The same day, Nikolai Smirnov, director of the Nizhni Novgorod Department of Popular Crafts, in an interview with *Itar-Tass*, indicates that BA will soon sport Russia's traditional Khokhloma paintings on the tail fins of certain of their jetliners. The pictures will be worn via a special film designed to withstand low temperatures and will be applied in time for celebrations marking the fortieth anniversary of the beginning of scheduled service between Great Britain and the U.S.S.R.

On the evening of March 1, Barbara Cassani, CEO of GO, delivers the annual Lindbergh Lecture before a London meeting of the Royal Aeronautical Society. Having agreed to take questions afterward, she and others are startled when the first question concerning financial performance, is posed by none other than Stelios Haji-Ioannou, chairman of **easyJet Airlines, Ltd.**

A three-month experiment also begins on March 1 under which the carrier will place catalogs from the SkyMall firm aboard all of its aircraft flying transatlantic from Boston and New York (JFK).

On March 2, the world celebrates the thirtieth anniversary of the first flight of the French-built Concorde prototype, called 001, which made its maiden flight from the Aérospatiale airfield at Toulouse this day.

On March 3, the U.S. House of Representatives begins to debate a retaliatory bill in response to the European Parliament vote in February calling for an EU crackdown on U.S. airliners equipped with hush-kitted engine mufflers that are ineffective at controlling air pollution. Should the EU go ahead as planned and vote on March 28 to prohibit flights by the Stage 3 U.S. planes (as early as April 1), the bill, voted to the floor by the House Rules Committee, would authorize a ban on Concorde flights to the U.S.

Spokesmen from both **Air France** and BA, the only carriers operating the SST, deplore the action calling Concorde "an inappropriate target for sanctions in a purely trade dispute." They also indicate their confidence that a diplomatic solution will be found.

The March 3 issue of *Flight International* reports that BA will be reorganized with new divisions in order to stress greater regional focus, boost revenues, and improve customer services. The enterprise will be carved into short-haul and long-haul units, which eliminate the prior geography-based organization.

The current four-way division of the passenger and cargo units will, by summer, be replaced by a new short-haul division that combines operations in the U.K. and in Europe, while two new long-haul units will cover services provided to the Americas and the rest of the world. The 15 current area offices will be replaced with 12 "global business units."

On March 7, **Virgin Atlantic Airways, Ltd.** announces that it will match any BA bid for **CityFlyer Express, Ltd.** As the value of the BA bid is at present unknown, Virgin is bidding blind.

Although expected to arrive at London (LHR) aboard an evening **United Airlines** flight, Monica Lewinsky, instead, arrives aboard the Concorde from New York (JFK). On March 8, she signs autographs of her book, *Monica's Story* (detailing the recent White House scandal), at Harrods Department Store.

The airline receives Alpha and Omega ratings in a satisfaction survey of 20,000 airline travelers, released on March 9 by the Consumers' Association's magazine, *Holiday Which?* The discount subsidiary GO is voted best value for the money, while BA itself is at the bottom of the list for U.K. domestic flights. It does, however, climb back to the top for service on routes to Portugal, Italy, Greece, and Spain.

Chris Jasper and Paul Phelan's report, "Alleged Rule Bending Stymies BA Plans to Start Italian Airline," appears in the March 10 issue of *Flight International*. The article details a rescue package that is allegedly part of a complicated secret enterprise between the struggling Irish airline **CityJet, Ltd.**, the **Qantas Airways (Pty.), Ltd.** partner **National Jet Systems (Pty.), Ltd.**, and BA to gain access to CityJet's existing air operators certificate. Such access would thereafter allow the launching of a BA franchise airline in Italy with five former **UNI Airways Corporation, Ltd.** BAe 146-300s that NJS would lease from Global Air Australia (Pty.), Ltd. and operate from Fiumicino Airport in Rome under the working name Italian National Airlines (ILAN).

CityJet's board of director's rejects the offer, even though NJS has already paid a part of the purchase price. In addition to the downsizing, concern exists that the arrangement will be blocked by European Union regulations prohibiting non-EU nations from holding majority shareholding in EU airlines. None of the players involved will offer comment; however, both the Irish public enterprise ministry and the EU launch investigations.

Barrie Clement writes in the U.K. *Independent* on March 15 that the airline now faces a bitter interunion row between the groups representing its cabin crews. Thousands of cabin crews have recently elected to join the Amalgamated Engineering and Electrical Union, which now represents GO, setting the stage for a row with the Transport and Gen-

eral Workers Union (the largest union in the U.K.), which has traditionally represented all BA cabin crews.

Still hurting from the company's treatment by BA and U.K. regulators over service from Lagos to London, officials of **Nigeria Airways, Ltd.**, also on March 15, according to an article by Tony Egbulufu in *The News*, enter into a new, and controversial, pact with **Virgin Atlantic Airways, Ltd.** Under terms of a memorandum of understanding signed between the two carriers and due to take effect in April, a phased-in arrangement between the two lasting 15 years will eventually see profits—and losses—shared on a fifty-fifty basis. Virgin will use its good offices to help Nigeria in the employment of third parties to achieve resolution of its foreign debt problem. The document also calls for immediate termination of Nigeria's partnership with British Airways and a replacement of BA's codes with its own on all of Nigeria's services, including the lucrative routes from Lagos to Johannesburg, Amman, and Dubai.

On behalf of the National Association of Aircraft Pilots and Engineers, Vice Admiral Okhai Akhigbe, chief of the general staff challenges **Nigeria Airways, Ltd.** Director of Corporate Information Chris Aligbe on the VAA deal. Aligbe informs the admiral and the press that no agreement, pact, or joint venture "has been contemplated or signed with Virgin Atlantic Airways." The denial leads to speculation that the new arrangement will be scrubbed, a view that becomes fact a few days later.

A man identified as Godfrey Sekajja is arrested at the BA office in Kampala, Uganda, on March 19 and held as part of an international racket using stolen credit cards to purchase airline tickets. He will be released under mysterious circumstances and sought again.

Following the failure of the Kosovo peace talks, BA, which had resumed its Yugoslav service at the beginning of the month, cancels its flights to Belgrade beginning on March 21 due to imminent NATO air strikes.

The British weekly *Hospital Doctor* reports on March 23 that BA reported 3,026 medical incidents during 1996–1997 (the last year for which figures are available). Requests for the help of a doctor from among the passengers occurred in 941 of those cases and the airline had to divert flights 76 times due to in-flight medical emergencies.

Air France indicates on March 24 that, due to high maintenance costs, it may well phase out its Concorde in or after 2007. Reacting to the announcement, BA states that it has no plans to curtail its SST services and suggests that it is ready to "welcome on board our Concorde" passengers from France who will not be able to fly on the Air France aircraft if the report is accurate.

Also on March 24, in anticipation of air strikes by NATO countries against Serbian military targets in a campaign for an independent Kosovo, BA, as most of Europe's major carriers, halts scheduled service into Belgrade. A spokesman, in making the announcement, indicates that the situation will be evaluated further toward evening; however, that night, Operation Allied Force, the bombing attack on targets in Serbia and Kosovo, begins.

When ground handlers open the cargo hold of the B-747-436 just arrived at London (LGW) from Dar es Salaam and Entebbe on March 25, they find the body of a young unidentified stowaway, frozen to death in the unheated space.

Service to Belgrade remains halted on March 25–31 and for the duration of the NATO bombing campaign Operation Allied Force. Flights to south-central and southeastern Europe experience delays of 30–60 min. due to airspace closure.

Federally mandated negotiations recessed with the machinists union in the U.S. on March 26 will, according to an adjournment announcement, be resumed on April 6. On March 27, the company flies its inaugural B-777-236 IGW service into Crown Point Airport at Tobago.

European transport ministers agree on March 28 to postpone by a month a proposed ban on old aircraft upgraded with noise mufflers in order to avoid a transatlantic trade dispute.

Daily B-737-36N GO roundtrips are initiated on March 28 between London (STN) and Faro. The main line of BA also inaugurates its

summer schedule on March 28, although most major changes will occur a month later.

In conjunction with its "OneWorld" code-share partner **Canadian Airlines, Ltd.**, the airline, on March 28, begins daily dual-designator return flights from Toronto to Moscow via London (LHR).

On March 29, GO begins to fly from London (STN) to Malaga.

On March 30, a London court sentences Lee Thresher, the unruly man who had smashed an inside window on a London-Bangkok flight back in January, to 15 months in prison.

Having had increasing difficulties competing with the faster one-stop flights now offered by other carriers, BA ends its daily two-stop flights to Melbourne, Australia, on April 1. BA customers are, however, able to travel on three new weekly flights to Melbourne, operated by **Qantas Airways (Pty.), Ltd.**, but flown by the two airlines carrying the BA code. The new flights connect at Bangkok.

The U.K. major gains a foothold in The Netherlands on March 31 when **Base Regional Airlines, B.V.** becomes its 10th franchise partner. The same day, company officials join with those from U.S. NASA in announcing that they have found an effective cure for jet lag.

Following a review of BA's Southern Africa timetables, new schedules, developed with **Comair (Pty.), S.A.**, come into effect on April 1. These schedules not only offer passengers daily connecting flights between Durban and Johannesburg, but a choice of daily departure times. The new revised schedules replace BA's four-times-weekly Durban services.

Pursuant to an earlier announcement, the carrier, also on April 1, ceases its unprofitable twice-weekly service to Gaborone, Botswana. Passengers seeking entry to that nation are now referred to **South African Airways (Pty.), Ltd.** or **SA Express Airways (Pty.), Ltd.** A new nonstop service to Tehran is started, while flights to Accra and Ghana are increased to five per week.

Also on April 1, weekly return service is started to Havana, with frequencies to Buenos Aires, Santiago de Chile, and Mexico City increased.

As a result of the UN's lifting of its air restrictions against Libya on April 15, BA indicates that it will soon launch thrice-weekly B-737 roundtrips to Tripoli.

The negotiations with the machinists union in the U.S. resume on April 6. The same day, working with the Abbey National Group, BA launches a program at six of its U.K. travel shops which offers travel loans of between \$800 and \$24,000. The two-year loans to qualified passengers carry a 15.9% annual interest rate, but may be paid back within 90 days "same-as-cash."

The company serves public notice on April 9 that it will shut down its headquarters at the Bulova Corporate Center in Queens, New York, when its lease expires in 2002.

Ending a three-day working visit to Cuba on April 10, British trade minister Brian Wilson is joined on the tarmac at Havana Airport by Cuban Vice President Carlos Lage and other senior officials of the island nation to greet an arriving BA B-777-236 IGW. After appropriate speeches, Wilson departs for London (LGW) on the first of the airline's new weekly flights.

Plagued by technical snags, the B-747-436 *City of York* is not able to depart from Bombay for London (LHR) on either April 12 or 13. On Monday, the Jumbojet experiences a malfunction in its air-conditioning system, two of its doors will not shut properly, and there is a hydraulic leak. While on its takeoff roll early Tuesday morning, the aircraft suffers a multiple tire burst, causing the pilot to abort the departure.

While en route from Sydney to London (LHR) via Singapore, also on April 13, Flight 16, a B-747-436 with 235 passengers, encounters severe turbulence over the Indian Ocean. Thirty-two people receive injuries, 2 of them serious. Prime Minister Tony Blair's daughter, Kathryn, is not injured. The flight is delayed several hours in Singapore while people are treated and arrives safely in London on April 14.

Also on April 14, a replacement B-747-436 arrives at Bombay to provide lift for those passengers stranded by the *City of York*.

Flight 2781, a BA B-737-236A with 137 passengers enroute to London (LGW) from Goteborg, Sweden, on April 15, is mistakenly ordered

to circle at the same altitude as a **United Airlines** B-777-222 IGW with just 19 passengers, which is en route to London (LHR) from Amsterdam. At 24,000 ft. off the Essex coast near Southend, the TCAS systems in the two planes sound, allowing the BA aircraft to climb and the UAL aircraft to descend. The jetliners miss each other by four seconds.

At a Dublin press conference called on April 15 to report the previous year's economic returns, Chairman Cahill informs reporters that **Aer Lingus Irish Airlines, Ltd.** will deliver a report to the government by month's end that will suggest which of several possible strategic partners the carrier may choose. Discussions have been held with representatives from several of the world's big airline alliances, including "OneWorld."

Despite the passing of a strike deadline, negotiations with the machinists union in New York continue on April 17. The union has been negotiating with the carrier to reach a contract since December 1995 and has already rejected one agreement.

A B-767-336ER transports Queen Elizabeth and Prince Philip to Seoul, South Korea, on April 18 for a state visit. The departing Boeing becomes the first aircraft, other than the Concorde, to fly with the Chatham Dockyard red, white, and blue design.

Following an announcement by Jamaican Finance Minister Omar Davies that taxes on diesel, gasoline, and fuels would be increased by 30%, demonstrations on the island flare up on April 19 and rage into full-scale civil unrest. BA, joined by **Air Canada, Ltd.**, **BWIA (British West Indies Airways, Ltd.) (2)**, and **American Airlines**, are forced to cancel services to Jamaica on April 20.

Following the Queen's service to Seoul in a BA jet wearing the Union Jack, company officials announce on April 20 that they may extend the logo to six more of the subsonic fleet, which has been wearing the controversial "world colours" for the past two years. On June 7, BA will announce that half of its aircraft will be repainted with a redesigned Union Flag logo by 2001.

Following three days of deadly protest, arson attacks, and clashes between demonstrators and police that leave seven people dead, calm is finally restored on Jamaica on April 21. BA resumes its services to Kingston the next day.

Also on April 22, BA contracts with IBM to install a new global customer database known as OceanWave. Using Java, it will allow BA staff anywhere in the world to access a single customer record. Also, authority is received from the Port of London Authority for construction of the world's largest observation wheel, the British Airways London Eye. It will be constructed horizontally over the Thames and then lifted into position.

In ceremonies at Seattle on April 23, the 57th and last B-747-436 is delivered. Also on April 23, a fire damages the offices of BA, **Air France**, **Deutsche Lufthansa, A.G.**, **Japan Air Lines Company, Ltd. (2)**, and **Indian Airlines, Ltd.** in the cargo terminal at New Delhi's Indira Gandhi Airport.

While over the Atlantic Ocean three hours into a service from San Francisco to London (LHR) on April 24, a recorded message is triggered aboard Flight 286, a B-747-336 with 391 passengers, warning that the plane is about to ditch into the ocean. Cabin crew quickly inform passengers that the message is incorrect, but two elderly passengers suffer anxiety attacks and must be assisted by a doctor on board.

While the fiftieth anniversary of NATO is being celebrated in Washington, D.C. on April 24, EU officials announce that, on April 29, ministers from the 15 member states will adopt the controversial "hush kit" restrictions against older aircraft. This will ban the addition of newly noise-modified aircraft to national aircraft registers from this point on. In addition, from April 2002, it will prevent the use of any non-EU noise-modified aircraft that were not operating in the EU in April 1999. All are aware that the U.S. Congress is still considering a ban on Concorde flights in retaliation and pledge to amend the law, which stands to destroy a potentially huge resale market for older Boeing jets, after further consultation with the U.S.

Following an investigation into the crash warning incident two days earlier, company officials on April 26 blame an unknown passenger for

triggering the pre-programmed warning, which can be set off by pushing a button on a panel in the cabin crew area. The airline again apologizes for what it calls "an amazingly stupid prank."

EU officials vote on April 28 to grant a one-year delay in imposing an aircraft engine rule opposed by the U.S.

CEO Gary Cullen and Strategic Director Larry Stanley, representing the airline's management, ask the **Aer Lingus** board on the morning of April 29 to join the "OneWorld" airline alliance, headed by BA and **American Airlines**. Both the U.K. and U.S. majors, with whom Aer Lingus will have direct marketing agreements, have agreed to sponsor the Irish line's membership in the multi-airline grouping. The board accepts this recommendation, which is passed along to Mary O'Rourke, Ireland's public enterprise minister.

The Irish Times, in reporting the move later in the day, indicates that one or both of the major alliance partners may take a small equity stake (5% to 10%) valued at approximately £60-million, with company employees also gaining shares. Completion of the alliance arrangement will clear the way for a public offering of Aer Lingus stock which, in turn, would raise the funds needed for future growth and expansion.

BA, reacting for "OneWorld" to the Irish line's announcement, expresses its pleasure, but notes that definitive arrangements must still be completed both with itself and **American Airlines** before entrance into the multi-airline grouping can be accomplished.

Also on April 29, the British Advertising Standards Authority (ASA) in a letter to BA's marketing department, rejects the calls from **Virgin Atlantic Airways, Ltd.** to prevent BA from using its 16-year-old advertising slogan "the world's favourite airline." A Virgin spokesman indicates that his company is confident of winning a bid in the U.S. to prevent BA's use of the tag.

The Kampala-based *New Vision* reports, also on April 29, that Godfrey Sekajja, wanted in connection with an international credit card fraud case involving the purchase of airline tickets, has been rearrested, together with an accomplice, Gerald Mukasa, formerly a senior official with the Ugandan tour company Afrique Voyage.

On April 30, the *Irish Independent* reveals that Ms. O'Rourke has, with some reservations, given her approval to the strategic alliance plan the previous evening, as had representatives from the airline's unions. The latter also express fear that **Aer Lingus** management is placing too much emphasis on getting partners who are willing to purchase shareholding. The airline staff, which already has a 5% stake, largely wishes to remain state employed.

After both BA and **Sabena Belgian World Airlines, S.A.** pull out of the tender process, **South African Airways (Pty.), Ltd.** and its protegee, **Alliance Air (African Joint Air Service)**, are the only prequalified bidders to make an offer for the 49% stake in Uganda Airlines Corporation, now to be known as **Uganda Airlines, Ltd.** The Ugandans are apparently very surprised by the BA withdrawal. Sources indicate to Reuters, Ltd. that the British major could not accept a prospectus clause requiring it to employ Entebbe as a regional hub after already investing heavily in a hub at Nairobi.

On April 30, the Ugandan government, via the cabinet subcommittee for privatization, cancels the tender process and invites SAA to negotiate the airline's purchase during the week of May 3.

On May 1, daily flights begin from Birmingham to Madrid. The same day, the number of frequencies from London (LHR) to Copenhagen and Oslo are increased to five a day. Also on May 1, continuing service is offered from Baku on to the Uzbekistan capital of Tashkent.

In an effort to jump-start struggling business travel during the off-peak season, BA, on May 3, launches a £200-million special offer on 750 flights. Anyone booking and flying Club World, first class, or Concorde before the end of July will receive a free ticket for a companion to use on their next flight.

Also on May 3, the security committee of the British ALPA, chaired by BA B-777 pilot Capt. Bill Lucas, asks BA to back a list of demands for actions to be taken against violent customers. A catalog of recommendations is also sent to the government, which already has a task

force examining unruly passenger behavior on aircraft. After deliberation, British Airways, on May 4, indicates that it cannot fully support the Lucas memo because punishment of offenders remains with the judicial system. It suggests that prison sentences, currently running at 12–14 months for each offense, are an adequate deterrent.

On May 3, an incident involving the Church of God's superintendent for Southern Africa, Bishop John Mambo, is reported by the *Times of Zambia*. Mambo, who is scheduled to fly to the U.S. via London on a mission to lobby for cancellation of Zambian debt cancellation, is denied boarding because he is late. Mambo, who had sent his wife on ahead to tell the airline he would be delayed, is angered, claiming that a white lady with children, also late, was boarded, while he was kept off. Claiming racism, Mambo makes his complaints known to the carrier's Zambian general manager, who refers to company policy on predeparture passenger arrivals.

Just after departure from London (LGW) for Genoa on May 5, Andrea O'Neill, a flight attendant aboard the B-737, makes a bet with the aircraft's captain that he cannot bring in his flight ahead of schedule. The aircraft arrives 10 minutes early. Before new passengers board for the return service, Ms. O'Neill, having lost her bet and feeling obliged to pay, takes off her skirt, rolls up her blouse, dons a safety vest like a mini-dress, and puts on the captain's hat. Thinking she is out of sight of the airport building, the flight attendant tiptoes down the steps and runs around the empty Boeing to cheers from crew members, baggage handlers, and cleaning staff. Appearing before her supervisors on May 6, the Dublin University graduate expects to be fired for her "bit of a giggle"; instead, she is allowed to retain her job after receiving, as the *Newcastle Chronicle & Journal* reports in its headline—"a dressing down."

Also at the beginning of May, a massive 15,000-lb. flight deck and first-class passenger cabin of a B-747-136 retired by BA in 1998 is moved overland under the coordination of **Emery Worldwide's** Global Project Management group from Roswell, New Mexico, to the Hiller Aviation Museum in San Carlos, California. The move is funded by retired **The Flying Tigers Line** pilot Al Silver. The unit will be displayed adjacent to the two-story exhibit building and will open later in the year.

Reminiscent of the bird in the motion picture *Paulie* is the story of Yuri the Parrot, released to the media on May 14. Hidden in a sailor's carry-on bag, the bird gives himself away by screaming loudly during a flight from Cape Town to London (LHR). Upon landing, officers from the Endangered Species Division of the U.K. Customs and Excise service board the BA Jumbojet and eventually take possession of the noisy bird. The seamen have been unsuccessful in their attempts to divert attention from the noise, even after they claim to have hidden a snake named Sasha somewhere aboard the plane. As in the case with the kitten the previous November, the airline does not press charges.

The low-cost division GO inaugurates daily B-737-36N roundtrips on May 20 between London (STN) and Bilbao, Spain. The deep-discount unit celebrates its first anniversary on May 22; during its first year, approximately 700,000 passengers have been flown.

While landing at New York (JFK) on May 24, a Concorde comes within 500 ft., both horizontally and vertically, of an **American Airlines** B-767-223ER that has just taken off on a service to Frankfurt.

At a news conference called in advance of a disappointing economic report the next day, CEO Ayling indicates that the company will enhance his carrier's cost-cutting program and will scrap most of its unprofitable domestic flights to London.

On May 25, BA reports that the previous year's £70-million, first-quarter pretax profit has, for the same period this year, become a £85-million (\$135-million) loss—this on a slight increase in revenue to £2.05 billion (\$357 million). The previous year's financial figures are also reported, as noted above.

BA, on May 28, places a \$420-million order with Embraer for 21 ERJ-145 regional jets that will be delivered to its subsidiary, **Brymon Airways, Ltd.** Also during the day, air rage defendant Ian Bottomley, who had gone berserk aboard a January flight from South Africa to London, is sentenced to three years in prison.

A major power failure at Terminals 3 and 4 at London (LHR) on May 29 causes hundreds of passengers to be stranded. BA is forced to cancel 20 flights.

On June 1, BA and **Japan Air Lines Company, Ltd. (2)** link their frequent flyer programs. Executive Club members are able to gain mileage credits on Japan's international route network while Mileage Bank loyalists may accumulate credit on the British line's routes.

Service to Tripoli is launched on June 3. Concorde Flight 2, inbound from New York (JFK) on June 6, makes a safe emergency landing at London (LHR) following hydraulic problems. On June 7, another false emergency announcement is accidentally made aboard Flight 69, a B-777-236 IGW en route from London (LHR) to Philadelphia, when the chief steward accidentally triggers the warning.

Miramax films CEO Harvey Weinstein is fined £200 by Uxbridge magistrates on June 10 for a December incident in which he had set off a smoke alarm by puffing on a cigarette in a toilet aboard a transatlantic Concorde flight. Released by police after the incident, Weinstein sends both his regrets and payment of the fine by mail.

A 28-year-old B-747-136, withdrawn from storage at Cardiff, Wales, arrives at the Sandia National Laboratories on June 18; it will be taken apart and analyzed for safety and airworthiness, with particular reference to the crash of the similar TWA Flight 800.

En route from Istanbul to London on June 21, a B-757-236 with 162 passengers is forced to divert to Budapest after the pilot reports engine problems. A safe emergency landing is made, after which the travelers are taken to a transit lounge to await a replacement aircraft.

Artist Damien Hirst files suit against BA and GO on June 26, claiming that one of their advertisements for the low-cost division had unfairly copied one of his spot paintings. The airline denies the charge.

A trial begins in Manchester Crown Court on June 28 for oil driller Neil Whitehouse, who had refused warnings from flight attendants and the pilot of a B-737 en route to Manchester from Madrid with 91 passengers back in September, to switch off his mobile phone. The defendant admits that his behavior was "unnecessarily awkward," according to a report in *The Express*, but denies endangering the flight.

Flight 027, a B-747-436 with 400 passengers en route from London to Hong Kong, accidentally drops down to just 200 m. above a **Korean Airlines/Korean Air (KAL)** B-747F en route from Seoul to Uzbekistan, also on June 28. The move sets off collision warnings aboard both aircraft, which are able to maneuver out of danger.

Daily roundtrips are started by GO on July 1 between London (STN) and Madrid.

Defendant Whitehouse is found guilty, also on July 1.

Simultaneously, this first day of the month, **Qantas Airways (Pty.), Ltd.** begins code-sharing on BA flights from London to Copenhagen, Stockholm, and Oslo.

As the result of a two-year inquiry set off by a pair of formal complaints from **Virgin Atlantic Airways, Ltd.**, BA, on July 14, is fined 6.8 million euros (\$7.19 million) by the executive commission of the EU for allegedly paying British travel agents to direct customers onto its flights. Stung, BA immediately appeals the EU decision.

The first man to be prosecuted under Article 55 of the Air Navigation Order 1995, Neil Whitehouse is sentenced to a year in prison on July 20.

U.K. Trade and Industry Secretary Stephen Byers grants approval on July 26 for BA's £163.75-million (\$117-million) takeover of **CityFlyer Express, Ltd.** The authority is contingent upon the major's agreement to an hourly cap on its London (LGW) slots under a plan to be worked out with the U.K.'s competition commission and director general of fair trading, John Bridgeman.

A marketing agreement is signed with the Indian carrier **Jet Airways (Pty.), Ltd.** on July 28. Under its terms, the frequent flyer programs of the two carriers are linked, while passengers flying on both airlines are granted through check-in.

After months of lobbying, hearings, and debate, the DOT, on July 30, dismisses the joint **American Airlines/BA** application for antitrust immunity, which has been pending before it since January 1997. Principals

from the two carriers indicate that they will seek other ways to expand their global partnership, concentrating on the possibilities of the new "OneWorld" alliance.

On August 1, BA announces that, in light of continuing fiscal losses, it is cutting its capacity by 12% over the next 5 years, will end service to Jakarta and Pittsburgh, and will reduce frequencies on other routes as well. Simultaneously, the carrier introduces a new and adjustable infant's seat, designed by a British car seat manufacturer. Over 1,000 of the units are installed aboard company aircraft.

As Western governments take heed of the first anniversary of the terrorist destruction of two U.S. embassies in Africa, BA, on August 14, tightens security on all of its flights departing London (LHR), with particular attention to services leaving for the Mideast or U.S.

Claiming that it has been unfairly singled out by the EU fines of July 14, BA informs the press on August 16 that it now expects to issue writs against some of its European rivals in their own countries, charging them with employing illegal travel agent schemes as well.

The online edition of *The Guardian* on August 15 reports that the company will soon announce a plan to lay off up to 1,000 middle managers in an effort to save £225 million. The same day, the *Newcastle Chronicle & Journal* notes that the pregnancy rate among the 9,482 female flight attendants based at London (LHR) is 30% higher than in 1998 and that, already this year, 600 who are in a family way have been grounded, being given desk jobs.

The *Financial Times* reveals the August 15 reduction-in-force figures of August 15 to be in error; actually, the carrier will retire 300 managers from a list of 1,000.

On August 24, Concorde Flight 2 departs off Runway 22R at New York (JFK) just as Concorde Flight 1 is inbound to intercept the localizer to Runway 4R. The SSTs just avert a midair disaster, passing within 800 ft. vertically and .7 mi. horizontally of each other.

The carrier's unique "flying bed" first-class service is introduced on the company's daily service between London (LGW) and Baltimore (BWI), beginning on September 2.

In the most radical restructuring in the past three years, CEO Ayling, on September 4, announces the reduction in the number of its business groups from 14 to 6: finance, strategy, commerce, customer service and operations, technical, and people. The overhaul is designed to reduce costs and streamline structure.

A Concorde brings the European Ryder Cup Team to Boston on September 20 for what will prove to be successful golf matches with its American counterpart.

Skopje, the capital of Macedonia, is served for the first time by a British airline when new twice-weekly roundtrips from London (LGW) commence on October 4. The next day, the carrier announces that it will dispose of 34 of its 53 B-757-236s.

As a result of the military coup in Pakistan on October 13, that day's flight to Islamabad from London (LHR) via Manchester is cancelled; although the 14 crew already in Pakistan are reported well, BA chooses not to risk stranding a Jumbojet. Service is resumed on October 15.

On October 25, U.S. District Court Judge Miriam Cedarbaum dismisses all outstanding claims raised by **Virgin Atlantic Airways, Ltd.** in its lawsuits against BA in the United States.

Beginning on October 31, **Qantas Airways (Pty.), Ltd.** code-shares aboard BA services from London (LHR) to both Hamburg and Berlin.

Wearing a "Chatham Historic Dockyard" Union Jack flag livery, the first of 39 A319-131s to be delivered arrives at Birmingham on November 9; it enters "British Airways Express" revenue service next day.

As part of the alliance with **Nigeria Airways, Ltd.**, a new joint service between London (LHR) and Lagos begins on December 1. BA supplies a B-747-236B—wearing a computer-generated "green wave" livery—pilots, and several of the cabin crew; a number of Nigerian flight attendants also serve.

The British major signs, subject to shareholder approval, an agreement on December 15 with SEPI, the government holding company which oversees **Iberia Spanish Airlines (2)** (**Lineas Aereas de**

Espansa, S.A.). Under its terms, BA will invest approximately 41 billion pesetas (£155 million/\$250 million) for a 9% stake in the Spanish flag carrier. Two BA executives are also to take seats on the Iberia board.

GO initiates new daily roundtrips, also on December 15, from London (STN) to Zurich and Lyon.

When the CAA awards **Virgin Atlantic Airways, Ltd.** a second frequency to Cape Town during the month, BA appeals.

As the result of problems in the adjustment of their ticketing and reservation systems, BA and **Japan Air Lines Company, Ltd. (2)** are forced, also in December, to indefinitely postpone the launch of their already delayed code-share on JAL flights between London (LHR) and Osaka (KIX).

Although it has been planned to open the £35-million BA-sponsored London Eye, a giant Ferris wheel located opposite the Houses of Parliament, on Millennium Eve, safety concerns over its pods forces a postponement on December 30.

The company-sponsored Millennium Dome in North Greenwich, which is twice as large as the Georgia Dome in Atlanta and so big it could contain the Eiffel Tower laid on its side, does have a successful opening, attended by thousands on New Year's Eve, including Queen Elizabeth II.

Having spent £100 million to swat the Y2K bug, some 2,000 passengers toast the new millennium at 35,000 ft. The company reports problem-free flights for all 15 of its aircraft in the skies as Big Ben strikes midnight.

Mainline customer bookings dip 2% to 36,346,000, although cargo is up 6.1% to 4.53 billion FTKs. Passenger boardings at the GO subsidiary skyrocket 332.7% to 1,614,000. Financially, the year is a disaster. Operating income inches up 0.4% to \$14.3 billion, but expenses accelerate 4.8% to \$14,169,600,000. The operating profit falls to \$134,400,000. The company is able to avoid reporting its first annual loss since privatization by selling \$398 million in assets, thereby achieving an \$8-million pretax profit. Still, after taxes and minority interests are worked out, an actual \$33.6-million net loss is suffered.

The mainline workforce stands at 53,060 at the beginning of 2000, a 17.1% cut over the previous 12 months. At GO, the number of workers has been increased 57.1% to 550. Among the world's top 25 airlines at the start of the new millennium, BA is 11th in passengers, 7th in FTKs, 9th in employee number and fleet size, 6th in operating revenues, and 25th in operating profit.

Sir Alan Cockshaw, former chairman of the building concern AMEC, now succeeds David Holmes as CEO of the BA regional division. Also during the first week of January, BA completes the sale of its second tranche of shares in Eqant, a telecommunications company for £58 million.

Although only 1% of its ticket sales are generated online, BA, in January, establishes a separate unit to handle Internet sales. The new division is given a mandate to move half of all company sales online by 2003.

On approach to London (LHR) following a January 29 flight from Barbados, a chartered Concorde suffers an engine failure; a safe emergency landing is made and no injuries are reported.

Just after takeoff from London (LHR) on January 30, Flight 9010, a Concorde charter with 9 crew and 100 passengers en route on a 3½-hr. sightseeing trip to and from the Bay of Biscay, is forced to turn back and land after a warning light comes on in the cockpit. This is the last Concorde incident prior to the fatal **Air France** crash of July 25.

All safety concerns resolved, the Millennium Wheel, also known as the London Eye, finally opens on February 1.

Following considerable debate among investors, the British major announces on February 12 that it has finally concluded execution of an agreement with SEPI, the government holding company that oversees **Iberia Spanish Airlines (2) (Lineas Aereas de Espansa, S.A.)**. Under its terms, BA pays approximately 41 billion pesetas (£155 million/\$250 million) for a 9% stake in the Spanish flag carrier. The investment can be removed if a public flotation of Iberia stock does not occur by December 31 or the deal does not gain EU approval.

The unprofitable GO routes to Lyon and Zurich are dropped during February. Also during the month, BA purchases a £17 million (\$27.9 million) 18.3% stake in its South African franchise partner **Comair (Commercial Airways [Pty.], Ltd.)** from Gensec and CNI. GO, on February 29, announces that it will suspend service to Munich at the end of March; it simultaneously files an official complaint with the European Commission complaining of the predatory practices of **Deutsche Lufthansa, A.G.** on the route over the past 15 months.

On March 6, the company and **USAirways** announce that they have resolved the litigation pending between them in the U.S. District Court in New York in a manner satisfactory to both sides.

By mutual consent of the BA board, CEO Robert Ayling, who has taken the blame for the carrier's bad economic showing, as well as the lingering flap over the now-changed "World Image" tailfin painting policy, resigns on March 10. Chairman Lord Marshall picks up his duties on an interim basis. The London *Daily Mail* will report on June 9 that he has received a £2-million golden parachute.

Equipped with 84 convertible beds and marketed as the "Biggest Bedroom in the Sky," the B-747-436 *The City of New York* enters service on March 23 between London (LHR) and New York (JFK). The last of eight weekly Concorde services between New York (JFK) and Barbados, begun on February 5, is concluded on March 25.

A new code-sharing agreement begins with **Cathay Pacific Airways (Pty.), Ltd.** on March 26. Under its terms, Hong Kong-based Cathay places its designator on BA flights operating from London (LHR) to Belfast, Edinburgh, Glasgow, and Manchester. A dual-designator pact with **Aer Lingus Irish Airlines, Ltd.** simultaneously starts, with BA adding its code to the Irish line's services from Dublin to London (LHR/LGW), Birmingham, Bristol, Edinburgh, Glasgow, Manchester, and Newcastle and from Cork to Birmingham.

Also during the month, the British government denies BA's latest application to continue its wet-leasing contract with **Atlas Air**. The B-747-47UF employed will be returned to the American operator, who will scrub off its "Chelsea Rose" color scheme prior to reassignment. The BA service to Almaty, begun in March 1995, ends on March 31. The "Chelsea Rose" will continue, being painted on the tails of the two B-747-436s assigned to British Asia Airways, Ltd.

New six-times-a-week B-777-236ER return service is launched on April 2 to Kuala Lumpur and thrice weekly to Bangkok.

On April 5, BA wins its appeal against the CAA decision to award **Virgin Atlantic Airways, Ltd.** a second Cape Town frequency; Secretary of State John Prescott, who overturns the agency's decision, awards the authority to BA, which will employ it to take its Cape Town service to daily flights.

Under terms of an agreement signed on April 19, BA will replace its in-house reservations system BABS with Amadeus. Over the next decade, most BA systems will be transferred over, while Amadeus will also take over the BA Speedwing contracts that provide services to 40 other airlines. The same day, GO launches six-times-a-week roundtrips between London (STN) and Naples.

As a result of the political and economic chaos in Zimbabwe, BA diverts its London (LHR) to Harare flights to Lusaka, beginning on April 24.

Coming upon the heels of the April 28 breakup of the nearly concluded operational merger between **Alitalia, S.p.A.** and **KLM (Royal Dutch Airlines, N.V.)**, BA, in early May, begins discussions with the Dutch flag carrier concerning a similar arrangement. The initially denied move reflects a certain amount of frustration by the British line over its inability to fully align with **American Airlines**.

Appointed on April 25, **Ansett Australia (Pty.), Ltd.** Executive Chairman Rod Eddington becomes CEO of "the world's favourite airline" on May 1.

At the beginning of May, the British government grants British Airways Cargo short-term approval to continue its **Atlas Air B-747-47UF** charter; the Jumbojet makes twice-weekly return freight runs from London (STN) to Osaka (KIX) and provides a weekly service to Frankfurt.

Never having enjoyed French market success, BA, on May 5, sells its 86% stake in the unprofitable British Airways Express franchise **Air Liberte, S.A.** to Taitbout Antibes, B.V., a **Swissair, A.G.** affiliate, for £47 million. For its part, BA requests that the "World Image" tailfin livery on Air Liberte's aircraft be removed, along with the "Speed Marque" (ribbon), as soon as possible.

Claiming the new CEO's plans have been "taken out of context," a spokesperson indicates on May 9 that half the fleet will continue to wear the controversial "World Image" ethnic tailfin designs for at least a while longer. As a condition for a further £29-million pound grant from the Millennium Commission, former Chairman Ayling is forced, on May 24, to also resign his post as head of the loss-taking Millennium Dome attraction.

On May 18, BA becomes the first airline in the world to successfully transmit live human data from a commercial flight over the ocean to land; the ground-breaking trial uses a recording from a cardiac monitor to transmit a heart rate reading to Medlink's medical experts on the ground.

With **Olympic Airways, S.A.** still in difficulty, BA announces on June 2 that it will not purchase a 20% equity stake in the Greek flag carrier. In fact, it has also terminated its Speedwing, Ltd. management consultancy early, but under a timetable agreeable to the Greek government.

By mid-June, BA has completed the paperwork and financial arrangements necessary to pass 7 B-767-336ERs under lease to **Qantas Airways (Pty.), Ltd.** These are employed to boost services between Australia, England, and Singapore.

At the end of the month, the government, having reviewed the issues involves, grants permission for BA to wet-lease an **Atlas Air** freighter for a full year, allowing it to continue its four weekly roundtrips to Hong Kong from London (STN).

Daily B-747-436 roundtrips start on July 3 between London (LHR) and Cape Town.

CEO Eddington and KLM CEO Van Wijk meet with EU Competition Commissioner Mario Monti on July 7 to launch the official EU Commission review required before the proposed BA/KLM marriage can be launched. Principal concerns include the number of flights by the merged partners to and from London and Amsterdam as well as international route rights.

Also in July, the company joins with **National Jet Systems (Pty.), Ltd.** to launch its first Italian franchise carrier, **National Jet Italia, S.p.A.** The new entrant begins flying eight times daily between Rome and Palermo on July 11 employing British Aerospace BAe 146-300s leased out of Taiwan. Service from Rome to Catania is promised for later in the year.

In a rescue mission made at the request of Monkey World, BA, on July 19, completes Europe's largest shipment ever of saved Asian monkeys; eight gibbons and an orangutan illegally smuggled into Taiwan are flown into London (LHR) from which they are trucked to the Dorset-based sanctuary.

On July 24, the airline first announces that it has been monitoring for several months the two-inch long cracks found in the rear spars of the wings of seven Concorde; one aircraft has been grounded because its cracks have worsened.

When the CAA elects to await further information, BA, which had temporarily grounded its Concorde in the wake of the fatal July 25 **Air France** SST disaster, resumes flying the speedy aircraft on July 26. Although the move is controversial, the airline points out that this was, in point of fact, the first fatal accident, that company experts had immediately consulted **Air France** and crash investigators at Paris and that, unlike the French, BA has made certain modifications to its supersonic transports, including the installation of a flight deck alarm system designed to provide tire burst warning.

Although not judged serious, but nevertheless receiving intense media exposure, are three Concorde incidents on the weekend of July 29-30. On Saturday, Flight 4, arriving from New York (JFK) with 18 passengers, experiences a backfire in one of its engines; emergency ve-

hicles at London (LHR) are alerted, but the aircraft lands safely. On Sunday, a Concorde's departure from London for the Big Apple is delayed over 90 minutes by a fault that forces transfer of its 53 passengers to a 747 service. Later that day, Flight 3, the SST en route to New York (JFK) from London (LHR) with 57 passengers, including singer Tony Bennett and musician George Bengers, is diverted to Gander after the pilot smells smoke in the passenger cabin. The customers complete their trip on a chartered jetliner.

Under terms of a new code-sharing agreement with "OneWorld" partner, **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**, the previous BA service from London (LHR) to Santiago via Buenos Aires is halted at the Argentine city on August 1. The connection between Buenos Aires and the Chilean capital are now flown by LanChile, with these flights also operating with a BA designator.

News circulates over the weekend of August 5-6 that merger talks with KLM had nearly collapsed; they are reportedly saved by KLM's chairman, Van Wijk, who lowers from 35% to 26% his company's stake demand in a consolidated carrier. The two announced on August 10 that discussions will continue.

With several days notice, the French DGAC and the CAA suspend the Concorde's airworthiness certificate on August 16, a day after BA grounds its SST fleet. With the exception of several ferried aircraft, all BA SSTs are immediately grounded.

En route from Los Angeles to London (LHR) on August 19, Flight 278, a B-747-436 with 16 crew and 394 passengers is forced to divert to Chicago (ORD) after a married American couple physically brawl and trade punches in the economy class cabin. The disruptive couple is restrained aloft and detained by local police on the ground; the Boeing arrives at its destination three hours late.

Late in the month, CEO Eddington reveals the names and resumes of the 12 new members of his Leadership Team.

At the beginning of September, capacity on the carrier's twice-daily flights from London (LHR) to Newark is increased by the substitution of 2 B-747-436 for the Jumbojet and 1 B-777-236 previously employed. The move signals an expectation that Concorde flights will not be resumed anytime soon.

Having found that the final issues between them cannot be resolved, BA and **KLM (Royal Dutch Airlines, N.V.)** end their merger discussions on September 22. On September 29, the low-cost GO subsidiary launches four-times-a-week B-737-300 overnight return service from London (STN) to Tenerife.

BA reports on October 1 that, after 50 years, the route from London (LHR) to Kuala Lumpur has become too unprofitable to operate and will be suspended at the end of March. New CEO Eddington announces his first major strategic initiative two weeks later. Under his plan, capacity will be cut 10% in the new summer schedule from the end of March, with the largest reductions coming to services from London (LGW). Further reductions will be made in the Jumbojet fleet, with the 4 B-747-336s already withdrawn put up for sale.

The *London Sunday Times* reports on October 22 that BA has begun talks with **Air France** and **Delta Air Lines** concerning its possible membership in their "SkyTeam" alliance.

Daily roundtrip frequencies from London (LGW) to Verona are reduced on October 28 from three to two as the service to Venice is shifted from Heathrow to Gatwick; the number of London (LHR) flights to Bologna are increased to three every day.

On October 29, frequencies to Paris (ORY) are reduced from 6-a-day to 3, while those to Paris (CDG) are doubled to 12; frequencies from London (LHR) to Tel Aviv jump from 10 to 17 every day. Elsewhere, frequencies from London (LHR) to Frankfurt, Munich, Prague, and Rome are increased while those to Salzburg and Ljubljana are suspended. Flights are boosted from London (LGW) to Barcelona, Bilbao are increased while those to Jersey are transferred to **CityFlyer Express, Ltd.**

Direct service from Dhaka to New Delhi is halted on October 30 and the current weekday Dhaka to London via Delhi flight becomes a thrice-weekly service route via Calcutta instead.

GO introduces four-times-a-day B-737-340 return service on November 1 between London (STN) and Glasgow. The next day, the *London Daily Mirror* reports that, after an extensive survey, company officials will allow mainline female ground staff in promotions, marketing, ticketing and sales to henceforth wear newly designed pants suit uniforms. Female flight attendants at GO are already in pants suit uniforms and now those at BA proper will also be accorded the same right; additionally, they will be able to ditch their "trademark" wide-trimmed hats.

On November 5 the *Independent* reports that the airline is adding U.K. provincial routes from Birmingham and Manchester to a portfolio of services to be axed early in the new year. The move is part of a plan improve returns on the carrier's unprofitable European short-haul routes. A number of the routes could be turned over to the airline's franchise partners.

BRITISH AIRWAYS, PLC. See BRITISH AIRWAYS, LTD. (2)

BRITISH AIRWAYS (SCOTLAND), LTD.: United Kingdom (1988–1992). This BA subsidiary is formed at Glasgow in 1988, following the 1987 privatization of its parent, to operate the company's scheduled services throughout Scotland. Originally known as the Highland Division, BA (Scotland) employs Gerry Devine as managing director and is given a fleet of 3 British Aerospace BAe ATPs, 2 Fokker F.27-200s, and 2 Shorts 360s. Under lease, **British Airways, Ltd. (2)** provides Boeing 737 and Douglas DC-9 services on longer segments.

In 1990, the carrier opens branch offices at Aberdeen and Inverness and Ian Reid is named managing director. The fleet is upgraded as the Fokkers and Shorts are removed in favor of 5 additional ATPs and 8 BAe 748-B2s.

A ninth BAe-748 is delivered in 1991 and the carrier is renamed British Airways (Scotland), Ltd. In late March 1992, the parent, wishing to end losses not only in Scotland but those generating from the Manchester and Birmingham hubs as well, merges its Scottish operation into the new **British Airways Regional, Ltd.**

BRITISH AIRWAYS EXPRESS, LTD. See AIR LIBERTE, S.A.; BASE REGIONAL AIRLINES, B.V.; BRITISH MEDITERRANEAN AIRLINES, LTD; BUSINESS AIR, LTD.; CITYFLYER EXPRESS, LTD.; COMAIR (PTY.), LTD.; DEUTSCHE BA LUFTFAHRTGESELLSCHAFT, A.G.; GB AIRWAYS, LTD.; MANX AIRLINES EUROPE, LTD.; NATIONAL JET ITALIA, S.p.A.; SUN-AIR OF SCANDINAVIA, A.S.; TAT EUROPEAN AIRLINES, S.A.

BRITISH AIRWAYS HELICOPTERS, LTD.: United Kingdom (1974–1986). Formed as **British European Airways Helicopters, Ltd.** in 1954, this rotary-wing carrier becomes a subsidiary of **British Airways, Ltd. (2)** as a result of the merger of **British European Airways Corporation (BEA)** into the new state airline in 1974. The head office is retained at London (LGW South) with branch stations at Penzance, Aberdeen, Beccles, and Sumburgh.

Previous routes and schedules are continued, in particular Europe's only scheduled passenger service (the Sikorsky S-61N route from Penzance to the Scilly Isles) and those providing service to offshore North Sea oil facilities. A new passenger terminal is opened on St. Mary's, Scilly Isles, in April 1975.

The contract with the coast guard for search and rescue (SAR) service off the Scottish coast is also maintained, employing a Sikorsky S-61N for which a portable winch has been company-developed. In January 1978, the Coastguard helicopter operation is transferred to Sumburgh in the Shetland Islands.

In the largest civil helicopter sale in terms of monetary value, to date, the company orders 3 Boeing Vertol Model 234 Civil Chinooks in January 1979 for \$33 million. In May, BAH accepts an S-61N simulator from Redifon Simulation; the machine is the world's first six-axis commercial helicopter simulator.

The Civil Chinook request is increased to five machines in 1980. In the first completely successful (i.e., no casualties) helicopter ditching in

the North Sea, a company S-61N puts down out of control on July 12. The first production Model 234 makes its maiden flight on August 19.

As launch customer, BAH places the first of its five new Model 234 Civil Chinooks into service for client Shell Exploration, Ltd. (Shell Expro) on the North Sea on July 1, 1981, flying from Aberdeen to the Brent Field in the East Shetland Basin. During the next six months, the machines transport a total of 82,000 passengers.

On January 6, 1982, several Westland 30s enter service from the Beccles base in East Anglia; these ships will be joined by Sikorsky S-76s. The latter are employed to operate a 120-nm. shuttle service to the jack-up rig Penrod 92, east of the mouth of the Humber River. The second Civil Chinook enters service in July, flying a 290-nm. roundtrip from Aberdeen to BP Petroleum's Magnus Field, the longest direct flight operated by the carrier. Parent **British Airways, Ltd. (2)** suffers increasingly significant losses and the push begins for privatization of the airline.

While on a Shell Expro North Sea support flight in February 1983, a Model 234 Civil Chinook suffers an in-flight fire; no injuries are reported. However, the situation is different on July 16 when an S-61N, with 26 aboard, crashes into the sea in foggy conditions while on final approach to St. Mary's airfield on the Isle of Scilly (20 dead).

After servicing a contract with Shell Expro in the gas fields in the southern North Sea off Beccles, East Anglia, with S-61Ns for 16 years, the company now loses it to competing **Bristow Helicopters, Ltd.** The Hong Kong government grants a license to provide shuttle flights to Macao. In December, the Sumburgh contract with the coast guard is also lost to **Bristow Helicopters, Ltd.** During the year, the carrier adopts its own new color scheme.

On December 31, it is reported by company officials that, since the type entered service in 1979, the Model 234s of BAH have made 3,971 roundtrip flights to energy industry platforms, carrying 298,300 passengers in 17,246 total revenue flying hours.

Plans for the Hong Kong–Macao service are dropped in 1984. Even so, 2 S-61Ns are sent out to Zhuhai across the border from Macao to support energy exploration in the South China Sea. At the same time, an S-61N and S-76 are dispatched to Bombay to support similar efforts in the Bombay High Field. In May, former Reed Mining Tools, Ltd. Managing Director Michael Graham-Cloete is appointed assistant to Managing Director John Garton. At the end of the same month, a Civil Chinook, flying over the East Shetland Basin, suffers a hydraulic-system malfunction; an uneventful emergency landing follows.

In August, and during a winching operation above the Mobile Searcher, an oil rig 50 mi. N of the Shetland Islands, an S-61N makes an unexpected wheels-up landing on the platform's helideck, damaging its keel.

A Civil Chinook is sold to **Columbia Helicopters** of Aurora, Oregon, in September. At Aberdeen, a company S-61N participates in a successful Civil Aviation Authority test of the automatic helicopter position recording system developed by Offshore Navigation, Inc. In December, a Civil Chinook moves by sling an 8.5 ton, 60-ft. silo over a distance of 300 yards, installing it through a hole in the roof of Brooke Bond Oxo's Trafford Park factory near Manchester.

The subsidiary Dublin City Helicopters, Ltd. is established in early 1985 with backing from **British Airways, Ltd. (2)** and British Rail. Employing an S-61N leased from BAH, the Irish concern opens Europe's first scheduled international helicopter service in years on April 3, flying from Dublin to Holyhead, Wales. The contract calls for five years of five-times-per-day roundtrips; passenger fares are £53 roundtrip or £30 one way.

Also during the first two quarters, a BAH Model 234, contracted by the Swedish state power board, loads 520 electrical transmission towers, each weighing upwards of 17,000 pounds, which are positioned along 116 miles of wooded area in the southern part of the country. By the end of June, company headquarters have been transferred from London (LGW) to Aberdeen.

A Civil Chinook with 47 aboard is forced to ditch in the East Shetland Basin on May 2; although all aboard are rescued, the helicopter sinks

due to a faulty rear ramp door seal. When the machine is raised, it, too, is sold to **Columbia Helicopters**. In July, Capt. Jack Jessop is named chairman. As in previous years, traffic and financial data is reported in the parent's annual accounting.

The fleet now includes 5 Boeing Vertol 234s, 22 Sikorsky S-61Ns, 4 Sikorsky S-76s, 2 Bell 212s, 1 Bell 206, 3 Aerospatiale AS-332L Super Pumas, and 3 leased Westland 30s. In September, the company chooses **HeavyLift Cargo Airlines, Ltd.** as its sole agent for its external-lift business throughout the U.K. and mainland Europe. It is reported in October that, since their introduction, the company's Model 234s have flown 514,000 passengers over 3.46 million revenue miles.

The carrier contracts with the government's Central Electricity Generating Board in November to help repair a 275,000-volt electrical line stretched over the Usk River near Newport in South Wales. The mission, employing a lightweight cradle, is the first such helicopter operation undertaken in Europe. On November 23, the main-rotor blades of an S-61N strike a company hangar while the aircraft is taxiing on a Sumburgh apron; shattered pieces cause damage to adjacent buildings and another Sikorsky.

Late in the year, BAH completes a six-month transfer of its headquarters and engineering facility from London (LGW) to Aberdeen (Dyce Airport).

The fleet in 1986 includes 4 Boeing Vertol Model 234s, 17 S-61Ns, 4 S-76s, 3 AS-332Ls, and 3 chartered Westland 30s. During the first quarter, the company loses out to **Bond Helicopters, Ltd.** on the award of a \$16.8-million contract for support of Total Oil Marine Engineering and Construction in the North Alwyn oil field. At this point, Managing Director Garton is succeeded by his assistant, Graham-Cloete.

In April, the Shell Expro contract is regained from **Bristow Helicopters, Ltd.** Three of the company's Civil Chinooks, in 25 weekday morning and afternoon services, fly from Aberdeen to the Brent, Dunlin, Cormorant, Fulmar, and Auk fields. During the month, former **Bond Helicopters, Ltd.** Scottish Operations Chief Capt. C. H. "Kit" Chambers becomes BAH's general manager in Scotland and is charged with boosting the carrier's North Sea presence.

In May, BA, wishing to exit the rotary-wing business before privatization, negotiates with Martyn Meade of London-based Coln Valley Investments, Ltd. to take it over. Any arrangement would see the venture capitalists acquire 70% shareholding, with 19.9% left to the airline and 10.1% to its employees. Dissatisfaction with this move at the airline and in Parliament lead to plans for a management buyout. In June, Robert Maxwell, publisher of the Mirror Newspaper Group, makes a \$33-million bid to BA for its helicopter subsidiary, which now eliminates Meade's proposal and considers only the Maxwell and management plans.

Falling North Sea oil prices in June, together with the company's uncertainty, cause the planned lease of a Civil Chinook from **Columbia Helicopters** to be placed on hold. Still, a Britoil Clyde support project is begun during the month employing Chinooks and Super Pumas. Simultaneously, a \$4.3-million contract is obtained from Total Oil Marine to provide an S-61N and an AS-332L in its support for two years. In addition, the Super Puma contract for support of BP's Magnus Field is renewed for two years.

In July, **British Airways, Ltd. (2)** sells its 550-employee helicopter subsidiary to a new company. **British International Helicopters, Ltd. (BIH)** is jointly owned by British publisher Robert Maxwell and two of his Scottish newspapers, the *Scottish Daily Record* and the *Sunday Mail, Ltd.*, following a vote of approval by the National Joint Council's union members. SDR Helicopter Plc. completes the takeover on September 26. At this point, it is reported that bookings for the year total 73,900.

BRITISH AIRWAYS REGIONAL, LTD.: United Kingdom (1992-1996). BAR is formed by **British Airways, Ltd. (2)** in late March 1992 to take over the major's regional unprofitable services operated out of the Manchester and Birmingham hubs, as well as those operated in Scotland by the subsidiary **British Airways (Scotland), Ltd.** Ian Reid is

named general manager and, although none of the 1,000 employees are laid off, direct annual employee costs are ordered reduced by £8.25 million.

A number of revenue services are inaugurated over previous routes on April 1. Four hundred weekly flights emanate from Birmingham to 17 cities with 13 British Aerospace BAe (BAC) 1-11s; 100-per-day in Scotland with 8 BAe ATPs (including 4 returned from Berlin) and 8 BAe (HS) 748-B2s; and 2, 70-per-week flights from Manchester to 20 destinations with 10 BAC 1-11s. Among the most popular of routes is that from London (LHR) to Inverness, which is operated thrice daily.

Unhappily for BA planners, the carrier's Manchester and Birmingham unionized cabin crews threaten to strike over the reorganization, holding up full implementation. In September, it is announced that the parent is considering the subsidiary's sale or closure; however, development of the carrier proceeds following an October accord with the attendants.

When **Dan Air, Ltd.** goes under at year's end, BA acquires its assets and routes out of London (LGW), turning them over to this division. The airline's statistics are reported as part of its parent's.

Airline employment in 1993 stands at 1,000. Several of the 11 Boeing 767-336ERs delivered to BA are leased to BAR during the first quarter and are employed, beginning on March 28, to offer flights from Manchester and Glasgow to New York and from Manchester to Los Angeles. Beginning with **CityFlyer Express, Ltd.** on July 1, BA enters into a series of "British Airways Express" franchise contracts with independent regional carriers. These companies, which will receive access to BA's computerized reservations system, marketing, frequent flyer, ticketing, airport and passenger services, will paint their aircraft in modified BA livery and begin to take over the domestic and regional services flown by British Airways Regional. Enplanements for the year total 1,533,926.

George Cooper is managing director in 1994 and the owned fleet includes 13 BAe ATPs; a 14th ATP will be delivered in July. During the year, a total of 22 B-737s are leased from **British Airways, Ltd. (2).**

On March 28, the regional carrier **Loganair, Ltd.** is detailed by its owner, Airlines of Britain, plc, to concentrate exclusively on Scottish service to the Orkney and Shetland Islands as a "British Airways Express" carrier. Retaining only its Pilatus Britten-Norman PBN-2 Islanders and a de Havilland Canada DHC-6-300 Twin Otter, it transfers 21 routes plus all of its ATPs and J-41s to **Manx Airlines, Ltd. (2)**, which now establishes a Jetstream 41 base at Southampton. Manx starts 36 new services of its own and becomes the largest regional airline in the U.K. Henceforth, all BAR traffic statistics will be reported with those of its parent.

On January 9, 1995, the Airlines of Britain, plc., Manx Airlines (Holdings) subsidiary is renamed British Regional Airlines (Holdings) and the airline operating subsidiary of Manx Airlines, Ltd. is divided into two separate divisions: **Manx Airlines, Ltd. (2)** and **Manx Airlines (Europe), Ltd.** The latter becomes a **British Airways, Ltd. (2)** franchise partner and flies BAe Jetstream 41s, ATPs, and 2 BAe 146-200s in "British Airways Express" livery. **Manx Airlines, Ltd. (2)** will operate all of the routes to and from the Isle of Man while **Manx Airlines (Europe), Ltd.** will fly the remainder, including those from Southampton, Cardiff, Belfast, and Manchester to Brussels, Rotterdam, and Paris. In addition, the regional carrier receives access to BA marketing, frequent flyer program, and airport service support.

On February 1, **GB Airways, Ltd.** becomes the sixth BA franchise partner. British Airways Regional, meanwhile, continues to soldier on, losing significant funding in competition with the AofB carriers.

Late in January 1996, **Manx Airlines, Ltd. (2)** takes over management control of the "British Airways Express" carrier **Loganair, Ltd.** In April, Aberdeen-based **Business Air, Ltd.** becomes the property of Airlines of Britain, plc. Its addition allows Sir Michael Bishop's group to blanket the U.K. with regional services, in addition to the international flights provided by BMA. The entrepreneur's success will soon bring a response from the nation's former state carrier. In May, **Sun Air of Scandinavia, A.S.** becomes the first BA franchise partner from outside of the U.K. The following month, a franchise agreement is reached with **Comair (Pty.), Ltd.** of South Africa.

In August, **British Airways, Ltd. (2)** announces that, two months hence, it will withdraw from its unprofitable Scottish internal services, including six routes serving Orkney, Shetland, and the Western Islands. A month later, British Regional Airlines (Holdings) in September changes the name of **Manx Airlines (Europe), Ltd.** to **British Regional Airlines, Ltd.**

Plans are announced for the new BRA to take over the previous British Airways Regional, Ltd. services at the end of October as a BA franchise partner. Under terms of this agreement, BRA will enjoy all of the benefits of franchise partnership, including dual designator flights, reservations, frequent flyer linkage, and passenger and airport services. Meanwhile, **Loganair, Ltd.** operations are incorporated into BRA. **Manx Airlines, Ltd. (2)** continues separate operations.

This arrangement, together with the rise of the franchise program, causes **British Airways, Ltd. (2)** to merge the BAR unit into itself and to employ its resources from London (LGW) to offer additional direct connections and short-haul Continental services. Activities involving the carriers in the British Regional Airlines Group are largely reported below under their respective names.

BRITISH AMPHIBIOUS AIR LINES, LTD.: United Kingdom (1932–1933). Two gentlemen named Kirston and Mace form British Amphibious Air Lines, Ltd., on February 22, 1932, to offer port city flying boat services; initial capitalization is £3,500 and the first aircraft is a Saunders-Roe Cutty Sark christened *Progress*. In March, irregular flights are started Blackpool to the Isle of Man. In cooperation with the bus operator W. Armitage and Sons, Ltd., regular services are offered from June 3–September 30, during which 348 passengers are transported over 8,920 unduplicated miles.

The *Progress* resumes Blackpool–Isle of Man service June–October 1933. Finances force the company out of business at the end of the season.

BRITISH CALEDONIAN AIRWAYS, LTD. (BCAL): United Kingdom (1971–1987). On April 1, 1969 the British government's civil aviation industry study, chaired by Sir Ronald Edwards, is published. The *Edwards Report* calls for the creation of a Second Force carrier, large enough to offer various services but not large enough to challenge **British European Airways Corporation (BEA)** or **British Overseas Airways Corporation (BOAC)**, which many interpret as **Caledonian Airways, Ltd.**, now Britain's largest independent.

Following parliamentary debate and various negotiations, the larger **British United Airways, Ltd. (BUA)** is acquired for £6.9 million by **Caledonian Airways, Ltd.** on November 30, 1970, the amalgamating carrier being known as **Caledonian/BUA Ltd.** With the assimilation of BUA fully completed, the name British Caledonian Airways, Ltd. and a new livery are adopted in September 1971. The BAC 1-11s of the merger partners form the backbone of the fleet, most of which are now named after Scottish locations.

In October, the BAC 1-11-201 *City of Edinburgh* is sold to the Ministry of Defence (Aviation) for use by the Blind Landing Experimental Unit at Bedford.

Adam Thomson remains chairman/CEO, with former **British European Airways Corporation (BEA)** Managing Director Sir Peter Masefield as deputy chairman. Shareholders in the new entrant include Bland Payne, Lyle Shipping, Proprietary Finance, Hogarth Shipping, Royal Bank Development, Industrial and Commercial Finance Corporation, Norwich Union, Midland Bank, General Accident Insurance, the Automobile Association, and Refuge Insurance. Associated companies include British Caledonian Aircraft Trading, Ltd., Caledonian Airways (Prestwick), Ltd., and the four travel agencies that make up British Caledonian Travel Holdings, Ltd.

Affinity group charters continue and a new wet-lease arrangement is entered into with **Saber Air, Ltd.** The company provides the Singapore-based airline with a B-707-399C, which takes over the Singapore–London charters previously operated in association with the U.S. supplemental carrier **Overseas National Airways**. On October 7, the Boeing 707-399C

Flagship Bonnie Scotland moves from London (LGW) to Cardiff and from there launches the company's first transatlantic charter to New York via Keflavik from Wales. Scheduled London (LGW)–Paris flights commence on November 1. Enplanements are 2,558,000.

While on a ferry flight, a VC10, with four crew is severely damaged in a bad landing at London (LGW) on January 28, 1972; there are no fatalities.

Planning for scheduled North Atlantic service is undertaken as the British government on February 18 grants licenses to the company for both New York and Los Angeles service. Daedalus Travel, of New York, involved in the plight of more than 100 American travelers stranded at London (LGW), reports on August 29 that it cannot provide transportation home, but will pay refunds.

The next day, the British Airport Authority informs the travelers that arrangements have been completed between Wimpy International, Ltd., a London travel agency, and British Caledonian for their free passage back to New York.

Nine additional regional sales centers are opened, including one in the U.S.

During the year, new Interjet BAC 1-11-201 services are introduced from Southampton and Newcastle to Glasgow. A BAC 1-11-515, leased from its manufacturer while the BAC 1-11-501 *Isle of Barra* is under repair, is returned on October 18.

On November 1, the *Isle of Barra* initiates scheduled Edinburgh–Copenhagen service via Newcastle. Later in the month, the remaining Vickers VC10s are withdrawn from the ex-**British United Airways, Ltd.** South American routes and replaced with Boeing 707-399Cs. Also in November, a deep-discount agreement is signed with **Cathay Pacific Airways (Pty.), Ltd.**

The workforce is increased to 5,478 while passenger boardings accelerate 2% to 2.6 million. The fleet at year's end includes 8 Boeing 707-399Cs, 3 Vickers VC10s, 13 BAC 1-11-500s, and 7 BAC 1-11-200s.

Flying on behalf of the Singapore charter airline **Saber Air, Ltd.**, British Caledonian begins daily flights to Singapore on January 1, 1973. Deep-discount service is inaugurated, in association with **Cathay Pacific Airways (Pty.), Ltd.**, from London to Perth via Hong Kong, Singapore, or Jakarta.

A former **Court Line, Ltd.** BAC 1-11-518 is purchased on March 15 and is christened *Isle of Hoy*. Sold out of service in early 1971, the BAC 1-11-201 *City of Edinburgh* is finally delivered to the RAF on March 26.

Scheduled North Atlantic service is launched aboard the B-707-399C *Flagship Bonnie Scotland* on April 1, with a variety of dignitaries, including Earl Mountbatten; unfortunately, the flight is diverted to Boston by bad weather. The carrier is the first British independent to operate scheduled flights to New York. An initial frequency of 12 weekly flights to the U.S. is laid on, including daily London (LGW) to New York (JFK) flights and five-times-per-week London (LGW)–Los Angeles (LAX) carriage, over the North Pole.

During April–May, 1 VC10 and 2 B-707-399Cs, including the *Flagship Bonnie Scotland*, are sold; the B-707-349C *County of Angus* is renamed *Flagship Bonnie Scotland*. BAC 1-11-201s/501s introduce Interjet services from Glasgow and Newcastle to Amsterdam. They also fly to Paris (Le Bourget) and take over the Gatwick to Le Touquet segment of the London–Paris air coach service known as Silver Arrow.

The old **British United Airways, Ltd.** BAC 1-11-201 Interjet route from London (LGW) to Belfast, Edinburgh, and Glasgow is expanded to Manchester on November 1; it is flown by Handley Page Herald's leased from **British Island Airways, Ltd.** In December, the Argentine carrier **Austral Airlines, S.A.** charters the BAC 1-11-509 *Isle of Iona* for three months.

Airline employment during the year is 5,530. As concentration on long-haul scheduled service increases, the carrier's commitment to charter and inclusive-tour work is reduced, contributing to a 10% dip in passenger bookings to 2,340,000 and a net loss of £1.5 million.

A BAC 1-11-530 is chartered to **Transbrasil, S.A. (Linha Aereas)** in February 1974. On March 20, a leased Herald arrives at

Paris (CDG) and British Caledonian becomes the first British airline to fly into that new French airport. The London intercity hub and spoke routes are adjusted again on June 4, as 19-times-per-week BAC 1-11 service is simultaneously started to Brussels. Back from Brazil in December, the BAC 1-11-530 is immediately leased to **Air Malawi, Ltd.**

A stabilization program is adopted. North Atlantic scheduled service to New York is ended on October 31, due to lack of traffic (only 96,000 passengers have been transported) and increased jet fuel costs, and operations on some short-haul routes are suspended or transferred (e.g., the Brussels route is given to **British Midland Airways, Ltd.**). Five BAC 1-11-509s are grounded and two VC10s are sold in October–November; the number of employees is reduced by 15% to 4,675. Simultaneously, service is extended to Dakar, a record Hadj traffic is recorded, and London–Brazil frequencies are stepped up.

Losses due to changes in service orientation are larger than expected; passenger boardings fall 25% to 1,915,000, although freight is up 23%.

Cost-cutting efforts continue in 1975 and increased emphasis is placed on nonscheduled cargo operations, to which 4 B-707-399Cs are fully dedicated. On May 1, a route is opened from London (LGW) to Kinshasa via Lagos. Three 1-11s are sold in October–November, including the Dash-509 *Isle of Ionna* and Dash-501 *Isle of Staffa* to **Austral Airlines, S.A.** The Dash-509 *Isle of Eriskay* is leased to **Monarch Airlines, Ltd.**, which will purchase the aircraft on November 14.

Following the British government's civil aviation review and realignment of the route networks of its international airlines, BCA's long-haul network will change significantly. At year's end, the workforce is 4,930. Passenger boardings drop 16% to 1,603,000, but cargo is up a healthy 37% to 226.05 million FTKs flown.

In early 1976, the BAC 1-11-509 *Flagship Isle of Skye* and BAC 1-11-501 *Isle of Arran* are sold to **Dan Air, Ltd./Dan Air Services**. British Caledonian, recertified as a national flag carrier, becomes the sole U.K. flag airline to West and Central Africa and to all of South America, except Guyana; service to East Africa is terminated. Flights from London to Bogota, Caracas, Tunis, and Algiers are inaugurated in October. During the fourth quarter, the BAC 1-11-501 *Isle of Mingulay* is sold to **Philippine Air Lines (PAL)**.

Charter flights comprise 52% of business, but will fall off henceforth. During the year, employment is increased 3% to 5,068. Orders are placed for 2 DC-10-30s.

Passenger boardings move upward 15% to 1,846,172 and a pretax profit of £6 million is earned.

The carrier's first Douglas DC-10-30, which had originally been ordered by **China Air Lines, Ltd. (CAL)** but not taken, arrives in March 1977 and is christened *Robert Burns: The Scottish Bard*. It enters long-haul service on the West African routes in April. A new DC-10-30 charter service to New York is launched in May.

A B-747-148 is chartered from **Aer Lingus Irish Airlines, Ltd.** and is employed to inaugurate a service from London (LGW) to Houston on October 23.

The carrier also undertakes three all-cargo runs: Africargo (London–Tripoli), WestAfriCargo (London–Lagos–Kano), and Texicargo (London and Prestwick–Houston). The BAC 1-11-501 *Isle of Islay* is leased to **Air Malawi, Ltd.** between December 3 and 17.

Although passenger boardings dip 3.5%, operating revenues still exceed \$250 million. Airline employment stands at 5,500. Chairman/CEO Adam Thomson possesses a fleet comprising 2 DC-10-30s, 9 B-707-399Cs, 9 BAC 1-11-50s, 7 BAC 1-11-200s, and 2 Piper PA-31-350 Navajo Chieftains.

The newly opened London–Houston route becomes the carrier's star performer in 1978, with enplanements on that one service reaching 67,000 (20,000 forecast), generating revenues of \$22 million. Domestically, London (LGW) to Birmingham Piper PA-31-350 Navajo Chieftain flights are started as is a Sikorsky S-61N helicopter Airlink operation between London's airports (LHR and LGW) in cooperation with **British Airways, Ltd. (2)**.

Long-haul service is inaugurated to Abidjan and Benghazi and Alistair Pugh is appointed Managing Director.

Passenger traffic falls 3.5% to 1,890,125, but overall cargo carriage rises 10.7% over 1977. An 18% jump in total revenues is recorded to \$296.4 million.

The number of workers is decreased by 1.2% in 1979 to 6,136 and the Boeing 747-148 leased from **Aer Lingus Irish Airlines, Ltd.** is returned and replaced with a third DC-10-30. Service is launched to Ecuador and Algeria. A new DC-10 engineering center is commissioned and construction of a new headquarters building is started. Three Airbus Industrie A-310s are ordered with options for three more. Following the acquisition of **Ferranti Helicopters, Ltd.**, a new subsidiary, **BCAL Helicopters, Ltd.**, is formed to operate in the North Sea area.

Weekly cargo service between London and Atlanta begins on September 24. In October, the BAC 1-11-524 *Isle of Raasay* is chartered to **Air Malawi, Ltd.** A license is received in November from the Hong Kong Air Transport Licensing Board (ATLB) for four-times-per-week services between London and Hong Kong.

Passenger boardings rise 10.5% to 2.1 million, but freight traffic slips by 2.6% to 229 million FTKs. Still, the company banks a \$10-million net profit. The fleet at decade's end includes 4 DC-10-30s, 7 B-707-320Cs, 16 BAC 1-11s, 1 Navajo Chieftain, and 2 S-61Ns. A \$10-million profit is posted.

Airline employment in 1980 stands at 6,511, a gain of 6.1%. Following protracted hearings that end on February 8, the carrier is granted permission by the Civil Aviation Authority to inaugurate its new Hong Kong frequencies. The *Isle of Raasay* returns from Malawi in April and is immediately leased to **British Airways, Ltd. (2)** for its regional network.

Beginning on June 1, service is launched from London to the three U.S. destinations of Atlanta, St. Louis, and Dallas (DFW). The aircraft employed on the London to St. Louis and Dallas (DFW) route is the DC-10-30 *James S. McDonnell—The Scottish American Aviation Pioneer*, named in honor of the cofounder of the aircraft builder McDonnell Douglas.

On June 17, the U.K. Secretary of State grants permission for **Laker Airways, Ltd.** to join BCAL and Cathay in offering unrestricted services to Hong Kong. Four-times-per-week DC-10-30 flights are inaugurated by BCAL on August 1, with the company dramatically unveiling a \$120 stand-by fare. Between August 14 and October 18, a BAC 1-11-524 is chartered from its manufacturer.

Cargo traffic rises 9.1%, but overall passenger boardings decline .05% to just over 2 million. DC-10-30 enplanements account for 55% of British Caledonian capacity as the percentage of charter traffic declines to only 12% of business. Revenues surge 35.8% to \$510 million, but expenses are up 36.6% to \$483 million; an operating profit of \$26.8 million is earned, but the net profit declines to \$7 million.

The number of employees is increased a slim 1.9% in 1981 to 6,344. The new DC-10-30 *Flora McDonald* joins the fleet and, by June, all 7 of the BAC 1-11-201s have been sold and delivered to **Pacific Express**. The former **Bavaria Fluggesellschaft mbH. & Co.** BAC 1-11-528s *Jakob Fugger* and *Albrecht Durer* are purchased on October 29.

Despite success on the London–Hong Kong route, the carrier joins many others in suffering severe financial distress, particularly over the North Atlantic route, as expenses exceed income.

Passenger traffic jumps 6.5% to 2,255,825 and freight soars 25.3% to 310.76 million FTKs. Total revenues rise 20.1% to \$612.4 million, but expenses shoot up 25% to \$604.2 million, sending operating income down to \$8.2 million and leaving the airline with an \$11.85-million net loss.

The workforce grows again, slightly, in 1982, up 1.4% to 6,462. A BAC 1-11-515 is acquired from **Dan Air, Ltd./Dan Air Services** on March 1 and is christened *City of Glasgow*. Purchased from the wreckage of **Laker Airways, Ltd.** during the first quarter, 4 BAC 1-11-301s arrive at the carrier's base during the first week of April. The carrier also buys a BAC 1-11-523 from **Faucett Peruvian Airlines, S.A.**

Due to the Falklands War between early April and June, service ceases to both Argentina and Chile and terminates in South America at São Paulo, Brazil.

With the arrival of its first owned Jumbojet, a B-747-230B christened *Mungo Park: The Scottish Explorer*, on April 15, a new service can be started from London (LGW) to Lagos on May 1. A new route is opened to Los Angeles on May 21.

On the domestic front, a new subsidiary, **British Caledonian Commuters, Ltd.**, is established to offer regional feeder links into the company's hub airports. Operated in a fashion similar to that of the "Allegheny Commuter" network in the U.S., BCAL coordinates schedules with several small contracted airlines, including **Brymon Airways, Ltd.**, **Connectair, Ltd.**, **Guernsey Airlines, Ltd.**, **Jersey European Airlines, Ltd.**, and **Metropolitan Airways, Ltd.**

Aircraft from all of the participating airlines carry a BCC logo and bookings for 23 destinations can be made through travel agents or BCAL London offices (or those it maintains throughout the world). The commuters carry their own costs of doing business, but BCAL now promotes the new network through its marketing organization and issues a joint timetable.

Following its acceptance of a contract from **British Airways, Ltd. (2)** in October, the carrier's longtime advertising firm Saatchi & Saatchi resigns its BCAL account in early November.

The U.K.'s largest independent airline suffers a reversal that is attributed directly to losses on South American routes.

While freight falls 17% to 259 million FTKs, enplanements rise 19% to 2,683,498. British Caledonian suffers a loss of just under \$1 million on total revenues of \$521 million.

For the first time since the early 1970s, the carrier embarks upon a significant return to the charter field in 1983. In a fifty-fifty partnership with the Rank Organization, a new subsidiary, **BCAL Charters, Ltd.**, begins operations in March. With 2 dedicated DC-10-30s, holiday flights are begun to resorts in Europe, the Mediterranean, Africa, and the Canary Islands.

British Caledonian becomes the first U.K. carrier to order the Airbus Industrie A-320; 7 are to be delivered in 1988. In September, the 4 former **Laker Airways, Ltd.** BAC 1-11-301s are sold to the new Nigerian carrier, **Okada Air, Ltd.**

Freight traffic grows 8% to 280.89 million FTKs, but overall passenger boardings decline 17% to 2.2 million. Still, with the Falklands conflict settled, revenues increase \$21 million to \$522 and a net profit of \$3.5 million is recorded.

Airline employment in 1984 stands at 6,747. Previously operated by **Faucett Peruvian Airlines, S.A.**, a BAC 1-11-523, refurbished by its manufacturer, is placed into service during the first quarter.

On July 16, British Civil Aviation Authority white paper report *CAP 500* is issued; it recommends the transfer of **British Airways, Ltd. (2)**'s Saudi Arabian routes to Second Force independent and BCAL's South American network to the state airline.

The first 2 A310-200s are delivered late in the year at a time when the carrier suspends its London to St. Louis service.

An arrangement is made with **Ozark Air Lines** for the American national to feed passengers to the British independent at Atlanta. During early fall, BCAL budgets £300,000 for an advertising and promotional campaign on behalf of the British Caledonian Commuter network. When underway, this "road show" is complete with colored lights and dancing girls and visits 10 British cities to show off the commuter network to travel agents and business managers.

Overall enplanements rise 3.9% to 2,319,616, while freight is up 17.1% to 328.9 million FTKs. Revenues climb 14.6% to \$453.3 million, and earnings total \$23.1 million—the highest net profit since 1970.

The payroll shoots upward by 13.1% in 1985 to 7,628.

To promote a new New York to London service, the carrier initiates a \$5.5-million advertising campaign on February 15. A new \$103-million financing package allows the company to acquire a DC-10-30 from **Ar-**

iana Afghan Airlines and, on March 18, the B-747-2D3BC *Princess Haya* from **Alia Royal Jordanian Airlines**. Direct A310 London–Riyadh service begins on March 31 and daily nonstop flights from London (LGW) are resumed to New York (JFK) with the ex-Ariana Douglas wide-body on May 1.

Also in May, Managing Director Alistair Pugh becomes executive vice president while Chief Operating Officer David Coltman succeeds him as managing director. This switch coincides with the consummation of the huge route swap initiated by the CAA the previous July.

In June, the former **Alia Royal Jordanian Airlines** Jumbojet, now known as the *Andrew Carnegie: The Scottish-American Philanthropist*, replaces the DC-10-30 on the New York route, with the latter being transferred to the Africa service. **Air Zaire, S.A.**'s DC-10-30 is acquired in June.

The number of employees jumps 13.1% to 7,628 and the fleet now includes 27 aircraft: 2 B-747-200s, 10 DC-10-30s, 13 BAC 1-11-500s, and 2 A310-200s, with orders outstanding for 2 more Jumbojets and 7 A320s.

Passenger boardings increase 6% to 2.45 million and cargo is up 8% to 354.39 million FTKs. Total revenues jump 17.2% to \$700 million, sending net gain up to a new record of \$31.3 million.

On January 23, 1986 the British government grants authority for initiation of Tokyo service, but in late spring, it disallows the Gatwick–Heathrow helicopter Airlink. It will be a year before the Japan service can be launched.

Because terrorism has made Americans afraid to travel to Europe and has forced down the carrier's U.S. bookings by 40%, the airline is forced to announce, on May 15, that it will lay off 1,000 of its 7,750 employees. Also in May, the first B-737-300 EFIS simulator in the U.K. is delivered by Rediffusion Simulation to the company's flight training center at Gatwick Airport.

The workforce downsizing occurs in June, while 3 DC-10-30s begin thrice-weekly one-stop London–Hong Kong service. To advertise its "Door to Door" transatlantic service, the airline later in the month kicks off a special eight-week, \$230,000 series of four-per-day sight-seeing flights over London by an Airship Industries Skyship 500. Costs to passengers will be \$153 each, although the first aboard, U.K. Minister of Aviation Sir Michael Spicer flies free.

In July, an A310-200, leased earlier to **Service Airways (Pty.), Ltd.** of Hong Kong, disappears from Amman before it can be impounded in a legal dispute. In the same month, flights to Libya cease. During the summer, construction is begun on a new first-class lounge at Gatwick Airport. In September, Priority Plus small package express service is launched to London from the North American gateways of New York (JFK), Atlanta, Houston, Los Angeles, and Dallas (DFW).

On October 1, the former **Wardair Canada, Ltd.** B-747-211B *Herbert Hollick-Kenyon* is purchased; it is employed on a Hong Kong service beginning in November. British Caledonian receives CAA approval to launch Gaborone service, also in November, and joins **Sabena (Belgian World Airlines, S.A.)** in starting a joint daily Brussels–London–Atlanta route employing a Belgian B-747-129 with a Sabena crew.

On December 3, BCAL becomes initial launch customer for the McDonnell Douglas MD-11, successor to the DC-10, as it places an order for 3 aircraft with 6 options.

Fear of terrorism causes a significant passenger decline for the year; bookings fall by 3% to 2,383,000; freight, however, is up by 17% to 414.36 million FTKs. Revenues fall 3% to \$753 million and a \$40-million operating loss is suffered.

Airline employment falls 4% in 1987 to 7,000. The former **Wardair Canada, Ltd.** B-747-211B *H. A. "Doc" Oaks* is purchased on March 7 and is employed to inaugurate nonstop London–Tokyo flights on April 1; the new route is the operational highlight of the year. Continuing to lose money, the nation's largest independent becomes a takeover target for various rival carriers and negotiations are held with several. On September 10, the former **Royal Jordanian Airlines** B-747-2D3B *Prince Hamzah* is acquired.

Through November, a total of 2,530,000 passengers are flown, a 15% increase; freight also rises, up 12% to 424.23 million FTKs. In December, the historic competitor, **British Airways, Ltd. (2)**, becomes the successful suitor and acquires BCAL for \$450 million. The MD-11 order is immediately cancelled.

Integration of the two carriers is completed in 1988, including the merger of BCAL Charters, Ltd. with **British Air Tours, Ltd.** to form the new holiday airline **Caledonian Airways, Ltd. (2)**.

Two years later, in 1990, Adam Thomson publishes his recollections of BCAL, *High Risk: The Politics of the Air* (London, Eng.: Sidgwick & Jackson). There is an unofficial website at <http://members.aol.com/cvswitch/blueskies/Default.htm>.

BRITISH CALEDONIAN COMMUTERS. See **BRITISH CALEDONIAN AIRWAYS, LTD.**

BRITISH CALEDONIAN HELICOPTERS, LTD. (BCHL): United Kingdom (1979–1987). Ferranti Helicopters, Ltd., is purchased by **British Caledonian Airways, Ltd. (BCAL)** in the spring of 1979 and is reorganized as a Caledonian group subsidiary to provide charter contract services in the North Sea area. The fleet grows to include 2 Sikorsky S-61Ns, 1 S-76, and 3 Bell 214STs. The former machines begin participation in the new Airlink shuttle between Gatwick and Heathrow Airports, begun in cooperation with the British Airports Authority on June 9, 1978.

Operations continue apace in 1980–1982 with ten daily 15-min. roundtrips connecting the international airports. Enplanements in 1981 total 86,481, declining to 81,029 in 1982.

During the summer of 1983, the company wins permission to begin flying a Bell 214ST from Aberdeen to a pipe-laying barge north of Stavanger in a gas field operated by Elf Aquitaine Norge, A.S. **Helikopter Service A.S.**, Norway's largest rotary-wing carrier, voices opposition to the contract before U.K. and Norwegian regulatory officials. In October, BCHL Helicopters elects to abandon its contract, which is reassigned to HS.

Operations continue apace in 1984. After losing a main-rotor drag brace, a company Bell 214ST makes an emergency landing in a field north of Aberdeen Airport in Scotland on August 14, 1985; none of the crew or 16 passengers are injured. On November 5, a Bell 214ST, flying from Aberdeen participates in the rescue of 140 men from the storm-damaged BP oil-rig support vessel *Tharos* in the North Sea. The company machine saves 62 crew.

The Airlink airport shuttle ends in February 1986 following the completion of the new M25 motor highway linking the Gatwick and Heathrow facilities. Still, the Civil Aviation Authority (CAA) recommends that the Airlink be maintained and BCHL, in response to earlier noise complaints, refurbishes a Sikorsky and makes plans to operate the service on a new route structure at higher altitudes. The CAA recommendation is rejected by the secretary of state for transport and the service is not resumed; since its beginning, Airlink has transported 600,000 passengers and generated \$140 million in revenues.

Despite the end of Airlink, North Sea operations continue, on a somewhat reduced basis, as the price of world oil declines. The company's fleet of 4 Bell 214STs complete achievement of a record 656 flight hours on May 1. However, on May 15, one of these machines, with 18 aboard, loses collective control and is forced to ditch near the Magnus field, 16 nm. north of Fraserburgh on the Scottish coast. On the bright side, no one is hurt in only the second completely successful North Sea ditching on record.

In July–August, 19 employees, mostly pilots and engineers, are laid off; BCHL becomes the first North Sea operator to actually dismiss workers due to the deflated offshore oil market. The subsidiary is among the assets passed along when BCAL is purchased by **British Airways, Ltd. (2)** on November 11, 1987. Less than a month later, BCHL, together with its 4 Bell 214STs, 3 S-61Ns, and 1 S-76, is purchased by **Bristow Helicopters, Ltd.** and merged.

BRITISH COMMONWEALTH PACIFIC AIR LINES (BCPAL): Australia/New Zealand/United Kingdom (1946–1954). Formed to offer long-haul service from Australia and New Zealand to the United States and Canada, BCPAL is registered at Sydney on June 24, 1946. Capitalized at £1 million, shareholding is divided between the governments of Australia (50%), New Zealand (30%), and the United Kingdom (20%); Sir Arthur Coles is named chairman. The company initially owns no aircraft, but instead contracts with ANA (**Australian National Airlines [Pty.], Ltd.**) for use of the Australian carrier's DC-4s.

Painted in BCPAL livery, the ANA-owned and piloted DC-4 *Warana* inaugurates every-two-week service on September 15, flying the 8,383 nm. from Sydney to Vancouver via Fiji, Canton Island, Honolulu and Oakland, serving San Francisco (the latter two destinations being transit stops only). The Skymaster arrives at Vancouver's Sea Island Airport to an enthusiastic welcome by over 1,000 people on September 18.

The Vancouver service becomes weekly on February 21, 1947; Oakland, serving San Francisco, landing rights are obtained later in the year. Flights from New Zealand to Vancouver via the U.S. are inaugurated on April 25. ANA's contract is terminated on April 21, 1948, at which point the long-distance carrier takes over the service with its two DC-4s purchased from ANA and another chartered for a year from **Trans-Australian Airlines (Pty.), Ltd.**

Capt. A. A. Barlow is named the company's first non-seconded general manager, with Capt. John Bennett as operations manager. Given competition from **Pan American Airways (PAA)**, plans are made, beginning in August, to upgrade the aircraft fleet. When 4 DC-6s ordered by **SAS (Scandinavian Airlines System)** become available at Santa Monica they are quickly purchased by Chairman Coles. All are ferried down to Australia by the end of December and are christened *Resolution*, *Endeavour*, *Adventure*, and *Discovery*.

The *Discovery* is the first of the new DC-6s to enter service, flying out from Auckland to San Francisco via Fiji, Canton, and Honolulu, on February 16, 1949. As the other 3 DC-6s commence operations, the DC-4s are retired.

In the 12 months between July 1950 and July 1951, BCPAL carries twice as many transpacific passengers as **Pan American World Airways (1)**. **Qantas Empire Airways (Pty.), Ltd.** Chairman Hudson Fysh pens a memorandum in November suggesting that his carrier take over and merge BCPAL.

In January 1952, orders (never filled) are placed for 6 de Havilland DH 106 Comet 2s. On October 14, 1953, the decision is taken to reorganize the tripartite arrangement when the U.K. announces its withdrawal from the consortium.

Just after departing San Francisco for Honolulu's John Rogers Airport on October 28 with 8 crew and 11 passengers, including world famous pianist William Kapell, the *Resolution* crashes into Kings Mountain at the 1,950-ft. level, 7.5 mi. SE of Half Moon Bay, California; there are no survivors. Edward Davies reviews "The Mystery of Flight 304: BCPAL DC-6 Crash," in *Propliner*, no. 51 (Summer 1992): 36–40.

At this point, there is no turning back from BCPAL's liquidation. Its transpacific routes are given to **Qantas Empire Airways (Pty.), Ltd.** on April 1, 1954; the Australian long-haul operator formally merges its onetime rival on May 15, taking on BCPAL's 260 employees and passing its 3 remaining DC-6s to **Tasman Empire Airways, Ltd.**

BRITISH CONTINENTAL AIRWAYS, LTD.: United Kingdom (1935–1936). Capitalized initially at £25,000 by its owner, Sir Percy MacKinnon, chairman of Lloyds of London, and his son Graham, BCA is registered at London on April 15, 1935. The fleet comprises 1 de Havilland DH 84 Dragon, 5 DH 86s, and 3 DH 89A Dragon Rapides. Thrice-daily London (Croydon)–Oste–Le Zoute service is inaugurated on July 2, with weekend extensions to Brussels. The Le Zoute route is closed on September 28; however, regular flights to Brussels via Lille are initiated in October. Daily London–Amsterdam via Antwerp flights begin on November 1.

On February 7, 1936, the DH 86 *St. George* undertakes a London–Malmö via Amsterdam, Hamburg, and Copenhagen demonstration flight, returning the next day. Regular service over the route begins later in the month. With **British Airways, Ltd. (1)** having received the government subsidy to operate flights to Scandinavia, BCA is unable to receive assistance. Indeed, the SSA on May 13 actually suggests that the MacKinnons seek a merger with BA-1.

On July 1, the Malmö route is extended (summer only) to Stockholm. In pool with **KLM (Royal Dutch Airlines, N.V.)**, Liverpool–Doncaster–Amsterdam operations commence the same day.

Like several of the other independent British carriers of the mid-1930s, BCA, without government support, encounters fiscal difficulties when the four national railroads, which are running their own airline, attempt to stifle competition by enforcing a bookings ban on travel agents. As a result, the carrier, its routes, and equipment, are purchased by **British Airways, Ltd. (1)** and merged on August 1. The MacKinnons receive seats on the BA-1 board, which they will occupy for a year.

BRITISH EAGLE INTERNATIONAL AIRWAYS, LTD. (BEIA): United Kingdom (1963–1968). Harold Bamberg purchases 60% majority shareholding in **Cunard-Eagle Airways, Ltd.** in February 14, 1963. Additional regional routes are added and the company is granted permission to begin serving Scotland's two largest cities in competition with **British European Airways Corporation (BEA)**—the first independent to be so allowed. The two Viscount 707s purchased in 1960 are sold in July. In order to demonstrate his control and interest in regional achievement, Bamberg renames the company **British Eagle International Airways, Ltd.** on August 9.

A Bristol Britannia 312 is purchased in September; christened *Enterprise* and following an October 22 proving flight, it inaugurates London (LHR) to Glasgow (Renfrew) weekday service on November 3. The following day, the *Enterprise* begins weekday service to Edinburgh, adding a frequency to Belfast before month's end. Meanwhile, in late October another Britannia 312 is delivered and christened *Endeavour*.

On November 19, the entire route network of Liverpool-based **Starways, Ltd.** is purchased. As a result, BEIA is able to take over its routes from London (LHR)–Liverpool, Liverpool–Edinburgh, Glasgow, and Cork, Blackpool–Glasgow, plus charter opportunities from Liverpool and Manchester.

On January 1, 1964, the remnants of **Starways, Ltd.** (minus the company's fleet that was sold by its previous owners) are acquired and redesignated as the subsidiary **British Eagle (Liverpool), Ltd.**

Simultaneously, frequencies on the London (LHR) to Belfast service are increased to six per week. During January, 5,000 passengers are carried on the London (LHR)–Liverpool route.

A new Britannia 312 is purchased in January and christened *Bonaventure*. Two former **Transcontinental S.A.** Britannia 308Fs named *Trojan*, and *New Frontier* are also added, and the 3 DC-6As are sold.

The Bristol Britannia 308F *Trojan* with 8 crew and 75 passengers crashes into Austria's Mt. Glungetzer, near Innsbruck, on February 29; there are no survivors.

There is considerable additional fleet activity in the spring. In addition to the Britannias added in January, 7 more Bristol turboprops are added between April and June, along with 3 ex-military Douglas C-54s converted to civil DC-4 standard. One of these does not enter service and is immediately sold.

Also in the spring, the carrier becomes embroiled in additional disputes and hearings before the ATLB. Although some requests are refused, frequencies are increased, on April 1, on both the Glasgow and Edinburgh services. The Britannia freighters are placed on the Adelaide contract route, also in April.

During the summer, new holiday flights are undertaken to Brindisi and Nice and the large inclusive-tour bookings of **Starways, Ltd.** are flown with the new DC-4s. Scheduled services are now offered London

(LHR)–Stuttgart, Manchester–Rimini and La Baule, and nightly service from Liverpool and Birmingham to Palma. Two leased Viscounts are returned to their owners in December.

Unable to win ATLB approval for increased frequencies on the London (LHR)–Belfast and Glasgow routes, BEIA withdraws from them on April 20, 1965. The company's dormant North Atlantic license is revoked by the ATLB and given to arch rival BOAC–Cunard, Ltd. in June. All previous regional scheduled and nonscheduled flights offered in 1964 are repeated save the April cancellations. Efforts to upgrade the fleet continue.

The 2 DC-4s are removed in February and, between March and June, 6 Vickers Viscount 701/707s are sold; these are replaced by 4 more Bristol Britannia 312s. British Eagle becomes the first U.K. independent airline to order the Dash-400 version of the BAC 1-11 when it places a request for 3 Series 406s.

The workforce is now 2,200 and enplanements reach 580,000.

In early 1966, the carrier leases the 4 surplus BAC 1-11-301s from **Kuwait Airways, Ltd.** As a result, the Dash-406 order is cancelled. On April 22, a BAC 1-11-301 that is slated for delivery to **Central African Airways Corporation** is instead—due to political developments in Rhodesia—leased by BEA. Painted in its livery and christened *Swift*, the jetliner enters BEA service on May 9 with an inaugural flight from London (LGW) to Glasgow (Abbotsinch Airport).

In May, a Britannia 313 is purchased and christened *Talisman*. The year's passenger boardings exceed a million and, at year's end, Bamberg's growing number of flying and nonflying companies are reorganized under the holding company Eagle International, Ltd. Simultaneously, Cunard's minority 40% interest is purchased. An £80,000 loss is suffered.

During initial climb away from London (Heathrow Airport) for an April 20, 1967 flight to Kuwait City, the landing gear of the Bristol Britannia 308F *New Frontier* with 11 crew and 54 passengers becomes jammed. After circling, a safe emergency landing is made on a foamed runway at RAF Manston and no injuries are reported.

In order to allow return of the **Central African Airways Corporation** BAC 1-11-301, 2 BAC 1-11-304s, *Salute* and *Supreme*, are delivered on April 28 and May 25. An arrangement is made to purchase Boeing 707s as new transatlantic licenses are sought from the ATLB. Three BAC 1-11-301s, *Stalwart*, *Spur*, and *Superb* are purchased from **Kuwait Airways Corporation** on June 8.

The new BACs fly domestic routes from London to Glasgow and Liverpool. They also undertake inclusive tour passenger charters to Stuttgart, Rimini, Pisa, Dinard, Luxembourg, La Baule, Perpignan, Palma, Tunis, and Djerba.

A new B-707-365C arrives from Seattle while a B-707-138B is obtained from **Qantas Empire Airways (Pty.), Ltd.** Arrangements are now made to lease a number of Viscounts and BAC 1-11s to other carriers, including **KLM (Royal Dutch Airlines, N.V.)**, **Swissair, A.G.**, and **SAS (Scandinavian Airlines System)**. When the *Stalwart* reaches Copenhagen, it is repainted in SAS colors and receives the name *Arnold Viking*; however, British registration is retained.

Liverpool–Cork scheduled service (a money loser) ceases on November 1 as Glasgow to Liverpool and London services remain the most profitable. East African Britannia charter flights commence in late fall.

Enplanements during the 12 months total 823,251 and cargo carriage climbs by 11%.

Airline employment in 1968 stands at 2,800. A Boeing 707-138B purchased from **Qantas Airways (Pty.), Ltd.** arrives at London (LHR) on February 3 and is christened *Enterprise*. A new B-707-465 reaches Ireland in February and is leased to **Middle East Airlines, S.A.L. (2)**. A second ex-**Qantas Airways (Pty.), Ltd.** 707-138B arrives at London (LHR) on March 15 and is named *Phoenix*.

A BAC 1-11-301, leased from **Zambia Airways Corporation**, is returned to that company, while a BAC 1-11-301 is chartered to **Swissair, A.G.** for the remainder of the year. The government contract for flights to Australia is closed out in March and during the year, over £1 million

in tour bookings are lost. On March 29, the BAC 1-11-301 *Stalward* is chartered to **KLM (Royal Dutch Airlines, N.V.)**.

The two former Australian Boeings are employed during the summer to fly inclusive-tour charters to the Caribbean, while the BAC 1-11-304s blanket Europe with tourists.

While en route from London to Innsbruck on August 9, the pilot of a BAC 1-11-304 with 4 crew and 44 passengers loses control of his aircraft and crashes beside the autobahn at Pfaffenhofen, near Munich; there are no survivors and a motorist is injured.

When on November 1, BEIA's Bermuda and Bahamas inclusive-tour license is revoked, despite the ATLB award of a transatlantic scheduled license, the banks backing Bamberg withdraw their support. Consequently, the carrier ceases trading on November 7.

BRITISH EMERALD AIRWAYS, LTD. (BEA): United Kingdom (1983–1987). BEA is organized at Belfast, Northern Ireland, in early 1983. An application to the Civil Aviation Authority for a license to operate low-fare transatlantic services is granted later in the year, but flights do not immediately begin.

After obtaining a pair of Douglas DC-10-40s, revenue flights to New York from Belfast, London (LGW) and Prestwick commence in 1985. The company is not able to achieve economic viability in a time of recession and thus is forced to shut its doors in early 1987.

BRITISH EUROPEAN, LTD.: Exeter Airport, Exeter, England, EX5 2BD, United Kingdom; Phone 44 (1392) 366 669; Fax 44 (1392) 445 237; <http://www.british-european.com>; Code JY; Year Founded 2000. Company officials at **Jersey European Airways, Ltd.** now believe that the airline's name does not reflect the size or mission of the carrier. Consequently, JEA changes its name on May 8, 2000, taking pains to assure the public that it is not taking the moniker once held by BEA, an historic British airline, which is still owned by **British Airways, Ltd. (2)**.

CEO Bayy Perrott's inaugural fleet includes a mix of 11 de Havilland Canada DHC-8-300s, 5 British Aerospace BAe 146-300s, and 1 new Canadair CRJ200ER. Previous routes are maintained, as is the new five-year "Air France Express" franchise contract signed on March 31.

All publicity material, as well as airport and in-flight announcements and signage are changed by early June; the first aircraft wearing the new company livery, a BAe 146-200, arrives from the paint shop on June 9. It is anticipated that all aircraft will wear the new livery by the end of March 2001.

Received wearing the company's new livery, the second CRJ200ER begins five-times-a-day roundtrips between London (LCY), Leeds Bradford, and Belfast on June 12, the same day four-times-a-day Dash-8 services are started from Birmingham to Edinburgh. Thrice-daily roundtrips are simultaneously begun from London (LCY) to Jersey, with twice-daily connections to Exeter.

Jack Walker, longtime owner/chairman, dies of cancer in hospital on Jersey on August 18. Thrice-daily return service is inaugurated on September 4 between London (LCY) and Leeds-Bradford.

Nonexecutive board member David Brown is named Chairman Walker's successor on September 22.

A contract with **CityJet, Ltd.** for the wet-lease operation of a BAe 146-100 ends on October 20. Nine days later, Aberdeen replaces Leeds-Bradford as a destination from London (LCY). BAe 146-300 thrice-weekday return flights are offered, along with a Sunday night service.

Wearing its own colors, a company BAe 146-300 is wet-leased to **Augsburg Airways, A.G.** on November 3 to operate out of the Augsburg base on behalf of "Team Lufthansa."

BRITISH EUROPEAN AIRWAYS CORPORATION (BEA): United Kingdom (1946–1974). After V-E Day, a European committee of the British state carrier **British Overseas Airways Corporation (BOAC)** studies ways to provide services to the Continent and proposes in late 1945 implementation of some "progressive, efficient, and eco-

nomical expansion in the public interest." The best manner to accomplish this goal appears to be the creation of an autonomous section within the government-owned airline.

Meanwhile, the government has changed from coalition rule under Winston Churchill, to that of the Labour Party. It has put forward a plan, first published in March as the "Swinton Plan" and named for its author, the first Minister of Civil Aviation Viscount Swinton, which will see the retention of one and the creation of two additional state airline corporations.

The British European Airways division of **British Overseas Airways Corporation (BOAC)** is officially formed as the No. 1 Line on January 1, 1946, to take over the continental operations of RAF No. 110 Wing (of No. 46 Group), based at Whitechurch. Douglas C-47A Dakotas (military Douglas DC-3s) in RAF livery and crews in RAF uniforms on February 4 start regularly scheduled commercial services from Northolt to Amsterdam, Brussels, Helsinki, Lisbon, Madrid, Paris, and Stockholm.

The Northolt Airport is loaned to **British Overseas Airways Corporation (BOAC)** by the RAF on March 1 and on March 4, No. 1 Line begins to operate its aircraft in civil livery and its crews in state airline uniform. The Ministry for Aircraft Production places an order for 50 Vickers-Armstrong Viking 1 transports, the first of which receives its Certificate of Airworthiness on April 24. Meanwhile, DC-3 routes are opened to Oslo on March 11, Copenhagen on March 12, and Marseilles, Rome, and Athens on March 14. A 30% shareholding is taken in **Aer Lingus Teorante** on May 5.

Under the Civil Aviation Act of 1946, the No. 1 Line/BEA division is split off from its parent on August 1 to form the British European Airways Corporation (BEA). Sir Harold Hartley becomes chairman and Gerard d'Erlanger managing director. The fleet of this new public company consists of 21 DC-3s transferred from **British Overseas Airways Corporation (BOAC)** and the motto *Clavis Europae* is adopted ("the key to Europe"). Arrangements are also made to lease from the Ministry of Supply a number of war reparation Junkers Ju-52/3ms; only a very small stock of spare parts is, however, available for them.

The first official service begins with an 8:40 a.m. departure from London (Northolt Airport) to Athens via Marseilles and Rome. Although the carrier now runs its own European services, internal operations are contracted out to private airlines.

A C-47A with 5 crew and 11 passengers crashes while on initial approach to the airport at Oslo, Norway, on August 7 (3 dead).

New Douglas transport routes are opened to Prague on August 7, Rome on August 9, Hamburg and Berlin on September 1, and Frankfurt am Main and Vienna on September 2. Several new Vickers-Armstrong Viking 1s are acquired; the first of these, christened *Valerie* and commanded by Capt. L. G. James, is placed into service on a new route from London (Northolt) to Kastrup, Copenhagen on September 1. Additional Viking 1 routes begin from Northolt to Stavanger, Oslo, and Amsterdam on September 2, Zurich on September 9, Ankara on September 17, Göteborg and Stockholm on October 6, plus Lisbon, Madrid, Gibraltar, and Prague on November 1.

Meanwhile, on September 16 the Italian carrier **Alitalia, S.p.A.** is formed, with BEA providing assistance and taking a 30% interest. Eleven former Luftwaffe Ju-52/3ms in BEA livery, converted by Short & Harland, Ltd. at Belfast and renamed Jupiters, are employed by **Railway Air Services, Ltd.** to begin contract Croydon–Liverpool and Belfast flights on November 18.

While on a repositioning flight near Lons le Saulnier, also on November 18, a DC-3 with four crew is involved in an accident; although the aircraft must be written off, there are no fatalities.

Due to icing problems, the 12 units of the Viking 1 fleet are grounded on December 8. Enplanements since August 1 have totaled 71,177.

In accordance with the provisions of the Civil Aviation Act of 1946, British European Airways Corporation (BEA) on February 1, 1947 acquires the carriers and services of the wartime **Associated Airways Joint Committee**. These domestic service providers include **Railway Air Services, Ltd.**, **Scottish Airways, Ltd.**, and **Isle of Man Air**

Services, Ltd., plus the assets of the former, currently inoperative, **West Coast Air Services, Ltd.**, **Highland Airways, Ltd.**, **Western Isles Airways, Ltd.**, and **North Eastern Airways, Ltd.** The whole lot is purchased by the government for £550,000.

As a result of these acquisitions, the state carrier's fleet is enlarged by 8 Ju-52/3ms, 2 DC-3s, 13 Avro 19s, 39 DH 89As, 1 DH 84, and 1 DH Gipsy Moth. The enlarged airline's first domestic services begin the same day as a DC-3 opens Northolt to Prestwick via Renfrew services and DH 89As and Ju-52/3ms begin flying over various Scottish routes.

The weather in February and March is horrific. The new enterprise gains something of a reputation for unreliability when snow and ice force cancellation of 3 of every 10 Continental services during this period.

Nonstop Ju-52/3m London-Belfast flights are started on March 20; the following day, BEA acquires the Greek carrier **Technical and Aeronautical Exploitations Co., Ltd.**, reselling it to the American **Transcontinental and Western Airlines (TWA)** later in the year. On the last day of the month, it is announced that, since start-up, the corporation has run up a deficit of £2,157,937. **Channel Island Airways, Ltd.** and its 6 DH 89As are purchased and merged on April 1; **Allied Airways (Gandar Dower), Ltd.** and one of its 4 DH 89As is taken over on April 12.

A Viking 1B proving flight is made to Geneva on April 18 and the 19 machines in the Viking fleet, upgraded to Mk.1A and 1B standard, are reinstated on the Continental routes beginning on April 21. BOAC/BEA jointly form Airways Training, Ltd., on May 1; 14 days later, BEA takes 51% controlling interest in newly created **Gibraltar Airways, Ltd.** Viking service is started to Geneva on May 19, the same day DC-3s launch London to Edinburgh, Aberdeen, and Shetland flights and replace Ju-52/3ms on the Belfast route. In addition, flights are made from the Isle of Man to Belfast, Blackpool, Carlisle, Glasgow, Liverpool, and Newcastle.

On June 26, orders are placed for 3 Sikorsky S-51s and 2 Bell Model 47s and, on July 1, a helicopter unit is established at Yeovil (Somerset). Also on July 1, Chairman Sir Harold Hartley becomes **British Overseas Airways Corporation (BOAC)** chairman. He is succeeded at BEA by Managing Director Gerard d'Erlanger, who is succeeded in his post by J. V. Wood. Before the day is done, weekly DH 89A flights begin Belfast to Carlisle and Newcastle.

The first BEA scheduled all-cargo service is opened on a daily basis by DC-3s on August 10 over the London-Brussels and Prague route. The next day, London-Renfrew and Prestwick and Copenhagen-Glasgow Viking flights are kicked off. The last Ju-52/3m is retired on August 31. The premier British postwar "all-up" (no aerial surcharge) mail service is opened on September 29 over the Glasgow-Belfast route.

Six unprofitable domestic plus the Helsinki routes are closed on October 6. The same day and in conjunction with **Cyprus Airways, Ltd.**, London-Nicosia operations are inaugurated, with the British line flying the Athens-Nicosia over-water sector under contract. National economic conditions require the discharge of 2,000 employees on October 2. London-Malta via Marseilles and Rome service is launched on December 1.

Bookings for the first full year total 511,522. Revenues total £1.2 million, but costs bring a £2.1-million loss.

Airline employment at the beginning of 1948 stands at 4,200. On January 6, while en route from Scotland to London, the Vickers 610 Viking 1B *Veracity* crashes while on approach to Ruislip (one dead).

On January 27, the helicopter unit's S-51s and Model 47s launch a series of practice mail services from Yeovil to Sherborne, Blandford, Gillingham, Poole, Wimborne, Dorchester, Weymouth, Warham, Lyme, Regis, and Bridgeport. A total of 570 missions are started and 547 completed by the time the operation is finished on March 7. Meanwhile, during February the carrier's 10 ex-Luftwaffe Ju-52/3m Jupiters are retired and scrapped.

Over Berlin's Gatow Airport on April 5, the Vickers 610 Viking 1B *Vimy*, piloted by Capt. John Ralph with 3 other crew and 10 passengers arriving from London over its normal route via Hamburg, is rammed head-on by a Soviet Air Force Yakovlev YAK-3 fighter, which is per-

forming aerobatics. The Viking, with its starboard wing taken off, spirals slowly without control until it crashes into the city's British sector; all aboard are killed. The Russian warplane falls into the Soviet sector and its pilot is also killed.

On April 18, **Cyprus Airways, Ltd.** assumes the Rome-Nicosia sector of the U.K.-Cyprus service flown by the British airline since the previous October.

On April 21, a Vickers 610 Viking 1B with 4 crew and 16 passengers is involved in an accident at Irish Law Mountain in the U.K.; although the aircraft must be written off, there are no fatalities.

In May, several independent carriers begin the provision of additional domestic services as BEA Associates.

Following a public ceremony hosted by the Lord Mayor of Peterborough on June 1, two S-51s, piloted by Captains J. Theilmann and G. A. Ford, open the U.K.'s first helicopter mail service from Peterborough to 12 East Anglia stops with 140 pounds of post. The six-days-per-week operation will continue until September 25, during which time a little over 15 tons of mail are transported. On June 18, the Soviet Berlin governor, Marshal Sokolovsky, orders a halt of all western rail and ground transport into the Russian zone of Germany at midnight.

The participation of civil aircraft in the Berlin Airlift begins on July 19 when **American Overseas Airlines (AOA)** C-54s commence twice-weekly flights into the city from Frankfurt. The British independent **Flight Refueling, Ltd.**, employing Avro Lancastrians, begins its own contract into the closed off city on July 27.

On August 1, E. P. Whitfield, BEA's Germany manager, is placed in charge of managing the contribution made by the West's civil airlines. Company representatives from the Charter Section, led by Charter Superintendent G. Wharton, are sent out to make preliminary arrangements to coordinate the work of the chartered civil operators who will fly in support of the Allied military airlift.

The first civil aircraft arrive at Gatow on August 4 and the coordinated civil lift commences next day. The carrier's helicopters, on August 23-24, begin a month of practice night flights, Peterborough-Downham, four times per week. The C-47s assigned to the Berlin Airlift have, by August 26, flown coal into the German city from RAF Fassberg. On August 27, Whitfield's headquarters are transferred to Lubeck and the cargo is changed to flour. Over 1,000 sorties are flown by month's end.

Orders are placed with Airspeed on September 20 for 20 of its new AS.57 Ambassador, designed to a requirement of the wartime Brabazon Committee for a DC-3 replacement. By September 21, the administered Berlin Airlift fleet from British independents, now known as "Whitfield's Circus," has doubled in size; aircraft employed include DC-3 Dakotas (3 from BEA), 1 C-87 Liberator, 1 Short Hythe flying boat, and 3 Handley Page Halifaxes. On September 22, orders are placed for 20 Airspeed AS.57 Ambassador 2s, which the carrier will call Elizabethans. Through September 25, Mr. Whitfield's charges have flown 15.92 million pounds of food, coal, and gasoline into Berlin.

The one-millionth passenger since the airline's inception is boarded by BEA on October 17. From November 10-17, company mechanics strike at London (Northolt) over a bonus plan; 80 flights must be cancelled. By mid-month, BEA is administering aircraft from 20 independents on the Berlin Airlift; during the first 100 days, the civil airlift has provided 17,487 metric tons in 3,994 sorties. As their contracts expire, the civil C-47s are withdrawn during the 10-day period ending on November 20 and are replaced by 10 Handley Page Haltons.

Through the month, the civil side of the airlift has cost £500,000. Under contract, flights begin, also in November, from Malta-Rome and London, on behalf of newly formed **Malta Airways, Ltd.** On December 17, an interline agreement is signed with **Pan American Airways (PAA)**.

Boardings for the year accelerate to 577,122.

At the beginning of 1949, the workforce totals 7,100. The government announces on February 10 that BEA will no longer have to employ the Ministry of Supply as its agent for aircraft purchases. An S-51 Peterborough-Norwich night proving flight is made on February 14-15 with 23 bags of fake mail.

While en route from London's Northolt Airport to Renfrew Airport at Glasgow on VFR, a C-47A with four crew and six passengers is hit in midair at 4,500 ft. over Exhall by an RAF Avro Anson. The RAF plane carried four crew on a training flight from Middleton; there are no survivors from either plane in this February 19 disaster.

Regular night S-51 dummy mail operations begin on the Norwich route on February 21–22 and will continue through March 17–18. Meanwhile, Lord Douglas of Kirtleside on March 14 succeeds Gerard d'Erlander as chairman.

The Civil Airlift Division is formed on April 1 under the leadership of BEA Charter Superintendent G. Wharton to assume formal overall control of the civil portion of the Berlin Airlift. London–Malta via Nice and Rome DC-3 all-cargo flights are launched on April 3; on April 11, DH 89A Cardiff–Liverpool, as well as Manchester and Birmingham to Paris routes are started.

Foreign Secretary Ernest Bevin announces, on May 5, that an agreement has been reached to lift the Berlin Blockade; four days later, Berlin's Soviet military governor, Gen. Chuikov, suggests that the siege will end within days. Vikings begin German internal flights from West Berlin to Hamburg and Dusseldorf as the Soviet blockade of the former Nazi capital officially ends on May 12. The West will continue to fly supplies into the city to build up its supply stocks. Night return fares of £10 are introduced on the London–Paris service on May 29 and on June 5, new Viking flights are kicked off London to Dusseldorf and Munich. Because of Spanish currency exchange problems, London–Madrid operations are extended to Malta during July.

The civil portion of the Berlin Airlift ends on August 16, at which point the BEA-administered Civil Airlift Division is closed down. Over the last year, E. P. Whitfield and G. Wharton's organization has formally and informally overseen the transport of some 132,000 short tons of cargo and fuel to the former German capital in almost 22,000 sorties. The British civil and military contribution to the airlift has cost £8.6 million and accounted for some 23.5% of the total contribution. The American contribution is larger, the French, smaller.

Later in the month, direct London–Rome service is begun and the London–Frankfurt am Main and Prague service is combined. On August 19, a DC-3 with 32 aboard en route to Manchester from Belfast crashes near Manchester (24 dead).

On October 17, engineer/pilot Peter Masefield is appointed managing director and that night the U.K.'s first night helicopter mail service (by S-51) with actual mail is inaugurated, Peterborough–Norwich. London–Dusseldorf and West Berlin Viking operations commence on November 14. The carrier, having lost substantial money on the routes from the Isle of Man, now announces that only "essential services" would be flown from that destination.

The year's enplanements are 751,512. Revenues climb to £5.3 million, but the loss reaches £2.5 million.

London–Hanover DC-3 all-cargo service is kicked off on February 3, 1950 followed by a similar service to Paris on March 1.

Over the English Channel en route to Paris from Northolt on April 13, a Viking 1B commanded by Capt. I. R. Harvey with 4 other crew and 28 passengers, is rocked by a saboteur's bomb. It explodes in the rear toilet, and although a flight attendant is severely injured, the aircraft is successfully returned to London and makes a safe landing after a runway overshoot. Capt. Harvey is later awarded the George Medal.

The Peterborough–Norwich night helicopter mail service ends on April 15 with over 95,000 pounds of mail having been carried since the previous October.

On April 16, the carrier begins operations from London (Heathrow) Airport, opening a direct Rome Viking service; a Glasgow and Manchester to Paris frequency is added the same day. Belfast–Birmingham services begin on May 1 and in cooperation with **Swissair, A.G.**, night excursion flights are begun London to Zurich and Geneva.

The corporation now elects to group all of its DH 89As into a single unit to serve Scottish routes, the Channel Islands, and the Scilly Islands. All of these de Havillands are named for famous writers, generals, or

politicians, e.g., *Lord Tennyson*, *General Chinese Gordon*, *Robert Louis Stevenson*, *James Kier Hardie*, and *Sir Colin Campbell*. DH 89A London (Gatwick)–Aldernay flights commence on May 6.

On May 13 and 26, respectively, DC-3 summer-only operations are started Manchester–Birmingham and Jersey and London–Le Touquet. On May 27, the London to Lisbon route is turned over to **British Overseas Airways Corporation (BOAC)**.

The world's first sustained and regularly scheduled passenger helicopter service is launched by 2 S-51s over a Liverpool–Cardiff route on June 1. The first helicopter is piloted by Capt. J. Theilmann and among his passengers are Lady Douglas, wife of the chairman, and Minister of Civil Aviation Lord Pakenham.

On June 29, Vickers Viscount 630 service is started Northolt–Paris (Le Bourget), the world's first scheduled commercial operation with a propeller-turbine (turboprop) powered aircraft. The aircraft employed is one of the prototypes that has been issued a special certificate of airworthiness and with a complement of fare-paying passengers is flown by Capt. R. Rymer and W. J. Wakelin. The experimental London–Paris Viscount service ends on June 13. BEA reports July earnings of £1.5 million, the first time it has earned £1 million in revenue in a single month.

On August 3, the corporation signs a contract for 20 (later 26) Viscount 701 turbine-powered (turboprop) transports. Viscount 630 London–Edinburgh service is inaugurated on August 15 and will continue until August 23 for the Edinburgh festival traffic. A total of 1,815 passengers are flown in the June and August operations; the 127 flying hours are the first flown under schedule by a civil propeller-turbine powered air transport.

On August 13, a bomb explodes aboard a Paris-bound Viking over northern France; one person is hurt and the plane lands safely.

While climbing away from Mill Hill (U.K.) for Glasgow in mist on October 17, a C-47A with 5 crew and 24 passengers suffers engine failure, loses height, and crashes into trees (28 dead).

Thrice-weekly London–Barcelona Viking flights are launched on October 22. Coming in from Paris in dense fog, the Vickers 610 Viking 1B *Ventnor* with 4 crew and 26 passengers is lost while landing at Northolt Airport on October 31 (29 dead).

The year's boardings are up to 939,586.

The workforce is cut by 100 employees in 1951. London–West Berlin Viking service is rerouted via Dusseldorf on January 1. In cooperation with **The Malta Airlines, Ltd.**, five-stop London–Cairo Viking operations are launched on January 7. *Charles Ulm*, the first of 7 ordered DC-3 Pionair-Leopard combis, enters service on January 24.

Thrice-weekly London–Milan Viking operations are inaugurated on February 12. Manchester–Belfast night DC-3 mail service begins on March 12–13. The Liverpool–Cardiff S-51 passenger operation is concluded on March 31; some 819 passengers have been carried in 1,086 flying hours since the service was started in June 1950; 96.5% of all scheduled flights have been completed.

London–Prague service ceases on May 21 and London–Birmingham S-51 service is launched on June 1.

Three hundred engineers strike the company on July 21, forcing the cancellation of 50 flights. The prototype de Havilland DH 104 is tested on the Northolt–Channel Islands services from August 4 to September 2.

Beginning on August 15, the DC-3 testbeds *Sir Henry Royce* and *Claude Johnson*, employed to develop the Rolls Royce Dart power plants introduced on the Vickers Viscount, are used to offer the first nighttime, pure all-cargo service by turboprop aircraft over a route from Northolt Airport to Hanover, Germany.

On November 9, the Bristol 171 freighter *Sir Gareth* is delivered on loan from the Ministry of Supply. Four-times-per-week mixed cargo-passenger Viking service to Hanover starts on November 19.

Bookings for the year pass the million mark for the first time, rising to 1,135,579. Revenues increase to £8.9 million, while the loss falls to £800,000.

The Transport Ministry withdraws the BEA rotary-wing shuttle subsidy on March 12, 1952. On March 13, an Airspeed AS.57 Elizabethan

London–Paris proving flight is made, followed by the regularly scheduled introduction of the type on that route on March 17.

London–Birmingham passenger helicopter flights end on April 9 and are replaced in an all-cargo operation. AS.57s are now introduced to Milan, Zurich, and Vienna on April 20, the same day London–Manchester and Manchester–Zurich Viking flights begin.

London–Basel Viking operations commence on May 2 and on June 7 weekly London–Nicosia AS.57 service is started, the Athens–Nicosia segment again being flown under contract to **Cyprus Airways, Ltd.** Lunchtime 90-min Elizabethan “Silver Wing” luxury service for a maximum of 40 passengers per flight is initiated on the London–Paris route on June 16.

On July 11, London–Helsinki Viking flights begin, lasting for the duration of the year’s Olympic Games. A London–Nicosia via Rome and Athens proving flight is made with the prototype Viscount 701 on August 25 and, on September 30, DH 89As are withdrawn from most Scottish routes and replaced by DC-3s.

On October 1, BEA claims it is the first European airline to fly over 200,000 passengers in a single month (September). On October 1–2 and in cooperation with **Air France**, low fare London–Paris night flights are initiated. AS.57s are put on the London–Copenhagen and Stockholm service on October 26. October 30 marks the boarding of the carrier’s five-millionth passenger.

An Elizabethan undertakes the airline’s first royal flight on November 29 when Prince Philip is flown London–Malta; he returns on December 2 aboard the same aircraft.

Enplanements this year soar to 1,400,122 and a total of 14.1 million tons of freight are flown.

By the beginning of **1953**, the workforce has grown to 8,500. After completing its trials and acceptance tests, the first production Vickers Viscount 701 is delivered on January 3.

Two days later, the Vickers 610 Viking 1B *Lord St. Vincent*, with 4 crew and 31 passengers en route from London to Belfast, strikes a beacon pylon line and crashes while landing at Nutt’s Corner in Belfast (27 dead); salvagers recover radioactive radon seeds from the plane’s debris.

During the Dutch floods, 2 S-51s, operating from a point near Eindhoven from February 6–11, rescue 76 people while flying relief sorties.

On February 11, the Viscount 701 is christened *Discovery* (becoming fleet flagship) and orders worth £4 million are placed for 12 Viscount 801s.

On March 13, a Viking 1A bound for West Berlin strays outside its corridor; four Soviet MIGs push it back on course with warning shots. Also in March, after 5,319 hrs. of cargo service from Northolt to Hanover, Copenhagen, Paris, and Milan, the Dart Dakotas *Sir Henry Royce* and *Claude Johnson* are reconverted to piston status; their Twin Wasp radials are reinstalled and the aircraft are sold out of service.

AS.57s are placed on the London–Manchester service on April 17. The next day, the world’s first sustained, regularly scheduled propeller-turbine airline service begins as the second Viscount 701, *Sir Ernest Shackleton*, piloted by Captains A. S. Johnson and A. Wilson, inaugurates service London–Nicosia (again the Athens–Nicosia leg is flown under **Cyprus Airways, Ltd.** contract). AS.57 London–Amsterdam, Brussels, Dusseldorf, Hanover, Hamburg, and Frankfurt am Main flights begin on April 19.

Discovery launches Viscount service to Zurich the same day and on May 14, the third Viscount 701, *William Baffin*, carries Princess Margaret to Oslo. Twice-weekly London–Palma flights start on May 15 and London–Geneva Viscount 701 operations begin on June 1.

On July 1, *Discovery* begins service on the Copenhagen–Stockholm route. Seventeen Vikings are grounded on June 20 for precautionary modifications. On July 13, a Bristol 171 Mk. 3A, christened *Sir Geraint*, enters regular all-cargo service London–Birmingham. An accident at Le Bourget Airport, Paris, on August 12 destroys a Vickers 610 Viking 1B; there are no fatalities among the 4 crew and 30 passengers.

First-class “Clansman” Glasgow Viscount 701 service begins on October 2, on October 4 Viscount 701s are placed on the regular Glasgow–

London and London–Zurich–Vienna routes, and AS.57s enter Brussels–Cologne service. Manchester and Birmingham–Paris AS.57 and London–Geneva–Milan Viscount 701 service starts on October 6, followed the next day by London–Nice and Malta AS.57 operations.

Also in October, to evaluate transport, a multistop promotional air race from Amsterdam to New Zealand is staged between a **KLM Royal Dutch Airlines, N.V.** DC-6, a BEA Viscount 701, and a Royal New Zealand Air Force Hastings. KLM supports publication of a 95-pp. booklet by Henrik Scholte commemorating the adventure, *We Flew to Christchurch: The Story of a Memorable Long Distance Flight* (The Hague, KLM, 1954).

First-class “Ulster Flyer” Viscount 701 service is introduced London–Belfast on November 16. In December, the fleet includes 9 DH 89 Dragon Rapides, 46 Vickers Vikings, 1 Bristol Freighter, 4 Viscounts, 20 Airspeed Ambassadors, and 50 DC-3s.

The year’s bookings climb to 1,656,700. Revenues surge to £13.1 million, while the loss climbs to £1.1 million.

Nonstop London–Paris Viscount 701 flights commence on January 10, **1954** followed by London–Barcelona operations on January 13. The next day, the Bristol 171 is withdrawn from the Birmingham freight service.

On February 2, Viscount 701 service begins London–Madrid; simultaneously, Gibraltar–Madrid connecting DC-3 flights are introduced. Viscount 701s replace AS.57s on the Nice and Rome routes on February 21.

On March 1, the Dusseldorf AS.57 route is extended to West Berlin. Nonstop weekly Viscount 701 London–Gibraltar flights are inaugurated on March 3 and on April 10 the type begins flying to Oslo. On April 11, AS.57 twice-weekly London–Naples flights start and AS.57s are assigned to the German internal services; the same day, Viscount 701s launch London–Manchester and Birmingham and Manchester–Birmingham–Paris flights.

On April 13, Viscount 701s are placed on the Stockholm/Dusseldorf services and, in cooperation with **Cyprus Airways, Ltd.**, are employed to extend the twice-weekly London–Nicosia route on to Beirut. Next day, Viscount 701s assume the twice-weekly London–Dusseldorf, Munich, and Athens route. Later in the month, an order is placed for 12 Viscount 802s.

On May 12, AS.57s take over the BEA–**Malta Airlines, Ltd.** Malta–Cairo service. From May 18–29, Vikings and DC-3s airlift newspapers during a nationwide British rail strike. Direct London–Biarritz Viking operations begin on May 28 and on June 15, Bristol 171 Mk.3A services are launched from London–Southampton.

A Viking brushes wings with an **Air France** Constellation over Paris on August 11; both planes land safely. The last scheduled passenger service from Northolt aerodrome is flown on October 30 and next day the Viking fleet is retired.

On December 17, 315 engineers are fired for defying a company order; 3 days later, all are rehired after agreeing to abide by their contract and joint council rules. BEA charges that “certain elements,” presumably Communists, are trying to disrupt its services. Two Westland-Sikorsky WS-55s, christened *Sir Ector* and *Sir Lionel*, are assigned to the Southampton service on December 22.

Boardings advance to 1,874,316. On March 31, the carrier’s first annual profit will be reported: £552,314 (operational) and £63,039 (net).

Airline employment in **1955** is increased by 600. On January 15, BEA lends nine pilots to **Deutsche Lufthansa, A.G.** to command the new West German carrier’s liners.

The first de Havilland DH 104 Dove is delivered to BEA on February 12 and is employed to commence ambulance charters on March 4. On March 31, the one-third investment in **Alitalia, S.p.A.** is sold to **British Overseas Airways Corporation (BOAC)**.

The 500,000th (cumulative) Viscount passenger is boarded on April 6. An Airspeed AS.57 Ambassador 2 with 6 crew and 47 passengers fails its takeoff from Dusseldorf on April 8 and makes an emergency landing 9 km. SW of the airport; there are no fatalities, but the aircraft must be written off.

Full helicopter service is inaugurated from London Airport Central on April 17. At a ceiling minimum of 500 feet over the Thames River

and 1,000 feet over the city, Westland-Sikorsky S-55s fly between the airport and city center. London–Munich and Athens Viscount 701 service begins on April 20 and London–Salzburg DC-3 flights two days later.

Manchester–Milan Viscount 701 night flights are inaugurated on June 16–17 and Westland-Sikorsky S-55 service from London Airport to Southbank Heliport in Waterloo begins on July 25. Twice-weekly London–Cairo via Munich and Athens Viscount 701 frequency commences on August 17 and 7 days later, Mrs. Susan Burrough is boarded as the carrier's 10 millionth passenger.

Twice-weekly London–Vienna Viscount 701 nonstop operations are launched on October 4 while on October 17, orders are placed for 20 Vickers Vanguard 900 turboprops with options on five more.

Enplanements for the year total 2,224,747; the airline is the first outside of the U.S. to board 2 million passengers in 12 months. Revenues reach £17.1 million and there is a small profit of £60,000.

A Viscount 701 fails takeoff from Blackbushe on January 21, 1956; although the turboprop must be written off, none of the five persons aboard are killed.

The Ministry of Supply, on January 25, pulls together executives from the carrier and BOAC, together with representatives from seven aircraft and engine builders, to begin consideration of the possibilities for manufacturing a British supersonic transport (SST).

BEA's tenth anniversary is celebrated in early February. Viscount 701s replace AS.57s on the Frankfurt am Main route on February 15. DH 89As are withdrawn from the Channel Islands routes on March 9. An RAF jet fighter, on March 27, narrowly avoids colliding with a Viscount with 23 aboard near London. A 25% interest is taken in **Jersey Airlines, Ltd.** on March 31.

Twice-weekly Venice-bound Viscount 701 flights commence on April 22 and the next day, the type replaces DC-3s on the Manchester–Dusseldorf route. London–Göteborg and Oslo Viscount 701 service begins on April 25.

On May 9, a 10-year agreement is signed with **Cambrian Airways, Ltd.** covering the latter's Channel Island and West of England services. The London Airport–Waterloo WS-55 helicopter service is withdrawn on May 31; 3,822 passengers have been carried since July 1955.

Twice-weekly Viscount 701 Bergen service is opened on June 15 and three days later, a Viscount flies Queen Elizabeth II and Prince Philip from Stockholm to London.

The helicopter service is upgraded and Capt. J. A. "Jock" Cameron becomes general manager. Twice-daily WS-55 Birmingham–Nottingham via Leicester flights are kicked off on July 2. On July 20, orders are placed for 20 Vickers Vanguard 951s and 16 Viscount 800s.

A new agreement is signed with **Aer Lingus Irish Airlines, Ltd.** on September 1 that reduces the British carrier's holding to 10%, but grants traffic rights to Dublin beginning in 1957.

Under a charter with **Cyprus Airways, Ltd.**, the Nicosia route is extended to Tel Aviv on October 7. On October 10–11, twice-weekly Viscount 701 night cargo flights are started to Milan.

Established by the Ministry of Supply earlier in the year, the Supersonic Transport (SST) Aircraft Committee, chaired by Morien B. Morgan, holds its first meeting on November 5. The WS-55 Nottingham service is closed down on November 10; 1,829 passengers have been carried on it since July. The first Viscount 802 is delivered on November 27 and is christened *Sir Samuel White Baker*.

As the year ends, the fleet includes 19 AS.57s, 1 Viscount 802, 36 Viscount 701s, 19 DC-3s, 3 DH 104s, and 3 DH 89As. Traffic for the year swells to 2,461,065.

At the beginning of 1957, BEA employs 10,400 workers. It also flies more services per day than any other European airline and owns the shortest average sector distance.

The first operations-ready Viscount 802, *Sebastian Cabot*, is placed on the London–Glasgow route on February 13; two days later, it opens international service by flying to Amsterdam. Queen Elizabeth II flies to Lisbon aboard the Viscount 701 *Gino Watkins* on February 16, returning

aboard the same plane on February 27. Viscount 802s replace AS.57s on the Paris service on February 18.

On March 14, the first BEA Viscount 701, *Discovery*, with 5 crew and 15 passengers and inbound from Amsterdam, develops wing flap problems after overshooting the runway at Ringway Airport, and crashes into a Manchester housing development before it can go around again. In addition to 20 deaths aboard the airliner, a mother and child are killed in one of the three houses destroyed. The wing flaps of all Viscounts are subsequently checked.

Dragon Airways, Ltd. is purchased by British Aviation Services on March 22.

On April 8, the *Gino Watkins* flies the Queen to Paris for a state visit and Viscount 802 London–Dublin service is inaugurated on April 14. Twice-weekly Viscount 701 London–Valencia operations start on May 3.

On June 1, Viscount 802s displace AS.57s on the Brussels and Dusseldorf route and Viscount 701s on the Zurich service. Viscount 701s on June 4 extend the Zurich sector twice weekly to Belgrade and on July 1, Viscount 701s are placed on the Hamburg and West Berlin flights and Viscount 802s on the Copenhagen route.

A DH-114 Heron 1B with three crew aboard is lost while landing at Port Ellen, on September 28; there are no survivors.

Viscount 701 service to Prague is reopened on October 7 after a six-year lapse, and service is started London–Tel Aviv via Milan and Athens. Viscount 701s begin flying the London–Malta via Rome and Naples routes on October 8 and 12, respectively, while on October 10, all-cargo DC-3 flights begin to Dusseldorf and Stuttgart.

En route over Anzio, Italy, on October 22, a Vickers Viscount 701C with 5 crew and 26 passengers is involved in a midair collision at 23,000 ft. with an Italian Air Force F-86 Sabre fighter; there are no survivors.

The first Viscount 802, *Sir Samuel White Baker*, with five crew and two passengers, is lost at Nutts Corner in Belfast on October 23; there are no survivors.

The first Viscount 806 is delivered on December 23 and is christened *William Harvey*.

Boardings for the year advance to 2,765,591. Revenues are £30.1 million and there is a £210,000 profit.

On behalf of the Cypriot government, BEA's *William Harvey*, on January 27, 1958, takes over the operations of **Cyprus Airways, Ltd.** On February 6, the chartered Airspeed AS.57 Ambassador 2 *Lord Burleigh* fails its takeoff from Munich to Manchester. The plane, carrying 6 crew and 38 passengers, including 7 members of the British champion Manchester United Football Team, encounters snow and slush on the runway that causes a slower-than-normal acceleration rate. The aircraft crashes and 23 aboard are killed. It is revealed the next day that the soccer team is insured for \$588,000. The event is examined in a book by Frank Taylor, *The Day a Team Died* (New Rochelle, N.Y.: Sport Shelf, 1960, 1983), as well as in Stanley Williamson's *The Munich Air Disaster* (Plymouth, Mass.: Bowering Press, 1972).

A minority share of **Cambrian Airways, Ltd.** is purchased on February 7.

On March 28, 6 de Havilland DH 104 Comet 4Bs are ordered while twice-weekly London–Warsaw Viscount 701 flights commence on April 8. A Vickers Viscount 802 with five crew is lost while positioning at Craigie on April 28; there are no fatalities.

The Viscount 806 enters service on May 1 in a mixed-class configuration and is placed on the German routes on May 6. A DC-3 freighter with three crew is lost at Chatenoy, France, on May 16; there are no survivors.

Queen Elizabeth II opens Gatwick Airport, 25 mi. S of London, in ceremonies on May 30. The first official flight, 30 min. after the proceedings, is a company DC-3 en route to the Channel Islands.

Mixed-class London–Oslo and Stockholm Viscount 806 service starts on July 1. Flights are suspended to the Mideast between July 15–17. On July 30, the last scheduled Airspeed AS.57 Ambassador 2 service is flown from Cologne to London, after which the Elizabethan class is retired.

On October 22, the Viscount 701 *Sir Leopold McClintock*, en route from London to Malta via Naples collides with an Italian Air Force F-86 Sabrejet off Anzio, not far from Nettuno; both aircraft crash (31 dead). The military pilot escapes to safety by parachute and the following June an Italian court will rule that the Viscount was off course in a restricted military zone.

The year's bookings grow to 2,828,715.

At the beginning of 1959, the workforce totals 11,500. On January 1, the carrier's women employees protest an order to shorten their skirts; next day, the stewardesses seek new uniform designs. Sporting BEA colors, the prototype Vickers Vanguard 951 makes its maiden flight on January 20.

In conjunction with **Swissair, A.G.**, pooled London-Switzerland flights are launched on April 1 while Gibraltar-Tangier Viscount 701 flights are launched on April 2 under contract to **Gibraltar Airways, Ltd. (2)**. BEA begins testing bright luminous paint markings on its liners on April 27 as a safety aid.

A London-Moscow via Copenhagen Viscount 806 route is inaugurated on May 14. On June 11, Handley Page, Ltd. receives a £2.25-million request for 3 Heralds powered with Rolls-Royce Dart engines, and on August 12, orders are placed for 24 de Havilland DH 121 Tridents.

Showing BEA's new black and red livery, the first Dart Herald begins test flights on October 30. A pilot training college is established on November 11 to overcome a pilot shortage. The first 2 de Havilland DH 106 Comet 4Bs are delivered on November 16 and christened *Edmond Halley* and *Walter Gale*, one of which enters service on the Moscow route on December 5. A Dart Herald makes three days of demonstrations flights late in the year between Inverness, Orkney, Shetland Islands, and Stornoway.

Enplanements for the year total 3,289,606. Revenues are £31.8 million and there is a £230,000 gain.

A Vickers Viscount 701 with 5 crew and 46 passengers is destroyed as the result of a hard landing at Luqa Airport on Malta on January 5, 1960; there are no fatalities. On January 8, Poland refuses permission for the airline to use Comet 4Bs on its London to Warsaw route.

A 51% majority interest is taken in **Gibraltar Airways, Ltd.** on February 2. The next day, Comet 4B service is initiated by Capt. W. Baillie's *William Denning* from London to Moscow, the first such offering made under a reciprocal agreement with **Aeroflot Soviet Airlines**. Employing chartered Avro 685 Yorks, twice-weekly London-Paris all-cargo night service is launched on February 18-19. Vanguard 951 proving flights also begin during the month.

In March, an early production unit visits Canada, the U.S., and the West Indies. On tour in Brazil, a Dart Herald demonstrator, in BEA colors and piloted by Capt. R. Shilton, who had been seconded to the state carrier from **Silver City Airways, Ltd.**, deviates from its schedule to provide emergency flood relief flights in the Fortaleza district near Recife. The Civil Aviation Act now strips BEA of many of its statutory rights and the company begins seeking ways to economize.

Comet 4B flights are inaugurated on April 1 when Capt. A. N. Werner flies the *Walter Gale* over a route Tel Aviv-London via Athens and Rome; the same day, a consortium agreement is signed with **Olympic Airways, S.A.** for operations over the Eastern Mediterranean. A Comet 4B Copenhagen frequency is initiated on June 3; two days later, nonstop weekly Comet 4B London-Malta service is kicked off. Comet 4Bs are placed on the Oslo and Stockholm route on July 1.

On August 1, London-Frankfurt am Main Comet 4B operations begin; simultaneously, Viscount 701s introduce London-Guernsey flights. A Viscount 806 narrowly avoids a midair collision with a **Pan American World Airways (1)** Boeing 707-321 over Rome's Ciampino Airport on August 11; 23 aboard the British airliner are injured.

BEA and **Aeroflot Soviet Airlines** begin to pool their London-Moscow services on October 26; three days later, Comet 4B service is halted after a craft loses a nosewheel. The final BEA scheduled DC-3 service is flown London-Birmingham on October 31; the flight also marks the

last scheduled service to be operated from Heathrow Airport by a piston-engine aircraft.

After two accidents, the carrier begins to replace its Comet 4B nosewheels on November 7. The first Vickers-Armstrong Vanguard 951s are delivered on December 2 and are christened *Euryalus* and *Victory*; they are quickly placed on several nonscheduled European routes: to Paris on December 17, Zurich on December 19, Geneva and Glasgow on December 20, and Dusseldorf on December 21. Incidentally, as of December 19, an additional third pilot is assigned to the Vanguards in a safety test.

Boardings for the year rise to 3,990,957.

At the beginning of 1961 the fleet comprises 3 Dragon Rapides, 62 Viscounts, 2 Herons, 6 Vickers Vanguards, 7 DH Comet 4Bs, and 7 DC-3s. Airline employment is now 17,900.

In January, a consortium agreement is signed with **TAP-Air Portugal, S.A.** for contract Comet 4B service on a London-Lisbon route. On the 20th of that month, a new five-year agreement is reached with **Cyprus Airways, Ltd.** and Comet 4Bs are slated to begin that carrier's service to Kuwait, Doha, and Bahrain. Having flown on an ad hoc basis since December, Vanguard 951s now enter regularly scheduled service on March 1.

Vanguards are also placed on the Scottish routes on April 1 and 3 Armstrong-Whitworth Argosy freighters are ordered on April 27. The company sets its London to Scotland service at 2.33 cents per mile on July 4, claiming it is the lowest rate in the world.

On August 15, contracts are signed with AT & T for a computerized reservations system. Although the new rate reduction scheduled is protested by the railroads, it takes effect on October 15 from London-Glasgow-Belfast.

On November 1, low-fare night Vanguard service is launched to Edinburgh and Belfast. En route from London to Tel Aviv on December 22, a Comet 4B with 7 crew and 27 passengers explodes and crashes just 4 minutes after takeoff from its intermediate stop at Ankara (27 dead).

The fleet now includes 10 DH 104 Comet 4Bs, 20 Vanguards, 19 Viscount 806s, 24 Viscount 701s, 3 DH 114s, 27 DC-3s, 2 WS-55s, and 1 Bristol 171 Mk. 3.

Enplanements total 4.3 million and in terms of passengers carried, BEA now ranks as the sixth largest airline in the world. Revenues increase to £42.3 million and a £1.54-million profit is generated.

Fleet standardization continues in 1962; 20 DC-3s are sold and the fleet now numbers 62 Viscounts, 20 Vanguards, 13 Comet 4Bs, and 5 DH 114s.

Prince Philip tours South America aboard a company Vanguard between February 9 and April 5. A de Havilland DH-89A Dragon Rapide disposed of five years earlier is reacquired, named *Lord Baden Powell*, and assigned to provide the basic daily service between Land's End and the Scilly Isles.

Meanwhile, the last Vanguard 951 is delivered on March 31. Later in the year, Capt. Cameron and his associates at the helicopter unit plan for equipment upgrades.

Airline employment in 1963 grows to 16,100. Employing Vanguards, BEA inaugurates the world's first standby service on April 1. Ten days later, the company abandons all routes to the Isle of Man. Rights to operate the services are awarded to **Cambrian Air Services, Ltd.** of Cardiff, Wales.

A DH 114 operates the 5,000th flight of the Scottish Air Ambulance Service on September 23. After a review of all proposals, the helicopter service orders a pair of Sikorsky S-61Ns, the first in Europe, during November. The first de Havilland (HS) 121 Trident 1C is delivered to the airfield at Hatfield on December 19 for crew training.

Enplanements total 4.91 million and revenues almost double, reaching £51.2 million. Unfortunately, there is also a £300,000 loss.

A wholly owned subsidiary, **BEA (British European Airways) Helicopters, Ltd.**, is formed on January 1, 1964. The workforce now totals 17,676. Certified on February 18, the first DH 121 Trident 1C is accepted in ceremonies at London (LHR) on February 28.

On March 11, the Trident 1C is placed on the London–Copenhagen route. The fleet now includes 13 Comet 4Bs, 5 Argosy freighters, 5 Vanguard 951s, 14 Vanguard 953s, 39 Viscount 800s, 3 Sikorsky S-61Ns, and will receive a total 18 Trident 1Cs by year's end.

As the second quarter begins, Trident 1Cs are in service to stations at Frankfurt, Geneva, Nice, Helsinki, Rome, Stockholm, and Zurich. Other sectors added include London to Athens.

On May 2, a Sikorsky S-61 of **BEA Helicopters, Ltd.** replaces the DH-89A *Lord Baden Powell* on the Land's End–Isles of Scilly service; with 12,634 hrs. of flying time, the aircraft is sold to **British Westpoint Airlines, Ltd.** Since 1947, the company's Dragon Rapides have transported a total of 337,500 passengers to and from the Scilly Isles.

In December, it is announced that 5.6 million passengers have been flown on the year and \$143.6 million in revenues have been earned.

Airline employment at the beginning of **1965** totals 17,700. An automatic seat reservation system at West London Air Terminal comes on line on April 17. New routes are opened from London–Shannon, Corfu and Dubrovnik, Berlin–Stuttgart, and Birmingham–Edinburgh. On June 10, the world's first automatic landing in scheduled airline service is made by a Trident 1C arriving at London from Paris.

An Armstrong-Whitworth AW-650 Argosy 222 freighter with two crew crashes near Piacenza on July 4 while on initial approach to Milan on a flight from London (LHR); there are no fatalities.

A £30-million contract is signed on August 26 for 15 long-range Trident 2Es, with options taken for 10 more.

A Vanguard 951 with 6 crew and 30 passengers arriving from Edinburgh on October 27, crashes while landing at London (LHR) in fog; there are no survivors.

On the year, the carrier's 102 aircraft fly 6,707,022 passengers, a 12.2% increase over 1964. Freight traffic accelerates by 25% and express traffic by 3%. Revenues reach £66.1 million and a £4.1-million profit is reported.

The first jet service between London (LHR) and Glasgow is inaugurated by a BEA Comet 4B on May 2, **1966**. Executive Express coach service to central London is introduced on certain domestic services, along with pier and gangway loading at Heathrow Airport on flights to Paris and Glasgow.

In June, the company receives a significant number of passenger complaints due to repeated delays caused by a shortage of spare parts for the Rolls Royce engines of the Vanguard turboprops.

On July 4, the carrier's senior pilots sign a petition expressing a lack of confidence in the board of directors, headed by Sir Anthony Milward, and charging that their pay is below international standards; the petition is presented to the government on July 11. Chairman Milward, on August 2, is informed by the government that he may not purchase Boeing aircraft, but must, instead, continue to "buy British."

The workforce now totals 18,011 and enplanements reach 6,843,000.

A total of 20,200 workers are employed by BEA at the beginning of **1967**. On January 27, a £32-million contract is signed with British Aircraft Corporation for 18 BAC 1-11-510s, plus 6 options. British Air Services, Ltd., a new wholly owned subsidiary, is formed on February 7 to handle the affairs of associated companies **BKS Air Transport, Ltd.** and **Cambrian Airways, Ltd.**, both of which officially become wholly owned subsidiaries themselves on October 1. Meanwhile, on June 22, the first BAC 1-11-510 makes its maiden flight over Hurn, England.

Operating on behalf of **Cyprus Airways, Ltd.** on October 12, Flight 284, a Comet 4B with 7 crew and 59 passengers en route from Athens to Nicosia, crashes into the Mediterranean, 150 km. ESE of the island of Rhodes. The wreckage sinks in 6,000 ft. of water, making recovery impossible. Initial reports, based on the condition of recovered seat cushions, suggest a bomb explosion in the rear of the tourist cabin caused the accident.

The airline reports on October 24 that hairline cracks have been found in the compressor casings of two Comet 4B engines during routine checks; all of the engines of the Comet 4B fleet are ordered examined.

On December 4, the pilot of an Armstrong Whitworth AW-650 Argosy 222 with 2 other crew, loses control on takeoff and crashes at London (STN). Although there are no fatalities, the plane must be written off for the damages sustained during this training flight in which the crew was to be responding to the simulated emergency of the No. 4 engine being out.

The last Trident 1C is delivered on December 20.

Passenger boardings for the year accelerate to 7,377,259; however, British economic difficulties and political problems in the Mediterranean and Middle East, including the Arab–Israeli War, hold these gains to two %. As a result, the company posts only a £700,000 net profit on revenues of £87 million.

Airline employment in **1968** is 22,992. On February 7, the premier production BAC 1-11-510 makes its maiden flight. The first Trident 2E is delivered for crew training and route proving on February 15. On March 13, following a two-year search for a new aircraft, the president of the Board of Trade announces in the House of Commons that the carrier has placed an order for 26 Trident 3Bs.

The Trident 2E is delivered to London (LHR) on April 16 and enters service two days later on the route to Milan. Additional Trident 2s, as delivered, back up Trident 1Cs until June 1, when they begin regular service over routes from London to Madrid, Stockholm, Dublin, Alicante, Lisbon, Moscow, and the eastern Mediterranean.

A **BKS Air Transport, Ltd.** Airspeed Ambassador crashes while landing at Heathrow Airport on July 3 and collides with two parked BEA Trident 1Cs, one of which is so badly damaged that it must be scrapped.

The first BAC 1-11-510 arrives on August 29 and, the next day, Scotland Yard reports that the October 1967 Comet 4B crash off Turkey was caused by a bomb planted in an attempted insurance swindle.

In September, BAC 1-11-510 service is inaugurated on the German internal routes, including flights to Berlin's Tempelhof Airport from Bremen, Bonn and Cologne, Dusseldorf, Frankfurt, Hamburg, Hanover, and Munich.

The new BAC 1-11-510 is placed in service on the Berlin–Stuttgart route on November 17. With 18 of the new short-haul BACs on hand, the company also launches flights to Berlin from London, Manchester, and Glasgow, from Glasgow to Dusseldorf, and from London to Bremen, Dusseldorf, and Hanover.

Orders are outstanding for 4 Trident 2s, 10 BAC 1-11-510s, and 26 Trident 3Bs. Retirement of the Comet 4B fleet begins, except for several assigned to charter work. In addition, 9 Vanguards are taken in hand for conversion into Merchantman freighters.

Enplanements for the 12 months reach 7,334,962 and revenues total \$221.4 million.

By the beginning of **1969**, the workforce has been increased to 22,200. Having lost power to both engines, a BAC 1-11-201 with 33 passengers crashes just after takeoff from Milan's Linate Airport on January 14 on a flight to London (LGW). Although no one aboard is killed, seven people are injured.

The first Trident 1E is delivered to British Air Services, Ltd. on March 28. It is placed into service on April 1 over a route from London (LHR) to Newcastle. BEA Airtours, Ltd., a wholly owned subsidiary, is formed on April 24 and equipped with the Comet 4Bs being removed from frontline service with the parent.

An HS 121 Trident 1C is lost in a ground accident at London (LHR) on July 29.

Ten BAC 1-11-510s are delivered during the remainder of the year. These not only undertake service to and within Germany, but on routes from Birmingham to Dublin and Glasgow, from Glasgow to Manchester, and from London to Manchester, Birmingham, Dublin, and Shannon.

The fleet at year's end includes 33 ViscounTS, 2 Herons, 19 Vanguards, 7 Comet 4Bs, 4 Argosies, 33 Tridents, and 10 BAC 1-11s.

Customer bookings reach 7.73 million while revenues are £117.6 million. Profit slides to £1.8 million.

The employee population reaches 24,932 in **1970**, 6.6% over 1969. Converted into freighters by Aviation Traders, the first 2 of 9 rebuilt Vickers Vikings, called Model 953Cs or Merchantmen, enter service on February 7, with one machine operating the initial commercial flight from London (LHR) to Stuttgart via Vienna. On March 6, the first Comet 4B charter flight by BEA Airtours, Ltd. is flown Gatwick–Panama.

On June 18, the corporation receives the Queen's Award to Industry for pioneering automatic landing of civil aircraft. The **BKS Air Transport, Ltd.** subsidiary is renamed **Northeast Airlines, Ltd.** on November 1, on which date a London–Sofia service is opened by its parent. The company's Trident 1E is repainted in a black, yellow, and grey color scheme.

Between October 13 and November 18, several Comet 4Bs of the tour subsidiary BEA Airtours, Ltd. are leased to **Northeast Airlines, Ltd.** In November, it is announced that BEA Airtours, Ltd. will purchase 7 Boeing 707-123Bs from **American Airlines** for £10.4 million. This contract is subsequently cancelled and replaced by one for an equal number of ex-**British Overseas Airways Corporation (BOAC)** B-707-436s.

Passenger boardings increase 4.2% to 8,665,103 and freight is off 14.5%. In terms of passenger boardings at the dawn of the new decade, BEA is now the 8th largest airline in the world; it is the 7th largest in terms of employment and with 101 aircraft, its fleet ranks 9th.

At the start of **1971**, airline employment is 28,100. Unions end a six-week work stoppage on January 29. The Provisional Wing of the Irish Republican Army bombs the company's offices at Belfast on February 7. The next day, the first of 26 Trident 3Bs is delivered for crew training and, on March 1, it is placed in service, London–Paris and Lisbon. Meanwhile, a final Comet 4B is added to the BEA Airtours, Ltd. fleet in February.

During the spring, Trident 3B service is initiated from London to Dublin, Palma, Milan, Madrid, Amsterdam, and Glasgow. The Civil Aviation Act becomes law on August 5, providing for the formation of the British Airways Board.

On October 1, **BEA Helicopters, Ltd.** becomes responsible for rescue operations off the Scottish coast. En route from London to Salzburg the next day, a Vanguard 951 with 8 crew and 55 passengers explodes over Aarsele, Belgium, near Ghent; there are no survivors.

BEA Airtours, Ltd. on December 30 takes delivery of the first of 7 Boeing 707-436s from **British Overseas Airways Corporation (BOAC)**.

This year's boardings climb to 8.66 million, while revenues total £152.4 million. Profits increase to £11.4 million.

The British Airways Board holds its inaugural meeting on January 10, **1972** and assumes ownership and control of British European Airways Corporation (BEA) and **British Overseas Airways Corporation (BOAC)** on April 1. Orders are now placed for 6 Lockheed L-1011 TriStar 1s with options on 12 more. Meanwhile, **Northeast Airlines, Ltd.** acquires a Trident 1E from the failed **Channel Airways, Ltd.**; a second 1E is accepted into the BEA fleet.

On June 18 in the worst crash in British civil aviation history to date, Flight 548, a Trident 1C en route to Brussels with 9 crew and 109 passengers, stalls and crashes into a field near the A30 highway at Staines, Middlesex. The crash occurs just minutes after takeoff from London (LHR) and there are no survivors. The jetliner had stalled because the wing's leading edge devices had been prematurely retracted. John Godson reviews the disaster in his *Papa India: The Trident Tragedy* (London: Compton Press, 1974).

On July 17, it is announced that the two carriers will be merged under unified top management in the British Airways Group, a move accomplished on September 1. An L-1011 TriStar 1 of **Eastern Air Lines** is displayed at the Farnborough Air Show wearing BEA tail and fuselage markings.

The final four BEA Airtours, Ltd. Comet 4Bs are sold in November after the final unit, G-ARJL, completes the last service by the type with a U.K. carrier on October 31, a flight from London to Paris (LBG). P. C. F. Lawton becomes BEA chairman in December, with Sir Roy Watts as managing director.

Airline employment is now 25,012 and enplanements are up to 9.4 million. Freight jumps upward by 25%.

A Vickers Viscount 802 with two crew crashes into a mountain at Ben More while on a January 19, **1973** test flight; both crewmen are killed in BEA's final accident.

Consolidated BEA/BOAC results for the year show a 7.5% increase in passenger boardings to 114,390,000 and a 6.5% climb in freight traffic. At £178.8 million, revenues are the highest ever; there is, however, a £300,000 loss.

BEA itself continues to employ 24,138 workers. The fleet includes 15 Viscounts, 2 Herons, 15 Vanguard, 60 Tridents, 21 BAC 1-11s, 2 HS 748s, and 9 L-1011s.

BEA and BOAC are dissolved on March 31, **1974** under Air Corporation (Dissolution) Order 1973 and the new entity, **British Airways, Ltd. (2)**, appears the following day.

BRITISH EUROPEAN AIRWAYS HELICOPTERS, LTD. (BEAH): United Kingdom (1964–1974). After 14 years of success with its special helicopter unit, **British European Airways Corporation (BEA)** forms the wholly owned subsidiary BEA Helicopters, Ltd., with Capt. J. A. "Jock" Cameron as managing director, on January 1, **1964**. The principal base is at London (LGW), with branches at Penzance, Aberdeen, and Sumburgh. The rotary-wing carrier continues to provide airport link and intra-urban service. Ordered the previous year, 2 Sikorsky S-61Ns, the first in Europe, are delivered in March–April to replace 3 de Havilland DH 89A Dragon Rapides.

Following a ceremony at St. Mary's, the first Sikorsky is employed on May 1 to inaugurate Europe's only scheduled helicopter route 24-times-per-day over the 28 miles from the Scilly Isles to St. Just on the mainland. Later in the year, Sikorsky S-61N services are provided to other offshore islands. The first heliport in Europe is opened at Penzance in September and the company is transferred to it from St. Just.

A total of 40,000 passengers are carried on the St. Just–Penzance service, 14,000 more than the DH 89As in their final year of service. BEAH thus becomes the first company to make scheduled helicopter-passenger transport successful.

The company begins active support of oil resource development platforms in the North Sea in **1965**. During the year, the company establishes northwest Europe's first offshore oil support base at a derelict World War II airfield at Beccles, south of Great Yarmouth in East Anglia. Shell Oil, based nearby at Lowestoft, becomes BEAH's first Beccles client and its offshore platforms are visited by both of the carrier's new Sikorsky S-61Ns.

Operations continue apace in **1966–1970**; in October **1968**, the carrier boards its 250,000th passenger. During the winter of that year, the company receives BEA's new livery.

On October 1, **1971**, BEA Helicopters, Ltd. (BEAH) is made responsible for air-sea rescue missions off the Scottish coast; under contract to the coast guard, search and rescue (SAR) flights begin with an S-61N in December. In March **1972**, BEAH becomes the first operator to clear the S-61N for flight in light icing conditions.

Late in the year, the subsidiary is merged into the British Airways Group, operating as part of a consolidated BEA/BOAC throughout **1973**. **British European Airways Corporation (BEA)** is dissolved on March 31 **1974** and **British Airways, Ltd. (2)** appears the next day. BEA Helicopters, Ltd. is thereafter renamed **British Airways Helicopters, Ltd. (BAH)** and becomes a division of the new state carrier.

BRITISH EXECUTIVE AIR SERVICES, LTD. (BEAS): United Kingdom (1970–1978). BEAS is formed at Coventry in **1970** to operate helicopters on agricultural duties, aerial crane work, flight training, executive charter, and passenger and cargo support services in support of the North Sea oil and gas industry.

In **1977**, **Bristow Helicopters, Ltd.** purchases the carrier and operates it as a subsidiary for a year. In **1978**, all but the agricultural division is merged into the new parent. Former BEAS Marketing Director David

Dollar purchases that division, along with the subsidiary's fleet of 10 Aerospatiale Alouettes and Lamas and Bell Model 47Gs, reorganizing it into **Dollar Helicopters, Ltd.**

BRITISH FLYING BOATS, LTD.: United Kingdom (1932). British Flying Boats, Ltd. is registered at London on June 12, 1932. The board is chaired by the Duke of Montrose and the general manager is Lord Malcolm Douglas Hamilton. A contract is let for a new Saunders-Roe Cloud amphibian, which is launched at Cowes on July 15 and christened *Cloud of Iona*.

On August 14, the carrier initiates a proving flight from Stranraer-Belfast, with a week of experimental flights beginning next day, Greenock-Belfast. Revenue services do not commence.

BRITISH HONDURAS AIRWAYS, LTD.: British Honduras (1956-1963). On October 24, 1956, **BCA (British Colonial Airways, Ltd.)** is purchased by **British West Indies Airways, Ltd. (2) (BWIA)**, becoming a wholly owned subsidiary. Equipped with two Cessna 180s and renamed British Honduras Airways, Ltd., the company begins nonscheduled flights to 15 public and private airfields.

Douglas DC-3s join the fleet in 1957 and one of these, with 12 aboard, fails its takeoff on August 30 and crashes near Juticalpa.

Service is maintained until 1963, when the carrier is purchased by the Maya Corporation, Ltd. and merged into its subsidiary, **Maya Airways, Ltd.**

BRITISH INDEPENDENT AIRWAYS, LTD.: United Kingdom (1990-1991). British Independent is organized by former **Pan American World Airways (1)** executive Kenneth Hilton at Lydd's Ashford Airport in Kent in 1990; Peter Elwell is named managing director. With a workforce of 30 and a fleet of 2 British Aerospace BAe (HS) 748-B2s, scheduled passenger services are inaugurated to Le Touquet and Beauvais.

Unable to secure economic viability, the carrier ceases operations on July 5, 1991. Prior to shutdown the company hauls a total of 24,429 passengers.

BRITISH INTERNATIONAL, LTD.: Buchan Road, Dyce, Aberdeen, Scotland, AB21 0BZ, United Kingdom; Phone 44 (0) 1224 771353; Fax 44 (0) 1224 771632, Year Founded 2000. Working with the Welsh Development Agency, the U.K. managers of **British International Helicopters, Ltd.** open negotiations with their parent organization, **Canadian Helicopter Corporation (CHC)**, during the first quarter concerning a possible management-buyout. With the acquisition of **Bond Helicopters, Ltd.**, now **CHC Scotia, Ltd.**, BIH has become a redundant U.K. subsidiary for the giant North American concern.

A satisfactory arrangement is concluded on May 17 under which BIH, sold for \$51 million, once again becomes the largest U.K.-owned helicopter operator. The Canadian corporation's U.K. offshore activities will now center fully on **CHC Scotia, Ltd.**

Trading as British International, Ltd., the new company retains or acquires from CHC 6 Sikorsky S-61Ns, 2 Eurocopter AS-365N2 Dauphins, and 2 light helicopters. The scheduled passenger service to Penzance is maintained, as are operations for the Ministry of Defence in Plymouth, England, and the Falkland Islands. Light helicopter operations are also undertaken in Cardiff.

In June, executives note that planning has begun for the possible initiation of new scheduled helicopter flights between Cardiff and London. In early September, BIH officials announce that plans are now definitely afoot to expand onshore helicopter operations, probably into the area of rotary-wing feeder flights between London (LHR) and several regional airports, including Cardiff. The EH Industries EH101 and Sikorsky S-92s are being considered for possible future scheduled services.

BRITISH INTERNATIONAL AIRWAYS, LTD.: British West Indies (1947-1948). Having obtained control of this carrier from its orig-

inal owner, **TACA (Transportes Aereos Centro Americanos, S.A.)**, on October 1, 1947, **British South American Airways Corporation** combines **British West Indies Airways, Ltd. (1) (BWIA)** and **British International Airways, Ltd.**, under the latter's name, into a single airline.

Service is maintained over the previous routes and, in February 1948, a route is started to Kingston via Caracas; in March, flights begin to Curacao. On June 24, the company is reorganized once more and becomes **British West Indies Airways, Ltd. (2) (BWIA)**.

BRITISH INTERNATIONAL HELICOPTERS, LTD.: United Kingdom (1986-2000). **British Airways Helicopters, Ltd. (BAH)**, the rotary-wing subsidiary of the state airline, is sold for £13.5 million in July 1986 to this organization, jointly formed by British publisher Robert Maxwell and two Scottish newspapers, the *Scottish Daily Record* and the *Sunday Mail*. Succeeding Michael Graham-Cloete when SDR Helicopter, plc. completes the takeover on September 26, Laurence Middleton is appointed managing director, with Stewart Birt as operations director.

Headquartered at London (LGW), BIH maintains bases at Aberdeen, Sumburgh, Penzance, and Beccles. The workforce totals 500 and the fleet comprises 30 helicopters. Previous routes and services are maintained, including the Sikorsky S-61N scheduled flights linking Penzance with the Scilly Isles. The sale includes transfer of some £9 million for BIH employees from the pension funds of **British Airways, Ltd. (2)**.

Emphasis on charter support of the North Sea oil industry is continued, with 26 aircraft active in the market, even as that industry enters into recession. During September, when Shell Expro is forced to remove its floating hotel, the *Treasure Finder*, from its Brent Field, BIH must call back two of the three S-61Ns which had been supporting it from Sumburgh, Shetland Islands.

Less than 5 miles from Sumburgh Airport on November 6, a Boeing Vertol Model 234LR Civil Chinook, with 47 aboard and inbound from Shell Expro's Brent oil field in the North Sea, crashes into the sea (45 dead). Not only does the carrier immediately ground its Civil Chinooks, but Shell Expro cancels its contract with BIA, causing fiscal difficulty. Since its introduction by BAH in July 1981, the carrier's Model 234LRs have transported a total of 604,000 passengers over 4 million revenue miles.

Operations continue apace in 1987 with Capt. C. H. "Kit" Chambers as general manager. After a complete in-house review of the Civil Chinook, Shell Expro, fearing an employee backlash against the type, awards BIH a new support contract in mid-June covering its transportation requirements in the East Shetland Basin region. The Model 234LR is specifically excluded as 4 Sumburgh-based S-61Ns are designated to undertake the work; fixed-wing flights will also be provided to and from Aberdeen.

Although its 4 remaining Civil Chinooks continue to be kept out of offshore support operations, they are employed on several other missions. One such mission is the 40-mile airlift of a 7-ton yacht. Stranded in Chichester Harbour by a hurricane that swept the southern U.K., the boat is taken to a shipyard on October 16. One unit is dispatched to Spain in November to transport car components from a Spanish factory to a dockside on behalf of Ford Motor Company. En route back to the U.K., the aircraft flies via Lyon so that a French ski lift owner might evaluate it for possible purchase.

During the first quarter of 1988, General Manager Chambers moves up in the Maxwell aviation structure and is succeeded by former Royal Navy Capt. Robert McQueen. Construction on Shell Expro's Eider and Tern production platforms in the East Shetland basin beginning in the spring leads to an increase in the Aberdeen-based fleet from 4 to 6 S-61Ns. At the same time, the airline's helicopters are all painted in a new livery (white bottom, blue top, red cheatline separating the two).

In April, a contract is received to provide Super Puma service on behalf of AGIP in the North Sea while another energy support contract, for S-76 flights, is obtained from Occidental Petroleum.

Since the fatal crash 18 months earlier, the company has been unable to employ its 3 Civil Chinooks in operations other than heavy-lift assignments. In late spring BIH awards Aberdeen-based Nash Helicopter Associates a contract to sell the machines. The company's Chinook simulator is sold to the Ministry of Defence. With no buyers stepping forward by the end of June, the carrier allows 2 Civil Chinooks to fly passengers on a revenue contract with Cabair. With champagne breakfasts before liftoff, blocks of 40 travelers fly to and from the British Silverstone automobile race during the first weekend in July.

On June 1, the last pegs in the 17-year link between **British Airways Helicopters, Ltd.**, BIH, and Total Oil Marine Engineering and Construction, Ltd. are removed. The latter gives **Bond Helicopters, Ltd.**, a five-year, £25-million award to not only support Total's Alwyn North platform, but the MCP01 pipeline pumping station and its exploration rigs as well. To handle what is thought to be the second largest contract in the U.K.'s North Sea oil business, Bond will continue to commit a minimum of 3 AS-332L Super Pumas.

Also during June, the company establishes a new world record for passengers carried over the Scilly Isles route by one helicopter on one day; shuttling back and forth between Penzance and St. Mary's between 0645 and 2040, the S-61N *Isles of Scilly* transports an amazing 730 passengers.

When a new Shell Expro contract begins on July 1, the company, in need of additional capacity, brings its fleet of Super Pumas to 5. Purchased from the former **Okanagan Helicopters, Ltd.**, now the western division of **Canadian Helicopter Corporation, Ltd. (CHC)** for C\$4.5 million, is one AS-332L, while another arrives new from its manufacturer. The third is leased long-term from **Helikopter Service, A.S.** of Norway.

While over the North Sea on July 13, the engine of an S-61N with 21 aboard catches fire, requiring the aircraft to make an emergency ditching. Before the Sikorsky sinks, all of the travelers safely evacuate and are rescued by a coast guard S-61N operated by **Bristow Helicopters, Ltd.** Also in July, when the Piper Alpha offshore rig explodes, company helicopters provide SAR assistance.

In two trips on the same August day, an S-61N lifts the 60-ft. long trimaran *The Spirit of Apricot* from its dockyard at Easton-in-Gordano, Bristol, to the docks. Also during the month, the company is awarded a three-year contract by Sun Oil to support its Balmoral Field in the North Sea. The arrangement replaces a contract previously held by **Bristow Helicopters, Ltd.**

In September, a Civil Chinook installs 13 treatment plant process tanks; the helicopter is able to reduce the construction phase of this project by half. Following vibration and an oil leak, an S-61N with 13 aboard ditches in the North Sea 100 mi. NE of Aberdeen on October 16. Although all aboard are rescued, the helicopter sinks before it can be salvaged.

Only Japan's **Aero Asahi Corporation** has expressed any major interest in purchasing the carrier's Civil Chinooks, but no sale can be arranged. Late in the year, officials from **Columbia Helicopters** sign a letter of intent to take over the giant helicopters. The last U.K. mission of the Model 234 occurs in December when a machine lifts 200 huge boulders that are used to repair a sea wall along Britain's southern coast.

The fleet of the 400-employee carrier in 1989 includes 14 S-61Ns, 4 S-76As, 3 Westland W-30s, and 5 Aerospatiale AS-332L Super Pumas. In February, the sale of the Civil Chinooks to **Columbia Helicopters** is completed; the arrangement, with spares, is worth between \$20 million and \$25 million. The first Model 234 leaves England on the 17th, with the other two following at monthly intervals.

In March, the S-61 at Aberdeen completes its 10th year of work, having flown some 21,000 hours. The six-days-per-week roundtrip service from Penzance to the Isles of Scilly now celebrates its twenty-fifth anniversary. In the previous year, the service has transported a total of 87,683 passengers. A new route is now opened from Penzance to Tresco.

In May, the company is awarded Sovereign Oil's Emerald Field contract, which will be supported by an S-61N from Sumburgh. Through

the first six months of the year, enplanements are up 7.4% over the same period a year earlier to 38,547.

Airline employment stands at 480 in 1990 and, following the addition of 2 more S-61Ns to the fleet, the company averages 24 aircraft active in offshore support roles.

Following the loss of 2 of 8 mooring cables from the accommodation rig *Safe Gothia* in the East Shetland Basin on January 9, 8 S-61Ns and 3 Super Pumas, flying in storm-force winds and darkness, evacuate some 400 oil workers to nearby platforms or Sumburgh.

While preparing to land on the Brent SPAR tanker-loading installation in the East Shetland Basin on July 25, the tail rotor of an S-61N carrying 2 pilots and 11 passengers strikes a crane structure A-frame. The contact causes the aircraft to drop 50 feet onto the helideck and then topple another 105 feet into the sea; it sinks within one minute (six dead). Although the U.K.'s eighth S-61N ditching since 1970, it is the first fatal occurrence and it leads to several wildcat work stoppages while oil workers, politicians, and union leaders discuss safety reforms for offshore employees.

Passenger boardings for the year ascend 2.6% to 234,650.

Another Super Puma is added to the fleet in 1991 and, early in the year, flights are started to and from Newquay. As the result of another downturn in the demand for offshore oil-support, the company is forced to layoff 24 pilots in October, along with other nonflying staff.

During the first 9 months of the year for which statistics are provided, records show that customer bookings are up 5.4% to 81,248. Cargo falls 15.4% to 11,000 FTKs. Following the death of Robert Maxwell, the carrier goes into receivership with the rest of Maxwell Aviation International Group on December 12.

The workforce is sliced 21.2% in 1992 to 382. With the death of owner Robert Maxwell, his entire financial empire is ruined, including BIH, now forced into Administration—the U.K. equivalent of Chapter XI bankruptcy in the U.S. During the first quarter, purchase bids for BIH are received from **Bristow Helicopters, Ltd.** and **Bond Helicopters, Ltd.** The former offer is withdrawn in July as the two proposals are referred to the U.K.'s Monopolies and Mergers Commission for approval.

Meanwhile, over the objections of Bond and bidders that include **KLM/ERA Helicopters, N.V.**, **Evergreen International Airlines**, and **Lloyd Helicopters (Pty.), Ltd.**, a joint buyout team from BIH management and **Canadian Helicopter Corporation, Ltd.** receive U.K. approval and CAA licenses in August to form two BIH subsidiaries. The establishment of BIH (Isle of Scilly), Ltd. and BIH (North Sea), Ltd. are part of a complicated effort by CHC to secure a better position in its attempt to buy the administered helicopter line.

Also during the summer, 60 employees are laid off from the Aberdeen base and Oxford headquarters. On the other hand, Shell Expro increases its S-61N fleet usage at Sumburgh to six aircraft and delays for three years its decision to replace the type with Super Pumas leased from **Bristow Helicopters, Ltd.**

On October 22, Trade Secretary Michael Heseltine, acting on the recommendation of the Monopolies and Mergers Commission, informs Bond Helicopter executives that it is not in the public interest for Bond to acquire BIH. Both Bond and BIH indicate displeasure and Bond joins **Bristow Helicopters, Ltd.** as a former suitor.

On December 1, it is announced that the management buyout team from **Canadian Helicopter Corporation, Ltd.** and BIH, together with the British merchant bank of Brown and Shipley, Ltd., has secured sale of BIH from its court-appointed administrators. Both the bank and Canadian operator are required to pay \$8 million each for matched 40% stakes, while BIH managers acquire 20% shareholding. On December 8, the Department of Transport voids the August licenses for subsidiaries and requires reapplication.

With its main base at Aberdeen and with other facilities at Penzance, Beccles, Farnborough, and Sumburgh, BIH continues to operate 26 helicopters in support of the North Sea oil industry. Passenger boardings for the year slide 7.5% to 87,725.

Brintel Helicopters, Ltd., the official name of the CHC-banking partnership, completes purchase of the carrier and its assets out of administration on January 27, 1993. Major shareholders in this \$45.5-million buyout and refinancing deal include the **Canadian Helicopter Corporation, Ltd.** (80%), British venture capitalists, and the new company directors; BIH will be allowed to trade under its previous name.

Brown Shipley executive David Wills becomes chairman and Stewart Birt is named managing director. The fleet comprises 15 Sikorsky S-61Ns, 1 Sikorsky S-76A, and the original 5 Aerospatiale AS-332L Super Pumas. The lone Westland 30 is returned to its manufacturer on March 19, at which time airline employment stands at 382, many of whom are also shareholders.

Also in March, the reorganized company wins its first major new contract, a three-year support pact from Elf Enterprise Caledonia, Ltd. During May, two S-61Ns are assigned to the Elf contract. Later in the year, upon the commissioning of two more Elf platforms, an AS-332L Super Puma joins the fleet and is dedicated to the new operation and 40 laid-off workers are recalled.

Through September, customer bookings fall 6.7% to 69,371. In October, the company's S-76As are sold to **Canadian Helicopter Corporation, Ltd.**, while an S-76A+ is chartered from Germany's **Wiking Helikopter Service**. Revenues for the year's first 10 months total \$56 million and leave a \$6-million net profit.

During January 1994, **Canadian Helicopter Corporation, Ltd.** purchases 100% interest in BIH for C\$27 million as its chairman/CEO, Craig Dobbin, obtains Irish citizenship to help satisfy U.K. and EEC ownership requirements and, additionally, 10 million new shares are issued to BIH administrators. Employment at the fully owned Canadian subsidiary is increased by 9.5% during the year to 460 and 7 AS-332L Super Pumas are added to the fleet.

In February, a yearlong contract is obtained from the United Nations to support its aid operations in Mozambique. Five Super Pumas are delivered from London (STN) to the African nation within five days of the arrangement's completion aboard an An-124 of **Heavylift Cargo Airlines, Ltd.**

In March, the Civil Aviation Authority agrees to let the **Canadian Helicopter Corporation, Ltd.** purchase stand. In April, the company hires 12 pilots and 12 engineers, who are dispatched to Mozambique to fly 5 Eurocopter Super Pumas on a long-term UN contract. The thirtieth anniversary of the Penzance to St. Mary's route is celebrated on May 1.

During the summer, Managing Director Birt establishes a business development center in Camberley, Surrey, to examine the possibilities of diversification into other civil and military markets. Traffic figures are once more provided for the first nine months and show passenger boardings recovering, growing 4.3% to 74,352. When CHC management elects to refocus on the company's core business of North Sea offshore support and scale back the new Camberley center, Managing Director Birt resigns on October 11. He is succeeded by chemical engineer David Wood.

At year's end, in light of changing offshore-oil work patterns, company officials begin to worry over the renewal of the five-year Shell Expro contract due to expire the following June 30.

The workforce does not change in 1995. The concern that Managing Director Wood continues to lead maintains its emphasis on aerial support of the North Sea oil industry and to offer scheduled service from Penzance to the Scilly Isles.

Following the January 19 ditching of a **Bristow Helicopters, Ltd.** AS-332L.1 in the North Sea after a lightning strike, BIH, after consultation with the Civil Aviation Agency in March, joins with that rival, as well as **Bond Helicopters, Ltd.** in a voluntary agreement to prohibit flights in actual lightning conditions. Aircraft will either be diverted around such areas or not allowed to depart.

At the beginning of May, **KLM-ERA Helicopters (UK), Ltd.** wins its first major North Sea contract, a three-year award from Shell Expro for support of its activities in the southern sector. The contract, formerly

held by BIH, will require assignment of 3 Sikorsky S-61Ns and an S-76. Still, BIH is able to retain the major share of the new Shell Expro awards, winning the energy concern's two other contracts worth \$97 million. Under the first, 7 S-61Ns will serve the East Shetland basin from Sumburgh while 2 or 3 AS-355L.1 Super Pumas will fly under terms of the second in the central North Sea area from Aberdeen.

Through September, enplanements inch up 0.8% to 74,908.

On October 1, the company unveils a new livery and shortens its marketing name to British International. While the red, white, and blue colors remain, the standard British lion logo is replaced with the hummingbird logo of parent **Canadian Helicopters, Ltd.**

Airline employment declines 14.1% in 1996 to 395 and the fleet now includes 8 AS-332L Super Pumas, 1 AS-332L-1 Super Puma, 2 Sikorsky S-76A+s, and 15 Sikorsky S-61Ns, one of which is leased to **Court Helicopters (Pty.), Ltd.** in South Africa.

Despite significant competition, during the first quarter the carrier is able to gain a three-year renewal of its Elfo support contract; the company will continue to support this energy operation with Super Puma flights from Aberdeen.

The company now forms a new subsidiary, Flight Handling, Ltd., to provide airport management, aircraft ground handling, freight movement, and passenger logistics. It will receive 3 sizeable contracts within the next 10 months.

Deputy Managing Director Paul Conway succeeds Managing Director David Wood on June 19. On September 1, the Enterprise Oil Super Puma support contract is extended for another three years, as of October 10, with two further one-year extensions possible.

Cardiff-based **Veritair, Ltd.** is acquired on October 31.

In early November, the company enters into a strategic alliance with Forde, Norway-based **Airlift, A.S.** Its Canadian parent, **Canadian Helicopter Corporation, Ltd.**, takes 10% equity in Airlift, with the later acquisition of 23% more a possibility. The carrier also wet-leases a Eurocopter AS-332L.1 Super Puma from CHC for the coastguard contract.

In December, the two-year Talisman offshore support contract to provide flight services to the former British Petroleum-owned North Sea fields is won away from **Bond Helicopters, Ltd.** and **Bristow Helicopters, Ltd.** In reaction, **Bond Helicopters, Ltd.**, acting on behalf of its new partner, the Norway-based Helikopter Service Group, challenges the operator's right to a U.K. operating permit, claiming that less than a third of BIH is owned by European Union nationals. Bond hopes to show that such a minority shareholding exists and that BIH is in violation of U.K. and EU laws. A London High Court agrees to a judicial review.

Piloted by expatriate U.S. Vietnam veteran Capt. James Spyker on behalf of **Airlift, A.S.**, the AS-332L.1 is no sooner brought to Svalbard, still in BIH livery, than it is called upon to perform a dramatic rescue. On December 23, a Russian Antonov An-72 with 22 passengers crashes while taking off from Nagurskoye in the Franz Josef Land archipelago, then a military reserve. Unable to dispatch a rescue mission from Murmansk, the Russians seek assistance from Norway. The new civilian SAR team at Svalbard is assigned the mission, which, in turn, tasks Capt. Spyker and his powerful helicopter.

With a medical team aboard, the Super Puma, with a crew of seven, a doctor, and a nurse, departs in -35° C weather for Nagurskoye at 00:10 a.m. on Christmas Eve. Due to bad weather, the helicopter must fly to Kong Karis Isle for refueling before proceeding 232 nm. to the Russian crash site. After three hours of medical work on scene at Nagurskoye, the refueled AS-332L returns to Svalbard with the three most seriously injured Russians. The success of the Nagurskoye mission further cements good relations between the governments of Russia and Norway, assists Airlift in its goal to acquire additional SAR contracts, and deepens the commercial relationship between that company and BIH.

For the year as a whole, BIH passenger boardings soar 19.5% to 103,690.

Airline employment grows 1.3% in 1997, up to 400. Two S-61Ns are withdrawn early in the year. On January 9, BIH is formally awarded the two-year contract (with an optional year's extension) by Talisman

Energy (UK), Ltd. to provide helicopter support of the energy concern's North Sea drilling operations at the Beatrice, Buchan, and Clyde fields. The new deal will be supported with AS-332L Super Pumas, Sikorsky S-61Ns, and S-76s out of Aberdeen.

Early in the first quarter, **Airlift, A.S.** purchases another Super Puma from BIH and has it modified at the Eurocopter facility at Marignane, France. Special attention is paid to the addition of avionics that will allow the helicopter to find fuel deposits that the company has stashed at various refueling points. It returns to Norway to join the leased unit at Spitzbergen.

Somewhat later in the spring, BIH acquires Cardiff, Wales-based **Veritair, Ltd.**, a small operator specializing in police support. It is the first BIH move into the rapidly expanding U.K. onshore helicopter market.

On July 1, **Bond Helicopters, Ltd.**, a subsidiary of **Helikopter Services, A.S.**, challenges the ruling of a London court concerning a 1993 determination by the Civil Aviation Authority that BIH complies with applicable U.K. and European licensing regulations with respect to ownership nationality.

Flights continue apace during the second half. Following the deaths of 12 people when a Norwegian Super Puma crashes during a routine flight over the North Sea, all 37 British Super Pumas, including the 9 flown by BIH, are grounded indefinitely on September 12. Spokesmen for the three helicopter companies which fly Super Pumas from Aberdeen issue a joint statement to the media that the aircraft will not restart until appropriate safety inspections have taken place. Five days later, the Super Pumas are back in the air.

Having reviewed the Bond claim, the CAA informs CHC that it has advised the U.K. Secretary of State of its belief that the nationality requirements have not been met and that BIH's license may be revoked.

After lengthy discussions, CHC, on December 10, enters into an undertaking with U.K. authorities whereby the issue may be resolved. CHC issues additional equity share capital to a company indirectly owned by Craig L. Dobbin, a citizen of both the Republic of Ireland and Canada, which in turn buys into BIH.

For the year as a whole, customer bookings climb 2.1% to 105,875.

Flights continue in 1998. In February, former **Bristow Helicopters, Ltd.** director Tony Jones, who had resigned the previous summer, takes a job as a line copilot with BIH.

On March 27, Bristow wins a £175-million, 7-year contract from Shell Expro for operations in the central and northern North Sea, effective July 1, with support flights from Aberdeen and Shetland. The contract had previously been held for 31 years by BIH (and its predecessors) and, in fact, made up more than half that operator's business. Bristow also wins a £50-million, 5-year contract from Shell Expro to work on that oil company's southern North Sea fields, flying to them from Norwich and Den Helder in the Netherlands.

Top BIH executives meet in Aberdeen on March 30 to decide future strategy in light of the loss of the Shell Expro contract. In an interview with that city's *Press and Journal*, Managing Director Conway admits that the Shell Expro decision had come as a big surprise—and quite a shock—to BIH. Conway and his lieutenants begin a series of consultations with company staff and unions, including the British Airline Pilots Association and the Transport and General Workers' Union.

Meanwhile, the CEO of BIH parent **Canadian Helicopter Corporation, Ltd.**, Rudy Palladina, resigns in a move described in the press release as having come because of disagreements over the long-term direction of CHC. Loss of the Shell business is not mentioned.

Former Bristow executive Tony Jones is promoted to senior pilot at Sumburgh at the beginning of April. For the rest of the month, many of the 350 workers employed by British International fear for their jobs, until an unexpected turn of fate brings some relief.

On April 27, the Ministry of Defence transfers the contract for helicopter support to the Falklands Island garrison from Bristow, which has operated it since the end of the 1982 war with Argentina, to BIH. However, the deal will not make up for the Shell Expro shortfall at BIH and many employee jobs remain in jeopardy.

On May 1, Sumburgh Chief Pilot Jones is named the company's flight operations manager. He succeeds Steven Stubbs, who has been assigned to special projects prior to his July retirement. Jones, whose star is rising fast, becomes commercial director in late June. At the same time, Managing Director Conway is succeeded by Neil Calvert.

Two BIH Sikorsky S-61Ns replace Bristow's rotary-wing assets in the Falkland Islands on July 1. Simultaneously, **Bristow Helicopters, Ltd.** begins to satisfy the Shell Expro contracts in the North Sea. For the contract based out of Aberdeen, the company hires 30 more engineering and administrative staff and 30 pilots, while another 20 ground staff and 20 pilots are taken on by Bristow for the southern contract. Many of the new pilots had previously flown for BIH, but had lost their positions in the wake of the Shell contract loss.

While preparing to land at Aberdeen Airport after an August 26 return from the *Ocean Princess* drilling rig, an S-61N, with two crew and eight passengers, suffers a control failure and goes into a spin. The Sikorsky, skillfully handled by its pilot, is put down without further damage and no injuries are reported by any of the 10 people aboard.

Preparations are now made to celebrate the thirty-fifth anniversary of the Penzance to St. Mary's, Scilly Isles, route the following year. The route provides the world's oldest scheduled helicopter service and is fully and enticingly described when **Canadian Helicopter Corporation, Ltd.** opens a British International-Penzance homepage on the Internet's World Wide Web on September 21—<http://www.chc.ca/bipz>.

In November, options are taken on 5 Bell Agusta BA-609 tiltrotors, the civil version of the military Osprey now under development. The request, part of a 10-ship deal made by the CHC parent, is designed to assist in the long-term restructuring the carrier's fleet. Initial deliveries are expected during the summer of 2002.

During the 12 months, passenger boardings accelerate 4.7% to 111,000; 53,000 FTKs are also operated.

The Aberdeen (Scotland) *Press and Journal* reports on January 12, 1999 that the **Canadian Helicopter Corporation, Ltd.** has purchased a package of 5.1 million shares in **Helikopter Services, A.S. Group**. The 25% stake in the Norwegian operator, valued at a "knock-down price" of £16 million (Nkr 40 per share), is acquired from an institutional investor via the CHC Norwegian subsidiary Vinland Helicopters. The purchase makes CHC the largest shareholder in HAS, as well as its subsidiaries, **Bond Helicopters, Ltd.** and Australia's **Lloyd Helicopters (Pty.), Ltd.**

An additional 5% stake in HSG is acquired on March 24, together with controlling interest. Interviewed by the *Press and Journal*, Helikopter Services Group Chairman Reidar Lund indicates that the action is regarded as an "unfriendly takeover" attempt. CHC Chief Financial Officer Jo Mark Zurel discourages "takeover speculation" and claims the share purchase is a moneymaking exercise.

On April 14, Reuters, Ltd. publishes news that CHC will bid 45 crowns per share for the remaining shares in Helikopter Services, A.S. Group and that the official offer will be released within a week, again through its Norwegian subsidiary, Vinland Helicopters. After a preliminary discussion, the Norwegian operator indicates that the offer, compared to booked capital, is too low.

BIH Managing Director Calvert announces on April 23 that his concern has signed a five-year contract (with an option for three one-year extensions) with Maersk Olie og Gas, A.S. in Denmark. Under terms of the agreement and beginning on July 1, BIH will employ two Super Pumas, an S-76A+, and a back-up helicopter to service the Danish Undergrund Consortium offshore oil and gas exploration operated by Maersk on behalf of itself and its Shell and Texaco partners.

CHC counters the HSG concern on April 26 with an offer, via Vinland, of Nkr 45 per share for the remaining shares. The purchase would be subject to successful completion of a due diligence review and government approval. A statement from CHC also indicates that the offer is conditional upon Vinland gaining a minimum of 90% of HSG stock.

Following another rebuff, the offer is increased to Nkr 60 in early June. CHC obtains 90.2% of the shares in HSG on June 25. The

takeover brings concern to workers at **Bond Helicopters, Ltd.**, which is now renamed **CHC Scotia, Ltd.**, that many may lose their jobs if the new owners elect to merge their concern with BIH, which CHC already owns.

Acting through Vinland Helicopters, **Canadian Helicopter Corporation, Ltd.** is able to announce on August 2 that the remaining conditions to its offer to purchase all shares in **Helikopter Services Group, A.S.** have been satisfied or waived and that the acquisition is completed. CHC now finds itself with two major U.K. rotary-wing subsidiaries.

The BBC reports on September 13 that BIH and **CHC Scotia, Ltd.** are, in fact, combining their operations at Aberdeen Airport. Some 71 permanent and 23 temporary positions at the carriers will be lost by November and upwards of 100 positions overall.

Enplanements for the year increase by 9% to 121,000.

On January 26, 2000, the U.K. Department of Trade and Industry and the Competition Commission both clear the merger of CHC's UK operations and those of **Helikopter Services Group, A.S.**

Working with the Welsh Development Agency, the U.K. managers of BIH open negotiations with their parent organization, **Canadian Helicopter Corporation (CHC)**, during the first quarter concerning a possible management buyout. With the acquisition of **Bond Helicopters, Ltd.**, now **CHC Scotia, Ltd.**, BIH has become the redundant U.K. subsidiary (publicly referred to as a noncore operation in the United Kingdom) for the giant North American concern.

A satisfactory arrangement is concluded on May 17 under which BIH, sold for \$51 million, once again becomes the largest U.K.-owned helicopter operator. The Canadian corporation's U.K. offshore activities will now center fully on **CHC Scotia, Ltd.**

Trading as **British International, Ltd.**, the new company retains or acquires from CHC 6 Sikorsky S-61Ns, 2 Eurocopter AS-365N2 Dauphins, and 2 light helicopters. The scheduled passenger service to Penzance is maintained, as are operations for the Ministry of Defence in Plymouth, England, and the Falkland Islands. Light helicopter operations are also undertaken in Cardiff.

BRITISH ISLAND AIRWAYS, LTD. (1): United States (1970–1980). Complete with new logo, livery, and uniforms, this regional carrier is formed on July 20, 1970 as successor to **British United Island Airways, Ltd.**, itself founded in the 1963 merger of **Silver City Airways, Ltd.** and **Jersey Airlines, Ltd.** Although associated with BUIA, BIA is excluded from the November amalgamation with **Caledonian Airways, Ltd.** BIA is now owned by the British and Commonwealth Shipping Group (91%) and the Eagle Star Insurance Group (9%).

On April 1, 1971, a new route, flown by Handley Page Herald, is opened in cooperation with **Sabena Belgian World Airlines, S.A.** from London (LGW) to Antwerp. An Antwerp–London (LHR) service is simultaneously started on behalf of the Belgian state carrier. Hurn–Channel Island flights resume in May 1973, but are suspended for the winter in late October. On November 1, twice-daily replacement flights for **Caledonian Airways, Ltd.** are initiated between London (LGW) and Manchester.

Flights from Hurn to the Channel Islands resume in the spring of 1974. The final DC-3 flight is completed on May 30. The fleet now comprises 12 Herald, one of which, with 54 passengers, groundloops at Jersey on December 24 and breaks in two; there are no fatalities.

During 1975, Managing Director C. P. W. Villa's company undertakes night newspaper runs to Ireland and a variety of charter flights. Between 1976–1979, a 2,900-mile route network of U.K., Northern Ireland, French, Channel Island, and Dutch destinations is completed. The fleet during this period includes 6 DC-3s, 6 Handley Page Herald, 4 BAC 1-11-416s, and 3 BAC 1-11-432s. The latter are named *Island Envoy*, *Island Endeavour*, and *Island Esprit*.

On January 4, 1980, BIA is one of four small airline partners merged to form **Air U.K., Ltd.**; the amalgamation results in the total absorption of the former independent and the disappearance—at least temporarily—of its name.

BRITISH ISLAND AIRWAYS, LTD. (2): United Kingdom (1982–1990). Chairman/Managing Director Peter Villa and BAC 1-11 Pilot/Marketing Director Roy Hope launch a new British Island Airways, Ltd. in early 1982 and purchase **Air U.K., Ltd.**'s charter division. With money and 4 BAC 1-11-432s—3 of which are named *Island Envoy*, *Island Endeavour*, and *Island Esprit*—borrowed from the British and Commonwealth Shipping Group, contracts to fly inclusive-tours to Mediterranean resort cities are recruited and begin from Gatwick Airport on April 1.

An interline arrangement with **Air Florida** is made to feed the American carrier's passengers bound to Amsterdam, Brussels, Frankfurt, and Dusseldorf. Enplanements total 350,000. Expecting a loss, the company actually turns in a small £28,000 (\$33,600) profit for the first year.

In 1983, Prime Minister Margaret Thatcher leases a BAC 1-11-432 for her reelection campaign. In May, a BAC 1-11-416 is acquired under charter and named *Island Ensign*. The profit climbs to \$699,600.

Air Florida's collapse in 1984 forces BIA to seek other interline and charter arrangements. Two ex-**Cayman Airways, Ltd.** BAC 1-11-500s are purchased at Miami and, upon upgrade, are placed in service in the spring. The *Island Esprit* is leased to **Airways International CYMRU, Ltd.** for the eight months after April 1.

An interline deal is worked out with **Virgin Atlantic Airways, Ltd.** to feed its Continent-bound passengers to and from Maastricht, Holland. Back from its previous charter, the *Island Esprit* is assigned to undertake this task.

The **Virgin Atlantic Airways, Ltd.** contract is completed in August 1985 and not renewed. Two BAC 1-11-400s are leased to **Air U.K., Ltd.** as holiday charter and inclusive-tour flights to points in Europe, the Mediterranean, North Africa, and the Middle East continue. Among the most romantic operations are 3, 10-day "air cruises" to Egypt designed to evoke the nostalgia of the days of **Imperial Airways, Ltd.** The company goes public and its profit reaches £1.1 million.

In January 1986, BIA's hush-kitted BACs have no difficulty meeting tough new noise regulations. The carrier applies to the Civil Aviation Authority for permission to introduce "seat-only" sales on all charters out of London. The profit level grows by £500,000. Charter operations continue apace in 1987 as the first two leased McDonnell-Douglas MD-83s are placed into service and there is a £1.9-million profit.

The fleet in 1988 totals 4 BAC 1-11-400s, 4 BAC 1-11-500s, and 3 chartered MD-83s, the third arriving in November. The MD-83s allow nonstop services to such destinations as Tel Aviv, Turkey, Luxor, and the Canary Islands. In the spring, scheduled service is inaugurated to Palermo and Catania in Sicily.

Enplanements total 1.5 million, but expenses cause the airline a \$4.9-million net loss.

The fleet in 1989 includes 6 BACs and 4 leased McDonnell Douglas MD-83s. In June, the company joins with SAS Service Partner, a subsidiary of **SAS (Scandinavian Airlines System)**, to develop the joint venture enterprise In-flight Services International, Ltd., a 6,000-sq.-ft. flight kitchen located at London (LGW).

Losses for the first half-year total \$8.3 million and continue to deepen throughout the remainder of the year. The company's shares are temporarily suspended in November, but, in December, a consortium of financiers concludes a restructuring of finances in a sale-leaseback arrangement. A cash injection of \$33 million is pledged, of which \$21 million will repay existing loans, leaving the remainder for use as working capital.

Unable to continue as a result of the severe downturn in the British package tour industry, BIA-2, with debt equivalent to \$17 million, enters receivership on February 1, 1990. The receiver, Touche Ross, is forced to immediately lay off 420 of the carriers 500 employees and eventually sells off the entire airline.

BRITISH LATIN AMERICAN AIR LINES, LTD. See **BRITISH SOUTH AMERICAN AIRWAYS, LTD.**

BRITISH MARINE AIR NAVIGATION COMPANY, LTD.: United Kingdom (1923–1924). Hubert Scott-Paine of Supermarine Aviation Works, Ltd. and officers of South Western Railway—the first British rail company to express any interest in commercial air transport—begin planning an air service in late spring 1922. On June 21, they announce plans for the introduction of frequencies between Southampton (a terminal at the Itchen River town of Woolston) and Le Havre, Cherbourg, and the Channel Islands. On October 1, the British government introduces a revised subsidy scheme to support private airlines. As part of the plan, £10,000 are set aside for Scott-Paine's enterprise, then being formed, to operate a route from Southampton–Cherbourg via the Channel Islands.

Capitalized at £15,000, the British Marine Air Navigation Company, Ltd. is officially registered on March 23, 1923. Three newly designed Supermarine Sea Eagle flying boats are delivered into the summer. On August 14, one of these, flown by H. C. Biard, with Sir Sefton Brancker, Scott-Paine, and an Air Ministry representative, undertakes a trial flight from Southampton (Woolston)–Cherbourg via Guernsey; the stop on the island is reported as the first by a civil aircraft. Regularly scheduled Southampton (Woolston)–Guernsey Sea Eagle flights commence on September 25.

On March 31, 1924, British Marine Air Navigation Company, Ltd. is one of four pioneer operators acquired by the government and merged to form **Imperial Airways, Ltd.**; BMAN's chairman, Scott-Paine, becomes a member of the state airline's board of directors.

BRITISH MEDITERRANEAN AIRWAYS, LTD.: Cirrus House, Bedfont House, London Heathrow Airport, Staines, Middlesex, England TW19 7NL, United Kingdom; Phone 44 (171) 4266300; Fax 44 (171) 4266354; <http://www.british-airways.com/ins/partners/franchise/docs/bmed.shtml>; Code KJ; Year Founded 1994. BMA is established at London (LHR) in September 1994 to offer scheduled passenger flights to nations in the eastern Mediterranean, beginning with Lebanon.

British Aerospace's nonexecutive director, Lord Alexander Hesketh, a doyen of U.K. motor sport during the 1970s, is appointed chairman, with Hugh Parry as managing director/CEO. Employing a leased Airbus Industrie A320-231, daily roundtrip service is inaugurated to Beirut on October 28, just five days after the U.K. government lifts the travel ban to Lebanon imposed at the height of the war in 1985.

Traffic figures are not released for the last two months of the year.

Former **Kenya Airways, Ltd.** executive Des Hetherington becomes managing director early in 1995. Service is extended from Beirut in May to Amman and Damascus.

In an effort to capture the trade for itself, **British Airways, Ltd. (2)** now also begins flying to the three BMA destinations. Company officials report to ICAO on the company's first anniversary in November that it has, over the past year, transported a total of 28,994 passengers along with 1.3 million FTKs.

The fleet is not increased in 1996 and plans are made to enter into a franchise agreement with **British Airways, Ltd. (2)**. On August 28, BA announces that it will turn over its routes in Syria, Lebanon, and Jordan to BMA and withdraw from Amman, Beirut, and Damascus on October 26. The airline has lost millions on these Mideast services since the end of the Gulf War, and especially on the new routes started the previous year.

The BA franchise agreement collapses during mid-October when the British major announces that BMA has not met the requirements for partnership. As a result, BA must continue to operate the unprofitable Mideast routes it had planned to turn over toward month's end.

BMA enplanements for the year decline 21.3% to 36,713. Freight, on the other hand, grows by 33.2% to 1.85 million FTKs.

After several attempts to reach closure, the franchise agreement with BA is finally signed during the third week of February 1997. That company's feed from the Mideast is facilitated when BMA's two new A320-231s, in modified BA livery, begin new services to Beirut, Damascus,

and Amman on April 1. Thrice-weekly services to Tbilisi in Georgia and Alexandria, Egypt, commence in mid-April.

A reciprocal code-sharing agreement is signed with **Armenian Airlines** in December.

The new BA franchise deal is largely responsible for a traffic bonanza. Customer bookings skyrocket 203.3% to 111,337.

Destinations visited in 1998 include Damascus, Amman, Beirut, Tbilisi, Bishkek, Alexandria, and Yerevan. Passenger boardings climb to 143,000; 1.3 million FTKs are also operated.

Airline employment at the beginning of 1999 stands at 200.

A third A320-231 is delivered during the fall. Overall customer bookings accelerate 9.8% to 168,000, but cargo plunges 35.3% to 692,000 FTKs.

Airline employment at the beginning of 2000 stands at 220, a 10% increase.

A third A320-231 arrives in April and is employed to launch a new twice-weekly return service in June from London (LHR) to Aleppo, Syria, and weekly roundtrips to Alexandria, Egypt.

In mid-October, it is announced that the carrier will take over the Tehran service of **British Airways, Ltd. (2)** with the beginning of the summer schedule in late March.

Service to the company's 10th scheduled Mideast destination, Luxor, Egypt, begins on October 29.

BRITISH MIDLAND AIRWAYS, LTD. (BMA): Donington Hall, Castle Donington, Derby, England, DE74 2SB, United Kingdom; Phone 44 (1332) 85 4000; Fax 44 (1332) 85 4662; <http://www.iflybritishmidland.com>; Code BD; Year Founded 1964. On October 1, 1964, **Derby Airways, Ltd.**, based since April at East Midlands Airport serving Nottinghamshire, upgrades its corporate identity, becoming BMA. Michael Bishop remains principal owner and chairman. A new Douglas DC-3 freight route is inaugurated on October 6 from Derby to Amsterdam via Birmingham. Canadair C-4 Argonaut inclusive-tour charters to Tenerife, Canary Islands, are maintained with the three machines acquired by Derby.

The routes of **Mercury Airways, Ltd.**, including its important service to Manchester, are taken over at the end of the month with the company itself following into the BMA fold in December.

The carrier's first turboprop, a Handley Page Herald, is delivered on February 1, 1965 and is followed by a second machine, leased from its manufacturer, in August. Meanwhile, the carrier completes its move from Burnaston to its new base at East Midlands Airport. On March 15, a DC-3 transports a power station generator and its instrumentation (2.5 tons) from Derby to Moscow's Sheremetyevo Airport via Copenhagen in a roundtrip flight that will require 23 hrs. 20 min. flying time.

The new H.P. Herald is placed into service on the Derby–Glasgow route on April 1 and new frequencies to Palma and Gerona are initiated, also in April. The second Herald is returned in October and the first DC-3 all-freight service to the Channel Islands from East Midlands Airport commences on December 1.

During the first quarter of 1966, the DC-3s *Peak Dale* and *High Dale* are sold; another Handley Page Herald is leased in April but returned in September following the summer inclusive-tour season. The first Herald purchased in 1965 is sold in December in trade on new aircraft to be soon delivered.

At the start of 1967, airline employment is 770 and the fleet includes 4 DC-3s and 3 C-4 Argonauts. On January 10, a Vickers Viscount 736 is purchased; it is followed by a Viscount 831 on February 15, another in April, and 2 Viscount 815s added in June and July. The Viscount 736 enters service in June followed by the others during the remainder of the summer. These Vickers-made turboprops will allow retirement of the Argonauts and DC-3s and form the fleet's backbone for the next 21 years.

On June 6, the Canadair C-4 Argonaut *Aurora* with 5 crew and 79 passengers loses power to two of its four engines while on approach to

Manchester Airport on a service from Palma de Mallorca. Attempting to overshoot and go around, the wing of the plane hits a building at Stockport, Cheshire, England, causing the aircraft to crash. As rescuers approach the aircraft from every direction, it explodes (72 dead). The disaster is laid to a previously unknown design flaw in the aircraft's fuel system.

The surviving two Argonauts are withdrawn on October 16 and November 2 respectively. At year's end, the final DC-3s are withdrawn from passenger services. A total of 247,000 passengers are flown on the year.

A Viscount 760 is added on April 12, **1968**, followed by a Viscount 785 on May 27. These replace the Canadair C4s on the scheduled route to Ostend from East Midlands and Manchester. New aircrew uniforms are introduced during the spring and the DC-3s *Derwent Dale* and *Dove Dale* are sold in July and October, respectively. During the latter month and in November, a pair of Viscounts are wet-leased, one each to **Ghana Airways, Ltd.** and **Nigeria Airways, Ltd.**

Control of the carrier is taken by **Invicta Airways, Ltd.**'s owner Minister Assets in January **1969** and a Viscount 814 and a Viscount 831 are purchased. The two airlines begin integration in early February.

Attempting a second go-around at East Midlands Airport on February 20, the Viscount 736, with five crew and 48 passengers, lands 1,000-ft. short of the runway in a snowstorm, shearing off its undercarriage; although the plane will be written off, there are no fatalities.

A separate air cargo division, **British Midland-Invicta Air Cargo, Ltd.** is now established. Meanwhile, **Invicta Airways, Ltd.**'s two Viscount 755s are simultaneously transferred to BMA. The merger takes effect on March 18, at which point Peter Cannon is chairman with R. R. Paine vice chairman and managing director. Fourteen redundant staff are dismissed and the reservations offices at Derby, Nottingham, Leicester, and Sheffield are closed.

While on a simulated engine-out test during a March 20 training flight from Manchester, the Vickers Viscount 815 with four crew inverts and crashes (three dead).

The same day, Chairman Cannon is succeeded by James Hodgson, while former Chairman Bishop returns to become the new general manager. A Viscount 833 is leased from **British United Airways, Ltd.** on April 4, the same day a Viscount 702 is purchased.

On June 3, orders are placed for 2 (later 3) British Aircraft Corporation BAC 1-11-523FJs for delivery later in the year. Hugh Kennard repurchases **British Midland-Invicta Cargo, Ltd.** and its 3 C-54s in July, renaming the acquisition **Invicta Air Cargo, Ltd.** The last of several fleet changes is made in July as the final DC-3, *Millers Dale*, is sold. Upon the failure of **Autair International Airways, Ltd.**, BMI seeks several of that carrier's routes, which are awarded. The first of these scheduled services to be flown opens London (LHR)-Teesdale on November 1.

BMA's first jetliners, 3 BAC 1-11-523FJs, are delivered between January 5 and March 12, **1970**; they are placed on frequencies to London (CTN), Dublin, and Glasgow.

Just after takeoff from London (LHR) on January 22, the No. 4 engine of a Vickers Viscount 814 with 4 crew and 34 passengers catches fire. Although a safe emergency landing is made, during which there are no injuries, and the fire extinguished, the aircraft is damaged beyond repair.

Also during the first quarter, Viscounts begin services to Jersey, the Isle of Man, Coventry, and Birmingham. New cabin staff and ground staff uniforms are introduced to mark the entry of the new jetliners into service.

The **British United Airways, Ltd.** Viscount 833 is returned in February. A Viscount 833 is sold to **Ariak Israeli Airlines, Ltd.** on February 21 while the Viscount 760 and 785 are withdrawn in April.

A Boeing 707-321 Stratoliner, purchased for £1.6 million from **Pan American World Airways (1)**, is delivered at Nassau, in the Bahamas, on April 1. Following a period of training, the aircraft is flown to East Midlands Airport via Gander and Keflavik on April 26, becoming the first Boeing and largest aircraft yet to land at that airport. Having obtained a permit from the U.S. CAB, BMA inaugurates

B-707-321 transatlantic inclusive-tour operations on June 3 from London (STN) to New York (JFK).

New sales offices are opened at New York and London on July 9 as plans are made to acquire a second Boeing from the American major. The last scheduled service from Staverton is operated on September 19. At year's end, the company exits the flight school business, 32 years after beginning at Derby as Air Schools, Ltd. On December 29, a second B-707-321 is purchased from **Pan American World Airways (1)**.

The fleet at the beginning of **1971** includes 3 Viscount 831s, 1 Viscount 815, 3 BAC 1-11-523FJs, and 1 B-707-321. The first U.S. station is established at Seattle on March 1 and the year's first IT flight from Washington State to East Midlands via Keflavik arrives on March 28. Leeds to Glasgow service must be ended on March 31 for lack of capacity. Refurbished, the second Pan Am B-707-321 is received the same day.

The previous year's scheduled routes are maintained and additional inclusive-tour routes are undertaken to the U.S. following receipt of an upgraded operating permit from the CAB on June 2. Meanwhile, Stratoliner tours from Manchester and Liverpool to Ostend commence on May 26.

A fleet of 7 Viscount 813s, together with a spares stock, is purchased from **South African Airways (Pty.), Ltd.** for £150,000. On September 5, a B-707-321 tour from Seattle to East Midlands is made direct (due to favorable winds) without the usual Keflavik stop.

During January **1972**, the 7 Viscount 813s are flown to England for refurbishment. BMA applies for and wins the Channel Islands routes of **Channel Airways, Ltd.**, which ceases operations on February 29. Viscounts begin two of the failed carrier's three routes in March, with the third going to **Dan Air/Dan-Air Services, Ltd.**

Direct services are inaugurated on April 7 from East Midlands Airport to Amsterdam; three days later, flights begin to Brussels and Frankfurt. The Viscount 813s enter service in June, at which time a BAC 1-11-523FJ is leased to **Court Line, Ltd.**

In midyear, General Manager Bishop becomes managing director. Flights to the Continent are offered five-times-per-week beginning on September 4 and a Viscount 831 is sold to **Arkia Israeli Airlines, Ltd.** on September 21.

Finding the inclusive-tour business too competitive, the carrier begins to search for additional employment for its two Boeings. On November 11 and December 15, respectively, the two begin a two-year charter to **Sudan Airways, Ltd.**, flying "Blue Nile" service from Khartoum to London (LHR) via Addis Ababa, Nairobi, Jeddah, Cairo, Beirut, Tripoli, Athens, and Rome. The aircraft are entirely manned by BMA personnel, except for two Sudanese stewardesses per aircraft to make announcements in Arabic.

BMA's available fleet by **1973** comprises 7 Viscounts and 3 BAC 1-11-523FJs. A. R. G. McGibbon succeeds Chairman Cannon in January.

Four Viscount 814s are acquired in February from failed **Nora Air Services, Ltd.** Three Handley Page Herald, purchased from **Transbrasil S.A. (Linha Aereas)** are delivered in March, but will not enter service until late fall. They are part of an arrangement under which the U.K. independent will sell its 3 BAC 1-11-523FJs to the São Paulo-based airline. New uniforms for ground and cabin crews are introduced at the end of the first quarter.

On April 1, daily East Midland-Paris Viscount flights are initiated; on April 30 in competition with **Air France**, twice-weekly London (LHR)-Strasbourg frequencies begin. Simultaneously, service is initiated between London (LHR) and Newquay Airport in Cornwall.

A Viscount is badly damaged on June 8 when, inbound from Glasgow, the landing gear collapses upon landing at East Midlands Airport; no injuries are reported. Two of the BAC 1-11-523FJs are sold, one each in March and September, the latter being withdrawn on the 24th of that month following the last service by the type in BMA colors. The Yom Kippur war in October brings a significant fuel crisis. Refurbished, the first ex-**Brasilian Herald** enters service on November 9 while **Arkia Israeli Airlines, Ltd.** purchases another of the Viscount 831s on December 21.

Two Viscounts and two Heralds are dispatched to Aberdeen in January 1974 to operate oil industry support service flights under contract to Site Aviation, Ltd. These are operated to the new North Sea oil bases being established at Aberdeen and at Sumburgh in the Shetland Islands. When Site Aviation fails in April, the BMI commitment continues.

The last BAC 1-11-523FJ is sold in April and the two Boeings, leased out to **Sudan Airways, Ltd.** in 1972, complete their contract and return in July. As the airline cuts back its charter routes and changes its fleet, the two American-made B-707-321 jetliners are regularly leased to other airlines by a new leasing division, which becomes known as "Instant Airlines."

The first Boeing back from Africa is repainted and chartered out to **British Caledonian Airways, Ltd. (BCAL)** for three months. It operates charters for that company from London (LGW), Manchester, and Prestwick to Toronto, Ottawa, Vancouver, Oakland, Accra, Lagos, and Nairobi. The second, beginning on August 10, is wet-leased to **Iraqi Airways**; the BCAL charter ends on September 30.

The former BCAL scheduled route to Belfast from London (LGW) is taken over on November 1 and flown by Viscounts. As the result of a VC10 accident at Nairobi on Christmas Eve, **East African Airways Corporation** charters the B-707-321, recently off its **British Caledonian Airways, Ltd. (BCAL)** service, for four months; it will operate from London to Kenya, Seychelles, Rome, and other points. Enplanements for the year are 568,534.

At the start of 1975, the employee population reaches 1,000 and the fleet comprises the 2 leased Boeings plus 10 Viscounts and 3 Heralds. As a result of the failure of **Court Line, Ltd.** late the previous year, the Glasgow office, which had handled arrangements for the carrier, must close for lack of business. On January 31, 2 Viscount 813s begin a long-term lease to **Cyprus Airways, Ltd.**, providing services from Larnaca to Athens, Heraklion, Beirut, and Tel Aviv beginning on February 10.

The final Herald service is operated on February 16, Jersey to East Midlands Airport; the Handley Pages are put up for sale (or lease) and their place is taken by Viscounts. In March, the Iraqi charter ends and the B-707-321 on that service is passed along to **Biman Bangladesh Airlines**.

The other Boeing returns from its Nairobi lease on April 1. It is immediately chartered by the *London Daily Mail* and is sent to Saigon on April 4 to return 100 war orphans. The company aircraft is the only British aircraft to rescue children from the South Vietnamese capital and the last of any nation to rescue orphans before the city's fall at month's end.

On May 1, the aircraft, together with its sister returned from Bangladesh, begin a one-year, £2.5-million service on behalf of **Syrian Arab Airlines**. Two former **Donaldson International Airways, Ltd.** Stratoliners are acquired to fill in the capacity gap, along with two from **British Caledonian Airways, Ltd. (BCAL)**.

On September 16, two Boeings are chartered by **Malaysian Airlines System, Ltd. (MAS)** to operate services from Kuala Lumpur to Hong Kong, Taipei, Sydney, Melbourne, and Tokyo. Two days later, another is dispatched to **Pakistan International Airlines Corporation (PIA)** to fly routes out of Karachi under a £500,000 lease. In October, two Viscount 814s are sold to **Skyline Sweden, A.B.** and, on November 1, thrice-daily London (LHR) to Birmingham Viscount flights begin.

A total of 561,919 passengers are flown on the year, a 1.3% decrease from 1974. Freight, on the other hand, jumps 18% to 1.02 million FTKs.

The Teesside-London service breaks all records, with 12,272 bookings in March 1976. The London-Strasbourg service is dropped on April 1 for lack of traffic; two Boeings are chartered to **Tunis Air, S.A.** the same day. The company once again becomes an active domestic jetliner operator as the DC-9-14 *Dove Dale* is acquired on June 18 and is placed into service over the route from London (LHR) to Teesside on September 27. The company's senior and first scheduled pilot, Capt. Eric Lines, retires on October 16.

In January 1977, a Viscount 815 is sold and a Herald is passed to **Brymon Airways, Ltd.** In early February and on only 48-hours notice,

newly established **Kenya Airways, Ltd.** charters a B-707-321 to take over the services of the defunct **East African Airways Corporation** from Nairobi and Mombasa to Rome, Frankfurt, Zurich, and London.

On February 7, two Boeings are chartered to **Kuwait Airways Corporation** and are delivered in March. The same month, **Kenya Airways, Ltd.** leases two more Boeings.

New uniforms are introduced in April. En route from Beirut to Kuwait on July 9, a B-707-321 is hijacked by armed Palestinians and flown to Kuwait, where the release of 200 prisoners is demanded. Although some of the passengers are released, the aircraft now begin an odyssey to Damascus, where, in the end, the air pirates turn upon themselves and surrender. At month's end, the company joins the **British Airways, Ltd. (2)** computerized reservations system BABS.

Early in August, a second DC-9-14 is leased from **Finnair O/Y**; christened *Merseyside*, it begins services from London (LGW) to Belfast on September 12. Two new B-707s, a Dash-399C and a Dash-373C, are acquired, from, respectively, **British Caledonian Airways, Ltd. (BCAL)** and **World Airways**, and are sent out to Kenya and Kuwait under charter as replacements for several of the gas-hungry earlier models. Government permission is also received to commence operations to Brussels, Copenhagen, and Frankfurt. Meanwhile, a slight drought is suffered at year's end in the wet-leasing business and two older Stratoliners are parked.

Airline employment reaches 950 in 1978. A third DC-9-14 is leased from **Southern Airways** in February and the two idle Stratoliners are replaced by a pair of B-707-338Cs formerly operated by **Qantas Airways (Pty.), Ltd.** The ex-Australian machines are quickly leased out to **Yemen Airways Corporation** for two years. The Kuwait arrangement is extended, at a cost of £1.9 million.

On July 20, three Stratoliners are chartered to **Air Algerie S.A.**, with a B-707F sent out to **Pakistan International Airlines Corporation (PIA)**. The next day, the company's executive directors, M. Bishop, John Wolfe, Stuart Balmforth, and G. Elliott, purchase 75% shareholding from Minster Assets for £2.87 million. Managing Director Bishop also becomes corporate chairman of the new British Midland Holdings, which has the airline as its principal subsidiary.

Continental routes from Birmingham to Brussels and Frankfurt are exchanged on October 15 with **British Airways, Ltd. (2)** for the flag carrier's services from Liverpool to London (LHR), Belfast, Dublin, Jersey, the Isle of Man, and Glasgow. The deal is valued at £4 million.

Additional route exchanges are made with BA in 1979, allowing the start-up of flights from Leeds and Bradford to London (LHR) and from Glasgow to Jersey and the Isle of Man. The Queen's Award for Export Achievement is received.

Passenger boardings for the year total 1,167,000, a 39% increase over the previous 12 months.

At decade's end, the fleet stands at 2 B-707-321s, 1 B-707-324C, 2 B-707-338Cs, 1 B-707-373C leased from **World Airways**, 1 Viscount 836, 3 Viscount 814s, 7 Viscount 813s, and 3 DC-9-14s.

At the end of March 1980, **British Airways, Ltd. (2)** is forced, in the name of economy, to abandon a number of domestic routes, including services from London and Manchester to the Isle of Man. Meanwhile, the world recession forces Chairman Bishop to sell off two B-707-321 Stratoliners. Still, in the years since the introduction of its "instant airline" program for overseas carriers, the company has assisted, by lease, 25 airlines and earned £4 million in foreign exchange.

The workforce in 1981 stands at 1,120 and the fleet includes 17 airliners. When the Civil Aviation Authority (CAA) turns down company applications for route inaugurations from London (LHR) to Glasgow and Edinburgh, BMA appeals and, in early March, wins a ruling reversal.

Consequently, London (LHR) to East Midlands flights commence on March 30. A Shorts 330 is leased from its manufacturer during the summer and is employed to begin trial services beginning on September 25. Tourist arrivals on the Isle of Man from Manchester, London, Liverpool, and Belfast drop below the 100,000 level.

BMA is impacted by the world economic recession that causes fiscal losses; passenger traffic dips as 1,135,000 passengers are carried.

Fokker F.27-200 Friendship flights begin over a Birmingham–Brussels route on April 1, **1982**. The 2 B-707-338Cs are reconfigured to wide-body standard and commence flights from East Midlands to 10 Mediterranean holiday destinations.

On October 1, discounted service is introduced six times per weekday from London (LHR) to Glasgow as the result of the U.K.'s liberalization of its internal air routes. Customers are won from **British Airways, Ltd. (2)** by offering low fares and superior service, including full English breakfasts served on china with real cutlery.

To promote its feed, the company joins with British and Commonwealth Shipping Group, owners of **Air U.K., Ltd.**, to form **Manx Airlines, Ltd. (2) (MAL-2)**. Shareholding is divided 25% to 75% in favor of BMA. At the same time and, in need of headquarters space, the company relocates from East Midlands Airport to Donington Hall, Leicestershire.

A BAC 1-11-401 is wet-leased from Westinghouse Electric on October 25. MAL-2 launches Isle of Man to London (LHR) flights on November 1.

Passenger boardings increase 10% to 1,248,000 while freight increases by 70.4% to 1.16 million FTKs.

Although passenger traffic is level in **1983**, the carrier continues to challenge **British Airways, Ltd. (2)** on various domestic trunk routes, including a new link from London (LHR) to Edinburgh. The BAC 1-11-401 is returned to Westinghouse Electric on January 10.

To counter BA's use of a Concorde flying subsonically from London to Glasgow to help introduce Super Shuttle, BMA briefly schedules one of its B-707-338Cs on the same route. Simultaneously, charter services are inaugurated from East Midlands and Birmingham to North America and parts of Europe abandoned a decade earlier, including Tenerife, Crete, and Corfu.

A third B-707-338C joins the holiday fleet based at Birmingham and commences flights to Malaga, Palma, Rimini, Tenerife, Athens, and Toronto via Belfast. For feed, 75% control is taken in the Scottish regional **Loganair, Ltd.**

By **1984**, the workforce has climbed to 1,200. The company begins to phase out its Viscounts, replacing them with 3 more F.27-200s and 1 Shorts 360. Although B-707-338C charters are inaugurated from London (LGW) to Los Angeles, the government refuses a request for the launch of nonscheduled flights from Manchester to New York and from Birmingham to Belfast, Edinburgh, Glasgow, Amsterdam, Dublin, Frankfurt, Dusseldorf, and Paris.

Still, new scheduled service begins between London (LHR) and Belfast. Several Boeing 707s are withdrawn from service in October followed by all but one of the remainder by year's end.

Customer bookings for the 12 months still total 1.8 million.

The fleet in **1985** includes 8 DC-9-14/15s, 1 B-707-338C, 3 Viscounts, 4 F.27-200s, and 1 Shorts 360s. The workforce totals 1,200 as Austin Reid becomes chief financial officer.

With an emphasis on European routes and domestic scheduled service, BMA begins to change its service emphasis during the year. Additionally, the corporate image is revised in October for the first time in 20 years. Aircraft are painted in a new red, white, and blue livery and are given a new logo.

On November 5, a BAC 1-11-304AX is leased from Airways International Cymru, Ltd. as the wet-lease program is ended and the last B-707-338C is retired. In December, orders are placed for three of the ultramodern British Aerospace BAe advanced turboprop ATPs. Enplanements slip to 1,633,000.

The workforce grows a slight 1.9% in **1986** to 1,387 and four-times-per-day roundtrip London (LHR)–Amsterdam service is inaugurated on June 29, in direct competition with **British Airways, Ltd. (2)** and **KLM (Royal Dutch Airlines, N.V.)**.

British Minister of Aviation Michael Spicer travels on the first BMA flight on the new route; the service is also employed to introduce Dia-

mond Service business class. The number of frequencies over the route will be increased to five a day in December.

Passenger boardings climb 4% to 1,733,830, but freight plunges 17.5% to 1.51 million FTKs.

While on final approach to East Midlands Airport during a January 18, **1987** training flight, an F.27-200 with three crew stalls and hits the ground. The aircraft is found with its wings and elevator leading edge covered with 1" of clear ice, and must be written off, there are no fatalities.

In March, Airlines of Britain Holdings, Ltd. is formed under Chairman Bishop and Chief Financial Officer Reid to act as a holding company for the carrier and its subsidiaries. Plans are made for recapitalization and investment discussions are opened with at least three other carriers.

The Diamond Club frequent flyer program is started on September 1. At the same time, the DC-9 fleet is rechristened in honor of famous diamonds, e.g., DC-9-15 *Dove Dale* becomes *The Tiffany Diamond*.

Enplanements for the year decline to 1,273,464.

In **1988**, the 1,500-employee independent owns a fleet that includes 9 DC-9-14/15s, 4 DC-9-32s, 3 Viscount 810s, 2 Shorts 360s, and 3 Fokker F.27-200s. The first of 5, later 6, ordered Boeing 737-33As arrives in January; it had formerly been operated by **Ansett Airlines of Australia (Pty.), Ltd.**

The last Viscount 810 service is performed on February 9 and the first BAe ATP is delivered on May 9 and begins flying at month's end from Birmingham to Brussels. Also in the spring, flights begin from London to Dublin.

Daily frequencies on the London (LHR) to Amsterdam Diamond Service are increased to nine in July. **SAS (Scandinavian Airlines System)** takes a 24.9% stake in the new parent during December for £25 million.

Passenger boardings recover, zooming upward by 25.4% to 1,707,056. Freight also does well, climbing by 51.3% to 835,000 FTKs. Pretax profit totals £14.3 million.

The fleet is downsized in **1989** as 3 DC-9-15s are withdrawn, to be replaced late in the year by 5 (4 chartered) B-737-33As and 3 leased B-737-4Y0s.

After takeoff from London (LHR) on a January 8 service to Belfast, Flight 092, a B-737-4Y0 with 8 crew and 118 passengers, suffers the failure of its No. 2 engine. The aircraft is diverted to East Midlands, but while on final approach, loses its No. 1 engine. The Boeing strikes a line of trees and smashes into the westbound lane of the M1 highway, coming to rest 900 m. short of the runway near the Leicestershire village of Kegworth (47 dead).

On April 28, six-times-per-day Diamond Service roundtrips are launched from London (LHR) to Dublin.

London City Airways, Ltd. is formed in partnership with **Sabena (Belgian World Airlines, S.A.)** to operate STOL services to Brussels, but loses £5.75 million in start-up.

Enplanements for the first eight months are up 28% over the same period a year earlier, reaching 2,014,395. Freight drops 13.2% to 1.02 million FTKs. Competition with **British Airways, Ltd. (2)** over the domestic trunk routes intensifies at year's end as BA upgrades its Super Shuttle service.

Company employment is increased by 28.4% in **1990** to 2,966. The fleet now includes 3 leased British Aerospace ATPs, 6 B-737-33As (4 leased), 2 leased B-737-4Y0s, 1 chartered B-737-46B, 2 DHC-7-102s, 2 leased DC-9-14s, 4 chartered DC-9-15s, 1 owned and 7 leased DC-9-32s, including 3 from **Austrian Airlines, A.G.** and 1 from **Adria Airways**, and 1 Shorts 360, which is chartered out to **Loganair, Ltd.** The latest leased B-737-33A is the 1,833rd "Baby Boeing" built and breaks the old record for the most commercial aircraft built held by the B-727.

Chairman Bishop grants a summer interview, "British Midland Set Fair for Europe," which appears in *Interavia-Aerospace World* 45 (July 1990): 564–567.

DC-9-32 London (LHR) to Paris (CDG) service is started in August, along with daily flights between Manchester and Paris; the Dash 7s,

meanwhile, inaugurate STOL flights from London (LCY) to Paris. Beginning on October 1 a new Diamond Club product, the Silver Card, allows frequent flyers even greater privileges. The costs of the new services, coupled with much steeper fuel prices following Iraq's August 2 invasion of Kuwait, bring fiscal difficulty.

Passenger boardings leap upward by 16.2% to 3,624,981. Costs exceed income and there is an operating loss of \$12.4 million. The net loss is \$21.6 million.

The payroll rises 8.4% in 1991 to 2,957 and the fleet is increased by 1 B-737-4Y0, 2 DC-9-14s, 4 DC-9-15s, and 1 DC-9-32. One ATP is leased to **Loganair, Ltd.** along with the Shorts 360; one of the B-737-33As is chartered to **Air 2000, Ltd.** Chairman Bishop makes the Queen's New Year's honors list and is knighted. A new £10-million training center is occupied at Whitwick Business Center in Coalville, Leicestershire, in February.

Traffic declines 20% during the first quarter as a direct result of Operation Desert Storm. In the spring, plans are made to begin flying from Birmingham to Berlin; however, in May, following the government's grant of a license over the same route to **British Airways, Ltd. (2)**, BMA elects not to commence this service.

Like other national-size carriers, BMA is now allowed to operate internationally from Heathrow Airport and plans to launch flights to Brussels in competition with **Sabena (Belgian World Airlines, S.A.)**.

The Heathrow move alone helps the company to increase its traffic; customer bookings accelerate 6.9% to 4,076,885 and cargo rises 32.7% to 4.81 million FTKs. Revenues jump 21.2% to \$506.5 million and with costs down, there are profits: \$17.6 million (operating) and \$4.8 million (net).

The workforce grows to 3,140 in 1992 and the leased fleet now includes 3 ATPs (Jetstream 61s), 2 B-737-3Q8s, 4 B-737-33As, 1 each B-747-4Q8 and B-747-4S3, 3 B-737-4Y0s, 1 B-737-46B, 2 DHC-7-102s, 2 DC-9-14s, 4 DC-9-15s, 8 DC-9-32s, and 1 Shorts 360. The Shorts and one ATP remain out on lease to **Loganair, Ltd.** while a Dash 7 is chartered to **Wideroe's Flyveselskap, A.S.**

In light of the upcoming new London (LHR)–Brussels competition, **Sabena (Belgian World Airlines, S.A.)** switches its affiliation to **Brymon Airways, Ltd.** in January; BMA now halts flights into London (LCY) from Paris. The unprofitable London (LHR) to Liverpool route is simultaneously suspended. The **Air 2000, Ltd.** lease ends in February.

In March, the **SAS (Scandinavian Airlines System)** interest in ABH Holding is increased to 35%. Chief Financial Officer Reid is now tasked with a restructuring of the company's accounting framework and a redirection of its sophisticated financing structure.

Simultaneously, a major expansion of the marketing arrangement with **United Airlines** is concluded, including code-sharing on routes from five U.S. gateways through Heathrow Airport to Frankfurt, Glasgow, Brussels, Nice, Belfast, Edinburgh, Leeds/Bradford, Teesside, and Amsterdam.

Also in March, the European Economic Commission's competition directorate in Brussels fines **Aer Lingus Irish Airlines, Ltd.** for refusing to grant the company reciprocal ticketing rights on the Dublin–London route.

During the month, an impressive new Diamond Club lounge and Diamond Service lounge are opened at London (LHR). On March 29, the company inaugurates six daily return flights from Heathrow to Brussels and a daily roundtrip service from East Midlands Airport to Frankfurt.

The code-sharing and marketing agreement already announced is signed with **United Airlines** in April; services of both carriers at Heathrow Airport will be promoted. Among the benefits to passengers are discounted Visit U.K. Air Passes for United travelers and participation in United's Silver Wings program for those using BMA. Dual-designator service with **United Airlines** from London (LHR) to Brussels begins in September, eight times per day. Later, code-sharing frequencies will be offered to Brussels from Birmingham and East Midlands and via Brussels to Washington, D.C. (IAD).

During the year, the company publishes the report *A Fair Deal?* in which it argues that the lack of competition on Europe's major air routes is costing British businesses up to £236 million per year.

The airline is now the second largest scheduled airline in the U.K. behind **British Airways, Ltd. (2)**. Passenger boardings balloon 15.3% to 4,342,044; freight, however, is off 28.3% to 3.29 million FTKs. Income exceeds expenses and there are profits: \$35.55 million (operating) and \$1.25 million (net).

In 1993, Chairman Bishop oversees a workforce of 3,720, up 14.8% over the previous year. Delivery is taken of a B-737-33A, which replaces a DC-9-15. Destinations visited from hubs at London (LHR) and Amsterdam (Schiphol) include Belfast, Birmingham, Edinburgh, Glasgow, Leeds/Bradford, Teesside, Jersey, East Midlands, Paris, Nice, Brussels, Dublin, and Palma.

In March, low-fare, Diamond EuroClass business-class services are introduced on the European routes, along with new four-times-per-day routes from London (LHR) to Hamburg, followed later by Frankfurt. Within each flight's separate business-class cabin, customers are offered a choice of business-class fares. During the summer, a run is begun from Leeds/Bradford to Jersey.

A code-sharing agreement is signed with **American Airlines** at Heathrow Airport on August 13 under which more connecting passengers are pushed onto each other's flights.

A route replacement arrangement is signed with MAL-2 on October 11. Beginning on November 1, Manx, which has purchased two more ATPs from BMA, launches four-times-per-day Belfast to London (LHR) and East Midlands service. It also takes over, initially for the winter schedule, the East Midlands–Birmingham–Jersey service of BMA.

In October, 4 Fokker 100s and 4 Fokker 70s are ordered under a long-term lease agreement with the Dutch manufacturer.

Beginning in November, BMA and AA begin to code-share through Heathrow on flights from six U.S. points to Amsterdam, Belfast, Brussels, Frankfurt, Edinburgh, Glasgow, Leeds/Bradford, and Teesside. The first chartered Fokker 100 arrives at month's end. Customer bookings increase by 7.1% to 4,734,871 while cargo jumps 16.8% to 3.2 million FTKs. Revenues ascend 11.4% to \$447.98 million, while expenses climb only 10.9% to \$406.35 million. Consequently, an operating surplus of \$41.63 million and a net profit of \$1.76 million can be reported.

In early 1994, new services are initiated from Edinburgh to Jersey. An alliance is entered into with **SAS (Scandinavian Airlines System)** in February; under its terms, BMA joins the SAS frequent flyer program and offers its new partner connections via London (LHR) to its domestic U.K. markets at Belfast, Dublin, Leeds/Bradford, and Teesside. Code-sharing is also arranged on flights from Copenhagen to Glasgow and from Bergen to Heathrow.

The first service to Scandinavia, Glasgow–Copenhagen, begins on February 28. London (LHR) to Bergen and East Midlands to Brussels flights commence on March 27.

Orders are now placed during the spring for 8 B-737-59Ds and the remainder of the Fokker 100 order begins to arrive, starting in April. On May 1, the company signs a code-sharing agreement with **Air Canada, Ltd.** that will provide joint services and linkage of the two airlines' frequent flyer programs.

The **SAS (Scandinavian Airlines System)** share of parent ABH grows to 40% and, on June 13, Paris (ORY) becomes a destination. A code-sharing route with **American Airlines** via Heathrow to Frankfurt is added on July 1. The new pact with **Air Canada, Ltd.** comes into effect the same day. Code-shared flights commence from Vancouver, Winnipeg, Toronto, Ottawa, Montreal, St. Johns, and Halifax to London (LHR) and beyond to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

A commercial agreement is signed with **Viva Air, S.A.** in July under which through fares and connections are provided for business travelers from the U.K. to Spain. Also, the company enters into a code-sharing pact with **Alitalia, S.p.A.** on routes from Rome, Milan, and Turin via London (LHR) to Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford,

and Teesside. The same month, the company leases its first BAe Jetstream from its sister carrier, **Manx Airlines, Ltd. (2)**.

The company's first commercial code-sharing agreement with another European airline, **Austrian Airlines, A.G.** is announced in August. Under its terms, Austrian purchases blocks of seats on BMA services from Vienna via London (LHR) to Belfast, Glasgow, Dublin, Teesside, Edinburgh, and Leeds. At the same time, BMA is able to make two new connections into Vienna, with direct services on to Eastern Europe, the Mideast, and Africa. The last of four Fokker 100s is delivered in September.

Contending that a French government rescue package worth \$3.77 billion for **Air France** would create a "huge distortion" of the European air market, seven European airlines and the British government vow on October 4 to take legal action to try and block the subsidy. Six carriers declare they will file a joint complaint with the European Court of Justice in Luxembourg while the British government announces plans for a separate action, as does BMA.

A code-sharing agreement is entered into with **Malaysia Airlines, Ltd. (MAS)** in November; the pact covers flights from Kuala Lumpur via London (LHR) to Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford, and Teesside. In addition, BMA travelers have access to some 40 destinations in Australia, New Zealand, and Southeast Asia.

During December, plans are made to introduce the Fokker 70 into service during the spring, making BMA the first European airline to do so. Through expansion of its international routes, BMA has transformed its business; a domestic carrier five years earlier, it is now a European regional carrier, with a sixty-forty split of revenues.

Passenger boardings swell 9.3% to 5,173,800; however, figures for freight are not released. Revenues jump 9% to \$647.2 million and allow an operating profit of \$8.7 million and a net gain of \$7.04 million.

Airline employment is increased by 6% in 1995 to 4,135. On January 9, with Airlines of Britain, plc. approval, Manx Airlines (Holdings) is renamed British Regional Airlines (Holdings) and the airline operating subsidiary of **Manx Airlines, Ltd. (2)** is divided into two separate divisions: MAL-2 and **Manx Airlines (Europe), Ltd. (MA[E]L)**.

The latter becomes a **British Airways, Ltd. (2)** franchise partner and flies BAe Jetstream 41s, ATPs, and two BAe 146-200s in "British Airways Express" livery. MAL-2 will operate all of the routes to and from the Isle of Man while MA(E)L will fly the remainder, including those from Southampton, Cardiff, Belfast, and Manchester to Brussels, Rotterdam, and Paris. In addition, the regional carrier receives access to BA marketing, frequent flyer program, and airport service support.

Also in January, the company receives the 1994 "Market Development Award" from *Air Transport World* magazine.

The flag carriers from the Iberian Peninsula become BMA partners in February. Codes are shared with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** on routes to London (LHR) from Barcelona, Bilbao, Madrid, Valencia, and Seville and with **TAP (Air Portugal, S.A.)** from Lisbon, Madeira, Oporto, and Faro. Both of the foreign carriers are thus allowed access to the BMA domestic destinations of Belfast, Dublin, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

The first of five Fokker 70s is delivered in April and begins service to European destinations. BMA is the first European airline to accept the aircraft, which will replace DC-9s.

In July, **Cathay Pacific Airways (Pty.), Ltd.** begins code-sharing with BMA on services from Hong Kong via London (LHR) to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside. The same five U.K. destinations become simultaneously available to passengers of **Virgin Atlantic Airways, Ltd.** arriving at London (LHR) from six U.S. gateways, plus Johannesburg and Tokyo (NRT).

The company reports that the Eurostar English Channel tunnel impacts only its London-Brussels service during the summer. On October 29, flights commence four-times-daily between Heathrow Airport and Zurich. Daily service to Prague begins in November. On the domestic front, new flights begin from Leeds/Bradford to Glasgow and from East Midlands Airport to Belfast.

On December 11, BMA becomes the first airline to sell tickets on the Internet's World Wide Web, when it begins to offer bookings via its "Cyberseat" system. Tickets can be received from travel agents, at check-in, or by mail.

Enplanements jump 8.5% to 5,850,047 while cargo moves ahead by 11.3% to 4.23 million FTKs. Revenues for recently scheduled services total \$559.5 million and allow an operating profit of \$8.3 million, down from the previous year.

Sixty-five new workers join the company in 1996. Late in January, MAL-2 takes over management of the Scottish regional **Loganair, Ltd.** Code-sharing is expanded with **Virgin Atlantic Airways, Ltd.** during February to include services to Amsterdam, Brussels, and Hong Kong.

As part of its commercial policy of developing services to major European capitals, BMA, in March, applies to the CAA for a license to serve Moscow, beginning on February 1, 1999, with return services four times a week. This application will eventually bring BMA into conflict with its code-sharing partner, Virgin Atlantic.

In April, Aberdeen-based **Business Air, Ltd.** becomes a property of Airlines of Britain, plc. Its addition allows Sir Michael's group to blanket the U.K. with regional services, in addition to the international flights provided by BMA.

Also in April, three new alliances are signed with Pacific operators. The first, with **Air Lanka, Ltd.**, provides for code-sharing on flights from Colombo via London (LHR) to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside.

Air New Zealand, Ltd. simultaneously starts sharing its code on flights from Auckland via London (LHR) to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside. The same five domestic U.K. destinations are also opened up via London (LHR) to **Royal Brunei Airlines** passengers coming in from Dubai, Yangon, Bandar Seri Begawan, and Singapore. BMA is now the second largest operator at Heathrow Airport after **British Airways, Ltd. (2)**.

Also during the spring, new regional flights commence from Leeds/Bradford to Paris (CDG) and from East Midlands to Dublin.

At the beginning of June, the new high-speed railway Eurostar lowers its fares in an effort to compete with the airlines. On June 6, it starts a high-speed rail service, Thalys, connecting Amsterdam, Brussels, and Paris. To date, Eurostar has cut 25% from **Air France's** Paris-London business, while BMA is forced to end its service to Paris (ORY).

In August, **British Airways, Ltd. (2)** announces that, two months hence, it will withdraw from its unprofitable Scottish internal services, including six routes serving Orkney, Shetland, and the Western Islands.

A \$15-million package of service enhancements is introduced during late summer and early fall. Updated BMA aircraft livery and new uniforms for crews and ground staff are presented, along with separate business-class departure lounges at important European regional airports, electronic ticketing, wider business-class seats, and an intensive new advertising campaign.

British Regional Airlines (Holdings) in September changes the name of MA(E)L to **British Regional Airlines, Ltd.** Plans are announced for the new BRA to take over the previous **British Airways Regional, Ltd.** services at the end of October as a BA franchise partner. Under terms of this agreement, BRA will enjoy all of the benefits of franchise partnership, including dual-designator flights, reservations and frequent flyer linkage, passenger and airport services.

Meanwhile, **Loganair, Ltd.** operations are incorporated into BRA. MAL-2 continues separate operations. On September 30, business-class is extended to all BMA domestic services.

Customer bookings inch up 1.4% to 5,394,762 and a total of 4.77 million FTKs are operated, a 10.6% increase. Operating revenues are £478.2 million, while pretax profit is £5.3 million.

The workforce is cut 1.6% in 1997 to 4,135. In January, BMA begins code-sharing flights with **Gulf Air** on services from Bahrain, Muscat, and Abu Dhabi via London (LHR) to Belfast, Edinburgh, Glasgow, Leeds/Bradford, and Teesside. Beginning in February, Dublin, Belfast, and East Midlands via Glasgow become available to passengers arriving

at London (LHR) on board **Flugfölag Islands/Icelandair, H.F.** frequencies from Reykjavik.

Deutsche Lufthansa, A.G. now begins discussions with British Midland concerning a possible strategic alliance and acquisition of a 40% equity stake in the British carrier, shareholding which would equal that held by **SAS (Scandinavian Airlines System)**.

On February 24, Airlines of Britain, plc, the holding company which owns **British Midland Airways, Ltd.**, **British Regional Airlines, Ltd.**, **MAL-2, Loganair, Ltd.**, and **Business Air, Ltd.** elects to split up British Regional Airlines (Holding) and all of the carriers except BMA. The move will technically allow BRA(H) to continue its **British Airways, Ltd. (2)** affiliations without fear of conflict of interest decisions being made by Airlines of Britain, which is about to become partners with BA's competitors, **Deutsche Lufthansa, A.G.** and **SAS (Scandinavian Airlines System)**. Still, Sir Michael Bishop retains ultimate ownership in both groups. Airlines of Britain, plc, itself is renamed British Midland, plc.

MAL-2, Loganair, Ltd., and **Business Air, Ltd.** will continue a confederation with **British Regional Airlines, Ltd.** in a British Airlines Regional Group of BA franchise partners. In March, **Loganair, Ltd.** will be purchased and taken outside of the group. Activities for each company will continue to be reported separately.

On May 1, BMA enters into strategic franchise alliance with **Deutsche Lufthansa, A.G.** Under terms of the agreement, the companies link their frequent flyer programs and undertake joint marketing, customer, and ground support services. BMA operates its own fifth-freedom flights to Cologne and introduces dual-designator flights with DLH between Cologne and Rome.

When formation of the "Star Alliance" between **SAS (Scandinavian Airlines System)**, **Air Canada, Ltd.**, **Deutsche Lufthansa, A.G.**, **Thai Airways International, Ltd. (THAI)**, and **United Airlines** is announced on May 14, negotiations are already under way to bring BMA in as another partner. The talks will drag on for months.

Also during the spring, BM Engineering, Ltd. is established at Heathrow Airport. The first international airline to contract with the new subsidiary for regular maintenance checks is **Virgin Atlantic Airways, Ltd.**

When, due to economic decline, **US Airways** loses 57 Airbus delivery positions early in July, many are quickly taken up by BMA. In mid-month, the carrier announces that it will take delivery of 8 machines (4 A320s and 4 A321s) the following month and lease 12 others from the International Lease Finance Corporation (ILFC).

The work slowdown by striking **British Airways, Ltd. (2)** cabin staff provides the carrier with additional passenger traffic and a £3-million net windfall.

The alliance with **Deutsche Lufthansa, A.G.** is deepened in August into a full code-sharing partnership. A new Diamond EuroClass premium product is later introduced.

Under its arrangement with the German major, the carrier inaugurates daily dual-designator services on October 27 from London (LHR) to Dresden via Cologne and Bonn.

A code-sharing agreement is signed with **Qatar Airways** at the beginning of November.

Customer bookings this year jump 7.5% to 5.7 million. Turnover increases 11% to £529.3 million, while pretax profit almost triples to £17.3 million.

BMA, at the beginning of 1998, is the second largest U.K. scheduled airline. It operates over 1,500 weekly flights to 19 European destinations.

Anticipating a closer relationship between the U.S. and U.K. air transport industries, the company, in February, petitions the CAA for route licenses to serve 10 additional U.S. destinations.

On March 29, BMA challenges **British Airways, Ltd. (2)** on its previous monopoly route from London (LHR) to Manchester; eight-times-daily B-737-59D service is initiated.

Aberdeen-based **Business Air, Ltd.** is renamed **British Midland Commuter, Ltd.** during the first quarter. Although BMA CEO Bishop

becomes the little carrier's chairman, the founder and president, Ian Woodley, remains managing director. With a fleet of 1 owned SAAB 340A and 2 leased SAAB 340Bs, the small regional continues to schedule visits linking its base with Dundee, Edinburgh, Esbjerg, Glasgow, and Manchester.

The first of 5 A321-231s and 7 A320-231s leased from ILFC is turned over during ceremonies on April 1.

A321-231 service begins on April 6 over the company's London (LHR) to Belfast route. A new daily B-737-59D roundtrip route is opened on July 10 between London (LHR) and Warsaw. The service is started in anticipation of the August launch of dual-designator code-sharing between **LOT Polish Airlines, S.A.** and **British Airways, Ltd. (2)**.

On August 10, a code-sharing agreement is signed with **Continental Airlines**; seven days later, BMA will begin operating as a feeder for Continental's transatlantic services, while CA will place its codes on BMA flights from Manchester to Aberdeen, Edinburgh, and Glasgow.

Under an agreement signed on July 20, BMA and **Virgin Atlantic Airways, Ltd.**, also on August 17, begin dual-designator service over the BMA route between London (LHR) and Warsaw.

On September 1, thrice-daily dual-designator roundtrips commence in cooperation with **Deutsche Lufthansa, A.G.** between Manchester and Dusseldorf; the new schedule enables the carriers to offer an increase from two to three weekly flights.

In mid-September, the U.K. CAA chooses **Virgin Atlantic Airways, Ltd.** rather than BMA to operate a second available weekly frequency from London (LGW) to Moscow. BMA appeals.

Beginning on October 7, **American Airlines** places its "AA" code on BMA services to Aberdeen, Edinburgh, and Glasgow via Manchester.

The decision of the CAA to award the Moscow route to **Virgin Atlantic Airways, Ltd.** is overturned by Deputy Prime Minister John Prescott on October 22. Acting in his dual role as Secretary of State for the Environment, Transport and the Regions, Prescott orders that a new hearing be held on November 26. At the same time, Managing Director Reid issues a statement of appreciation on the decision, noting that BMA will begin daily service from London (LHR) to Budapest in March.

At the beginning of November, a \$2000-million order is placed with Embraer for 10 EMJ-145s with options on another 5. Deliveries will commence in May.

The hearing ordered by Deputy Prime Minister Prescott occurs on November 26, with attorneys from both carriers making presentations backed by various witnesses, including Chairmans Bishop of BMA and Richard Branson of VAA. On balance, the CAA now finds for BMA and grants it the Moscow route license on December 16. The case is reported for the general public on the CAA website, <http://www.caa.org.uk/airlinelic/decision498.htm>.

During the 12 months, passenger boardings rise 5.1% to 5.97 million. Turnover climbs 3% to £558.8 million (\$905.25 million), while net gain falls 35% to £11.02 million (\$17.84 million). The "disappointing" fiscal results are blamed on intense competition with deep-discount carriers.

By the beginning of 1999, airline employment has been increased 32.8% to 5,490. On January 8, many of the 79 survivors of the 1989 Kegworth disaster join staff from the Queen's Medical Centre in Nottingham for a tenth anniversary memorial service in the hospital chapel. An A320-232 joins the fleet later in the month.

BMA and **Deutsche Lufthansa, A.G.** further strengthen their code-sharing agreement on March 28, when they launch joint services between London (LHR) and both Stuttgart and Hanover. The twice-daily nonstop roundtrip flights offered by Lufthansa are increased to thrice daily by the addition of one BMA B-737-59D nonstop roundtrip service into each German market.

Three days later, the company announces that it has won CAA route licenses to serve New York, Washington, D.C., Miami, and Boston from London (LHR) if and when a new bilateral air agreement between the U.K. and the U.S. opens up competition at Heathrow Airport.

It is reported in an April 16 article by Keith Harper in the online edition of *The Guardian/The Observer* that the CAA has just approved a

second British route to Moscow that BMA has won against strong competition, again from **Virgin Atlantic Airways, Ltd.**

To raise money in aid of the National Society for the Prevention of Cruelty to Children, 20 employees stage an aircraft pull at Leeds-Bradford Airport on April 24; a 28 1/2-ton Fokker 70 is dragged 200 m. along the tarmac at Yeading in an effort which generates £1,500.

On May 11, BMA presses a long-running bid to enter the transatlantic market by making a special request to the U.S. DOT that it be allowed to start services between London (LHR) and New York (JFK) under a special exemption from the U.S.-U.K. bilateral air agreement. Even though the company has already received a route license from CAA, there is no immediate response from Transportation Secretary Rodney Slater.

Daily nonstop B-737-59D roundtrips commence on May 28 between London (LHR) and Budapest.

Finding the arrangement no longer profitable, BMA, on June 24, serves notice on **American Airlines** that it will be terminating its code-share agreement with the U.S. major in March 2000.

In July, James Hogan becomes operating chief and a report is commissioned from branding consultants Landor Associates. The findings, due within a month, may result in a new name, logo, and livery for BMA by the end of the year.

Although it is not currently for sale, *The Sunday Times* on August 29 indicates that BMA has received purchase offers from **Air France**, **Deutsche Lufthansa, A.G.**, **KLM Royal Dutch Airlines, N.V.**, and **Virgin Atlantic Airways, Ltd.** Only Virgin's Richard Branson confirms his interest.

At the beginning of September, Michael Bishop ups the ante for those airlines seeking a piece of his carrier by applying to the government for authority to begin transatlantic services; the stalled U.K.-U.S. bilateral agreement will be circumvented by flying out of Manchester.

Employing the first of three newly delivered ERJ-145s, the company launches twice-daily roundtrips between East Midlands Airport and Frankfurt on October 31. On November 9, the German major **Deutsche Lufthansa, A.G.** purchases half of the 40% stake in BMA formerly held by **SAS (Scandinavian Airlines System)** for £91.4 million. The equity purchase is criticized by a number of competitors, including **British Airways, Ltd. (2)**, but also practically guarantees the company's entry into the "Star Alliance."

Overall customer bookings accelerate 9.6% to 6,504,000 and 6,956,000 FTKs are operated. Income rises by 9.8% to \$981,280,000 and allows net profits to reach \$21,920,000.

The workforce is 4,743 at the start of 2000, a drop of 13.6% over the previous year.

In continuing anticipation of a possible opportunity to offer transatlantic service, the company, on February 22, places a firm £1.2-billion order for 4 A330-200s, with 8 options.

In celebration of its entry into the multinational grouping, BMA, on March 5, places "Star Alliance" decals on one of the newly repainted A321-231s, A320-231s, and B-737-33As.

In order to feed transfer passengers onto the long-haul airliners of its new "Star Alliance" partners, BMA, on May 2, inaugurates new four-times-a-day B-737-59D services from London (LHR) to Madrid, Rome, and Milan. A simultaneous withdrawal from the Frankfurt, Prague, and Warsaw routes confirm a shift in company focus away from its earlier Eastern European expansion.

On July 1, the company officially becomes the 13th member of the multinational group; its Heathrow hub now becomes the only European airport to host two competing associations, "Star Alliance" and "OneWorld."

On September 18, the company announces that, with CAA route licenses in hand, it intends to employ the A330-200s ordered earlier to launch its first transatlantic services, code-shared with **United Airlines**, from Manchester to Washington, D.C. (IAD) on April 30 and to Chicago (ORD), on May 21.

Thrice-daily B-737-59D roundtrips begin on November 1 between London (LHR) and Barcelona.

BRITISH MIDLAND COMMUTER, LTD.: **Kirkhill Business House, Howermoss Drive, Dyce, Aberdeen, Scotland, AB2 0GL, United Kingdom; Phone 44 (0) 1224 401 900; Fax 44 (0) 1224 770 141; <http://www.flybritishmidland.com>; Code BD; Year Founded 1998.** Aberdeen-based **Business Air, Ltd.** is renamed during the first quarter of 1998. Although BMA CEO Michael Bishop becomes the carrier's chairman, the founder and president, Ian Woodley, remains managing director. With a fleet of 1 owned SAAB 340A and 2 leased SAAB 340Bs, the small regional continues to schedule visits linking its base with Dundee, Edinburgh, Esbjerg, Glasgow, and Manchester.

Enplanements during the year total 134,000.

By the beginning of 1999 airline employment has been boosted 75% to 245.

Following the September 30 failure of **Debonair Airways, Ltd.**, **Lufthansa CityLine, A.G.** in early October awards the defunct line's "Team Lufthansa" contract to BMC. Plans are made to take over the 5 BAe-146s leased by Debonair, hire required personnel, and continue the flights from Munich. Unfortunately, the relaunch is delayed by difficulties in transferring the 146 leases and the November service resumption is pushed into the new year.

Also during the year, the capacity is substantially increased and night-mail services are undertaken under contract to the Royal Mail. Aircraft and crews are also wet-leased to **British Regional Airlines, Ltd.** Enplanements reach 301,000.

The delayed inauguration of "Team Lufthansa" service from Munich begins on February 7, 2000, employing a single leased BAe 146-200.

By March, one each chartered ERJ-145, B-737-59D, BAe 146-200, and Airbus A321-231 have been stationed at Munich to fly the **Lufthansa CityLine, A.G.** subservice previously operated by **Debonair Airways, Ltd.**

On April 17, the B-737-59D and ERJ-145 are returned to **British Midland Airways, Ltd.** and replaced with 2 more BAe 146-200s. BMC joins "Team Lufthansa" in May and its BAes are repainted.

BRITISH NEDERLAND AIR SERVICES, LTD.: **United States (1947-1950).** Equipped with 2, later 3, Miles M.57 Aerovans, this non-scheduled operator is registered on June 4, 1947. Charter services begin at the end of the month, but are suspended in November at the close of the summer season and two of the Aerovans are withdrawn.

In March and April 1948, 2 Douglas C-47s are acquired; converted to DC-3 civil standard, they join with those of Dutch associate **Aero Holland, B.V.** in hauling produce. From May through December, a wide variety of ad hoc charters are flown. Meanwhile, between September 21 and November 14, 1 DC-3 is employed as a freighter flying 76 cargo sorties into Berlin from Lubeck and Hamburg during the Berlin Airlift.

On January 6, 1949, the company begins flying textiles from the Continent to England under contract to **Lep Air Services**. As the season wears on, additional ad hoc charters are undertaken, including produce and machinery flights. Nonscheduled passenger services are also undertaken, including DC-3 operations to Finland, Spain, France, and Norway.

In January 1950, a Vickers Viking is purchased and passenger charters to Amsterdam are undertaken. Textile flights, produce runs, and miscellaneous charters complete the carrier's service roster. A DC-3 is sold in November and failing to find sufficient work for the remaining Douglas and Vickers, the company ceases operations on December 31.

BRITISH OVERSEAS AIRWAYS CORPORATION (BOAC): **United Kingdom (1939-1974).** As a result of a study by the Cadman Committee concerning U.K. air transport, particularly **Imperial Airways, Ltd.**, on November 11, 1938, Minister of State for Air Sir Kingsley Wood announces the British government's intention to merge **Imperial Airways, Ltd. (IA)** and **British Airways, Ltd. (1)** (BA-1) to form the new British Overseas Airways Corporation (BOAC). The private shareholders will be bought out and former British Broadcasting Corporation Director General Sir John Reith will be appointed chairman; from

offices near Victoria Station, Reith and his chief assistant, Leslie Runciman, draft guidelines for the new organization.

Minister Wood introduces the BOAC Bill in the House of Commons on June 12, 1939; it receives a second reading on July 10 and Royal Assent on August 4. Under its terms, the former state airline is purchased for £2,659,086 while the shareholders of the unprofitable BA-1 are given only £262,500. Reith's management overhaul is completed and BA-1 Operations Manager Campbell Orde assumes the same post under Sir John.

A Lockheed L-14 Super Electra formerly owned by BA-1 catches fire in midair over Luxeuil, France on August 11 and crashes. Both IA and BA-1 are assigned one of the two L-14s of **LOT (Polskie Linie Lotnicze)** to escape following the German invasion on September 1. The *Lowicz* of the former is assigned to routes running into France.

IA and BA-1 schedules and operations are integrated, beginning after the outbreak of war in September. Many of the pilots of the two carriers, members of the RAF Reserve, depart for military service, some flying of transports or antisubmarine aircraft. A number of the flying boats, now operating from Poole Harbour instead of Southampton Water, are impressed into RAF maritime service, including the S30s *Cabot* and *Caribou*, and the new S26 G-Class *Golden Hind*. The Handley Page HP 42s and de Havilland DH 89A Dragon Rapides of the merging carriers are sent to Exeter Airport to assist in a national communications program.

The British Overseas Airways Corporation is officially established on November 24, with Sir John Reith as its first chairman; his deputy is the former BA-1 chairman, Clive Pearson. Other directors include Leslie Runciman and Harold Brown. Acquired from **KLM (Royal Dutch Airlines, N.V.)**, the L-14 formerly known as the *Lepelaar (Spoonbill)* crashes at Malta on December 21.

A former BA-1 L-14 overshoots the runway at Heston on January 15, 1940 and crashes. On March 6, Deputy Chairman Pearson succeeds Reith as chairman, when the latter is given a peerage and named U.K. Minister of Information. Also during the first quarter, the S23s *Cordelia* and *Clio* pass to the RAF, along with the new S26s *Golden Fleece* and *Golden Horn*.

BOAC officially acquires the assets, routes, and operations of IA and BA-1 on April 1. The first BOAC Empire Service departs Durban on April 3. On April 9, German forces invade Norway; Perth–Oslo and Stockholm service is ended, but not before the carrier's Junkers Ju-52/3m *Jason* is captured during the morning at Oslo's Fornebu Airport. The L-14 *Lochinvar* is lost in a crash near Loch Lomond on April 22.

While attempting to fly supplies to the Allied bases in northern Norway for RAF's 119th Squadron, the Shorts S23 flying boats *Cabot* and *Caribou* fall victim to German bombers at Bodo on May 5 and 6. On May 22–23, Armstrong-Whitworth AW-27 Ensigns fly foodstuffs to Allied forces surrounded at Merville; the *Elysian* is caught on the ground by Luftwaffe Me-110s and destroyed.

On June 1, with the battle of France in high gear, the AW-27 *Ettrick* is damaged at Paris (LBG) by Nazi air raid and then abandoned. The DH 91 Albatross *Fingel* inaugurates twice-weekly London–Lisbon via Bordeaux flights on June 4. The frequencies are scheduled to link up with the Lisbon–New York flying boat service of **Pan American Airways (PAA)** thereby preserving a vital communications chain to the U.S. Italy enters the war on June 10 and in India on this day, the joint BOAC/**Indian Trans-Continental Airways, Ltd.** AW XV Atalanta service is suspended on the Karachi–Calcutta route and the twice-daily joint service operated with **Air France** is indefinitely suspended on June 13.

France capitulates on June 17 while Empire-class flying boat service is opened to Lisbon on June 19, the same day weekly flying boat service is launched on an emergency Empire ("Horseshoe") Route to Australia and New Zealand via Lourenco, Marques, Beira, Dar es Salaam, Mombasa, Kioumu, Khartoum, Cairo, Habbaniyah, Baera, Karachi, Calcutta, Rangoon, Bangkok, Penang. **Qantas Empire Airways (Pty.), Ltd.** and **Tasman Empire Airways, Ltd.** operate the Singapore–Sydney and Sydney–Auckland segments, respectively. The Khartoum–Takoradi route, formerly flown in cooperation with **Elders Colonial**

Airways, Ltd., is now closed as is the Bordeaux stop on the London–Lisbon route. On June 28, France forbids British flights across the Sahara and the London–Khartoum Lockheed L-14 route opened on June 10 is now closed.

The S23 *Clare* begins, on August 3, the first of four high-priority Poole–New York flights via Botwood and Montreal; the last is completed on September 23. On August 6, the S23 *Clyde* departs Poole for a survey, which will be completed on August 9, via Lisbon, Bathurst, Freetown, and Lagos, of the new West African route. During the month, the Takoradi–Khartoum DH 86 route is reopened.

On August 19, the *Clyde* flies British and Free French representatives to a meeting at Leopoldville; in a conference aboard the flying boat (anchored in the Congo River), officials of French Equatorial Africa agree to bring that colony into the war on the Allied side.

The S23s *Cassiopeia*, *Corinthian*, and *Coote* fly from Poole to Lagos, with the latter continuing on to Leopoldville; afterwards, the three fly on to Lake Victoria to join the England–Australia "Horseshoe" operation. During the war, Short C-class flying boats will operate from the surface of the Dead Sea which, at 1,292-ft. below sea level, is the lowest destination ever regularly visited by commercial aircraft.

The last nonstop service to Stockholm is flown on September 12. Due to difficulties in obtaining clearance for flights over Indochina, the Hong Kong service is closed down on October 15. The same day, the Empire Airmail Scheme, which has been in operation for almost a decade, is suspended; the no-surcharge transport of letters has been a success, but cannot be continued due to the war.

Four days later, the S23s *Clyde* and *Clare* begin every-10-day priority flights Poole–Lagos via Lisbon, Bathurst, and Freetown. Late in the month, **Sabena Belgian World Airlines, S.A.**, with BOAC cooperation, begins weekly Takoradi–Cairo multistop flights.

Earlier in the fall, the Ministry of Aircraft Production head Lord Beaverbrook suggests establishment of an organized ferrying service for the transport of American lend-lease aircraft across the Atlantic. An organization is established in Canada when the Canadian Pacific Railway sets up an Air Ferries Department under the command of Maj. George E. Woods-Humphrey, longtime managing director of Imperial Airways.

Led by BOAC Capt. D. C. T. Bennett, 7 Lockheed Hudsons (the military version of the Model 14 airliner) make the first ferry flight, from Gander, Newfoundland, to Belfast, Northern Ireland, in 10½ hrs. on November 10–11.

Enplanements for the first three quarters of the first year total 19,579.

On January 19, 1941, the Super Electra *Lafayette* is lost in a crash at El Fasher, Sudan, while the S23 *Clyde* is destroyed by a Lisbon storm on February 15. An L-14 begins Stockholm service from Lauchars, Scotland, on March 2, completing the first of 1,200 high-priority flights that will be made by the corporation before V-E Day. In addition to the transport of important passengers, the aircraft involved are able to return to Great Britain small quantities of urgently required items, such as electrical equipment, watch springs, and unique ball bearings.

The American Lend-Lease Act is signed by President Franklin D. Roosevelt at Washington on March 11 and twice-weekly Khartoum–Asmara flights commence on March 12. Also in March, the carrier, places its first of 39 ordered Lockheed L-18 Lodestars into service.

Greek troops in Macedonia and Epirus surrender on April 22, leaving supporting British forces exposed to German attack. Immediately, the S23s *Cambria* and *Coorong* make the first of 13 Alexandria–Crete (Suda Bay) return evacuation flights; when the operation is completed on May 5, 569 British soldiers have been saved.

The S23 *Cathay* replaces the *Clyde* on the Lisbon service as the outbreak of rebellion in Iraq on May 2 forces suspension of services via Habbaniyah.

On May 4, Capt. D. C. T. Bennett departs Montreal for Blackpool via Gander in the formal inaugural of the Return Ferry Service; when his Consolidated Liberator I lands next day, it has the honor of completing the first regularly scheduled British landplane passenger flight over the North Atlantic.

Following the surrender of Italian Ethiopia in mid-May, BOAC inaugurates a weekly service to Addis Ababa from Cairo; British government officials must approve every passenger to and from the Ethiopian capital.

On May 22, *Bristol*, the first of 3 Boeing 414s to be delivered by July (the others are *Berwick* and *Bangor*) arrives at Foynes from New York via Bermuda and Lisbon, and is placed on the Lagos route on May 26. These 3 planes, purchased from **Pan American Airways (PAA)** for £259,250 each, will be the only British aircraft to forgo austere wartime conditions and continue to offer their passengers comfort, tea, and fine food.

At month's end, **Sabena Belgian World Airlines, S.A.** terminates its Takoradi–Cairo service at Juba. Air Chief Marshal Sir Frederick Bowhill is appointed on June 13 to lead the organization that will ferry U.S. military aircraft across the Atlantic; it is officially named RAF Ferry Command in July.

S23s open a Lagos–Cairo frequency on July 4 via Libreville, Points Noire, Leopoldville, Cocquilhatville, Stanleyville, Port Bell, and Nile River; the same day, DH 95s launch Bristol–Dublin flights. The L-14 *Livingstone* is destroyed in a crash at Khartoum, Sudan, on August 4. En route from Prestwick to Gander on an August 10 return ferry run, a Liberator, with 27 aboard, crashes into 2,868-ft. Goat Fell on the Isle of Arran; there are no survivors. Four days later, another Liberator, with 27 aboard, also crashes on takeoff from the Scottish base; all aboard are killed, including Arthur Purvis, chairman of the British Supply Council in North America.

On August 19, President Franklin Roosevelt announces that **Pan American Airways (PAA)** will establish a subsidiary that will transport U.S.-made aircraft to the RAF in Egypt via West Africa. Also during August, the last surviving Handley Page HP 42W, the *Helena*, is dismantled at the Royal Navy Air Station at Donibristle.

Weekly Asmara–Port Sudan and Cairo service is kicked off on September 12 and on September 24, pursuant to the requirements of RAF Ferrying Command, BOAC takes over management of the Return Ferry Service. Under its charter, the RFS, initially employing six Liberator Is, is able to fly aircraft crews back to the U.S. or Canada from the U.K., allowing them to avoid time-consuming sea voyages and ferry planes back more quickly.

U.K.–Cairo service via Lisbon, Gibraltar, and Malta, is begun weekly on October 12 by the S23s *Clare*, *Champion*, and *Cathay*. The Takoradi–Cairo service is withdrawn on October 28 as **Pan American Airways (PAA)** begins Accra–Khartoum service, later extended to Takoradi; the replaced British aircraft open a Cairo–Khartoum four-times-per-week operation.

On November 3, weekly Asmara–Tehran service is initiated via Port Sudan, Wadi Halfa, and Cairo. The U.S. Army Air Corps turns its C-55, the Curtiss-Wright CW-20 prototype, over to the U.K. and, on November 12, the 24-seat transport is flown to Prestwick by Capt. A. C. P. Johnstone in 9 hrs. 40 min.

On December 7, Japanese forces bomb Pearl Harbor, Hawaii, and invade Malaya. The Rangoon–Singapore sector is immediately revised, with flights going via Port Blair, Sabang, and Medan. The next day, the U.S. and Great Britain declare war on Japan. On December 22, the S23 *Cassiopeia* flies ammunition to Singapore via Port Blair and Rangoon. Late in the month, **Pan American Airways (PAA)** withdraws its Khartoum service as the American carrier's resources are now needed to directly support the U.S. war effort.

As the need for military transport increases during the year, the RAF acquires the Armstrong Whitworth AW 15s *Atalanta*, *Artemis*, *Astraea*, and *Aurora*. At the first annual meeting after Christmas, it is reported that 28,829 passengers have been carried during this first full year of service.

Following his Christmas visit to Washington, Winston S. Churchill, on January 15–17, 1942, flies Norfolk, Virginia, to Bermuda and Bermuda to Plymouth aboard the BOAC-operated B-314 *Berwick*, piloted by Capt. Kelly Rogers, becoming the first British Prime Minister to make a transatlantic flight. While approaching England, 6 RAF Hur-

ricane fighters are dispatched to destroy the unidentified aircraft believed to be a hostile bomber; the Hawkers, as Churchill will later record in his *History of the Second World War*, “failed in their mission.”

On January 25–26, a civil Liberator flies nonstop Hurn–Cairo in 11 hrs. 15 min.; returning, the plane is mistakenly shot down off the English coast, possibly by the same aircraft sent to intercept the *Berwick* 10 days earlier.

The Empire Route to Singapore and Australia is terminated at Calcutta on February 13; two days later, Singapore surrenders to the Japanese. Also on February 15, a civil Liberator, with five crew and four passengers, is accidentally shot down by RAF interceptors south of Plymouth and crashes into the English Channel near Eddystone Lighthouse; there are no survivors.

The Frobisher–Dublin route is altered to Shannon on February 21; five days later, the S23s operating the Mediterranean Cairo route are, due to the military situation in Libya, transferred to West Africa.

The Takoradi–Khartoum frequency is stopped on April 30; however, L-14s inaugurate Cairo–Malta night flights on May 697. On May 11, a Lockheed L-18 Lodestar opens a new Hadramaut 10-stop Cairo–Karachi route.

Armstrong-Whitworth Whitley 5s are placed on the U.K.–Malta operation on June 11. During the spring, the prototype Curtiss-Wright CW-20, which was received by the government from the U.S. Army Air Force for use as a special courier transport the previous November, is christened *St. Louis* and is placed into service on the routes to Gibraltar, Malta, and the Middle East.

Piloted by Capt. Kelly Rogers, the B-314 *Berwick* flies Prime Minister Churchill on June 17 from Stranraer, Scotland, to the Potomac River at Washington, D.C. in 27 hrs. Following discussions with President Roosevelt, Churchill returns to Britain the same way he came.

Designed as a transport version of the popular Avro Lancaster bomber, the Avro 685 York makes its maiden flight at Ringway on July 5. On July 14, a BOAC Liberator begins the first of 24 Lyneham–Gibraltar–Cairo flights that will end on December 10. The new Shorts S26s *Golden Hind* and *Golden Horn* are placed on the West African service on July 18.

Due to engine problems, the Whitley 5s on the Malta service are restricted to the London–Gibraltar segment; the Gibraltar–Malta run is made by L-14s. At month's end, the government announces that 995 of every 1,000 American-made aircraft flown to the U.K. have arrived safely.

On August 15, famed BOAC pilot Air Commodore D. C. T. Bennett is placed in charge of the Pathfinder Force of RAF Bomber Command. The S23 *Clare* crashes near Bathurst on September 14, leading to the withdrawal of all the S23s from the West African service. Cairo–Karachi Wellington flights are launched at month's end and as the Whitley 5s are retired, the RAF assumes responsibility for the carrier's Gibraltar–Malta operations.

On behalf of BOAC, **KLM (Royal Dutch Airlines, N.V.)** on October 15 contracts to extend its London–Lisbon route to Gibraltar. Piloted by Capt. J. R. Percy with two other crewmen and eight travelers, a Liberator I transport makes the company's first experimental passenger flight to Russia on October 21–22, flying from Prestwick, Scotland, to Ramenskoye, outside Moscow, in 13 hrs. 9 min.

Weekly Cairo–Lydda–Basra Wellington flights are begun on October 26, but together with the Cairo–Lagos and Takoradi route, these end on November 8 as the corporation's transports in the area are needed to support the El Alamein offensive. The first of 200 flights to points in the Western Desert to be made by year's end is flown on November 10.

On December 17, Member of Parliament W. D. Perkins rises in the House of Commons to note how impossible it has become for BOAC's fleet to fulfill demands now being placed upon it. Plans are made to ask the Americans, under lend lease, to supply additional aircraft. The year's enplanements total 49,928.

On January 4, 1943, a Liberator I makes the first of six passenger proving flights to the U.S.S.R. over a route from RAF Lyneham, Wiltshire,

and Ramenskoye, near Moscow via Cairo, Habbaniyeh, Pahlevr, and As-trahan. Five days later, the new S26 *Golden Horn* crashes at Lisbon.

S23s on January 25 commence Kisumu–Diego Garcia service via Mombasa, Dar es Salaam, Lindi, and Mayotte. An L-14 lands at Tripoli on January 26, just hours after the last German outfit departs Castle Ben-ito airfield.

The first DH 98 civil Mosquito begins Leuchars–Stockholm night flights through German-controlled air space on February 4–5. En route from Prestwick to Gander with 22 aboard, a Liberator I crashes on approach to the Canadian destination short of fuel and in bad weather (19 dead).

Under Secretary of State for Air Lord Sherwood rises in the House of Commons on February 10 to announce the findings of a technical committee established under Lord Brabazon of Tara. The committee's charge was to consider the five types of postwar civil aircraft that will be required after the war. From these recommendations will come the Brabazon Mk. 1 (inoperative), the Airspeed Ambassador/Elizabethan, the Bristol Britannia, the de Havilland DH 106 Comet I, and the Miles Marathon/de Havilland DH 104 Dove.

U.K.–Egypt Liberator flights are resumed on February 27 via Lisbon, Gibraltar, and Algiers. The last of six Liberator proving flights to the U.S.S.R. is completed on March 3 and, on March 23, the AW-27 Takoradi route is extended weekly to Freetown. Two days later, Air Secretary Sinclair replaces four BOAC directors refusing to work with RAF Transport Command. At month's end, Short S25 Sunderland IIIs are placed on the West African route and it is reported in April that, since February, the corporation has received six passenger-configured Douglas C-47s (military DC-3s).

DC-3s open a London–Lisbon operation on May 11, replacing the **KLM (Royal Dutch Airlines, N.V.)** contract.

Following the Trident Conference, Prime Minister Churchill, accompanied by U.S. Army Chief of Staff George C. Marshall and Gen. Sir Alan Brooke, chief of the Imperial General Staff, departs the Potomac River at Washington, D.C. on May 26 aboard the B-314 *Bristol* for Gibraltar, arriving next day.

Lord Knollys is named chairman of BOAC, also on May 26; the next day, the S26 *Golden Hind* is put on the Poole–Foyne run.

The London–Lisbon DC-3 frequency is increased to four per week on June 1. A week later, Tripoli replaces Algiers as a stop on the London–Cairo Liberator route. Liberators on June 10 introduce Lyneham–Moscow service via Tripoli, Cairo, Habbaniyeh, Pahlevr, and Astrakhan, the route tested during the first quarter. As of June 30, corporation transports have completed some 270 military-support flights into Western Desert points.

The BOAC civil air service to Russia via the Mideast is revealed in the British and American press on July 3, but is denied by the Soviet Central Civil Aviation Directorate on July 4.

DH 91 Albatross service Bristol–Shannon halts on July 6 and on July 18, L-18s commence weekly Cairo–Khartoum flights via Wadi Halfa. Five-times-per-every two weeks AW-27 Ensign service is introduced on July 25 Cairo–Takoradi, replacing the Khartoum–Lagos and Cairo–Takoradi routes.

On August 4, twice-weekly DC-3 U.K.–Gibraltar flights begin. Weekly DC-3 services are started London–Lisbon via Madrid on October 24; a thrice-weekly S25 Cairo–Karachi operation is begun the next day.

The Lockheed Model 10A *Lea*, acquired earlier from BA-1, is involved in a landing accident at Aimazzah, Syria, on November 19; the plane cannot be repaired and will be scrapped. U.K.–Algiers flights commence regularly on November 20. A Liberator on the Return Ferry Service crashes at Gander, Newfoundland, on December 27; there are no survivors.

In something of a footnote on the year, the carrier employs its first female flight attendants, outfitted in Women's Auxiliary Air Force uniforms.

Passenger boardings since January rise to 72,614.

On January 10–11, 1944, Capt. John H. White flies his DH 98 civil Mosquito roundtrip Stockholm–Leuchars in a record 9 hrs. 36 min. On

February 28, AW-27s are withdrawn from the trans-Africa route; they are placed, as of March 2, on a twice-weekly Cairo–Calcutta route via Bahrain and Karachi. Two days later, weekly Cairo–Karachi flights commence. The first specification is issued on March 10 for the Avro Tudor airliner, a conversion of the Lincoln bomber. A four-times-per-week L-18 service is launched Cairo–Khartoum–Nairobi on March 13 and, on March 20, chartered **KLM (Royal Dutch Airlines, N.V.)** DC-3s resume London–Lisbon–Gibraltar flights.

The Lockheed Model 10A *Leith*, acquired earlier from **British Airways, Ltd. (1)**, is wrecked at Asmara, Eritrea, on April 14. Two days later, on April 16, BOAC assumes control of the Lagos route from the RAF; DC-3 services begin Bristol–Lagos via St. Mawgan, Lisbon, Rabat, Port Etienne, Dakar, Bathurst, Freetown, Abidjan, Takoradi, and Accra.

A DC-3 overshoots the runway while landing at Stockholm's Bromma Airport on April 21; although no injuries are reported, the plane is a total loss. The first Avro 685 York is delivered and placed on the Lyneham–Cairo route via Gibraltar and Tripoli, on April 22 and on April 29, all B-314s are placed exclusively on the North Atlantic service.

The Karachi S25 route is extended to Calcutta on May 10. On June 2, the Cairo–Tehran L-18 flight is rerouted via Damascus and Baghdad. On June 6, Allied forces invade Normandy. The same day, in response to a recommendation from the Committee on Civil Air Transport, construction begins on a new airport on the site of the Fairey Aviation, Ltd. facility at the village of Heath Row, near Harmondsworth.

With the landing of an aircraft at Prestwick on August 12, the Return Ferry Service has completed its 1,000th transatlantic flight in three months. Piloted by Capt. L. J. White and with six others aboard, a DC-3 crashes into the Atlas Mountains at Telmet near Casablanca on August 28.

DC-3s join DH 98s on the Stockholm route on September 1 and the Return Ferry Service completes its 5,000th flight on September 7 and, two days later, BOAC records its 20,000th wartime transatlantic crossing.

In October, various interests begin the process of suggesting the possible direction of U.K. postwar civil aviation. BOAC Chairman Lord Knollys suggests that his carrier maintain its international monopoly while allowing financial participation by private interests. The four major railroads, for their part, recommend both a U.K. and Continental service, which can be operated without government subsidy. These two approaches will eventually be joined to some degree in the legislation creating **British European Airways Corporation (BEA)**. DC-3s launch London to Lisbon and Madrid flights on October 23.

On November 1, the corporation's U.K. base is transferred to Hurn. A Cairo–Ankara L-18 route is started on November 11. Following an October proving flight, the S26 *Golden Hind* inaugurates regular Kisumu–Ceylon service on November 28 via Mombasa, the Seychelles, and Maldiv Islands. The last DH 98 is withdrawn from the Stockholm service on November 30. On Christmas Eve, Cairo–Jeddah weekly L-18 flights begin via Port Sudan. The year's enplanements are 103,804.

On January 1, 1945, the London–Cairo Avro York route is extended to Karachi. Cairo to Lydda and Damascus and Baghdad to Besra DC-3 flights commence on February 18. Also in February, the company receives its first long-range Avro 691 Lancastrian, a nine-passenger converted Lancaster bomber.

The British War Cabinet, on January 24, approves the "Swinton Plan," which will confine BOAC postwar operations to the Commonwealth, the North Atlantic, and the Far East in order to allow the new **British Latin American Airways, Ltd.** the opportunity to develop services to and within Latin America. Also, European services will be handed over to a new private airline, which will be backed by ocean shipping and railroad concerns. The Minister of Aviation's scheme draws on the proposals advanced by BOAC and the railroads the previous fall. Lord Beaverbrook and Minister of Information Brendan Bracken, fearful of a BOAC monopoly, oppose the plan, which is presented to Parliament as a White Paper in March.

Cairo–Ankara L-18 flights extend to Istanbul on April 6 and two days later, a DC-3 must be written off after its landing gear collapses during a takeoff from El Adem.

The International Air Transport Association (IATA) is set up at Havana on April 19 as successor to the International Air Traffic Association founded in 1919.

Between April 23 and 27, the first Avro 691 Lancastrian Makes a Hurn–Auckland proving flight. L-18s replace DC-3s on the Syrian routes on April 30.

A DC-3 is lost in a nonfatal crash at Basra on May 1 and on May 6 regularly scheduled transatlantic services are started for the summer, four times per week from Foynes to Baltimore. As of May 8, V-E Day, the company has received a total of 59 C-47s/DC-3s since February 1943. Flying from the Empire Air Navigation School in Canada, the Avro Lancaster *Aries* begins two weeks of training flights from Iceland to Canada via the North Pole and Magnetic Pole. DC-3s begin to operate a combined U.K.–West Africa–Cairo passenger-cargo service on May 12.

In cooperation with **Qantas Empire Airways (Pty.), Ltd.**, weekly Hurn–Sydney Lancastrian “Kangaroo” service starts on May 31 via Lydda, Karachi, Ceylon, and Learmouth. Two days later, a **Qantas Empire Airways (Pty.), Ltd.** crew flies an Avro 691 Sydney–Ceylon–Karachi, where it is handed over to BOAC for the London run. Twice-weekly U.K.–Karachi DC-3 flights commence on June 3 via Istres, Malta, El Adem, Cairo, Baghdad, and Sharjah. Onetime Imperial Airways, Ltd. Air Superintendent now Air Commodore Herbert G. Brackley returns to BOAC as a member of the chairman’s staff.

Lydda and Basra are added as stops on the U.K.–Karachi DC-3 service during the first week of July. On July 3, the corporation endorses the Brabazon Committee’s call for the development of the jetliner that will eventually be born as the de Havilland DH 106 Comet I. The U.S.–Australia service becomes twice weekly on July 15 and, also in July, 7 Lockheed Lodestars are transferred to the Norwegian military. The British national election replaces Prime Minister Churchill with Clement Atlee and the Labour Party.

War with Japan ends on August 15 and the Misumu–Diego Garcia service is withdrawn on August 30. The surrender of Japan is signed aboard the U.S.S. *Missouri* on September 2. On September 29, the Cairo–Tehran via Damascus and Baghdad frequency is halted and, on October 9, the Poole–Calcutta S25 route is extended to Rangoon. The same day Capt. O. P. Jones, flying a Lancastrian, undertakes a survey flight from Hurn Airport in Hampshire to Lima, Peru, via West Africa, Chile, and Argentina.

The *Bristol* launches thrice-weekly Bermuda–Baltimore B-314 flights on October 18. Having been worn-out in courier service, the Curtiss-Wright CW-20 *St. Louis* is withdrawn toward month’s end and broken up. Lord Winster, Minister of Civil Aviation in the new Labour government, confirms the demarcations of the “Swinton Plan” on November 1, but insists that the companies involved be public.

Nine passenger-carrying Avro 685 York Is are leased to **South African Airways (Pty.), Ltd.** When the first of these arrives on November 7, it is christened *Springbok*. As part of a pool arrangement with the British state carrier it is employed on November 10 to commence weekly Johannesburg–London (Bournemouth) “Springbok” return service via Nairobi, Khartoum, Cairo, and Tripoli. Named for the majestic antelope, the two-day flights enter the history books as the first commercial landplane service from South Africa to Europe and SAA’s first international service. For its part, the BOAC Avro York *Manchester* opens the “Springbok” the route next day thrice weekly from Johannesburg to London (Hurn Airport) via Livingstone, Brazzaville, Kano, and Tripoli.

Thirteen British Yorks are dedicated to the South African service, which is the first postwar British commercial service not under the control of the wartime Air Transport Priorities Board, which had been set up to allocate air passages.

On December 1, the U.K.–Gibraltar contract of **KLM (Royal Dutch Airlines, N.V.)** is cancelled. In December, the company orders 10 de

Havilland DH 106 Comet I jetliners while the Hurn–Karachi Avro York route is extended to Calcutta on December 31.

During the year, the Armstrong Whitworth AW 27 *Ensigns Ensign* and *Euterpe* are taken out of service and scrapped. Boardings for the year rise to 143,950.

All wartime restrictions on U.K. civil flights are withdrawn on January 1, 1946, the same day the Air Ministry transfers operation of Heathrow Airport to the Ministry of Civil Aviation. Some months will be required yet before the airport opens to commercial service.

The next day, BOAC DC-3s take over the Hurn–Lisbon service previously flown under contract by **KLM (Royal Dutch Airlines, N.V.)**. A C-47A is lost in an accident at El Adem, Libya, on January 23.

The Hurn–Karachi operation is suspended on January 24; later in the day, the corporation’s order for 5 Lockheed L-049 Constellations is announced in the House of Commons. The Lockheed order, coupled with one later for Boeing Stratocruisers, raises considerable public concern over the choice of American aircraft over British.

On January 29 and 30, respectively, Cairo–Karachi and Port Sudan L-18 services are withdrawn. S25 flying boat service U.K.–Singapore is reopened thrice weekly on January 31; however, S25 service to Rangoon is withdrawn on February 3.

The British European Airways Division, formed on January 1, begins Continental DC-3 service on February 4 and a civil Liberator completes the 2000th Montreal–Prestwick Return Ferry Service flight on the same day.

On February 17, the S25 *Hythe* departs Poole on a 35,313-mile, 45-day roundtrip proving flight to Australia and New Zealand. A Liberator, with 13 aboard, makes a forced landing at Charlottetown, Prince Edward Island, on February 21 in foul weather (two dead).

As the result of negotiations begun with the Americans at Bermuda in February, BOAC is finally allowed access to Hawaii, as well as other American-controlled Pacific islands, while **Pan American Airways (PAA)** receives reciprocal authority. The Bermuda I arrangement becomes a model for commercial air transport bilateral agreements.

The *Berwick* departs Poole for Baltimore on March 7 on the last weekly transatlantic B-314 flight. During its return flight on March 19, the *Hythe* becomes the first British flying boat to land on Shanghai’s Wang-poo, and on March 21 at Tokyo Bay; the S25 reaches Poole on April 2.

Meanwhile, an Avro 691 Lancastrian 1, piloted by Capt. O. F. Y. Thomas with four other crew and five passengers, disappears on March 23 during a flight from Colombo to Cocos Island in the Indian Ocean; there are no survivors. Following the loss, the BOAC/**Qantas Empire Airways (Pty.), Ltd.** U.K.–Australia route is altered on April 6 and operations henceforth proceed via Singapore rather than the Indian Ocean.

Meanwhile, on April 5, a bilateral agreement is signed between the governments of Ireland and the U.K.; under its terms, **Aer Lingus Irish Airlines, Ltd.** will be the only carrier authorized to fly scheduled services between the two nations. Weekly Hurn–Lydda DC-3 flights are inaugurated on April 8; twice-weekly Hurn–Cairo Avro York service is launched two days later.

A C-47A with four crew and nine passengers is lost while landing at Lugo de Lanera, Spain, on April 17; there are no fatalities. On April 25 and 26, respectively, weekly Cairo–Athens and Athens–Cairo and Tehran operations commence; Cairo–Khartoum L-18 frequencies are withdrawn on April 30.

Nigerian Air Services, Ltd. is now set up at Lagos under order of the West African colonial government. A contract is entered into with BOAC to provide twice-weekly Douglas DC-3 roundtrips linking the capital city with Jos, Kano, and Port Harcourt.

An Avro 691 Lancastrian 1 with five crew is seriously damaged in a landing accident at Mascot, Australia, near Sydney, on May 2; no injuries are reported.

On May 9, multistop DC-3/L-18 Northolt–Tehran services start. The first postwar U.K.–Australia flying boat service is begun on May 12; the flight requires 5½ days and is operated over various segments between Poole and Sydney by 4 S25s (*Hudson, Hobart, Howard, and Henley*).

Also on this day, U.K.–Calcutta S25 service is terminated; flights begin from London to Tehran on May 17. Also on May 17 an Avro 691 Lancasterian 1 with five crew and an undisclosed number of passengers, is destroyed while landing at Mauripur, India; there are no fatalities.

The S23 Cairo–Calcutta service is cut back to a Cairo–Karachi run on May 28; the same day, the first BOAC service from London's about-to-open Heathrow Airport is a joint "Kangaroo" Lancasterian operation with **Qantas Empire Airways (Pty.), Ltd.**

On May 29, weekly Poole–Cairo S23 services begin. Heathrow Airport is officially opened on May 31 and all of the state carrier's operations are now transferred to it from Hurn Airport in Hampshire. At this point, what will become Europe's most important civil airport has but one runway and tents to accommodate passengers.

The last remaining AW-27 Ensign, the *Eddystone*, arrives at Hurn from Cairo on June 3 and is then retired from passenger service. She, together with the *Egeria*, *Elsinore*, *Explorer*, *Empyrean*, and *Echo*, withdrawn earlier in the year, are now scrapped. A joint airline pact is signed with the government of Italy on June 10. An Avro York departs Hurn for Cairo on June 14; henceforth, all BOAC landplane flights will be operated from Heathrow.

The 5 Lockheed Constellations are delivered in June and the first of these, christened *Balmoral*, is, on June 16, flown by Capt. W. S. May on the first of 10 London–New York roundtrip proving flights.

On June 29, the Italian government approves both BOAC and **Transcontinental and Western Airlines (TWA)** contracts governing civil airlines in Italy.

The L-049 *Bristol II*, opens twice-weekly Heathrow–New York (LGA) service on July 1; the same day, London–Beirut via Lydda DC-3 flights start. The *Bristol II* arrives at New York (LGA) from Ireland on July 2; among its passengers is Lord Knollys, who undertakes an inspection of the airline's New York facilities. The Constellations are grounded on July 10 and North Atlantic services are suspended.

An S25 leaves Poole on July 16 on a preservice proving flight to Hong Kong while the first of 9 Handley Page HP 70 Haltons (civil version of the Halifax bomber) is delivered on July 18 and is christened *Falkirk*.

On August 1, in accordance with the Civil Aviation Act, the BEA Division is split off and formed into a separate corporation, **British European Airways Corporation (BEA)**. An Avro 691 Lancasterian 1, with only its four-man flight crew aboard, fails its takeoff from Bournemouth–Hurn Airport on August 5. Although the aircraft must be written off, there are no fatalities. A C-47A freighter with five crew is lost while climbing away from Luqa Airfield on Malta on August 14 (one dead).

An Avro 691 Lancasterian 1 with nine crew aboard crashes near Rouen, France, on August 20 while on a training flight (eight dead). Weekly S25 multistop service is kicked off Poole–Hong Kong on August 24, followed two days later by inauguration of flying boat flights Singapore–Hong Kong.

Having connected with the S25 *Haslemere* at Karachi, the S25 *Hunter* is the first postwar flying boat to arrive at the crown colony. Lord Winster, Minister of Civil Aviation, announces on August 30 that BOAC will acquire 6 Boeing 377 Stratocruisers, along with as many as 200 more "aircraft of the future" from the U.S.

On August 31, the L-049s are returned to operations and commence thrice-weekly North Atlantic service on September 2. HP 70s replace Avro Yorks on the twice-weekly London–Cairo frequencies on September 9. On September 30, the Return Ferry Service, no longer required after five years in light of the Constellation introduction, is terminated; the same day, the S26 *Golden Hind* takes over the weekly Poole–Augusta–Cairo route, the first purely commercial service for the giant flying boat. The Liberators, displaced from the Return Ferry Service, continue to maintain their London–Montreal roundtrip schedules, hauling freight and mail and training crews.

The astrodome of the L-049 *Balmoral*, en route from New York to London on October 28 via Gander and Shannon, blows out at 20,000 feet over the mid-Atlantic; the Constellation descends to 7,000 feet and makes an emergency landing at Shannon, where no injuries are reported.

In accordance with the company's requirement of the previous December, the Ministry of Supply orders two prototype DH 106 Comet I jetliners from de Havilland on September 4.

A Constellation, damaged on takeoff on November 14, circles Prestwick Airport for 10 hours to exhaust 2,500 gallons of avgas before it can land. Ten extra Baltimore to Bermuda flying boat services are laid on weekly between December 21 and January 5.

The year's bookings, now devoid of military personnel, dip to 129,928. Losses total £8.07 million.

At the beginning of 1947, airline employment stands at 24,500. While on a positioning flight, a C-47A with three crew crashes while landing at Whitchurch, England, on January 3; although the aircraft must be written off, there are no fatalities.

On January 4, the first racehorse flown by BOAC departs England aboard an Avro York for California via New York City.

A C-47A with 5 crew and 11 passengers is lost near Stowting, U.K., on January 11 (8 dead). Beginning on January 13, the Empire ("Horseshoe") Route is closed down, the last section being withdrawn on March 2. The first Avro Tudor I is delivered on January 21 and christened *Elizabeth of England* by Princess Elizabeth; the plane will never enter service.

On January 29 and 30, respectively, the Cairo–Karachi and Port Sudan services are withdrawn. A Lancasterian is damaged in a nonfatal landing accident at Mascot, Australia, on the month's last day. London to New York service is increased on February 4 and a new Montreal to London route is pretested.

To protect its local interests in the area, the corporation forms **Hong Kong Airways (Pty.), Ltd.** on March 4. The last S23 flight is made Durban–Southampton on March 12 by the *Caledonia*; three days later, L-749 London–Montreal flights begin via Prestwick and Gander and are the first commercial BOAC operations into Canada. Bought out in December 1946, the carrier's share in **Qantas Empire Airways (Pty.), Ltd.** is turned over to the Australian company on March 21.

On May 1, BOAC and BEA form Airways Training, Ltd. The next day, the first S25 Sandringham is placed in service on the Poole–Karachi via Bahrain route; on June 23, Sandringhams will begin weekly multistop Poole–Hong Kong operations, replacing the previously employed S25 Hythes.

On May 28, Sir Alan Cobham, chairman of **Flight Refueling, Ltd.**, accepts a contract from the British Ministry of Civil Aviation to undertake a series of refueling experiments for commercial airliners on long-distance flights. In the first of 22 missions, Cobham and Air Vice Marshal D. C. T. Bennett fly a Lancasterian nonstop from London to Bermuda, being refueled in-flight over Bermuda with 1,700 gallons of avgas from a Lancaster tanker.

Sir Harold Hartley, ex-**British European Airways Corporation (BEA)** chairman, becomes BOAC chairman on July 1; he takes over a state monopoly with 24,000 employees and 175 aircraft of 18 different types. Also on July 1, DC-3s replace L-18s on the Cairo–Nairobi route and twice-weekly HP 70 London–Karachi flights begin. On July 14, multistop London–Colombo HP 70 service is inaugurated.

On July 16, an Avro 685 York I with 6 crew and 12 passengers is lost during its final approach to Az-Zubair, Iran; only the crew is killed. The next day, the Lagos DC-3 frequencies are withdrawn. The S25 Sandringham *Portland* crashes at Bahrain on August 23 (10 dead) and a new London–Tehran DC-3 route via Marseilles, Rome, Athens, Nicosia, Lydda, and Baghdad, is opened on August 25.

HP 70 trans-Sahara London–Accra flights start on September 1, the same day on which the carrier begins participation in the evacuation caused by the partition of India and Pakistan. A formal contract is signed with the Pakistan government on September 2 for the transfer of officials from India. Avro Yorks replace HP 70s on the London–Karachi route on September 11.

"Operation Pakistan," under the command of Air Commodore Herbert G. Brackley, is completed by September 15; since September 1, 2 Avro Yorks, 1 Lancasterian, and 12 DC-3s have flown 7,000 people Delhi–Karachi and 1,500 Karachi–Delhi. Additionally, food and medicine

are flown in to Delhi and Lahore. The S26 *Golden Hind* is withdrawn from the Poole–Cairo service on September 21 and, together with the *Golden Horn*, is retired.

The newly formed **West African Airways Corporation** assumes authority for the contract Lagos to Kano service of **Nigerian Air Services, Ltd.** in early October.

On October 20, BOAC joins seven independent carriers in “Operation India,” another population-shifting airlift under Air Commodore Brackley on the subcontinent. Weekly London–Delhi six-stop Avro York service is launched on November 25. The London–Sydney Lancastrian service becomes mail and freight-only on December 2; two days later, six-stop London to Dar es Salaam Avro York flights begin. On December 31, Poole–Singapore S25 and London–Cairo HP 70 services are withdrawn.

When its contract ends in December, BOAC turns over responsibility for the Lagos to Jos and Port Harcourt contract routes of the contract **Nigerian Air Service, Ltd.** to **West African Airways Corporation**.

BOAC enplanements for the year are 142,404. Revenues total £11.5 million, but there is a loss of £7.3 million.

Piloted by Capt. J. W. Burgess, the *Bristol* makes the last B-314 flight Bermuda–Baltimore on January 17, 1948; the class is thereafter retired. Since her acquisition from America at the beginning of the decade, the aircraft and her sisters *Bristol* and *Bangor*, have flown a total of 4.25 million miles, transporting 40,042 passengers and 432 tons of mail and express on 596 transatlantic crossings. In addition, the BOAC flying boat base at Baltimore is also closed.

The L-049 *Baltimore* on January 17 and 18, respectively, inaugurates thrice-weekly roundtrip Baltimore–Bermuda and thrice-weekly roundtrip Bermuda–New York service. The twice-weekly Lagos–Kano DC-3 service is terminated on January 24 and taken over by **West African Airways Corporation**.

Lancastrians replace Avro Yorks on the London–Colombo route on February 2; simultaneously, BOAC refuses a Ministry of Supply request that it order 25 of Bristol’s new Type 175 turboprop to be known as the Britannia.

Two days later as part of midair refueling trials conducted for the Ministry of Civil Aviation, a civil Liberator launches nonstop London–Montreal all-cargo operations. On February 10, the weekly Cairo–Hargeisa DC-3 service is withdrawn, but on February 16, weekly Cairo–Nairobi flights begin. Lancastrians replace Avro Yorks on the Colombo–Singapore route on February 19.

On February 21, weekly Aden and Cairo–Addis Ababa routes are opened and two days later, London–Nairobi Avro York operations commence. Also in February, the last nine Lockheed L-18 Lodestars are sold to **East African Airways Corporation**.

Fortnightly Aden–Mukalla DC-3 service is launched on March 15 and on March 19, the S25 Sandringham Poole–Hong Kong route is extended to Iwakuni, Japan. S25s supplement Avro Yorks on the Karachi run as of March 20. Weekly Freetown and Lagos–Dakar DC-3 services are suspended on March 27 and 29, respectively.

The U.K. flying boat base is transferred to Southampton from Poole on March 31. The same day, the Russian command in occupied Berlin informs representatives of Great Britain, France, and the U.S. that stringent new ground traffic regulations will come into effect the next day covering traffic from West Germany into the former capital.

Also in March, a former military C-69 is acquired; converted to civil L-049 standard, it brings the corporation’s Constellation fleet to 6. Air Commodore Brackley departs during the month to become CEO on the board of **British South American Airways, Ltd.**

On April 1, the S25 *Hanwell* makes the first departure (for Sydney). London–Karachi Avro York services are suspended on April 4. Weekly Singapore–Hong Kong Sandringham flights begin on April 7; weekly London–Basra Avro York flights are launched on April 10, but will be ended within a month.

In association with **South African Airways (Pty.), Ltd.**, seven-stop London–Johannesburg Lancastrian mail and freight operations

are inaugurated on April 11; these will cease on August 12. Meanwhile, on April 14, Lord Nathan, Minister of Aviation, officially opens the new flying boat base at Berth 50, Southampton. Simultaneously, the mayor of Southampton christens the premier 30-passenger Short S45 Solent, an upgraded version of the wartime Sunderland flying boat, *Southampton*.

The Arab-Israeli war forces cancellation of London–Lydda DC-3 services on April 28 and on May 1, Avro Yorks replace HP 70s on the Accra route. The S25 Southampton–Bahrain service is withdrawn on May 3; the next day, the first Short S45 Solent, *Southampton*, is placed in multistop service Southampton–Johannesburg. The state of Israel is proclaimed on May 14, the day the British mandate over Palestine is terminated.

The Russian military governor of Berlin, Marshal Sokolovsky, orders all passenger train and motor traffic between the Russian and western zones of Germany to cease at midnight June 18–19. The Solents (now also including *Southsea*, *Severn*, and *Salisbury*) are withdrawn in June for wingtip float modifications.

Set up to allocate air passages during the war, the Air Transport Priorities Board is closed down on July 1. Following BOAC’s refusal to order the Bristol Type 175 in February, the Ministry of Supply steps in on July 5 to guarantee the project.

A DC-3 freighter, en route from Malta to Marseilles, crashes at Cap Sicié, near Toulon, on July 14 (six dead). Eight days later, Sir Frank Whittle joins the corporation as adviser on the development and operation of gas turbine engines. The Berlin Airlift begins on July 27; civil aircraft, under the direction of **British European Airways Corporation (BEA)**, begin participation in the resupply effort on August 4.

As a result of the Irish government’s refusal the previous fall to allow **Aerlinne Eireann Teoranta**, the long-haul partner of **Aer Lingus Irish Airlines, Ltd.**, to begin North Atlantic flights, the 5 Lockheed L-749 Constellations acquired for that purpose are put up for sale during the summer. The British flag carrier, without the need for dollar expenditure, is able to acquire the lot for £1,575,000 and the Irish are able to make a profit of £65,000 per aircraft. The *St. Patrick* is the first ship turned over and she is rechristened *Banbury*.

Having lost its No. 4 engine following departure from Tengah, Australia, on August 27, an Avro 691 Lancastrian 1, with five crew and nine passengers, returns to its point of origin and makes a nonfatal crash landing; the aircraft, however, is wrecked beyond repair.

On September 9, the Hythe *Hanwell*, piloted by I. C. Peirce, is lost during its takeoff run from Sourabaya; all aboard escape. Avro Yorks replace DC-3s on the London–Tehran route on September 19. Three DC-3s begin Berlin Airlift operations for a month on October 20, the same day the S25 Sandringham Iwakuni route is extended to Tokyo. Modified, the S45 Solents return to service in late October.

The corporation’s 3 dedicated DC-3s complete their Berlin Airlift participation on November 25; since October 20, they have flown 81 sorties and transported 294 tons of supplies in 224 flying hours. On November 28, Avro Yorks replace DC-3s on the London–Cairo route; two days later, weekly Nairobi–Aden DC-3 frequency begins. Also during the month, former **Imperial Airways, Ltd.** Air Superintendent Herbert G. Brackley drowns in a Rio de Janeiro accident.

Having been acquired from **Aerlinne Eireann Teoranta**, the L-749 *Banbury* kicks off Constellation service on the London–Sydney route on December 1. S25 Sandringham services are launched Southampton–Shanghai on December 30. The year’s boardings are 143,000 (19,000 on the North Atlantic routes).

The government announces on January 10, 1949, that the corporation will no longer have to order its aircraft via the Ministry of Supply. Baltimore–Bermuda L-049 service is suspended on January 17 and Aden–Addis Ababa DC-3 flights stop on January 26.

An Avro 685 York I, with six crew and nine passengers, fails its take-off from Castel Benito Airfield, Libya, on February 1; although the aircraft must be written off, there are no fatalities. The last Hythe-class S25, *Honduras*, arrives at Southampton from Sydney on February 16

and thereafter the class is retired. S45 Solents replace Avro Yorks on the U.K. to Dar es Salaam frequency on February 23. On March 15, daily roundtrip L-049 service is inaugurated Bermuda–New York.

The first of 22 Canadair C-4 Argonauts (Douglas DC-4s powered by Rolls Royce Merlin 626s and also nicknamed “Canadair Fours”) is delivered on March 29, just a month after the type’s roll-out.

Thrice-weekly London–Cairo Avro York service is launched on April 11. The same day **SAS (Scandinavian Airlines System)** announces that it will henceforth standardize its flight equipment on product from Douglas Aircraft and sells its 4 Boeing 377 delivery positions to BOAC; the action will increase the number of British Stratocruisers to 10.

On May 5, Foreign Secretary Ernest Bevin announces in the House of Commons that an agreement has been reached for an end to the Berlin Blockade; four days later, the Soviet’s Berlin commander, Gen. Chuikov, announces that the siege will be lifted within days. The Russian ground blockade of Berlin ends on May 12 and, on May 15, thrice-weekly London–Nairobi Avro York frequency is replaced by operations flown by S45 Solents from Southampton to Lake Naivasha, near the Kenyan capital. Solents replace Sandringhams on the weekly Southampton–Karachi frequency on May 26.

On June 5, Aden–Mukalla DC-3 flights are restarted. Sir Harold Hartley is succeeded, on June 30, as chairman by Welsh automobile tycoon Sir Miles Thomas. Thomas will serve seven years, which is longer than any of his successors. At the same time, the corporation is reformed; the board now has three full-time and seven part-time members and the principal divisions are operations, commercial, and central services.

The premier second-class mail is flown across the North Atlantic in the cargo bay of an L-049 on July 1. Soon to become the world’s first commercial fan-jet airliner, the DH 106 Comet I prototype, piloted by John Cunningham, makes its maiden flight on July 27 from Hatfield airfield in Hertfordshire. As a result of the Airways Corporation Act, the assets and aircraft of **British South American Airways Corporation** are taken over on July 30, including shares in **British West Indies Airways, Ltd. (2) (BWIA)**.

The weekly London–Johannesburg Lancastrian mail and freight service stops on August 12 and, on August 21, London–Lydda DC-3 service is resumed. The premier BOAC all-landplane service to the Far East is inaugurated on August 23 as the first purchased Canadair Four Argonaut, *Arcturus*, departs London for Hong Kong on a weekly service, flying via Rome, Cairo, Basra, Kartachi, Calcutta, Rangoon, and Bangkok.

Three days later, the second Argonaut, *Atlanta*, launches London–Yokohama service as S25 Sandringhams are withdrawn from their Oriental routes. Twice-weekly Singapore–Hong Kong Argonaut flights commence on August 27. Cooler-pump difficulties force the C-4 Argonaut fleet to stand down at month’s end; the move temporarily closes the new Japan route.

On September 2, the weekly London–Delhi Avro York route is closed and, two days later, the huge, but unsuccessful Bristol Brabazon Mk. 1 eight-engine airliner is flown at Filton, Bristol. The first production Handley Page HP 81 Hermes 4, *Horatius*, is delivered on September 12. The all-cargo civil Liberator service launched to Montreal in early 1948 is withdrawn on September 27 and the Berlin Airlift is officially closed down three days later.

The first Boeing 377 Stratocruiser, *Cathay*, is delivered on October 15. Late in the month, all shares of **British Caribbean Airways, Ltd.** are purchased.

On November 5, 7, 11, 15, 16, and 17 (respectively), York-replacing C-4 Argonaut routes are introduced London–Kuwait; London–Abadan, via Rome and Damascus; London–Bahrain via Rome and Damascus; London–Colombo and Singapore via Rome, Cairo, Bahrain, Bombay (Lancastrian replacement); and London–Calcutta via Malta, Cairo, Bahrain, Karachi, and Delhi. Eight months ahead of its contract date, the final C-4 Argonaut arrives on November 19 and is christened *Avion*. Avro Yorks replace Short Solents on their previous route to Karachi beginning on November 19.

The B-377 *Cathay* begins London and Prestwick to New York Speedbird Stratocruiser service on December 6. Later in the month, the first Handley Page HP 81 Hermes 4, the *Hecuba*, is handed over to the company for use in crew training at Hurn; the aircraft will not be accepted, but rather leased to **Airwork, Ltd.**

The year’s bookings increase to 155,557 (19,000 transatlantic). Revenues advance to £15.1 million, while the loss drops to £6.2 million.

The New York terminus is changed from La Guardia Airport to Idlewild on January 1, 1950 and the B-377 *Caribou* is placed into service on January 10. The first HP 81 to be officially accepted is the *Hanno*, received on February 7 and placed into service on February 22, one day after the first prototype of the de Havilland DH 106 Comet I jetliner makes its first pressurization flight. Meanwhile, the B-377 *Canopus* enters service on February 17.

On March 2, C-4 Argonauts reopen Central Atlantic service to the Caribbean and South America via Bermuda. The next day, another HP 81, the *Horsa*, is accepted, followed by the B-377 *Cabot* on March 9 and the HP 81 *Heracles* on March 20. The final Stratocruiser built is christened *Castor* and is delivered to London on March 24. New York–Bermuda L-049 services are suspended on March 31.

The London to Tokyo service is doubled on April 2 and C-4 Argonauts replace Avro Yorks on the London–Buenos Aires route on April 16, extending on to Santiago. The B-377 *Castor* begins London–Montreal flights on April 23; en route, the aircraft suffers an engine fire and loss of the No. 4 engine, but is able to make a safe emergency landing at Sydney, Newfoundland, with no injuries reported.

Due to Portuguese capacity rulings, BOAC assumes the Lisbon regional route from **British European Airways Corporation (BEA)** on June 2; the next day, C-4 Argonauts replace Avro Yorks on the London–Tehran multistop route. During June, the HP 81s *Hano* and *Horsa* undertake route-proving flights on the West African sector of the company’s route network.

The B-377 *Caledonia* is christened at Prestwick on July 1. The HP 81s *Hannibal* and *Hengist* are received on July 6 and 7, while a C-4 Argonaut en route to Formosa from Hong Kong on the latter day is attacked, but not damaged, by Chinese Communist MIG-15s.

The 10th Handley Page HP 81 Hermes 4 is delivered on July 11 and is christened *Helena* by Lord Pakenham during the handover ceremony at Heathrow Airport. Three sisters, *Hero*, *Horus*, and *Heron*, arrive between July 17 and July 20 while the world’s first turboprop airliner, the Vickers Viscount 630, is employed on experimental London to Paris service during July and August.

On August 6, the first operationally ready Hermes 4, the *Hengist*, begins HP 81 operations, replacing Avro Yorks on the London–Accra route, flown via Tripoli, Kano, and Lagos. Two more HP 81s, the *Homer* and *Herodotus*, join the fleet on August 24 and 29, respectively, followed by the *Hesperides* and *Hestia* on September 6 and 13.

On September 24, the HP 81s launch a four-times-per-week London–Nairobi frequency via Rome, Cairo, Khartoum, and Entebbe, replacing the Solent services while the L-049 *Bristol II* starts replacing Avro Yorks on flights to South America’s west coast. The HP 81 *Hera* is delivered on September 29.

The last Avro York service is flown Santiago–Nassau on October 7, after which the entire class is retired from passenger operations. The Hermes 4 *Halcyone* is delivered on October 12, followed by the *Helios* on October 30.

The HP 81 *Herodotus* inaugurates London–Johannesburg thrice-weekly multistop service via Kano, Brazzaville, and Livingstone on November 7, replacing the Solents which are now retired, thus ending the era of British flying boat operations that began in 1924.

The next day, B-377s inaugurate twice-weekly, direct 4½-hr. New York–Nassau services. The last regularly scheduled Solent arrives at the Marine Terminal, Southampton, from Johannesburg, on November 14. The next to last HP 81, the *Hyperion*, arrives on December 13. The year’s boardings rise to 196,512 (36,000 on the North Atlantic).

The L-049 *Baltimore* is so badly damaged in a crash at Filton, Bristol, on January 8, 1951, that it must be written off. The last production HP 81 *Hermes* 4, the *Honor*, is accepted on January 16; however, the last of the type to be acquired is the *Hector*, which arrives on February 21.

The B-377 *Champion* launches luxury, thrice-weekly London–New York “Monarch” service on March 1. During the month, proving flights are undertaken with a prototype de Havilland DH 106 Comet I. In an interline agreement with **Eastern Air Lines** and **Colonial Airlines**, the carrier begins roundtrip tours on March 24 from New York to the Bahamas and West Indies.

The first direct Montreal to Paris service is initiated on April 7. The nosewheel is lost and the fuselage and propellers are damaged when the B-377 *Cabot* makes a bad landing at Prestwick on April 25; no injuries are reported and the ship will be rebuilt.

Due to poor traffic, service along South America’s west coast to Santiago is withdrawn on April 28. “Monarch” frequencies become daily on May 1 and, two days later on May 3, New York to Bermuda service is resumed.

In July, East African services through Malta are dropped in favor of a Rome connection. Flights to the Far East are cut on August 19 as a result of the Iranian oil crisis.

On October 1, 51% control is taken in Bahrain-based **Gulf Aviation Company, Ltd.** The B-377 *Canopus* on October 8 flies Princess Elizabeth to Montreal for a Canadian tour while, on November 20, a Stratocruiser flies from Newfoundland to Scotland in a record 4 hrs. 23 mins.

Another B-377, on December 8, flies from Montreal to London in a record 9 hrs. 28 min. During an outbreak of mob violence in Cairo on Boxing Day, the offices of BOAC are destroyed.

Enplanements for the year total 243,692 (51,000 transatlantic).

On January 22, 1952, the company-sponsored de Havilland DH 106 Comet I, the world’s first Certificate of Airworthiness ever granted to a turbojet-powered civil airliner receives from British Minister of Civil Aviation J. S. Maclay. Due to riots in Cairo, HP 81 *Hermes* 4 services to East Africa and the Mideast are rerouted via Tripoli–Khartoum and Nicosia–Damascus from January 26 and February 10.

Meanwhile, on February 7, Queen Elizabeth II arrives at London from Entebbe aboard the C-4 Argonaut *Atalanta*; the day marks her accession to the throne. During takeoff from Tripoli later in the month, the *Hermes* 4 *Hannibal* sheds a starboard propeller blade that penetrates its fuselage alongside the galley; no injuries are reported and the HP is able to make a safe landing.

The first service operated through West Germany is inaugurated on April 2 as Frankfurt am Main is added as a stop on the London–Hong Kong frequency.

A DH 106 Comet I flies from London to Rome and back in just 4 hrs. 46 min. on April 21, cutting the conventional time in half. “Mayflower” and “Beaver” class flights are launched to the U.S. and Canada, respectively, on May 1. These are the world’s first North Atlantic tourist fares.

On May 2, the world’s first regularly scheduled service by a turbojet aircraft is inaugurated by a DH 106 Comet I (G-ALYP), with 36 passengers and piloted in turn by Capt. A. M. Majendie, J. T. A. Marsden, and R. C. Alabaster, over the 6,724-mile Johannesburg route. The flight is made in 23 hrs. 38 min. with stops (17 hrs. 16 min. actual flying time, which is two-thirds that of conventional airliners) at Rome, Beirut, Khartoum, Entebbe, and Livingstone. The Comet I returns to London on May 6. Three days later, it returns to South Africa, beginning a thrice-weekly roundtrip schedule.

Comet I proving flights to Singapore begin on May 15. On May 23, a DH 106 makes a VIP flight with Queen Elizabeth II, the Queen Mother, Sir Geoffrey and Lady de Havilland as passengers, over the Continent. The 4-hr. flight, which departs Hatfield, England, at 12:25 p.m., covers 1,850 miles at an average speed of 462 mph.

On May 26, after take-off from Tripoli for Kano, the HP 81 *Horus* with 8 crew and 10 passengers crash-lands in the Sahara southeast of

Port Etienne in French West Africa, 1,300 miles off course (1 dead). The cause of the accident is determined to have been a navigational error and the pilot and copilot will later be fired.

A Comet I proving flight departs for Tokyo on July 3, arriving 6 days later, and by July 10 the carrier has 6 Comet Is on U.K.–South Africa service. Weekly London–Colombo Comet I service is launched on August 11, with the DH 106 completing the 5,925-mi. voyage in 21 hrs. 35 min. (12 hrs. 10 min. less than that for a C-4 Argonaut) via Rome, Beirut, Bahrain, Karachi, and Bombay. The inaugural jetliner returns on August 14, but, due to fog, is 3 hrs. 42 min. late and must be diverted to Prestwick, Scotland.

The prototype of the Bristol Type 175 Britannia, powered by four turboprop engines, makes its maiden flight from Filton, Bristol, on August 16. On September 6, Capt. A. M. Majendie completes a 250,000-mile London–Singapore roundtrip Comet I proving flight.

As of October 1, BOAC has 135 trained crewmen available for jetliner service; 9 days later, on October 10, the company reports that its first 3 months of Comet services have been very profitable. On October 14, regularly scheduled Comet I flights begin over the route to Singapore. Late in the month, due to political upheavals, Tehran service is suspended.

On October 26, a Comet I en route from London to Johannesburg, lands safely at Rome after one engine fails. Tourist-class HP 81 services are started to Khartoum, Entebbe, Nairobi, and Tanganyika on November 17 and 21, respectively. The second U.K. to Japan Comet I test flight is completed on December 15.

Boardings for the year climb to 281,692 (66,000 on the North Atlantic). Revenues jump to £23.5 million and the loss falls to £3.3 million.

All of the company’s B-377s on transatlantic service are grounded between January 22 and January 30, 1953 as their engines are inspected and faulty bearing lubrication is discovered. London–Aden via Rome and Cairo, HP 70 operations start on February 4, with the Cairo–Aden segment being flown under contract to **Aden Airways, Ltd.** The Comet I fleet records its 10,000th (cumulative) flight hour on February 20 and, on March 1 HP 70 tourist-class flights begin to Lusaka.

London–Tokyo DH 106 Comet I service is introduced on April 3; the £260 one-way (£468 for roundtrip) flight over the carrier’s longest route (10,379 miles) requires 36 hrs. 20 min. Destinations visited en route include Paris, Dakar, Johannesburg, Colombo, and Singapore.

Two days later, on April 5, following a delay at Rome the previous day with engine trouble, the Comet arrives at Tokyo after a 36-hr. flight, still 50 hrs. less than conventional time on the route. A second Comet I, prepositioned at Tokyo, arrives at London on April 6, after a multistop flight of 92 hrs. 22 min. On April 15, Comet I pilot Capt. E. E. Rodley becomes the first commercial pilot to log 1,000 flight hours on jetliners.

On May 2, the first, Capt. M. W. Haddon’s Comet I (G-ALYV), having taken off from Calcutta’s Dum Dum Airport and ascending toward 10,000 feet, suffers structural failure six minutes later (as asserted by an Indian court on June 15) in a storm and crashes (43 dead). The disaster, which sees wreckage strewn over an 8-sq. mile area, is the first fatal accident involving a commercial turbojet airliner in scheduled service, and ironically occurs on the first anniversary of the Comet I’s successful and profitable operation.

A Comet I pilot lands safely on a 3,800-foot runway at Bombay on July 16, one which he has mistaken for the 7,000-ft. regular strip; he safely takes off from the same runway on July 24. In August, Jordan-based **Arab Airways (Jerusalem), Ltd.** is reorganized and an interest is acquired. During the summer, two former **American Overseas Airlines** L-049s are purchased from **Pan American World Airways (1).**

On September 13, the first South American-bound Comet I, commanded by Capt. A. P. W. Pain, leaves London and reaches Rio de Janeiro in a record 12 hrs. 30 min. the next day, half the time required by a propeller aircraft. The flight is made via Lisbon, Dakar, and Recife. At Rio, Capt. A. M. Majendie takes over the controls and returns the ship to London, flying via Natal, Dakar, Casablanca, and Madrid. The overall roundtrip requires 31 hrs. 40 min.

C-4 Argonauts replace HP 81s on the East African service on October 1; thereafter, the 19 Hermes 4s are temporarily retired. An order for their sale to independent charter carriers is frustrated when unionized BOAC maintenance workers protest and their union places a ban on their servicing any which might be transferred. In the first week of October, BOAC extends tourist-class services to its subcontinent, Persian Gulf, and African routes.

The B-377 *Canopus* on November 23 and 24 transports Queen Elizabeth II and Prince Philip to Bermuda for the start of a Commonwealth tour. In December, the company establishes **British International Airlines, Ltd.** in Kuwait.

The fleet at year's end includes 6 Avro Yorks, 9 HP Hermes 4s, 8 DH Comet 1s, 22 Canadair Argonauts, 10 B-377s, and 12 Constellations.

Enplanements are 290,156 (76,000 transatlantic) and the company enjoys its first profits since 1940. On revenues of £35.7 million there is a gain of £60,000.

En route from the Orient to London on January 10, 1954, a Comet I G-ALYP, commanded by Capt. A. Gibson, disintegrates 26,000 feet above a point between Elba and Monte Cristo, 25 min. after takeoff from Rome's Ciampino Airport (35 dead). Among the victims is Australian author Chester Wilmet. The entire jetliner fleet is grounded for inspection on January 12.

On January 23, weekly nonstop B-377 "Jamaican" flights start, London–Montego Bay.

The Comets are cleared to resume service on February 5. On February 28, a B-377 crash-lands at Reykjavik; no one is hurt. A Sikorsky S-51 is employed on March 8 to fly from New York's La Guardia Airport to Idlewild International Airport, also in New York.

The Constellation *Belfast* with 9 crew and 31 passengers en route from Australia to London, crashes while landing at Singapore on March 13 (33 dead). Comet I operations are resumed on March 23, the first service being run on the Johannesburg route.

En route from Rome–Cairo on a leg of that route operated on behalf of **South African Airways (Pty.), Ltd.**, a Comet I with a SAA crew crashes 70 miles off Naples on the evening of April 8, just after takeoff from Rome's Ciampino Airport (21 dead). All Comet Is are withdrawn from service the next day and its airworthiness certificate is revoked by Minister of Transport and Civil Aviation A. T. Lennox-Boyd.

C-4 Argonauts are introduced on the South American routes on April 11. **Qantas Empire Airways (Pty.), Ltd.** sells 5 Constellations to BOAC on June 20 to bolster the British carrier's long-haul fleet.

Due to a shortage of aircraft, 6 B-377s are purchased from **United Air Lines** on July 17; the next day, HP 81 Hermes 4s are reintroduced on the weekly African tourist routes to Nairobi and Dar es Salaam.

In August, an arrangement is concluded with **Capital Airlines** that will further increase the corporation's piston-engine capacity. Seven L-749A Constellations are acquired from the American carrier in exchange for all 7 of the corporation's L-049s, plus £1,375,000 cash and the cost of refurbishment. At the same time, the L-749A *Star of Colorado* is purchased from Howard Hughes and rechristened *Buckingham*.

After five years of service, the **United Air Lines** B-377 *Mainliner Hilo* is forwarded to BOAC on September 2. The "Monarch"-class New York–London frequency is extended to Cairo on September 4. *Balmoral*, the first L-049 received in 1946, is the first sent to the U.S., departing the U.K. on October 8. On October 19, the Royal Aircraft Establishment publishes the results of its probes into the Comet crashes of January and April; both, it concludes, were caused by metal fatigue. The former **United Air Lines** B-377 *Mainliner Kauai* is acquired on October 27; it will be refurbished and repainted and enter service as the *Coriolanus*.

The window of a B-377 en route from New York to London on November 29 with 33 passengers blows out at 25,000-ft. off the Irish coast; no one is hurt by the depressurization and the pilot drops his aircraft to 11,000 ft.

The *Mainliner Kano* is secured from **United Air Lines** on December 1 and the HP 81s are again withdrawn on December 4. The Stra-

tocruiser *Mainliner Hana Maui* is delivered from **United Air Lines** on December 16.

While landing at Prestwick Airport on December 25, the B-377 *Cathay*, with 11 crew and 25 passengers, underflies the runway, turns over, and crashes (28 dead); USAF personnel are able to rescue 7 crewmen and 1 passenger.

On December 29, the B-377s *Mainliner Hawaii* and *Mainliner Waipahu* are brought in from **United Air Lines**. Also, between this day and December 30, a diamond shipment valued at \$2.2–\$2.8 million is recovered from the Prestwick wreck of the *Cathay*; however, a number of gems remain missing.

Bookings for the year drop to 281,373 (68,000 on the North Atlantic).

The court of inquiry appointed to look into the previous year's Comet I disasters makes its official report on February 11, 1955, blaming metal fatigue. On February 16, the government reports that the Comet Is on hand will not be modified due to the cost of the changes; all will be scrapped.

Reconfigured, the former United Stratocruiser *Mainliner Hawaii* is rechristened *Cleopatra* and inaugurates service on March 1 from London to Lagos via Kano and Accra. Early in March, 48% interest is taken in **Middle Eastern Airlines, S.A.L. (1)**. During the same month and with support from **British European Airways Corporation (BEA)** and **Hunting-Clan Air Transport, Ltd.**, the holding company Associated British Airlines (Middle East) is established to coordinate investments in several of the Mideast's carriers. On March 31, a third of **British European Airways Corporation (BEA)**'s interest in the Italian carrier **Alitalia, S.p.A.** is purchased.

Having been refurbished and renamed *Calypso*, the former United Stratocruiser *Mainliner Hilo* reaches London on April 9. Also in April, the 3 Lockheed L-1049D Constellations *American Air Trader*, *Paris Air Trader*, and *Zurich Air Trader* are leased from **Seaboard & Western Airlines** to operate roundtrip New York–Bermuda all-cargo services over the next two years.

Tourist-class London–Sydney Constellation service is started on May 9, and on May 14 London–Karachi C-4 Argonaut flights are inaugurated, followed by the introduction of a London–Hong Kong "Majestic"-class Constellation frequency on May 19. Meanwhile, the former *Mainliner Kano*, refurbished and rechristened *Clio*, arrives at London on May 15; it will be used exclusively for charter flights. It will be joined by the *Cabot* and *Canopus*, which have been diverted from their transatlantic service. Constellations assume the weekly Singapore–Hong Kong Service on May 22 and, the next day, the weekly Johannesburg run. Refitted and renamed *Cordelia*, the ex-United B-377 *Mainliner Hana Maui* arrives at London, also on May 23.

The first-class London–Singapore route is taken over by Constellations on June 14 and the Lockheed type replaces C-4 Argonauts on the Karachi flights beginning June 25. The last L-049 to be handed over to **Capital Airlines** arrives in the U.S. at month's end.

In August, orders are placed for Douglas DC-7Cs and on September 21, the C-4 Argonaut *Altair* with 7 crew and 40 passengers crashes near Idris, Libya, while attempting to land at Tripoli during a sandstorm (14 dead).

Piloted by de Havilland's chief test pilot, John Cunningham, a Comet 2 completes a test run in early October on the U.K. to South Africa route, with a stopover at Rome, and return flight. In November, Cairo is dropped as a stop on the Johannesburg route and the first two Bristol Britannia 102s are delivered on December 30.

Despite the Comet I disasters, boardings total 371,215 overall, as transatlantic enplanements rise to 74,000. Revenues are £35.6 million and there is a profit of £1.2 million.

On February 2, 1956, Frankfurt am Main and Milan are added as stops on the Singapore freight service, which now employs HP 70s instead of Avro Yorks. The Ministry of Supply pulls together representatives from BOAC and BEA, together with engineers from seven British aircraft and engine builders, to form a working group to examine the possibilities of creating a U.K. supersonic transport (SST).

Former **British European Airways Corporation (BEA)** Chairman Gerard d'Erlanger succeeds Chairman Sir Miles Thomas during the first quarter.

In April, the 3 Constellations leased from **Seaboard & Western Airlines** are returned as **British West Indian Airways, Ltd.** (2) Vickers Viscounts take over the Bermuda–London cargo service that they had been providing. An Avro 685 York C.1 is destroyed in a ground accident at Idris, Libya, on April 22.

Refurbished and renamed *Cameronian*, the former **United Airlines** Stratocruiser *Mainliner Waipahu* is delivered to London on June 6.

Having failed its initial climb away from Kano, Nigeria, on June 24, the C-4 Argonaut *Argo* with 7 crew and 38 passengers is destroyed during a forced landing after hitting a stand of trees (32 dead).

Service to Egypt is ended during the Suez Crisis in the fall, while the first DC-7C is delivered on October 15.

Also during the fall, senior flight attendant Cynthia Apthorp recalls *How I Became an Air Stewardess* (London: Thomas Nelson, 1956).

Established by the Ministry of Supply earlier in the year, the Supersonic Transport (SST) Aircraft Committee holds its first meeting on November 5. On November 8, orders are placed for 16 Boeing 707-436s, powered by Rolls Royce Conway turbojets.

Traffic this year recovers only slightly as 395,989 passengers are carried; the North Atlantic continues to grow, up to 90,000.

The fleet, at the beginning of 1957 includes 7 Bristol Britannias, 8 Argonauts, 16 Stratocruisers, 9 Constellations, and 6 DC-7Cs.

DC-7C London–New York “Monarch” frequency is inaugurated on January 6. On February 1, Bristol Britannia 102 “whispering giant” London–Johannesburg flights commence—the first BOAC service with turboprop aircraft. The inaugural flight is made via Rome, Khartoum, and Nairobi in 22 hrs. 50 min. DC-7Cs on first-class flights are replaced with Stratocruisers on February 11.

Thrice-weekly London–Sydney Britannia 102 operations are launched on March 2 and on March 10–11, nonstop London–San Francisco via New York, DC-7C service is begun. Also in March, the carrier stops flying to Damascus in sympathy with **Air France**, which has been banned from Syrian air space.

On May 3, the B-377 *Calypso* inaugurates service to London on behalf of **West African Airways Corporation (WAAC)**. On May 25, Egypt authorizes the carrier to resume services to Cairo; the airline weighs the offer and declines. Also in May, a 10-year contract is signed with **Central African Airways Corporation** for the operation of that carrier's long-haul routes.

Flights to Damascus resume on June 26. In the course of a June 29 proving flight, a Britannia 310 with 139 passengers makes the first non-stop airliner flight London–Vancouver in 14 hrs. 40 min.; Britannia 102 Tokyo service is inaugurated on July 16.

Flown for nearly 20 years, the Canadair C-4 *Arcturus* is finally sold in early August. On August 22, Britannia 102s replace Constellations on the London–Aden run; the Bristols also replace Lockheeds on the Colombo routes as of September 17.

The first proving flight of a Britannia 312 from London (LHR) to New York (IDL) is completed without incident on September 27 in 11 hrs. 39 min. The return, three days later, is marred by icing that puts two engines out and forces the plane to divert to Miami (MIA) for repairs. On October 18, weekly nonstop Montreal–Nassau DC-7C flights begin.

The last two Avro Yorks are retired on November 22 and BOAC Associated Companies, Ltd. is formed on November 30 to take over the management and assets of its subsidiary companies. A Britannia 312 (G-AOVC) piloted by Capt. A. Meagher on December 19 undertakes the first transatlantic London–New York passenger proving flight by a turbine-powered (turboprop) airliner; regularly scheduled service commences on December 22.

At a point 500 miles E of Gander on Christmas Day, a B-377 has a runaway propeller on its No. 4 engine. With advice from a nearby **Pan American World Airways (1)** Stratocruiser crew, Capt. Val Croft is able to reach his Canadian destination and land his giant piston-engine airliner safely.

The year's bookings increase to 459,144; transatlantic enplanements remain a bright spot, rising to 105,000. A £2.1-million profit is made on revenues of £48.6 million.

A contract is signed with Vickers on January 14, 1958 for the eventual delivery of 15 VC10 jetliners. With 1,135 Atlantic crossings to her credit, the Stratocruiser *Cabria* is retired on January 21. Holding 49% interest, BOAC Associated Companies participate in the creation of Labuan-based **Borneo Airways, Ltd.** in March.

Britannia 312 London–Chicago (ORD) via Prestwick, Montreal (YUL), and Detroit (DTT), services are launched on April 17 while Tehran frequencies are restarted with Britannia 102s on April 22. On May 3, a London–Melbourne Britannia 102 route is introduced; three days later, 312s replace DC-7Cs on the San Francisco run.

Under BOAC management, **Kuwait Airways, Ltd.** is reorganized on June 1. The B-377 *Cordelia*, under charter to **Ghana Airways, Ltd.** and painted in its colors, commence London–Accra flights on July 16 and on July 27, Britannia 312s are placed on the Johannesburg route. After 1,115 Atlantic crossings, the Stratocruiser *Caledonia* is retired on August 4; it is followed by the *Cabot*, a veteran of 956 transatlantic flights, on September 12.

Two days later, on September 14, the first DH 106 Comet 4, piloted by Capt. John Cunningham, arrives at London via Bombay and Cairo from Hong Kong in a record 16 hrs. 16 min. The second Comet 4 departs London later in the day for a tour of the Americas. Both are officially delivered on September 30.

On October 4, the two new acquisitions, G-APDC piloted by Capt. R. E. Millichap and G-APDB flown by Capt. T. B. Stoney, operate the first simultaneous east–west/west–east turbojet service over the North Atlantic, passing within 300 miles of each other at 47 degrees west at 13.35 GMT. The flight from New York to London, with BEA Managing Director Basil Smallpiece as guest, is completed in a record 6 hrs. 12 min., while the London to New York service requires 10 hrs. 20 min. Weekly transatlantic Comet 4 service is thereafter begun, but after only a few flights it is suspended due to a strike.

The Constellation *Bournemouth* lands at London from Abadan on October 6; thereafter, all Constellations are retired. From October 14–17, maintenance workers strike and return to work only after government intervention; a court of inquiry finds that the strike has been caused by “disruptive” Communist elements among the workers. In mid-month, 6% minority interest is acquired in the Turkish carrier **Türk Hava Yolları, A.O.** Britannia 312s begin thrice-weekly London–Caracas flights on October 28, thereby reopening South American service.

On November 11, regularly scheduled New York–London and New York Comet 4 daily service officially begins as the last vestiges of the work stoppage end. With **Trans World Airlines (TWA)** still flying Constellations, the corporation becomes the second-ranking North Atlantic carrier after **Pan American World Airways (1)**.

Early in December, Constellation freighters of **Seaboard & Western Airlines** begin operating charter London–New York all-freight services for BOAC under contract. Weekly London–Montreal Comet 4 service is undertaken on December 19. A Bristol Britannia 312, with five crew and seven passengers, crashes at Winkton while on a December 24 training flight (nine dead).

The year's enplanements accelerate to 470,437, including 149,000 transatlantic travelers.

Multistop London–Doha Britannia 102 service is inaugurated on January 6, 1959. Later in the day, after 1,145 Atlantic crossings (first to New York and then to the Caribbean), the B-377 *Caribou* is retired. Just after takeoff from Accra on January 18, the B-377 *Coriolanus* sheds a propeller; the Stratocruiser is able to return and land safely. On January 20, Prince Philip departs on a Comet 4 on the first leg of a Commonwealth tour and the next day a Comet 4 undertakes a London–Tokyo proving flight.

On February 14, the company charges that two Nationalist Chinese jet fighters buzzed the Comet 4 en route to Tokyo as the jetliner winged

north from Hong Kong; although the Taipei government denies the charges, the Comet crew is able to produce photographs showing a near collision. A San Francisco–Tokyo Britannia 312 proving flight is undertaken on February 23.

In early March, 30% shareholding is acquired in **Malayan Airways, Ltd.** Unable to find a buyer for its last unsold HP 81 Hermes 4, the *Heron*, BOAC now sells it for scrap. On March 12, the B-377 *Canopus*, a veteran of 1,043 Atlantic crossings, is sold out of service; she is followed on March 14 by the *Castor*, which has 1,087 transatlantic flights to her credit. The first London–New York nonstop Comet 4 flight is made on March 24.

An around-the-world service is started by the Britannia 312 G-AOVT on March 31; the turboprop, flying from Heathrow via New York, San Francisco, Honolulu, and Tokyo, arrives at Hong Kong where it meets the Comet 4 G-APDH, which has also flown in from Heathrow via Tokyo. The Bristol's passengers transfer to the jetliner and continue on to London. Failure to obtain transpacific rights from San Francisco to Honolulu forces scheduled operation of the route to be postponed. The situation will be debated at the highest levels.

London–Lagos Britannia 102 flights commence on April 13 followed by introduction of the type on the Accra run three days later.

The first Boeing Stratoliner powered by Rolls Royce Conway Mk. 508 engines makes its maiden flight May 19. The B-377 *Coriolanus* lands at London from Accra via Kano and Barcelona on May 31, completing the final Stratocruiser service; thereafter, the type is retired.

Scheduled Comet 4 London–Singapore service is inaugurated on June 1–3, the first regular jetliner service between Europe and the Far East. The return Singapore–London flight is made on June 3–5. A Comet 4 with 43 aboard lands safely after crashing through a steel runway barrier at New York (IDL) on June 21.

Under contract, a multistop all-cargo route with **Skyway, Ltd.**'s L-749As is opened to Hong Kong on July 22; four days later, a high-speed, same-day 5-stop Hong Kong–London Comet 4 frequency is started. After 376 Atlantic crossings, the B-377 *Cleopatra* is sold on July 27 and, on July 28, Prime Minister Harold Macmillan publicly reports that BOAC has repeatedly sought permission for transpacific traffic rights from the U.S.

While en route from Zurich to Boston on July 29 on its final transatlantic service, the B-377 *Cameronian* is forced to feather its No. 4 engine and divert to London. After repairs, the plane takes off again for America the next day. Some hours out of Shannon, Ireland, No. 4 blows again and must be feathered once more. The giant plane successfully reaches Shannon and lands safely; those aboard are put up at airline expense at hotel near the airport. The carrier dispatches a DC-7C to Ireland and the next morning the *Cameronian's* customers continue across the Atlantic. The Boeing returns to the U.K.

The Stratocruiser *Coriolanus*, which has flown across the Atlantic 290 times, is sold on July 31; it is followed by the *Cameronian*, a veteran of almost 282 crossings, on August 3.

On August 7, President Eisenhower personally authorizes transpacific stops for BOAC. Two days later, on August 9, a B-377 en route to London is forced to return to New York after a passenger's child chews 13 pieces of provided medicated gum designed to prevent air sickness; the incident costs the airline \$1,425. On August 22, the regularly scheduled around-the-world service finally begins with a Britannia 312 from London flying via New York, San Francisco, and Honolulu, and connecting at Tokyo with a Comet 4 from the east.

On September 9, two Japanese writer-passengers arrive at Tokyo after making the around-the-world flight, encouraging fellow citizens to fly with BOAC. Also in September, the B-377 *Clio*, which has made 288 Atlantic crossings on charter flights, is withdrawn. A London competition is started with **Trans World Airlines (TWA)** on October 17 for the recruitment of British women to become stewardesses.

Comet 4 three-day multistop London–Sydney flights begin on November 1 followed by the introduction of London–Rome–Johannesburg service on December 2. The jetliner arrives in South Africa from London

(LHR) on December 3. Later in the day, the first return trip is started; however, bad weather forces it to divert from a stop at Rome to Naples. Still, the 11,169-mile roundtrip is accomplished in 32 hrs. 29 min.

Meanwhile, on November 25, the carrier joins with **British European Airways Corporation (BEA)** in setting up a pilot training college to overcome pilot shortages. On December 4, an agreement is signed with **Air India, Ltd.** and **Qantas Empire Airways (Pty.), Ltd.** for integrated services on the Europe–Australia route, effective April 1, 1960.

The year's bookings jump to 587,372 (211,000 on the North Atlantic). Revenues jump to £57.9 million, while profits fall to £800,000.

On January 1, 1960, BOAC becomes coequal owner with **Qantas Empire Airways (Pty.), Ltd.** and **Tasman Empire Airways, Ltd.** of reconstituted **Fiji Airways, Ltd.** Comet 4s reopen service to Brazil, Chile, Argentina, and Uruguay on January 25 and 26, following with services to Montego Bay on February 2. A new pool agreement comes into effect with **Trans-Canada Airways, Ltd.** on March 1 as BOAC Comet 4s begin flights to Toronto.

Dusseldorf is added as a stop on the Sydney and Delhi routes on April 2 and the C-4 Argonaut *Aurora* lands at London from Abadan on April 8 completing the last Canadair Four service; thereafter, the type is retired. Cairo is reinstated to the route network (after a four-year absence) on April 10 as a stop on the London–Hong Kong Comet 4 frequency. Britannia 102s replace Argonauts on the Abadan service on April 13.

The first Boeing 707-436 is delivered on April 29 and is placed on the New York route on May 27. The first of 18 on order to be received, the new aircraft is powered by Rolls Royce Conway 508s and is the only version of the B-707 to use British engines. On June 13, London–Boston Comet 4 flights commence and orders worth £25 million are placed on June 23 for 10 Vickers VC10s. During the month, BOAC sells a number of its withdrawn C-4 Argonauts to Overseas Aviation, Ltd., an aircraft broker.

Sir Matthew Slattery succeeds Sir Gerard d'Erlanger as BOAC chairman on July 29. At the end of the summer, flight attendant Irene Milburn publishes her recollections, *Runways to Adventure* (London: Robert Hale, 1960).

Operating its aircraft in pool, the carrier assists **East African Airways Corporation** on September 4 to open Comet 4 jetliner service from England to Nairobi via Rome. Twice-weekly London and Prestwick–Montreal (YUL), Detroit (DTT), and Chicago (ORD) B-707-436 flights are launched on September 24 and on October 1, economy class is introduced on the Johannesburg run.

Low-fare "Skycoach" flights are introduced on October 4 on routes to central and east Africa. These fares are also initiated on services to Montego Bay and Kingston on October 15, Singapore and Hong Kong on October 17, Barbados and Trinidad on October 22) and Bermuda and Nassau on November 5.

The last scheduled twice-daily Comet 4 North Atlantic flight is made New York–London on October 16; in two years of operation, the Comet 4s have completed 2,304 transatlantic flights with no in-flight engine problems, a new record for an aircraft type. The B-707-436 New York route is extended, on October 20, to San Francisco.

On November 1, a **Middle East Airlines, S.A.L. (1)** Comet 4 leased from BOAC begins Bahrain–London service; the same day, the British flag carrier introduces 6-stop London–Karachi Comet 4 frequency.

A Bristol Britannia 102 with 9 crew and 18 passengers makes a hard landing at Khartoum on November 11; although the aircraft must be written off, there are no fatalities.

Twice-weekly London–Tripoli and Benghazi Britannia 102 flights commence on December 1, followed three days later by the introduction of DC-7F all-cargo runs from London and Prestwick to New York.

On December 8, the carrier's Stratoliners take over the around-the-world service previously operated by Britannias. Twice-weekly London–Hong Kong B-707-436 service is introduced via New York, San Francisco, Honolulu, and Tokyo, connecting with the Comet 4 westbound

service from Hong Kong to London. The first of the new circumnavigations is completed after a Comet 4 departs Hong Kong for London (LHR) on December 11.

The year's boardings are up significantly, to 785,082, with 254,000 of those booked on the North Atlantic.

The fleet in 1961 now includes 15 B-707-436s, 19 Comet 4s, 17 Britannia 312s, 15 Britannia 102s, 8 DC-7Cs, 2 DC-7Fs, and 1 Argonaut, with orders outstanding for 15 VC10s and 30 Super VC10s. Engineers and ground crew strike between January 2 and June 30. Los Angeles to London B-707-436 flights begin on March 3 and, on March 9, the Arab League threatens to blacklist the airline if it begins Tel Aviv service. The company becomes self-insured for its propeller liners on March 28.

BOAC loses its monopoly on British service to the U.S. on June 22 as the government grants a route to **Cunard Eagle Airways, Ltd.** Six Britannias suspected of having cracked tail-hinge brackets are withdrawn for X-ray inspection on July 8–10. Maintenance workers strike between July 15–20, forcing the cancellation of services in and out of London.

Passenger operations are transferred from London (Heathrow) Airport North to London Airport Central on November 13. During the year, Monica E. Tyndall, BOAC's cabin services training unit instructor and former flight attendant, publishes her memoirs, *Air Hostess* (London: Robert Hale, 1961).

In terms of passenger miles flown, the carrier now ranks 8th in the world; it is 9th in terms of freight ton-miles (5th on the North Atlantic). Transatlantic bookings alone top 270,000, out of 890,000 sold. Revenues surge to £88 million pounds and costs allow a £4.3-million gain.

Weekly, 25-hr. Britannia 312 service is inaugurated in January 1962 from London (LHR) to Mauritius via Rome, Khartoum, Nairobi, and Antananarivo. The relationship it enjoyed with **KLM (Royal Dutch Airlines, N.V.)** ends on March 30, when **Air Ceylon, Ltd.** signs a technical and commercial contract with BOAC. The Dutch Electra previously employed returns to Amsterdam and the Singalese routes are flown under charter by the British line's de Havilland Comet 4s, painted in Air Ceylon colors.

The Cunard Steamship Company, having deserted **Eagle Airways, Ltd.**, joins with the state-run carrier to form BOAC-Cunard, Ltd. on June 1. A B-707-436 crash-lands at sea between Antigua and Barbados on July 23 (one dead).

Test pilot Brian Trubshaw commands the first flight of the British-assembled Concorde 002 from the Filton Airport at Bristol on September 9.

Delivery positions for the Concorde supersonic transport are booked with Aerospatiale/BAC on November 15. Comet 4s replace Britannia 312s on the Mauritius route in November, cutting the travel time to 17 hrs.

During the year, 3 more B-707-436s are placed in service as 3 Britannias are retired. North Atlantic bookings accelerate to 298,000.

On September 20, 1963, in protest of South Africa's racial policies, the company joins with **Central African Airways Corporation** in withdrawing from a profit-sharing pool with **South African Airways (Pty.), Ltd.**

Canadair CL-44 cargo transports are introduced on the North Atlantic route on October 1.

Systemwide, enplanements total 1,108,000 with 280,673 of these on the transatlantic frequencies. Although revenues are up to £92.4 million, there is a £4.7-million loss.

Sir Giles Guthrie becomes chairman on January 1964 and brings in a new management team that features Charles Hardie, accountant/chief financial officer, who will sort out the company's finances.

A Comet 4B with 69 aboard en route from Southern Rhodesia to London on February 4, lands in a Kenya game preserve that the pilot mistakes for Nairobi Airport; the confused pilot is fired a week later. Meanwhile, on February 7, the carrier becomes the 10th to place orders for the U.S. supersonic transport that is yet to be built; although 6 delivery positions are acquired, none will ever be activated.

Paris to Leopoldville flights are initiated on April 21 and VC10 passenger service is launched over the London–Lagos route on April 29. Later, VC10s extend the African routes from London to Tokyo via India.

In a highly embarrassing incident, a B-707-436 pilot dies minutes after his plane lands at New York (JFK) on November 11 on a flight from London. It is determined that the man is dead of acute alcoholism and a probe is launched to find out why medical and flying tests failed to reveal his condition.

Airline employment is 19,948 and BOAC/BEA Medical Services are merged on December 18. During the year, the Canadair C-4 *Arcturus*, a longtime favorite that flew for nearly 20 years before its 1957 retirement and 1964 sale, is reacquired and assigned to the company's Heathrow Airport Air Training School.

On the year, passenger boardings rise 16% to 1.2 million—366,893 on the North Atlantic, a 23.5% jump. A record operating profit of \$42 million is recorded. The first "clear profit" in eight years (\$19 million) is realized on record revenues of \$319.2 million.

The fleet, at the beginning of 1965, includes 3 Britannias, 17 Comet 4s, 12 VC10s, and 20 B-707s. Airline employment grows to 18,996.

In March, the British Minister of Aviation announces that BOAC's 25-year accumulated £80-million debt will be written off. On April 25, BAC Super VC10s are introduced on the North Atlantic. The company reveals, on June 20, that a jetliner on a Far Eastern flight in May was contaminated by a Chinese A-bomb test.

On September 28, the airline's marketing director for Germany bans an ad featuring Marlene Dietrich; her alleged anti-German statements during World War II are given as the reason.

The logotype is changed with BOAC lettering altered and Speedbird symbol redesigned. Routes are extended to Freeport, Georgetown, and Nandi, and on November 24 Auckland–Fiji service is opened as the first step in a plan to operate across the South Pacific. A new freight terminal is opened at New York (JFK).

Longtime company aviator Capt. Wilfred Ercon retires during the year; 15 years later, he will publish his memoirs, *Three Decades a Pilot* (Tunbridge, Eng.: Spellmount, 1990).

Freight traffic rises and enplanements for the 12 months jump 14% to 1,333,069. Revenues reach £114.4 million and there is a profit of £16.8 million.

The Air Corporation Act, providing for the carrier's capital reconstruction, receives Royal Assent in March 1966. On March 5, a B-707-436 with 11 crew and 113 passengers crashes into Mt. Fujiyama, Japan, after takeoff from Tokyo to Hong Kong. All aboard are killed, including 75 sales representatives from the Therma King company.

Super VC10s are placed on the New York to Scotland route on April 2 and, two days later, jetliner service is opened London–Bermuda and Mexico City. The same month, service is resumed to Brisbane and new flights are inaugurated to Perth and Dubai. A B-707-436, with 70 aboard, returns to London on May 5 after being hit by lightning just after takeoff.

Stewards and stewardesses on August 22 sign a petition protesting that the faster aircraft being introduced make it difficult for them to serve passengers the more elaborate meals advertised; they also protest a lack of proper attention to on-board equipment. Chairman Guthrie denies the charges. On September 1, 6 B-747 Jumbojets are ordered from Boeing.

Profit on the year is \$22.4 million and 1,446,000 passengers are flown.

The 45-plane all-jet fleet in 1967 includes 19 B-707-432s, 3 B-707-336Cs, 12 VC10s, and 11 Super VC10s. Orders are outstanding for 6 Super VC10s, 11 B-747s, 1 B-707-336C, and 14 SSTs, the latter on option.

South Pacific service begins on April 1, as a B-707-432 departs London for Sydney via New York, San Francisco, Honolulu, and Fiji. On the same day, BOAC Engine Overhaul, Ltd., a wholly owned subsidiary, starts trading at Treforest, South Wales.

On August 9, a VC10 lands safely after losing a wing flap during its approach to New York (JFK); the flap falls on a new Hyde Park home.

The employee population reaches 19,416 and enplanements for the year total 1,530,642. Net profit climbs to £23.2 million (\$66.9 million) on revenues of £137.4 million.

The workforce in 1968 is 20,921. Just after takeoff from London on April 8, the engine of Flight 712, a B-707-436 with 11 crew and

116 passengers, catches fire and causes the jetliner to crash near Heathrow Airport (5 dead). The undamaged nose and cockpit will later be employed to repair that of **Trans World Airlines (TWA)** B-707-331B that was blown off by a terrorist bomb.

Pilots strike over pay and productivity between May 17 and July 1; over 1,000 pilots are idled and 46 planes are grounded. The job action demonstrates that these flyers work less and earn more than their European or U.S. colleagues. On the other hand, the company is not ready to support their demand that they be allowed to work longer hours.

All-cargo B-707-336C service is begun on October 1 on the London–Australia routes.

On November 1, the Boeing order is increased to 12 Jumbojets and, on November 7, the BOADICEA computer complex is formally opened. A two-week pilot strike costs the carrier its ranking as the largest non-Communist international airline outside of the U.S., an honor that briefly passes to **Air Canada, Ltd.** An estimated \$17–\$20 million in losses are incurred for the year, due mainly to the work stoppage.

Enplanements are 1.52 million and revenues total \$360.7 million.

Keith Granville succeeds Sir Giles Guthrie as chairman/managing director on January 1, 1969; the fleet now includes 28 VC10s and 23 B-707-432s.

A B-707-432 London–Anchorage–Osaka polar route is now opened. Meanwhile, pilots strike for higher pay on March 31 and all company services are halted the next day. The issues of the job action are settled on April 5, allowing flights to resume the next day. The first Anglo-French Concorde assembled at the BAC plant at Filton makes its premier subsonic flight on April 9.

On September 12, the company announces U.K. tours for American bachelors, which include blind dates with British girls to be arranged by a computer dating service. The plan stirs protests in the House of Commons the next day and although the airline defends the concept, it suspends its plan on September 14 “pending further investigation.” The premier Concorde supersonic flight is completed on October 1; the SST will reach Mach 2 the following year.

Traffic during the 12 months rebounds to 1.8 million. Revenues are £169.6 million and there is a gain of £21.9 million.

On February 27, 1970, the carrier offers its pilots a pay raise of up to \$3,600 per year for piloting Jumbojets. Delivered in the famous golden Speedbird color scheme, the first 2 B-747-136s arrive on April 20 and May 22, respectively, and are christened *Peterborough* and *Newcastle*.

The start-up of B-747-136 service is delayed on May 27 by a dispute with the British ALPA as to whether there should be two or three pilots on the flight deck, in addition to a flight engineer. The new Jumbojets will be idled at London (LHR) for the remainder of the year causing huge financial losses.

A B-707-432 trans-Siberian London–Moscow–Tokyo service is inaugurated on June 2. The third B-747-136 is delivered on June 29 and is named *Belfast*. En route from Bangkok to Hong Kong with 124 aboard on August 25, a B-707-432 is forced to dive 2,000 feet over the South China Sea to avoid collision with 3 USN aircraft; 14 passengers are injured.

En route from Bombay to London on September 6, Flight 775, a Super VC10 with 114 passengers is hijacked by Popular Front for the Liberation of Palestine guerrillas. Just after takeoff from an intermediate Bahrain stop, they force the plane to fly to Zerqa, a military air base 20 mi. N of Amman, Jordan. Like the passengers from **Swissair, A.G.** and **Trans World Airlines (TWA)** jetliners also captured this morning, those aboard the BOAC aircraft will be held for 6 days and then freed, as the aircraft are all flown to Syria and blown up.

Princess Alexandra officially opens the airline’s new passenger terminal at New York (JFK) on September 24.

Having been first acquired in the summer of 1949, the Canadair C-4 *Arcturus*, for the past six years at the company’s Heathrow Airport Air Training School, is withdrawn and scrapped.

In November, **Air Ceylon, Ltd.** announces its decision to terminate its commercial relationship with BOAC and to enter into a new affiliation with **UTA French Airlines, S.A.**

Freight traffic for the year drops 5.7%; however, passenger boardings rise 4.7% to 1.9 million. Employment jumps 8.6% to 24,000. In terms of freight ton-miles at the dawn of a new decade, BOAC ranks as the 8th largest airline in the world. It is also 8th in terms of employment and with 53 airliners and its fleet is ranked 21st.

In February 1971, a new London Inter-Continental Hotel, The Portman, is opened. Two more B-747-136s, the *Southampton* and *Westminster*, arrive on March 5 and 14, respectively.

By government order, BOAC routes to West Africa and Libya are transferred to **British Caledonian Airways, Ltd. (BCAL)** on March 31. The same day, the BOAC commercial pact with **Air Ceylon, Ltd.** is officially terminated, although technical arrangements continue. The British line’s contract will allow it to put wet-leased Vickers Armstrong VC10s onto **Air Ceylon, Ltd.’s** trunk routes.

Early in April, a contract worth \$7.2 million is obtained to provide complete management computer services for **Malaysia-Singapore Airlines, Ltd.**

Following resolution of the manpower disagreement with BALPA and settlement of a pay dispute with flight engineers, the first B-747-136 service is inaugurated on the North Atlantic on April 19 from New York to London and Bermuda, four days later than advertised. The same month, the carrier receives the Queen’s Award to Industry for Export Achievement. Daily B-747-136 transatlantic flights commence on May 9.

On July 15, Jumbojet flights are started from London to Toronto via Montreal. En route from Montreal to London on August 3, a B-747-136 is diverted to Denver, Colorado—which has an altitude of 5,300 feet—after receiving a phone call warning that there is a bomb aboard the Jumbojet set to go off at a low altitude and demanding \$250,000 in cash. The Boeing lands safely and no bomb is found.

On August 5, the Civil Aviation Act becomes law, providing for the formation of a British Airways Board. The sixth B-747-136, *London*, arrives on September 8 and, for financial reasons, mid-Pacific service is eliminated on November 1, with San Francisco dropped from the route that connects Hong Kong with Tokyo and Honolulu. The B-747-136 *Inverness* is delivered on November 23 and a B-707-432 is turned over to BEA Air Tours, Ltd. in December.

Enplanements for the year are 1.89 million and revenues are up to £195.5 million. Profit plunges to £5.9 million.

Airline employment in 1972 stands at 24,682 and an unnamed B-747-136 arrives on January 7. The British Airways Board holds its first meeting on January 10 and, on April 1, assumes ownership of British Overseas Airways Corporation (BOAC), **British European Airways Corporation (BEA)**, and their associated companies. Meanwhile, on March 21 and 24, the B-747-136s *Sheffield* and *William Shakespeare*, are received.

Beginning on April 9, the carrier offers a series of 29-day Himalayan wildlife tours in northern India, Sikkim, and Nepal. The B-747-136 *Nottingham* arrives on April 19 and, also in April, the Queen’s Award to Industry is again received. On June 1, the company signs a contract for 5 Concorde SSTs. The first *Report on British Airways Organization* is approved by the government. During the summer, B-747 Jumbojet routes are opened London–Chicago (ORD), Detroit (DTT), Boston, and Miami.

On September 1, BOAC/BEA and their associated companies are merged under unified top management in the British Airways Group. On December 22, more than 300 Christmas travelers are stranded in London after the airline cancels ITGS charter flights to New York on the grounds that the passengers are not eligible under international air charter regulations to be members of their charter group.

On Christmas Eve, the carrier, not wishing to offend America from where most of the passengers originate, makes arrangements for the travelers to give “undertakings regarding payment of scheduled fares” and flies them back to New York.

Passenger boardings on the year rise 18.2% to 2,325,000 and freight traffic, with a 25.8% boost, makes BOAC the 4th largest North Atlantic cargo carrier.

The second and third *Reports on British Airways Organization* are approved on January 22 and November 22, 1973, respectively. The B-747-136 *Bristol* is delivered on May 3 and London–Washington, D.C. Jumbojet service is begun in late spring.

A B-747-136 en route from London to New York on June 21 with 153 passengers, skids off the runway during its landing at New York (JFK); no injuries are reported.

When the Anglo-French Concorde arrives at the new Dallas (DFW) from Caracas, Venezuela, to participate in the dedication of the world's largest airport on September 20, it is the first SST to visit the United States.

In recognition of the Europeans' supersonic technology and the day's occasion, President Richard M. Nixon awards the plane's test pilots, Captains Andre Turcat and Brian Trubshaw, the Harmon International Aviation Trophy in special White House ceremonies. In cooperation with New York's Vision Travel Agency, the airline, on October 1, offers a 22-day Australian tour timed to coincide with the opening of the new Sydney Opera House.

The B-747-136 *Leicester* enters service on November 7, followed by the Jumbojet *Durham* on December 7. Beginning on December 9, the Cunard Steamship Lines offers travelers, who pay at least \$740 for their accommodations on the *Queen Elizabeth II*, a free one-way trip via BOAC between London and either Boston or New York.

As a result of the energy crisis, supplies of jet fuel in London are nearly exhausted. Consequently, on December 13, company officials announce the cancellation of nearly every flight from U.S. cities, with the exception of New York, during the year's last week. Four days later, it is revealed that the company must also reduce its European and domestic flights by 30%–40% through December 31.

Combined results for BOAC/BEA on the year demonstrate a 7.5% rise in enplanements to 114,390,000, a 6.5% hike in freight traffic, and a group net profit of \$5.2 million. Individually, BOAC brings in £267.7 million.

BOAC itself continues to employ 24,239 workers as 1974 begins. Its fleet comprises 27 VC10s, 27 B-707-436s, and 12 B-747-146s. An ad campaign is begun on March 1 informing the public that the company will fly as **British Airways, Ltd. (2)** after April 1.

En route from Bombay to London two days later, a VC10 with 101 aboard is taken over by two Palestinian youths, Abu Said and Abu Ali, following its landing for a scheduled stop at Beirut. Following the refusal of Greek authorities to allow a requested landing, the plane is forced to fly to Amsterdam's Schiphol Airport. There, all of the hostages are allowed to deplane before the hijackers set the aircraft ablaze and then surrender to Dutch police. The pirates will be tried and sentenced to five-year prison terms.

BOAC/BEA is dissolved on March 31, and the new entity, **British Airways, Ltd. (2)**, appears the next day.

There is an unofficial website at <http://expage.com/page/boac>.

BRITISH REGIONAL AIRLINES, LTD.: Isle of Man (Ronaldsway) Airport, Ballosalla, Isle of Man, IM 9 2JE, United Kingdom; Phone 44 (1624) 826000; Fax 44 (1624) 826001; <http://www.british-regional.com>; Code JE; Year Founded 1996. In August 1996, **British Airways, Ltd. (2)** announces that, two months hence, it will withdraw from its loss-making Scottish internal services, including six routes serving Orkney, Shetland, and the Western Islands. In September, Airlines of Britain, plc's subsidiary, British Regional Airlines (Holdings), changes the name of Manx Airlines (Europe), Ltd. to **British Regional Airlines, Ltd. (BRA)**. British Airways, Ltd. (2) Resources Director David Holmes is named president.

Plans are announced for the new BRA, which is based at Ronaldsway Airport on the Isle of Man, to take over the previous **British Airways Regional, Ltd.** services at the end of October as a BA franchise partner. Under terms of this agreement, BRA will enjoy all of the benefits of franchise partnership, including dual-designator flights, computerized reservations and frequent flyer linkage, and passenger and airport ser-

vices. Meanwhile, **Loganair, Ltd.** operations are incorporated into BRA. **Manx Airlines, Ltd. (2)**—a separate subsidiary—continues separate operations. Combined enplanements for the year are 1,038,173 on 51,300 scheduled departures.

Two momentous announcements are made on February 24, 1997. Effective that date, Airlines of Britain, plc, the holding company that owns **British Midland Airways, Ltd.**, BRA, MAL-2, **Loganair, Ltd.**, and **Business Air, Ltd.** elects to split up British Regional Airlines (Holding) and all of the carriers except BMA. The move will technically allow BRA (H) to continue its **British Airways, Ltd. (2)** affiliation without fear of conflict of interest decisions being made by Airlines of Britain, which is partnered with BA's competitors, **Deutsche Lufthansa, A.G.** and **SAS (Scandinavian Airlines System)**. Still, Sir Michael Bishop retains ultimate ownership in both groups. Airlines of Britain itself is renamed British Midland, plc.

MAL-2, **Loganair, Ltd.**, and **Business Air, Ltd.** will continue a confederation with BRA in a British Airlines Regional Group of BA franchise partners. Activities for each company will continue to be reported separately.

Also on February 24, Managing Director Terry Liddiard announces an order for up to five Embraer EMB-145 Amazon regional jets, with options taken on another two. After a management buyout in March, **Loganair, Ltd.** reestablishes its independence outside of the British Regional Airlines Group. It will fly specialist services for Scottish Air Ambulance and scheduled services to the Orkneys and Shetlands with Twin Otters and Islanders.

The first EMB-145 is accepted during the Paris Air Show in June and begins service in July–August from Manchester to Berlin. It is the first of the type to enter service with any British airline. In September, new Amazon service is inaugurated from Southampton to Zurich.

On September 30, BA sends shock waves through the business and tourist industries located in the Scottish Highlands. Ian Reid, Scotland general manager, announces at a press conference that the major will switch its Inverness to London (LHR) route to London (LGW) and franchise it to its subsidiary BRA, which will operate it with BAe 146-200s. Despite the transport of 214,000 passengers over the route the previous year, BA declares that it has lost £8 million since beginning the thrice-daily service in 1992. The move, as might be expected, causes a furor in northern Scotland and provokes a strong protest from the members of a newly established pan-Highland pressure group that includes the Highland Council, Highlands and Islands Enterprise, Scottish Council Development and Industry, and the Inverness Chamber of Commerce. Chairman Stelios Haji-Ioanou of rival **easyJet, Ltd.** indicates that his carrier will launch a new daily roundtrip from London (CTN) to Inverness to help fill the gap left by BA.

On October 28, **British Airways, Ltd. (2)** announces major changes to its services linking Aberdeen with Birmingham and Manchester. From July next, the de Havilland Canada DHC-8-301s of **Brymon Airways, Ltd. (2)** will replace the BRA ATPs currently employed. The new Brymon services are expected to create 100 new jobs within the BA group organization, with 75 of them in Aberdeen. Frequencies to Manchester will increase from four to six each day, while those daily services to Birmingham will jump from two to three.

A previously owned BAe 146-100 is acquired in November. The Inverness to London (LGW) route is handed over to BRA on November 15 and inaugurated by the just-received 146-200.

Just after takeoff from London (LGW) to Inverness on November 29, the BAe 146-100 with 62 passengers is forced to return to its point of origin when the pilot notices an electrical fault on the control panel. When BRA is unable to bring in a backup aircraft, the passengers are put up in a Brighton hotel at the airline's expense and, with a second BRA aircraft made available, complete their trip to Scotland more than 18 hours later. The incident is the first in a series of cancelled flights reported by Aberdeen's *Press and Journal* that will increase tensions between northern Scotland citizens and BA.

The fleet in December includes 9 British Aerospace BAe ATPs, 13 BAe Jetstream 41s, 1 BAe 146-100, 8 Shorts 360-300s, and 1 EMB-145.

Just after takeoff an hour late from London (LGW) for Inverness on the evening of December 21, the fully loaded BAe 146-100 develops additional problems with the engine that had delayed the flight in the first place. The BAe returns to its point of origin, where the passengers are bussed to a Brighton hotel for a 3-hr. rest before returning to Gatwick. The flight arrives at Inverness 15 hrs. behind schedule, with customers again complaining about the lack of BRA backup.

Enplanements for the year total 1,574,449. It is reported that British Regional Airlines Group has generated an operating profit of \$254.2 million and a net gain of \$5.9 million, a 21% increase over the previous year.

In 1998 as the largest BA franchise partner, BRA flies scheduled services over 70 routes throughout the U.K., Scotland, and into Western Europe. Among the destinations visited are Aberdeen, Barra, Belfast City and International Airports, Benbecula, Berlin, Blackpool, Brussels, Campbeltown, Cardiff, Cork, Donegal, Edinburgh, Glasgow, Guernsey, Hanover, Islay, Jersey, Kirkwall, Knock, Leeds/Bradford, Lerwick, Liverpool, London (CTN, LGW, STN), Londonderry, Manchester, Newcastle, Paris (CDG), Shannon, Southampton, Stornoway, Sumburgh, Unst, Waterford, and Wick.

The London (LGW) to Inverness service continues as a source of embarrassment for the airline in the new year. On January 8, Brian Stewart, CEO of the Western Isles Council, demands that BRA publish its operating records for the past three months amid claims of the airline's deteriorating standards.

The early morning Inverness to London (LGW) service and its return is cancelled on January 9 when the BAe 146-100 develops an electrical problem prior to departure. The 32 southbound passengers depart Inverness just after noon on an ATP switched from BRA's Manchester to Belfast service. Meanwhile, the 35 passengers stranded at Gatwick Airport are put on the service to Edinburgh, where another ATP is made available to fly them on to Inverness.

Details on this incident are reported to the Environment, Transport, and Regional Affairs Committee of the House of Commons, which is preparing to launch an inquiry into the access of regional airports to London (LHR).

Just after landing at Stornoway on February 10 following a service from Benbecula, a Shorts 360-300 with 30 passengers suffers the collapse of its port-side undercarriage and skids along the runway to a stop. Although the aircraft is badly damaged, no injuries are reported. The same day, Angus Macmillan, director of the Western Isles Tourist Board, calls for BRA to be stripped of its franchise to operate services in the Scottish Highlands, claiming it has lost passenger confidence.

Two days later, council presidents from the Highlands, Western Isles, Orkney, and Shetland meet in Glasgow with BA's general manager for Scotland, Ian Reid, and BRA officials led by the Scotland general manager, Gerry Devine, concerning improvements in Scottish airline service. Although promises of revised and improved procedures are made, they cannot be implemented soon enough to prevent or ease additional service incidents.

As February begins, the future of the airline's Benbecula to Stornoway service is thrown into doubt because of a growing decline in passenger boardings. Company officials suggest that they may not tender again for the service, authority for which comes due for renewal in August.

Just hours after the Highland Council expresses support for BRA on February 21, another service incident occurs. When a technical hitch causes the mid-afternoon service from London (LGW) to Inverness to be scrubbed, 59 people are at Inverness waiting to catch the return flight. BRA is able to fly 37 of the Inverness-stranded passengers, who will make connections elsewhere, to Glasgow on a scheduled Shorts 360-300 flight via Stornoway. The remaining 22 passengers wait until 10 p.m. when a plane chartered by the airline departs. This plane carries not only the passengers stranded mid-afternoon, but those scheduled for the unavailable 7:55 p.m. departure as well.

A technical fault in a BAe ATP forces a significant delay in February 25 service from Inverness to Stornoway until a backup ATP can be made

available; the replacement aircraft also operates the connecting Stornoway to Glasgow segment.

The Shorts 360-300 scheduled to operate from Glasgow to Inverness breaks down on March 5, causing the airline to cancel the service. It must also cancel the March 6 return flight from Inverness to Glasgow. Significant press attention is paid to the plight of a Nairn couple, Charles and Althea McInnes, who are forced to miss a friend's funeral at Greenock.

Four delegates from Scottish Highlands organizations offer testimony on BRA service before the Environment, Transport, and Regional Affairs Committee of the House of Commons on March 11. They argue that any review of regional air policy should guarantee London (LHR) slots for areas like theirs, areas whose fragile local economies need effective links to the U.K. hub of world travel. More importantly, they try to have the national legislature reverse the BA decision to shift its Inverness service to London (LGW).

Just after landing at Manchester on a March 18 service from Southampton, an ATP with 4 crew and 58 passengers suffers the collapse of its nosegear; although the aircraft is badly damaged, no injuries are reported.

Also during the first quarter, new frequencies are inaugurated from Southampton to Zurich and from Manchester to Geneva.

A BAe 146-200 replaces the 146-100 on April 1 over the London (LGW) to Inverness route.

On April 28, British Regional Airlines Group CEO Liddiard acquires the services of Dresdner, Kleinwort Benson to act as sponsor and stockbroker for an initial public offering (IPO) on the London Stock Exchange during the summer. Chairman Michael Bishop's 50% stake is valued at £50 million and he will cut his holdings by some 20%.

In fact, frequencies from Aberdeen to Manchester change hands on May 4 and are increased by **Brymon Airways, Ltd. (2)** from four to six each day. Those daily services from Aberdeen to Birmingham are started on June 8 and jump from two to three.

Although already electronically recorded, a shipment of 250 individual customer checks paid at the Abbey National bank branch in Inverness between July 10 and 13 disappear from the secure area aboard the carrier's Inverness to London (LGW) flight on July 14.

It is reported on July 17 that BRA's UK-wide services have only a 59% on-time rating, although those over the attention-gaining Inverness route are now running at 80% to 85%, or within 15 min. of scheduled departure times. On July 20, the carrier launches a campaign to raise that figure to 65% and to improve reliability on the London (LGW) to Inverness route.

Plans to replace the aging Shorts 360-300s on the twice-daily Glasgow to Shetland roundtrips and the daily roundtrips from Edinburgh to both Kirkwall and Shetland are shelved on July 28 when BRA decides to turn these Orkney Island routes over to **Loganair, Ltd.** Word of the changeover is leaked to the press before BRA can make a public announcement the next day, causing further alienation between the airline and the political leadership of northern Scotland.

The summer IPO brings in income to pay for the additional acquisition of Embraer ERJ-145 Amazons. On July 29, Scotland General Manager Devine indicates that BRA will devote an Amazon to the northern Scotland routes in early 1999, increasing them by one daily roundtrip, and that, meanwhile, the company is seeking a larger BAe 146-300 to replace the BAe 146-200.

The loss of the Abbey National bank checks is reported in the press on August 15. Contacted for comment, an airline official indicates that the bank has not contacted the company concerning them and that BRA is unaware of any missing checks.

BRA tenders and wins renewal of its Benbecula to Stornoway route in August.

While on approach to Inverness on a service from Stornoway on October 16, an ATP with 23 passengers is forced to shut down an engine following a warning light. An uneventful one-engine out landing is completed and no other damages or injuries are reported.

On November 2 on-time and reliability figures are released by the government. In the period between April and October, only one Inverness to London (LGW) flight has had to be cancelled and regularity on the route has been boosted to 99.9%, a welcome turnaround. A spokesman for the Western Isles Council dismisses the figures, indicating that efforts to improve service on the Inverness route has resulted in inadequacies on the routes to the Western Isles.

After a year of worrying about permanency of the landing slots it has borrowed from **British Airways, Ltd. (2)** at London (LGW), BRA announces on November 3 that Airport Coordination, Ltd., the umbrella organization that manages traffic at both Heathrow and Gatwick Airports, has awarded the regional three of its own Gatwick slots.

A BAe 146-300 is received and enters service on the London (LGW) to Inverness route on December 15, increasing capacity by 35% or 40,000 seats a year.

The fleet at year's end includes 2 BAe 146-200s, 1 BA3 146-300, 11 BAe ATPs, 13 BAe Jetstream 41s, 7 Embraer ERJ-145s, 1 Shorts 360-300, and 1 SAAB 340.

During the 12 months, passenger boardings accelerate 8% to 2.33 million even as cargo traffic plunges 12% to 168,000 FTKs. Revenues jump 14.4% to \$305 million and an \$8.3-million operating profit is enjoyed.

Huge winter storms with 70-kn. winds in Scotland on January 4, 1999 force BRA to cancel all of its flights from Glasgow and Edinburgh to Belfast, Cardiff, Southampton, and the Western Isles. These are the same storms that days earlier had hit the U.S. Midwest.

Hurricane force winds in Shetland on February 3-4 again cause problems for the airline. Unable to get its own aircraft to Sumburgh Airport on the first of the two storm days, BRA contracts with **British World Airlines, Ltd.** for the use of its ATR72-210, which is on-scene in connection with an oil industry contract. As the four-person crew taxis the turboprop on the morning of February 4, a gust of wind turns it to one side on its wing. The aircraft rights itself and is taken into shelter. The flight and all others for the day are cancelled.

Daily ERJ-145 roundtrips commence on February 22 between Edinburgh and Paris (CDG).

Employing an ERJ-145, BRA launches a fourth daily roundtrip service on March 1 between Southampton and Edinburgh. The company also flies four daily roundtrips between Southampton and Glasgow. The jet service between Edinburgh and Paris (CDG) is upgraded to thrice-daily on March 15; two flights are offered in Saturdays and Sundays.

In response to a surging demand for flights on its ERJ-145s, shares in BRA jump 14% on March 26, rising from 10p to 80p. CEO Liddiard informs *The Independent* that he has bought 6 more jets and plans to convert his entire fleet of 45 aircraft as soon as possible.

On March 29, London City Airport announces a new four-times-per-day service for scheduled flights to Sheffield to be operated by BRA beginning in September. Frequencies are planned for Edinburgh, Glasgow, and Paris during the winter season.

Thrice-daily Jetstream 41 roundtrips begin on June 14 between Sheffield and Belfast, along with daily J-41 return service from Sheffield to Dublin.

While descending out of cloud in unregulated airspace to land at Inverness on a scheduled service from London (LGW) on July 1, a BAe 146-200 with 6 crew and 84 passengers is nearly hit by an RAF Bulldog training plane that comes within 200 ft. of the jetliner. The flight crew of the BAe takes evasive action and puts their aircraft into a steep climb, avoiding disaster.

It is announced on July 26 that President Holmes will retire at year's end. His successor will be former AMEC (a building contractor) Chairman Sir Alan Cockshaw.

Company capacity over the routes from Cardiff to Paris, Belfast, and Aberdeen are increased by 50% in mid-September when the BA franchise replaces BAe Jetstream 41s with larger and faster ERJ-145s. Employing an Express Jet, the company simultaneously launches the first-

ever regional jet service from Southampton to Frankfurt. The company also takes over the Southampton to Jersey route previously flown by **KLM uk, Ltd.**

The company takes delivery of its 13th ERJ-145 in November and, with an order for 10 more, will become the largest Express Jet operator outside the U.S.

Customer boardings dip 0.4% to 2,328,000 while cargo traffic is level at 169,000 FTKs.

Airline employment stands at 1,231 at the beginning of 2000, a 0.4% cut over the previous 12 months.

With the beginning of the summer program in April, the carrier operates over 200 scheduled flights each weekday, serving 35 airports with 77 routes.

Just after takeoff from Manchester to Belfast on May 16, Flight 7787, an ATP with 4 crew and 44 passengers, is unable to retract its left main landing gear. Pilot Capt. Nick Davies is diverted to Liverpool Airport, which he circles for three hours burning off fuel. In a shower of sparks, the turboprop touches down and comes to a halt, tilting on to its left wing. Surrounded by rescue and fire vehicles, passengers escape down a chute and no injuries are reported.

New thrice-weekly Jetstream 41 roundtrips are introduced on July 3 between Cardiff and Dublin.

Special ceremonies are held in Brazil on August 25 to mark delivery of the company's 16th ERJ-145, which is also the 300th Express Jet built by Embraer.

Daily (except Sunday) ERJ-145 roundtrips are started on October 29 from Manchester to Toulouse.

Employing a BAe Jetstream 41, the carrier, on October 30, replaces **Maersk Air, Ltd.** on the route from Birmingham to Newcastle. The now-abandoned route between Dublin and Sheffield City is simultaneously taken over by Aer Arann Express, Ltd.

BRITISH REGIONAL AIRLINES GROUP. See BRITISH REGIONAL AIRLINES, LTD.; BUSINESS AIR, LTD.; LOGANAIR, LTD.; MANX AIRLINES, LTD. (2)

BRITISH SOUTH AMERICAN AIRWAYS, LTD./BRITISH SOUTH AMERICAN AIRWAYS CORPORATION: United Kingdom (1944-1949). Capitalized at £10,000 and with J. W. Booth as chairman, **British Latin American Air Lines, Ltd.** is formed at London in January 1944. The new carrier is a cooperative venture between the shipping concerns Blue Star Line, Ltd., Booth Steamship Company, Ltd., Lamport and Holt Line, Ltd., Royal Mail Lines, and Pacific Steam Navigation Company. In October, the name of the enterprise is changed to **British South American Airways, Ltd.** During the summer of 1945, D. C. T. Bennett is appointed managing director and a small fleet of Avro 691 Lancastrians is assembled following V-J Day.

Piloted by Managing Director Bennett, the Avro 691 Lancastrian 1 *Starlight* departs London on January 1, 1946 on the first of six proving flights to Buenos Aires via Lisbon, Bathurst, Natal, and Montevideo. Bennett's departure is the first aircraft movement from what will be London's new civil airfield, Heathrow Airport. During the same day, which is the first for postwar U.K. civil operations, the unfinished airport is turned over by the Air Ministry to the Ministry of Civil Aviation.

Regularly scheduled London-Buenos Aires service—the first by a British airline to South America—is inaugurated on March 15. The Lancastrian *Star Glow* on April 5 cuts the scheduled flight time from 77 to 56 hours and on June 27, the Buenos Aires route is extended to Santiago.

On August 1, under the Civil Aviation Act, the company becomes a wholly owned state corporation, similar to BOAC, at which time its fleet consists of 2 Lancastrians and 4 Avro 685 York Is. On September 2, every-two-weeks London-Caracas via Azores, Bermuda, Jamaica, Lancastrian flights are begun by the *Star Glow*.

An Avro 691 Lancastrian 1 with five crew and six passengers fails its takeoff from Bathurst, Gambia, on August 30; although the aircraft must be written off, there are no fatalities.

On September 7, the Avro York *Star Leader* with 4 crew and 24 passengers and scheduled to fly from London and Lisbon to South America, crashes on takeoff from Bathurst, Gambia (24 dead); Dakar replaces Bathurst as a stop on the Buenos Aires run as of September 23. On October 12, London–Rio de Janeiro Avro York service is begun via Lisbon, Dakar, and Natal.

On January 18, 1947, the Caracas route is extended to Lima/ and Santiago. On March 31, it is announced that, in the period since start-up, the company has earned a surplus of £20,507. The Avro York *Star Speed* with six crew and nine passengers crashes in fog at Dakar on April 13 (six dead).

Employing Lancaster bombers, the carrier starts a series of in-flight refueling tests over its South American routes, beginning on May 28. On June 5, weekly London–Azores, Bermuda, Nassau, and Jamaica flights commence. Multistop London to Lima flights begin on July 7.

On August 2, the Avro 691 Lancastrian 3 *Star Dust* crashes on Bermuda in bad weather (11 dead). Six days later, São Paulo replaces Rio de Janeiro as a stop on the Santiago frequency. After having held for a weather improvement over Bermuda on September 5, the Lancastrian *Star Trail* with 5 crew and 15 passengers and nearly out of fuel, hits an aerial mast at the 300-ft. level and crash-lands; amazingly, no significant injuries are reported.

The first Avro 688 Tudor 4, *Star Lion*, is delivered on September 29 and is flown by Managing Director Bennett on a South American proving flight the next day.

On October 1, the remaining shares of **British West Indian Airways, Ltd. (1)**—47% was taken in August—are purchased and the new subsidiary is renamed **British International Airlines, Ltd.** The Caribbean route is pushed to Havana on October 31 as the *Star Lion* begins commercial service. An Avro 691 Lancastrian 3 with three crew is involved in a landing accident at Heathrow Airport on October 23; although the aircraft must be written off, there are no fatalities.

Required to shut down an engine, the Lancastrian *Star Light* with 4 crew and 12 passengers makes an emergency crash landing at Bermuda, its point of origin, after dark on November 13; although the aircraft must be written off, there are no fatalities.

Two additional Tudor 4s, *Star Aerial* and *Star Tiger*, are delivered late in the year as orders are placed for 6 de Havilland DH 106 Comet I jetliners.

On January 29–30, 1948, the Tudor 4 *Star Tiger* disappears somewhere between the Azores and Bermuda (31 dead). On February 1, second-class mail is initially transported on the South American route, making the carrier the first U.K. airline to carry subsidy mail on scheduled service; the same day, an Avro York Nassau–Miami route is begun.

Herbert G. Brackley succeeds D. C. T. Bennett as managing director on April 1. Bennett's time as managing director will be well remembered by Alan Bramson in his *Master Airman: A Biography of Air Vice Marshal Donald Bennett, CB, CBE, DSO* (Shrewsbury, Eng.: Airlife, 1985).

On June 24, **British International Airlines, Ltd. (1)** reverts to its purchase name of British West Indian Airways. Nassau–Havana Avro York service commences on August 21. During the month, **Bahamas Airways, Ltd.** is acquired. Weekly London–Havana flights are inaugurated on December 6 via Lisbon, Azores, Gander, and Nassau.

An Avro 685 York I with six crew and nine passengers is lost at Brazil's Caravellos Bay on January 5, 1949 (three dead). The Tudor 4 *Star Aerial* disappears between Bermuda and its destination of Kingston, Jamaica on January 17 (20 dead). The Airways Corporation Act becomes law on July 30 and BSAAC is merged into **British Overseas Airways Corporation (BOAC)**.

BRITISH UNITED AIR FERRIES, LTD.: United Kingdom (1962–1967). On October 1, 1962, the closely coordinated vehicle ferry divisions of **Silver City Airways, Ltd.** and **Channel Air Bridge, Ltd.** are merged into this single entity. Operations are conducted from both of the bases, Southend and Lydd, employed by the merger partners. A to-

tal of 29 aircraft, mostly Aviation Trader ATL-98 Carvairs and Bristol 170 Freighters are in the combined fleet. On December 28, the Carvair *Pont de L'Europe* is destroyed in a Rotterdam crash. Passenger boardings for the year of merger partner **Channel Air Bridge, Ltd.** exceed 300,000.

During the first full year of combined work in 1963, the company breaks all previous ferry records, combined or single; during the summer season 4,762 cross-Channel flights are made carrying 51,269 passengers and 12,150 automobiles. Additionally, charter flights are made as far inland as Basel, Geneva, and Strasbourg.

The Bristol 170 Mk. 32 *City of London* is destroyed in a crash on Guernsey on September 24. In October and November, 3 more Bristol 170 Mk. 21s, the *City of Exeter*, *City of Bath*, and *City of Carlisle*, are withdrawn. Meanwhile, 2 ATL Carvairs, *Pont du Rhin* and *Massburg*, are purchased in March and July and, in December, 1 makes the first landing at Lydd Airport.

In January 1964, ferry routes are granted by the Air Transport Licensing Board (ATLB) for services to France from the Midlands. As a result, flights are soon in operation from Coventry to Calais, Le Touquet, Cherbourg, Lege, Geneva, and Rotterdam and from Lydd to Mimes. Two more Carvairs, the *Channel Bridge* and *Pont d'Avignon*, are added in February. On June 6, it is announced that since the creation of **Silver City Airways** in 1948, a million cars have been flown from the U.K. to Europe. Jersey to Hurn roundtrips commence on October 31.

Cross-Channel and Continental flights continue in 1965, as do several governmental contract flights to the Middle East. In December, 2 ATL Carvairs are leased to **Air Ferry, Ltd.** for use in the Rhodesian crisis. During the year, 2 additional ATL Carvairs, the *Menai Bridge* and *Big John*, are added while 3 Bristol 170 Mk. 32s, the *Venture*, *Voyager* and *City of Durham*, are withdrawn. Enplanements total 366,454.

The preexisting joint freight service flown with **Sabena Belgian World Airlines, S.A.** to Ostend ends in 1966, with BUA maintaining the route alone. An ATL Carvair is acquired, but 2 more Bristol 170 Mk. 32s, the *City of Leicester* and *City of York*, are retired. New routes added include London (LGW) to Coventry and Le Touquet; Le Touquet to Ostend; Southampton to Cherbourg, Jersey, and Guernsey; Manchester to Rotterdam; and Jersey to London (LGW). The vehicle ferry network is stretched into the north of England with a total of 23 routes flown systemwide. Despite this expansion, the number of vehicles ferried drops to 90,000.

The Coventry–Calais route is closed on February 28, 1967. At this point, the company elects to discontinue all flights to destinations other than those just across the Channel. The first ATL-98 Carvair, *Golden Gate Bridge*, acquired by predecessor **Channel Air Bridge, Ltd.** at the beginning of the decade, makes its final flight in March and will be sold in May. The Bristol 170 Mk. 31 *Victory*, together with the Mk. 32s, *City of Salisbury*, *City of Edinburgh*, *Vigilant*, and *Valour*, are also grounded. On October 1, the carrier becomes a separate Air Holdings, Ltd. division and is renamed **British Air Ferries, Ltd.**

BRITISH UNITED AIRWAYS, LTD.: United Kingdom (1960–1970). **Airwork, Ltd.** changes its name to **British United Airways, Ltd.** on May 19, 1960. As the result of negotiations, a new carrier by this name is officially formed on June 27 through the merger of BUA (ex-**Airwork, Ltd.**), **Hunting-Clan Air Transport, Ltd.**, **Air Charter, Ltd.**, **Morton Air Services, Ltd.**, **Olley Air Services, Ltd.**, **Transair, Ltd.**, **Airwork Helicopters, Ltd.**, and **Bristow Helicopters, Ltd.** The company's three major divisions are air transport, helicopters, and overseas contracts.

Channel Air Bridge, Ltd., a BUA subsidiary prior to the merger, is left to operate as a subsidiary under its own identity. Shareholders in the new concern include Furness Withy & Co. (20%), Blue Star Line (20%), Clan Line (16%), British and Commonwealth Shipping Group (16%), Hunting Group (8%), and 20% private interests. Miles Wyatt is named chairman, with Freddie Laker as managing director. The combine is now the largest British air transport concern after

British European Airways Corporation (BEA) and British Overseas Airways Corporation (BOAC).

Scheduled and nonscheduled routes of the merger partners within the U.K. and to Gibraltar, Accra, Milford Haven, Rotterdam, Salisbury, Swansea, and Johannesburg (cargo) are maintained, along with routes flown under government contract. In association with **British Overseas Airways Corporation (BOAC)**, **East African Airways Corporation**, and **Central African Airways Corporation**, "Skycoach" Viscount service is inaugurated from London to various African destinations. Weekly London (LGW) to Canary Islands flights begin on October 7. Some 100,000 passengers are carried in the first six months.

The BUA fleet in 1961 includes 2 Bristol Britannia 312s, 2 Douglas DC-6As, 3 DC-3s, 2 Vickers Viscount 833s, 2 Viscount 831s, 2 Viscount 804s, 2 Viscount 736s, and 1 Viking, plus 2 DH 114 Herons, 6 DH 104 Doves, and 1 DH 89A Dragon Rapide.

During January, the company and **Cunard-Eagle Airways, Ltd.** approach the ATLB for additional licensure to visit a large number of new charter and scheduled European markets at the beginning of the summer season in March. Many of these are awarded: Amsterdam, Athens, Barcelona, Basel, Genoa, Madeira, Malaga, Palma, Paris, and Zurich.

Also during the month, the carrier publicly announces its intention to reequip with 5 de Havilland Tridents and 4 VC10s, 3 of which are ordered. After additional deliberation, CEO Laker elects to scrap these requests and turn to British Aircraft Corporation.

On May 9, orders are placed for 10 new BAC 1-11s, for which the airline is official launch customer for the Dash-200. Slated for delivery to **Channel Air Bridge, Ltd.**, the first Aviation Traders, Ltd. ATL-98 Carvair passenger-vehicle freighter, the *Golden Gate Bridge*, is rolled out at Southend Airport on the morning of June 17 and makes its initial test flight during the afternoon. The aircraft's model name, a contraction of the phrase "car-via-air," is suggested by two local businessmen won a naming contest.

A Vickers Viking 736 with 4 crew and 12 passengers crashes during final approach to Frankfurt on October 30; there are no fatalities.

On November 3, the carrier announces plans to join with the British Aviation Services (Britavia) group to form the holding company Air Holdings, Ltd. The ATLB partially ends **British European Airways Corporation (BEA)**'s monopoly on European routes on November 29, opening the way for BUA to commence Continental services.

Channel Air Bridge, Ltd. enplanements reach 265,000. Overall income reaches £1.14 million and profits approach £625,000.

In January 1962, British Aviation Services Group and its airline subsidiary, **Silver City Airways, Ltd.**, is purchased and joins BUA under a new holding company, Air Holdings, Ltd. On January 30, the *Golden Gate Bridge*, first of 10 Aviation Traders ATL-98 Carvairs, receives its government certification and, on February 16, is turned over to subsidiary **Channel Air Bridge, Ltd.**; in ceremonies, it is christened by the wife of the Swiss ambassador, Mr. Daeniker. A proving flight for VIPs is made across the English Channel to Ostend during the afternoon, with revenue charters beginning the next day with the plane hauling a shipment of new automobiles to Malaga, Spain. Additional charters are flown during the remainder of February.

Regularly scheduled roundtrip car ferry flights commence on March 1 with a service to Rotterdam. The second ATL-98 Carvair *Atlanta* is test flown on March 25 and, also in March, a DC-6B is leased for 18 months from **Canadian Pacific Air Lines, Ltd.** The *Atlanta* joins **Channel Air Bridge, Ltd.** in April and, on May 20, **Jersey Airlines, Ltd.** is acquired. Vickers Viscount 800 flights are launched to various European cities.

The Aviation Traders Carvairs begin new scheduled car ferry operations Southend-Strasbourg on June 1. Employing a Vickers-Armstrong VA-5 hovercraft, BUA, on July 20, inaugurates the world's first scheduled commercial hovercraft service in the Dee Estuary, near Wallasey. Also in July, it is announced that **Channel Air Bridge, Ltd.** and **Silver City Airways, Ltd.** will be merged, effective October 1, into a new airline, **British United Air Ferries, Ltd.**

On September 1, the DC-6As begin "Africargo" flights from London (LHR) to various African destinations. The experimental hovercraft service in the Leeds Estuary ceases on September 16; during the eight weeks of its schedule, over 20,000 passengers have been transported.

After an initial one-year experiment is completed by **Silver City Airways, Ltd.** for the trooping of soldiers between the U.K. and Germany, the government awards BUA, in late September, a large contract under which 11,000 troops will be flown roundtrip each month in company Viscounts.

Following a reorganization of Air Holding, Ltd.'s subsidiaries, **British United (Channel Islands) Airways, Ltd.** is formed on November 1. The **Airwork, Ltd.** interest in **Commercial Air Services (Pty.), Ltd.** of South Africa, acquired at the time of merger in 1960, is sold to J. M. S. Martin, Leon Zimmerman, and Max Geffin.

Three Viscount 804s are sold in November-December. Net gain this year totals £750,000.

A large number of inclusive-tour destinations are added in 1963. On April 11, **British European Airways Corporation (BEA)** withdraws its services to the Isle of Man; plans are made to take them over. However, **Cambrian Air Services, Ltd.** wins the rights to fly the abandoned routes. The company's DC-4 is sold in July while 2 Bristol Britannia 313s are briefly operated for the Israeli carrier **El Al Israel Airlines, Ltd.**

In October, a second weekly DC-6A "Africargo" service is initiated. BUA, which had previously earned as much as £4 million each year from trooping contracts (55%) of income, now begins to gradually withdraw from them, ending one commitment in order to redeploy its VC10s.

Twice-weekly Blackpool-Bournemouth via Manchester DC-3 operations commence on January 1, 1964. Weekly London (LGW)-Seville Viscount flights are launched on March 12. Orders are placed for jetliners and, in September and October, the first 2 Vickers VC10s are received. Two Britannias are sold during the year and the **Canadian Pacific Air Lines, Ltd.** Douglas is returned.

In December, the company receives government permission to fly the South American routes recently abandoned by **British Overseas Airways Corporation (BOAC)**.

A total of 559,543 passengers are carried on the year and the workforce totals 1,800.

A new network of U.K. twice-daily jet services, called "Interjet," is begun in January 1965, linking Belfast, Edinburgh, Glasgow, and London (LGW). Simultaneously, the first Super VC10 is acquired and employed to begin flights to Rhodesia.

As launch customer, a company BAC 1-11-201, piloted by Capt. S.G. Websper with Chairman Laker and Horizon Holidays Chairman Lord Douglas of Kirtleside as passengers, inaugurates the world's first short-haul jet service on April 9 with a 690-mi. flight from London (LGW) to Genoa.

Flight 1030X, a C-47B with 4 crew and 23 passengers en route from Paris (ORY) to Jersey, crashes near the latter point on April 14; there are no survivors.

A Britannia 309 is delivered in July for charter work while a Britannia 313 is simultaneously sold. At the same time, twice-weekly scheduled service to Santiago, Chile, begins over the ex-**British Overseas Airways Corporation (BOAC)** routes.

Late in the fall, nonstop VC10 service to the Canary Islands is inaugurated. The new short-haul BAC jetliners replace Viscounts on a number of European frequencies by November with all 10 aircraft in service by year's end.

Freight traffic accelerates 37% and enplanements jump 20% to 690,678. Still, a £115,000 loss is suffered.

Airline employment reaches 2,400 in 1966 and the fleet total includes 10 BAC 1-11-201s, 5 Britannia 312s, 7 Viscount 800s, 3 VC10s, and 2 DC-6As. Max Stuart becomes managing director on January 1, the same day scheduled London (LGW)-Belfast, Glasgow, and Edinburgh BAC 1-11-201 Interjet flights begin. These services represent the first scheduled domestic jet schedules marketed in the U.K.

During the year, BAC 1-11-201 service is also introduced to the Channel Islands, Rotterdam and Amsterdam, Lourdes, Malaga, Majorca, Barcelona, Lisbon, Gibraltar, Malta, Las Palmas, and the African cities of Bathurst, Freetown, and Accra. A total of 773,895 passengers are carried, including those transported on behalf of Horizon Holidays.

By 1967, the company payroll has 2,500 names and the fleet has shrunk by 2 Britannias, 2 DC-6As, and all 7 Viscounts. Orders are placed for 5 BAC 1-11-501s. Service to Brazil and Argentina is introduced.

The year's bookings are up 17% to 920,335, but loss reaches £825,370. In an effort to stem the mounting losses, Air Holdings decides to sell out.

Airline employment stands at 3,000 in 1968 and the fleet comprises 4 VC10s and 10 BAC 1-11-201s. Orders are outstanding for 8 BAC 1-11-501s.

During the first quarter, the carrier and most of its subsidiaries is sold to British & Commonwealth Shipping, Ltd. and Eagle Star Insurance, Ltd. Continuing expansion, the new partners in turn pay £17 million to the previous owners and form a new holding company, BUA Holdings, Ltd., which they divide on a 92% to 8% basis. The original Air Holdings, Ltd. retains control of only **British Air Ferries, Ltd.** and the New Zealand cargo operator **SAFE Air, Ltd.**

Passenger traffic increases 77% and freight 36% on the VC10 South American service and overall enplanements for the year climb another 17% to 921,860. A small profit is also reported.

A BAC 111-201AC with 7 crew and 26 passengers fails its initial climb away from Milan for a January 14, 1969 flight to London (LGW) and makes a forced landing; although the aircraft must be written off, there are no fatalities.

A replacement Dash-408, is leased from **Channel Airways, Ltd.** on April 3.

During the year, the British government's Edward Committee begins to assess the nation's air transport system with the possibility of allowing creation of a "second force" airline to compete with the state carriers, should they be combined into a single entity.

During the summer, Chairman Anthony Cayzer discusses merger possibilities with Adam Thompson, chairman of **Caledonian Airways, Ltd.** Five BAC 1-11-501s and a VC10 are added during the year and a Viscount 833 is sold to **Arkia Israeli Airlines, Ltd.** on December 20. Profits are again announced for the 12-month period.

Three additional BAC 1-11-501s are acquired in March 1970. On August 30, the company announces the beginning of in-flight secretarial services for businessmen traveling between London and East Africa.

While the government continues to debate creation of a "second force" airline, BUA Holdings, Ltd. decides to sell out. After unsuccessful feelers to the two state carriers, an October 20 meeting results in **Caledonian Airways, Ltd.** acquiring BUA on November 30, the new carrier being named **Caledonia-BUA, Ltd.** For the final year, passenger boardings reach the highest point ever—2,243,000.

BRITISH UNITED (CHANNEL ISLAND) AIRWAYS, LTD.: United Kingdom (1962–1968). On November 1, 1962, the passenger and cargo networks of **British United Airways, Ltd./Air Holdings** group members **Silver City Airways, Ltd.** and **Jersey Airlines, Ltd.**, are combined into British United (Channel Island) Airways, Ltd. From their bases at Blackpool and Jersey, company Douglas DC-3s, de Havilland DH 104s/114s, Handley Page Heralds, and Vickers Viscount 700/800s fly scheduled services to the Channel Islands and the Isle of Man. The company is comprised of two major divisions: the Manx division offers services from the Isle of Man to Scotland and Ireland while the Channel Islands division served its namesakes.

On August 1, 1963, BUA associate **Jersey Airlines, Ltd.** is merged into the carrier. The route networks do not change and no new aircraft are purchased during the remainder of the year or into 1964.

In 1965, a number of aircraft are transferred to another BUA associate, **Morton Air Services, Ltd.** London (LGW)—Channel Islands via Southampton air-rail services are now offered. A DC-3 with 26 aboard

crashes on Jersey Island while coming in from Paris on April 4; there are no survivors. Airline employment in 1966 stands at 770 as preparations are made to eliminate the DC-3s and Herons.

In 1967, all piston-engine equipment is removed and, with 8 Heralds and 4 Viscounts, the company by December is an all turboprop operation. Enplanements for the year are 681,991.

On November 1, 1968, **Morton Air Services, Ltd.** is merged and the company name is changed to **British United Island Airways, Ltd.**

BRITISH UNITED ISLAND AIRWAYS, LTD.: United Kingdom (1968–1970). This carrier is formed on November 1, 1968 when the **British United Airways, Ltd./Air Holding** group members **British United (Channel Islands) Airways, Ltd.** and **Morton Air Services, Ltd.** are combined. Significant changes are not made for a year until December 31, 1969, when scheduled services Southampton and London (LGW) to Alderney and Jersey to Dinard, St. Brieuc, and Quimper are dropped. At this point, the fleet of de Havilland Doves and Herons is sold. On July 20, 1970 the company name is changed to **British Island Airways, Ltd.**

BRITISH WEST INDIES AIRWAYS, LTD. (1) (BWIA): British West Indies (1940–1947). With the complete collapse of communications in May 1940 and air services between Trinidad and Barbados suspended, the islands throughout the entire Caribbean find themselves virtually cut off from each other and from the outside world.

Legendary **TACA (Transportes Aereos Centro Americanos, S.A.)** founder Lowell Yerex meets Lady Young, wife of the colonial premier of Trinidad and Tobago at a cocktail party in mid-November and is persuaded, so the story goes, to come to the island and examine the prospects of establishing a new West Indian airline.

Yerex and his chief pilot, "Snark" Wilson, fly a Lockheed L-18 Lodestar from their larger operation to Trinidad on November 27 and then continue on for an hour to Tobago. While Wilson makes a proving flight to Barbados, Yerex meets with the governor and receives a one-month provisional airline certificate.

By the week before Christmas, Yerex and Wilson have set up shop at the future site of Piarco International Airport, complete with parking spaces, a ticket office, and other amenities. The new entrant's CEO launches service on December 26; daily Port of Spain–Bridgetown, Barbados, and thrice-weekly Port of Spain–Tobago flights are undertaken.

During 1941, a total of 381 of 383 scheduled flights are completed and, with the addition of occasional charters, the company turns in an \$80,000 profit. No one notices that the initial operating certificate is not renewed.

An additional **TACA (Transportes Aereos Centro Americanos, S.A.)** L-18 and 2 L-14Hs are diverted to Trinidad in 1942 as connections are opened to Grenada, St. Vincent, St. Lucia, and St. Kitts in the Windward and Leeward Islands. The new entrant also begins flying to U.S. military bases.

Once flown on clandestine photo reconnaissance missions over Africa under cover of **British Airways, Ltd. (1)** registry and then passed to the RAF, a Lockheed Model 12A Electra Junior is purchased from England in December.

The carrier is incorporated as a public limited company on May 13, 1943, with Yerex as managing director and three-fifths owner. During the summer, Port of Spain–Grenada flights begin and one of the company's two Super Electras is burned out at Piarco Airport on August 26. Yerex resigns on October 5; his holdings are reduced to 40%, most of which is now held by **TACA (Transportes Aereos Centro Americanos, S.A.)**.

Late in 1944, 3 ex-RCAF Lockheed Hudson IIIs, reconfigured to civil L-14 standard, are delivered from Canada.

Additional new Lockheed routes are opened in 1945: to Belize on March 4, to Georgetown and Mackenzie on September 6, and to Ciudad Trujillo on October 3. By this time, the carrier has expanded its routes across the 2,000 miles of sea and islands of the Caribbean, from the

British Honduras to Guyana. The area linked by BWIA-1 is as large as one that could be formed enclosing the region between London, Moscow, Athens, and Marseilles. With the return of unprotected ocean shipping after V-E Day, company revenues decline and it becomes necessary to seek additional capitalization in order to purchase longer-range aircraft. The routes are maintained in 1946 while officials seek permission to begin services from Trinidad to Miami via Puerto Rico.

The **TACA (Transportes Aereos Centro Americanos, S.A.)** shareholding is reduced to 28% on January 11, 1947. In August, TACA's remaining interest is sold to the Trinidad government, which has come to fear that a resurgent **Pan American Airways (PAA)** might acquire a stake, and thus eventual control. In September, colonists take 25% interest and **British South American Airways Corporation (BSAA)** gains 47% shareholding. Finally, on October 1, the BSAA subsidiary **British International Airways, Ltd.** takes the remaining 28%; BSAA, now holding 75% control, combines **British West Indies Airways, Ltd. (1) (BWIA)** with BIA, under the latter name.

BRITISH WEST INDIES AIRWAYS, LTD. (2) (BWIA INTERNATIONAL AIRLINES, LTD.): Trinidad and Tobago (1948–1999). On June 24, 1948, **British International Airways, Ltd.** is reorganized; capitalized at £3 million and with J. W. Booth as chairman/managing director, the company is named **British West Indies Airways, Ltd. (2)**, but will come to be known in the industry as "BeeWee." Late in the year, 5 Vickers-Armstrong Vikings are placed in service.

Three ex-**British European Airways Corporation (BEA)** Vikings are acquired in 1949, along with a Shorts SA-6 Sealand I; the latter is not placed in service. On March 14, an application is made with the American CAB for a Miami route.

British Overseas Airways Corporation (BOAC) takes over **British South American Airways Corporation** and its **British West Indies Airways, Ltd. (1) (BWIA)** subsidiary on July 30.

To ensure that the carrier retains its West Indian character, navigational and engineering schools are established at the headquarters in Trinidad to train staff drawn from the Caribbean. In October, **British Caribbean Airways, Ltd.**, together with its Miami route, is purchased by BOAC and merged into BWIA.

At the beginning of 1950, the Lodestars are replaced with 3 Douglas C-47s, converted to DC-3 civil standard. The BCA integration is completed on March 31. Viking service is inaugurated from Port of Spain to Nassau, Miami, Haiti, Martinique, Puerto Rico, and Guadeloupe.

These routes are maintained in 1951. During this period, the BWIA-2 operation is losing \$3 million and the new managing director, John Rahr, is assigned the task of stemming the flow of red ink.

The international services of **Bahamas Airways, Ltd.** to Nassau, Miami, West Palm Beach, and Havana are taken over in 1952 at **British Overseas Airways Corporation (BOAC)** direction. Vickers Viscount 702s are ordered in 1953 and two former **Bahamas Airways, Ltd.** Three more Douglas transports join the fleet in 1954. All of the Lockheed Lodestars and Hudsons are now retired.

The first of 3 Viscount 702s to arrive in 1955 is delivered on July 28, followed by the other 2 in summer and fall. A branch station is opened in Puerto Rico in September.

On December 2, the carrier becomes the first in the Caribbean to start turboprop operations when its Viscounts inaugurate twice-weekly Port of Spain–Barbados–San Juan service.

Viscounts replace Vikings on the twice-weekly Port of Spain–Caracas–Kingston route on December 15; under contract to **British Overseas Airways Corporation (BOAC)**, the company now extends the Kingston service to Montego Bay and Nassau and, on December 16, Nassau to Miami service begins. Meanwhile, following the British Guiana government's acquisition, British Guinea Airways, Ltd. management is also assumed.

On January 1, 1956, in cooperation with **British Overseas Airways Corporation (BOAC)**, Viscount 702 service is started to New York via Miami; simultaneously, Viscount 702 flights commence

from Bermuda to Port of Spain. Four Viscount 772s are ordered during the first quarter, while a Viscount is chartered for use pending the delivery of the owned units.

The Vikings are withdrawn from passenger service in June. They now replace the Lockheed L-1049D Constellations that BOAC has leased from **Seaboard & Western Airlines** to operate all-cargo services from Bermuda to New York.

On October 24, money-losing **British Colonial Airways, Ltd.** is purchased; the new subsidiary is renamed **British Honduras Airways, Ltd.**, and its fleet of 2 Cessna 180s continues service over routes to 15 colonial destinations.

Taking 51% interest and providing a Piper PA-23 Apache, the carrier assists in the formation of **Leeward Island Air Transport Services, Ltd. (LIAT)** late in the year; the remaining shares are held by the island's colonists.

In December, the 4 new Viscount 772s are received.

Concerned in 1957–1959 that the winds of Caribbean independence blowing through negotiations between the British West Indies Federation and the U.K., **British Overseas Airways Corporation (BOAC)** begins to take over all of the company's international services and most of its profitable interisland routes. BWIA-2's reputation for service suffers; some say its initials stand for "Better Walk If Able."

Upon the independence of the colonial British West Indies, BWIA-2 is but a shadow of its former self, possessing no international routes of its own and a fleet of just 2 Viscounts, 1 DC-3, and 2 de Havilland DH 114 Herons.

The carrier applies for Miami and New York certification in its own right and places an order for a large turboprop. In December 1959, BWIA-2 receives authority to fly from London to Jamaica and from London to Barbados, both via New York.

Employing a wet-leased **British Overseas Airways Corporation (BOAC)** Bristol Britannia 312, BWIA inaugurates transatlantic London–Barbados and Trinidad via Miami and New York, service on April 29, 1960, flying the same aircraft eastward for the first time on May 1. The route is operated in pool with BOAC. The Port of Spain to New York route, also flown with Britannias in pool, becomes daily on December 11.

Britannia services are launched to Miami on January 22, 1961. In June, the Britannias are replaced on the New York and London runs by a Boeing 707-436 chartered from BOAC. To keep the airline from collapse, the government of Trinidad and Tobago on November 1 purchases 90% of the carrier's stock for TT\$2.5 million, with **British Overseas Airways Corporation (BOAC)** retaining 10% shareholding and providing 4 Viscount 772s.

A Viscount 736 is leased in 1962 from Norway's **Fred Olsen's Flysel-skap, A.S.** In February, a delegation is sent by the Trinidad and Tobago government throughout the region seeking to sign up additional Caribbean interests; although shareholding, board seats, and immunity from subsidizing the airline's losses are offered, no additional participants are ever found. Indeed, regional differences will keep the carrier from receipt of the financial backing from the very area its routes support.

Local businessmen buy out **British Honduras Airways, Ltd.** in 1963. In association with local interests, a new subsidiary, **Air Jamaica, Ltd. (1)** or **Jamaica Air Services, Ltd.**, is formed in May. Three B-727-78s are ordered in November.

The first B-727-78, painted in green and white and christened a "Sun-jet," is delivered in December 1964 and placed in service on the Miami route in January 1965. The two other Boeings are also received and, by May, are placed on the New York and Miami routes. In August, a de Havilland DH 114 Heron 2 enters service with **Jamaica Air Services, Ltd.**

Boeing 720Bs are introduced early in 1966 and, on May 1, a BWIA-2 B-727-78, in dual markings, begins service with **Air Jamaica, Ltd. (1)** to New York via Miami. In the fall, **British Overseas Airways Corporation (BOAC)** sells its remaining interest to the Trinidad government. During the year, computer reservations are introduced at Sunjet House.

With the U.K. flag carrier out of the picture, North Atlantic services, previously flown in pool with it, ends in 1967. Hawker Siddeley HS

748s and Convair CV-440s are purchased and introduced, but income and morale suffers. In September, the government of Trinidad and Tobago announces that it has accepted, in principle, a proposal for the reorganization, financing, and expansion of the company as presented to the government by the New York investment banking firm of Allen & Co. The American concern is retained under a management contract.

Convinced that government officials have taken bribes to purchase U.S. rather than British jetliners, pilots walk off the job early in 1968. When the flyers refuse to return to work, all are fired and replaced. In July, 2 Viscount 772s are sold to **LAV (Linea Aeropostal Venezolana, C.A.)**.

A Boeing 707-338C is leased from **Qantas Airways (Pty.), Ltd.** on December 14. It arrives painted in bright gold and white; christened a "Sunjet," the Stratoliner immediately begins flying to New York.

The Australian-owned B-707-338C resumes New York service in January 1969.

On February 1, the Viscounts and DC-3 begin flying a "00" shuttle service between the nation's principal islands; the route becomes known as the Tobago Air Bridge.

A B-727-78 captain thwarts the attempt by passenger J. S. Pinckney to seize the controls during the plane's approach to Miami (MIA) on February 11; Pinckney is turned over to local police when the jetliner lands.

On February 21, new financing is arranged and additional minority shareholding is taken by Allen and Co. In March-April, 2 purchased B-707-138Bs replace the chartered **Qantas Airways (Pty.), Ltd.** jetliner.

A Canadian license is obtained on May 2 and B-707-138B flights direct to Toronto from Antigua and Barbados commence the next day.

In August, a bilateral air agreement is negotiated between Trinidad and Ottawa. Enplanements for the year are 279,625.

Airline employment in 1970 totals 1,452. Propeller aircraft operations cease and, with an all-jet fleet, the airline becomes the dominant carrier in the eastern Caribbean, from North American gateways.

En route from Kingston to Miami on May 1, a B-720B with 60 passengers and 8 crew is diverted to Cuba by a hijacker. He drops his plans to fly to Algeria after talking with Cuban officials and British embassy personnel, who convince him that such a flight is beyond the aircraft's range.

Toward the end of the year, services to Miami are restructured to concentrate on fast, direct services to and from the south Florida gateway.

Passenger boardings jump 11.7% to 314,539 and freight traffic rises 11.1%.

The withdrawn Viscounts, CV-440s, and HS 748s are all sold in 1971 as the fleet is stabilized at 3 B-727-78s and 2 B-707-138Bs. Early in the year, the 3 former aircraft are traded to **Braniff International Airways** for its 4 B-707-227s.

During the year, BWIA-2 triples the number of charters into the U.K. from 8 to 24 and continues to improve its scheduled flights to and from Miami.

Passenger and freight traffic decline, but the unduplicated route system grows to some 7,000 miles.

The first 2 B-707-227s are placed in service in 1972 and additional direct services are instituted to the New York and Toronto gateways from the Eastern Caribbean. The first Canadian reservations complex is opened at Toronto and a total of 262,080 passengers are carried on the year.

The third ex-Braniff B-707-227 joins the fleet in 1973. **Leeward Island Air Services, Ltd.** is sold to the British carrier **Court Line, Ltd.**, which had previously been turned down in its efforts to take over BWIA-2. The company also receives route rights to fly into London (LHR) as a scheduled airline.

Passenger bookings rise 0.4% to 273,600 and freight traffic is down by 13%.

The workforce in 1974 totals 1,526. A B-707-351C is purchased from the Minneapolis/St. Paul-based carrier **Northwest Airlines** on February 15 as a B-727-78 replacement.

On April 5, thrice-weekly Trinidad and Barbados to London (LHR) via Miami and New York scheduled flights are inaugurated. The service

is considered a company milestone as all previous frequencies to the U.K. have been of a periodic charter nature and have only been allowed to use Gatwick Airport.

Frequencies from North America to the eastern Caribbean are increased to meet the demand created by a suspension of **British Airways, Ltd. (2)** flights and a second **Northwest Airlines** B-707-351C arrives on July 12.

A Boeing 747 is leased in October for use during the winter tourist season and plans are made to remove the ex-Braniff Stratoliners during the following spring.

Cargo increases 36% while passenger boardings leap upward 21% to 368,784.

The Trinidad government resumes complete corporate control in 1975 by purchasing back the minority interest formerly held by Allen & Co. and others in the U.S. Two more B-707-351Cs arrive from Minneapolis between January 16 and May 21. The fleet now also includes 1 B-707-227B, 1 B-727-227, and 2 B-707-138Bs. Passenger boardings swell 9.9% to 369,000, and freight is up 6.3%.

Landing rights recently won for Jamaica and Guyana are now exercised.

Airline employment totals 7,288 in 1976. The 2 B-707-138Bs and 1 B-707-227 are retired and replaced by 1B-707-351C and 1 leased DC-9-51. Orders are placed for 4 DC-9-51s with which to replace the B-707-138Bs.

A new carrier, Arawak Airlines, Ltd., is established to take over the Tobago Air Bridge; it is unsuccessful and within months the shuttle between Tobago and Trinidad is returned to BWIA-2. Meanwhile, McDonnell Douglas schedules 5 DC-9-51s for delivery rather than the 4 originally ordered. When this becomes known in Trinidad, the local press and political opposition charge the government with corruption.

Passenger bookings grow 4.3% to 385,000 and cargo moves ahead by 20%.

Having been found to be too large for its needs, the airline, continuing to suffer from charges of corruption, determines in early 1977 not to take the DC-9-51s. A last minute negotiation with McDonnell Douglas for a substitution prior to delivery of the purchased models will allow 3 Dash-43CFs to join the fleet, beginning with the first on June 28, instead of the 4 Dash-51s originally ordered. Enplanements this year soar to 567,876.

The employee population at Chairman John E. N. Scoon's airline in 1978 stands at 1,573. Two additional DC-9-34CFs are delivered following a five-month pilots strike.

In August, the airline expands its ticket offices with the opening of Ibis House, bringing to three (with Sunjet House and Kent House) the number of facilities available to the traveling public in Port of Spain.

At the end of the year, orders are placed for 2 (later 4) Lockheed L-1011-500s.

The pilots strike brings a passenger traffic decline as boardings fall 27.9% to 444,532; freight, surprisingly, is up by 20.7%.

The merger operations begun the previous year are completed in early spring 1979. A new management team is put into place, headed by the London-educated managing director/CEO, Ian Bertrand.

The first L-1011-500 is delivered in December. Simultaneously, the cutover to the IBIS I Realtime reservations system occurs, which provides more effective control over passenger reservations.

Enplanements this year rebound to 625,000.

The workforce in 1980 totals 2,200. **Trinidad and Tobago Air Services, Ltd.**, plus its routes and fleet of 6 HS 748s, is acquired and with BWIA is merged on January 1 into a new company called Trinidad and Tobago Airways Corporation; BWIA International Airlines, Ltd. is retained as the trade and marketing name.

The newly delivered TriStar 1, one of the first wide-bodies delivered to the third world, is christened *Flamingo* and enters service on the London route on January 29. It is followed by a second L-1011-500, the *Sunjet Antigua*, in August. It briefly flies a route to Frankfurt.

In October, U.S. reservations are centralized at Miami with a more advanced computer system.

Passenger boardings advance 29.7% to 889,331, but cargo is down 13.9%.

The third L-1011-500 joins the fleet in late spring 1981. An upgraded version of IBIS I comes on-line in November and provides improved access to the reservations system from Antigua, Barbados, Puerto Rico, Miami, New York, and Toronto.

Freight soars 58.5% to 7.1 million FTKs and passenger bookings for the year pass the one million-mark for the first time, rising to 1,350,000.

Service to Paramaribo ends in February 1982, but is started to Curaçao. The fourth long-range TriStar is delivered during the summer as a B-707-351C is sold.

Passenger boardings grow 6% to 1,392,484, but freight is down 27.4% to 5.35 million FTKs. An undisclosed financial loss is suffered.

The workforce in 1983 is now 2,150. The last 2 B-707-227Bs and 2 B-707-351Cs are sold. After 14 months of installation work, the new IBIS II system, purchased from KLM (Royal Dutch Airlines, N.V.), is turned on on September 18. Shortly thereafter, London frequencies are increased from two to three each week.

Passenger bookings dip 3.2% to 1,347,603, but the off again/on again cargo situation is on again, up 43.4% to 7.67 million FTKs.

The employee population is reduced by 150 in 1984. BEMIS (BWIA Engineering & Maintenance Information System) is progressively implemented; the new system controls all aircraft inventory and purchasing.

"BWIA Sunjet in Bond" is opened in December, allowing passengers to acquire a wide range of duty free items. The carrier's inaugural first-class lounge is simultaneously opened at Trinidad.

Bookings decline 9.5% to 1,240,888. However, 27.82 million FTKs are operated. On revenues of \$105.6 million, losses are significant: \$32 million (operating) and \$10.5 million (net).

Airline employment is increased 6% in 1985 to 2,085. A McDonnell Douglas MD-82 joins the fleet, which now includes 6 BAe (HS) 748s, 4 DC-9-34CFs, 1 DC-9-34C, and 4 L-1011-500s. Orders are placed for 2 MD-83s.

Service is initiated in October to Frankfurt, Zurich, Boston, Martinique, and St. Martin. The flights to Martinique are made with BAe (HS) 748s. The Information Services Department moves into a new data center on December 7.

Passenger boardings accelerate 4.4% to 1,297,695 and cargo rises 26.9% to 36.4 million FTKs. Still, the financial picture worsens. Although revenues advance 7% to \$169 million, expenses soar to \$203 million; the operating loss is \$34.2 million and the net loss is \$13 million.

The payroll is increased 2% in 1986 to 2,127 and phaseout of the 6 BAe (HS) 748s begins as the 2 MD-83s arrive to replace them.

Flights to Zurich and Frankfurt are suspended at the end of March. Service is inaugurated in June from Jamaica and San Juan to Haiti and from Trinidad to Baltimore (BWI). At year's end, the fleet includes 4 L-1011-500s, 4 DC-9-34CFs, 2 MD-83s, and 2 BAe (HS) 748s.

Passenger bookings climb to 1,303,000 and cargo rises 19.3% to 12.56 million FTKs. Revenues ascend to \$159.4 million, but costs cause losses of \$25.7 million (operating) and \$28.1 million (net).

A third MD-83 arrives 1987 and a Boeing 747-123 is wet leased from Cargolux Airlines International, S.A. in April. Automated Ticketing and Farequote are implemented in IBIS II and the first tickets are produced in July.

The BEMIS System assists in the planning and execution of the first DC-9 "D Check" accomplished at Trinidad's Piarco International Airport. Service to Frankfurt is resumed in October. Meanwhile, BWIA's duty free shop is allowed to sell duty free items to all arriving passengers.

The company reports no traffic or financial figures for the year and only partial information for several thereafter. It does, however, note that it has carried more than nine million passengers since November 1940.

In 1988, traffic statistics are available for only the first six months. These show customer boardings down 4.7% over the same period a year earlier to 603,070, but freight up 20.5% to 6.45 million FTKs.

A fourth MD-83 arrives in July and is placed into service on the New York and Baltimore routes. A no-smoking ban is put into place on all short-haul segments.

Airline employment stands at 2,040 in 1989 and the fleet rationalization continues. Weekly roundtrips begin on January 16 between Trinidad and Stockholm, Sweden. The fifth MD-83 arrives in March.

In August, *Silver Ibis* business-class service is introduced on the L-1011-500s and the first-class product is renamed *Golden Ibis*. Economy-class service is known as *Scarlet Ibis*. As a first step toward eventual privatization, First Boston Corporation is engaged as the airline's financial advisor.

Enplanements for the year are 1,322,000, with 13.46 million FTKs. Revenues total \$187 million.

The chartered fleet, by January 1990, contains just 2 aircraft types, 4 L-1011-500s and 7 MD-83s. Two more MD-83s arrive by April.

The last DC-9-34CF service to Tobago is operated on July 18. A coup attempt on July 27 forces the airline to curtail, but not cease, operations for a number of months thereafter.

In November, the company's fiftieth anniversary is celebrated with an interfaith service in Wildflower Park. It is also remembered in the addition of two more MD-83s and the addition of a second weekly TriStar flight from St. Lucia to London. Service to Cologne begins in December.

The fleet in 1991 includes 1 out of service DC-9-34CF, 9 leased MD-83s, and 4 leased L-1011-500s. In January, the carrier increases its service from New York to both Trinidad and Tobago to five weekly flights.

A daily L-1011-500 route is opened in February from New York to Barbados, continuing on to Trinidad. An Integrated Check-In System (ICIS) is introduced in June.

In October, six-times-per-week MD-83 flights commence from New York to Tobago, along with five-times-per-week to Port-au-Prince. Weekly frequencies are also started on October 29 from Stockholm to Barbados, while daily runs are made from Miami to St. Kitts. The New York to Barbados route is increased from four times a week on November 1 to daily service. At the same time, five-times-a-week MD-83 frequencies commence from New York to Georgetown via Port of Spain. L-1011-500 roundtrips are launched to Munich.

Ian G. Bernard is named chairman/managing director in February 1992. A joint marketing agreement is signed with LIAT (Leeward Islands Air Transport, Ltd.) in March providing for through baggage service, joint fares, and joint scheduling at the Antigua and Barbados hubs. Simultaneously, twice-weekly flights commence from Miami to St. Martin; the return flight stops at Antigua.

Daily flights commence on May 1 from New York (JFK) to Barbados and Grenada. The same day, the New York to Port of Spain service is upgraded from MD-83 to L-1011.

In July, the carrier begins twice-weekly flights from Antigua-London (LHR). A cooperative agreement is signed with the American major Delta Air Lines. Late in the year, the carrier is commended by the UN for its ban on the transportation of exotic and endangered birds.

Although revenues reach \$200 million—over 4% of the nation's GDP—a total of \$9.1 million is lost on the year. A drought on the release of annual traffic figures resumes.

Airline employment stands at 2,500 in 1993. In an effort to compete with Caribbean encroachment by American Airlines and United Airlines, BWIA in January inaugurates daily nonstop service from Miami to St. Martin. It also creates a tour subsidiary, Funventure Tours, to market holiday packages to travelers visiting the eight markets served. Additionally, a heavy new marketing campaign is begun in Caribbean-oriented news outlets.

While en route from Miami to Barbados on October 30, an MD-83 with 7 crew and 76 passengers suffers the explosion of a water heater in its forward galley due to a worn-out relay and a faulty security valve; two flight attendants are injured.

Tobago-Zurich L-1011-500 roundtrips commence on October 31.

A \$28.6-million loss is suffered on the year.

The workforce is boosted by 19.3% in 1994 to 2,945 and, in January, the joint marketing agreement with **LIAT (Leeward Islands Air Transport, Ltd.)** takes effect and a Cost Reduction Improved Service and Profitability (CRISP) program is implemented. In the spring the company enters into a partnership for a new flight kitchen with Airline Caterers and ALPHA Airports Group, plc.

In July, a memorandum of understanding is signed with The Acker Group and Loeb Partners for the recapitalization and privatization of the airline. German interpreters are introduced on European flights.

World Tracer, an integrated baggage tracing and management system, is implemented in September, while the BEMIS II system is turned on on September 30.

As part of the CRISP program, 2 MD-83s are returned to their lessors and the workforce is reduced by December to 2,221.

For the year plus one month, the operating deficit is \$9.4 million and the net loss reaches \$31.5 million.

Employment is cut in 1995 to 1,950. Royal Hibiscus premier-class service is introduced on January 8. At the end of January, domestic service between Trinidad and Tobago over the Tobago Air Bridge is withdrawn.

The carrier is incorporated on February 15 and, on February 22, the company is privatized. A 51% shareholding is purchased by a group of Caribbean and American investors led by former **Pan American World Airways (1)** and current **Atlantic Coast Airlines** Chairman C. Edward Acker and President/COO Edward J. Wegle. The government stake is reduced to 33.5%, with employees holding the last 15.5%.

With the government assuming responsibility for previous \$83-million debt, an entirely new BWIA corporation is incorporated.

A number of staff changes are made. After 30 years of service, Vice President-Marketing and Sales Nelson Tom Yew departs to become general manager of **Air Caribbean, Ltd.**

Plans are announced for the purchase of Boeing 757s/767s, which will never be delivered. Orders will, instead, be placed for 2 each Airbus A340-300s and A321-131s, plus 5 Embraer EMB-145s. Meanwhile, a Lockheed L-1011-500 TriStar is leased from **TAP-Air Portugal, S.A.**

In early April, BWIA begins operations into Vigie Airport in St. Lucia. During the last week of April, a strategic alliance is entered into with **American Airlines**. The company begins transferring its New York operations into the AA terminal at New York (JFK) and its reservations personnel are familiarized with the SABRE computerized reservations system.

Traffic figures are reported through June and show enplanements of 421,000.

Specialized Airline Services takes over all BWIA-related freight and cargo handling in Trinidad under a July 1 agreement with the airline. The same day, a self-service Sunjet Duty Free Shop is opened at Trinidad's Piarco International Airport.

The arrangement with **American Airlines** begins on July, with the conversion to the SABRE system. In addition to shared reservations, marketing, ground handling, and airport amenities, the two begin to share codes on each other's flights. Specifically, the BWIA code appears on AA flights from New York and Miami to Orlando, Washington, D.C., and Boston. The AA designator is shown on BWIA flights from Antigua via Miami to New York and from Barbados to Antigua, St. Lucia, Port of Spain, and St. Martin and between Port of Spain and Grenada and Georgetown.

A baby girl is delivered on board a New York flight on September 12.

In November, plans are made to establish a BWIA Express, Ltd. subsidiary and a 29% stake is purchased in **LIAT (Leeward Islands Air Transport, Ltd.)**, making BWIA the largest investor in the newly privatized regional. For the winter season, the company begins flying to São Paulo and Buenos Aires. Direct services are inaugurated from Tobago to New York and to Miami. A ceremony marking 55 years of service is held at Trinidad on November 27.

For the whole year, the operating loss is reduced to \$3.6 million.

The all-leased fleet in 1996 includes 7 MD-83s and 5 L-1011-500 TriStars, including one chartered from **TAP-Air Portugal, S.A.** Early in the year, Chairman Acker steps down. President Wegle continues to direct operations and starts a rigid cost control program.

Also in January, weekly flights begin from Trinidad to São Paulo via Barbados. In February, the Port of Spain headquarters begins handling all BWIA reservations for the entire North American region. The Trinidad to São Paulo service via Barbados is withdrawn in April.

In June, a cooperative marketing agreement is entered into with **Bahamasair, Ltd.** covering services to Antigua, Barbados, and Port of Spain. The carrier now begins replacing its TriStars and MD-83s with a fleet from Airbus Industrie. The first of 2 A321-131s is delivered on July 3 and, 10 days later, enters service from Port of Spain to New York via Barbados. The second A321-131 arrives in August.

In October, German tourists become prime marketing targets as charters are brought in from Frankfurt and Zurich; flights to Munich are, however, suspended. At the same time, Giles Filiatreault becomes chairman/CEO and a new air cargo division is started. A321-131 service to Georgetown begins in November. Enplanements total 896,407.

The employee population inches up 0.2% in 1997 to 2,470. At the end of May, a memorandum of understanding is signed with **Air Jamaica, Ltd.**; the document pledges mutual cooperation in areas which will reduce costs for both airlines, including joint purchases, engineering and support services, customer services, and some flight operations. A working group from both carriers is assembled to look into the possibilities of code-sharing and aircraft cross utilization.

During the summer, both A321-131s are returned to their lessors. They will be repainted and sent to the Turkish charter operator **Air Alfa, A.O.**

On December 3, **Leeward Islands Air Transport Services, Ltd. (LIAT)** takes over the carrier's twice-daily Tobago Air Bridge roundtrip service. The move is contested in court by the designated air bridge carrier, **Air Caribbean, Ltd.**

Passenger boardings for the year fall to 892,005. Revenues total \$210 million, but operating expenses reach \$223 million; consequently, there is an \$18-million loss.

Flights continue in 1998. During the first quarter, Conrad Aleong is asked to perform a business audit of the airline. The audit reveals a dreadful picture: no cash, short-term borrowing of \$11.6 million, a long-term \$16.8 million debt, and capital of just \$950,000. In the face of these findings, Chairman Lawrence Duprey, a 2.6% shareholder, declares the company bankrupt.

Aleong's report lead the airline's board of directors to invite him to succeed President/CEO Giles Filiatreault at least through that time when the company will be strong enough to make an initial public offering of its stock.

Based on his report, Aleong and the board of directors unveil a business plan in April. As part of the new approach, employees are committed to individually purchasing up to 100 shares of common stock each, or almost 90,000 shares. Unfortunately, other shareholders reject the chairman's plea to put up proportionate funding to raise the critically needed \$10 million. "Plan B" is developed whereby BWIA will take a \$50-million rights issue to the NASDAQ Exchange on November 1.

On June 18, Justice Fyrd Hosein grants the **Air Caribbean, Ltd.** request and orders LIAT to halt flights on behalf of BWIA over the Tobago Air Bridge. BWIA and LIAT, in turn, appeal Hosein's decision to the court of appeals. On July 1, that high court overturns Judge Hosein's finding and permits BWIA and LIAT to return to the air bridge effective August 31.

On August 20, **Air Caribbean, Ltd.** Executive Chairman Leslie "Lucky" Samaroo and General Manager Nelson Tom Yew meet in a "peace conference" at the Red House at Port of Spain with BWIA Chairman Duprey and CEO Aleong. The session, brokered by Works and Transport Minister Senator Sadiq Baksh, is designed to create an atmosphere under which previous operational differences between the two carriers might be resolved. During the meeting, Baksh expresses a hope

that BWIA will fly more services over the air bridge and that Air Caribbean might be designated a national air carrier, which would allow it to expand its regional and international activities.

Plans to issue its stock in November are dashed during the month when the New York stock exchange becomes uncertain. The issuance is pushed back to June 1999. Depressed fuel prices help the airline gain a trickle of hard currency with which to pay creditors; the carrier has been as much as 90–120 days behind on its invoices this year.

When **Air Canada, Ltd.** pilots go on strike on September 3, effectively shutting down that carrier, BWIA makes a number of MD-83 flights to Toronto to help transport nationals and visitors stranded in Trinidad and Canada.

During the month, the carrier finds itself with a major drug-smuggling problem with flights originating from Cheddi Jagan International Airport at Timehri, Guyana.

While en route from Guyana to New York via Trinidad on September 8, an L-1011-500 is delayed on the ground at Trinidad when 7.5 kilos of cocaine in 7 packets is found under 7 seats aboard the airliner. *The Trinidad Express* reports on September 9 that on August 20 and September 4, Canadian customs and the RCMP have found 10 kilos of cocaine hidden under the seats of BWIA MD-83s arriving at Toronto from Trinidad. No suspects are immediately identified as investigations continue, but suspicion falls upon the airline's maintenance staff. On September 11, company officials meet with representatives from the governments of Trinidad and Guyana seeking ways to smash the smuggling operation.

Realizing that BWIA must make a profit in 1998, in September President Aleong backs off from the mutual cooperation pact signed with **Air Jamaica, Ltd.** the previous year. Its value to BWIA is limited as no significant yield has been realized from the plan that is aimed at growth through volume and profits in the new century. On a more practical note, the company does engage in discussions with Air Jamaica concerning a possible cargo joint venture, as well as shared ground-handling and check-in services at Miami (MIA).

Also in September, a memorandum of understanding is signed with **Continental Airlines**. Planning begins for code-sharing with the U.S. major before the end of the year.

In other moves designed to increase income, an MD-83 replaces an L-1011-500 on the route between Guyana and New York and a new engine overhaul program is started in cooperation with Rolls Royce.

At Toronto on October 3, RCMP officers find 11 kilos of cocaine on a rotating carousel among luggage off-loaded from a BWIA service that had, again, originated in Guyana. Joining with local authorities, airport security police, and agents from the U.S. Drug Enforcement Administration, the RCMP announces a plan on October 6 to search all arriving BWIA aircraft.

Just after takeoff from Trinidad for New York on November 17, Flight 426, an MD-83 with 6 crew and 88 passengers, suffers problems with an engine that must be shut down. An emergency is declared and the aircraft makes an uneventful landing back at its point of origin.

An order is placed with Bombardier Aerospace in late November for a pair of de Havilland Canada DHC-8Q-300s. Upon their arrival early in the new year, the turboprops will connect will connect passengers arriving at Port of Spain and Barbados on long-haul flights with the regional destinations of Tobago, Grenada, St. Lucia, St. Vincent, Georgetown, and Caracas.

While deplaning from a flight that has just arrived at Guyana from New York on December 21, 56-year-old Chandra Bheir slips on the third step of the air stair and falls down its remaining length to the ground. The lady is pronounced dead shortly thereafter.

It is reported that, on Christmas Eve, the body of an Antiguan man wanted on criminal charges has been found in the wheel well of an MD-83 at Trinidad. Security issues are raised as to the causes of this incident, the second unusual death involving a company aircraft within a week.

It is announced at year's end that the company will initiate twice-weekly MD-83 roundtrips on July 1 from Port of Spain to Houston; the flights will be code-shared with **Continental Airlines**.

A total of 879,591 passengers are carried on the year, along with 36.5-million pounds of freight. Due largely to a dramatic decline in fuel prices, the company is able to increase revenues from \$210 million to \$225 million, and reduces its operating expenses from \$223 million to \$214 million. The previous year's \$18-million loss is turned into a \$9.1-million profit, the first in the airline's 58-year history.

The fleet at the beginning of 1999 includes 5 MD-83s and 4 L-1011-500s. The 2 A321-231s chartered from ILFC are subleased to **Air Alfa, A.O.** CEO Aleong makes a serious effort to get out of the Airbus lease, even agreeing to pay a small fee if necessary.

During the mid-February sick-out by pilots at **American Airlines**, BWIA is able to assign a pair of MD-83s to fly the lucrative Miami route, bringing passengers in for the Carnival celebrations.

After numerous security breaches over the last year, including the as-yet unsolved cocaine smuggling episodes, BWIA indicates on February 22 that it will replace 12 Guyanese security officers at Cheddi Jagan International Airport with men from the local office of a Trinidadian security firm.

Having been delivered in January–February, the new DHC-8Q-300s, for which BWIA has paid \$12.5 million apiece, enter service with the new subsidiary **BeeWee Express, Ltd.** on March 1. The turboprops fly thrice daily to Grenada, twice daily to Barbados, St. Lucia, Barbados and Tobago, and daily to Caracas.

Following the Guyanese carrier's acceptance of a local interest's offer to take equity control of **Guyana Airways Corporation**, BWIA, on March 1, withdraws its privatization bid. The Trinidad carrier moves to formalize a code-sharing pact with **Continental Airlines**. The pact should be in operation in time for the Miss Universe Contest, which BWIA will host at Trinidad on May 26.

CEO Aleong holds a press conference on March 22 to announce the positive fiscal results of the previous year, highlighted by the carrier's first-ever profit. To celebrate, a \$1-million bonus will be paid to employees in appreciation for their dedication and in recognition of their role in helping the carrier to achieve its success. Aleong also notes that new uniforms and a new livery will be unveiled by the new year.

At the beginning of April, a \$360-million order is placed for 7 Next Generation B-737-800s, to be delivered by the end of the year 2000, while an option is simultaneously taken for receipt of another 3 in 2001. The first plane will arrive in December.

Following an announcement by Jamaican Finance Minister Omar Davies that taxes on diesel, gasoline, and fuels would be increased by 30%, demonstrations on the island national flare up on April 19 and rage into full-scale civil unrest. BWIA, joined by **British Airways, Ltd. (2)**, **Air Canada, Ltd.**, and **American Airlines** are forced to cancel services to Jamaica on April 20.

Calm is restored on Jamaica on April 21, following three-days of deadly protest, arson attacks, and clashes between demonstrators and police that have left seven people dead. BWIA resumes its services the next day.

As a consequence of the St. Lucia government ending its annual \$1.7-million subsidy to **American Airlines** on April 30, BWIA, as the result of negotiations completed on April 12, steps in and begins thrice-weekly direct flights to the U.S. from St. Lucia.

Leased from ILFC for a year, a Next Generation B-737-7Q8 arrives at Piarco International Airport at Trinidad on May 12; it enters service on routes to Miami within a few days.

The Miss Universe Contest goes off without a hitch on May 26 and brings the airline valuable good will.

Smoking is banned from all BWIA flights beginning on July 1, the same day twice-weekly MD-83 return flights, jointly operated with **Continental Airlines**, are started from Port of Spain to Houston.

Former BWIA vice president and **Air Caribbean, Ltd.** general manager, Nelson Tom Yew, returns to the company on July 14 as general manager for strategic alliances and government relations.

Four-times-a-week B-737 roundtrips are launched on October 31 from Trinidad to Washington, D.C. (IAD). More important in the long term, however, is the corporate renaming of the carrier to **BWIA West Indies Airways, Ltd.**, which occurs on December 2. In a special ceremony at Port-of-Spain, the company's new "steel pan" livery is unveiled on an L-1011-500 TriStar.

Passenger boardings surge 33.3% to 1,173,000 while 54.72 million FTKs are operated. Operating revenues advance 6.2% to \$239 million and allow a \$3.7 million (TT23 million) net gain, the second in a row after 57 consecutive years of losses.

BRITISH WESTPOINT AIRLINES, LTD.: United Kingdom (1960–1966). Frank and Jack Mann's **F & J Mann Airways, Ltd.** is registered on December 2, 1960 with capitalization of £100. The need for additional partners and aircraft results in a successful search, including 2 Douglas DC-3s purchased in March and July 1961. Operating as Westpoint (later British Westpoint) Airlines, Ltd., the company begins nonscheduled Douglas service from Exeter Airport in late March. During the summer, the DC-3s fly inclusive tours from London (LGW) to France and Austria. Additional tour points are served through the winter.

A third DC-3 is acquired in March 1962 and joins the others in offering a variety of ad hoc charter and inclusive-tour flights during the summer. The first scheduled service is started Newquay–London via Exeter on April 1, 1963. The primary tour destinations this year are in France and Holland. A bid to takeover **Mayflower Air Services, Ltd.** during the fall is unsuccessful.

DC-3 replacement service (for **Air France**) is flown London (LHR)–Lille, beginning in the spring of 1964. **Mayflower Air Services, Ltd.** is successfully purchased in May, along with its 2 de Havilland DH 89A Dragon Rapides and a scheduled route network to the Scilly Isles. Another DH-89A is purchased from **British European Airways Corporation**. Two DC-3s and a Mayflower Dragon Rapide are sold during the year.

A number of ad hoc passenger and cargo charter flights are flown in 1965 along with the previously operated scheduled routes. Early in 1966, financial difficulties force the carrier into bankruptcy.

BRITISH WORLD AIRLINES, LTD.: Viscount House, Southend Airport, Southend-on-Sea, Essex, England, SS2 6YL, United Kingdom; Phone 44 (1702) 354 435; Fax 44 (1702) 331 914; <http://www.british-world.co.uk>; Code VF; Year Founded 1993. On April 6, 1993, the regional **British Air Ferries, Ltd.** is renamed and adopts a new corporate image, including logo and aircraft livery. Still owned by Mostjet, Ltd., the carrier not only wet-leases out aircraft to other airlines, but operates scheduled and charter services. Chairman Robert Sturman and Managing Director Neil Hansford's fleet now includes 5 British Aerospace (BAC) 1-11s in storage, as well as 3 leased 1-11-518FGs, 1 each chartered 1-11-520N and 1-11-531FS, and 2 leased BAe 146-300s. Still the world's largest Viscount operator, BWA flies 2 802s, 4 806s, and 1 each 807 and 808C.

Scheduled services include flights from the company base at London (STN) to Dusseldorf and Bucharest, the latter point becoming a destination on June 28. Viscount freight services are flown from Dublin and Birmingham to Brussels on behalf of **Federal Express**. One each Viscount 813 and 836 are joined in this service in June by an 810.

Three others are also employed to operate contract 76-passenger flights from Aberdeen to the Shell U.K. Exploration and Production (Shell Expro) base at Sumburgh, in the Shetland Islands. Charter flights are also conducted, although the previously significant number of troop flights to Germany are being progressively reduced as British troops stationed there are progressively withdrawn.

An interline agreement is signed with **TAROM (Transporturile Aeriene Romane, S.A.)** in July and thrice-weekly scheduled flights are inaugurated from London (STN) to Bucharest using the BAC 1-11-520N and 1-11-531FS. A mail and express delivery contract is

won from the British Post Office while plans are made to undertake year-round charter services between London (STN) and Manchester with the BAe 146-300s.

Enplanements for the year total 354,125 and a total of 2.8 million FTKs are operated. A net \$957,000 profit is earned atop an operating income of \$230,000.

Airline employment is increased by 12.8% in 1994 to 203.

Recognizing that it has few customers in the Southend area, the company, on January 25, relocates its headquarters from Southend Airport to Longford, near Heathrow.

While en route from Edinburgh to Coventry on February 25, Flight 4272, a Vickers Viscount 813 freighter with two crew, loses power to its No.2 and No. 3 engines and is ordered to divert to Birmingham. Although the No. 2 engine is restarted while on the new heading, the No. 4 now quits and, just 5 min. short of landing, the aircraft descends into trees and breaks up (one dead).

In the spring, British World drops its scheduled services to concentrate on contract and charter operations.

Late in the year, against heavy competition, the carrier begins preparations to regain the \$85-million Shell Expro contract that is about to come due for rebidding. Not only is it won, but 5 Viscounts are painted bright red and are assigned to the postal service operation.

The 5 chartered BAC-111s are purchased from ILFC in November.

Passenger boardings slide by 1% to 485,919 but revenues advance 8.3% to \$21.5 million. With expenses at \$20.4 million, a \$1.02-million operating profit is generated.

The workforce is cut to 180 during 1995. The company now moves into the business of assisting new start-up carriers, offering a complete Air Operators' Certificate (AOC) infrastructure. The first customer to contract for this service will be **Debonair Airways, Ltd.** When that new airline is started on October 1, BWA holds its AOC and provides all of the named management, business and accounting plus engineering services as Debonair is built.

On November 1, the carrier is awarded a 5-year, £55-million charter contract by Shell Exploration and Production UK (Shell Expro) for the transport of oil industry workers from Aberdeen to Sumburgh, Shetland Islands. To handle the new award the carrier orders 2 Avions de Transport Aerien ATR72-212s with which to replace the Viscounts currently operating the route.

Revenues total \$57.35 million and costs are low enough to allow a \$1.55-million net profit.

Airline employment stands at 213 in 1996, as the company celebrates its fiftieth anniversary. The first ATR72-21—the first new aircraft in the company's history—is delivered in March. It immediately begins to ferry oil workers between Aberdeen and the Shetland Islands community of Sumburgh on behalf of Shell Expro.

While landing after its second training flight of the night of March 24, a Vickers Viscount 808's crew fails to extend the landing gear and the aircraft makes a belly landing on the Belfast Airport runway. After coming to a stop, the crew secures and evacuates the aircraft, which is badly damaged.

The last passenger Viscount flight in the U.K. is made from London on April 18 when a Dash-802 filled with VIPs, including the aircraft's designer Sir George Edwards and former **British European Airways Corporation** Managing Director Sir Peter Masfield, makes a 45-minute flight between Heathrow and Stansted Airports. The withdrawn turboprops begin conversion into Freightmaster cargo planes.

With BWA contract support and employing its AOC, **Debonair Airways, Ltd.** inaugurates services on May 1 from its London (CTN) base. Meanwhile, the second ATR72-212 arrives in May.

A total of 475,000 passengers are transported and 1.64 million FTKs are operated. A \$2.3-million operating profit is reported.

The workforce is increased by 4.2% in 1997 to 222. Early in the year, orders are placed with BAe Asset Management, trading turboprops for a pair of ATPs.

In May, the company, together with the aircraft broker Independent Aviation Group, undertakes to assist **Classic Airways, Ltd.**, a start-up based at Stansted Airport that is planning to fly Lockheed L-1011s on international charters.

With **Debonair Airways, Ltd.** having achieved a significant measure of viability, it is awarded its own AOC in September as the BWA contract is renegotiated into a maintenance support package.

Also in September, the company acquires its first BAe ATP; after crew training and route proving, it enters service at the beginning of October.

Classic Airways, Ltd., established in May by British World and the aircraft broker Independent Aviation Group, is ready to commence the provision of wet-leased, standby aircraft for ad hoc charters or replacement services. David Chubalashvili is chairman and he begins revenue services with a single Lockheed L-1011-100 TriStar, which is operated under the British World AOC.

In November, the carrier completes takeover of Sydney-based **Australian Jet Charter (Pty.), Ltd.**, a fixed base operator.

Customer bookings this year inch up 0.5% to 413,000. Operating revenue, however, declines 8.9% to \$50.8 million. Fortunately, expenses also plunge 15.5% to \$45.2 million. Consequently, the operating profit doubles to \$5.6 million and there is a \$2-million net profit.

Flights continue in 1998. On May 9, **Classic Airways, Ltd.** charters an L-101-50 TriStar from Investors Asset Holdings; the wide-body had previously been operated by **Caledonian Airways, Ltd.**

During the summer, arrangements are completed for the purchase of two of the last three BAe ATPs to be manufactured. The first is delivered in late September, with the second set to arrive at Southend Airport in mid-November.

On September 20, BWA suspends permission for **Classic Airways, Ltd.** operations on its AOC. The move forces Classic to ground its two TriStars, one of which is the subject of a maintenance dispute with Marshall Aerospace.

Following the September 25 fatal crash of a **Pan Air Lines Aereas, S.A.** BAe 146-100QC during a service from Malaga to Mellila on the North African coast, BWA is contracted to take over the route. As soon as the first of the new ATPs becomes available, it inaugurates four daily roundtrips.

The arrival of the second ATP on November 16 allows BWA to start an all-cargo service on behalf of **DHL Worldwide Express**. Nightly, the turboprop transports 6.5 tons of cargo from Palma to Barcelona and Madrid and back to Palma.

Passenger boardings total 211,000, while 112,000 FTKs are operated.

By the beginning of 1999, airline employment has been increased by 74.3% to 387.

Hurricane force winds in Shetland on February 3-4 again cause problems for the local air carrier, **British Regional Airlines, Ltd.** Unable to get its own aircraft to Sumburgh Airport on the first of the two storm days, BRA contracts with British World for the use of its ATR72-212, maintained at the Scottish point in connection with an oil industry contract. As the four-person crew taxis the turboprop on the morning of February 4, a gust of wind turns it to one side on its wing. The aircraft rights itself and is taken into shelter. The flight and all others for the day are cancelled.

Max Kingsley-Jones reports in the April 14 issue of *Flight International* that BWA will begin a fleet renewal program in midyear and will standardize on a fleet by 2002 with just 2 aircraft types—BAe ATPs and Boeing 737-300s. Having already sold 1 of its 4 remaining BAC 1-11-500s, Managing Director Ian Vanderbeek reports that his concern now also flies 2 ATR72-212s and 4 ATPs.

One of the former in "British Airways Express" colors is dry-leased to **CityFlyer Express, Ltd.** at the beginning of the month, while two ATPs have simultaneously been wet-leased for two-and-a-half years to **Jersey European Airways, Ltd.** The ATPs allow JEA to increase capacity and frequencies on its Southampton to Guernsey route.

Toward the end of April, a third ATP is readied for departure on a six-month charter in New Zealand.

During late summer, a British Aerospace ATP is leased to **CityJet, Ltd.** for use on an express service between Belfast and East Midlands Airport.

A BAC 1-11-518FG is chartered to **Air Nostrum, S.A.** in October and, on behalf of Shell, BWA introduces daily ATP roundtrips in November between Aberdeen and the Shetland Islands.

Passenger boardings plunge 37% to 143,000 while freight soars 45.5% to 179,000 FTKs.

The workforce stands at 233 at the start of 2000, a decline of 39.8% over the past 12 months.

The carrier's first leased B-737-340 is delivered in January; it will be employed for two months in crew training and route proving from London's Gatwick Airport, to which the carrier has returned after a two-year absence.

Later in the month, a five-year contract is signed with the Integrated Aviation Consortium's (representing BP Amoco, DNO Heather, Kerr McGee, and Shell) lead operator, **Bristow Helicopters, Ltd.**, to operate three dedicated ATPs daily beginning in April, flying oil workers between Aberdeen and Scatsta. Also, in order to increase its ad-hoc charter presence in Germany, the company simultaneously stations six ATPs (later reduced to one) at Hanover. ATPs also undertake replacement services for **Crossair, Ltd.**, **Brymon Airways, Ltd.**, and **Jersey European Airways, Ltd.**

After training nine crews and completing a successful final route proving flight to Dublin on March 29, the premier B-737-340 enters service on April 2, operating replacement flights from London (LGW) to Hamburg, Hanover, and Dresden for **Hapag-Lloyd Fluggesellschaft, mbH**. A second B-737-353, previously operated by **Debonair Airways, Ltd.**, is delivered at the end of April. In May, it begins a six-month wet-lease to **easyJet, Ltd.**

Previously flown by **Braathens, A.S.**, a B-737-305 leased on April 5 enters service at the beginning of July, flying Mediterranean tours on behalf of Independent Tour Operations Association member companies. Introduction of the Boeings allows removal of the last two BAC 1-11-500s.

During the first week of August, it is announced that Managing Director Ian Vanderbeek has resigned; he is succeeded by former Askern France, S.A. Chairman/Managing Director Christopher Bakhurst.

All three of the carrier's BAC 1-11-500s are put up for sale in mid-October.

BRITT AIRWAYS: United States (1975-1991). When **Allegheny Airlines**, with which William C. "Bill" Britt's **Vercos Air Service** has been affiliated as an "Allegheny Commuter" partner for five years, changes its marketing plans and cuts back commuter operations in early 1975, Britt augments his contract by establishing his own independent passenger service, Britt Airlines, in February. Two more Beech 99s are placed into service from the Terre Haute, Indiana, base, joining a fleet which includes a Volpar Beech 18 and another Beech 99.

Enplanements for the year reach 117,779.

The four-plane carrier is divided into two operations in 1976; Britt Airlines continues to service the Allegheny Commuter contract while the new Britt Airways allows the former **Vercos Air Service** to grow and serve the key regions surrounding its hub, flying independently over routes not covered by the Allegheny contract. The new title allows the company to avoid legal complications, particularly as feeder flights are now also being flown on behalf of **Ozark Air Lines**.

Destinations visited include Decatur, Champaign, Fort Wayne, Danville, Lafayette, Indianapolis, and Chicago. In July, flights begin from Galesburg and Sterling to Chicago and to Indianapolis from Danville and Bloomington.

Passenger boardings accelerate 17% to 141,902 and a total of 1.8-million pounds of freight are hauled. Three more Beech 99s are acquired in 1977.

As is the case with many regional carriers, the signing of the Airline Deregulation Act in October 1978 is a catalyst for Britt expansion. As

the major carriers abandon smaller, unprofitable segments in favor of long-haul routes, Britt, equipped with a 12 Beech 99s and the first of 4 ordered Swearingen Metro IIs, is able to come to the rescue and make the short hops profitable.

Immediately on the heels of the Federal legislation comes a strike by flight attendants of **Ozark Air Lines** in 1979 that allows the company to launch services to communities such as Peoria, Springfield, and Evansville.

In 1980, the fleet comprises 12 Beech 99s and 8 Fairchild Swearingen Metro IIs. Service is provided to five Midwestern states from hubs at Indianapolis, St. Louis, and Chicago. The first of three requested Fairchild Hiller FH-227s arrives in October.

On April 20, 1981, Britt severs all remaining relations with the "Allegheny Commuter" network and merges both of his divisions under the Britt Airways name. The founder and his staff then watch as their passenger, freight, and mail services blossom to additional markets.

New flights begin to Burlington and Quincy as 2 Fairchild Hiller FH-227s, formerly operated by **Air New England**, join the fleet, which now also includes 12 Beech 99s and 8 Metroliners.

Enplanements for the year total 319,677 and 52,530 FTKs are operated.

The carrier, with 900 employees, remains in family hands in 1982 and, in April, two former **Allegheny Airlines** Fairchild F-27As are acquired as capacity is increased on routes within Illinois. Customer bookings skyrocket 150.5% to 798,538 and in terms of passenger boardings, Britt now ranks as the second biggest (behind Empire Airlines) large regional.

Britt does not remain in second place among large regionals for long. In 1983, the Terre Haute, Indiana-based company's enplanements accelerate 18.9% to 949,237, sufficient to give it the top spot in terms of passenger bookings. Part of the load is handled by two newly delivered FH-227s.

The fleet in 1984 includes 12 Beech 99s, 7 FH-227s, 7 Fairchild F-27A/Js, and 16 Metroliners.

Just after takeoff from Terre Haute on a January 30 training flight, a Swearingen Metro, with two crew and one passenger goes into a steep descent and crashes 6,300 ft. from the end of the runway; there are no survivors.

During early spring, two BAC 1-11-416s are acquired; the first is delivered via Keflavik and New York on June 23. Beginning in October, one of the British-made jetliners begins scheduled flights over the high-volume route from Chicago to Champaign, Evansville, and Cedar Rapids. The other, under an arrangement with Sterling Transportation, is employed to fly gamblers from the Windy City to Atlantic City.

The one million-mark in annual passenger bookings is passed for the first time as enplanements climb 26.9% to 1,204,775.

In 1985, the 950-employee company owns 2 BAC 1-11-416s, 7 Fokker Fairchild FH-227s, 7 Fokker F.27A/Js, 16 Fairchild-Swearingen Metroliners, and 12 Beech 99s.

Thrice-daily BAC 1-11-400 roundtrips to Walt Disney World are inaugurated during the first quarter from Chicago to Orlando. The jetliners join the company's other units in visiting 27 cities in 8 states—Illinois, Indiana, Ohio, Iowa, Kentucky, Michigan, Missouri, and Tennessee.

On August 9, the company joins the "Piedmont Commuter" system in an extensive joint marketing program and begins to feed the major's Dayton hub on November 1. Majority control of Britt is purchased by **PEOPLExpress** for \$36.5 million on December 23; however, the regional will continue operations as a subsidiary.

Customer bookings for the year ascend 3.9% to 1,252,000, including 46,000 flown out of Dayton on behalf of Piedmont during the year's last month. Profits of \$1.6 million (operating) and \$428,600 (net) are reported on revenues of \$90 million.

Twenty new employees join the airline in 1986 and the fleet includes 12 Beech 99s, 19 Metroliners, 14 F-27A/Js and FH-227s, and 2 BAC 1-11-416s. All outstanding stock in the commuter is purchased by **PEOPLExpress** on February 26.

The Hoosier carrier suffers a major passenger traffic downturn as enplanements fall 21.1% to 985,000. With **PEOPLExpress** piling debts

upon the carrier as it attempts to save itself, the large regional finds itself with negative fiscal figures. Revenues decline 9.6% to \$35 million and expenses are so high that the operating profit is given as only \$3,663. Net profit is just \$5,882.

In February 1987, the doomed **PEOPLExpress** is purchased by Texas Air Corporation (TAC), parent of **Continental Airlines** and **Eastern Air Lines**, and together with TAC's **New York Air** subsidiary, is integrated. Britt, which is acquired along with the national, becomes both a "Continental Express" partner operating to Houston (HOU) and an "Eastern Express" carrier flying into Chicago.

At this point, company founder Bill Britt retires and is succeeded as president by former **Precision Airlines** executive Norman McInnis. The new man oversees 700 employees and a fleet of 33 aircraft. In December, Britt begins flights between six cities feeding Continental's new hub at Cleveland Hopkins Airport. Enplanements drop to 703,913.

Seeking smaller aircraft with which to operate its Continental's Houston Proud Express shuttle service, **Continental Airlines**, on January 15, 1988, drops its contract for trans-Houston service with Conroe, Texas-based **Emerald Airways** and enters a new arrangement with Britt. Under its terms, company Fairchild inaugurates Hobby Shuttle flights between the airport of that name and Houston (IAH).

During the year, the onetime independent's "Eastern Express" slots at Chicago (ORD) are sold to **American Airlines**. When President McInnis becomes vice president/general manager of Britt Central in May, he is succeeded as president of the airline by former **Bar Harbor Airlines** official John Prendergast. Enplanements total 759,142.

The 530-employee large regional replaces its Chicago (ORD) hub in 1989 with one based at Cleveland Hopkins Airport. From that location and despite the grounding of its parent by a strike in March, Britt flies as "Continental Express," with 2 new Avions de Transport Regional ATR42-300s and 15 Embraer EMB-120 Brasilias. Meanwhile, the carrier's slots at Chicago (ORD) are sold on February 19 and flights from **Continental Airline's** Houston hub continue with 3 ATR42-300s and 10 Brasilias; the new European turboprops are especially welcome on the half-hourly Hobby Shuttle. Passenger boardings fall 9.8% to 691,387.

On May 15, 1990, Britt is combined with **Rocky Mountain Airways** to form **Jet Link**. The following month, nonstop roundtrip service is introduced from Jackson, Mississippi, to Houston. Still, the two linked regionals fly their separate ways for one more year. On November 8, the crew of an ATR42-300 puts their aircraft down at Hawkins Field at Jackson, Mississippi, 7 miles from the intended destination of Thompson Field. Britt's two-hub operation sees company enplanements skyrocket 92.2% to 1,328,072.

Britt and Rocky Mountain are absorbed by **Continental Airlines** in 1991, officially becoming **Continental Express**. The former Britt Airways is now CE's eastern division.

BROCKWAY AIR: United States (1983–1989). On October 1, 1983, Pennsylvania-based Brockway Corporation, owners of the "Allegheny Commuter" operator **Crown Airways**, purchases **Clinton Aero** and its network of routes in central and upstate New York, Vermont, and New York City. The new acquisition is renamed Brockway Air and commences services on May 1, 1984 over its previous system.

During the summer, **Air North**, based in Burlington, Vermont, since its 1972 founding, is also purchased and its integration is completed by September 1. John Sullivan is named chairman/president of Brockway's 303-employee airline division (with **Clinton Aero** founder Anthony von Elbe as vice president-general manager), which does not amalgamate **Crown Airways**, but does adopt a new logo and livery. Sullivan initially directs the Brockway Air (Vt.) Part 121 operation from Burlington and the Brockway Air (N.Y.) Part 125 component from Plattsburgh.

From hubs at Burlington, Boston, Albany, and Binghamton, the company dispatches its 8 Fokker F.27s, 6 Beech 1900s, and 2 Shorts 360s to 21 destinations in the northeast. These include Elmira, Massena, New York (LGA), Ogdensburg, Plattsburgh, Poughkeepsie, Saranac

Lake, Syracuse, Washington, D.C. (National), Waterford, White Plains, and Wilkes-Barre. Late in the year, Ithaca, Nantucket, Newark, Philadelphia, Rochester, and Scranton join the route network.

Enplanements for the large regional, including pre-merger figures, total 276,322.

In 1985, a 7th and 8th Beech 1900 are acquired; orders are outstanding for 3 more of the former plus 5 SAAB SF340As. A year of code-sharing discussions begin with **Piedmont Airlines** in the spring.

Passenger boardings jump 19.1% to 329,058.

Airline employment in 1986 stands at 256 and the fleet includes 8 Beech 1900s and 5 F.27s. The company's **Clinton Aero** and **Air North** divisions join the "Piedmont Commuter" network on March 15, becoming responsible for the major's New England feed; the **Crown Airways** unit remains part of the "Allegheny Commuter" network. Late in the year, **Piedmont Airlines** begins construction of a new concourse for its affiliate, 10 gates, and a ramp at the onetime **Empire Airlines** hub at Syracuse.

Enplanements climb 30.4% to 429,173.

The first of 5 SF340As begin to arrive in May 1987 to replace the 5 Fokker Friendships. Ten Beech 1900s are also operated. In midyear, Toledo, Ohio-based Owens-Illinois begins a successful effort to purchase Brockway's corporate parent.

Passenger boardings jump 25% to 534,368. Revenues rise 19.9% to \$50.51 million.

The fleet in 1988 includes 6 SAAB 340As, 3 Shorts 330s, 4 Twin Otters, and 11 Beech 1900s. Orders remain outstanding for 4 more SAABs. Owens-Illinois wins control of the Brockway Corporation early in the year.

Customer bookings rise 4.9% to 906,030 and revenues climb 11.8% to \$56.5 million.

On April 7, 1989, the Owens-Illinois subsidiary is purchased by Dallas (DFW)-based **Metro Airlines** for \$14.2 million. The carrier is converted into a code-sharing partner of **Trans World Airlines (TWA)** and inaugurates "TWExpress" flights on July 1 to Washington, D.C., Philadelphia, New York, Boston, and other northeastern destinations.

BROOKER-WHEATON AVIATION, LTD.: Canada (1965–1995). Contract passenger, cargo services, and charters are undertaken by this little-known carrier from Edmonton, Alberta. The fleet in the 1980s comprises a mix of Learjets and small Cessnas and the workforce averages 25.

Operations continue and in 1993 William Welsh is president.

Flights cease in 1995.

BROOKS AIRWAYS, LTD.: Canada (1932–1934). Brooks Airways, Ltd. is established at Prince Albert in early 1932 and on June 7, inaugurates contract airmail service from its base to Lac la Ronge. On March 16, 1933, every-two-weeks passenger and mail flights are launched from Big River to Ile a la Crosse.

Fourteen months later, on May 1, 1934, scheduled service is initiated from Prince Albert to Ile a la Crosse via Beauval. Operations cease late in the year.

BROOKS FUEL: P.O. Box 61143, Fairbanks, Alaska, 99706, United States; Phone (907) 479-8330; Fax (907) 479-0578; <http://www2.polarnet.com/users/brksfuel>; <http://members.tripod.com/~WAVEBOT/brooks.html>; Year Founded 1986. Roger Brooks forms this Alaskan freight operation at Fairbanks in late 1986 to specialize in the transport of fuel oil to remote locations, mines, and farm communities. A workforce of seven is recruited and flights commence and continue with a fleet that includes 1 ex-USAF C-45G (Beech 18S) and 3 Douglas DC-4s.

On February 21, 1997, a homepage is opened on the World Wide Web.

Services continue into the new millennium. During this time, the fleet is enhanced by the addition of 6 additional DC-4s and 2 DC-7s and airline employment grows to 13.

BROTHERS AIR SERVICES COMPANY, LTD. (BASCO): South Yemen (1968–1971). Following the British withdrawal from South Yemen and the collapse of **Aden Airways, Ltd.** in 1968, young men from a well-to-do local Yemeni family, the Baharoon brothers, step into the void and create their own airline. With 3 Douglas DC-3s and 1 DC-6B, the private carrier attempts, often with great difficulties, to operate domestic and international services to some of the points visited by its predecessor.

The concern is not a lasting success and, on March 11, 1971, the government steps in and nationalizes it. **Alyemda** begins services next day.

BROWER AIRWAYS: United States (1968–1980). Thomas J. Whitman forms Brower Airways as a division of the FBO at Fort Madison, Iowa, in 1968. Employing a Beech 55 Baron, he inaugurates scheduled daily passenger and cargo roundtrips to Chicago via Keokuk and Macomb.

Operations continue apace during the remainder of the decade and into the 1970s. During the latter period, corporate headquarters are transferred to Jacksonville, Illinois. The route network is altered into two major segments: Jacksonville to Chicago via Macomb and Jacksonville to St. Louis via Springfield.

Services cease on February 20, 1980.

BROWER FLIGHT SERVICE. See BROWER AIRWAYS

THE BROWER'S AIR SERVICE CORPORATION: United States (1929–1931). BASC is established at Wichita, Kansas, in the summer of 1929 to offer scheduled passenger service to Omaha, Nebraska. Equipped with a fleet of Curtiss Robins and Stinson SB-1 Detroiters, the company inaugurates flights on September 29 via Salina, Concordia, Belleville, and Lincoln.

The operation is purchased by Western Air Service Corporation on July 15, 1930 and continues, largely without change (except for the introduction of a Sioux City to Tulsa route), until December 1931. After transporting 2,653 passengers, the company, renamed **Western Air Service** the previous year, ceases operations.

BRYANSK AIR ENTERPRISE: Russia (1995–1999). The Bryansk directorate of **Aeroflot Soviet Airlines** is reformed into a joint stock company in 1993 under this new name. Under the direction of CEO Vasili S. Yushenko, regional and domestic passenger and cargo services, both scheduled and charter, are offered with a fleet that includes 8 Yakovlev Yak-40s, 5 Antonov An-24s, 36 An-2 biplanes, and 15 Mil Mi-2 helicopters.

BAE is reformed in the summer of 1999 and renamed in honor of a now-defunct U.K.–Russian joint enterprise set up to sell Rolls Royce-powered Tupolev Tu-204s.

BRYMON AIRWAYS, LTD. (1): United Kingdom (1969–1993). Formed in Marcannoh 1969 by New Zealander William R. "Bill" Bryce and Ferrari racing team leader Chris Amon, Brymon Aviation, Ltd. begins Cessna 337 Super Skymaster flights from Plymouth, moving on to the airfield at Fair Oaks in November, taking over Fair Oaks Flying Service and its Cessna fleet.

In September 1970, the company begins nonscheduled passenger and cargo operations with a new Britten-Norman BN-2.

Scheduled third-level Islander flights are inaugurated from Plymouth to Jersey and the Scilly Isles in May 1972 and a month later, on June 15, the company's air transport division, operating from RAF St. Mawgan (later Newquay Civil Airport) is renamed Brymon Airways, Ltd. In October, a second BN-2 is purchased and, in November, all flights are concentrated on Plymouth Airport.

In 1973 service is extended to the Scilly Isles from Exeter and, beginning on November 2, four-times-weekly Plymouth–Morlaix.

The French service becomes twice daily in early 1974. In April, the company receives a new de Havilland Canada DHC-6-200, becoming

British launch customer for the Twin Otter. The new aircraft initiates frequencies from Exeter, Plymouth, and Newquay to St. Mary's, Scilly Isles, and London (LGW).

During the summer, a third Islander is leased from **Douglas Arnold Aviation, Ltd.** In November, twice-daily Plymouth–Cardiff flights begin.

The Airwork FBO operation at Plymouth Airport is taken over on March 24, 1975. Meanwhile, a four-times-per-week route is opened from Plymouth to Cherbourg, along with service to Alderney. In May, **Intra Airways, Ltd.** provides another Islander on a seven-month lease. During the summer, Plymouth to Cork flights begin.

A Handley Page Herald is acquired in 1976, at which point the fleet includes the larger aircraft plus 2 DHC-6-300 Twin Otters and 1 Cessna 337. Airline employment is 56. Passenger enplanements reach 53,400 in 1977.

In 1978, new routes are extended from Plymouth–London (LGW) and Birmingham and from Newquay to Aberdeen and Manchester. Passenger boardings increase 11% to 61,500.

Two DHC-7s are ordered in 1979, a third DHC-6 is delivered, and a route is opened from Plymouth–London (LHR). The workforce is increased by 25.4% to 89 and passenger boardings soar 58% to 92,000.

Operations continue apace in 1980 and in the fall of 1981 2 DHC-7s enter service on a long-term charter operation on behalf of Chevron Oil, from Aberdeen to Unst, Britain's most northerly airport.

A third DHC-7 is acquired in 1982 as the carrier joins the British Caledonian Commuter network and begins flying under that banner from London (LHR) to Cork and the Channel Islands. Airline employment grows to 110 and the fleet now comprises 3 DHC-7s, 1 Handley Page Herald, and 5 DHC-6 Twin Otters.

In 1983, losses total £2.8 million (\$5.6 million). To save Brymon Airways from collapse, de Havilland-Canada takes a 75% controlling interest and places it under the operational control of former **British Airways, Ltd. (2)** executive Charles Stuart. Although DHC-7 service to the Scilly Isles had been planned, the refusal of the local authorities to improve the airport at St. Mary's forces Brymon to halt services altogether.

Productivity increases in 1984, by which time the nonunion employee population reaches 170.

The British government announces in 1985 the upcoming creation of a STOL port in the Royal Docks area to be called London City Airport; Brymon will be the lead entrant.

On the year, 175,000 scheduled and 50,000 charter passengers are carried, but a \$160,000 loss is suffered.

On January 1, 1986, six senior Brymon Airways executives with assistance from BA, led by CEO Stuart and collectively known as the Plimsoll Line, purchases the carrier from de Havilland-Canada; **British Airways, Ltd. (2)** takes a 14% minority interest. A DHC-7 is the first aircraft to overfly groundbreaking ceremonies for London City Airport, located in a Docklands site.

The fleet now includes 3 DHC-7s, 2 DHC-6s, and 1 Shorts 360, and the employee population totals 214. Destinations served now include Birmingham, London (LGW), Newquay, Aberdeen, the Channel Islands, and Bristol. Branch offices are established at Aberdeen and Newquay.

Although traffic figures are not released, a \$1.4-million profit is generated.

In 1987, three more DHC-7s join the fleet and an office is opened at London City Airport. The first ever Dash 7 landing is made at the latter facility on October 14. Paris joins the route network and the weekly 465-mile nonstop DHC-7 roundtrip service is the longest route in the U.K. A \$616,000 profit is reported for the year.

Enplanements in 1988 total 273,371, a 46% increase over the previous year, but a \$1.37-million loss is posted. In early 1989, the company joins with **British Airways, Ltd. (2)** and **Maersk Air, A.S.** to acquire tripartite ownership of **Birmingham Executive Airways, Ltd.** They rename their new subsidiary **Birmingham European Airways, Ltd.** The Aberdeen office is now closed as 2 DHC-7-110s are withdrawn to make way for 2 DHC-8-102s.

Enplanements total 300,230 and a \$233,000 net profit is created.

Airline employment in 1990 stands at 370 and the fleet now includes 1 DHC-6-310, 6 DHC-7-110s, and 2 DHC-8-102s are now delivered. CEO Stuart retires on April 1 and is succeeded by Malcolm Naylor. The company now flies to eight destinations from London City Airport.

New DHC-8-102 daily services are initiated in November from Bristol to Paris, Glasgow, and Edinburgh.

Passenger boardings climb 15.5% to 212,969. Revenues rise 26.3% to \$43.4 million, but expenses grow quickly. As a result, the operating profit slides to \$8.55 million and there is a net loss of \$2.3 million.

The payroll is sliced 13.6% in 1991 and, in January, the company receives the 1990 "Market Development" award from *Air Transport World* magazine. The Twin Otter is withdrawn and replaced by 2 DHC-8-301s, the first of which arrives in March. Flights begin from Bristol to Jersey, Newcastle, and Aberdeen.

During the year, the company invests £40 million to build up Bristol Airport as its European hub. Enplanements swell to 301,461.

The partnership between **British Midland Airways, Ltd.** and **Sabena (Belgian World Airlines, S.A.)** ends in January 1992 when the former challenges the latter's income by introducing jetliner flights from London (LHR) to Brussels. **Sabena Belgian World Airlines, S.A.** switches its affiliation to Brymon, which introduces four-times-per-day turboprop flights into London City Airport. The second DHC-8-301 is received in April.

On May 1, the company significantly increases its services to Ireland. The new de Havilland is employed to launch regular services to Belfast and Cork. At the same time, the number of frequencies on company routes from Bristol to Glasgow and Edinburgh are increased.

Later in May, it is announced that the carrier will be completely merged in November by its owner, the TPL Group, with another subsidiary, **Birmingham European Airways, Ltd.**, to form **Brymon European Airways, Ltd.** Managing Director Naylor resigns in July and for the remaining four months, Birmingham European Managing Director Mike Brenton also assumes the mantle of acting managing director. The union is completed on October 25.

BRYMON AIRWAYS, LTD. (2): Meridian, Worle Parkway, Worle, Weston Super Mare, England, PL6 8BW, United Kingdom; Phone 44 (01934) 523 600; Fax 44 (01934) 523 650; <http://www.brymon.com>; Code BA; Year Founded 1993. In July 1993, the merger between **Brymon Airways, Ltd. (1)** and **Birmingham European Airways, Ltd.** unravels, with the partners electing not to continue the **Brymon European Airways, Ltd.** operation. Unable to exist separately, both are acquired by larger airlines. The British Office of Fair Trading gives its approval for the breakup and **British Airways, Ltd. (2)** official Ray Sayer is seconded down to handle the disbandment.

Brymon Aviation becomes a wholly owned **British Airways, Ltd. (2)** subsidiary (along with Plymouth City Airport) in August and is allowed to function under its previous identity. Regional flights in support of the parent are undertaken with a fleet that includes 2 each de Havilland Canada DHC-8-102s and DHC-8-301s and 6 DHC-7-110s, including one leased from **British Midland Airways, Ltd.** All are painted in "British Airways Express" colors and markings. Enplanements total 325,527.

Two DHC-7-110s are withdrawn by the new managing director, Mike Jones, in 1994, but their removal has no impact on traffic. Through November, passenger boardings accelerate 28.9% to 419,494.

Airline employment stands at 180 in 1995. Again, through November, enplanements are up, by 10.2% to 462,420.

During the first four months of 1996, Brymon accepts delivery of 5 used DHC-8-301s from Bombardier Aircraft Trading Unit. These are employed to replace 3 DHC-7-110s and 2 DHC-8-102s.

Summer only roundtrips are inaugurated from Sheffield to Jersey in May.

In September, the carrier wins a five-year, \$16-million contract from BP Exploration to transport oil workers from Aberdeen to the Shetland Islands. The subsidiary Brymon Offshore Air Charter, Ltd. is established

and 2 of the former "British Airways Express"-dedicated DHC-7-110s are based at Aberdeen for the service. Both are repainted in a new "Flying Puffins Over the Ocean" color scheme.

Customer bookings for the whole year rise 6.4% to 524,568.

Airline employment increases 30.3% in 1997 to 430. Destinations visited include Aberdeen, Bristol, Cork, Edinburgh, Glasgow, Guernsey, Jersey, London (LGW), Newcastle, Newquay, Paris (CDG), Plymouth, and Southampton.

When **British Airways, Ltd. (2)** unveils its new "World Image" marketing and livery makeover on June 10, Brymon is ready to participate. The tail of one of the regional's DHC-8-301s is repainted as "Colour Down the Side," a depiction by artist Terry Frost of the light and landscape of Cornwall.

On October 28, **British Airways, Ltd. (2)** announces major changes to its services linking Aberdeen with Birmingham and Manchester. From July next, the de Havilland Canada DHC-8-301s of Brymon will replace the **British Regional Airlines, Ltd.** British Aerospace (BAe) ATPs currently employed. The new Brymon services are expected to create 100 new jobs within the BA organization, with 75 of them in Aberdeen.

Orders are placed at year's end for eight additional DHC-8Q-300s. Customer bookings accelerate 23% to 567,000.

The first of the new Canadian-built turboprops enters service in April 1998. It is reported in the *Aberdeen Press and Journal* on April 6 that the carrier has also increased its staff at Aberdeen airport. Added are 18 pilots, 19 cabin crew, and 19 engineering and ground staff under the direction of Capt. Syd Fleet.

Frequencies from Aberdeen to Manchester in fact change hands on May 4 and are increased from four to six each day. Extra weekend services are also added. Those daily services from Aberdeen to Birmingham are started on June 8 and jump from two to three.

Passenger boardings accelerate 34.3% to 764,000.

By the start of 1999, airline employment has been cut back 47.7% to 225.

Just after landing at Plymouth on February 28 following a service from Bristol, the left landing gear of a DHC-8Q-300 with four crew and nine passengers, collapses; although no injuries are reported, the turboprop cannot continue on to Cork. A replacement aircraft is brought in, to which the passengers are transferred.

Daily nonstop DHC-8Q-300 roundtrips commence on March 28 between Aberdeen and Oslo.

Weekend charters are inaugurated in early May from Jersey to the new Sheffield City Airport. **British Airways, Ltd. (2)**, on May 28, places a \$420-million order with Embraer for 21 ERJ-145 regional jets, which will be delivered to its subsidiary, Brymon.

Later in the year, a dedicated lounge is opened at Bristol International, a new flight information system goes on-line at Plymouth City Airport, and extra services are introduced to Southampton, Belfast, Newcastle, and Exeter. The airline completes a move to Weston Super Mare and opens a new training center at its head office where the recruitment of 160 new staff is completed.

Customer bookings accelerate 20.7% to 922,000. Revenues shoot up 29.9% to \$147,563,000 while expenses climb only 26.3% to \$133,920,000. There are healthy profits: \$13,643,000 (operating) and \$16,293,000 (net).

The workforce stands at 700 at the start of 2000, a 27.3% increase over the past 12 months.

Two of 7 new Embraer ERJ-145s ordered the previous year are received early in March. The first is placed into "British Airways Express" service from Birmingham to Glasgow, Edinburgh, and Munich on March 28. Express Jet flights from Glasgow and Edinburgh to Frankfurt and Brussels follow on April 5.

When Managing Director Gareth Kirkwood becomes the managing director of British Airways World Cargo on May 1, he is succeeded as Brymon's managing director by Louise Fowler. The next day, Brymon moves the Northern Ireland end of the Newcastle-originating route from Belfast International to Belfast City Airport.

Employing the newly received, fifth ERJ-145, daily "British Airways Express" roundtrips are begun on October 11 from Bristol to Munich.

BRYMON EUROPEAN AIRWAYS, LTD.: United Kingdom (1992-1993). In May 1992, **Brymon Airways, Ltd. (1)** and **Birmingham European Airways, Ltd.** are merged by their owner, the TPL Group, to create this stronger regional carrier. Shareholding is divided between **British Airways, Ltd. (2)** and **Maersk Air, A.S.** (40% each), and Jim Harris Holdings, Ltd. (20%); Harris is chairman with Michael Brenton as managing director. Airline employment is 320 and the enlarged fleet now comprises 4 BAe (BAC) 1-11-400s, 3 BAe Jetstream 31s, 4 de Havilland Canada DHC-7s, 2 DHC-8-100s, and 2 DHC-8-300s. Schedules and personnel are gradually integrated.

At this point, Operations Manager Tony Auld and executive Brian Beal depart as **Maersk Air, A.S.** management places more of its own people into the airline. Unhappily, the new Danish leadership team has very little experience with U.K. operations.

Revenue flight operations officially commence on October 25, the day the union is completed. Destinations visited include Aberdeen, Amsterdam, Belfast, Birmingham, Bristol, Brussels, Copenhagen, Cork, Dublin, Edinburgh, Geneva, Glasgow, Humberside, Jersey, London (LCY/LHR), Milan, Newcastle, Newquay, Paris, Plymouth, and Stuttgart. Passenger boardings inch up 0.8% to 353,953.

Claiming the route is unprofitable, Brymon, which had pioneered the service, stops flying Dash-7s into London (LCY) in March 1993 and Brussels in April. Former Chairman/CEO Charles Stuart dies in May at age 64. The same month, **Maersk Air, A.S.**, the A.P. Moller Group, and **British Airways, Ltd. (2)** enter negotiations designed to disband Brymon European as a way of ending its heavy fiscal losses. In May, a rescue plan worth £6 million from each carrier is announced designed to bolster the TPL Group and save Brymon European's 500 jobs.

The merger between the two regionals comes apart in July. With neither able to function alone, they are taken over by larger operators in August. Brymon Aviation becomes a wholly owned subsidiary of **British Airways, Ltd. (2)** while **Birmingham European Airways, Ltd.** is purchased by the Danish carrier **Maersk Air, A.S.** and reformed into **Maersk Air U.K., Ltd.**

BSF BERLINER SPEZIALFLUG, A.G. See BERLINER SPEZIAL FLUGGESELLSCHAFT, A.G.

BSF HUBSCHRAUBERDIENSTE, GmbH. See BERLINER SPEZIAL FLUGGESELLSCHAFT, A.G.

BSL AIRLINES: 33/2 Vozdukhrolotski Prospect, Kiev, 252186, Ukraine; Phone 380 (044) 276-3194; Fax 380 (044) 276-6301; Code BSL; Year Founded 1994. BSL is set up at Kiev in 1994 to offer domestic and regional passenger and cargo charter services. Yuriy Semushiev is general director and he begins services with a fleet of 6 Ilyushin Il-76MDs and 1 Tupolev Tu-154B. In 1997, a scheduled route is inaugurated from Kiev to Krivoy Rog.

It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

BUCKEYE AIR SERVICE: United States (1967-1971). BAS is set up at Elyria, Ohio, in 1967 to provide scheduled daily roundtrip passenger and cargo services east along the shore of Lake Erie to Cleveland and west to Chicago via Detroit. Beech 18 frequencies are duly inaugurated and are maintained into 1971.

BUDDAH AIR, LTD.: Jawalakhil Lalipur, GPO Box 2167, Kathmandu, Nepal, Phone 977 (1) 52 1015; Fax 977 (1) 53 7726; http://www.nepalonline.net/buddahair; Year Founded 1999. Buddah Air is established at Kathmandu in 1999 to offer domestic charters, with emphasis on tourist flights. Managing Director Birendra Basnet begins and continues services with 3 Beech 1900Ds.

BUDYER AIR: United States (1981–1982). Budyer Air is set up at Evanston, Wyoming, in **1981** to provide scheduled passenger and cargo services to Salt Lake City via Rock Springs and Casper.

Unable to achieve viability in this recessionary year, the Piper light-plane operator goes out of business in early **1982**.

BUFFALO AIRWAYS: United States (1982–1998). Buffalo Airways is founded at Waco, Texas, in late **1982** to operate passenger and cargo charter services, primarily to Las Vegas. Start-up authority and financing are sought in **1983**, along with a suitable freighter.

Authorized to undertake international passenger and cargo flights and cargo and contract service flights, Buffalo Airways inaugurates operations from Waco in **1984** with 1 each Boeing 707-323C and B-707-351C. Contracts are flown on behalf of other operators, including **HeavyLift Cargo Airlines, Ltd.** of the U.K.

Enplanements for the first full year total 65,382. An operating loss of \$219,000 is suffered as is a net loss of \$385,000.

Although passenger boardings are down 28.2% in **1985** to 51,000, revenues are up 12.5% to \$7.4 million. Expenses, on the other hand, jump 25% and cause an operating loss of \$1.1 million. Still, a net gain of \$25,000 is achieved.

Two additional Stratoliner freighters, 1 B-707-324C and 1 B-707-341C, are chartered in **1986** as the carrier's contract with HeavyLift ends, but new ones are acquired from **Burlington Air Express** and the Spanish airline **Cargosur, S.A.** Flights for the former are undertaken from a new hub at Toledo and for the latter from Madrid.

Profits for the year total \$484,672 (operating) and \$600,235 million (net).

On April 13, **1987**, Flight 721 is on final approach to Kansas City in bad weather. The B-707-351C with three crew and a passenger and under contract to **Burlington Air Express** descends below the 100-ft. ceiling and crashes three mi. short of the runway. All aboard are killed and the aircraft is destroyed.

Having abandoned passenger charters entirely, freight traffic accelerates by 33.3% to 3.58 million FTKs. Revenues rise 10.9% to \$7.5 million and with costs held low, the operating profit swells to \$953,762 and net gain reaches \$1 million.

Airline employment is increased by 1.1% in **1988** to 91 and a B-707-399Cs is added to the fleet. The Stratoliners cannot stem a traffic and fiscal downturn.

Cargo plunges 35.9% to 173,268 FTKs. Revenues fall 42.3% to \$4.35 million, costs drop 34.3% to \$4.32 million, and the operating gain is only \$27,000. Net profit declines all the way to \$79,000.

The employee population increases 64.8% in **1989** to 150 and the fleet now includes the 5 Boeings and 4 BAC 1-11-204AFs. A passenger subsidiary christened **Classic Air** is established in the spring and begins charter services with the 4 BACs.

Freight recovers 25.8% to 57.73 million FTKs. Revenues also recover and almost double to \$8.3 million. Expenses shoot up and losses are suffered: \$669,448 (operating) and \$608,437 (net).

The previous year's losses cause company employment to drop in **1990** to 85 and the fleet to be cut to just the B-707-323C, B-707-341C, and B-707-399C. The Texas-based freight operator continues its passenger charters with the 4 BAC 1-11-204AFs and, on the year, enplanes 13,000 passengers. Having decided the effort is not paying off, the charter subsidiary **Classic Air** is closed down at year's end.

Cargo accelerates 41.3% to 64.1 million FTKs and revenues increase to \$20.94 million. Expenses climb more quickly, to \$21.55 million, and force a \$601,359 operating loss. Net loss deepens to \$945,529.

1991 is another bad year, not only from a financial viewpoint, but now from one of traffic as well.

Passenger work is again halted and freight is down by 28.6% to 45.77 million FTKs. Revenues are off 27.1% to \$15.26 million. Expenses decline by 28.1% to \$15.5 million and the operating loss is cut to \$236,128. Net loss is down, too, to \$376,332.

Company employment is increased by 10% in **1992** to 165 and the fleet now includes 11 Stratoliners. Application is made during the spring and approved in December for the resumption of passenger charters.

Meanwhile, freight traffic skyrockets 151.3% to 115.02 million FTKs. Revenues jump 11.5% to \$17.02 million, expenses rise 5.9% to \$16.4 million, and a \$614,196 operating profit is generated. There is also a net profit of \$796,675.

In **1993**, Chairman/CEO John Burwell oversees worldwide operations that employ 165 workers. The fleet now includes 8 Boeing freighters and 4 Douglas DC-8-55CFs. A major contract is signed with Azerbaijan for the provision of oil exploration support services, including the leasing of aircraft.

Charter passengers are transported for the first time since 1990 and number 50,000. The year's cargo traffic declines 36.8% to 71.27 million FTKs and there are financial losses: \$171,000 (operating) and \$278,000 (net).

Buffalo withdraws from passenger services in **1994** and reforms its leased fleet to include 2 each DC-8-61Fs and DC-8-62Fs, plus 1 each B-707-323C, B-707-324C, B-707-351C, B-707-399C, and DC-8-63F. The last Canadair CL-44 Conroy is chartered for medium-haul, out-sized-cargo work.

In June, the B-707-341C, which had been withdrawn from service at the end of the previous year, is chartered to **Azerbaijan Airlines (Azerbaijan Hava Yollari)**.

Freight slides 6.1% to 79.84 million FTKs, but revenues still increase by a significant 20.9% to \$25.26 million. Expenses are only up 8.8% to \$22.92 million, leaving a \$2.34-million operating surplus and a net gain of \$2.22 million.

The workforce stands at 165 in **1995**, a 10% increase. Early in the year, the B-707-323C and B-707-399C are also leased to AHY; unhappily, the former is lost in a crash at Baku in November.

The company's six aircraft operate 83.93 million FTKs, a decline of 26.9%.

The employee population is cut 9.1% in **1996** to 150 and the fleet is reduced by 1 Douglas. Cargo traffic is only reported through May and shows a decline of 80.3% to 6.11 million FTKs. Revenues for the entire year are \$20 million.

Airline employment is increased during **1997** to 223. Having outlived its usefulness, the CL-44 Conroy is returned to its lessor in early the year. It will be repainted and also leased to **Azerbaijan Airlines (Azerbaijan Hava Yollari)**. In late spring, company headquarters are transferred to Kansas City.

The company suspends operations early in **1998**.

BUFFALO AIRWAYS, LTD.: 1000 Buffalo Dr., Hay River Airport, Hay River, Northwest Territories X0E 0R9, Canada; Phone (403) 874-3333; Fax (403) 874-3572; Code J4; Year Founded 1970. Established by Joseph McBryan at Fort Smith, Northwest Territories, in **1970**, Buffalo undertakes charter and contract service flights, largely on behalf of the energy industry, throughout the province from both its main base and a branch at Fort Simpson. The initial fleet comprises 4 Douglas DC-3s, including 3 surplus craft obtained from Canadian Forces as C-47s and refurbished.

The recession of **1980** brings a temporary end to mining, oil, and gas exploration in the Western Arctic and causes McBryan to constantly reduce his fleet until only 1 DC-3 remains. Some energy industry recovery occurs in **1981–1982** and the company, once on the brink of closure, is stabilized.

In **1983–1984**, the fleet grows to also include 2 Britten-Norman BN-2 Islanders, 2 Beech 18s, 2 de Havilland Canada DHC-3 Otters, 2 DHC-2 Beavers, and 2 Bell 206B JetRanger helicopters.

Scheduled services are begun to Fort Chipewyan, Hay River, Pine Point, Snowdrift, and Uranium City.

Two DC-3s are withdrawn in **1986** and the company is reformed into Buffalo Airways (1986), Ltd., with Joe McBryan as president. New

scheduled operations are launched from the base at Hay River to Fort Simpson and Yellowknife and continue apace through the remainder of the decade and into the **1990s**.

In **1992**, 2 DC-4s join the fleet of 4 DC-3s. Flights continue and, by **1994**, the fleet includes not only the 2 Skymasters, but 12 DC-3s.

While on final approach to the airport at Fort Simpson on June 26, a DC-3C with two crew finds it necessary to make a forced landing on a gravel road nearby; the plane is damaged, but neither flyer is hurt.

The number of Dakotas is reduced to seven in **1995**; however, 2 Curtiss C-46 Commandos arrive to replace these departing DC-3s.

Also available are 3 Consolidated PB5Y-5A Cansos and 4 Canadair CL-215-1A10s, which are all employed as fire-fighting air tankers on behalf of the provincial government. CEO McBryan also maintains a float-equipped Noorduyn Norseman V. It had originally been delivered to the Saskatchewan government, restored over a seven-year period, and is now flown only in summer.

On November 30, **1996**, a striking new kelly green-and-white livery is unveiled in a ceremony at Red Deer, NWT.

Operations continue in **1997–2000**, during which years 3 additional DC-3s are acquired. These Dakotas provide daily scheduled service from Yellowknife to Hay River, across the Great Slave Lake. The C-46s, meanwhile, operate weekly supply flights from Yellowknife to Norman Wells via Wrigley, Fort Norman, Fort Good Hope, and Fort McPherson.

BUGULMA AIR ENTERPRISE: Airport 8, Bugulma, Privolzhskiy Zone, 423200, Russia; Phone 7 (84314) 51900; Fax 7 (84314) 53700; Code KAZ1; Year Founded 1994. BAE is set up at Bugulma in **1994** to offer domestic and regional passenger and cargo services, both scheduled and charter. P. V. Trubaev is general director and he begins flights with 15 Yakovlev Yak-40s. Five more of the type are added by **2000**.

BUKER AIRWAYS: United States (1966–1974). BA is created at North Springfield, Vermont, in the spring of **1966** to undertake scheduled mail services to Cincinnati via Boston, New York, and Pittsburgh, under terms of the Post Office Departments Air Taxi Mail Program. A fleet is assembled comprising 2 Learjet 24s and several Beech 18s, which are employed to inaugurate flights on April 18. The executive jets are seldom employed, except on overnight runs which other Post Office contractors cannot complete.

The Post Office program continues through June 30, **1974**.

BUKHARA UNITED AIR SQUADRON: Bukhara Airport, Bukhara, 705010, Uzbekistan; Phone 7 (36522) 32 466, Year Founded 1995. BUAS is set up at Bukhara in **1995** to provide domestic charter service, both passenger and cargo. Djura A. Madzhirov is CEO and he begins flights with 6 each Yakovlev Yak-40s and Antonov An-24s, plus 12 An-2s.

BULAIR. See BALKAN BULGARIAN AIRLINES

BULGARSKE VAZDUSHNE SOBSTENIE. See BALKAN BULGARIAN AIRLINES

BULORO GOLDFIELDS AEROPLANE SERVICE, LTD.: Australia (1926–1928). Ray "Battlin" Parer and Eric Gallet form Buloro Goldfields Aeroplane Service, Ltd. at Sydney in November **1926** to provide service to the goldfields of the New Guinea's Bulolo River. The two obtain a de Havilland DH 4 and take the crated aircraft to Rabaul, New Britain, arriving on March 27, **1927**. Hurt in a test crash of the ex-bomber, Gallet returns to Australia in May. Parer, having repaired his aircraft, inaugurates Rabaul to Wau flights on June 23. The largely non-scheduled service is successful and provides the funds with which to acquire a DH 9 and a Bristol F-2b in November.

In early **1928**, the Bristol is destroyed in a crash and the DH 4 is rated unsafe to fly. Parer, planning to expand, makes several proving flights

from Lae to Port Moresby; however, nonrenewal of his pilot's license and stiff competition from **Guinea Airways (Pty.), Ltd.** forces the owner to cease operations before the year's end.

BURL AIR FREIGHT. See BURLINGTON AIRWAYS

BURLINGTON AEROPLANE COMPANY: United States (1983–1984). Established at Burlington, Washington, in **1983**, BAC undertakes scheduled Piper Aztec flights to Mount Vernon and Seattle. Slight traffic in a recession and start-up costs force the new third-level entrant into bankruptcy in **1984**.

BURLINGTON AIR EXPRESS (BAX): United States (1986–1997). Early in **1986**, Burlington Northern Air Freight is renamed and begins initial operation of its own hub and spoke system with a fleet which comes to include 4 DC-8-63Fs, 11 B-707-320Cs, 4 B-727-100QCs, and 4 Convair CV-580s. Although no traffic figures are released, it is understood that in excess of a million pounds of freight are hauled nightly, some of it by **Buffalo Airways** under contract. At year's end, a new management team, headed by President/CEO Robin H. W. H. Wilson, is brought in to reverse a \$12.2-million operating loss.

Burlington's parent, Pittson, is acquired by WTC International in March **1987** through an exchange of stock. The new owner, an internationally experienced freight forwarder, begins to combine its own freight operation with Burlington's to create a new daylight shipping service that will employ the Fort Wayne hub and the unchanged BAX fleet. The amalgamation continues over the next 12 months and no traffic figures for the year are released.

Now one of the world's larger air-cargo operations, 2,375-employee Burlington owns a fleet in **1988** that includes 4 DC-8-63Fs, 2 DC-8-54Fs, 11 B-707-320Cs, 4 B-727-100QCs, and 2 CV-580s. Direct freighter flights are inaugurated in June between the Fort Wayne hub and Newark while, in October, daily B-707-320C flights begin from Fort Wayne to Des Moines.

A total of 474,500 pounds of freight are transported on the year and revenues reach \$800 million.

Early in the spring of **1989**, work begins on a \$50-million, 279,000-sq.-ft. air-cargo hub at Toledo, Ohio. In October, the company reports that its second quarter operating profit is up 300% and that, for the first time in company history, revenues from international operations exceed those from domestic work. Cargo capacity is increased by 25% in November when two DC-8-61Fs are acquired.

The new hub continues construction in **1990**. The year's good work brings a \$9.1-million operating profit.

Using Brussels as a hub, the company, in May **1991**, begins a short-term DC-8-63F supplemental weekend lift program from Belgium to Fort Wayne. Services are also expanded deeper into Latin America and the Pacific.

Although traffic figures are not released, it is noted that revenues are up to \$875.9 million and operating income is \$19.8 million.

The new hub facility is opened at Toledo Express Airport in Ohio during January **1992**. Over four million pounds of cargo can be moved through the 279,000-sq.-ft. facility daily. Revenues total \$888.22 million and the operating profit is \$15.1 million.

The fleet in **1993** includes 7 DC-8-63Fs, 4 B-707-320Cs, 3 DC-8-71Fs, and 2 B-727-100QCs.

Following the collapse of Time Air Sweden, A.B. in February, BAX is able to acquire its only freighter, the DC-8-71F *Italian Rainbow*.

On July 1, the company receives an international transportation logistics contract from General Motors; under its terms, the freighter will move automotive products between the U.S. and Europe.

Although traffic figures are still not released, it is announced that a \$38-million operating profit is earned on revenues of \$998 million. The operating income is 24th highest among all of the world's airlines.

It is announced in May **1994** that Burlington has received a two-year, \$1.6-million contract from IBM de Mexico under which the air transport

concern agrees to handle shipments of computers and peripheral equipment from Mexican facilities to South American markets. Also during the spring, a contract is signed with **Air Transport International** under which the Detroit-based cargo carrier agrees to operate 9 of BAX's DC-8-71Fs to more than 30 U.S. markets.

An agreement is signed with Copenhagen's Inter Express, under which the Danish freight forwarder takes on the Burlington name and begins handling BAX's air ocean and surface transportation business, including customs brokerage, on June 1. Traffic is considerably increased during the year by a nationwide trucking strike.

Between July and mid-August, capacity is increased by 20% with the addition of 3 more DC-8-71Fs, 1 B-727-21C, and 1 B-727-173C to the North American next-day jet fleet. A total of 5 million worldwide shipments are made, allowing an operating profit of \$69.22 million.

Early in **1995**, company officials credit a truckers strike for the previous year's good economic fortune. New operations are launched in Belgium, Denmark, Portugal, the Philippines, and China. Worldwide shipments jump 5.7% to 5.1 million. Operating income advances 16.4% to \$1.41 billion while costs rise an identical 16.4% to \$1.35 billion. Operating income reaches \$58.72 million, down from 1994.

Operations continue apace in **1996**. As in earlier years, contracts are let to other carriers, e.g., **American International Airlines**, for the actual operation of the company's freighters.

On May 29, a contract is received from SAAB Automobile, A.B. to handle spare part shipments from the U.S., Canada, and Japan to its Swedish spare part distribution center at Nykoping.

On June 11, BAX joins with **Air France** to transport four classic Type D Jaguar racing cars from Los Angeles and Chicago to Coventry and then to Le Mans to participate in special anniversary events surrounding the Grand Prix. The cars are returned to their owners at the end of the month.

BAX teams with **Qantas Airways (Pty.), Ltd.** on October 5 to introduce BAX Downunder Direct, a weekly roundtrip B-747F service from the American company's Toledo hub to Sydney and Melbourne, with connections to major cities throughout Australia and New Zealand.

Jo-Burg Direct two-day cargo service is introduced on January 27, **1997**, from New York, Los Angeles, Chicago, and Atlanta to Johannesburg. From that point, distribution is made possible via BAX offices in that city, Cape Town, Durban, Port Elizabeth, and Richards Bay.

Having originally been unscrupulously traded on the black market to a family in Fingal, Ireland, a rare, 8-month-old Siberian tiger cub named "Jodie" is turned over to the Irish Seal Sanctuary. Nursed back to health over a two-month period, the cub is readied to go to its new home at the San Fernando Wildlife Way Station in California. Flown to London on April 25, the small cat is sent to Los Angeles via an **American Airlines** flight next day and is then transported by Burlington to San Fernando. Both airlines donate their services to save what might otherwise have been 1 of only 470 Siberian tigers remaining in the wild.

A multiyear "global logistics" contract is signed with the personal computer peripherals manufacturer NEC Technologies in June. Under the arrangement, the carrier will undertake the company's material returns.

The giant Arkansas-based retailer Wal-Mart selects BAX on June 30 as its primary carrier for heavyweight international-air shipments. The contract covers time sensitive shipments over 50-lb. to the retailer's 197 international outlets in Canada, Mexico, Puerto Rico, Brazil, Argentina, China, and Indonesia. The carrier is also endorsed as Wal-Mart's secondary carrier for domestic shipments over 50-lb.

On July 29, **Air New Zealand, Ltd.** retains BAX to handle its logistics under an open-ended, multimillion dollar contract. BAX does not fly goods, but manages the carrier's supply chain to ensure that the parts it is transporting are received where and when they are needed.

On August 21, the company is awarded a two-year contract by Southampton, England-based Racal Records, Ltd., an electronics concern, to provide both inbound and outbound services for the company from the U.K., with emphasis on shipments from subsidiary companies in the U.S. and Europe.

Later in the year, the concern is renamed BAX Global.

BURLINGTON AIRWAYS: United States (1980-1982). Bernard F. "Bernie" Golding sets up Burlington Airways at Kenosha, Wisconsin, in **1980** to provide scheduled passenger and cargo services to Chicago via Manitowoc and Milwaukee. Beech 18 and Piper PA-31-310 Navajo revenue flights are duly inaugurated.

The fleet is increased in **1981** to include 1 Convair CV-240, 1 Aero Commander 680, 5 Beech 18s, and 1 Cessna 172; the Navajo is retired. All-cargo flights commence to Indianapolis, Louisville, Cincinnati, and Lexington; these operations are flown under the name **Burl Air Freight**.

The financial effects of the previous summer's PATCO air traffic controllers' strike put the company out of business during the first quarter of **1982**.

BURLINGTON NORTHERN AIR FREIGHT: United States (1972-1986). Burlington Northern Air Freight is established in **1972** as an air freight forwarder subsidiary of the Burlington Northern Railroad; Lawrence Rodberg is named chairman. Relations are established with the scheduled airlines for the provision of service with competitive rates.

During the remainder of the decade and into the next, many shipments are made on behalf of the automobile industry and a significant number of charter flights are undertaken from the Midwest to Texas. The first small planes are chartered in **1980** for the transport of small packages and, in **1982**, the railroad sells this division to Pittston Company.

Fiscal difficulties caused by the national recession bring a major management change in **1984**. Chairman Rodberg resigns and is succeeded as president/CEO by George Ryan. After receiving unreasonable quotes from both **Eastern Air Lines** and **United Airlines**, the long-established transportation firm now elects to begin flying its own freight.

In excess of \$100 million is invested in the development of a cargo hub at Fort Wayne Airport and long-term leases are taken on a fleet made up of 2 Boeing 727-100QCs, 2 B-707-320Cs, and 3 DC-8-63CFs. Choosing not to become a small-package specialist, general commodities transport operations are launched from the Indiana hub by **Orion Air** personnel under contract to 22 cities nationwide.

Over 750,000 pounds of freight are moved nightly and bring a \$15.7-million operating profit for the year.

Operations continue apace in **1985** as the carrier's commitment to transporting its own freight is intensified. The fleet is increased by the addition of 6 additional leased B-707-320Cs. A contract is entered into with **Spectrum Helicopters** to provide rotary-wing pickup and delivery services to Manhattan and Wall Street and to suburban heliports in Connecticut, New Jersey, and New York's Westchester County.

In December, Burlington contracts with **Pan American World Airways (1)** for all of the pioneer's belly cargo space on its four-times-per-week B-747-200 San Francisco and Los Angeles to Frankfurt flights. The new Fort Wayne hub loads 2.7-billion pounds of express. Revenues decline 2.6% to \$459.3 million and a \$9.2-million operating loss is suffered.

Early in **1986**, the operator is renamed **Burlington Air Express**.

BURMA AIRWAYS CORPORATION, LTD.: Burma (1972-1989). Late in December **1972**, **Union of Burma Airways, Ltd.** is reformed and takes this name; the carrier's autonomous status is withdrawn and the managing director reports directly to the government. Employing the fleet's 6 Douglas DC-3s, 7 Fokker F.27s, 1 Boeing 727-191, and 3 Vickers Viscount 761s, BAC maintains service to 30 domestic and several foreign destinations. A DC-3 with 25 aboard crashes into the Bay of Bengal, near Sandoway, on August 18; there are no survivors.

Enplanements for **1973**, the first full year of service under the new name, are 409,200.

Service continues apace in **1974**. An F-27-200 with 4 crew and 36 passengers overruns the runway while landing at Bassein, Burma, on April 30 and suffers the collapse of its nosegear; there are no injuries reported, but the aircraft is damaged beyond repair.

Serious problems occur in early **1975** with the end of the Vietnam conflict. Prevented from flying over the former French colonies after

April, the company's route to Hong Kong via Bangkok and Communist-occupied Phnom Penh, must be suspended. Without the route, there is no further need for the company's Boeing trijet, and it is sold. Orders are placed for Fokker F.28-1000 Fellowships and de Havilland Canada DHC-6-100 Twin Otters.

The fleet grows in the next year to include 1 Fokker F.28-4000, 2 Fokker F.28-1000s, 7 F.27s, and 5 de Havilland Canada DHC-6-100s.

F.28-1000 service is inaugurated from Mandalay to Tavoy on April 1, 1976, followed by introduction of the Fellowships on routes to Bangkok and Singapore on May 2. The first Twin Otter begins flying for the company on September 19. The F.28-4000 inaugurates service to Jakarta before year's end.

A DHC-6-300 with 3 crew and 22 passengers crashes into Mt. Loi Hsam Hsao on September 8, 1977; the wreckage is not found for three days and there are no survivors.

The company becomes involved in the support of the offshore energy industry during the year. Three Aerospatiale AS-332 Puma helicopters are acquired for this work.

Managing Director U Maung Maung Nyunt's carrier employs 1,300 workers in 1978. An F.27-200 with 4 crew and 44 passengers strikes trees during its takeoff from Okaraba, near Rangoon, on March 25, loses control, crashes into a rice paddy, and catches fire; there are no survivors.

While on its initial climb away from Moulmein on a scheduled August 26 service to Paan, a DHC-6-300 with 3 crew and 11 passengers explodes at 400-ft. altitude and crashes near Papun, Kayin; there are no survivors. Crash investigators will not be able to conclude whether the blast is the result of explosives or a physical defect.

While on initial climb away from Sagaing on October 3, both engines of an F.27-200 with 4 crew and 40 passengers lose power. The crew is able to carry out a forced landing on the banks of the Irrawaddy River (2 dead).

Traffic statistics, reported infrequently, are given this year; it is reported that 609,000 passengers are carried on domestic routes and 42,000 on international flights.

Service is started to Singapore in 1979. An F.27-400 with 4 crew and 24 passengers is destroyed as the result of a bad landing at Moulmein on August 19, 1980; there are no fatalities.

During 1981-1985, routes are extended or frequencies improved to Calcutta, Dhaka, and Kathmandu. There are losses.

A DHC-6-300 with three crew and five passengers crashes into a hill at Mindat on August 12, 1982; there are no survivors.

Losing power while climbing away from Lankin on October 8, 1983, another DHC-6-300 with 3 crew and 11 passengers turns left, strikes trees, and crashes (9 dead).

While on final approach to Putao on October 12, 1985, an F.27-600 with two crew and two passengers overflies the runway and crashes into soft ground a mile away; there are no survivors.

Following the withdrawal of an F.28-1000 and the Canadian-made turboprops, a second Fokker F.28-4000 is delivered in March 1986.

1987 is a tragic year as two Fokker Friendships are lost. The first occurs a quarter of an hour after takeoff from Taungyi on June 21. An F.27-200 with 4 crew and 41 passengers crashes into an 8,200-ft. mountain 24 km. SE of Hopong in the eastern part of the country; there are no survivors. In the second incident, an F.27-500 en route from Rangoon on October 11 with 4 crew and 45 passengers, crashes into a 1,500-ft. mountain 25 km. S of Pan-An; again, there are no survivors.

Although domestic services are maintained, all international routes, except that to Bangkok, are suspended in 1988.

While on an all-cargo service from Myitkyina to Putao in fog on June 16, an F.27-600 with three crew and a passenger crashes into high ground 9 mi. NW of its destination; there are no survivors.

During takeoff from Rangoon on February 3, 1989, an F.27-600 with 4 crew and 25 passengers enters into a fogbank. The turboprop veers left and collides with a line of trees near the end of the runway, crashes, and catches fire (26 dead).

On April 1, the company is renamed **Myanma Airways, Ltd.**

1666. BURNTHILLS AVIATION, LTD.: United Kingdom (1974-1985). This nonscheduled carrier is formed at Glasgow Airport in the spring of 1974 and launches Piper PA-23 Aztec passenger and cargo charters in May. Additional operations are flown throughout the year on behalf of the oil industry, including missions to Norway and Denmark. In early 1975, Burnthills establishes an FBO at Glasgow and in May acquires competing air taxi operator **Assistair, Ltd.** and its Piper Aztec.

Two Bell 206B JetRanger helicopters are acquired in the summer of 1978 and, with a subsidy from the Highlands and Islands Development Board, the company begins scheduled rotary-wing flights in October between Glasgow Airport and the heliport at Fort William. Operations continue apace in 1979-1980.

On May 1, 1981, service begins to the helipads at Rothesay and Lochgilphead. During the next two years, additional charters are accepted and the fixed-wing fleet grows by the addition of 3 Piper PA-31-350 Navajo Chieftains. Helicopter service to Oban begins in 1982.

In April 1983, the fixed-wing division is sold to rival **Air Charter (Scotland), Ltd.** The scheduled helicopter services are suspended in the spring of 1984, although charter services are continued until the operator ceases flying in 1985.

BURRARD AIR, LTD.: Canada (1983-1990). Burrard is established at Vancouver in 1983 to provide scheduled services to Nanaimo, as well as nonscheduled charter and contract work. Revenue flights begin with a mixed wheel- and float-equipped aircraft, including at least 1 each de Havilland Canada DHC-3 Otter, DHC-2 Beaver, Cessna 185, and Britten Norman BN-2A Islander.

Services are maintained without incident until December 1990.

BURSA AIR LINES, A.O. See BHY BURSA AIR LINES, A.O.

BURUNDAI AVIATION COMPANY: Kazakhstan (1995-1999). Burundai is set up at Alma-Ata in 1995 to offer domestic charter services. Commander Valeri A. Mastenko begins flights with a fleet comprising 5 Antonov An-24s, 1 An-30, 5 Mil Mi-2 and 12 Mi-8/17s.

In 1999, the company is renamed **Burundaiavia**.

BURUNDAIAVIA: Burundi Airport, Durundai Village, 483162, Kazakhstan; Phone 7 (3272) 357939; Fax 7 (3272) 357878; Code IVR; Year Founded 1999. Commander Valeri A. Mastenko's **Burundai Aviation Company** is renamed in 1999. Domestic and regional cargo charters and helicopter support operations continue with a fleet of 2 Antonov An-26s, 3 An-26Bs, 9 An-30s, 5 Mil Mi-2s, and 12 Mi-8/17s.

BURYAT AVIA: Russia (1996-1999). Having suffered traffic and associated financial problems since its founding in 1994, **Ulan Ude Aviation Enterprise** is reformed and renamed in 1996. A. P. Abasheev remains director general and he continues to provide domestic and regional scheduled passenger services with a fleet of 10 Antonov An-24s, 3 An-26s, 2 Let L-410UVPs, 24 An-2s, and 1 Tupolev Tu-154B. Helicopter support operations are provided with a large rotary-wing fleet that includes 15 Mil Mi-8/17s and 15 Mi-2s.

The company is renamed **Buryatia Airlines** in 1999.

BURYATIA AIRLINES: Ulan Ude Airport, Irkutsk Region, Eastern Siberian Zone, 670018, Russia; Phone 7 (20122) 33559; Code UUD1; Year Founded 1999. Buryat Avia is renamed in 1999. A. P. Abasheev remains director general and his fleet is rationalized to include just 2 aircraft types: An-24s (7 An-24Bs and 2 An-24Vs) and An-26s (2 An-26s and 1 An-26B).

Scheduled trunk and regional passenger services are maintained as before. Early in 2000, Buryat, which has been unable to maintain its economic viability, enters receivership. It is sold to ZAO Media Gray on June 1.

BUSAIR, GmbH: Uerdinger Strabe 532, Dusseldorf, Germany; Phone 49 (02) 02151 508 615; Fax 49 (02) 02151 508 609; Year

Founded 1993. Business Air Charter Service, GmbH., known as Bus-Air, is set up at Dusseldorf in 1993 to provide executive and small group passenger charters throughout Germany. Revenue operations begin and continue with a single Beech King Air 90.

BUSH AIR: United States (1979–1983). Bush Air is established at Bethel, Alaska, by Ronald Petolta in 1979 to offer commuter services to surrounding destinations. Employing a fleet of Cessna and Piper light-planes, revenue flights are inaugurated linking the company's base with Russian Mission, Marshall, Scammon Bay, and Tununak.

A feeder agreement is signed with **Wien Air Alaska** in 1980 and remains in effect until the company, unable to maintain viability in a time of recession, must shut its doors in 1983.

BUSH PILOTS AIR SERVICE: Lake Hood, Anchorage, Alaska, United States; Year Founded 1960. Beginning in 1960, this operator undertakes charter and contract flights for both passengers and cargos to remote areas from Lake Hood, Anchorage, Alaska. The fleet always consists of float-equipped small aircraft, such as Cessna 185s and de Havilland DHC-2 Beavers.

Operations at President Gary W. Archer's concern continue.

BUSH PILOTS AIRWAYS (PTY.), LTD.: Australia (1951–1982). **Bush Pilots Airways (Pty.), Ltd.**, is formed as an air taxi operation on June 21, 1951 to provide on-demand services to cattle ranges and stations in northern Queensland from an airfield at Cairns. Charter, survey, mail and air ambulance flights begin in June. Scheduled services begin on August 4, 1957, but cease in June 1960 as the little carrier reverts to charter flying.

In May 1972, **Queensland Pacific Airways (Pty.), Ltd.** is acquired and merged and scheduled operations resume. Over the next 6 years, the fleet is upgraded to comprise 5 Douglas DC-3s, 5 Swearingen Metro IIs, 4 Britten-Norman BN-2A Trislanders, 6 Cessna 402s, and 2 each Cessna 310s and 404 Titans.

In 1978, the commuter operation of Chairman H. S. Williams and Managing Director R. H. Entsch employs 120 workers. One Trislander and 1 Cessna 310 are withdrawn in 1979 and replaced by 1 Cessna 402, 3 Cessna 210s, and 1 Britten-Norman BN-2 Islander.

In October 1980, a Fokker F27 is introduced on routes from Cairns to Groote Eylandt, Ramaga, Lockhart River, and Thursday Island. On December 1, the company acquires 4 de Havilland Canada DHC-6-300 Twin Otters from **Trans-Australia Airlines (Pty.), Ltd.** and begins flying them to Brampton Island, Great Keppel Island, and Schute Harbor on the Great Barrier Reef.

Airline employment in 1981 stands at 179 and orders are placed for 3 SAAB-Fairchild SF340s and 3 DHC-8s. A leased Swearingen SA.226TC Metro freighter is damaged beyond repair in an aborted take-off from Emerald, Australia, on April 2; the pilot is not hurt.

The company is renamed **Air Queensland (Pty.), Ltd.** in January 1982.

BUSINESS AIR: United States (1957–1999). David Corey forms Business Air at Bennington State Airport in Vermont in 1957 to offer cargo charter and contract service flights throughout North America and internationally.

By the late 1980s, a workforce of 30 is recruited and revenue flights begin with a fleet of 5 Douglas DC-3s, 4 Beech 58 Barons, 3 Piper PA-31-310 Navajos, 2 Cessna 208A Caravan Is, 4 Cessna 402Cs, 2 Cessna 404 Titans, and 2 Mitsubishi Mu-2s.

By 1998, Walter L. Fawcett Jr. is president and the fleet has been altered to include 3 Beech 58 Barons, 3 DC-3s, 1 Cessna 402C, 2 Cessna 404 Titans, 4 PA-31-310 Navajos, and 11 Embraer EMB-110 Bandeirantes. In 1999, the carrier is renamed **AirNow**.

BUSINESS AIR, LTD.: United Kingdom (1987–1998). Ian G. Woodley organizes Business Air, Ltd. at Dyce Airport, Aberdeen, Scotland, in

August 1987 to provide charter brokerage service to the offshore oil industry and to operate night airmail services. Revenue flights, including Skynet night mail operations under contract to the Post Office, commence in early 1988 with a fleet of 4 Embraer EMB-110P2s; destinations visited from Aberdeen include Dundee, Esbjerg, and Manchester.

In 1989, the fleet is increased by the addition of 1 Cessna 404 Titan and 1 Shorts 360.

The 45-employee regional's major shareholders in 1990 are **Crossair, Ltd.** of Switzerland and Abela Holdings of the U.K. Both acquire 15% shareholding, later increased to 32%; the company flies a total of 4,417 passengers.

Stewart Adams is named general manager in 1991 and 2 SAAB 340As are acquired under lease from **Crossair, Ltd.** Airline employment is increased by 64.4% to 74 and the company's destinations now include Aberdeen, Edinburgh, Inverness, Manchester, Sumburgh, and the Danish city of Esbjerg. Customer bookings skyrocket to 13,933.

The workforce is increased by 35.1% in 1992 to 100 and, in July, after **Aberdeen Airways, Ltd.** shuts its doors, Business Air increases its frequencies on its Aberdeen, East Midlands, and Edinburgh routes. During the fall, 3 additional **Crossair, Ltd.** SAAB 340As and 1 BAe (HS) 748-B2 are placed in service and 1 BAe 146-200 is requested from **Crossair, Ltd.**

Passenger boardings increase 164.6% to 52,729.

Airline employment in 1993 stands at 100. Following delivery of the chartered BAe 146-200 in early April, the company becomes, on August 31, the first U.K. jet operator to use London City Airport when it inaugurates scheduled flights to it from Frankfurt.

At the same time, an alliance is entered into with **Deutsche Lufthansa, A.G.** under which the service to London is code-shared and the British airline is able to participate in the German major's frequent flyer program. Hoping to appeal to banking and financial-oriented passengers, Business Air calls its service the Bank Shuttle.

A code-sharing agreement is signed with **Air Kilroe, Ltd.**, which begins to provide feed from Cardiff to the Business Air stations at Aberdeen, Dundee, and Inverness. Skynet mail stations visited now include Aberdeen, Belfast, Bristol, Edinburgh, East Midlands, Inverness, Isle of Man, Liverpool, Norwich, and London (STN).

Customer bookings through November skyrocket another 142% to 107,237.

The workforce is cut to 95 in 1994 and the BAe 146-200 lease agreement is changed during the summer from dry to wet. In September, **Deutsche Lufthansa, A.G.** assumes commercial responsibility for the Bank Shuttle. A code-sharing agreement with the German flag carrier purchases a 38% stake and allows Business Air to feed it at Manchester from its own stations at Aberdeen, Dundee, and Inverness.

Traffic figures are again reported for 11 months, and show passenger bookings increasing 41.8% to 152,024.

Although there is no change in the workforce during 1995, the company conducts negotiations for its takeover by the Airlines of Britain Group. During the first quarter, the company begins to code-share with **Deutsche Lufthansa, A.G.** on those routes to and from Manchester that connect with the German major's flights. Through November, enplanements are up 17.7% to 178,892.

Airline employment is increased to 225 in 1996 and the fleet now includes the BAe 146-200 and 5 SAAB 340As leased from **Crossair, Ltd.**, plus 3 owned 340As.

The company becomes a part of the Airlines of Britain Group in April. It is allowed to continue operations under its previous identity and is managed from its Aberdeen base. In addition, a wet-lease agreement is signed with **British Midland Airways, Ltd.** under which the BA subsidiary will diversify into a service-providing role on behalf of BMA.

In a September 10 ceremony European Commission Transport Commissioner Neil Kinnock, Airlines of Britain Chairman Sir Michael Bishop, and **Deutsche Lufthansa, A.G.** Chairman Jurgen Weber preside over the opening of Superhub, a joint initiative between Manchester Airport, Business Air, Ltd., and the German major. The project is designed

to stimulate and speed transfer traffic growth for commercial flights operating from northern England and the Continent.

Two SAAB 340Bs are leased from their manufacturer on October 1 to increase feeder operations from Manchester. They will also be available on a wet-lease basis to **British Midland Airways, Ltd.**

During the month, a code-sharing agreement is signed with **Continental Airlines**. Under its terms, CA will place its designator on company services from Manchester to Aberdeen, Dundee, Edinburgh, and Glasgow. Its DC-10-30 Flight 20 will depart Newark the previous evening and arrive in Manchester at 7:50 a.m., in time to offer its passengers easy connection to Business Air flights north. Services to the Shetlands end on October 27.

Passenger boardings for the year drop a significant 21.3% to 154,538.

The workforce is downsized by 37.8% in **1997** to 140. Destinations visited include Aberdeen, Dundee, Edinburgh, Esbjerg, Glasgow, and Manchester.

On February 24, Airlines of Britain, plc, the holding company which owns **British Midland Airways, Ltd.**, **British Regional Airlines, Ltd.**, **Manx Airlines, Ltd. (2)**, **Loganair, Ltd.**, and Business Air elects to split up British Regional Airlines (Holding) and all of the carriers except BMA. The move will technically allow BRA (H) to continue its BA affiliations without fear of conflict of interest decisions being made by Airlines of Britain, which is partnered with BA's competitors, **Deutsche Lufthansa, A.G.** and **SAS (Scandinavian Airlines System)**; still, Sir Michael Bishop retains ultimate ownership in both groups.

Manx Airlines, Ltd. (2), **Loganair, Ltd.**, and Business Air will continue a confederation with **British Regional Airlines, Ltd.** in a British Airlines Regional Group of BA franchise partners. Activities for each company will continue to be reported separately.

Customer bookings recover, shooting up 18.4% to 175,888.

British Regional Airlines (Holdings) transfers ownership of Business Air to **British Midland Airways, Ltd.** on January 1, **1998**.

On March 29, the carrier is renamed **British Midland Commuter, Ltd.**

BUSINESS AIR CHARTER SERVICE, GmbH. See **BUSAIR, GmbH.**

BUSINESS AIRCRAFT GROUP: **Burke Lakefront Airport, 2301 N. Marginal Road, Cleveland, Ohio 44114, United States; Phone (216) 348-1415; Fax (216) 348-1432; Year Founded 1994.** BAG is set up at Burke Lakefront Airport in **1994** to provide executive and small group passenger charters to destinations in North America and Europe. Revenue flights begin with one each Canadair 600 Challenger, Cessna 550 Citation II, and Mitsubishi Mu-300 Diamond IA.

BUSINESS AIRLINES, B.V. See **BASE BUSINESS AIRLINES, B.V.**

BUSINESS AVIATION: **Coeur d'Alene Airport, 10960 Airport Drive, Hayden Lake, Idaho 83835, United States; Phone (208) 772-0922; Fax (208) 772-0582; Year Founded 1995.** BA is established as an FBO in **1995**. In addition, the concern offers a wide variety of executive and small group passenger charters, including flight-seeing, hunting and fishing flights, and express services. Aircraft are based at two airfields.

From Coeur d'Alene, BA operates 2 Cessna 182 Skylanes and 1 each Cessna 501 Citation, Grumman G-690B Turbo Commander, Cessna 421C Golden Eagle, C-180 Skywagon, C-210, and C-T210M Turbo Centurion. A Swearingen S-227TT Merlin 300 is flown from Felts Field at Spokane, Washington.

BUSINESS AVIATION (PTY.), LTD. See **COUNTRYWIDE AIRLINES (PTY.), LTD.**

BUSINESS COMMUTER: United States (1976-1980). BC is established at Bridgeport, Connecticut, in **1976** as the scheduled airline divi-

sion of Business Aircraft Corporation. Employing Piper PA-23 Aztecs, PA-31-310 Navajos, and PA-32 Cherokee Sixes, the company duly inaugurates daily roundtrip commuter services to Philadelphia, Farmingdale, and Albany. Summer seasonal flights are also offered to Martha's Vineyard and Nantucket.

Due largely to the energy crisis, operations cease in **1980**.

BUSINESS EXPRESS (BEX): 14 Aviation Ave., Portsmouth, New Hampshire 03801, United States; Phone (603) 334-4000; Fax (603) 334-4050; http://www.flybex.com; Code HQ; Year Founded 1983. In late **1983**, negotiations are completed that will allow Bridgeport, Connecticut-based **Atlantic Air** to be purchased by James R. McManus' Westport-based Marketing Corporation of America, in which George Valassis is principal shareholder. Operations at the 40-employee company, however, continue as before during a yearlong period of integration. Destinations visited by the carrier's 5 Beech 99s include Baltimore, Boston, Martha's Vineyard, Nantucket, Philadelphia, and White Plains.

Flights are started to Bedford, Newark, and Worcester in **1984**, but traffic figures are not released. The corporate identity of **Atlantic Air** is reformed into Business Express (BEX) in November.

In **1985**, the small regional moves up in status by a grade to large regional when it acquires the Groton-based large regional **Pilgrim Airlines** for \$1 million. The arrangement calls for the bigger carrier to be operated as **Pilgrim Business Express** during an integration period. Business Express Chairman/President McManus becomes CEO of the combined operation with **Pilgrim Airlines** founder Joseph Fugere a special transition advisor.

Meanwhile, **Pilgrim Airlines'** 8 de Havilland Canada DHC-6 Twin Otters are replaced by 5 of BEX's Beech 99s, while McManus' original carrier purchases 8 Beech 1900Cs.

Unofficial indications show the combined transport of 459,380 passengers on the year.

The integration period is completed on February 28, **1986** and the Pilgrim name disappears. The BEX fleet now includes 4 Fokker F.27-100s, 4 Shorts 360s, and 16 Beech 1900Cs. In a unique arrangement with SAAB, the company orders and receives 2 340As that it may try for a certain period and return if unsatisfied—a "walk-away provision." Negotiations are undertaken with **Delta Air Lines** aimed at making New England's largest regional a member of the major's commuter network. Negotiations are successfully completed on April 22.

Customer bookings for the year accelerate 12.6% to 525,000.

The 450-employee large regional undertakes "Delta Connection" code-sharing flights early in **1987** and President McManus upgrades his fleet by the addition of 8 Beech 1900Cs, 2 SAAB 340As, 4 Shorts 360s, and 1 Fokker F.27-100.

In October, the FAA launches an intensive program of airport screening. Over the next 18 months, FAA agents will be able to slip 734 test weapons or explosives through airline-run screening points and will, in turn, impose \$5.21 million in fines against some 50 airlines that fail the unannounced tests.

Passenger boardings for the year rise 24% to 651,000.

The fleet in **1988** includes 6 SAAB 340As, 16 Beech 1900Cs, 5 F.27-100s, and 4 Shorts 360s. The Fokkers are all retired.

In January, twice-daily service is initiated from Bangor, Maine, to Boston. Frequencies begin from Islip, New York, to Boston in August with four daily Shorts 360 roundtrips and three Beech 1900C roundtrips per day.

Customer bookings during the 12 months jump 17.6% to 765,400.

Airline employment is increased by 25% in **1989** to 750 as 4 additional SAAB 340As are added, while 1 Shorts 360 and all of the Fokkers are withdrawn.

Six-times-per-week SAAB 340A service is started from Boston to Baltimore (BWI) and four daily nonstop 340A flights begin from Philadelphia to Hartford. In addition, nine-times-per-day service is inaugurated from Newark to Providence, Rhode Island.

On June 1, the FAA assesses fines against those carriers failing its latest round of airport screening tests. BEX, with five security breaches, is faced with \$50,000 in punishment.

In July, 10 peak-hour landing slots at New York (LGA) are purchased from **East Hampton Air** for an undisclosed sum. On September 1, the "Delta Connection" partner acquires troubled **Mall Airways**, which is based at Albany, New York, and flies U.S.-Canada transborder routes.

Passenger boardings zoom upward by 22.4% on the year to 936,000.

The workforce is reduced in **1990** to 525 even as a significant acquisition of flight equipment occurs. Two more Beech 1900Cs, 5 more SAAB 340As, and 9 additional Shorts 360s are delivered, many of the American and Swedish built turboprops coming over from bankrupt **Metro Airlines Northeast**. During the summer, flights commence from Boston to Baltimore (BWI).

Service is now provided to 27 cities in the Northeast, with over 500 daily departures. Customer bookings accelerate 16.2% to 1,126,059.

The payroll increases by 62.5% in **1991** to 1,300. James Malski becomes president as Jim McManus moves up to chairman/CEO. The fleet is further expanded by the addition of 2 Beech 1900Cs and 7 SAAB-340As. The fleet now includes 35 SAABs, 11 Shorts 360s, and 19 Beech 1900Cs.

Plans are made to acquire **Pan Am Express** and, during the year, the carrier's first jetliners, 5 British Aerospace BAe 146-200s, are placed into service. A \$450-million order is placed in mid-December for 20 British Aerospace BAe RJ70s, on top of the outstanding \$250-million request for 48 more SAAB 340As.

The growing regional introduces "Delta Connection" service to Boston and New York (LGA) and between June and November, 17 new routes are opened in existing markets, with the company now the ninth largest regional airline in the U.S.

While on a training flight from Bridgeport on December 28 a Beech 1900C crashes into the sea off Block Island, Rhode Island; all three crew aboard are killed.

Customer bookings ascend 19.3% to pass the 1-million mark in annual boardings for the first time (1,343,197). Revenues total \$109.3 million and with costs held down, profits are earned: \$7.96 million (operating) and \$3.79 million (net).

Company employment is increased by 25.1% in **1992** to 1,626 as the onetime regional is elevated to the status of a national airline.

Service is expanded to Delta's new New York (JFK) hub, feeding the major's transatlantic flights from there.

The five chartered British Aerospace BAe 146-200s are employed to in March to inaugurate "Delta Connection" flights from Boston to Baltimore (BWI), Norfolk, Mountpelier, and Hartford.

It will later be alleged that in May, Marketing Corporation of America and Creditanstalt-Bankverein use BEX assets as collateral for a \$17-million loan to BEX by the latter. BEX, in turn, passes \$12.5 million back to MCA, which uses the money to repay outstanding loans to two Connecticut banks. These charges, which will be placed by a Committee of Unsecured Creditors when the carrier runs into fiscal problems four years hence, will note that from 1989 to this point, MCA has withdrawn more than \$20 million.

In June, it is announced that the carrier will become the first major tenant at the former Pease AFB in New Hampshire, now the Pease International Tradeport. The airline will sign a long-term lease with the Pease Development Authority and construct its fourth maintenance facility at the ex-USAF base. The State of New Hampshire provides a \$10-million loan guarantee. Service is started during the fall to Cleveland, Detroit, Philadelphia, and Richmond.

The first public stock offering is made and the fleet at year's end, in addition to the BAes, includes 17 SAAB 340As, 20 SAAB 340Bs, 19 Beech 1900Cs, and 8 Shorts 360-300s.

All of this expansion assists passenger boardings to jump 18% to 1,584,606 and revenues increase 50.4% to \$162.5 million.

In **1993**, Chairman/CEO McManus oversees a workforce of 1,500, down 126 from the previous year. The fleet is also reduced to 34 SAABs

and 15 Beech 1900s as 3 additional Shorts 360-300s are acquired. During the spring, nonstop SAAB flights commence from the former Pease AFB in New Hampshire to Manchester, Boston, and Providence.

Plans to abandon service at Bridgeport and Presque Isle, Maine, are shelved in August following meetings between company officials and leaders of those communities. The BAe 146-200s are replaced, beginning in October, by 3 RJ70 Avroliners, which are the U.K.-Taiwan joint venture upgrade of the BAe 146-300.

In the face of continuing fiscal problems, President Malski resigns in December.

Although customer bookings swell 9.5% to 2,026,913, the carrier encounters severe financial loss: \$47.39 million (operating) and \$50.9 million (net).

As a result of the economic downturn, former Phoenix Airline Services CFO Bryan K. Bedford is appointed president in February **1994**. As a first step toward profitability, Bedford returns the Shorts aircraft to their lessors and suspends payments on the Avros and Beechcraft. Deliveries for 20 SAAB 340Bs and 9 RJ70s are rescheduled.

A marketing alliance is signed with **Northwest Airlines** in July and, although several replacement services have been flown on behalf of other airlines, BEX elects, in August, not to expand southward from its New York (LGA) hub to Norfolk and Richmond, Virginia.

Service to Canada is significantly increased in September and is timed to connect with **Delta Air Lines** jetliner flights from Boston, as well as other "Delta Connection" services to cities in the Northeast and Midwest. Employing Beech 1900Cs, frequencies are initiated from Logan International Airport to Quebec City, Halifax, and Moncton.

The year's passenger boardings plunge 19.1% to 1,640,000 and revenues decline by 9.4% to \$180.3 million. Expenses fall 24.3% to \$186.6 million, generating an operating loss of \$6.3 million. Still, a \$7.4-million net gain is reported.

The workforce stands at 1,500 in **1995**. The fleet grows to include 37 SAAB 340As, 16 Beech 1900Cs, and 2 Avro RJ70s. BEX is now the largest airline operating in the Northeast.

When **Delta Air Lines** realigns its hub system on May 1, it significantly reduces the number of its jetliner departures from Boston. To help take up the slack, BEX expands its own Logan site and adds 22 flights, raising its total from 125 to 147 daily departures.

Enplanements for the year dip 1.6% to 1,742,000 and there is a net loss of \$9.13 million.

Deeply in debt, BEX is placed into involuntary Chapter XI bankruptcy in U.S. Bankruptcy Court for the District of New Hampshire on January 22, **1996** by SAAB Aircraft Credit, A.B. and two other creditors who fear loss of company assets before aircraft payments are completed. It will be revealed some months later by a Committee of Unsecured Creditors (CUC) that a long list of debts are owed: SAAB and various of its divisions, \$30,311,000; Creditanstalt-Bankverein, \$9.3 million; BAe Finance, \$8 million; Raytheon Aircraft Credit Corp., \$22 million; Pease Development Authority, \$8 million; Others, \$7 million.

Former American Eagle head Robert E. Martens is appointed the company's new chairman/CEO replacing McManus and Malski and is given a mandate to reorganize the carrier.

"Delta Connection" and Northwest Airliner services continue, though in reduced number. The airline operates 400 departures per day, including 38 from New York (JFK), 42 from New York (LGA), and 120 from Boston.

The RJ70s are withdrawn at the end of March and orderly retirement of the Beech 1900Cs, scheduled to take 12 to 18 months, begins. There are no personnel reductions.

Late in the year, SAAB files a reorganization plan with the U.S. Bankruptcy Court. Under its terms, BEX will be forced to sell all of its slots at New York (JFK) to **Delta Air Lines** for \$5 million (if Delta elects not to purchase, SAAB will be free to auction them off). What remains of the company will then be turned over to John Sullivan's Champlain Enterprises, which owns **Commutair**.

At the same time, the management of BEX submits its own plan. It would feature a code-sharing pact with **American Airlines**, as well as a continuance of the alliances with Delta and Northwest.

Customer bookings plunge 40.7% to 1,033,711 and financial figures, released only for the first quarter, show an \$11.771-million net loss. There are 151,640 scheduled departures.

The fleet in 1997 is cut to just the SAABs as the last of the leased Beech 1900Cs are returned. The code-sharing agreements with **Delta Air Lines** and **Northwest Airlines** continue, pending a ruling from the bankruptcy court.

In January, the CUC proposes to sue former Chairman McManus, President Malski, and investor Valassis for misappropriation of funds back in 1989–1992—misappropriation that they claim left BEX with so little capitalization as to render it insolvent.

In March, the carrier's management, together with SAAB Aircraft of America, combine their revitalization efforts and jointly file a reorganization plan with the U.S. Bankruptcy Court. Left out of the action, John Sullivan's Champlain Enterprises files suit against BEX and SAAB for breach of contract.

BEX emerges from Chapter XI on May 22 when its new reorganization plan is approved. Although secured creditors receive a greater amount, unsecured creditors, including SAAB, receive only 21 cents on the dollar of investment. The SAAB 340A lease amounts are also reduced and taxpayers in New Hampshire will ultimately foot a \$13-million bill, including interest payments. All assets are sold to a new Business Express operating company formed by the Philadelphia-based investment partnership of Dimeling, Schreiber & Park.

As part of the arrangement, the carrier continues its code-sharing and alliances with **Delta Air Lines** and **Northwest Airlines** and agrees to fly from Boston as "American Eagle." The fleet of 37 SAAB 340s will continue to fly 320 daily departures from its hubs at Boston and New York (LGA).

On September 24, a contract is entered into with **American Airlines** to provide feed to the major at Boston. At month's end, the city of Portland, Maine, refuses a company bid to relocate its headquarters and maintenance facility in exchange for tax credits.

The American Connection service is offered to Burlington, Portland, Bangor, and Lebanon, plus Quebec City, beginning on October 1, with the new network later expanded to Syracuse, Rochester, Albany, White Plains, Islip, Ottawa, and Halifax.

By the end of the year, the number of daily departures has been increased by 20 and the company is now the largest regional operator in the Northeast.

Passenger boardings drop 2.3% to 1,326,300 on 100,052 scheduled departures. Revenues total \$145.31 million and allow an operating gain of \$312,000. Interest expense in excess of \$2 million and \$3 million in restructuring costs create a net loss.

In January 1998, the company's Delta Connection emphasis is shifted to Boston and New York (LGA) after the major signs a code-sharing pact with **Trans States Airlines** covering feed at New York (JFK).

SAAB 340A roundtrips from Boston to Presque Isle, Maine, begin on November 1, four times a day.

Strengthening its regional presence in the Northeast, **American Eagle Airlines (2)** purchases Business Express for an undisclosed price on December 4, thereby gaining the much-desired BEX slots at New York (LGA). The regional will operate as a separate entity until all takeover arrangements are completed. BEX, meanwhile, negotiates with **Delta Air Lines** and **Northwest Airlines** concerning its regional partnerships with those majors and manages to hold on to them.

The fleet at the end of the year includes 43 SAAB 340As. A total of 350 daily flights are made between 16 cities. During the 12 months, customer bookings dip 0.9% to 1.31 million.

While en route from Boston to Philadelphia on March 3, 1999, Flight 6277, a SAAB 340A with 3 crew and 30 passengers encounters turbulence at 7,000 ft., 40 nm. NE of Atlantic City; the flight attendant is se-

riously injured when thrown onto the deck. She is rushed to the hospital upon landing at the Pennsylvania airport.

The acquisition of BEX by **American Eagle Airlines (2)** is completed on March 11. Initially, it is operated as a separate company, with President Ellmer remaining in place, but now reporting to American Eagle President Bowler. Marketing relationships, including code-sharing with several other airlines, is continued. Rather than perform costly modifications to conform BEX aircraft to Eagle specifications, Eagle begins to retire units of the BEX SAAB fleet as their leases expire and to replace them with American Eagle aircraft.

By an 89% margin, the company's ALPA-represented pilots ratify a new two-year labor contract on June 29.

Customer bookings accelerate 5.8% to 1,391,000 and operating revenues total \$150 million.

Airline employment at the beginning of 2000 stands at 1,000, a 33.3% decrease over the previous 12 months. The decision is taken not to repaint any of the SAAB 340Bs, which are being replaced by Embraer jetliners.

Thrice-daily ERJ-135 roundtrips commence on January 25 from Boston to Columbus, Ohio; 4 of the 12 daily nonstops between Boston and Philadelphia are simultaneously upgraded to ERJ-135.

Thrice-daily ERJ-135 return flights from Boston to Richmond begin on March 21, as do twice-daily ERJ-135 roundtrips from Boston to Nashville.

ERJ-135 roundtrips from Boston to Norfolk commence on April 2 and twice daily from New York (JFK) to Columbus. Thrice-daily SAAB 340B return flights are simultaneously launched between New York (JFK) and Worcester, Massachusetts.

The code-sharing agreement between the American Eagle subsidiary and **Midwest Express Airlines** is deepened in May. Under terms of the enhanced arrangement, the Milwaukee-based carrier will share its designator on 15 Eagle flights from Boston to cities in the Northeast, Virginia, and Canada beginning during the year's third quarter.

On July 6, the carrier launches the only service to New York (JFK) from Worcester, thrice-daily SAAB 340B roundtrips. Four-times-a-day ERJ-135 roundtrips, code-shared with **Midwest Express Airlines**, begin on July 17 from Boston to Toronto.

New daily service is launched on August 31 from New York (LGA) to Greensboro, High Point, Winston-Salem, Norfolk, and Richmond.

SAAB 340B frequencies are initiated on September 11 from Boston to Montreal, four times a day.

On October 27, a historic agreement is signed between **American Eagle Airlines** and **Trans World Airlines (TWA)**. The American Eagle subsidiary Business Express will provide "Trans World Express" services to nine new markets and the five existing "Trans World Express" cities of Baltimore, Boston, Hartford, Pittsburgh, and the District of Columbia, from which **Trans States Airlines** will withdraw by January 5.

Employing SAAB 340Bs, a new "Trans World Express" service is launched on December 2 from New York (JFK) to Albany, Buffalo, Montreal, Providence, Rochester, Syracuse, and Worcester. ERJ-135 "Trans World Express" flights also start from JFK to Cleveland and Columbus.

Thrice-daily roundtrips are launched on December 15 from Chicago (ORD) to Greensboro, North Carolina.

BUSINESS FLIGHT OF SCANDINAVIA, A.S.: Denmark (1988–1995). **Business Flight Service, A.S.** is reorganized in late 1988 and renamed. Jasper Hougaard remains as managing director, however, the fleet is dramatically increased to include 7 Beech Super King Air 200s, 1 Beech 1900, 2 Beech King Air 90s, 4 Beech Bonanzas, and 2 Fokker F.27s.

Scheduled services are introduced in early 1989 to both domestic destinations and markets in Germany and Luxembourg. In September, financially troubled Danish competitor **Midtfly, A.S.** is taken over and merged. Enplanements total 20,000.

The fleet is revised during **1990**. Gone are 2 Super King Air 200s, replaced by 1 F.27, 1 Beech 1900, and 1 Fairchild Metro III. Citing heavy costs, the company abandons scheduled passenger flights in July to concentrate solely on all-cargo services. Two Super King Air 200s are withdrawn in **1991**.

Operations continue in **1992** and in **1993–1994**, Managing Director Hougaard's fleet is upgraded to include 6 Beech Super King Air 200s, 2 Beech King Air 90s, 2 Beech 58 Barons, 6 Beech 33 Bonanzas, 2 Fokker F.27s, and 2 Beech 1900s.

A victim of economic reversal, the company shuts down in **1995**.

BUSINESS FLIGHT SERVICE, A.S.: Denmark (1985–1988). Michael Burgess establishes this carrier at Copenhagen in **1985** to provide air taxi, air ambulance, charter and cargo services to local and regional destinations. Jasper Hougaard is appointed managing director and a fleet is assembled comprising 1 Beech 55 Baron, 1 Beech King Air 100, 1 Beech King Air 90, 1 Beech Super King Air 200, 1 Piper PA-28 Cherokee, and 1 Rockwell Aero Commander.

Revenue flights commence and in **1986–1987**, the fleet is upgraded. Gone are the Beech King Air 100 and the Aero Commander, replaced by 2 more King Air 90s and 3 Super King Air 200s. The company is reorganized in **1988** and renamed **Business Flight of Scandinavia, A.S.**

BUSINESS FLYERS BASEL, LTD.: Switzerland (1975–1978). Aimed at the executive market, Business Flyers Basel, Ltd. is formed as an air taxi service on February 14, **1975** by **Swissair, A.G.** DC-9 pilot Moritz Suter. Employing a Cessna Citation executive jet, flights are initiated from both Basel and Zurich to destinations throughout Western Europe. Suter's company is renamed **Crossair, Ltd.** on November 14, **1978** in preparation for the start-up of scheduled operations.

BUSINESS JETSHARES, LTD.: 8631 Lemmon Ave., Hangar J, Dallas, Texas 75209, United States; Phone (214) 357-7477; Fax (214) 352-3066; Year Founded 1992. This concern is set up as an FBO at Dallas in **1992**. It also undertakes executive and small group passenger charters. By **2000**, BJ employs seven pilots and stations aircraft at three different locations.

Four Grumman G-1159A Gulfstream IIIs are flown from Dallas (DAL) along with 2 British Aerospace BAe (HS) 125-800 Hawkers and 2 BAe (HS) 125-700 Hawkers. A BAe (HS) 125-600 Hawker is based at Ft. Lauderdale Executive Airport in Florida and 1 Canadair 604 Challenger is flown from Salt Lake City.

BUSOL AIRLINE: 46 Leiptzgskaia Street, Kiev, 252015, Ukraine; Phone 380 (44) 290 4391; Fax 380 (44) 290 4278; Code BUA; Year Founded 1992. Busol is established at Kiev in **1992** to provide all-cargo charters around the CIS and throughout Europe. Grigory Bododisty is president and his fleet includes 1 Antonov An-26 and 6 Ilyushin Il-76MDs.

It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

BUSY BEE AIR SERVICES, A.S.: Norway (1966–1980). Oslo-based **Busy Bee Air Services, A.S.**, the charter subsidiary of **Braathens SAFE, A.S.**, is formed in **1966** and reorganized in **1972**, receiving the upgraded title of **Air Executive Norway-Busy Bee, A.S.** Managing Director Hans A. Grotterad employs a small workforce of 30–35 and operates a fleet of 3 Fokker F.27-100s and 3 Shorts 330s.

A fourth F.27-100 arrives in **1976**, followed by 3 more in **1977–1979**. Flights around northern Europe as well as contract service flights for the Norwegian Armed Forces are continued until **1980**. In early spring the carrier is renamed **Busy Bee of Norway, A.S.** and begins a concentration on military charters.

BUSY BEE OF NORWAY, A.S.: Norway (1980–1993). Reformed in early spring **1980**, Busy Bee continues to provide inclusive tour and ex-

ecutive charter flights and to provide contract service to the Norwegian government, especially military charter. The fleet now includes 8 Fokker F.27s and 3 Shorts 330s. In addition, it now begins to undertake regularly scheduled replacement flights for both **Braathens SAFE, A.S.** and **SAS (Scandinavian Airlines System)**. Customer bookings for the year are 214,630.

In **1981**, the 125-employee company possesses a fleet of 8 Fokker F.27s, to which is added 1 **Braathens SAFE, A.S.** B-737-205A under lease. Enplanements this year total 254,000, a 15.5% boost. They will rise to 374,000 in **1982** and 435,000 in **1983**.

Additional replacement flights are added in **1984–1985**, as Managing Director Hans A. Grotterud's company also becomes a subcarrier for **Netherlines, B.V.** and **Wideroe Norskair, A.S.** The workforce in the latter year totals 168 and enplanements are 630,000. Revenues reach \$3.18 million. Busy Bee celebrates its twentieth anniversary late in the year.

In **1986–1987**, 4 F.27-200s, leased by **Braathens SAFE, A.S.** for its subsidiary, join the fleet's 7 F.27-100s and 1 F.27-300.

Airline employment grows by 13.3% in **1988** to 340. The F.27-300 is now replaced by 4 new Fokker 50s. On May 6, an F.27-100 with 36 aboard crashes near the coast; there are no survivors. Passenger boardings jump 24.4% over the previous year to 1,600,000.

A fifth Fokker 50 is added in February **1989**. Einer Fjeldstad becomes managing director in **1991** and 1 F.27-100 is withdrawn. The fleet now includes 11 Friendships and 5 Fokker 50s.

Operations continue apace in **1990**. The workforce stands at 150 in **1991**. Per G. Braathens remains chairman while Managing Director Fjeldstad's fleet now includes 5 Fokker 50s and 4 Fokker F.27-200s. Operations continue apace for the 175-employee airline in **1992**. A significant government contract is lost at year's end and this reversal so significantly impacts Busy Bee's finances that it is forced to declare bankruptcy and close.

In January–February **1993**, Managing Director Fjeldstad is able to acquire financial backing from Chemical Bank. His airline is restructured and renamed **Norwegian Air Shuttle, A.S.**

BUTLER AIR TRANSPORT (PTY.), LTD.: Australia (1934–1959). C. Arthur Butler wins a contract in April **1934** for a mail route from Charleville to the Cootamundra rail junction to be flown under subsidy as part of the overall England–Australia airmail system. To undertake his service, Butler forms Butler Air Transport, Ltd., equipping it with a de Havilland DH 84 Dragon. On December 10 and again on December 21, Butler participates in his portion of the opening of the England–Australia route, picking up the mail at the QANTAS Charleville field and handing it off at Cootamundra.

The route is continued with little change in **1935–1937**.

On August 4, **1938**, Sydney replaces Cootamundra as the terminus on Butler's mail route. On November 11, **1940**, the carrier takes over the Sydney–Bega via Moruya route, a daily service previously flown between the New South Wales coastal towns by **Adastra Airways (Pty.), Ltd.** This service continues in **1941–1946**.

On April 1, **1947**, the company purchases 93% majority control in **Queensland Airlines (Pty.), Ltd.**, which is allowed to continue operations under its own identity.

While on a June 3 training mission, a DC-3 with two crew fails its takeoff from Schofield; although the aircraft must be written off, there are no fatalities.

New destinations and frequencies are introduced on the New South Wales network in **1948**. Routes and schedules are further integrated in April **1949** when **New England Airways (Pty.), Ltd.** is acquired and merged, its Avro Ansons being passed on to **Queensland Airlines (Pty.), Ltd.**

The first DH 114 Heron arrives in late fall **1952**; christened *Warrawee*, it is placed in service in November. Orders are placed for Vickers Viscount 747s in **1953**. Service continues in **1954**.

The first Viscount 747 is delivered on September 27, **1955**; christened *Warral*, it is placed on the New South Wales routes in October. Butler is the ninth operator in the world to operate the British turboprop.

While climbing away from Bourke on December 15, a DC-3 with 3 crew and 10 passengers suffers an engine failure, but is able to make a successful emergency landing; although the plane is destroyed, there are no fatalities.

Another Viscount 747 joins the fleet in **1956**.

During late spring of **1957**, 3 Airspeed Ambassadors are purchased from **British European Airways Corporation (BEA)**; they are placed into service on August 5. Ansett Transport Industries buys the Butler subsidiary **Queensland Airlines (Pty.), Ltd.** on October 4. There follows a period of protracted, unhappy negotiations between Butler officials and those of **Ansett-ANA, Ltd.**; on February 5, **1958**, Butler is purchased by the larger carrier.

Butler is allowed to retain its own name during a period of integration that ends on December 17, **1959** when the Ansett subsidiary is named **Airlines of New South Wales (Pty.), Ltd.**

BUTLER AIRLINES (PTY.), LTD.: Australia (1977–1982). Butler Airlines (Pty.), Ltd. is formed at Brisbane in **1977** to offer charter services to various small destinations in Queensland. At the same time, twice-daily scheduled service is offered from Brisbane to North Stradbroke Island. The carrier's fleet grows to include 1 Mitsubishi MU-2B, 1 Beech B-58 Baron, 1 Cessna 206, and 1 Hughes 269.

Unable to absorb the losses caused by the higher fuel prices of the early 1980s, the company stops flying in **1982**.

BUTLER AVIATION: United States (1979–1980). Butler Aviation begins flying San Francisco–Eureka Cessna services in the summer of **1979** employing a de Havilland Canada DHC-7-102. The turboprop, with 2 crew and 10 passengers, strikes trees on the crest of Surveyor Mountain at Klamath Falls, Oregon, on September 14 and crashes; there are no survivors.

Unable to recover and refinance, the carrier closes down at the start of **1980**.

BUZZ: Endeavour House, Stansted Airport, Essex, England, CM24 1RS, United Kingdom; Phone 44 (0870) 240 7070; <http://www.buzzaway.com>; Year Founded 1999. This new entrant is formed by **KLM uk, Ltd.** in the fall of **1999** to offer low-cost service from London (STN) to various European destinations employing the former **Air UK, Ltd.**'s fleet of 8 BAe 146s painted in yellow, purple, and lime green livery. BUZZ will fit into KLM uk's plans to reorganize its scheduled services into a concentrated focus on feeder services to and from Amsterdam. KLM uk CEO Floris van Pallandr commits £10 million (\$16.1 million) to start-up costs and promises that the airline will break even by the end of 2001.

The company's booking phones are opened on October 31 and take 3,000 calls on the first day. By December 3, £1 million in advance booking sales have been completed.

During December, the company polishes its plans to make both ticketless travel and pay-as-you-go passenger services available on the ground and in the air.

Revenue flights commence on January 4, **2000** with Done Deal restricted and flexible Open Deal fares on roundtrips between Stansted Airport and Berlin, Frankfurt, Dusseldorf, Vienna, Milan, Paris and Lyon.

To take advantage of the summer tourist trade, Buzz, on March 26, introduces holiday flights from London (STN) to Montpellier and Toulouse, as well as Jerez, in southern Spain. These flights will cease on September 28. Employing a pair of B-737-3L9s purchased from **Deutsche BA Luftfahrtgesellschaft, GmbH.**, Buzz simultaneously opens more permanent routes from London (STN) to Helsinki, Hamburg, and Bordeaux. Introduction of its "Baby Boeings" allows Buzz to become the only European low-cost airline offering food service both on the ground and in-flight.

Frequencies are initiated on March 27 from London (STN) to Bordeaux, Marseilles, Hamburg, and Helsinki. Simultaneously, **KLM uk, Ltd.** withdraws from its last two domestic British routes, Stansted to Edinburgh and Glasgow.

The thrice-daily London (STN) to Hamburg route is suspended on October 28 and the next day the aircraft that had been employed for that service is used to boost capacity for parent **KLM uk, Ltd.**'s London (STN) to Amsterdam service.

BWIA WEST INDIES AIRWAYS, LTD.: Administration Building, Golden Grove Road, Piarco International Airport, P.O. Box 604, Port of Spain, Trinidad and Tobago; Phone (809) 669-3000; Fax (809) 669-1865; <http://www.bwee.com>; Code BW; Year Founded 1999. In honor of the new millennium, **British West Indies Airways, Ltd. (2) (BWIA)** is renamed on December 2, **1999**. In a special ceremony at Port of Spain, the company's new "steel pan" livery is unveiled on an L-1011-500 TriStar.

The first of 6 leased ILFC Next Generation B-737-8Q8s arrives at Trinidad from Seattle on January 8, allowing the company to become the first operator of the type in the Latin American and Caribbean regions. The new aircraft, incidentally, has brought 5,000 pounds of donated medical supplies, which will be transshipped to flood-ravaged Venezuela.

A tentative agreement is reached with **Helen Air, Ltd.** on February 7 under which the St. Lucia-based commuter will operate as a **BeeWee Express** carrier. Twice-weekly B-737-8Q8 return flights are launched on February 10 from Bridgetown, Barbados, to Boston, with continuing service to Port of Spain, Trinidad.

With its license due to expire on March 8, BWIA is recertified by the government on February 26 to operate **BeeWee Express** air bridge services between Trinidad and Tobago. For the next four months, it will be permitted to add another daily roundtrip to the two currently its regional affiliate already operates.

The second Next Generation B-737-8Q8 enters service in March. Frequencies throughout the Caribbean are consequently increased and enhanced, while new flights are started to Washington, D.C. (IAD).

To feed its increasing number of international services, the carrier, in April, begins to operate on the "hub-and-spoke" system, employing two newly established major hubs at Trinidad and Barbados. On April 14, BWIA becomes the first Caribbean-based airline to receive regulatory permission for ETOPS operations. The new B-737-8Q8s will be the first to enjoy the designation, which will be employed to cut 20 min. off the Trinidad–New York (JFK) run.

A new daily nonstop roundtrip is inaugurated on May 24 between Trinidad and Jamaica; the three earlier one-stops are also maintained.

In honor of 60 years of flying, BWIA now applies special decals to all its aircraft.

A code-sharing agreement is signed with **United Airlines** on July 25, with an immediate linkage of frequent flyer programs. Dual designator flights with United commence on September 1 on routes from Washington, D.C. (IAD) and New York (JFK) to Trinidad, from Miami to Antigua, Barbados, and Port of Spain, and on connecting flights to Tobago.

The introduction by BWIA of thrice-weekly services from Trinidad to Montego Bay causes **Air Jamaica, Ltd.** to terminate its recently resumed daily frequency on that route as of October 22.

The collapse of **Air Caribbean, Ltd.** on October 23 leaves BWIA as the only carrier on the Trinidad and Tobago air bridge. Accordingly, it steps in and increases the number of its daily frequencies to eight, with three being operated by MD-83s or B-737-8Q8s. Although it honors true "hardship" cases, the airline does not, in general, honor the tickets of most passengers who had booked with Air Caribbean. Chairman Aleong, commenting upon his competitor's receivership, indicates that he may hire a few of its employees, but has no interest in purchasing any of the AC fleet.

In the wake of the Air Caribbean failure, **Caribbean Star, Ltd.** on October 27 applies to the Air Transport Licensing Authority to operate a

service on the Trinidad and Tobago air bridge. After an objection by BWIA, ATLA Chairman Ramsaran Bissessar announces that law and international treaties exclude the Antigua-based carrier's bid.

BYERS AIRWAYS. *See WIEN AIR ALASKA*

BYKOVO AVIA (BYKOVO AVIATION ENTERPRISE): **Russia (1993–2000).** Prior to its reformation in **1992**, **Aeroflot Soviet Airlines** has four major divisions at the airports around Moscow. The Central Region Civil Aviation Department (CRCAD) (Bykovo Avialinii) is based at Bykovo, 30 miles SW of the capital. The CRCAD is responsible for all medium- and short-range commercial flights in the nation west of the Ural Mountains. Ivan S. Makarov is director general and the fleet includes some 125 Russian-made airliners, including Tupolev Tu-134s, Yakovlev Yak-40s/-42s, and Antonov An-24s/-26s/-32s.

While on final approach to Ivanov on an August 27 service from Donetsk, a Tu-134A with 7 crew and 77 passengers strikes a line of trees 2,962 m. from the runway and crashes; there are no survivors.

Enplanements for the year total 1,928,784.

A large portion of Aeroflot's Bykovo directorate becomes a joint-stock company in **1993**, with shareholding divided between the state (51%) and company employees (49%). The fleet is reduced to 25 An-24s, 10 An-26s, and 12 Yak-42s, plus 5 Mil Mi-8/-17 helicopters. The name "Bykovo Avia" appears on airplane titles and A. A. Mukhin is director general, with Gennady I. Sytnik as general manager. Customer bookings fall off 43% to 1,342,230 while cargo traffic drops 35.1% to 172.4 million FTKs.

Service is maintained in **1994**, but traffic begins an even more spectacular plunge.

The cockpit crew of an An-24B with 4 crew and 28 passengers retracts the landing gear prematurely while taking off from Kherson, Ukraine, on July 17; the aircraft settles onto the runway on its belly and there are no injuries reported. Passenger boardings decline 39.6% to 810,700, while freight falls another 12.8% to 150 million FTKs.

Although there are no reported accidents, business steadily declines in **1995** with only 497,608 passengers flown. Boardings are down to 466,000 in **1996**, but bounce back to 182,268 in **1997**.

The fleet during these years is reduced to 10 An-24s, 6 An-26s, and 10 Yak-42s.

The currency devaluation of summer **1998** has a dreadful impact on company revenues. A new management team arrives in December and optimistically announces the planned inauguration of international services the following summer. Customer bookings this year again drop to 166,000.

Airline employment stands at 2,500 at the beginning of **1999**. With only half of the 12-unit Yak fleet airworthy, 2 more of the type are leased short-term in June from the Irish concern Corvette Aviation, while the others are refurbished. All wear new liveries.

Service to Stuttgart and Hanover begins in late summer.

The airline is renamed **Tsentr Avia** on May 5, **2000**.

BYLINA: Bykovo Airport 19, Sovetskaya Str., Moscow, 140150, Russia; Phone 095-558-4504; Fax 095-501-6500; Code BA; Year Founded 1992. Bylina is established at Bykovo Airport in **1992** to provide regional charter passenger and cargo services. By **2000**, Valentine A. Cherkasov is general manager and he oversees a 57-person workforce and flights provided by 3 Yak 40s.

C AIR: United States (1964–1966). Long Beach, California-based C & W Aviation establishes this flight division in the fall of **1964**. Employing a de Havilland DH 104 Dove, the unit inaugurates scheduled passenger and cargo commuter flights to Los Angeles, Riverside, and Redlands on November 16, maintaining them until **1966**.

C & M AIRLINES: United States (1979–1982). C & M is established at Inyokern, California, in early spring **1979** to offer scheduled passen-

ger services to Los Angeles. Airline employment is 18 and 2 Cessna 402s are employed to inaugurate flights on May 1. Enplanements total 6,000 by December 31.

The employee population is increased by 27.8% in **1980** to 23 and 3 more Cessna 402s are acquired. The 5 aircraft together board 13,411 passengers, a 123.7% boost.

The workforce grows to 50 in **1981** and the equipment numbers 6 Cessnas. Flights are inaugurated to Las Vegas, Palmdale, and Edwards AFB. Again, exact boardings are not made known; however, RPKs advance to 2.88 million.

Upon its sale, the privately owned airline changes its name to **Mojave Airlines** in early **1982**.

C & N CONDOR NECKERMANN TOURISTIC, A.G. *See CONDOR FLUGDIENST, GmbH.*

CAA (CENTRAL AMERICAN AIR LINES, S.A.): Honduras (1925–1927). Dr. T. C. Pounds, who had started the first air service in Central America in 1923 but who went out of business following the defection of his pilot to **Empresa Dean, S.A.**, returns to the Honduran air transport scene in early **1925**.

Having persuaded a pilot named Morgan to contribute an Aeromarine flying boat to this new enterprise christened CAA (Central American Airlines), Pounds relaunches service to the capital city of Tegucigalpa—this time from Puerto Cortes, 200 kilometers away on the Gulf of Honduras. On December 4, the company's northern terminus is transferred to San Pedro Sula, headquarters town for United Fruit Company.

A Caudron is added to the fleet in **1926** and services are maintained, but by **1927** the Pounds-Morgan partnership is finished, along with the airline.

CAAC (GENERAL ADMINISTRATION OF CIVIL AVIATION OF CHINA): 155 Dong-si Xi Dajie, P.O. Box 644, Beijing, 100710, China; Phone 86 (1) 401-2233; Fax 86 (1) 401-2210; Code CA; Year Founded 1952. After decades of struggle, by the summer of 1949 the supporters of Communist leader Mao Tse-tung are in possession of almost all of mainland China. Regularly scheduled operations by the airlines of the Nationalist government, **Central Air Transport Corporation (CATC)** and **China National Aviation Corporation (CNAC-1)** cease on August 17 and they begin sending their aircraft to safety in Hong Kong. Mao Tse-tung announces the formal creation of the People's Republic of China on October 1. The only Western company still flying is **Hamiata**, the Sino-Soviet joint stock company that is providing small-scale services in the northwest part of the country.

On November 1, the new government in Peking establishes the China Civil Aviation Administration (CCAC) to operate ad hoc air services on 12 routes linking the capital with the southern communities of Canton, Hankow, Chongqing, and Kunming.

C.Y. Liu, CNAC-1's Chinese managing director, defects to Tientsin on November 9 with 8 Douglas C-47s and 3 Curtiss C-46 Commandos from the company's 56-plane fleet, plus the CATC Convair CV-240, the only one in China.

Among the defectors is future CAAC Director General Hu Yizhao, now an airplane mechanic. Following their arrival, the aircraft crews are treated to a great feast at the Peking Hotel, where Premier Chou En-lai presides. Shortly thereafter, the Convair is christened *Beijing* and is named flagship of the new airline that the government orders formed.

Those CNAC/CATC fleet elements at Hong Kong are now grounded under guard, but a British court in the crown colony acts on December 3 to prevent the Nationalists from taking control of the aircraft. Over the next several weeks, hundreds of out-of-work CNAC-1 technicians and aircrew flee to Peking, secretly smuggling out maintenance manuals and spare parts for the planes acquired on November 9. A three-year legal battle will follow before **Civil Air Transport (CAT)** is able to claim the contested aircraft.

The Civil Aviation Bureau of the PRC is established at Peking in January **1950** as the first step in the establishment of a national airline. To

take over services previously provided by CATC/CNAC, now based on Formosa, the People's Aviation Corporation of China is formed on March 27, with Soviet interest and assistance. The new concern's name is longer in both Chinese (Ren Ming Hong Kong Kun Sze) and Russian (Sovetskio-Kitaysko Aktsioneren Obschestvo Grazhdanskoi Aviatsii) than it is in English (Sino-Soviet Joint Stock Company). As a result, the company is familiarly known as SKOAGA. It will, at least for awhile, coexist with CCAC, in what might be seen as two autonomous divisions of a young national system.

Shareholding in SKOAGA is divided on an equal fifty-fifty basis between China and Russia and the previous Sino-Soviet joint carrier **Hamiata** is merged. A Russian fleet of Lisunov Li-2s is delivered to supplement the CNAC and CATC units acquired earlier. The airline takes over the **Hamiata** routes, including the strategic service to Alma Ata, while simultaneously starting services in Manchuria over a network earlier flown by the Japanese. A new frequency is also initiated to Chita, in Siberia, where a connection can be made with **Aeroflot Soviet Airlines** flights to Moscow.

CCAC continues to operate its routes in southern China. On August 1, it inaugurates a new service from Canton to Chengtu via Hankow, Tientsin, and Chongqing. Operations continue apace over the next three years. A new route is opened to Irkutsk in Siberia in December 1952. A 1,200-mile Urmuchi-Kashgar route is started in 1953, linking the western Chinese provinces to those in the east.

Having matured both in its administrative ability and in its jurisdiction, the Civil Aviation Bureau is able to organize a merger of SKOAGA and CCAC in March 1954. The new concern is named the Civil Aviation Administration of China (Zhonghua Ming Hong Jui) or Minkaiduy and is placed under the direction of Air Force General Kuang Jen-nun, a Korean War Mig-15 pilot.

Modeled upon the organization of **Aeroflot Soviet Airlines**, the company's major administrative units are established as directorates at Peking, Shanghai, Canton, Shenyang, Sian, and Hankow, with subdirectorates at Lanchow and Chongqing. The establishment of the new carrier is completed by December 30.

The year 1955 is one of amalgamation as the new airline's DC-3 and Li-2 fleet successfully integrates operations over the combined new route network. An initial few (later hundreds) Antonov An-2 biplanes are acquired and employed to start services from Lanchow to Hofei and Sining. Imported Soviet Ilyushin Il-12s/14s begin to supplement the Li-2s and plans are made for modest foreign expansion the following year to nations of similar political outlook.

The first international expansion (other than the Soviet Union) is an April 11, 1956 Il-14 route from Kunming to Rangoon via Mandalay. An Li-2 route proving flight is made from Peking to Lhasa, Tibet, on May 25, with regularly scheduled service beginning on June 27. Meanwhile, Canton to Hanoi service is launched on May 29 via Nanning.

A comprehensive domestic route network is developed between 1957-1960. It is reported during these years that, since the creation of the CAAC, the route network has doubled in length to 16,000 miles, 29 routes are operated, and 42 Chinese communities have obtained air service. It is also suggested that PRC commercial aviation has a perfect safety record.

Under unknown circumstances, an Il-14 is lost 70 km. from Xian on April 5, 1958.

In the international arena, a new route is opened on April 3, 1959, from Beijing to Pyongyang, North Korea, via Shenyang. Five Vickers Viscount 843s are ordered from the U.K. in 1961.

In April 1962, the Civil Aviation Administration of China is reformed into the **General Administration of Civil Aviation of China** (also known as CAAC) and, again on the Soviet model, is assigned such additional duties as cargo, training, agricultural flying, rotary-wing support operations, etc. The commercial division, now operating under the historic China National Aviation Corporation (CNAC-2) name, comprises 20 Li-2s, 50 Il-12s/14s, and 6 Il-18s.

The five Viscount 843s are delivered in 1963 and placed into service. Simultaneously, an interline agreement is signed with **British Overseas Airways Corporation (BOAC)** and negotiations are undertaken with **Aeroflot Soviet Airlines** to make the Soviet's Moscow-Peking service a joint operation.

On April 29, 1964, **Pakistan International Airlines Corporation (PIA)** inaugurates Boeing 707-340 Stratoliner service from Dacca to Shanghai via Canton. The Karachi-based company has the distinction of offering the first Western airline service into the PRC since the 1949 revolution and its Boeing is the first Western jetliner to visit China. Direct propliner flights from Canton to Phnom Penh also begin during the year. Events of 1965 have nothing so spectacular to offer.

In early 1966, Antonov An-2s are employed to begin weekly services from Urumchi to Sharasume and from Urumchi to Tahcheng via Karamai. A twice-weekly service is also offered from Lanchow to Sinang. As a result of the establishment of diplomatic relations with France two years earlier, **Air France**, on September 20, gives Chinese customers a direct Stratoliner link from Shanghai to Paris; this first European connection is flown via Phnom Penh, Karachi, Cairo, and Athens.

Beginning on April 22, 1967, reciprocal services to Pakistan are widened. Orders are made in 1968 for a number of Antonov An-24s, 2 Tupolev Tu-134s, and 6 Mil Mi-6 helicopters. An Il-14 crashes at Beijing on December 5.

As political difficulties with the Soviet Union intensify toward decade's end, little is heard of the Chinese carrier in the West. Orders are placed in Great Britain during 1969 for 6 Hawker Siddeley (HS) Trident 3Bs.

To replace aging Soviet aircraft, 4 HS Trident 1Es are purchased from **Pakistan International Airlines Corporation (PIA)** in 1970. The carrier's 20 Li-2s and 30 Il-12s are retired as new An-24s enter service. An order is sent to Moscow for 5 Ilyushin Il-62s.

A policy of more relaxed relations with the outside world is implemented and plans are made to expand international services. An Il-14 is lost at Guiyang on November 14.

The first of 5 Il-62s arrives in early May 1971 and, with an all-Chinese crew, makes a roundtrip on May 13 over the trunk line from Beijing to Guangzhou; the long-legged jetliner allows cancellation of the previous propliner stop at Wuhan. The flight is the first indigenous civil jetliner flight in Chinese aviation history.

Orders worth \$48 million are placed on August 24 for 33 Trident 2Es as 2 Nihon YS-11A-200s join the fleet. Future **Air China International** President Xu Bai Ling is a crew member on the flight bringing Secretary of State Henry Kissinger to Beijing. One of the ex-PIA HS Trident 1Es transporting out-of-favor Defense Minister Lin Piao on a specially arranged flight crashes north of Beijing in September. It is widely rumored that the loss is an act of sabotage.

In addition to some 300 Antonov An-2s involved in agricultural flying, the fleet in 1972 comprises approximately 50 Il-14s, 9 Il-18s, 6 Viscount 843s, and 2 YS-11A-200s. Air Force One brings U.S. President Richard M. Nixon to China on February 21; the dramatic visit will have an important impact on PRC aviation, as well as world diplomacy.

On July 24, orders are placed for 3 Anglo-French Concorde at \$34-million-per-copy (they will never be delivered). On August 6, an Il-18 shows an in-flight motion picture for the first time in China. Huge, new—some say historic—orders for Western flight equipment are now placed: \$56 million in August for 6 Trident 2Es and \$120 million on September 12 for 10 B-707-3J6B Stratoliners, plus \$26 million the same day for 40 spare Pratt & Whitney JT3D jet engines.

The first Trident 2E arrives from the U.K. on November 13. The same day, another \$59 million is committed for 6 more Trident 2Es and 2 Trident 3Bs.

Five more Il-62 jetliners are purchased from the Soviet Union in 1973. The first domestic Trident 2E service is flown on March 15 between Beijing and Shanghai. The An Il-62 arrives in Tokyo from Shanghai on March 23 on a flight designed to pave the way for direct flights between the People's Republic and Japan. On April 18, scheduled weekly Il-62 European flights are started to Bucharest and Tirana via

Tehran. The first B-707-3J6B arrives at Beijing in August and is initially employed on a proving flight to Albania.

A Trident 2E makes a flight from the mainland to Hong Kong on September 28, the first such flight since the Communists came to power 23 years earlier. Orders are placed for 15 Australian Aircraft Factory Nomad N.2s while a \$100-million request of December 4 for 13 additional Trident 2Es and 2 3Bs is the last made for that aircraft type.

Direct Peking to Moscow Il-62 flights commence on January 30, **1974**. In commemoration of the second anniversary of the establishment of diplomatic relations, CAAC and **Japan Air Lines Company, Ltd.** (2) initiate direct B-707-3J6B services between Peking and Tokyo on September 29. CAAC will be allowed to use Tokyo as a stopover on its forthcoming flights to Canada and the U.S.

Weekly roundtrip Stratoliner service from Beijing to Paris is launched on October 27 via Karachi. Tirana is dropped from the route map on November 29 as B-707-3J6Bs replace Il-62s on the China–Iran–Romania service.

During **1975–1977**, additional international routes are started, growing in number from 107 to 160 and the number of weekly flights increases from 273 to 500. Director General Ma Jen-Hui's fleet is upgraded and comes to include 13 Li-2s, 50 Il-14s, 11 Il-18s, 7 An-12s, 5 Viscount 843s, 20 Trident 2E/3Es, and 5 Il-62s, 10 B-707-3J6Bs. In addition, there are 37 An-24s, 31 An-26s, 300 indigenously built Y-5s, and 30 N-30s.

Osaka joins the Asian route network in 1976 while an An-24, with 40 passengers, crashes at Changsha on January 21, while on final approach to Baiyun Airport, Guangzhou; there are no survivors.

Shen Tu is named director general early in **1978**. A de Havilland Canada DHC-6-200 Twin Otter is delivered on April 1 and, simultaneously, Stratoliner service is inaugurated to Addis Ababa via Karachi. Weekly B-707-3J6B flights commence to Zurich via Urumchi (technical stop) and Bucharest.

The 117th and last Trident built, a 2E, is delivered on June 17, followed by another 2E on October 11. One of the new units inaugurates regularly scheduled services from Guangzhou to Hong Kong on October 12.

An order is placed with Boeing on December 16 for 3 B-747SP-J6s. The request is the first from CAAC since the Stratoliner order of September 1972.

A three-year old service to Phnom Penh is suspended on February 1, **1979**.

A HS-121 Trident 2E with 12 crew crashes into a factory while climbing away from Guangzhou on March 14; all aboard are killed, along with 32 people on the ground.

Weekly Il-62 service is launched to Frankfurt on May 3 via Tehran and Bucharest.

Flights to Manila commence on September 4 and Nagasaki becomes the carrier's third Japanese destination on November 1. The carrier begins recruiting female flight attendants at Peking on December 23; within 3 days, 800 have applied for an estimated 140 positions.

The first B-747SP-J6 is delivered on February 29, **1980**. An An-24V is lost at Changsha on March 20; there are no other details on the accident.

The new B-747SP-J6 Jumbojet is employed to inaugurate weekly roundtrip Beijing to Paris flights on April 2.

A pooled daily service with **Cathay Pacific Airways (Pty.), Ltd.** on June 21 between Guangzhou and Hong Kong. Two more Special Purpose Jumbojets also arrive, one each on June 26 and September 23, respectively. B-707-3J6B service to Bangkok is initiated on August 29.

Under charter to General Motors, 6 B-747SP-J6 flights are conducted in October between Beijing and Seattle. On November 15, one of the new SPs extends the Frankfurt route on to London.

It will be reported 15 years later that enplanements for the year are 3.42 million and 90,000 tons of freight are transported.

During the first week of **1981**, the press notes that CAAC has upgraded its operations for the initiation of flights to America; among the

improvements cited are new uniforms, in-flight movies, improved cuisine, and more courteous service.

Scheduled B-747SP-J6 passenger services between the U.S. and China are resumed on January 7, after a 32-year hiatus, when a B-747SP-J6 piloted by Xu Bai Ling, with 139 aboard, lands at San Francisco after a nonstop flight from Beijing. Passengers are welcomed by Mayor Dianne Feinstein and Chinese Consul General Hu Ding-yi. The aircraft continues on to New York.

The carrier now begins to launch or upgrade passenger and cargo service to 17 countries in Asia, Africa, Europe, and North America. Domestically, the route network grows to 171 services tying together 29 provinces. The fleet is increased by 2 Trident 3Es, 7 Trident 2Es, 5 B-737-2J6As, 1 B-707-3J6C, and 2 MD-80s. Direct Trident 2E roundtrips are initiated between Kunming and Hong Kong on November 3.

Service from Shanghai and Beijing to Los Angeles begins on April 12, **1982**.

En route from Guangzhou to Builin on April 26, Flight 3303, an HS 121 Trident 2E with 8 crew and 104 passengers crashes into Mt. Yangsu; there are no survivors.

In the spring, a B-737-200 demonstrator tours the country for 6 days, landing on occasion at difficult points such as the 11,800-ft. high city of Lhasa in Tibet.

When five men attempt to commandeer Flight 2502, an Il-18, on July 25, they are attacked by both crew and passengers and the two would-be pirates are nearly bludgeoned to death. As later described by a group of New Jersey tourists aboard, one of the hijackers dropped a live hand grenade that exploded, blowing a hole in the fuselage and causing the aircraft to nearly crash during its Shanghai landing. After a trial, the five failed pirates are executed at Shanghai on August 18.

Orders are placed with Boeing on December 15 for 10 B-737-2T4As.

A passenger's cigarette butt starts a fire aboard an Il-18B with 11 crew and 58 passengers as the Ilyushin is landing at Guangzhou on December 24; the aircraft is evacuated on the runway, but 25 passengers die and 28 others are injured in the process.

Built for **Braniff International Airways** but not accepted, a B-747SP-27 is sold on December 23 to CAAC instead.

As a result of the July hijacking attempt, the Chinese government assigns security guards to all company flights as of February 23, **1983**.

After landing at Fuzhou on February 27, an HS 121 Trident 2E with 96 passengers overruns the runway and suffers the collapse of its nosegear; there are no fatalities.

Despite the new guards and because of inadequate airport policing, five men and a woman are able to smuggle two pistols aboard a Trident 2E with 105 aboard on May 5. They shoot two crew members while taking over the plane during a flight from Shenyang to Shanghai. The pirates demand to be flown to Taiwan, but the pilot flies over North Korean airspace, perhaps desiring to put down in friendly territory. The North Koreans put up a cloud of anti-aircraft fire and force the plane to divert south, where it is allowed to land at a U.S. base northeast of Seoul, South Korea. The incident marks the first successful skyjacking of an aircraft from the People's Republic.

CAAC Director Shen Tu and South Korean Deputy Foreign Minister Ro Myung meet in Seoul on May 7 to negotiate the return of the hijacked Trident 2E and prosecution of the six hijackers. Shen, the first Communist Chinese official to visit South Korea since 1953, is able to also sign the first official accord between the two nations, a document limited to the repatriation of the passengers, crew, and jetliner—but not the hijackers. A local court sentences the pirates on August 18 to prison terms ranging in length from four to six years; the Peoples Republic protests the leniency of the sentences. After a year, they will be released and sent to Taiwan.

A fourth B-747SP-J6, the one accepted in December because **Braniff International Airways** could not pay for it, is delivered on June 15. It will continue to wear its U.S. registration numbers for five-and-a-half years.

While taxiing onto the runway at Guilin and preparing for takeoff on a service to Beijing on September 14, an HS 121 Trident 2E with 6 crew

and 100 passengers is struck on its starboard side by a taxiing military aircraft. The military plane rips a hole in the forward right side of the Trident's fuselage (11 dead). This is the fourth incident since the previous April.

Two McDonnell Douglas MD-80s are sent to China as demonstrators on December 9 and are placed into a trial service with the Shanghai directorate.

A B-747-2J6B Combi (BC) is delivered on December 20 and it is reported that, despite very bad service, the airline earns \$100 million in profits for the year. Still, the four accidents and safety incidents between April 1982 and September 1983 bring about concern for the airline's operational management.

At the beginning of 1984, CAAC has only 15 commercial aircraft; these are primarily outmoded Soviet-built units.

A lone hijacker is overpowered when he attempts to hijack an An-24 on June 25 as it flies from Nanchang to Fuchou.

Also in June, CAAC service standards and safety are officially criticized for the first time.

In September and October, Gu Mu, the state councillor in charge of China's modernization program, and CAAC Director General Shen Tu announce that the carrier is being restructured and that CAAC will cease to exist as an operational airline. The plan, which will be approved by the state council in December, calls for CAAC to remain as the administrative body for (initially) four new regional airlines, each with a different geographical name (e.g. **China Southern Airlines Company, Ltd.**), that will be phased in during the years ahead. In addition, the international routes will be placed into an autonomous unit to be known as Air China, and all utility work will be passed to **China General Aviation Company**.

Passenger enplanements for the year reach 3,942,000.

Throughout 1985, a total of 76 airliners of a wide variety of types are ordered via the China Aviation Supplies Corporation: 8 B-737-300s, 26 MD-82s, 5 B-767-2J6ERs, 5 B-757-2J6s, 1 B-747-2J6C, 3 Airbus Industrie A310-222s, 3 Tupolev Tu-154Ms, 5 B-707-3J6Cs, and 8 Short 360-300s. With 217 aircraft already on hand, CAAC ranks 6th among world airlines in terms of fleet size.

The year starts out badly with another fatal accident. While performing a missed approach in fog and rain at Jinan on January 18, an An-24B with 7 crew and 34 passengers crashes near the airport (38 dead).

Also in January, Xinhua reports the State Council's December decision to split up CAAC and indicates that there may be as many as six independent airlines. Twenty-seven routes are added during the year, including 7 domestic and 20 to such international destinations as Kuwait and Singapore.

On April 1, 57-year-old Hu Yizhou succeeds Shen Tu as director general and, on April 15, after 6 years of negotiations, an \$800 arrangement is made with McDonnell Douglas for the purchase of 28 MD-82s. All but one of the aircraft will be assembled at a plant in Shanghai from parts supplied by the manufacturer from Long Beach.

In May, 5 B-707-3J6Cs are delivered. A B-747-243B, previously flown by **Alitalia, S.p.A.**, enters service on May 20 on a six-month lease from Boeing. According to CAAC CEO Hu Yizhou in June, only four other independent airlines will be created aside from the CAAC-controlled international unit. Also in June, the first two A310-222s enter service and a memorandum of understanding for a two-phase technical cooperation project is signed with **Deutsche Lufthansa, A.G.** Phase 1 begins on July 1 as German airline executives provide advice on improvements to the Chinese airline's workshops. Later Phase 2 will emphasize maintenance assistance. The first Shorts 360-300s arrive during the month and begin flying from Shanghai.

In early August, one-hour \$55 helicopter tours are initiated to the Great Wall and Ming Tombs. At the same time, 4 more Shorts 360-300s are delivered and begin operations from Wuhan. En route from Canton with 89 aboard on August 30, a Trident 2E crashes while landing at Hong Kong (6 dead). In September, an agreement is signed with **Qantas Airways (Pty.), Ltd.** for maintenance of the carrier's B-747s, B-767s, and B-707s.

Another aircraft, carrying 46 workers being rewarded for recent good performances, crashes into a hotel in Linfen on October 7 (42 dead). A Shorts 360-100 is damaged beyond repair as the result of a bad landing at Enshi on October 22; there are no fatalities.

Equipped with a B-737-2J6A, the former Xinjiang Province division, based at Urumqi, inaugurates service in November as **Xinjiang Airlines Company, Ltd.**, the first of the new regional carriers. Another regional, **Yunnan Airlines of China, Ltd.**, based at Kunming and named for its province, receives a B-737-2J6A in December.

Passenger boardings soar 46% to 7.3 million and freight traffic rises 33.4% to 403 million FTKs.

For the Chinese New Year holiday the first week of February 1986, 108 additional flights are made to Hong Kong. The staff now totals approximately 50,000 and the company continues to operate three training colleges for the education of future personnel. There are more than 90 civilian airports in the country, including 8 that can accommodate Jumbojets and 32 large enough to take B-737-2J6As. Early in the year, passenger services are inaugurated with the first commercial aircraft developed and built in China, the Xian Y-7-100.

Operated by the Wuhan municipal authorities, the regional **Wuhan Airlines Company, Ltd.** inaugurates services in May to Hubei, Hunan, Guangdong, and Sichuan provinces. Some \$850 million in orders are placed in June for 4 (later 5) Jumbojets (2 Dash-2J6BCs and 3 Dash-4J6Bs), 4 B-767-2J6s, and 2 A310-300s.

The fleet now comprises 410 aircraft, including 300 small Soviet machines and as of October, the first of 10 BAe 146-100s to be delivered. **China Southwest Airlines Company, Ltd.**, based in Sichuan Province, is the only one of the regional carriers, other than Xinjiang and Wuhan, which appears close to start-up, although **Shanghai Airlines Company, Ltd.**, with 5 B-707-320Cs, announces plans for services to Beijing and Guangzhou by year's end.

Just after takeoff from Lanzhou on December 15, an An-24RV with 7 crew and 37 passengers develops engine problems in its No. 2 power plant due to severe icing. The aircraft attempts to return to its point of origin, but crashes en route (6 dead).

Customer bookings jump 33% to 10 million and cargo accelerates 21.4% to 489.82 million FTKs.

The giant carrier, which is soon to begin de-emphasizing its CNAC-2 flying operations in favor of the regional airlines it will regulate, opens 22 new domestic markets and 17 international services in 1987, bringing the system to 318 routes, including 35 international segments. Among the first of these is a new B-747SP run from Beijing to Melbourne via Guangzhou and Sydney, which replaces service formerly operated (minus the Guangzhou stop) by **Qantas Airways (Pty.), Ltd.** Overall, more than 229,000 km. of domestic air routes are operated, along with some 94,000 international km. Orders remain outstanding for 3 B-747-400s, 2 B-767-200ERs, 40 Y-7-100s, 6 BAe 146-100s, 5 MD-82s, and 2 A310-300s. However, 2 new B-747-2J6BCs enter service, 1 each on March 28 and December 10.

Three new regional carriers are launched, including **China Northeast Airlines Company, Ltd.** at Shenyang, in Liaoning Province, near North Korea, **China Northwest Airlines Company, Ltd.** in Shaanxi Province, and **China Southern Airlines Company, Ltd.** based at Guangzhou in Guangdong Province, not far from Hong Kong.

Currently, CAAC maintains working relations with some 386 foreign airline companies and the Chinese government has bilateral air service agreements with over 40 countries. Under terms of its February pact with East Germany, an **Interflug DDR Airlines** Il-62 initiates weekly service on May 1 between East Berlin's Schoenefeld Airport and Beijing; the 8,100-km. flight, completed via Moscow, requires 9 hrs. 50 min. The route is the shortest link between China and Europe, being 2,000 km. less than services operated by **Air France** and other carriers.

The first MD-82 assembled in China is delivered in July and it is announced that it is assigned to the **China Northeast Airlines Company, Ltd.** **China Eastern Airlines Company, Ltd.** receives 2 Airbus

Industrie A310-300s in July–August. In cooperation with **Royal Nepal Airlines, Ltd.**, weekly charter service is inaugurated in September between Lhasa and Kathmandu.

The international division launches Beijing–Vancouver via Shanghai B-747-2J6BC flights in October. Three B-757-221Bs are accepted by CAAC in November and are handed over to **China Southern Airlines Company, Ltd.**

Passenger boardings rise 28% to 12,800,000 and 647.49 million FTKs are flown. Revenues advance 45% and operating income is up 53.6%, although the airline fails to reveal exact monetary figures; an after-tax profit of \$263 million is declared.

Organization and promotion of the regional airlines continues apace in 1988.

While on initial approach to Chongqing on January 18, an Il-18D with 10 crew and 98 passengers literally loses its No. 4 engine; the resulting vibration causes the plane's pilot to lose control of the Ilyushin and crash. There are no survivors.

Employing a B-707 leased from CAAC, **Royal Nepal Airlines, Ltd.** is able to begin participation in the shared charter service the two airlines have between Lhasa and Kathmandu. The service will be operated annually from April through October, although the Nepalese will substitute a B-727-100.

In May, a B-707-3J6B is hijacked to Taiwan. In early June, CAAC indicates that it will soon be primarily a regulatory body and airport authority. The regional carrier **China Eastern Airlines Company, Ltd.** is established on June 25.

On July 1, the Beijing-based international division is renamed **Air China International Corporation**. CAAC Deputy Administrator Xu Bai Ling, who headed the former division, is named president as the CAAC continues to divest itself of its actual airline operations. His fleet is immediately equipped with all 4 B-747SP-J6s.

While landing at Kai Tak Airport at Hong Kong on August 31 after a service from Guangzhou, a HS 121 Trident 2E with 11 crew and 78 passengers strikes approach lights and suffers the collapse of its right main landing gear. The aircraft veers off the side of the runway and into Kowloon Bay (7 dead).

Later in the month, an Il-14 with 46 passengers aboard crashes into a hotel at Linfen, Shaanxi Province, while on a sight-seeing flight (42 dead).

In December, the second indigenous MD-82 goes to **China Eastern Airlines Company, Ltd.**

Revenue passenger kilometers flown increase by 37.5% to 25.6 billion as enplanements total 21.4 million. Freight traffic also accelerates upward by 13.9% to 731.83 million FTKs. The year's profit is officially put at \$269 million.

Beginning in 1989, CAAC no longer regularly flies operations or reports traffic statistics, leaving these matters to be largely managed by **Air China International Corporation** and the regionals. It does, however, act as a central purchasing agent for aircraft as well as a regulatory body, controlling the allocation of route in a manner similar to that practiced by the old U.S. CAB. Although the exact impact of this political disaster on Chinese airline traffic figures is not revealed, by all informed reports, it is significant.

Demonstrations occur in Beijing between May 4 and June 4. On the latter date, soldiers sweep through protestors in Tiananmen Square, dispersing the crowds at a dreadful cost in lives.

While on its takeoff roll from Honggalae Airport at Shanghai on August 15, an An-24 with 40 aboard overruns the runway and plunges into the river (34 dead). The first 2 B-747-4J6s arrive during the year.

Flights continue in 1990. During the year, CAAC authorizes the undertaking of a five-year experimental program by **China Southwest Airlines Company, Ltd.** to provide airlift for the Chinese Air Force from Chengdu to the capital of the Tibet Autonomous Region.

China's worst-ever air disaster occurs on October 2 when a hijacked **Xiamen Airlines Company, Ltd.** B-737-247A crashes into aircraft

from **China Southwest Airlines Company, Ltd.** and **China Southern Airlines Company, Ltd.** while landing at Canton (131 dead).

Director General Hu Yizhou is succeeded in April 1991 by Jiangxi Province Communist Party Secretary Jiang Zhuping. A large number of independent air carriers have now been established in the nation, most being owned by large manufacturers, municipal, or provincial governments. All report to the CAAC, which continues to allocate routes and order aircraft. In a statement that will be recanted, Director General Zhuping announces in November that the new carriers will be open to private and foreign investment.

In 1992, all of the surviving Il-18s are transferred to **China United Airlines**. In June, a new agreement is signed with McDonnell Douglas for the production of 40 additional MD-82s. When Airbus Industrie sells Dassault Mirage jet fighters to Taiwan, it incurs the wrath of the PRC government and damages, at least temporarily, its prospects for sale to China of its Airbus jetliners.

Late in the year, four airliners (covered under their company profiles) are destroyed in crashes (276 dead). During the year, \$340 million is spent on new "fixed assets," including construction and ATC radar. Six new airports have been opened since January.

Enplanements increase 31.7% to 28.68 million.

In 1993, the three largest ex-CAAC divisions-now-airlines (**Air China International Corporation**, **China Southern Airlines Company, Ltd.**, and **China Eastern Airlines Company, Ltd.**) are granted the status of autonomous, indeed independent, "aviation groups." The three are given responsibility for their own aircraft acquisitions and finances, and are allowed to float shares on the new Chinese stock exchanges. In March, CAAC announces tightened regulations for new entrants and sets minimum levels for working capital and experienced management, maintenance, and ground-support staff.

On behalf of the nonindependents, the central organization takes delivery of 71 aircraft during the year and begins to operate the aviation college outside Chengdu in Sichuan Province. Through April, Boeing has delivered 125 aircraft since President Nixon's visit in 1972.

On June 3, Hong Kong Aircraft Engineering (HAECO) and **Cathay Pacific Airways (Pty.), Ltd.** agree to establish a maintenance outfit with local authorities in Xiamen.

A report by John Bailey in the June 23 issue of *Flight International* indicates that there are now some 35 airlines in service in China and that CAAC influence with them is rapidly disappearing. Still, poor safety records require CAAC to begin blocking marginal airlines from acquiring new aircraft, a rule soon extended to all PRC airlines. The move is supported by the big American manufacturers Boeing and McDonnell Douglas, as well as Airbus Industrie in France.

New airports are opened during the year at Wuhan, Kunming, Lhasa, and Dayong.

Charged with lax safety standards that have resulted in crashes and 10 hijackings within the past year, Director General Jiang Zhuping is demoted to deputy director in January 1994. Zhuping is succeeded by Chen Guanyi, a member of the Communist Party Central Committee, whose new post is now elevated to government cabinet level. In April, the airline regulatory leadership lets it be known that foreign investment will be sought in an effort to maintain a growth rate of 13% for its carriers and for an upgrade of infrastructure (airports and ATC). Meanwhile, Director General Guanyi launches a campaign to improve passenger service standards at the companies.

CAAC is able to effect a major reform in air traffic management in May when it is allowed to take over ATC responsibility from the military for the routes linking Beijing with Shenzhen and Guangzhou. These busiest routes are returned to civilian oversight after more than 40 years. Meanwhile, CAAC begins to compile the CCARS (China Civil Aviation Regulations) modeled on the Federal Aviation Regulations of the U.S. Federal Aviation Administration.

In September, the dormant China National Aviation Corporation (CNAC-2) division, named in honor of the famous pre-revolution carrier established with the help of **Pan American Airways (PAA)**, is

reactivated and takes majority 51% interest in **Air Macau, S.A.**, the first airline to operate from the Portuguese enclave in modern times.

Enplanements encompassing all airlines in China total 37,344,191. Since 1980, total passenger volume has increased 12-fold to 78 million passengers flown (including those served by private and foreign carriers).

CAAC joins with Rosaero Navigatsia of Russia on January 4, 1995 to authorize a new air route from North America via Siberia to China. In March, China National Aviation Corporation (CNAC-2) announces that it will begin a rival airline in Hong Kong before the British colony is handed back to the PRC in 1998.

During the last week of April, CNAC-2 applies for a scheduled license to operate service into Hong Kong as a complement to the charter flights into Kai Tak already made with aircraft leased from **China Southwest Airlines Company, Ltd.** The PRC move is bitterly opposed by **Cathay Pacific Airways (Pty.), Ltd.**, even though CNAC-2 is a 10% shareholder in Cathay.

The five-year experimental airlift program by **China Southwest Airlines Company, Ltd.** on behalf of the Chinese Air Force is completed during the spring. CSA will continue to offer flights for the military between Chengdu and the capital of the Tibet Autonomous Region. The experimental project has proven to be such a success that CAAC now orders a Chinese Air Force liaison office set up in each of the country's major regional airlines.

China National Aviation Corporation (CNAC-2) in July is one of seven PRC carriers agreeing to make service with Taiwan easier for passengers from both Chinas; beginning in August, it will offer double boarding passes to outbound customers traveling via Hong Kong on a **China Airlines, Ltd. (CAL)** connection.

During the year, the agency continues to aggressively improve the PRC aviation infrastructure. Hundreds of airport facilities are improved, with special attention paid to the 40 airports from which 95% of the carrier's domestic and international departures are made. Zhuhai Airport and the airport at Macau, the Portuguese enclave, are opened as the fourth and fifth airports in the Pearl River Delta.

As part of a new Five-Year Plan, several new procedures come out of the 14th Meeting of the Chinese Communist Party in October. As soon as Macau Airport is ready in November, **Air Macau, S.A.**, the indirect CAAC subsidiary, launches service. **China Northern Airlines Company, Ltd.** and **China Northwest Airlines Company, Ltd.** begin services to the facility on December 8.

Also in December, discussions on a proposed \$144.4-million joint venture with **Cathay Pacific Airways (Pty.), Ltd.** for the joint operation of a new airport at Xiamen are dropped.

A new bilateral air agreement between China and the U.S. is signed on December 24; under its terms, **China Southern Airlines Company, Ltd.** will be able to begin transpacific service the following year.

Once again, CAAC, acting as something of a clearinghouse, reports annual traffic figures to ICAO for all of the country's airlines. These show passenger bookings ahead by 27% to 51,156,426. Freight carriage increased 20.2% to 2.16 billion FTKs. It will also be noted that the Boeing concern has trained over 1,000 Chinese pilots and maintenance personnel at its Seattle facilities during the past two years. In addition, the nation's airlines have recorded 1.2 million accident-free hours of flight time.

Implementation of the nation's ninth Five-Year Plan begins in January 1996. CAAC now begins to relax its two-year ban on aircraft purchases and begins to phase in a new "down to Earth effort" designed to withhold new aircraft from those carriers with poor business management practices or safety records. Under these new rules, plans are made for the acquisition of 240 new airliners by the year 2000.

During the second week of the month, approval is given to Flight-Safety International for construction of a flight training center near Kunming. At month's end, officials inform the Orient Airline Association that it will not support the applications for membership of its three largest airlines, **China Southern Airlines Company, Ltd.**, **China Eastern Airlines Company, Ltd.**, and **Air China Interna-**

tional Corporation. Rather, they insist that China National Aviation Corporation (CNAC-2) be the first admitted.

The PRC expands its stake in Hong Kong's major airlines during the last week of April. Under a stock offering arrangement worked out between Swire Pacific (Pty.), Ltd. and China's foreign investment firm Citic Pacific, Swire sells out its majority stake in Cathay, while retaining its management contract. It also turns over 35% controlling interest in **Dragonair (Pty.), Ltd.**, along with the right for the Chinese to appoint their own management team.

Citic Pacific, on its part, will acquire 572.9 million shares of Cathay stock for HK\$6.3 billion (\$815 million) and advance its shareholding from 10% to 25%. Meanwhile, China National Aviation Corporation (CNAC-2)'s stake shrinks from 10% to 8%, public shareholding falls from 27.40% to 23.10%, and the 52.60% holding of Cathay Pacific is reduced to 43.9%. The infusion from the stock offering is almost twice what is needed by Cathay to cover the costs of the new headquarters and training center it is building at Chek Lap Kok Airport, which is due to open in April 1998.

At the same time, Cathay loses its control of **Dragonair (Pty.), Ltd.** Under the same agreement, China National Aviation Corporation (CNAC-2) takes over with a 35.86% majority stake. For this, the CAAC unit pays HK\$1.97 billion (\$254.8 million), including HK\$971.1 million (\$125.6 million) each to Swire Pacific and Citic Pacific and \$4 million to the founding Chao Family. Swire Pacific's stake drops from 43.16% to 25.50%, that of Citic Pacific falls from 46.15% to 28.50%, that of the Chao Family from 5.57% to 5.02%; public interest of 5.12% remains unchanged.

During the first week of July, CAAC-2 announces that it will expend \$700 million on air navigation aids over the next five years. The announcement comes as a Raytheon AutoTrac ATC system is turned on by the North China Regional Administration at Beijing; it will be followed by installations at Taiyuan, Kunming, Nanchang, Xian, Zhuhai, and Zhengzhou.

Also during the summer, the Taikoo (Xiamen) Aircraft Maintenance concern, built by local investors in association with Hong Kong Aircraft Engineering (HAECO) and **Cathay Pacific Airways (Pty.), Ltd.** opens at Xiamen.

The *China Women's News* is chosen to announce on August 21 that CAAC is implementing new security rules. Passengers stealing luggage, aircraft fittings, or life vests, smoking in nonsmoking areas, sneaking dangerous goods through safety checks, or getting drunk and fighting with other passengers will be severely punished.

During September, Beijing's Capital International Airport becomes the first in the PRC to seek membership (which will be approved two months later) in the Airports Council International. During the month, CAAC announces that it has spent \$2.2 billion over the past five years making upgrades at 44 airports and authorizes Shanghai officials to begin building the new Pudong International Airport.

CNAC-2 takes over Hangzhou-based **Zhejiang Airlines Company, Ltd.** in mid-October for an undisclosed sum.

China's first international air show, "Airshow China '96," is hosted at Zhuhai Airport, 30 miles west of Hong Kong, from November 5-10. Every CAAC subsidiary, including airlines, airports, training, ATC, and maintenance units, have an exhibition in CAAC's large pavilion.

At year's end, a total of 27 CAAC-approved airlines are in operation, although only six are fiscally viable. Between them, **Air China International Corporation**, **China Eastern Airlines Company, Ltd.**, **China Northern Airlines Company, Ltd.**, **China Northwest Airlines Company, Ltd.**, **China Southern Airlines Company, Ltd.**, and **China Southwest Airlines Company, Ltd.** are responsible for 82% of the revenue transport kilometers flown by Chinese carriers.

Following the completion of a review by a joint team from CAAC and the U.S. FAA, it is announced in March 1997 that the Chinese body meets all requirements of international safety oversight standards, but will require additional resources if it is to monitor the safety aspects of its various air carriers.

A **Shenzhen Airlines Company, Ltd.** B-737-300 crashes while landing at Shenzhen on May 8 (35 dead). Although the accident is the 15th major PRC incident within the past decade, it is the first since CAAC began a safety crackdown 3 years ago. Also during the month, a \$1.5-billion order is placed with Airbus Industrie for 20 A321s and 10 A320s.

It is reported that, by June, CAAC has established 62 jointly funded or cooperative ventures involving contracted foreign investments of some \$500 million. Total investment in civil aviation projects over the past decade now tops \$15 billion.

On July 1, CAAC authorizes an adjustment in ticket prices for the country's domestic routes and airlines. Henceforth, PRC citizens and foreigners will both be charged the same tariff. The move, brought about by Beijing's desire to join the World Trade Organization, is widely heralded in air transport and travel circles. The same day, the British hand Hong Kong back to PRC control and China National Aviation Corporation (CNAC-2) assumes final management control of **Dragonair (Pty.), Ltd.**

For the third straight time, the Shanghai based company **China Eastern Airlines Company, Ltd.** is cited by air passengers as the best among large Chinese airlines which carry more than six million passengers annually. The survey, which has been conducted for three consecutive years, sent out a total of 1.33 million questionnaires to solicit passenger opinion on the service quality of 25 airports and 16 major Chinese airlines. Other winners announced on July 17 are **Xiamen Airlines Company, Ltd.** and **Shenzhen Airlines Company, Ltd.**, which each win first place in separate contests for the annual passenger volume exceeding two million and less than two million.

In mid-July, \$2.4 billion is authorized for the construction of a new airport at Guangzhou; on July 21, **China Southern Airlines Company, Ltd.** becomes the first carrier to operate a twin-engine jetliner, its B-777-21B IGW, on a transpacific service flying from Guangzhou to Los Angeles in 14 hours.

In the first joint decision since CNAC-2 obtained final management control a month earlier, officials from that PRC regional and **Dragonair (Pty.), Ltd.** announce during the first week of August that they will jointly construct a \$6.9-million office building at Hong Kong's new Chek Lap Kok Airport. Pains are taken to assure the world that CNAC-2 will not take over **Cathay Pacific Airways (Pty.), Ltd.**; however, CNAC-2 Vice President Zhang Xianlin does note that the possibility exists of leveraging its 35.86% interest **Dragonair (Pty.), Ltd.** via a listing on the Hong Kong stock exchange.

In line with Chinese government policy designed to reduce the number of regional airlines in order to increase the efficiency of competition, six carriers are encouraged in September to form the New Star Alliance. When activated the following January 1, the informal compact between **China Hainan Airlines Company, Ltd.**, **Shenzhen Airlines Company, Ltd.**, **Shandong Airlines Company, Ltd.**, **Sichuan Airlines Company, Ltd.**, **Wuhan Airlines Company, Ltd.**, and **Zhongyuan Airlines Company, Ltd.** will hopefully begin to boost the quality of its members' services via integrated passenger and marketing services and code-sharing on selected routes.

Also during the month, CNAC-2 receives government approval to go public in Hong Kong.

CAAC and its regional subsidiaries all sponsor exhibits at the "Airshow China '97" held at Beijing from October 8-12. CAAC employs the gathering to unveil its new Raytheon ATC system at Beijing Capital Airport.

U.S. President Bill Clinton announces, on October 29, that China will sign a letter of intent for the purchase of 20 Boeing jetliners, valued at \$1.1 billion. On the eve of his visit to the U.S., President Jiang Zemin, the next day, announces another \$1-billion request for 30 B-737s. Orders and options within two days thus come to \$3 billion, atop the \$1.5-billion order placed with Airbus Industrie in May.

Also during the month, China National Aviation Corporation (CNAC-2) plans to make a 30% initial public offering (IPO) on the Hong Kong Stock Exchange. Shareholding will be sold in **Dragonair (Pty.), Ltd.**, Jarine Air Services, and a property investment company on the island.

The crash of regional stock markets at the end of the month forces CNAC-2 to postpone its 30% IPO, which it had hoped to start trading in Hong Kong markets at the beginning of November.

It is announced in November that all Chinese cabin crews must be proficient in English by the end of 1998.

Lead manager Peregrine Capital, Ltd. is able to work around the Hong Kong economic problem and launch the IPO in early December. It is oversubscribed 17 times and raises HK\$613 million (US\$79 million).

At year's end, Director General Chen Guangyi's ministry continues to operate the domestic subsidiaries **Air China International Corporation** and Management Information System of CAAC, plus the domestic division known as the CAAC Flying College. Having witnessed the success of the CNAC-2 stock offering, the government now allows Beijing Capital Airport, Shenzhen Huangtian Airport, Shanghai Hongqiao Airport, Guangzhou White Cloud Airport, and Xian Airport to begin planning for their own domestic stock market listings.

CAAC now oversees the operations of 43 airlines, with a combined fleet of 760 aircraft. Although exact figures are not released, it is estimated that the top 11 carriers have lost \$199 million this year. Load factors on domestic routes have averaged only 68.8%, down from 75.9% just two years earlier. China National Aviation Corporation (CNAC-2) generates a profit of HK\$401 million.

In February 1998, CAAC imposes fines of up to 700,000 yuan (\$84,000) on eight aviation firms for their poor safety records in 1997. **China Eastern Airlines Company, Ltd.** is, however, singled out for praise.

Also during the first quarter, the regulatory body significantly increases pressure for the amalgamation of the country's regional airlines into three large groups centered around major carriers. It is hoped that, by 2001, **Guizhou Airlines Company, Ltd.** will be taken over by **China Southern Airlines Company, Ltd.**; that **China Southwest Airlines Company, Ltd.** will be acquired by **China Eastern Airlines Company, Ltd.**; and that **Changan Airlines Company, Ltd.** will become part of **China Northwest Airlines Company, Ltd.**

On March 1, CAAC authorizes its 10 international carriers to begin flying on July 1 over 18 new routes to Japan, the Philippines, North Korea, Macau, Malaysia, and Mongolia. The expansion will give the airlines a total of 124 international destinations.

The Asian financial crisis, competition from foreign airlines, retrenchment of state enterprises, and falling business traffic caused by improved road infrastructure all contribute to a decline in demand for air transport. The situation is exacerbated by an increase in domestic airline capacity.

The airlines, with little success, introduce a variety of fare reductions. CAAC now steps in and requests that domestic companies delay new aircraft deliveries. Some will lease out or park their latest additions.

During the summer China National Aviation Corporation (CNAC-2) opens a Chinese-language homepage on the World Wide Web, <http://www.zjair.com>.

China and Great Britain sign a memorandum of understanding on civil aviation on October 7; British Prime Minister Tony Blair attends the signing ceremony at Beijing on October 7.

It is reported on November 1 that, due to the Asian economic "flu," slower national economic growth, and fare discounting, China's airlines have collectively lost \$120 million during the first half of the year. Stressing that existing formal orders are not affected, CAAC now freezes all new orders by the country's air carriers.

"Airshow China '98" is again hosted at Zhuhai Airport, east of Hong Kong, from November 17-23. Every CAAC subsidiary, including airlines, airports, training, ATC, and maintenance units, have an exhibition in CAAC's large pavilion. Boeing introduces its new B-717-200 to potential customers.

Led by Deputy Assistant Secretary David Marchick, a U.S. DOT delegation visits with officials of CAAC in Beijing on December 4 to urge the PRC to expand its air services to the U.S.

The Xinhua news agency reports on December 18 that Boeing China Company officials have helped their U.S. parent to place 40 of their airliners with Chinese airlines this year.

It will also be reported early in the new year that, during the year, 20 flights have been the subject of bomb hoaxes or air rage incidents. In addition, 595 criminal complaints (a 22% increase) are filed concerning incidents at the airlines involving everything from hijackings and drug-smuggling to murder.

Midway through the next year's second quarter, it will be reported that China's airlines have collectively lost at least 2 billion yuan (\$242 million) in 1998. When the books on the year are finally closed, the figure will be closer to 3 billion yuan. China National Aviation Corporation (CNAC-2) loses HK\$5.9 million (\$766,000).

CAAC makes news on January 15, 1999, when the BBC and other international news organizations report that it will order the heads of all of the country's airlines to board flights on December 31, amid growing fears that the Y2K computer problem could ground their planes next day. The carrier chiefs thus become involved in a frantic race against time to make certain that their computer systems are ready. At the same time, the individual airline leaders are warned by CAAC director Liu Jianfeng that they will be fired if they are unable to reverse their 1998 fiscal losses.

Following the February crash of a **China Southwest Airlines Company, Ltd.** Tu-154 near Wenzhou (61 dead), CAAC orders that the older Soviet-made jetliners be gradually withdrawn from China's fleet. Also during the month, the regulators ban discounts on domestic airfares.

It is reported on March 17 that, because of the Asian economic slump and in an effort to improve safety and efficiency, the CAAC will oversee the removal of 71 of the older aircraft from commercial fleets during the remainder of the year. A total of 48 new aircraft will be added, for a net reduction of 23 jetliners. The older planes may be converted into freighters or leased out if opportunities arise. In addition, Boeing and Airbus have been requested to postpone future deliveries. Presently, China operates a total of 447 jetliners, including 324 from Boeing, 70 from Airbus, and 83 miscellaneous.

On April 22, a spokesman for CAAC announces that the local service carriers will cut 766 flights from 95 domestic routes during the summer and autumn to ease airline industry losses. The losses are blamed on low passenger rates.

Orders valued at \$400 million are placed on April 23 for 10 Next Generation B-737-700/800s. The China Aviation Supplies Corporation, on behalf of CAAC, will provide the planes to **Air China International Corporation**, **Xiamen Airlines Company, Ltd.**, **China Hainan Airlines Company, Ltd.**, and **Wuhan Airlines Company, Ltd.**

Several Hong Kong morning newspapers report on July 9 that PRC officials may force the merger of **China Southern Airlines Company, Ltd.** with **Air China International Corporation**. The report had first been carried in the British industry magazine *Flight International*. The confusion causes the Hong Kong stock exchange to temporarily suspend trading in CSA shares. Later in the day, the restructuring office of CAAC issues a statement denying plans to forcibly amalgamate the two companies.

Following up on the *Flight International* and local newspaper reports, executives at China Southern confirm on July 13 that preliminary discussions have been held with **Air China International Corporation** concerning a possible merger or partnership sometime in the future. Analysts suggest a merger might be a difficult feat to accomplish.

The *China Daily* reports on August 20 that the nation's domestic airlines have, collectively, registered profits of 262 million yuan during the first 7 months of the year.

Without elaboration, Senior Minister Liu Jian-feng informs a news conference in December that, because his country has too many airlines, CAAC will soon move to form "larger groups or consortiums" the makeup of which will be "determined by market forces."

To counteract large airline losses due to excessive ticket price-cutting, CAAC, on April 1, 2000, bans all Chinese airfare discounting and im-

poses unified pricing on certain routes. On May 31, in anticipation of the China's pending fall entry into the World Trade Organization, the agency announces that the amount of shares foreign investors may hold in Chinese airlines will be increases from 35% to 49%.

Demand for air travel immediately falls and by June the government agency is forced to ease the restriction, allowing domestic carriers to offer savings of up to 35% through mid-September on group travel over eight routes.

Media reports out of China in July indicate that CAAC's dual role of regulator and operator of eight airlines may soon end. It is speculated that, similar to the U.S. FAA, the CAAC will continue its regulatory role in a new Transport Ministry.

With Chinese airlines required to purchase fuel from the China Aviation Oil Supply Corp., which has raised its prices five times since November, it comes as little surprise in July when the carriers report a collective 560 million yuan (\$68 million) loss since January.

In response to a fatal June 22 **Xian Airlines** Y-7-100C crash, CAAC delivers a major reorganization plan to the China State Council in mid-July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into three groups built around **Air China International Corporation**, **China Eastern Airlines Company, Ltd.**, and **China Southern Airlines Company, Ltd.**

The CAAC proposal becomes policy on July 22; the three groups will initially, but on no specific timetable, merge seven carriers and each receive approximately \$6 billion in additional assets.

Merger discussions between **Air China International Corporation** and **China Southern Airlines Company, Ltd.**, broken off earlier, resume and quietly conclude during the year. However, it is reported on October 2 that a merger proposal submitted by the two to the CAAC has been rejected on the grounds that the resultant carrier would be too large.

Reacting to rising fuel costs, the CAAC on November 1 grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies increase fares on November 5.

CAAK (CHOSONMINHANG KOREAN AIRWAYS). *See* AIR KORYO

CAAV (CIVIL AVIATION ADMINISTRATION OF VIETNAM): North Vietnam (1956–1976). CAAV is established at Hanoi's Gialam Airport on January 1, 1956 to provide scheduled and nonscheduled civil aviation services throughout the Democratic Republic of Vietnam. Services are inaugurated on April 20 with a number of Lisunov Li-2s and Ilyushin Il-14s donated by the Soviet Union, which, joined by East Germany, provides air crew and technician training. The initial route is from Hanoi to Peking (later Beijing); it is followed in October by the introduction of domestic services from Hanoi to Dong Hoi via Vinh.

During the fall of 1958, a route is initiated linking the capital city with Dien Bien Phu via Nasan. The company's services develop very slowly and convert to a war footing after 1961. Three Soviet-made Il-18s arrive in 1967 and are employed to link Hanoi with Moscow. Little more is heard of CAAV until **Hang Khong Viet Nam** begins to develop a unified national system under its direction following the conclusion of the Second Indochina War in 1975.

CABLE COMMUTER AIRLINES: United States (1966–1969). Organized at Ontario, California, by Roger Cable and Bill Myers in the fall of 1966, CCA is equipped with a fleet of Cessna 402s and de Havilland Canada DHC-6 Twin Otters, which are employed to inaugurate scheduled passenger services to Los Angeles and Santa Ana on November 21.

Operations continue apace in 1967. On November 1, flights are started to Palmdale and Inyokern. Late in the year, the carrier begins

providing feed to and sharing an LAX gate with **Trans World Airlines (TWA)**.

In **1968**, frequencies are opened from Ontario to Lake Havasu via Palm Springs and to Lake Havasu direct from LAX, as well as directly to Colton, Ventura, El Monte, Burbank, and Santa Barbara. A Twin Otter with two crew and seven passengers crashes on the freeway at Santa Ana while on approach to Orange County Airport on November 23; there are no survivors.

Passenger enplanements reach 100,000. By year's end, the company has become the third largest commuter in the U.S.

In May **1969**, the company and its 10 Twin Otters are acquired by **Aero Commuter**, joining with it to form the regional **Golden West Airlines**.

CABLE FLYING SERVICE. See **CABLE COMMUTER AIRLINES 3002**

CABO VERDE AIRLINES. See **TACV (CABO VERDE AIRLINES)**

CAH (COMPANIA AEREO HONDURENO, S.A.): Honduras (1927–1934). The Tela Railroad, a primary customer of **Empresa Dean, S.A.**, forms a company airline at Tela in **1927**. After purchasing a pair of Lincoln Standards, it contracts out its flights to itinerant aviators, who operate to the capital at Tegucigalpa via Puerto Castilla and San Pedro Sula.

On August 3, **1928**, railroad officials notify the government that the company would not renew the license of its air transport division; however, shortly thereafter, this position is altered 180 degrees and the division is now officially named CAH. The same pilot, Morgan, who had partnered with Dr. T.C. Pounds in **Central American Air Lines, S.A.** the previous year, is named chief pilot.

Six years later in **1934**, Morgan, in partnership with the Nicaraguan airline **LANEP (Lineas Aereas de Nicaragua, Empresa Palacios, S.A.)**, takes over CAH, its assets and routes, and renames it **Morgan Airlines, S.A.** By the end of the year, he has crashed both the company's Ford 4-AT and its Bellanca CH-300, thereby grounding his company for good.

CAICOS INTERNATIONAL, LTD.: Turks and Caicos Islands (1973–1975). Caicos International is established at Grand Turk in **1973** to operate nonscheduled passenger and cargo charters throughout the Caribbean and into south Florida. Revenue operations commence with a single Douglas DC-4, which is employed until the company shuts its doors in July **1975**.

CAIRO AVIATION, LTD.: Egypt (1991–1994). **Cairo Charter & Cargo, Ltd.** is established at the Egyptian capital in October **1991** to offer all-cargo services to destinations in the CIS, Germany, and Eastern Europe, as well as to Egyptian domestic locations. The airline commences revenue flights with a pair of Ilyushin Il-76TD freighters. In March **1992**, a pair of Tupolev Tu-154Ms is acquired and employed to launch passenger services to historic and other Nile Valley destinations beginning in May.

Among the principal sources of tourists for the Soviet-made airliners is Germany, with tourist flights to Egypt beginning in July. When Islamic fundamentalists attack a sight-seeing bus in the fall killing and wounding travelers, the European market all but dries up.

The company's name is changed to **Cairo Aviation, Ltd.** in November, and flights are continued throughout **1993** until the company ceases operations in January **1994**.

CAIRO CHARTER & CARGO, LTD. See **CAIRO AVIATION, LTD.**

CAL-AERO AIRWAYS: United States (1969–1970). Cal-Aero is set up at Van Nuys, California, in **1969** to fly scheduled passenger and cargo flights to local destinations. Although Beech 18 and Cessna 402 revenue flights commence, they cannot be maintained beyond early **1970**.

CAL AIR. See **CALIFORNIA AIR COMMUTER**

CAL AIR INTERNATIONAL AIRWAYS, LTD. See **NOVAIR INTERNATIONAL AIRWAYS, LTD.**

CAL CARGO AIRLINES, LTD.: 11 Galgale Haplada Strete, Herzlia, 46722, Israel; Phone 972 (9) 952-6666; Fax 972 (9) 951-3232; Code ICL; Year Founded 1976. This carrier is established in June **1976** by the Israeli Agricultural Board (Agrexco) and labor organizations to provide perishable goods transport to Europe, with general cargo on the return trip. The organization is the result of a government compromise between Agrexco and **El Al Israel Airlines, Ltd.** and requires CAL to lease its aircraft from the state airline. A Boeing 747-258F is thus acquired and begins revenue flights, with a Tel Aviv–Cologne operation undertaken on November 2. Airline employment in **1978** is 25 and the fleet grows to comprise 2 leased 747-258Fs and 1 Douglas DC-8-63F.

In **1979–1980**, routes are extended to London, Brussels, Cologne, Rome, Amsterdam, and other Western European cities. The fleet remains the same, but services are also opened throughout the Middle East. The workforce is doubled to 50. FTKs operated in the latter year total 110,852. That number falls by 3.6% in **1981** to 107,000.

The carrier's B-747-258F operates 148.92 million FTKs in **1982**, a dip of 4.7%. The 50-employee freighter shows renewed strength in **1983** as the number of FTKs flown climbs 29.5% to 132.24 million.

Operations continue apace with little fanfare over the next decade. Ownership is now divided between the Organization of Agricultural Cooperatives and the Production and Marketing Boards of Ornamental Plants, Fruits, and Vegetables.

The automobile dealer Goldberg Leo, Ltd. contracts with the company in **1991** to import Opel cars from Cologne on its return flights from Germany. BMW and Volkswagen autos will also be flown.

In **1993–1998**, President S. Nelkin's 65-employee airline flies a leased B-747-258F on high-frequency services to Bonn, Cologne, and Amsterdam.

The continuing prohibition against flights by **El Al Israel Airlines, Ltd.** on the Jewish Sabbath brings a government investigation of alleged violations early **1999**. After El Al publishes advertisements claiming it is being discriminated against because of the no-fly rule, Israeli Transport Minister Shaul Yahalom receives complaints that the flag carrier has been transporting cargo to Europe on the Sabbath using flight numbers of privately owned CAL Cargo, to which it leases aircraft. These charges come just days before Yahalom is to decide whether or not to follow an earlier special panel recommendation to grant CAL its own license to fly in competition with El Al.

In an attempt to thwart El Al's efforts to block it from getting its own license to fly scheduled freight operations, CAL Cargo offers a Shabbat compromise on February 9; in return for authority, it will respect the status quo and not launch new flights on the Jewish Sabbath.

Freight operations continue apace into **2000**. In April, an Airbus A300-600F is wet-leased from Brussels-based **City Bird, S.A.**

CAL-NAT AIRWAYS: United States (1967–1969). Cal-Nat is set up at Grass Valley, California, in **1967** to provide scheduled lightplane mail services to Los Angeles, Mojave, Fresno, and Palm Springs. Operations last only two years.

CAL-NEVA AIR: United States (1966–1967). Cal-Neva is established at San Jose, California, in the summer of **1967** to provide scheduled and passenger commuter flights on local routes out of the city. Beginning on September 1, de Havilland DH 104 Dove service is flown, but lasts less than a year.

CAL SIERRA AIRLINES: United States (1980–1981). Employing a Convair CV-440, Cal Sierra launches scheduled passenger and cargo flights on December 18, **1980** between its San Diego base and Burbank

and Lake Tahoe. ATC restrictions occasioned by the PATCO air traffic controllers' strike during the summer of 1981 cause severe fiscal difficulties and the company goes out of business in December.

CAL-STATE AIRLINES: United States (1968–1970). Cal-State is set up at Long Beach, California, in the fall of 1968 to offer scheduled passenger and cargo commuter services to Santa Barbara and Fresno via Los Angeles and Bakersfield. Beech 99 flights commence on November 11 and continue until the company goes out of business in May 1970.

CAL-WEST AIRLINES: United States (1988–1989). C-W is founded at Concord, California, in spring 1988 to offer scheduled passenger and cargo services to Bakersfield. Dean Hanson is named managing director. Initial plans call for a fleet of 3 Piper T-1040s, but instead, the new small regional acquires a Piper PA-31-350 Navajo Chieftain.

Revenue services commence in February 1989. Unable to establish economic viability, the carrier closes down before year's end.

CALASIA AIRLINES: United States (1945–1947). One of many all-freight operations established by returning World War II airmen, Calasia (the name is a play on its California and Asian gateways), employing a surplus Douglas C-54, inaugurates transpacific charters in the fall of 1945.

Service can only be maintained for two years and ends in 1947.

CALEDONIAN AIRWAYS, LTD. (1): United Kingdom (1961–1970). John de la Haye and Adam Thomson, together with their travel club and travel agency backers, form the inclusive-tour carrier **Caledonian Airways, Ltd.** at Prestwick, Scotland, on April 27, 1961. In August, an application is placed with the U.S. CAB for the operation of an 1,800-hour charter program under terms of the Civil Aeronautics Act (Section 402).

With the Douglas DC-7C *Star O' Robbie Burns*, leased from **Sabena Belgian World Airlines, S.A.**, the first charter flight is made from Barbados to London on November 29. Thomson himself on December 3 undertakes a charter from Luxembourg to Lourenco Marques (Maputo) via Khartoum, returning via Lagos and Lisbon. The first group charter is undertaken to New York on December 21.

On March 4, 1962, the original DC-7C with 10 crew and 101 passengers, in the worst single-plane crash in aviation history to date, crashes during takeoff from Douala, Cameroon, on a Mozambique–Luxembourg charter flight; there are no survivors.

Another DC-7C is leased from **Sabena Belgian World Airlines, S.A.** in April. The American CAB hears Caledonian's Section 402 case. Additional holiday destinations in Europe and the Mediterranean are opened during the remainder of the year and into the next as 4 additional DC-7Cs and 3 Bristol Britannia 312s join the fleet.

In August 1963, Caledonian's Foreign Air Carrier closed group charter permit is granted by the CAB and ratified by President Kennedy. Enplanements reach 81,000.

Managing Director Thomson replaces Chairman de la Haye in 1964.

A chartered DC-7C with 8 crew and 89 passengers crashes short of the runway at Istanbul on September 28; there are no fatalities.

A total of 110,730 passengers are flown and revenues skyrocket 139% to \$6,449 million; a net profit of \$253,000 is earned.

As many as 28 weekly transatlantic Britannia 312/DC-7C flights are offered during summer 1965. Long-haul flights to Africa and aerial participation in the Hadj retreat to Jeddah are also undertaken. The company's headquarters are moved to Crawley, West Sussex, and 3 of the 4 DC-7Cs are replaced by 3 Britannia 314s. Two Boeing 707-320Cs, the company's first jetliners, are ordered in November. At year's end, several Britannias are employed on the Zambian airlift.

Passenger boardings jump 39% to 132,948 and revenues climb 48.7% to \$6.5 million.

Additional frequencies are added in 1966 as plans are laid for the introduction of the carrier's first jetliners. Airline employment is now 240 and the fleet comprises 3 Britannia 312s, 3 Britannia 313s, and 1 DC-7C.

The Britannias return to Britain from the Zambian airlift in March. The last DC-7C is sold in the spring of 1967. The first Boeing 707-339C is accepted on July 13; christened *Flagship Bonnie Scotland*, it remains in the U.S. for a year's charter to **The Flying Tiger Line**. The second B-707-399C is delivered in December and christened *County of Ayr*. Airline employment is 306 and enplanements rise to 189,672.

The *County of Ayr* inaugurates the carrier's jetliner service on January 16, 1968 with a charter flight to North America. Two Britannia 312s are retired during the year as 2 more B-707-349Cs join the fleet. The B-707-339C leased to **The Flying Tiger Line** is returned in July. In flying 430,000 passengers on the year, the carrier becomes Britain's No. 1 charter airline.

During 1969, transatlantic and Mediterranean frequencies are increased as plans are made and negotiations conducted for expansion.

Three BAC 1-11-509s and the B-707-355 *County of Caithness* are delivered as 3 Britannias, which have briefly flown charters for the Swiss carrier **Tellair, Ltd.**, are retired.

On April 1, the British government's civil aviation industry study, chaired by Sir Ronald Edwards, is published. The Edwards Report calls for the creation of a Second Force carrier (large enough to offer various services but not large enough to challenge either **British Overseas Airways Corporation** or **British European Airways Corporation**), which many interpret to be Caledonian, now Britain's largest independent.

In March 1970, another BAC 1-11-509 is added and in the spring, the carrier begins another successful season of inclusive-tour flying. In June, 2 additional B-707s are purchased. Following parliamentary debate and various negotiations, the larger **British United Airways, Ltd.** is acquired for £6.9 million by Caledonian Airways on November 30, the amalgamated carrier being known as **Caledonian/BUA**.

CALEDONIAN AIRWAYS, LTD. (2): United Kingdom (1995–2000). Although originally established in 1988 as its charter subsidiary, **British Airways, Ltd. (2)** announces Caledonian's sale on December 14, 1994, effective March 31. Included in the sale are a lease on BA's L-1011-1 *Loch Iver* and 4 L-1011-100s, *Loch Earn*, *Loch Fyne*, *Loch Avon*, and *Loch Rannoch*, to the travel concern Inspirations, plc, for \$7.65 million in cash and \$18.27 million in debt assumption.

Clare Hollingsworth is named managing director early in 1995 and his chartered fleet initially comprises the 5 TriStars. During the summer, he will charter 3 Airbus Industrie A320-231s from Kawasaki. The aircraft are all named after Scottish lochs and are painted in a blue and white livery that prominently displays the historic golden lion symbol on each plane's tail. One has yellow titles instead of the dark blue given the other two.

Replacement scheduled flights on behalf of BA commence on March 1 between London (LGW) and Nassau, San Juan, Tampa, and Grand Cayman. International charter flights under the new owner commence on April 1 to destinations in North America, the Caribbean, Africa, Europe, and the Far East. During the summer, 2 DC-10-30s and 2 B-757-236ERs are leased from the pioneer U.K. flag carrier; however, the DC-10 *Loch Torridon*, is returned at the end of the year, along with the 3 A320-231s.

With the beginning of the winter schedule, charters are flown to Munich, Geneva, Salzburg, and Zurich.

Enplanements for the year are 2,037,400, a 6.6% increase over the carrier's last 12 months with British Airways.

Airline employment stands at 900 in 1996. Caledonian is now the only British carrier flying the Lockheed TriStar. In February, the L-1011-100 *Loch Fyne* is withdrawn from service and repainted; given **Aer Lingus Irish Airlines, Ltd.** tail livery, it is leased to the Dublin-based national carrier for the summer season.

During the fall, arrangements are completed with London-based Premier Magazines for the production of an entertaining holiday magazine to be distributed to customers during the following year.

Business is not as good this year and passenger boardings decline to 1,869,000. Additionally, a total of 5.76 million FTKs are operated.

The workforce is cut in 1997 to 817. During March, the *Loch Fyne* is again repainted and chartered to **Aer Lingus Irish Airlines, Ltd.** for the

summer. The first issue of *Caledonian* magazine appears in April; a second edition will be distributed in November.

In the spring, the carrier joins with Goldcrest Aviation to form the subsidiary **Peach Air, Ltd.** at London (LGW). The new company is equipped with 2 used Boeing 737-204s and 2 Lockheed L-1011-385 TriStar 1s formerly operated by **Air Atlanta Icelandic, H.F.**

Charter and inclusive-tour flights to holiday destinations in Europe and the Mediterranean commence in May and continue. Destinations visited also include the U.S., Canada, Bangkok, and Kenya.

At the same time, Caledonian subleases a Douglas DC-10-30 from the Belgian operator **ChallengeAir, S.A.** Arrangements are completed with the International Lease Finance Corporation (ILFC) for the five-year lease of two A320-231s, beginning in the spring of 1998.

In October, the *Loch Fyne* is returned from **Aer Lingus Irish Airlines, Ltd.** Knowing that the aircraft will be reassigned to the Irish carrier the following spring, it is not repainted in full Caledonian colors but rather, wears the line's titles and tail logo over the Aer Lingus green when it returns to service in November.

For the year, passenger bookings swell to 2,256,000 while freight doubles to 10.02 million FTKs.

A Lockheed L-1011-385 TriStar 1 with 377 passengers makes a precautionary landing at Athens on January 6, 1998 with engine problems.

While on approach to London (LGW) on August 13, a B-737-200 experiences a rapid decompression. The little Boeing makes an emergency landing and no injuries are reported. The CAA undertakes an investigation.

In September, an L-1011 strikes its tail while landing on the Greek island of Kos; the aircraft is not as badly damaged as first feared and only minor repairs are required.

Arrangements are concluded with **Air Atlanta Icelandic, H.F.** in late October under which Caledonian will wet-lease 4 of Air Atlanta's L-1011s for the upcoming 1999 summer season (May 1–October 31).

Also in late October, Thomas Cook Group, which has recently purchased and begun to merge Sunworld and its house carrier **Airworld Aviation, Ltd.**, as well as **Flying Colours Airlines, Ltd.**, acquires Carlson Leisure Group and its airlines Caledonian and Peach Air. By November 1, the U.K. charter airline business is rapidly approaching consolidation.

Through the move, Thomas Cook gains Caledonian's slots at London (LGW) and Manchester and, with 32 aircraft, now owns the second largest fleet among the nation's charter carriers. Plans are announced for an increase of service from London (STN), Bristol, Cardiff, Birmingham, and Glasgow. The fleet will also be rationalized, with only the TriStars seen as certain for retention.

As the year ends, Thomas Cook Group, which has assigned its own name to the enlarged travel group, is conducting marketing surveys to determine which airline brand name has the best public image and should be retained for the larger carrier. Early betting is that the names Caledonian (with its memory of delays and incidents) and Peach Air will disappear in addition to that of Airworld, with the romantic Flying Colours winning the label. A final decision is promised before the start of the 1999 summer holiday season.

Meanwhile, there are flights to be operated. One of these, on December 6, nearly ends in tragedy. As the result of ATC confusion, Flight 5199, an L-1011, must quickly climb following a TCAS alarm to avoid Flight 66, a **Delta Air Lines** B-767-332, which has received a similar prompt to descend. The two airplanes pass each other with 1.5-mi. horizontal and 900-ft. vertical separation.

During the 12 months, passenger boardings accelerate 30.3% to 2.24 million.

Although Flying Colours is, indeed, the surviving airline, the Caledonian brand does not immediately disappear. The two companies, with their enlarged fleet of 34 aircraft, begin the new summer holiday season at the end of March 1999. The amalgamation of travel concerns comes as the European Commission grants permission for Thomas Cook to merge with the Carlson Leisure Group's U.K. travel interests.

Caledonian, for its part, launches direct weekly return charter flights from London (LGW) to St. Thomas, U.S. Virgin Islands. Plans are announced in early August for biweekly service between the two points during September.

Plans for amalgamation with **Flying Colours Airlines, Ltd.** at the conclusion of the summer holiday season in November proceed; it is anticipated that the two carriers will officially become one by the end of March 2000. Caledonian Operations Director David Newall and Operations Manager Barry Fitzgerald resign in July, as Robert Willis becomes operations general manager for the combined operation.

The engineering facilities of the two companies are also combined at Manchester, with some job loss, while fleet rationalization and repainting continues. Arrangements are also made under a new fleet rationalization plan to replace 4 L-1011s with 3 B-757-200s and to return 3 wet-leased TriStars to **Air Atlanta Icelandic, H.F.**

On September 1, Thomas Cook Group establishes a new holiday travel concern to replace its Sunworld, Sunset, and Inspiration holiday subsidiaries, as well as both Caledonian and **Flying Colours Airlines, Ltd.** Under the direction of Managing Director Simon Vincent, the new travel brand, to be known as JMC after the son of Thomas Cook (John Mason Cook), will complete this changeover within five years, assisted in the process by a £200-million (\$320-million) investment program. As aircraft are repainted and other vestiges of corporate image are altered, the names of the tour operating division, JCM Holidays, Ltd., and in-house airline, JCM Airlines, Ltd., will be gradually introduced during the next six months. Terry Soult is named managing director of the new **JCM Airlines, Ltd.**

This is the last year in which traffic figures are maintained. During these 12 months, customer bookings fall 6.4% to 2,621,000 and cargo traffic has plunged 71.2% to 2,656,000 FTKs.

Caledonian disappears completely on March 26, 2000 when **JMC Airlines, Ltd.** becomes operational under a single air operator's certificate.

CALEDONIAN/BUA, LTD.: United Kingdom (1970–1971). Following parliamentary debate and various negotiations, the larger **British United Airways, Ltd.** is acquired for £6.9 million by **Caledonian Airways, Ltd.** on November 30, 1970, the amalgamated carrier now taking the name Caledonian/BUA, Ltd. Just as Caledonian Airways had operated domestic and international scheduled flights, so, too, is the new company able to provide the same service. The employee population reaches 4,635 and the fleet is increased to 34 aircraft. Together, the two carriers fly 2,243,000 travelers on the year.

On March 31, 1971, the airline is awarded the old **British Overseas Airways Corporation (BOAC)** West African scheduled routes from London to Accra, Lagos, and Kano, with Tripoli being added in July. Meanwhile, in June a Boeing 707-323C is leased for three months from **American Airlines**, and while with the British it is named *County of Renfrew*. With the assimilation of BUA fully completed, the name **British Caledonian Airways, Ltd.** and a new livery are adopted in September. London (LGW)–Paris (LBG) flights commence on November 1. Enplanements are 2,558,000.

CALIFORNIA AIR CHARTER: United States (1983–1987). CAC is set up at Burbank, California, in 1983 to provide charter and contract service flights to intrastate and regional destinations. Employing 1 Dassault Falcon 20 executive jet, 1 Piper PA-31-350 Navajo Chieftain, 1 PA-31-310 Navajo, 1 Cessna 208 Caravan I, and several smaller Piper aircraft, the company begins on-demand flights.

Service continues without incident until 1987. On January 16, the Cessna Caravan en route from Ontario, California, to Las Vegas crashes into the top of a 6,500-ft. mountain peak near Cima; the pilot is killed and the aircraft is destroyed. CAC closes its doors shortly thereafter, its assets being acquired by **Ameriflight**.

CALIFORNIA AIR COMMUTER: United States (1975–1977). During the summer of 1975, the Oakland, California-based FBO

Marine Aviation sets up an operating division to provide scheduled passenger and cargo commuter service. A Piper PA-31-310 Navajo is secured and revenue flights commence in October, linking the company's base with Truckee and with Redding via Chico.

Frequencies are maintained until the unit goes out of business in the fall of 1977.

CALIFORNIA AIR SHUTTLE: United States (1990). President Steven Lay forms CAS at Oxnard in early January 1990 as a reincarnation of failed **Qwest Air**; a code-sharing agreement is signed with **America West Airlines** on January 7. Employing a single Fairchild Metro II, the new entrant inaugurates services in February to Las Vegas, Sacramento, San Francisco, San Jose, and Bullhead City.

Although plans are made to expand services to additional California cities, the bankruptcy of Fairchild ends efforts to acquire new Metroliners. When Iraq invades Kuwait in August, fuel prices skyrocket. A lack of capacity combined with higher expenses conspires to put the small regional out of business by year's end.

CALIFORNIA AIRFREIGHT. See **AAXICO AIRLINES**

CALIFORNIA AMPHIBIAN TRANSPORT: United States (1980-1982). CAT is set up at Long Beach, California, in the late spring of 1980 as a division of All Seasons Air Pacific. Employing a Piper PA-31-310 Navajo and a Grumman Mallard, the company inaugurates scheduled passenger and cargo services to Avalon, on Santa Catalina Island, on June 13.

Services are maintained until January 15, 1982.

CALIFORNIA CENTRAL AIRLINES: United States (1947-1954). Colonel Charles Sherman founds CCA at Burbank in 1947 to offer low-fare intrastate service to Oakland. Meanwhile, an associate concern, **Airline Transport Carriers**, is also formed and comes to offer relatively scheduled services between Burbank and Oakland until the CAB forces it to stop them.

Col. Sherman, meanwhile, assembles a fleet of 6 Douglas DC-3s and 2 DC-4s, and \$9.99 one-way revenue flight operations commence between Burbank and Oakland on January 2, 1949. Flying under jurisdiction of the California Public Utilities Commission, Cal Central's aircraft, in their red, white, and blue livery, become very attractive to travelers. Flights to San Diego are initiated in 1950 as enplanements exceed 100,000.

Indeed, the \$9.99 one-way fare is so popular that the company has to acquire new equipment in 1951 just to keep up with demand.

Two C-54Ds, each with three crew, collide over Oakland Range at 3,000 ft. on November 17. The empennage of the **Overseas National Airways (1)** Curtiss is torn off and it crash-lands on a highway and catches fire; all three aboard are killed and eleven persons on the ground are injured. The CCA aircraft is able to complete a successful emergency landing.

The entire Douglas fleet is now traded to **Northwest Airlines** for 5 Martin 2-0-2s.

In 1952, Sherman's carrier enjoys 137,000 passenger boardings, but the bottom falls out in the following year. Reequipping and operational costs do not allow enough return on the small fares charged.

By the end of 1953, CCA, which has leased a Lockheed Constellation to enhance its Martinliner fleet and is suffering from a bad case of financial mismanagement, is \$1 million in debt. To cover the bills, the 2-0-2s are put on the auction block and, in February 1954, the airline voluntarily shuts its doors.

Ironically, during its 1958-1962 second life, this time as a temporarily certified Supplemental Air Carrier, **Airline Transport Carriers** employs the California Central moniker as a marketing title.

CALIFORNIA EASTERN AIR LINES (1): United States (1946-1948). CEA begins irregular Douglas C-47 transcontinental cargo and

passenger charter flights in May 1946, increasing its flights to four per day in 1947.

Caught in economic difficulty, it ceases service in May 1948, almost two years to the day of start-up.

CALIFORNIA EASTERN AIR LINES (2): United States (1953-1954). CEA-2 is reborn on January 6, 1953, when its owners sign a 10-year agreement with **Japan Internal World Airways Company, Ltd.** to operate the Japanese line's Douglas C-54s on a route from Tokyo to São Paulo, Brazil. It also prepares to operate its own Douglas transports on contracts received from the U.S. Military Air Transport Service (MATS). The company begins training crews for JIWA on January 8 and, on February 22, a DC-4 is leased to **AVENSA (Aerovias Venezolanas, S.A.)**.

En route to Honolulu and Tokyo on March 27, a Douglas R5D-1 with three crew and one passenger ditches into the ocean off San Francisco after suffering engine failure; there are no fatalities.

A C-54 chartered to MATS crashes into the Pacific on takeoff from San Francisco for Honolulu and Tokyo on May 2; four aboard are rescued after six hours on a raft. Like many other irregulars, CEA-2 is unable to make a profit. Consequently, on July 26, 1954, a merger is announced with **U.S. Airlines**.

CALIFORNIA NEVADA AIRLINES: United States (1976-1977). California Nevada is set up at Stateline, Nevada, in late 1976 to provide scheduled passenger and cargo commuter flights to Las Vegas and to Oakland, Concord, Reno, and Lake Tahoe. Aero Commander 500 revenue flights commence, but cannot be maintained.

CALIFORNIA SEABOARD AIRLINES: United States (1985-1986). Newport Beach, California-based **Catalina Seaboard Airlines** is renamed in 1985. Employing Piper PA-31-310 Navajo equipment, the company provides scheduled daily passenger and cargo flights linking its base with Catalina Island, Orange County Airport at Santa Ana, and Palm Springs.

When Washington State-based **Aeronautical Services, Inc.** is offered a contract by **UPS (United Parcel Services)** in 1986, it purchases and merges CSA, making the airline its California branch. AS flies its parcels back and forth with a pair of Beech 18s.

CALLENS FLYING SERVICE. See **ROSWELL AIRLINES**

CALM AIR INTERNATIONAL, LTD.: 90 Thompson Drive Thompson, Manitoba R8N 1Y8, Canada; Phone (204) 778-6471; Fax (204) 778-6954; http://www.calmair.com; Code MO; Year Founded 1961. Based at Lynn Lake in Manitoba and the Keewatin District in the Northwest Territories, Calm Air is founded by Mr. and Mrs. C. Arnold Morberg in 1961 to provide lightplane services to a variety of small communities. Land is acquired at Black Lake in northern Saskatchewan where a fishing camp is built and the remote location is maintained by Morberg's small planes. In 1962, Morberg receives a charter license to fly passengers from nearby Stony Rapids to their lodge.

Chupika Air, Ltd., formed by Fred Chupika at Lynn Lake, is purchased in 1969; the Morbergs move to Lynn Lake, commuting by air to Black Lake during the summers that follow. Scheduled services are inaugurated.

The first large aircraft are purchased in 1971, a Shorts SC-7 Skyvan and a de Havilland Canada DHC-6 Twin Otter. Service continues apace over the next three years and, in 1975, flights commence to Churchill, which is known as Manitoba's "Arctic Seaport." A DHC-2 Beaver is acquired in 1976.

Transair, Ltd.'s Twin Otter operation at Rankin Inlet and in the Keewatin are acquired in 1977. A metal building is put up and the area gains its first year-round airline. A second DHC-6 is acquired in 1978.

A second Skyvan is purchased in 1979 and also a Hawker Siddeley HS 748 leased from **Gateway Aviation, Ltd.** The turboprop is employed to replace Transair's turbine-powered service in the Keewatin area.

The SC-7s are both sold in January **1980**. Airline employment in **1981** is 56. Manitoba destinations visited by Chairman Gordon Brooker and President/General Manager Morberg's carrier from its principal Lynn Lake base plus branches at Thompson and Leaf Rapids include South Indian Lake, Brochet, Lake Brochet, Tadoule Lake, Coop Point, Flin Flon, Wollaston Lake, and Granville.

From a base at Rankin Inlet, the company flies to Whale Cove, Eskimo Point, Chesterfield Inlet, Coral Harbour, and Repulse Bay. The fleet now comprises the leased HS 748, 4 DHC-6s, 1 Beech King Air 90, 1 DHC-2 Beaver, and 1 Cessna 185.

To allow additional all-cargo capacity, 2 Douglas DC-4s are purchased in January–February **1982**. One of the primary destinations visited by the Skymasters is the Cullaton Lake Gold Mine, W of Arviat in the Northwest Territories.

On March 19, the leased HS 748 is badly damaged in a landing accident. While it is being rebuilt, a similar aircraft is leased for a year from New Zealand's **Mount Cook Airlines, Ltd.** The refurbished HS 748 returns to service in August **1983**.

A Beech King Air 90 arrives in February **1984**, but it is lost in a December 22 crash at Sanikiluaq. Meanwhile, in September, a second HS 748 Series 2B, refurbished and rebuilt after a decade of experimental use by Hawker Siddeley, joins the fleet.

At the beginning of the second quarter of **1985**, company headquarters are transferred to Thompson, Manitoba. A Beech Super King Air 200 arrives in May and a DC-4 is sold in July.

During the summer of **1986**, CAI becomes a Spirit commuter affiliate of **Pacific Western Airlines, Ltd.** In September, the carrier begins three new HS 748 routes out of Winnipeg—to Thompson and Lynn Lake, to Thompson and Flin Flon, and to The Pas and Flin Flon.

A Douglas DC-3 joins the fleet in February **1987**. In June, PWA Corporation, owner of **Canadian Airlines International, Ltd.**, purchases 45% shareholding; the former PWA Spirit associate now becomes a member of the Canadian Partner team.

While landing at Hidden Bay, Saskatchewan, after a service from Kasba Bay on June 16, the last DC-4, with four crew, undershoots the runway; the right main landing gear strikes the edge of the runway and then the wing fails. Although the Douglas is badly damaged, there are no fatalities. The hull will be withdrawn for scrap in October.

The decade-old DHC-2 is sold in July and 3 new aircraft are added in September—2 Piper PA-31-350 Navajo Chieftains and 1 HS 748. They are followed into the fleet by 3 more Pipers in October.

A pair of **Eastern Provincial Airways, Ltd. (EPA)** HS 748s are purchased in March **1988** and employed to inaugurate new services from Winnipeg to Brandon and Lynn Lake in April. The fleet now includes 4 748s, 3 DHC-6s, 6 Piper Chieftains, 1 Beech King Air 200, and 1 DC-3.

The company suffers intense competition in the Northwest Territories and in northern Manitoba during **1989** and is consequently forced to downsize to 23 destinations. The workforce is cut and the fleet is stabilized on 14 aircraft. Revenues fall 23.4% to C\$13.2 million.

Operations continue apace in **1990** with the 4 748s, King Air 200, 2 DHC-6-100s and 1 DHC-6-200. A DHC-6-100 is withdrawn in **1991**, but is reinstated the following year. In **1992**, Chairman Gordon Brooker and President Morberg oversee a workforce of 144 employees. Hubs are maintained at Winnipeg, Thompson, and Churchill. The fleet now includes 4 HS 748s, 2 DHC-6-100/200s, and 1 PA-31-350 Navajo Chieftain.

Airline employment is increased to 180 in **1993**, as scheduled services are maintained over a regional network in northern Manitoba and throughout the Keewatin district of the Northern Territories.

The fleet in **1994** includes 4 HS 748s, 2 Beech Super King Air 200s, and 1 each DHC-6-100 and DHC-6-200. The Navajo Chieftain is withdrawn in the fall when orders are placed for 2 SAAB 340B+s, the first of which arrives in December.

The new SAAB enters service on January 15, **1995**, flying from Winnipeg to the Pas, Flin Flon, and Thompson.

Following the arrival of the second SAAB 340B+ in December, the carrier places its new Swedish-made turboprop into Canadian Partner service to Dryden, Thunder Bay, Gillam, and Churchill.

A third SAAB 340B is delivered in **1996**. Represented by CUPE, the company's flight attendants begin to negotiate for a new labor contract.

Airline employment stands at 230 in **1997**. In addition to feeding CAI, the company continues to serve 29 communities in northwest Ontario, northern Manitoba, and throughout the Northwest Territories.

Coming to the brink of a strike on March 14, the carrier's management and pilots, the latter represented by the Air Line Pilots Association (ALPA), agree to the intercession of a conciliator from the National Mediation Board (NMB).

Flights continue in **1998–2000**.

CAM-AIR. See **CAMEROON AIRLINES, S.A.**

CAM AIR INTERNATIONAL: United States (1983–1984). Miami-based **Fleming International Airways** is reformed in **1983** and renamed. Previous operations are maintained, including scheduled cargo flights to Atlanta, Baltimore, Boston, Chicago, Dallas (DFW), Detroit, Miami, and New York (JFK).

The fleet of 4 Boeing 727-100s and 8 Lockheed L-188AF Electras is also employed to subcontract work from freight forwarders, package express firms such as **UPS (United Parcel Service)** and other cargo airlines, like **Emery Air Freight**.

The lack of traffic, coupled with mounting expenses during a recessionary year, bring significant fiscal difficulties that force the carrier to shut down in **1984**. The company's assets will be purchased into **Spirit of America Airlines**.

CAMAI AIR: P.O. Box 787, Bethel, Alaska 99559, United States; Phone (907) 543-4040; Fax (907) 543-2369; Code R9; Year Founded 1977. Founded by Joseph C. Angalak at Bethel, Alaska, in **1977**, Camai undertakes charter passenger and cargo flights to a variety of statewide destinations, including St. Mary's. The fleet grows to include 3 Shorts SC-7s, 2 Piper PA-32 Cherokee Sixes, 2 Cessna 207As, and 1 Cessna 206. Among the first contracts is one with the province of Ontario for emergency medical service flights; over the next twenty years, helicopters from the Toronto EMS base will deliver more than 12,000 patients to life-saving facilities.

Nonscheduled operations continue with little change throughout the remainder of the **1970s** and into the **1980s**. Regularly scheduled commuter flights are inaugurated in May **1986**, linking the company's base with Scammon Bay, Hooper Bay, Chevak, and other local communities and bush sites.

Airline employment stands at 42 in **1990** and the fleet now includes 6 Cherokee Sixes and 3 Cessna 206s. Enplanements for the year total 4,194. That figure jumps to 6,657 in **1991**. In addition, a total of 2,065,840 pounds of mail are flown.

Operations continue apace in **1992**. Airline employment in **1993** stands at 41 and the fleet is increased by the addition of 2 Cessna 207As, 2 Cessna 172s, and 3 Shorts SC-7 Skyvans. Enplanements total 6,835. The workforce stands at 25 in **1994** and passenger boardings jump 8% to 7,429.

The fleet is radically reduced in **1995**; gone is all equipment previously employed except for 2 Cessna 207As, 2 Cherokee Sixes and 1 Cessna 206. Still enplanements climb further, growing by 24% to 9,183. The employee population stands at 25 in **1996**. Customer bookings increase 62.5% to 14,919.

Don King is president in **1997–2000** and his fleet now includes 5 Cessna 207As, 1 Piper Cherokee Six, and 1 Cessna 206.

CAMAVIA, S.A.: Cameroon (1986–1989). Camavia is established at Douala in December **1986** by local businessman Charley Eba a Moise. With financial backing from the small business department of the Cameroon government, Camavia is able to purchase a de Havilland

Canada DHC-4 Caribou and, in February 1987, all-cargo charters are inaugurated to domestic destinations and stops in neighboring countries. Operations cease in 1989.

CAMBODIAN INTERNATIONAL AIRLINES, LTD.: Thailand (1992–1995). A consortium of Thai and Cambodian businessmen establish this joint venture airline at Chiang Mai, Thailand, in 1992 to operate flights between Bangkok and Phnom Penh. Udom Tantiprasonchai is named CEO and revenue operations commence with a leased Boeing 737-247.

Operations continue in 1993 and a route is opened to Hong Kong during the summer of the former year with a leased British Aerospace BAe 146-300. The Thai-owned and managed company is threatened with closure in June 1994 because the government at Phnom Penh plans to set up its own national carrier, **Royal Air Cambodge**, with assistance from Singapore; CIA is given a temporary reprieve when the Singapore arrangement falls through.

On December 22, the CAA of Cambodia orders CIA to halt all operations by December 24 so as to permit the launch of **Royal Air Cambodge**. CIA officials unhappily comply, noting however, that the order is precipitous. All inquiries concerning refunds for passengers with tickets are referred to the Cambodian government.

Early in January 1995, the grounded carrier is divided in two. One division is renamed **Orient Airlines, Ltd.** and is transferred to a base at Phnom Penh. The other becomes **Orient Express Air, Ltd.** Tantiprasonchai remains CEO of the latter and a director on the board of the former.

CAMBRIAN AIR SERVICES, LTD.: United Kingdom (1935–1955). Capitalized at £750, CAS is registered at Cardiff, Wales, on April 25, 1935 by its founder S. Kenneth Davies, who is also board chairman, managing director, and chief pilot. Employing his own de Havilland DH 60G Gypsy Moth, Davies undertakes nonscheduled passenger and cargo charters, pleasure flights, and military contracts around south Wales until civil flying ceases upon the outbreak of World War II on September 3, 1939.

Following V-E Day, Davies prepares to resume service, completing the purchase of 3 Auster J/1 Autocrats, which he christens *Pembroke*, *Caernarvon*, and *Cardigan*, as well as Percival Proctor 1, the *Denbigh*. The original Gypsy Moth is sold for £375.

On January 1, 1946, when all government restrictions on civil operations are lifted, Davies becomes the first British operator to resume charter flights, with a cargo to Bristol from Cardiff's Pengam Moore Airfield.

Miscellaneous charters are undertaken throughout the remainder of the year and through 1947. In June of the latter year, the company purchases another Proctor 1, the *Montgomery*, and, more importantly, its first de Havilland DH 89A Dragon Rapide, which is named *Carmarthen*. During the year, the company operates the café at the Cardiff Airport and makes a £31 profit from the eatery—more than is generated from airline activities.

Another DH 89A, the *Monmouth*, is delivered in May 1948 and, in conjunction with **Western Airways, Ltd.**, Cambrian, during the same month becomes the first charter airline to be granted **British European Airways Corporation (BEA)** associate status. As a result, regularly scheduled flights are started between Cardiff and Weston-super-Mare with Western's Anson I and CAS's Dragon Rapide.

The governance of the carrier is revised in February 1949; John H. Watts becomes chairman with founder Davies retaining the reins of managing director. One more DH 89A, the *Flint*, and 2 Fairchild F-24Ws, the *Angelsey*, and the *Merionydd*, are acquired in May and the Weston run is undertaken independently of Western Airways. During the summer, BEA grants several additional associate routes from Cardiff: to the Channel Islands, Barnstaple, and London. All scheduled services cease at the end of the tourist season; however, charters are flown. Bookings for the year are 1,611.

In April 1950, a third F-24W, the *Caernarvon*, is acquired and joins its sisters on the company's summer services, beginning with a May 6

twice-daily frequency Cardiff to Weston-super-Mare. Other summer routes are started on June 3. Meanwhile, the Auster fleet, as has become practice, is based at Pwllheli for pleasure charters; there on August 1, one is destroyed in a crash landing. A total of 2,202 people are transported this year.

Founder Davis is appointed a board member at BEA and resigns as managing director on March 13, 1951. He is replaced by joint managing directors L. B. Elwin and W. W. Stanley. Beginning in the spring, the BEA associate contracts are renewed for a five-year period with two new ones added—Haverfordwest–Swansea–Cardiff–London and Cardiff–Guernsey and Jersey–Liverpool.

Only the second contract, a replacement for **British European Airways Corporation (BEA)**'s experimental helicopter service, is opened during the year and in December, records show a total of 328,460 miles flown. Airline employment is now 40, including personnel at a new auxiliary base at Haverfordwest, and the year's enplanements are 4,382.

On May 24, 1952, the **British European Airways Corporation (BEA)** scheduled replacement route Harverfordwest–Cardiff via Swansea is inaugurated. The other routes are also operated, although the Fairchilds *Carmarthen* and *Merionydd* plus the Auster *Caernarvon* are sold. Later in the year, Capt. Geoff Perrott becomes chief pilot, a post he will hold until his 1975 retirement. A total of 6,600 passengers are flown on the year.

In February 1953, part of pioneer **Ole Air Service, Ltd.**, as well as Staverton-based Murray Chown Aviation, Ltd. is purchased and the company acquires another DH 89A plus 2 Airspeed AS.65 Consuls. Simultaneously, in February and March, CAS receives 4 DH 104 Dove 1s/2s. Murray Chown's Staverton–Jersey and Guernsey is started and new **British European Airways Corporation (BEA)** routes are awarded; as a result of the latter, thrice-weekly scheduled Cardiff–Bristol and Paris flights are inaugurated on May 24.

During the year, the Auster *Pembroke*, the 2 Consuls, 1 DH 89A, and 1 Dove 1 are all retired and the company takes over management of Staverton Airport, located between Gloucester and Cheltenham. Enplanements for the year skyrocket to 15,932.

On April 1, 1954, the base is moved from Pengam Moore to Rhoose Airport. The Douglas transports now enter service with Ms. Pamela Morris serving as the company's first stewardess. The company's published schedule remains unchanged from the previous year. In June, the Fairchild F-24W *Angelsey* is sold along with 2 Dragon Rapides. Passenger boardings for the year total 25,535. In November, the first Douglas DC-3 is purchased followed by a second in January 1955. Both American transports are employed on the Channel Island and Paris services. Introduction of the DC-3s marks a significant upgrade for CAS and on May 23, the carrier changes its name to **Cambrian Airways, Ltd.**

CAMBRIAN AIRWAYS, LTD.: United Kingdom (1955–1976). Cardiff-based **Cambrian Air Services, Ltd.** is renamed Cambrian Airways, Ltd. on May 23, 1955. On July 20, weekly Cardiff–Nice scheduled flights begin.

En route from Cardiff to Paris on July 20 via Southampton, a de Havilland DH 104 Dove with six passengers and a pilot crashes at Fritham; pilot Robert Carson is killed in the company's first fatal accident. A French traffic controllers' strike forces cancellation of Paris service from November–December. The year's bookings are 34,631.

Two DH 114 Heron 2s are acquired in March 1956 and one is employed to inaugurate twice-weekly Cardiff–Bristol and Belfast service. Flights also begin from Cardiff and Bristol to Nice. On May 9, a 10-year contract is signed with **British European Airways Corporation (BEA)** to provide support for the development of scheduled Cambrian services linking Wales and the west of England with London and Manchester, as well as a subsidized Liverpool–Channel Islands route.

The last Fairchild F24W, the *Caernarvon*, is retired in July and replaced by another Heron. Manchester–Cardiff–Bristol–Channel Islands flights via DC-3 transport commence on October 29. The company's Douglas DC-3 transports participate in the Hungarian airlift between

November 16 and December 14, flying 500 refugees to Britain from Austria in 16 roundtrips, including the last flown by a civil airliner from the U.K. The contract for management of Staverton Airport is concluded. Enplanements for the year jump to 46,044.

A Dove is sold in June 1957 and simultaneously, three-times-per-week Swansea–Jersey flights begin. A company Heron is the first scheduled aircraft to operate from the new Lulsgate Airport at Bristol. Passenger boardings reach 57,765.

On February 7, 1958, **British European Airways Corporation (BEA)** takes a one-third minority interest and, on July 1, John Morgan is named to succeed John H. Watts as company chairman. No new routes are opened during the year, although a Heron 1B is leased for a year from **Overseas Air Transport, Ltd.** Heavy losses force the company to cease all operations during the winter except the Manchester–Cardiff–Bristol–Jersey service, which is flown by **Jersey Airlines, Ltd.** under contract.

Enplanements drop to 52,915 and a £53,473 loss is reported for the year.

On January 1, 1959, Mr. Morgan takes up his duties as the new chairman and the carrier is reorganized. Two Herons are sold and 3 DC-3s are leased from **British European Airways Corporation (BEA)** in February and are employed, along with the company's 1 Heron, to reopen services on March 2 from Liverpool to Jersey via Cardiff and Bristol and from Cardiff and Bristol to Paris via Southampton. In May, the last DH 89A, *Flint*, is sold, followed by the Percival Proctor 1 *Denbigh* in June.

The number of travelers carried dips to 45,045, but the £40,025 net profit is reinvested in the company.

In January 1960, a DC-3 is purchased and christened *Horatio Phillips*; it is followed by a second but unnamed Douglas in February. On April 1, direct flights are started from Bristol and Cardiff to Belfast. The last Heron is sold in December.

Enplanements for the year are 56,031 and net gain dips to £35,000.

Three more DC-3s are delivered in April 1961 and in September, Cambrian's DC-3s become the first British aircraft to operate from the new airport at Cork. Passenger bookings increase 36% to 83,629.

On April 2, 1962 a route is opened Glasgow–Cardiff via Manchester and Bristol. A new engineering and headquarters facility is opened at Rhoose Airport in May. In September, the carrier takes over all BEA operations linking the Isle of Man with the rest of the U.K. The *Horatio Phillips* is sold in October. Enplanements jump to 119,362.

Airline employment in 1963 stands at 275. During the first half of the year, Cambrian purchases 5 Vickers Viscount 701s and a stock of spares from **British European Airways Corporation (BEA)** for just £750,000. The first turboprop is placed in service on February 2 on a charter for Welsh rugby fans. Eighteen days later, the Viscounts are introduced on the scheduled routes, beginning with the Cardiff–Dublin via Bristol frequency.

The former BEA routes from Liverpool to Belfast and from Belfast to London via Liverpool and Manchester, are assumed on April 1. On behalf of a Cardiff-based travel agency, Cambrian undertakes its first inclusive charters during the summer to Nice, Rimini, and Valencia. An older DC-3 is sold in August to **Gibraltar Airways, Ltd.**; it is followed by two others sold to the King of Morocco. Enplanements reach 276,090.

During 1964, following the appointment of Leslie Castlemaine as commercial and sales manager in January, the company becomes a significant inclusive-tour operator, with flights to points as distant as Yugoslavia, and undertakes night freight services to Ireland. Many of the Continental tours are arranged with South Wales travel agents.

Also in January, the Isle of Man–Liverpool route is extended to London, while in February *Champagne Flights* are initiated to the Isle of Man for those traveling to the casino at the Castle Mona Hotel.

Passenger boardings jump 21% to 349,051 and turnover is £1,481,620. The net profit is £32,837.

Another ex-BEA Viscount 701 is delivered in January 1965.

A Vickers Viscount 701 freighter with two crew crashes while on fi-

nal approach to Liverpool on July 20; both airmen are killed along with two people on the ground.

Shortly thereafter, **Aer Turas, Ltd.**'s DC-4 is contracted to take over the Cardiff–Liverpool service. Regularly scheduled all-cargo services are initiated during September from Liverpool to the Isle of Man.

Another Viscount 701, once flown by BEA as its *Sir John Franklin*, is acquired from **British Eagle Airways, Ltd.** in December. The Christmas period from December 20 to New Year's is the busiest in the company's history to date; 12,000 extra travelers are carried, many on replacement flights offered on behalf of **British European Airways Corporation (BEA)**. Passenger boardings climb to 400,708.

An additional Viscount 701 is delivered in January 1966. Five more are purchased from **Channel Airways, Ltd.** for £750,000. In April, a three-year replacement contract is begun on behalf of **Air France** over a route from London to Lille. During the year, four-times-per-week Swansea–Channel Islands Dakota services and weekly Swansea–Dublin flights are undertaken.

Bookings swell to 476,271 and revenues total £3.25 million, but the net profit is only £66,000.

Three former **Channel Airways, Ltd.** Viscount 701s enter service in January 1967. British Air Services, Ltd., a wholly owned **British European Airways Corporation (BEA)** subsidiary, is formed on February 7, to manage the affairs of the state carrier's associated companies, including Cambrian Airways. John H. Davies succeeds John Morgan as company chairman on May 1.

During the year, the **Air France** service is expanded into two separate route structures: London to London via Lille, Lyon, Lille, and London to London via Lille, Geneva, Bordeaux, Geneva, and Lille. Swansea–Dublin services end on September 29. Upon the completion of the 1956 contract, the independent is purchased by **British European Airways Corporation (BEA)** and becomes, itself, a wholly owned subsidiary on October 1.

The year's enplanements are 491,467.

Managing Director William Elwin resigns in March 1968. Although suspended over the winter, Swansea–Channel Islands is restarted on April 6. Bristol and Cardiff–Paris flights are suspended on September 4 and all services from Swansea on September 30. On October 31, the last DC-3 flight is made over the route and all of the Douglas transports are withdrawn and will be sold over the next year.

Elsewhere, the London–Liverpool service is advanced to five per day and a new aircraft livery is unveiled. Following the November collapse of **British Eagle Airways, Ltd.**, Cambrian assumes its routes from Liverpool to Glasgow and London. James Callan is appointed the new managing director in December.

The year's passenger boardings increase to 590,796.

The company's route network is compacted during 1969. The **Air France** replacement service ends in March. During the first half of the year, the five DC-3s are sold to World Inter. On November 1, new service is, however, launched from Cardiff to London via Hawarden. In December, a BAC 1-11-408EF, previously operated by the **Court Line, Ltd.** as the *Halcyon Cloud*, is delivered along with a promise to turn over 3 BAC 1-11-416s. Bookings for the year dip to 589,111.

Airline employment in 1970 stands at 781. A Vickers Viscount 701 with 4 crew and 59 passengers is destroyed as the result of a bad landing at Bristol's Lulsgate Airport on January 19; there are no fatalities.

The Christmas delivery of the carrier's first jetliner is followed in January by the arrival of a second from the **Court Line, Ltd.**, a BAC 1-11-416EK. The December unit is placed on the London–Liverpool run on January 15 and, on February 15, the Cardiff–London Viscount service is suspended for lack of traffic. The Dash-416ER is used to begin jetliner service from Cardiff on March 9. Both are painted in the company's new livery.

Meanwhile during the first quarter, Managing Director Callan resigns and is succeeded by David Davies. The BACs also fly a variety of inclusive-tours from Bristol during the summer tourist season before one is leased to **British European Airways Corporation (BEA)** for its

summer inclusive-tour schedule. Four Viscount 806s are delivered between July and October and 2 Viscount 701s are withdrawn.

Passenger boardings for the year reach 790,961.

Another Viscount 806 is delivered in January 1971, followed by an additional former **Court Line, Ltd.** BAC 1-11-416EK on February 15. Services similar to those of 1970 are again offered. George T. Cantlay becomes the new chairman on July 1.

The remainder of the Viscount 701s are retired and during the final quarter, four more Viscount 806s are placed in service. The world's oldest surviving Viscount 701, once flown by **British European Airways Corporation (BEA)** as its *Sir John Franklin*, completes its final revenue flight on Christmas Eve; the machine has completed 25,938 and is estimated to have transported some 800,000 passengers over 7 million miles in the air.

Enplanements for the year jump to 910,527.

On April 1, 1972, Cambrian comes under control of the British Airways Board, the new and transitional owner of the two state carriers. Two of the unsold Viscount 701s are chartered to **British Overseas Airways Corporation (BOAC)** to operate feeder services from Edinburgh and Belfast to Prestwick. A scheduled service, in cooperation with **JAT (Yugoslav Air Transport)**, is started from London (LGW)–Dubrovnik on April 1. On April 12, the world's oldest surviving Viscount 701, formerly flown by **British European Airways Corporation (BEA)** as its *Sir John Franklin*, is turned over to the Viscount Preservation Trust.

During the summer, one BAC flies inclusive tours from London (LGW) on behalf of BEA Air Tours. BAC 1-11s are introduced on the Cardiff and Bristol–Paris route and a Southampton–Paris route is started. In addition, Edinburgh–Prestwick feeder services are now undertaken on behalf of the British Airways Board.

Passenger boardings decline 4.7% to 892,607; however, freight traffic is up by 19%.

Airline employment in 1973 stands at 873. In April, Orly Airport becomes the new Parisian destination. Later in the same month and in cooperation with **Air France**, thrice-weekly jetliner return flights are started from London to Lyon. Cyril A. Herring becomes the final board chairman on May 1, succeeding Mr. Cantalay, while Managing Director David Davies is succeeded on July 1 by David Moscrop.

Also in midyear, BAC 1-11s are introduced on the Cardiff to Paris via Bristol service. To assist with this schedule, a BAC 1-11-408 formerly operated by **Channel Airways, Ltd.** is delivered on September 5; it is christened *County of Gloucestershire*. Two BAC 1-11-401s, first flown by **American Airlines**, are also received. They will operate as *County of Shropshire* and *County of Worcestershire* on routes to and in Scotland for over a decade.

A BAC 1-11-416EK is chartered out to **Gulf Air, Ltd.** in October; the wet lease includes four crews that will fly the jetliner between Jeddah, Dubai, Bahrain, Kuwait, Ryat, Beirut, and Karachi. Although **Gulf Air, Ltd.** titles are painted on the aircraft in both English and Arabic, the basic Cambrian red colors and motifs are retained.

Customer bookings accelerate 8.9% to 911,804 and cargo traffic is up by 0.6%.

The Gulf Air charter is concluded in February 1974. When **British Airways, Ltd.** (2) officially comes into existence on April 1, Cambrian becomes part of its regional division. Simultaneously, a new Cardiff–Brussels via Bristol BAC 1-11 service is undertaken; a financial loss, it is abandoned within a year. Meanwhile, the carrier's aircraft take on the BA livery and inclusive-tour services are cut back. Cardiff to Brussels via Bristol services commence in early December. During the year, the workforce has been cut to 641. Enplanements drop to 823,470.

The company celebrates its fortieth anniversary in 1975; however, its parent begins to significantly downsize Cambrian's route network, under the direction of new Managing Director John Gimblett. In February, the new Brussels service is eliminated. Within a month, services from Glasgow, Liverpool, Bristol, and Cardiff are suspended. After 23 years service, Flight Operations Manager Geoffrey Perrott retires. The final boarding figures reveal that bookings are down to 724,105.

Cambrian Airways disappears into its parent when **British Airways** divisions are abolished on April 1, 1976. The company's entire 561-member staff is transferred to the state carrier's payroll.

CAMEL FLYING SERVICE: United States (1939–1940). While operating the North Carolina sales franchise for Stinson SR Reliants and Piper Cubs at Winston-Salem in 1939, L. S. McGinnis founds CFS to undertake demonstration flights and charters. During the summer, he employs Thomas H. Davis as a salesman and instructor.

A wealthy young man, Davis is able to buy out McGinnis during the spring of 1940. As principal stockholder and president, Davis reforms Camel on July 2 and renames it **Piedmont Aviation, Inc.**

CAMEROON AIRLINES, S.A.: BP 4092, 3 Ave. General de Gaulle, Douala, Littoral, Cameroon; Phone 237 42 25 25; Fax 237 42 34 59; <http://home.global.co.za/~afdev/Airline.htm>; Code UY; Year Founded 1971. To permit Cameroon's withdrawal from the multinational long-haul consortium **Air Afrique, S.A.** in 1971, this national carrier, sometimes known by its marketing title of Cam-Air, is formed at Douala on July 26. Ownership is divided between the Cameroon government (75%) and **Air France** (25%), with the latter providing technical assistance and, under a marketing alliance, leasing to the beginner a Boeing 707-328C. The new concern also takes over the assets of **Air Cameroon (Societe Anonyme des Avions Meyer et Compagnie, S.A.)**, including 2 DC-4s.

Membership in **Air Afrique, S.A.** ends on September 2 and Boeing flight operations are started on November 1 with a link between Douala and Yaounde.

Chartered from **Aer Lingus Irish Airlines, Ltd.**, the first B-737-248 is delivered on July 14, 1972 for domestic and regional services. It joins the 2 Douglas DC-4s, a purchased Convair CV-440, and another DC-4 leased from **Air Niger, S.A.** The B-707-328C now flies to Paris via Rome. Late in the year, the fleet is increased by the addition of 2 B-737-2H7Cs (named *Mangu* and *Bonoue*), which replace the Irish airliner, and an owned B-707-3H7C Stratoliner, the *La Sanaga*.

During 1973–1978 in addition to domestic routes, regional services are begun to the Ivory Coast, Central African Republic, Congo Republic, Burundi, Benin, Nigeria, Zaire, Equatorial Guinea, Kenya, and Gabon. Long-haul operations are flown to Paris and Rome while a joint service with **British Caledonian Airways, Ltd.** takes passengers on to London. During these years, the fleet is increased by the addition of 1 de Havilland Canada DHC-6-300 Twin Otter and 1B-737-2K9A, the *Le Noun*.

President Theodore Koule Njanga's 1,344-employee carrier comes to operate a fleet comprising 1 Boeing 707-3H7C, 2 B-737-2H7Cs, 1 B-737-2K9A, 2 Douglas DC-4s, and 1 de Havilland Canada DHC-6 Twin Otter. Two Hawker Siddeley HS 748-A2s are acquired in 1979–1980.

A B-747-2H7B is delivered on February 26, 1981; christened *Mont Cameroon*, it begins European service replacing the Stratoliner, initially to Paris, on April 1.

Barely into its takeoff from Bafoussam on October 31, a DHC-6-300 with 2 crew and 22 passengers aborts; the turboprop cannot be stopped and runs off the runway (1 dead).

Two Hawker Siddely HS-748-2As are placed on the domestic route network during 1982.

During 1983, Marseilles and Geneva join the European route network. Passenger boardings now average some 600,000 per year.

In 1984, the technical base at Douala Airport performs the first-ever B-737 D check in West or Central Africa.

While taxiing out for a flight from Douala to Garoua via Yaound on August 30, Flight 786, the B-737-2H7C *Le Noun* with 7 crew and 109 passengers, suffers the explosion of its No. 2 engine. Debris punctures the wing and fuel tank, causing a fire. Two are killed as the plane is evacuated and thereafter burned out.

Thrice-weekly Jumbojet flights commence from Douala to London via Geneva in July 1985 and a replacement B-737, another Dash-2K9A named *Nyong*, is placed in service in August. In November, Samuel

Eboua becomes chairman with Louis-Claude Nyasa as general manager; they immediately sell the B-707-3H7C and the B-747-2H7B, which will be leased back. The two early-model British Aerospace BAe (HS) 748-A2s are traded in for 2 Dash-B2s.

Employment totals 2,100 in **1986** and the fleet includes 2 B-737-2K9As, 2 B-737-2H7Cs and 2 BAe (HS) 748-B2s. In an effort to save costs, the earlier owned B-747-2H7B, which was sold the previous year, is leased back under the same name, *Mont Cameroon*. The year's enplanements total 600,000.

In February **1987**, former Transportation Minister Andre Bosco Cheuoua becomes chairman, with Cameroon Railways Managing Director Youssoufa Daouda as director general. Air France official Alain Bordin now fills the long-vacant post of deputy director general, under contract. Ernest-Jean Pfrimmer, another executive from the French carrier, becomes chief financial officer. The fiscally troubled airline is owed over \$18 million by its own government for services provided.

As **1988** begins, the largest source of revenue continues to be the four-times-per-week Jumbojet service from Douala to Geneva and Paris via Rome and Frankfurt. However, because of the nation's economic problems, domestic traffic falls and funds are unavailable to maintain the long-haul operations, which are suspended in May. Plans are made to find smaller aircraft to replace the Boeings and BAes.

Operations continue with little change in **1989**. On the third landing attempt to Yaounde in stormy weather at the conclusion of a June 28 service from Douala, an HS 748-2B with 2 crew and 45 passengers touches down 400-m. short of the runway and collides with an embankment (3 dead).

The onset of recession and the substantially higher fuel costs caused by Iraq's August invasion of Kuwait, bring enormous, but undisclosed, fiscal losses in **1990**. In October, former **Air France** Inspector General Claude Keinz becomes director general.

In an effort to cut costs, many workers are laid off in early **1991** and the Jumbojet is temporarily replaced by smaller jetliners.

Operations continue apace in **1992**. In **1993**, the B-747 rejoins Director General Keinz's 1,400-employee operation. The fleet now includes 1 BAe (HS) 748-B2, 1 B-737-2K9A, and 2 B-737-2H7Cs. Keinz returns to **Air France** in May and is succeeded by another official from the French flag carrier, Jean-Gabriel Ceccarelli.

In February **1994**, a new route is opened from Douala to Djedah, N'Djamena, and Johannesburg. Louis Claude Nyassa is named general manager. The company's reputation for wildly inconsistent domestic schedules, flights cancelled at the last moment or rerouted without warning, and rampant overbooking, continues.

In **1995**, the company begins to cooperate with **Nigeria Airways, Ltd.** on flights to Paris. Four-per-week roundtrips commence from Douala to Paris (ORY). Talks between the two carriers are undertaken concerning a possible joint service to the Orient.

While on final approach to Douala after a December 3 service from Cotonou, the B-737-2K9 *Nyong* with 5 crew and 71 passengers, elects to abort and try a second approach. While on this maneuver, the aircraft goes into a steep dive and crashes into a mangrove swamp 6-km. short of the runway (71 dead).

During **1996**, one of the services to Paris is extended to London (LGW) via Brussels. Flights continue to 4 domestic and 25 regional and international destinations.

In **1997**, marketing agreements are also entered into with **Oman Air** and **Air Gabon**, as well as **Air Zaire, S.A.** before it becomes **Congo Airways, S.A.** A de Havilland DHC-7 is received under lease in late August.

In September the government announces that the company, which currently has a negative net worth of \$20 million, has been scheduled for privatization during the next 18 months.

As part of newly initiated planning, up to 800 positions will be cut, although not before severance funds are available. New managers will attempt to improve customer service and otherwise improve the company to a point where it will attract foreign investment.

If interested investors cannot be attracted, the company will be sold off and its traffic rights transferred elsewhere.

In October, a flight from East Africa to Douala in Cameroon stops over in Kigali and Kinshasa. Connecting flights can then be made to different locations in West Africa, including Lagos and Abidjan.

The East African regional manager, Ndoumbe Isidore, signs a General Sales Agency agreement in Kampala, Uganda, on October 21. He informs the newspaper *New Vision* that if preliminary studies are positive, Cameroon Airlines will extend its operations to Uganda. No timetable is provided.

Flights continue in **1998**. Having accused Chairman Joseph Belibi and Managing Director Sameul Minko of bad management while seeking increased salaries, the carrier's entire workforce goes out on strike on January 20. The job action affects operations at all of the airports in Cameroon. Five days later, after Belibi and Minko are fired, the workers return and air traffic is resumed.

At this point, a whole new management team is brought in. Jerome Abondo becomes chairman, with Cyrille Etoundi-Atangana as director general and Louis-Paul Motaze as chief financial officer.

During the fall, a homepage is opened on the World Wide Web. In addition, a contract is signed with **Air Affaires Afrique, S.A.** under which the Douala-based competitor begins to operate scheduled and charter flights on behalf of Cameroon with a Bombardier DHC-8-300.

The airline's pilots and flight engineers stage a 24-hour "warning" strike on March 26, **1999**. The flyers are demanding payment of allowance arrears owed by management. Two flights out of every five scheduled are allowed to takeoff from Douala Airport.

In March **2000**, a cooperative agreement is signed with **Air Gabon, S.A., Air Afrique, S.A.,** and **Air Madagascar, S.A.** Under its terms, the four will provide joint handling, coordinate schedules, and purchase common equipment.

CAMEROON HELICOPTERS, S.A.: BP 5439, Akwa, Douala, Cameroon; Phone 420222; Fax 5395; Year Founded 1984. CH is established at Douala in **1984** as a subsidiary of the French rotary-wing operator **Heli-Union, S.A.** to undertake passenger and cargo charters around the country. Operations continue apace into **1999** with equipment leased from the parent; the usual complement of the concern is 20 employees and 1 Aerospatiale SA-318C Alouette II.

CAMEROONS AIR TRANSPORT, S.A.: Cameroon (1962–1970). CAT is established at Douala in late **1962** to offer both scheduled and nonscheduled services in the Anglo-French Cameroons. Ownership is divided between the West Cameroon Development Agency (50%), the Crop and Culture Agency (25%), and the aircraft manufacturing Britten Norman Group (25%). W. P. Lebaga is chairman, with J. Patient as general manager.

Revenue services commence in **1963** with a fleet that includes 2 de Havilland DH 104 Doves, 1 Dornier Do-28A, 1 Piper PA-23 Aztec, and 2 Britten-Norman BN2 Islanders. The initial service is operated between Douala, in French Eastern Cameroon, and Tiko, in British West Cameroon.

Enplanements reach 2,628 by the end of **1965**. Service continues apace in **1966–1970**, with flights added to Bali and Mamfe. Operations end during the latter year.

CAMPLING BROS. & VANDERWAL, LTD.: Kenya (1946–1963). Keith Campling establishes, with his brother, an FBO at Nairobi West Airport in **1946**, together with a flight school and a lightplane charter service. Additionally, a sight-seeing service, **Caspar Air Charter & Agencies, Ltd.** is formed as a subsidiary to offer flights around Lake Victoria from bases both at Nairobi and at Entebbe, Uganda. Revenue flights commence with 2 Piper J-3 Cubs and 1 PA-12 Super Cruiser.

During the early **1950s**, several de Havilland DH-89A Dragon Rapides are acquired and they begin twice-weekly roundtrips linking Nairobi and Entebbe with Bukoba and Mwanza. If there is demand, stops can be arranged at Ukerewe Island and Geita. The latter two points are dropped

in 1957 when, in cooperation with **East African Airways Corporation**, the route becomes scheduled.

By the start of the 1960s, the fleet includes 2 Dragon Rapides, 2 Cessna 180s, 2 C-182s, and 1 C-150. Yugoslav-born Zivota Boskovic is chief pilot and one of four directors, with L. K. Campling, F. K. Campling, and H. van der Wal.

In June 1963, 77% of the company is sold to New York-based Blackwell Enterprises for £120,000. The chief pilot, Boskovic, moves across the airport to form his own airline, now known as **ZB Air, Ltd.** Blackwell reforms Campling into **Safari Air Service, Ltd.**, but leaves intact the Entebbe-based portion of the Caspar subsidiary.

CAMSA (COMPANIA AEREO MERCANTIL, S.A.): Peru (1947–1957). This operation is formed in February 1947 to offer feeder services from Tingo Maria. Employing a fleet that would come to comprise 1 converted B-18 bomber, 1 Fairchild C-82 Packet, and 6 Cessna T-50s, the carrier offers intermittent services until 1951.

Following a brief suspension of operations, CAMSA resumes flying until 1957.

CANADA 3000 AIRLINES, LTD.: 27 Fasken Drive, Toronto, Ontario M9W 1K6, Canada; Phone (416) 674-0257; Fax (416) 674-0256; <http://www.canada3000.com>; Code 2T; Year Founded 1988. **Air 2000 Airlines, Ltd.** is formed at Toronto on April 1, 1988 as a Canadian associate of the U.K. charter operator by that name, which is the airlift arm of the tour group Owners Abroad. The Manchester-based airline, with quarter ownership, holds too much “foreign” interest and is forced to divest itself in order for the Canadian operation to get started.

Accordingly, the 25% shareholding is sold to Toronto-based Deluce Investments, Ltd. and Robert Deluce becomes president. Other shareholders include Colin Hunter, Paul Jervis, and Chairman John Lecky. Angus Kinnear is appointed managing director, with Capt. David “Dusty” Thompson as vice president-operations and chief pilot.

A Boeing 757-28A leased from **Air 2000, Ltd.** in the U.K. arrives in late November; it is painted in Air 2000 livery with a maple leaf painted on the forward passenger door.

The company receives an operating license from the National Transportation Agency of Transport Canada on November 29; certification allows the Canadian company to begin nonscheduled flights to Caribbean, Mexican, and Florida holiday destinations on December 1.

Airline employment in 1989 stands at 165. In accordance with the terms of its license, the company begins seeking a new name with which to replace the one employed. An initial idea, Air 3000, Ltd., is submitted to the NTA at the end of April; the regulators will turn the concept down.

The company receives the first B-757-28A it has chartered from ILFC on May 5, allowing return of the leased unit. The new plane, with Air 3000, Ltd. titles, will have to be repainted.

Agreeable to NTA, the carrier disassociates itself entirely from the British carrier on May 10 by changing its name to **Canada 3000 Airlines, Ltd.** With 2 chartered B-757-28As in hand by mid-month, the reformed company is able to launch its first service on May 17, from London (LGW) to Toronto.

In 1990–1992, the company builds up a Canadian network and introduces additional services to Europe. Destinations visited from gateways at Calgary, Edmonton, Montreal, Toronto, Vancouver, and Winnipeg are continued. These include Acapulco, Amsterdam, Antigua, Barbados, Belfast, Birmingham, Cancun, Costa Rica, Cuba, Dublin, Dusseldorf, Edinburgh, Ft. Lauderdale, Ft. Myers, Glasgow, Grenada, Halifax, Huatulco, Ixtapa, Las Vegas, Lisbon, London, Los Cabos, Manchester, Manzanillo, Margarita Island, Nassau, Nice, Oaxaca, Oporto, Orlando, Palm Springs, Paris, Ponta Delgada, Puerto Plata, Puerto Vallarta, Quebec City, St. Johns, St. Kitts, St. Lucia, St. Martin, St. Petersburg, St. Thomas, San Juan, Shannon, Terceira, and the Turks and Caicos Islands.

New routes are opened to Honolulu and Maui from Vancouver on behalf of Fiesta West as enplanements total a million. The winter lease of B-757s from the British independent **Air 2000, Ltd.** continues.

Airline employment in 1993 stands at 752. Employing the carrier’s 7 leased Boeing 757-200ERs, President Deluce adds charter and tour frequencies from Toronto to Copenhagen early in the year. The first of 3 chartered Airbus Industrie A320-211s arrives on May 29 on lease from **Monarch Airlines, Ltd.**

Frequencies from Vancouver to Glasgow, Manchester, Amsterdam, and Dusseldorf are introduced during 1994. On behalf of Fiesta West, a route is opened from Vancouver to Kona. The fleet is expanded by the addition of 2 A320-212s, while the number of chartered B-757-200ERs is reduced to 1 Dash-23A and 3 Dash-28As.

Flights continue in 1995. On behalf of Fiesta West, a route is stretched from Vancouver to Kauai. On September 16, Flight 5516, a B-757-28A en route from Denmark to Toronto, comes within 3-mi. horizontal and 2,000-ft. vertical of **American Airlines** Flight 53, a B-767-323ER en route from Scotland to Chicago; the loss of required separation is blamed on an ATC trainee at Gander, Newfoundland.

On January 10, 1996, Sunquest Vacations, Ltd. signs a deal giving Sunquest access to Canada 3000 flights, including destinations throughout Canada, as well as Florida, California, and the U.K. Canada 3000 will provide lift for Sunquest tours. Chartered from ILFC for seven years, an A320-212 enters service in March.

A record is established on October 23 when an entire female crew—Capt. Nicole Sauve, First Officer Linda Galipeau, and seven flight attendants—operates the service between Toronto and Manchester.

The workforce stands at 1,406 in 1997 and the carrier operates a leased fleet of 4 A320-212s, 2 B-757-23As, 3 B-757-28As, and 1 each B-757-23AER and B-757-28AER.

Destinations visited include Acapulco, Amsterdam, Antigua, Barbados, Belfast, Birmingham, Cancun, Costa Rica, Dublin, Dusseldorf, Edinburgh, Ft. Lauderdale, Glasgow, Honolulu, Manchester, Nice, Nassau, Las Vegas, London, Paris, Shannon, and numerous Caribbean markets.

During the year, flights begin to Australia; Canada 3000 is the first Canadian charter carrier to offer direct service down under. The carrier also begins a yearlong experiment to see if changing its tail titles from “Canada 3000” to “C-3” will have any marketing advantage.

When major contractor Signature Vacations announces in November that it will transfer to another airline a year hence, the company begins to sign up new charter operators or increase its relationship with older clients, including Sunflight and Sunquest.

When the summer schedule is unveiled on March 1, 1998, Newcastle, Belfast, and Stuttgart have been added to the European network, while Moncton, New Brunswick, is placed on the domestic map.

An A330-202 arrives under charter from ILFC on April 29; a second is delivered at the end of May. The carrier is the first in North America to operate this advanced type. The first A330-202 revenue flight occurs on May 10, from Vancouver to Amsterdam via Calgary.

Also in May, the company opens the first office of its new wholesale tour operation, Canada 3000 Holidays, in Vancouver. Finding no advantage in the “C-3” tail titles, the concept is dropped.

Departures and arrivals at Toronto are transferred from Terminal 1 to Terminal 3 on December 15.

Enplanements for the year total 2.5 million, while revenues of C\$270 million are earned.

Airline employment at the beginning of 1999 stands at 1,890.

The company now aligns with the North American Leisure Group.

Two more A330-202s join the fleet during spring and summer.

The company’s domestic services continue to expand, reaching 12 points and yielding 750,00 passengers during the 12 months. On the year, customer bookings reach 2.7 million.

Airline employment stands at 2,100 at the beginning of 2000, an 11.1% increase. To insure competition for the new Air Canada-Canadian Airlines combine, the government on February 17 grants Canada 3000 immediate rights to offer scheduled flights to France, Germany, and the U.K. Authorization of the carrier’s request to serve Japan, India, and the Philippines is delayed.

Weekly A330-202 roundtrips commence on May 2 from Toronto to Brisbane via Vancouver, Honolulu, and Sydney. The next day, A330-202 service is initiated to Berlin from Calgary and Vancouver. On May 14, orders are placed for 4 (later increased to 5) A319-100s with which to expand domestic service.

An initial public offering (IPO) of three million shares is completed on July 13, raising gross proceeds of C\$30 million. Trading of the carrier's common shares begins on the Toronto Stock Exchange.

During the summer, new service is started from Toronto to Abbotsford, from Vancouver and Calgary to Moncton, from Toronto to New Orleans, and from Vancouver and Calgary to Berlin. Just in time for the XXVII Olympiad in Australia, new flights are introduced in September from Toronto to Brisbane via Vancouver.

In mid-October the carrier places an order for 6 A319-100s for use on domestic routes beginning in late 2001; it also receives authority for service from Vancouver to New Delhi via Toronto and London (LGW).

Weekly A320-211 roundtrips commence on November 1 from Toronto to Abbotsford, British Columbia.

CANADIAN AIR-CRANE, LTD.: 7293 Wilson Ave., Delta, British Columbia V4K 4E2, Canada; Phone (604) 940-1715; Fax (604) 904-1735; <http://www.air-crane.com>; Year Founded 1991. Canadian Air-Crane is established at Delta in 1991 to engage in such heavy-lift operations as construction, forestry work (including helilogging), and fire fighting. Within six years, Operations Manager/Chief Pilot Paul Mavrinac operates a fleet that includes 3 huge Sikorsky S-64 Sky Cranes leased from **Erickson Air Crane** and 1 Bell 206B JetRanger.

At the 1997 FireExpo held at Abbotsford, British Columbia, during the summer, a pair of S-64s steal the show, wowing crowds with demonstrations of their 3,000-gallon belly-dump systems. Commercial flights also continue during the year and over the next three.

CANADIAN AIRLINES, LTD.: #2800-700 2nd Street, SW, Calgary, Alberta T2P 2W2, Canada; Phone (403) 294-2000; Fax (403) 294-2066; <http://www.cdnair.ca>; Code CP; Year Founded 1999. Canadian Airlines International, Ltd. is given a new name on January 13, 1999, as well as a new look and a "Proud Wings" logo featuring a stylized bright blue Canada goose.

The first aircraft painted in the new livery is a B-747-475, which arrives at Calgary from Beijing just in time for a celebratory news conference.

In addition to aircraft, the new look will appear on over 1,900 customer promotions, from cargo trucks to ticket jackets and frequent flyer cards. Canadian also has a new uniform collection designed by Canadian Brian Bailey to complement the new look is to be shown for the first time on January 14.

A severe winter storm hits Toronto on the evening of January 14, forcing the airline, together with **Canadian Regional Airlines, Ltd.**, to cancel over 30 departures, to say nothing of the Bailey uniform show. Additional manpower is laid on at Montreal, Calgary, and Vancouver to accommodate customer inquiries. Blizzard conditions continue at Toronto the next day forcing the two carriers to cancel all of their departures. The situation returns to normal by January 17.

The delayed showing of the carrier's new uniforms is rescheduled and held on the evening of January 19 at the opening of the airline's new domestic departure lounge at Toronto. Over 100 separate pieces have been designed by the Alberta-born Bailey for the carrier's 12,000 uniformed employees, including flight attendants, pilots, concierges, cargo handlers, baggage handlers, reservations and check-in personnel, and others.

The "OneWorld" global alliance is formally implemented on February 1 with **American Airlines British Airways, Ltd. (2), Cathay Pacific Airways (Pty.), Ltd., and Qantas Airways (Pty.), Ltd.**

On the evening of February 8 in Vancouver, Canadian illuminates one of the largest signs in Canada with the help of three generations of the company family, headed by retired Capt. Robert Randall Jr., 90. His Canadian Airlines aviation family includes three sons and two grandsons

who are all current or retired pilots. The new 4.5-ton sign displays the new "Proud Wings" logo using over 4 miles of neon. It is made of aluminum and measures 56-ft. high by 105-ft. wide, and features the word "Canadian," which has been created in canvas and measures 117-ft. The sign is visible in the night sky from two miles away.

On February 16, it is announced that Canadian will place its code on **Alitalia, S.p.A.'s** nonstop roundtrips between Milan and Toronto five times a week beginning on June 1.

On March 11, the Allied Pilots Association respond to Canadian's request to Canada's Department of Transport to consider relaxing the restriction that limits foreign ownership to 25%. The statement notes the union's opposition to any increased ownership of the Canadian carrier by AMR Corporation, parent of **American Airlines**. The AA pilots had not been in favor of the original investment.

In conjunction with its "OneWorld" code-share partner **British Airways, Ltd. (2)**, the airline, on March 28, begins daily dual-designator return flights from Toronto to Moscow via London (LHR).

When the code-sharing agreement with **Alaska Airlines** and **Horizon Air** takes effect on April 1, the three companies begin to participate in each other's frequent flyer programs and begin code-sharing on routes between Vancouver, Seattle, and numerous cities across the western U.S. and Canada.

Daily nonstop B-737-275A roundtrips commence on April 4 between Edmonton and Chicago (ORD) and is the only nonstop service between the two cities.

The same day, the carrier's code-sharing agreement with **Japan Air Lines Company, Ltd. (2)** is expanded from two to four daily flights between Vancouver and Tokyo (NRT). This new service brings the number of nonstops offered by the two airlines from Vancouver to Tokyo and Nagoya to 42 each week.

In conjunction with code-sharing partner **Canadian North**, thrice-weekly B-737-275C roundtrips begin on April 6 linking Ottawa with Iqaluit in the Northwest Territories. Plans are announced to double the schedule in October.

On April 23, the company closes the sale and lease-back of 2 DC-10-30s to San Francisco-based Pegasus Aviation. The Douglas wide-bodies are being replaced by a pair of leased B-767-300ERS due to arrive in midyear. Two more B-767-300ERs will be received during the fourth quarter to replace another pair of DC-10-30s, which, again under a sale lease-back deal, will depart the fleet in early 2000.

The company adds three Asian languages to its already bilingual World Wide Web site on April 30, becoming the first airline in Canada to offer multilingual online services for all of its customers.

Despite this technological achievement, the company continues to struggle financially. On May 3, its stock is down from C\$5 per share a year ago to just C\$1.75. The next day, the airline reports that its quarterly revenues are up 4.4% to C\$704 million from C\$674 a year earlier. The boost is due to strong traffic between Canada and the U.S. as well as improvements in Asian business.

The good news quickly turns gloomy as operating costs of C\$806 million are shown. Thus there is a first quarter operating loss of C\$102 million, compared to C\$62 million a year earlier. The net loss of C\$108 million (\$74.1 million), while less than expected, follows a C\$150-million fourth quarter loss.

Even as the airline seeks a capital infusion, the amount of its cash on hand at the end of the three months (a large concern to analysts) is C\$101 million, compared with C\$55 million at the end of March 1998.

Meeting with other "OneWorld" CEOs at Vancouver on May 14, Chairman Kevin Benson indicates to reporters that his carrier is making progress on required operational restructuring. Canada's second-largest airline is focusing on its troubled short-haul business and hopes to have a plan to stem losses in hand within a few months, one which can be presented to equity markets by late fall.

Canadian and **American Airlines** become, on June 17, the first airlines to implement technology allowing two carriers to issue electronic interline tickets on each other.

CEO Benson informs the company's annual meeting at Calgary on June 29 that their carrier has been in discussions, requested by the government, with **Air Canada, Ltd.** concerning the possibility of dividing the two carrier's weak domestic routes rather than competing over them. Although no agreements are reached, discussions are scheduled to resume in October.

Following a C\$17.8-million second quarter loss (C\$124 million for the first half), Canadian, in July, announces plans to cut passenger capacity by 7%, using aircraft smaller than DC-10s in a number of markets. Although voices are raised for government assistance, ministers in Ottawa make it known that none will be forthcoming.

Still, there are other possibilities to keep the airline aloft. At a news conference on August 13, Transport Minister David Collette and Industry Minister John Manley announce an Order-in-Council, pursuant to Section 47 of the Canada Transportation Act. The edict will relax competition rules for 90 days in order to allow Canadian and Air Canada to discuss a possible corporate restructuring plan. Press speculation of the outcome of such a plan range from domestic route sharing to a takeover of Canadian international routes by Air Canada, to a full-blown merger with the Montreal-based major.

On August 23, **Air Canada, Ltd.** offers to purchase Canadian's profitable international routes, along with certain associated assets and liabilities, and to offer Canadian passengers code-sharing opportunities on its international routes. The arrangement guarantees transfer of Canadian personnel associated with international operations, liquidity, and continued maintenance of company headquarters at Calgary. Competition on domestic routes would be maintained. The exact monetary terms are kept confidential. Canadian rejects the bid within hours of its receipt, fearing that its acceptance would reduce it to a domestic-only airline.

The stakes are raised once again on August 24. After some days of speculation in the Canadian press, Gerald Schwartz, CEO of Toronto-based Onex Corporation, a buyout specialist that also operates Lantic Sugar, Ltd. and the airline catering company Sky Chefs, comes forward at Montreal with an ambitious plan to purchase and merge both airlines. Indeed, an accommodation is quickly gained and approved by Canadian Airlines under which Onex would purchase it.

Under the Onex scheme, valued at C\$5.7 billion (\$3.81 billion), a new concern, AirCo, would be created. Shareholders in Canadian Airlines are to be paid C\$2 cash or 0.2424 common share of AirCo for each of their common stock. Shareholders in **Air Canada, Ltd.**, when given the chance, will be offered C\$8.25 cash or one AirCo share for each of their common stocks. Retaining the name Air Canada, the enlarged Canadian operator would retain headquarters in Montreal.

For its part, Onex, according to Schwartz, will invest C\$1.2 billion in AirCo. Of this amount, the corporation will invest C\$475 million, including C\$225 million financed by a loan from AMR Corporation, parent of **American Airlines**, while AMR itself will put in C\$275 million in AirCo equity and convertible debt. In addition, both concerns will join together in investing a further C\$250 million in AirCo debts and warrants. When the paperwork is finished, Onex will own a 31% stake, AMR 14.9%, and public shareholders, 54% or the majority. Key to this venture will be a shift of the reformed Air Canada away from its membership in the "Star Alliance" and into the AA-dominated "OneWorld" international grouping. AA would also provide reservations and accounting systems for the single carrier. Efficiencies would be gained by the elimination of 5,000 jobs, as well as other cost-cutting measures such as route consolidations.

The offer is to be sent to both airlines by certified mail within two weeks and will expire on November 8. In 1995, Onex made a hostile takeover attempt on John Labatt, Ltd., which it eventually lost.

The Onex bid, viewed as "unsolicited" and "below-market" in value, is not welcome at **Air Canada, Ltd.**, and officially says so in a press release on August 27. Meanwhile, Air Canada President/CEO Robert Milton, in a message to employees also on August 24, indicates that other bids and counteroffers may be expected. Initial responses from shareholders and analysts are surprise and caution.

Figuratively speaking, the stadium is filled in anticipation when the contest, on August 25, begins to take on the trappings of the first international alliance dual. Speaking on behalf of the "Star Alliance," **Deutsche Lufthansa, A.G.** announces that the grouping will do everything reasonable to maintain the presence of Air Canada "in the team for the sake of our customers and fair competition."

At midday on August 26, the three airlines involved plus Onex agree on one point; they will exercise a vow of silence until their business is completed.

On August 31, the **Air Canada, Ltd.** board of directors adopts and announces shareholders' rights plan designed to give the carrier time, beyond November 8, to consider alternatives. Under the plan's "poison pill" provisions, should any bidder not approved by the company board attempt a takeover (by purchasing more than 10% of Air Canada's common stock), shareholders will receive one share of new stock for each one they already own, thereby diluting the bidder's airline stake. The directors also call for a special shareholders meeting on January 7 to consider proposals. The move is immediately protested by Onex and the company files suit in court to force a meeting on or before November 8.

Analysts immediately express concern that the **Air Canada, Ltd.** move will delay a buyout long enough for Canadian Airlines to go bankrupt, at which point there will be nothing left of Onex Corporation to merge. In this way, the present Air Canada will remain intact, and Canadian assets, particularly long-haul routes, will be available for purchase. Both national political parties, the ruling Liberal and the opposition Reform, now enter the picture, debating the merits of extending the 90-day waiver of competition rules.

The Canadian Transport Ministry indicates, on September 2, that it will not grant an extension of the 90-day limit. Simultaneously, the leadership of the International Association of Machinists and Aerospace Workers (IAM) indicates that its 18,500 members at the two major airlines and airline service companies will stage an illegal strike on September 27 unless Ottawa guarantees no jobs will be lost in an Onex deal.

A new code-share service begins with **Cathay Pacific Airways (Pty.) Ltd.** on October 31, with Canadian placing its code on Cathay services from Hong Kong to Vancouver and to Toronto.

On November 6 a Quebec court rules on a case filed by **Air Canada, Ltd.** that the hostile takeover bid by Onex Corporation, which is supported by Canadian Airlines and **American Airlines**, violates the 10% individual limit rule on Air Canada share ownership. The stipulation had originally been written into Air Canada's 1988 privatization document to guarantee diverse ownership. Onex Chairman Schwartz, having been proven wrong in his assumption that the government would quickly change the provision, is forced to end his acquisition attempt.

Air Canada, Ltd. now makes a C\$92 million offer to take over Canadian, but this move is resisted by Canadian CEO Benson, who is receiving credits from **American Airlines**, which really does not want to lose its "OneWorld" partner. Analysts, including Transport Minister Collette, now predict that Canadian will soon be acquired by its rival and planning for Canada's post-merger skies begins.

The company's long effort to avoid failure ends on December 4 when its board votes to accept Air Canada's C\$92 million (\$63 million) buyout. On December 23, Canadian stockholders agree to sell their outstanding shares; the same day, an agreement is facilitated with **American Airlines** under which the Dallas (DFW)-based major will sell its Canadian shares to AC for \$59 million.

Customer boardings during these tumultuous 12 months fall 6.5% to 7,799,000, although cargo traffic rises 5% to 714.1 million FTKs. Revenues are up 2.9% to C\$3.26 billion as are expenses, which rise 6.6% to C\$2.34 billion. The operating loss quadruples to C\$97.67 million while the net loss nearly doubles, reaching C\$222.3 million.

The workforce stands at 16,807 at the beginning of 2000, a 5% increase. Acquisition of the **American Airlines** and Canadian Airlines shares by **Air Canada, Ltd.** occurs on January 4. The company in January begins intense negotiations with its creditors in an effort to

restructure its C\$3.5-billion debt; responses are positive. The federal Competition Bureau simultaneously orders the sale of the **Canadian Regional Airlines, Ltd.** subsidiary but grants permission for its integration into the Air Canada commuter network if it is not sold by August 30.

Service from Toronto to Boston is suspended on February 6, although the Vancouver to Boston route is maintained.

In a joint ceremony at Toronto on February 9, 60 AC and CAI employees roll out the first Canadian jetliner to be painted in modified AC colors. Reliveried, the B-767-375ER wears Canadian titles, with the famous goose logo shown in smaller format behind the titles.

Seconded over from **Air Canada, Ltd.**, its executive vice president, Paul Brotto, succeeds Kevin Benson as chief operating officer on February 29; Benson remains a Canadian board member.

On March 14, **American Airlines** confirms that it has received word that Canadian Airlines will depart the "OneWorld" alliance on June 1. Air Canada is a member of the rival "Star Alliance."

Also in March, ALPA-represented pilots reach agreement with Air Canada on a new five-year contract with major pay increases. Late in the month, Canadian seeks and receives bankruptcy protection from its U.S. and Canadian creditors as it seeks to restructure C\$3.5 billion (\$2.4 billion) in debt.

Despite the carrier's administrative position, it is still permitted to launch new services. On April 3, daily B-737-200 nonstop roundtrips are started from Edmonton to Los Angeles and Montreal; both routes are code-shared with **Air Canada, Ltd.**

By April 15, Canadian has reached agreement with 90% of its aircraft creditors concerning the restructuring of its debt towards aircraft leases. The company's reorganization plan receives internal approval on April 21 and is forwarded to an Alberta court for approval on April 24.

A first quarter loss of C\$255.9 (\$173.1 million) is reported on May 5, a figure worse than that provided for the same period a year earlier.

AC and Canadian announce on May 19 that the two will end their code-sharing arrangements with **American Airlines** on or before October 1. Canadian and American had been partners for a decade.

Employing the B-767-375ER unveiled February 9 in revised colors, the company on July 2 resumes a daily service from Toronto to Sydney via Vancouver and Honolulu.

Financial restructuring of Canadian is completed on July 4, on which date CEO Milton announces the reorganization of Air Canada into five main divisions. In anticipation of the year end completion of the two airlines' integration, the pair jointly indicate next day that the Canadian Plus loyalty program will be merged into Air Canada's Aeroplan on January 1.

Canadian, on July 7 becomes an indirect, but wholly owned Air Canada, Ltd. subsidiary. At this point, **Air Canada, Ltd.** is permitted to actually place Canadian's regional subsidiary up for sale.

During the summer, the three **Air Canada, Ltd.** regionals, **Air BC, Ltd.**, **Air Nova**, and **Air Ontario** take a major step towards their consolidation into a single unit when a head office for a joint carrier is established in Halifax and a western hub at Calgary. Having failed to find a buyer, AC is permitted to take over **Canadian Regional Airlines, Ltd.** on August 30 and add that feeder into its regional airline consolidation process. When the integration process is completed at year's end, it is anticipated that the (as yet) unnamed airline will be one of the largest regional airlines in the world, with over 5,000 employees and some 135 aircraft, mostly Dash-8 turboprops.

An important foreign blessing of the majors' merger is received on August 31 when the British Competition Commission, ruling in response to complaints from other airlines, approves the takeover and agrees to allow **Air Canada, Ltd.** to retain all of its important London (LHR) landing slots.

Technical problems prevent Canadian's conversion to the **Air Canada, Ltd.** reservations system as scheduled on October 1; the use of two different reservation systems continues to cause problems for passengers. Meanwhile, operational and service problems caused by the

merger process cause additional frustrations for passengers, who complain in record numbers.

Flight CP096 to London (LHR) on October 8 is the last Canadian international service to be flown from Calgary.

Plagued with a barrage of service complaints, **Air Canada, Ltd.** officials now move to speed up integration of the operations of both carriers. By October 15, just fewer than 200 employees remain at Canadian's Calgary headquarters and it is anticipated that the flying goose corporate symbol will disappear from the aviation landscape in 2001.

When the winter schedule, coordinated with **Air Canada, Ltd.**, begins on October 30, the two add new B-737-375ER roundtrips from Vancouver to New York (JFK); nine additional domestic nonstop services begin the next day.

New B-737-375ER flights, coordinated with **Air Canada, Ltd.**, commence on December 10 from Calgary to Honolulu.

CANADIAN AIRLINES INTERNATIONAL, LTD.: Canada (1986–1999). A merger of **Canadian Pacific Air Lines, Ltd.** and **Pacific Western Airlines, Ltd.** is announced on December 2, 1986. Calgary-based Pacific Western Airlines Corporation, parent of the latter, has paid C\$300 million to effect the merger, which also includes various amounts of shareholding in the subsidiaries **Nordair, Ltd.**, **Quebecair, Ltd.**, **Eastern Provincial Airways, Ltd.**, **Time Air, Ltd.**, and **Transair, Ltd.** In addition, shareholding in **AirBC, Ltd.** is sold to **Air Canada, Ltd.** Rhys T. Eyton, former Pacific Western chief, is appointed chairman/CEO, with Murray Sigler as president/chief operating officer.

The new carrier's official name is adopted on March 26, 1987, with a start-up date of April 26. The initial fleet comprises 70 Boeing 737-200s and 9 Douglas DC-10-30s, plus 3 leased (later purchased) from **United Airlines**.

An order is placed for 6 (later 8) B-767-375ERs and 1 B-737-2E1 is sold. It will take two years to complete the changeover to the carrier's new livery. Meanwhile, the workforce of the combined enterprise increases by 53.9% to 13,454.

During the year, chairman Eyton's carrier establishes a nationwide commuter network, Canadian Partner. Members include **Time Air, Ltd.**, **Norcanair, Ltd.** prior to its takeover by **Time Air, Ltd.**, **Calm Air, Ltd.**, and **Air Saint-Pierre, Ltd.** In Quebec, **Nordair Metro, Ltd.** and **Quebecair, Ltd.** are merged to create **Inter-Canadian, Ltd.**, while a new Ontario partner is established in **Ontario Express, Ltd.**

Many of the routes and services of the merger partners are continued, including Canadian Pacific's international flights to South America, the Pacific, Asia, Italy, Portugal, Holland, and the U.S. markets of San Francisco, Los Angeles, Pittsburgh, and Ft. Lauderdale (the last two gateways having belonged to **Nordair, Ltd.**).

In October, the new entrant trades certain routes with **Air Canada, Ltd.**, giving the Montreal-based airline rights to Korea and Portugal in exchange for the German cities of Munich and Frankfurt. CAI is also now designated the nation's link to Scandinavia and the U.S.S.R. In all, some 90 destinations are served in 13 countries.

During late fall, the previous Attache Class and Empress Class services are replaced by a new Canadian Business Class. First-class service aboard the carrier's B-737-200s is dropped; however, a temporary ban on smoking aboard that aircraft type becomes permanent.

Passenger boardings for the new megacARRIER increase by 2.1% over the previous year's individual totals to 9,538,623. Freight rises 21.7% to 303.7 million FTKs. Revenues increase by 20.2% to C\$1.4 billion and expenses are low enough to allow an operating profit of C\$96.3 million. Merger costs, on the other hand, force the net profit down to C\$13.8 million.

The employee population is increased by 2.6% in 1987 to 13,800. In February, two former **Nordair, Ltd.** Fairchild FH-227s are sold to **Malmo Aviation, A.S.** The second of two Hawker Siddeley HS 748s sold to **Calm Air, Ltd.** is delivered in March while the first B-767-375ER is delivered in April and is placed into service on the carrier's trans-Canada routes in May. Later in the same month and with an inter-

line agreement from **Aerolineas Argentina, S.A.**, the carrier inaugurates a weekly route from Toronto to Rio de Janeiro.

In July, orders are placed for 4 B-747-475s and 10 Airbus Industrie A320-211s. In the fall, thrice-weekly DC-10-30 service is inaugurated from Vancouver to Bangkok via Hong Kong. Thirteen B-737-200s are sold to Polaris Aircraft Leasing during the year and leased back. Two B-737-200s are leased to other carriers, one to **Britannia Airways, Ltd.** and one to **Transavia Holland, A.S.** A second Rio frequency is introduced in December.

For three months beginning on January 6, 1988, passengers traveling first- or business-class from Vancouver to Bangkok receive hotel accommodation through a Bangkok Executive Stay program.

En route from Amsterdam to Vancouver with 263 aboard on January 12, a DC-10-30 makes an emergency landing in Edmonton after a note is found warning of a bomb in a washroom; no bomb is found. Also in January, thrice-weekly DC-10-30 service is started to Bangkok.

In March, a feeder agreement is signed with Chicago-based **Midway Airlines (I)**. In April, 3 B-737-3Y0s are leased to **Monarch Airlines, Ltd.** while 1 B-737-2K9A is chartered to **Air Atlantis**. Nonstop service is introduced in May from Toronto to Buenos Aires, Santiago, and Lima.

In September, twice-weekly roundtrip, nonstop service is initiated between Toronto and Mexico City. Nonstop service is initiated on October 1 between Vancouver and Shanghai, with continuing service to Beijing. Late in the year, a new Northern Division is established and provided a fleet of B-737-200s with which to operate northern airlifts.

Customer bookings accelerate 6.4% to 9,848,533 and cargo rises by 23% to 432.7 million FTKs. Revenues swell by 16.3% to C\$1.8 billion. Expenses grow more quickly, however, and cut the operating profit to C\$64.6 million. Net gain moves ahead slightly to C\$25.2 million.

The workforce grows in 1989 by 20.7%, to 16,877 and the fleet now includes 55 B-737-375ERs, 8 B-767-275ERs, 1 B-747-1D1, 1 B-747-133, 12 A310-304s, and 10 DC-10-30s. Orders are placed or outstanding for 3 B-747-475s, 4 B-767-375ERs, and 18 A320-211s.

A takeover offer is made to Wardair, Inc., parent of **Wardair Canada, Ltd.**, in January. In February, the company introduces Super Skysaver fares with a "best price guarantee" against ticket price increases. Weekly roundtrip and nonstop B-767-375ER flights begin in late April from Montreal's Mirabel Airport to Munich. Also during the month, thrice-daily nonstop B-737-3Y0 flights are inaugurated from Toronto to Chicago (MDW). The services are timed to connect with **Midway Airlines** and Midway Connector flights under a new joint marketing program with the U.S. carrier. On April 25, 100% interest is taken in Ward-air, Inc. for C\$250,800,000, of which C\$146.2 million is paid in cash.

Beginning on May 4, weekly nonstop roundtrips commence from Toronto to Tokyo and from Vancouver to Nagoya.

A strategic alliance is entered into with **Deutsche Lufthansa, A.G.** during the first week of May. In addition to joint marketing and promotions, ground handling, and frequent flyer program linkage, the two will code-share on an increasing number of flights between Canada and Germany.

On June 25, weekly nonstop flights are initiated from Edmonton to Tokyo, with flights originating and ending in Calgary. Also in June, weekly roundtrips are launched from Toronto to Copenhagen via Amsterdam.

With a few issues outstanding, integration of **Wardair Canada, Ltd.** is completed on July 1, while, later in the month, weekly Edmonton-Tokyo flights commence. Other new nonstop frequencies begun during the year include Toronto to Tokyo, Vancouver to Nagoya, and Toronto to Chicago (MDW). Marketing agreements are signed with **Aeroflot Soviet Airlines** and **SAS (Scandinavian Airlines System)**. The latter pact, made in December, calls for the joint operation of flights from Toronto to Copenhagen.

The joint-venture alliance with **Deutsche Lufthansa, A.G.** begins on December 20 with weekly nonstop roundtrips between Toronto and Frankfurt.

In addition, the company's 32% investment in Intair (formerly Inter-Canadian) is sold for C\$15.5 million.

Passenger boardings dip 1.9% to 9,450,000 and freight climbs 4.1% to 215.2 million FTKs. Revenues increase 16% to C\$2.23 billion. Expenses, however, climb 20.5% and guarantee an operating loss of C\$8.7 million. The net loss—the first in 19 years for PWA Corporation—is C\$48.6 million.

The workforce inches up by 0.7% in 1990 to 17,000 and the fleet now includes 89 aircraft. The latter figure makes the airline the 23rd largest in the world. The Wardair, Inc. merger is finally finished on January 1.

Dropped for the winter season, Edmonton and Calgary to Tokyo service resumes on April 29 while flights on the Vancouver to Nagoya route are increased to thrice weekly on the same day.

In accordance with the terms of the previous December's marketing agreement with **SAS (Scandinavian Airlines System)**, CAI and SAS inaugurate joint, thrice-weekly nonstops in May between Toronto and Copenhagen. Canada's first B-747-400, a Dash 475, is placed into service and inaugurates services to Taipei. Following up on the success of the previous year's joint arrangements, new marketing agreements are entered into with **Air France** and **China Airlines, Ltd. (CAL)**. In September, the company elects to divest itself of its 50% ownership in GPA Jetrop, Ltd. of Shannon, Ireland.

Daily B-747-475 service is launched in October from Vancouver to London and from Toronto to Paris. In November, a twice-weekly nonstop Ottawa to London schedule is introduced while a fifth flight is added from Toronto to Paris and nonstop B-747-475 frequencies are initiated from Toronto to Mexico City.

Services are aligned with **Air New Zealand, Ltd.**, beginning on December 2, the two airlines offer joint flights, with joint seat capacity and marketing promotional activities, including the Canadian Plus frequent flyer program. Enhanced flight schedules are also inaugurated between the two nations, employing the second Dash-475 Jumbojet delivered in mid-month; 10 services per week are operated from Canada to Fiji and New Zealand. Minority interest (46%) is taken in **Time Air, Ltd.**

Customer bookings leap up by 10.8% to 9,450,056 while cargo moves ahead by 23% to 594.5 million FTKs. Revenues are up a slight 3.7% to C\$2.38 billion and the operating loss deepens to C\$10.1 million. The net loss "improves" to minus C\$12.7 million.

Company employment is cut by 7.3% in 1991 to 15,300. The last 54% interest in **Time Air, Ltd.** is acquired in January, in consideration of C\$11 per share. Also in January, twice-weekly DC-10-30 flights begin from Toronto to Mexico City. A supplemental marketing agreement is signed with **Deutsche Lufthansa, A.G.**; taking effect on April 12, the code-sharing project allows the German carrier to purchase and market seats on up to 19 weekly Canadian flights to Germany.

New Terminal 3 facilities are opened at Pearson International Airport at Toronto and the first of five A320-211s arrives at Vancouver on April 15. A code-sharing agreement is inked with **Qantas Airways (Pty.), Ltd.**, providing for joint service on routes from Sydney to Honolulu with Australian aircraft and from Honolulu to Melbourne, Vancouver, and Toronto on board CAI jetliners.

A second B-747-475 enters service, on routes to the South Pacific, while the first A320-211 is placed on domestic flights, beginning in May. The holding company **Canadian Regional Airlines, Ltd.** is established to control the carrier's Canadian Partner affiliates. In October, an alliance is sealed with **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** instituting code-sharing flights from Canada to Brazil, Argentina, and Chile and, in November, a marketing agreement is signed with the **China Airlines, Ltd. (CAL)** subsidiary **Mandarin Airlines, Ltd.** covering joint services from Vancouver to Formosa.

Six-times-per-week B-757-475 frequencies are opened from Vancouver to Honolulu in late December. As with most of the larger airlines in Canada, CAI is visited by recession in the wake of the first quarter's Gulf War.

Passenger boardings slide 15% to 8,034,000 and freight declines 4.4% to 565 million FTKs. Revenues increase 4.5% to C\$2.44 billion,

but spiraling costs guarantee a hike in operating loss to C\$89.7 million. Net loss zooms to C\$129.4 million.

The payroll declines a slight 0.5% in 1992 to 15,547. Three A310-304s are sold to the Canadian armed forces for \$C50 million. Early in the year, PWA Corporation, the airline's parent, enters into cooperative discussions with **American Airlines**. **Air Canada, Ltd.**, which would like to purchase its competitor's international routes, protests the talks even as its Canadian rival continues its attempts to resign from its Gemini computerized reservations system commitment.

In August, the employees of PWA Corporation form the Council of Canadian Airlines Employees (CCAEE) to provide their company with a capital infusion via payroll deductions and to help keep it independent. Discussions are dropped with the Americans and taken up with **Air Canada, Ltd.** and, in September, it is reported that the former Trans-Canada has purchased PWA Corporation.

Under terms of the "premerger" deal announced in October, which remains subject to shareholder, government, and regulatory approval, a new holding company will be created. Shareholders of each airline will receive one share of common stock in it for each share of common owned in the two earlier firms, with Air Canada shareholders owning 60% interest and PWA 40%. A joint management board will employ an equal number of directors from each airline and it is hoped that merger-related layoffs can be kept below 6,000.

Concerned over the size of the debt load it might be taking on as it also negotiates a takeover of **Continental Airlines**, the board of **Air Canada, Ltd.** announces, on November 3, that it has rejected management's effort to take over CAI's parent, PWA Corporation. Although somewhat surprised, leadership of the latter wastes no time in reopening merger discussions with **American Airlines**, which quickly stall as the American major awaits the outcome of the U.S. government's hearings on a merger between **USAir** and **British Airways, Ltd.** (2).

Also on November 24, the national transport minister, Jean Corbeil, offers PWA Corporation a C\$50-million loan guarantee, sufficient to cover operations for 80 days. Five days later, PWA Corporation is forced to temporarily cease payments to lenders as part of its restructuring.

In an effort aimed at keeping itself aloft, CAI announces in December that it has reached agreement with union leaders for huge salary cuts. It also cancels delivery of 3 A320-211s while returning a fourth to its lessor, and accepts a C\$50-million (\$39-million) loan from the Canadian government offered the previous month.

On December 18, the provincial governments of Alberta and British Columbia provide loans of C\$50 million and C\$20 million, respectively, on the same terms as that of the Ottawa government. A tentative deal, subject to approval by the U.S. and Canadian governments and dependent upon PWA Corporation's successful financial restructuring, is announced on December 29. Under its terms, **American Airlines'** parent, AMR Corporation, will purchase \$195 million in convertible preferred stock, a 33.3% equity investment, in exchange for 25% control, two AMR members on the airline's eight-person board, and a service contract worth \$2 billion over a 20-year period.

At year's end, a C\$1 billion suit is filed against **Air Canada, Ltd.**, charging that it is trying to drive CAI out of business with predatory pricing.

Customer bookings inch up by 1.3% to 8,136,649 and cargo rises 5.7% to 597 million FTKs. Revenues decline 0.2% to C\$2.3 billion and expenses rise 0.8% to C\$2.38 billion. Although the operating loss is cut to C\$87 million, the net loss triples to C\$434.6 million.

In 1993, Chairman/CEO Eyton and President Kevin J. Jenkins oversee a workforce of 15,200, down 2.2% from the previous year. Still, starting early in the year and continuing for four years, employee members of the CCAEE contribute a cumulative total of C\$210 million.

Beginning in early January, travelers paying full-fare for economy class seats are allowed to fly business class on a space available basis. Another promotion allows any first-, business-, or full-fare economy-class international passenger to make a domestic connecting flight to his

or her overseas gateway for only C\$1. On January 11, scheduled capacity is cut by 15%. Employees now vote overwhelmingly to invest C\$200 million in PWA over a four year period through 5-20% wage cuts.

The pilot twins, Captains Ted and Robert Randall Jr., both retire on March 31; both had begun their company service on April 15, 1952.

Also in March, **Time Air, Ltd.** and **Ontario Express, Ltd.** officially begin to merge under the single **Canadian Regional Airlines, Ltd.** banner.

The struggling line is dealt a serious blow on April 22 by the government's regulator, the Canadian Competition Tribunal (CCT). It refuses to allow CAI to walk away from its Gemini reservations partnership with **Air Canada, Ltd.** in order to join the SABRE system of **American Airlines**; the government body admits it lacks jurisdiction to permit the action. In May, the National Transportation Agency (NTA) of Transport Canada concludes that an AMR Corporation 25% buy would not be against the public interest as control of CAI would remain with PWA.

Two B-737Fs, the first pure freighters in the fleet, are placed into service in June on overnight cargo services within Canada. At the same time, the government, despite appeals by various interests, refuses to overturn the NTA decision. A Federal Court of Appeals decides in July that the Competition Tribunal does, indeed, have the necessary jurisdiction required to release CAI from its Gemini hosting agreement. At the same time, 70% of the carrier's creditors sign a debt restructuring agreement (DRA). Preferred and common shareholders vote overwhelmingly in August to support the DRA and corporate restructuring.

A marketing agreement is signed with **VARIG Brazilian Airlines (Viacao Aerea Rio Grandense, S.A.)** opening up increased frequencies from Toronto to São Paulo and allowing the carrier's customers to readily connect with VARIG flights in Brazil and Argentina. Other major overseas destinations visited now also include Auckland, Buenos Aires, Frankfurt, Hong Kong, Honolulu, London, Los Angeles, Manchester, Milan, Munich, Nadi, Paris, Rio de Janeiro, Rome, San Francisco, Santiago de Chile, Shanghai, Sydney, Taipei, and Tokyo. Transborder and domestic services are maintained to 125 communities.

In September, parent PWA Corporation rejects a takeover bid by rival **Air Canada, Ltd.**. If completed, the deal would have provided C\$200 million (\$150.9 million) in cash and the assumption of C\$800 million (\$603.6 million) in debt and lease obligations in exchange for all of CAI's international routes and 8 jetliners. A B-767-375ER is, however, sold for C\$15.5 million. The arrangement fails primarily because officials realize that the resulting domestic-confined CAI would not be financially viable in the long run.

The Canadian Supreme Court, in October, rules that **Air Canada, Ltd.**, Gemini, and Covia may not challenge the appeal court's July ruling. At this point, the remaining creditors sign the DRA. The major hurdle to an agreement with **American Airlines** is removed on November 24 when the Canadian Competition Tribunal orders the dissolution of the Gemini partnership with **Air Canada, Ltd.** within a year.

In December, PWA Corporation announces AMR's extension of its deadline to complete business until the following June. At the same time, PWA, CAI, and AMR settle out of court with Gemini; however, mediated talks with **Air Canada, Ltd.** to resolve the Gemini issue cannot be resolved and a second merger offer from the Montreal-based major is rejected. Gemini, Covia, and Air Canada appeal the CCT's November ruling to the Federal Appeals Court; however, the national government, as well as the provincial governments of Alberta and British Columbia, restore and extend PWA Corporation's loan guarantees.

Passenger boardings for the year decline 6.2% to 7,629,962 while freight jumps 7% to 656.3 million FTKs. Although revenues are up 3.4% to C\$2.25 billion, expenses climb 1.7% to C\$2.3 billion. The company's losses are down to C\$46.45 million (operating) and C\$207.32 million (net).

Interested in a possible relationship, **Air Canada, Ltd.**, on January 16, 1994, drops its opposition to CAI's pullout from the Gemini reservations system and discontinues its appeal of the CCT's November

ruling. It joins with AMR, Gemini, Covia, and PWA Corporation to negotiate an end of differences. A settlement between the Canadian firms is reached in February, the same month in which employees ratify amended terms of the company's employee investment program.

The equity-for-service arrangement is finally concluded with **American Airlines** on April 27, and is seen by the Canadian carrier as the final stage in a restructuring which enhances the balance sheet by more than C\$1 billion (C\$720 million). In return for the transfer of a total of C\$186 million (\$177 million) north of the border, the Dallas (DFW)-based megacARRIER receives 25% shareholding in CAI and a multibillion-dollar computer services contract worth \$115 million in year one.

AA will also provide CAI with a host of other services including data processing, communications, accounting, operations planning, pricing and yield management, passenger services, and U.S.-originated reservations. The two will also link their frequent flyer programs and AA receives two seats on the CAI board of directors, with one of the new members being AA's own strong-minded Chairman/CEO Robert L. Cranial.

CAI is able to reach agreement with **Air Canada, Ltd.** for dissolution of their partnership in the Gemini reservations system, reportedly by allowing its Montreal-based rival uncontested access to Osaka (KIX) in September. In other financial moves, the carrier is able to achieve C\$530 million in debt restructuring and C\$150 million in employee concessions. The national government and the provincial governments of Alberta and British Columbia provide C\$120 million in loan guarantees.

Meanwhile, as financial restructuring continues, Chairman/CEO Eytton retires and is succeeded by President Jenkins, who assumes leadership of both the PWA holding company and its airline subsidiary.

On May 4, twice-weekly scheduled service, suspended after the Tiananmen Square massacre, is resumed to Beijing. Additional service to Asia is also offered, including an increase in the number of flights from Toronto to Hong Kong (from 7 to 10 flights per week); from Toronto to Tokyo (from 4 to 5), and from Vancouver to Hong Kong (from 6 to 8).

Operations continue apace during the remainder of the year and, for the winter tourist season, include charter flights to Orlando, Ft. Lauderdale, St. Petersburg, Phoenix, Palm Springs, and Las Vegas. On October 30, nonstop flights commence between Toronto and Mexico City.

After a brief shutdown of certain commuter services following the November ban on ATR operations by the U.S. FAA, the airline manages to maintain its schedule by redeploying several DHC Dash-8 aircraft from its western carriers; these join leased Dash-7, Dash-8 and Convair aircraft. The company's two wholly owned eastern subsidiaries, **Canadian Regional Airlines, Ltd.** and **Inter-Canadian Airlines, Ltd.** work to maintain 60% to 70% of their schedule on a week-by-week contingency basis. The two carriers operate Canada's only ATR aircraft with eight and seven ATR42s, respectively. They are forced to ground a combined 15 aircraft when the ban was enforced at an estimated total cost of \$220,000 per day.

In December, Transport Canada rules that **Air Canada, Ltd.** will not be allowed to serve Hong Kong as a "second carrier."

Customer bookings inch up 1.5% to 7,744,746 while cargo advances by 6.6% to 699.84 million FTKs. Revenues jump 7.2% to C\$2.09 billion while expenses rise only 2.2% to C\$2.04 billion. There is a C\$50.33-million pretax gain, later adjusted upward to C\$40.15 million. The net loss is cut to C\$26.83 million upon initial reading, but later becomes an actual minus C\$39.2 million.

The workforce stands at 15,200 in 1995. On January 4 the Russian and Chinese air ministries authorize a new route from North America via Siberia to China. The ATR ban is lifted during the month.

Under terms of a new bilateral "open skies" agreement signed between Ottawa and Washington in February, **Air Canada, Ltd.** and CAI on March 10, are allocated by Transport Canada a total of 24 new landing slots at New York (LGA) and Chicago (ORD). Indeed, a total of 32 new routes into the U.S. will be started.

To help direct this incursion south of the border, **American Airlines** executive Barbara Amster is appointed CAI vice president of management and sales; she will be joined by two other former AA officials.

The same day as the U.S. decision is announced, the government agency also reverses its December "second carrier" decision and establishes new criteria for such airline designations on international routes. **Air Canada, Ltd.** now becomes eligible to start Hong Kong flights even as CAI receives authority for such other Asian destinations as Malaya, Vietnam, and the Philippines plus Germany.

In order to develop a market at Seattle, the company, beginning on March 15, offers Vancouver-London tickets to U.S. citizens only in the Washington State city for C\$535 (US\$379); the same tickets are sold in Vancouver for C\$768.

Twice-daily nonstops commence on April 1 between Montreal and Toronto and Mexico City; the new frequencies represent a three-fold increase in weekly services over the previous year.

A company DC-10-30 makes a proving flight on April 21 from Vancouver to Beijing, flying via Anchorage, Magadan, Khabarovsk, and Haiqag, and returns two days later. Problems with the Canadian Holidays, Ltd. reservations system are resolved during the second quarter.

Thrice-weekly B-747-475 return service begins at month's end over the new Vancouver to Beijing route; passengers are saved 2½ hr. from the previous service flown by way of Tokyo (NRT).

When the "open skies" pact with the U.S. takes effect, CAI launches new cross-border frequencies in June. The previous charter services to the Southwest are converted into six new scheduled routes. On June 3, daily nonstop roundtrip flights begin between Toronto and Ft. Lauderdale and Hollywood, Florida.

Additional cross-border frequencies started on June 19 include a daily nonstop return service from Vancouver to Chicago, two daily nonstop roundtrips between Toronto and Chicago, and five daily nonstop return flights between Toronto and New York.

A fourth B-747-475 arrives and begins return frequencies from Vancouver to Taipei and Vancouver to Nagoya; the summer schedule also features the initiation of a new Mexican market at Monterrey, served from Montreal and Toronto. Additional services are also laid on to Tokyo, Paris, Frankfurt, Honolulu, Mexico City, and Shanghai.

Additionally, Canadian Shuttle service is initiated to further business markets while business-class service itself is upgraded. New and competitive Value fares are introduced in an effort to counter the deep discounts offered by other carriers. Having obtained C\$27 million in concessions from its unions with which to launch its "summer initiative," CAI managers and representatives of five of the airline's six unions continue to discuss issues even after a June 30 company deadline for agreement passes.

In association with **American Airlines**, dual-designator flights are undertaken as of July 3 on new CAI routes from Toronto to New York and from Toronto and Montreal to Chicago, Miami, and Dallas (DFW). Indeed, 12 daily roundtrip frequencies are now offered between Toronto and New York (LGA). By month's end, CAI offers 208 weekly departures to American markets, including 64 daily flights from Toronto alone, to 16 U.S. communities.

Conversely, AA launches new Canadian frequencies of its own, which it code-shares with CAI, from Chicago to Ottawa, Calgary, and Winnipeg and from DFW to Calgary and Vancouver. Passengers arriving at Vancouver are able to connect to CAI's Beijing flights.

To the tune of a C\$44.5 million onetime restructuring cost, several unprofitable operations are removed by the end of September, including cancellation of the carrier's weekly Montreal-Rome flights, closure of the pilot base at Dorval Airport, and transfer of Halifax-St. John's service to **Air Atlantic, Ltd.** The B-737-200s removed from the six-times-per-week Nova Scotia-Newfoundland frequencies are assigned to the new services into the U.S.

A C\$20-million arrangement is entered into with the National Hockey League's Calgary Flames on July 20. Under its terms, the airline's name will be placed on the Olympic Saddledome and it will transport the Calgary Flames team to its destinations free of charge; cost of the flights are estimated to value C\$850,000 annually.

At the beginning of August, a strategic agreement is signed with **Alitalia, S.p.A.**; code-sharing flights will be undertaken between Toronto and Rome.

On August 24, it is announced that the carrier will, with the start of its winter schedule, double its service from Toronto to Florida to six non-stops per day, including two each to St. Petersburg, Orlando, and Ft. Lauderdale. Extra flights will continue to be offered on weekends.

In addition, heavy maintenance is consolidated in Vancouver, and 18 aircraft are sold and leased back, including two DC-10-30s and a B-767-375ER which are employed to enhance services between Halifax and Vancouver, via Toronto and Calgary. Funding for the three aircraft comes as a direct result of successful negotiations with the Canadian Air Line Pilots Association (CALPA).

Also in September and into October, services into the Far North are restructured and consideration is given to transferring such B-737-275C destinations as Cambridge Bay, Repulse Bay, Baker Lake, Yellowknife, and Norman Wells to regional affiliates. Deep discount fares are offered on a number of routes, but, where the schedules overlap, these are matched by **Air Canada, Ltd.**

While on its takeoff roll from Vancouver for Taipei on October 19, the engine of Flight 17, a B-747-475 with 257 passengers stalls, forcing the pilot to initiate a rejected takeoff. The aircraft cannot be stopped on the runway and its nosewheel gear collapses as the Jumbojet rolls through the soft ground, coming to rest in a nose-down attitude some 400 ft. off the end of the runway. Six passengers are slightly injured during the emergency evacuation that follows.

In November, seven-times-per-week passenger and freight Toronto to Rome code-sharing flights are inaugurated with **Alitalia, S.p.A.** CAI will operate the services during the winter and spring seasons and Alitalia in summer and fall. At about this same time, South African native Kevin Benson, who has just completed the economic rescue of the big real estate developer Trizec, Ltd., is named senior vice president/chief financial officer.

Also during the 11th month, code-sharing begins with **Malaysia Airlines, Ltd. (MAS)** aboard MAS aircraft flying from Kuala Lumpur to Vancouver via Taipei. Plans are announced on November 24 for the consolidation of all maintenance in Vancouver, including closure of the base at Calgary and a reduction in workers.

Notice is given by the Germans on December 5 that the 6-year old code-sharing pact with **Deutsche Lufthansa, A.G.** will end in six months.

On December 20, a B-737-217 cleared to land touches down at Calgary and applies reverse thrust before noticing that a Piper Cheyenne that had landed ahead of it had ceased its movements toward the terminal and had come to rest with its nosegear just off the edge of the runway. The jetliner passes the Piper, with about 15 ft. of clearance, at between 100 and 115 knots. No injuries are reported.

Passenger boardings ascend 3.8% to 8,625,559 while freight climbs 12.9% to 716.62 million FTKs. Although operating revenue is up 5.9% to C\$2.29 billion, costs rise 8.8% to C\$2.31 billion. As a result, the previous year's operating profit becomes a C\$19.49-million loss. The net loss deepens to C\$142.13 million.

The workforce is reduced by 2.9% through 1996 to 13,228.

At the beginning of the year, CAI becomes the first Canadian airline to offer a designated concierge program. A total of 43 trained concierges are made available to assist VIP and business passengers at the airports at Toronto, Montreal, Ottawa, Calgary, Vancouver, London (LHR), Tokyo (NRT), Honolulu, and Hong Kong.

Matched wherever possible by **Air Canada, Ltd.**, CAI expands its shuttle services during the year's first two months. From Toronto, 41 daily flights are undertaken to Montreal, with another 33 flown to Ottawa. This schedule represents an increase of 10 flights per day on each leg of the eastern triangle. At the same time, 42 daily frequencies are inaugurated between Calgary and Edmonton; a total of 31 daily flights are made from Calgary to Vancouver and 14 per day are initiated from Edmonton to Vancouver.

This schedule represents an increase of four daily frequencies on each leg of the western triangle. B-737s are employed on the CAI shuttle; in

a new departure, 20 seats on each plane are converted from economy to business-class.

Flight 48, a B-767-375 coming in from Toronto on March 8, crosses the Halifax runway threshold about 20 ft. above ground level while landing and touches down 200 ft. further on. The tail of the aircraft strikes the runway, causing substantial damage to the tail skid and rear fuselage.

Code-sharing is inaugurated with **Japan Air Lines Co., Ltd. (2)** on April 1 on board CAI jetliners flying four times a week from Nagoya to Vancouver.

On April 18, company officials, in a complex arrangement, sell 11 B-737s to **Arkia Israel Airlines, Ltd.** for \$60 million. The planes (3 Dash-275Cs, 2 each Dash-242Cs, Dash-217As, and Dash-296As, and 1 each Dash-2T5A and Dash-2T2C) are then leased back to CAI for US\$1,079,100 per month for a six-year period, bringing Arkia a profit of US\$17.7 million. As part of the arrangement, CAI is given the option of continuing the lease of individual aircraft for two-year periods, up to four years, after 2002.

The code-sharing pact with **Deutsche Lufthansa, A.G.** ends on June 1. Also in June, a marketing agreement begins with **British Airways, Ltd. (2)** covering CAI services from Calgary to London (LHR) direct and to the U.K. capital from Vancouver, Calgary, and Montreal. Links between the frequent flyer programs of the two carriers are also made.

A three-year arrangement is entered into with Pepsi-Cola Canada Beverages on June 7. In return for exclusive Pepsi beverage service aboard its aircraft, CAI will receive, gratis, 250,000 cases of canned soft drink products annually.

On June 19, CAI sells its Canadian Holidays, Ltd. unit to an undisclosed management concern for an undisclosed price. Hereafter, the airline will outsource its holiday charter business to independent contractors.

Citing personal exhaustion, President Jenkins resigns on June 28; Chief Financial Officer Benson succeeds him. At the same time, the machinists' union, which represents 5,000 employees, ratifies a 38-month contract that will result in cost savings for the company of C\$34 million.

During July and August, CAI moves to cut unprofitable routes, convert some shuttle routes to smaller, cheaper jets, and move its B-737 fleet to the most profitable routes in Asia and Europe. Routes to Frankfurt, Paris, and Shanghai are eliminated; the European suspension frees up planes for use on more profitable Asian services. Only two aircraft are employed in northern Canada to fly the profitable routes to Yellowknife, Rankin Inlet, and Inuvik.

Some Calgary-Edmonton shuttle flights are converted to smaller F.28s, thus allowing 2 B-737s to be added to the general fleet. Extra aircraft as they become available are stationed at Vancouver to accommodate the alliance with **American Airlines**, while the number of frequencies to Hong Kong, Beijing, Japan, and Southeast Asia are boosted.

A cargo alliance signed between the Canadian Air Cargo subsidiary and **American Airlines** takes effect on September 1. Under its terms, each acts as the other's sale agent in respective territories and creates a cargo network of over 420 destinations worldwide.

Philippine Airlines (PAL) employs its newly received A340-312 on September 19 to commence four weekly nonstop dual-designator round-trips with CAI between Manila and Vancouver, with continuing service to Newark. The Philippines was, previously, the largest airline market still unserved by direct flights from Canada.

Also in September, a C\$20-million advertising campaign designed by Gee Jefferey & Partners Advertising, begins; it is designed to improve the airline's image and will be run in business publications and as TV spots during sports and news programs.

In early October, the code-share arrangement with **American Airlines** is expanded to cover "American Eagle" services from New York (JFK) to Baltimore (BWI), Boston, Philadelphia, Pittsburgh, and Washington, D.C. (IAD). Chicago will become part of the agreement within a month.

CAI initiates its portion of the PAL code-sharing pact on October 28 with three weekly flights from Vancouver to Manila via Hong Kong.

Through the summer and into the fall, rising energy costs, competition from new deep-discount entrants, and a fall in the value of the

Japanese yen plague the company. As part of a rescue plan designed to save CAI from bankruptcy, CEO Benson seeks 10% wage cuts (valued at C\$70 million) from the carrier's workers, who are represented by six trade unions. On "Black Friday" November 1, he announces that, unless the wage cuts, route restructuring, and an AMR Corporation concession could be gained, thereby allowing C\$200 million in savings, CAI will fail by year's end.

The next day, the company begins turning its domestic flights in Ontario and Quebec over to its regional partners, while long-haul services to Paris and Frankfurt are also cut.

On November 4–5, company executives at domestic hubs begin to outline the carrier's survival plans to employees. In the words of CEO Benson, "there is no Plan B." In Ottawa, Transport Minister David Anderson indicates that the Canadian government is prepared to consider proposals to assist the airline—if the unions will accept the restructuring plans.

The carrier's entire 10-member board of directors, including CEO Benson, former Alberta premier Peter Lougheed, and CTV CEO John Cassady, resigns on November 15. The move is taken on the advice of legal counsel in order to avoid personal responsibility for the airline's payroll in the event of bankruptcy. Until a new board is appointed (within about two weeks), the airline is operated under the direction of two of its major shareholders, Canadian Airlines Corporation and Aurora Airline Investments, Inc., a wholly owned subsidiary of **American Airlines**.

Benson remains in control as CEO and is closeted in one meeting after another seeking both labor concessions and to reassure corporate clients and travel agents that CAI will remain viable.

By November 28, CEO Benson has secured approval from four of the unions, with the Canadian Union of Public Employees (CUPE) and Canadian Automobile Workers (CAW) refusing to agree. That day the CEO, rather than calling upon these company employees to vote directly on the cut, refuses to extend talks with the two remaining groups. The next day, the CUPE president, convinced that the cut is in the best interest of the 2,700 flight attendants she represents, agrees to endorse the salary-slashing plan. Passenger service staff are requested to voice their yea or nay.

At the close of business on the last day of November, stock that CAI employees had purchased upon the airline's creation for C\$13 a share closes at C\$2.20 per share.

On December 2, CAI announces that it is planning to defer more than half of its debt and lease payments during the next six months and will begin discussions with lenders and aircraft suppliers to suspend payments of about C\$170 million over the next six months. Canadian Labor Minister Alfonso Gagliano requests that the 3,700 reservations and ticket agents vote, even though their union remains opposed to the CAI bailout plan. He warns that, unless workers agree to wage cuts and other concessions, the company will run out of money in January.

Having received daily reports on the airline crisis during a tour of Asia during the last week of November, Prime Minister Jean Chretien becomes convinced that something must be done to avoid CAI's failure. Upon his return to Ottawa on December 3, Chretien summons Transport Minister Anderson and Labor Minister Gagliano. The latter suggests that seldom-invoked Section 107 of the Canadian Labour Code can be employed to force a vote among CAW workers, despite continuing opposition from that union leader's, Basil ("Buzz") Hargrove.

Section 107, which allows the federal government to "maintain or secure industrial peace," is invoked on December 4. The national labor relations board is ordered to organize and conduct an election of the CAW membership. After CAW President Hargrove voices the outrage expected of him, an intense flurry of last-minute negotiation begins between union executives, government ministers and bureaucrats, and airline officials.

With the company's future placed squarely upon their shoulders, leaders of the Canadian Auto Workers union come to terms on December 8 for a rescue plan that includes pay cuts averaging 3.7%. The company's immediate labor crisis appears over. In addition, the federal, Alberta, and British Columbia governments agree to continue C\$35 million in

tax reductions while AMR Corporation promises to accept a 35% reduction (\$35.5 million) in its annual fees.

At this point, CEO Benson and his airline must convince customers that the airline is open for Christmas business and will be so for many more to come.

Enplanements inch up 2.6% to 8,852,578 and 714.1 million FTKs are operated, a 0.4% decrease. Operating income slips 1.3% to C\$2.25 billion and expenses move up a slight 0.9% to C\$2.32 billion. Although the operating loss deepens to C\$70.44 million, the net loss "improves," with only C\$136.58 million loss reported. That negative figure is readjusted later to read an even better C\$104.3 million.

The workforce is increased by 7.6% in 1997 to 14,233. Early in the year, the company drops charter flights to Florida. Domestic service is cut back sharply and frequencies to Paris and Frankfurt are withdrawn. A new four-year restructuring plan is put in place designed to save C\$146 million.

In April, the code-sharing arrangement with **British Airways, Ltd.** (2) is expanded. CAI will place its codes on BA flights from London to Montreal and from London to Aberdeen, Amsterdam, Edinburgh, Glasgow, Manchester, and Prague. BA will share codes on CAI flights from Toronto on to Halifax and Quebec City.

Also during the month, the frequent flyer relationship with **American Airlines** is modified. Heretofore, it has only been possible for members of one carrier's program to upgrade on the other airline if the flight was dual designator; now, members may upgrade from economy to the next class up on any of each other's flights.

Daily roundtrip A320-211 nonstop service is inaugurated on May 5 between Vancouver and Boston. These are the first nonstop flights by any airline in this market.

On May 29, the company announces that it has obtained formal agreement for all of its lenders and lessors and is able to implement the payment deferral plan announced the previous December.

In June, CAI becomes the first Canadian airline to offer scheduled service to Central America. Via its code-sharing agreement with **American Airlines**, it inaugurates dual-designator services from Toronto to Miami, where American takes over and flies through passengers to El Salvador and Guatemala.

Also during the month, Pacific Coastal Airlines is contracted to operate daily roundtrip replacement service on behalf of CAI from Vancouver to Nanaimo.

The decision having been taken to discontinue operations, Greyhound Canada, parent of the failing discount carrier **Greyhound Air, Ltd.**, works out an arrangement on September 1 with CAI. The major agrees to honor all reservations made before September 2 for travel after the new entrant's shutdown, subject to availability. Affected Greyhound passengers or their travel agents will be rebooked by September 15.

During takeoff from Beijing on September 6, a company B-767-375ER suffers an uncontained failure of its No. 1 GE CF6-80C2 engine; the takeoff is rejected and no injuries are reported. A few fragments are recovered from the runway.

On September 8, **American Airlines** begins to code-share on CAI wide-body flights from Vancouver to Taipei. The dual-designator flights commence in Boston, Chicago, Dallas (DFW), Las Vegas, Los Angeles, New York, Portland, Seattle, or San Francisco and transit via the British Columbia capital on to Taiwan. At the same time, AMR management fees are reduced. A new service to New Zealand is announced on September 18.

The last **Greyhound Air, Ltd.** service is operated on September 21.

Helijet Airways, Ltd. joins the Canadian Plus frequent flyer program on October 6. Passengers of the helicopter line are able to earn loyalty points on Helijet scheduled flights between Vancouver, Victoria, and Seattle.

On October 26, the company and **Mandarin Airlines, Ltd.** begin to sell tickets on each other's flights between Vancouver and Taipei and from Taipei to Vancouver. The same day, the company expands its direct service from Toronto to Buenos Aires via São Paulo to six times a week.

When the winter shuttle schedule begins on October 26, service on the Western Shuttle between Vancouver and Calgary increases to 34 flights a day, while that from Calgary to Edmonton reaches 47. Connections between Vancouver and Calgary increase to 34 flights a day and the Vancouver–Edmonton corridor is served by 16 flights every day. Flights from Vancouver–Kamloops and from Vancouver–Prince George jump to 12 flights every day. Service from Vancouver–Campbell River reaches 3 daily roundtrips while that between Vancouver and Comox grows to 5.

The Eastern Shuttle is significantly expanded. Its flights from Toronto to Ottawa jump to 38 roundtrips each day, while that between Toronto and Montreal is just 2 fewer.

Twice-weekly B-767-375ER return flights commence from Vancouver to Auckland, New Zealand, via Honolulu on October 29. The one-stops replace a service previously provided by **Air New Zealand, Ltd.**

Transcontinental service from Toronto to Vancouver is boosted to 7 daily roundtrips, while that to Calgary is increased to 8. Flights from Toronto to London, Ontario, jump to 12 returns per day.

Service to Dallas (DFW) becomes daily and that to Orlando, twice-daily. Seating to London from Calgary is increased by using a DC-10-30 instead of a B-767-375ER while the Calgary departure time to Los Angeles is advanced 2½ hours to provide better connections in California.

Three bridges (covered walkways) are modified and taxiway construction is completed at Calgary International Airport at month's end.

On November 7, negotiators in Chile place the finishing touches on a new strategic alliance with **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)**. It will be formally signed after Christmas. The pact is a follow-up to the Canada–Chile Free Trade Agreement signed on July 5.

It is announced on November 17 that CAI and **Japan Air Lines Company, Ltd. (2)** will link their frequent flyer programs in two phases, beginning in January.

Dual-designator flights with **American Airlines** commence on November 19 from Toronto to Nicaragua and Costa Rica. Again, CAI flies the Toronto to Miami leg, where the U.S. major takes over and continues the services into Central America.

As the year ends, the company completes several of the goals set in its restructuring plan. President/CEO Benson will note that the redeployment of the narrow-body fleet is completed, with an emphasis on transborder operations, while capacity is shifted away from Europe and toward Asia. Increased revenues, fleet building, and recruitment of new investments remain as targets.

The carrier's leisure travelers are, as of December 15, able to fly between Vancouver and Honolulu 28 times a week. Twice-daily roundtrips commence on December 17 between Vancouver and San Diego.

As a result of a shift in capacity toward the transborder operation and restructuring, passenger boardings are down 2.9% to 8,594,000; freight, however, rises 2% to 728.68 million FTKs.

Operating revenues of C\$2.2 billion are earned, allowing a C\$3.8-million net profit, the first net gain the company has been able to celebrate since 1988.

The fleet at the beginning of 1998 includes 76 planes, only 44.7% of which are Stage III certified; the numbers show 42 Stage II B-737s and a remaining Stage III contingent of 4 B-747s, 9 B-767s, 12 A320s, and 9 DC-10s.

CAI and **Canadian Regional Airlines, Ltd.** cancel all regularly scheduled flights into and out of Ottawa and Montreal on January 8–10, during a huge ice storm. Beginning on Sunday, January 11, CAI transports the Team Canada '98 trade mission, headed by Prime Minister Chretien, on a two-week mission to Mexico, Brazil, Argentina, and Chile.

Between January 13–20, CAI waives the normal advance ticket purchase requirements to help victims and their families hurt in whatever way by the recent ice storms and who wish to travel to and from Montreal and Ottawa. At the same time, company aircraft transport badly needed generators to supply power to those who have been without heat and electricity.

During an official ceremony in Santiago on January 23, a commercial alliance agreement is signed with **LanChile Airlines (Linea Aerea Na-**

cional Chile, S.A.). When the pact takes effect on March 11, the two will coordinate their schedules and link their frequent flyer programs. Initially, passengers will be able to travel on LanChile from Santiago to Los Angeles four-times-a-week and connect with Canadian service to Vancouver. The signing by the airline representatives is witnessed by Eduardo Frei, president of the Republic of Chile, and Canadian Prime Minister Chretien.

Also in January, the first phase of the linkage of frequent flyer programs with **Japan Air Lines Company, Ltd. (2)** begins; the second phase will kick in during November.

Dual-designator flights with **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** commence on April 8. In addition to the daily Los Angeles connection announced earlier, the two companies also share daily return flights between Toronto and Santiago. Customers fly Canadian to Miami, where they seamlessly board LanChile for the remainder of their trip; the process is reversed on the return.

While en route from Beijing to Vancouver on April 13, Flight 30, which had filed an approved flight plan, is denied permission to enter Russian airspace per usual practice; the service returns to Beijing, where passengers are deplaned. A protest is filed by Canada with the Russian government and its federal aviation authority.

In "celebration" of the third anniversary of the U.S.–Canadian "open skies" pact, the company launches eight daily A320-211 roundtrips on May 4, between Toronto and Boston. May 5 is "Canadian Airlines Day" in Newton, Massachusetts.

This introduction helps to bring about a larger change than is anticipated. Having watched the **American Airlines** share of cross-border traffic drop from 95% to 50% since 1995 and concerned that CAI's success may impact U.S. pilot jobs, the U.S. major's Allied Pilots Association now triggers a related contract clause. American, as a result, is forced to drop code-sharing with CAI during the second week of May over 14 of 35 cross-border routes.

An application by **Air Canada, Ltd.** and **Air China International Corporation** to code-share over routes from Canada to China is rejected by Transport Canada during the last week of May. The National Transportation Agency of Transport Canada, some years earlier, had designated China as a single-market country and assigned Canadian service to it to CAI.

The company and **Philippine Airlines (PAL)** expand code-sharing on services between the two countries on June 1. PAL places its code on CAI flights between Vancouver and Toronto, allowing passengers the ease of seamless travel from Manila to Toronto, with a short stopover at Vancouver.

The latest expansion of the code-share partnership with **British Airways, Ltd. (2)** begins on June 2 with three weekly nonstop roundtrips between London (LHR) and Ottawa. BA will place its code on a CAI B-767-375ERs on Tuesdays and Saturdays and a DC-10-30ER on Sundays. CAI labels the services Dayliner and Starliner.

The dispute between APA members and code-sharing partner **American Airlines** concerning CAI services deepens as the union recommends that its members not accept additional flying time. American is forced to cancel hundreds of flights during July for lack of flight crews. Finally, on August 15, an arrangement is reached between the major and its flyers. Under its terms, AA is allowed to maintain its code on six CAI flights added after January 7, 1997 and to add its code to one more flight later in the year.

On August 27, it is announced that the carrier will terminate its commercial agreement with **Air Atlantic, Ltd.** on October 24 and that that regional will cease all scheduled flight operations. Only half of the small carrier's 118 pilots will be taken on by **Inter-Canadian Airlines, Ltd.**, which will assume the Air Atlantic routes the next day. After that date, IMP Group, which owns the St. John's-based regional, maintains the company's operating certificate and studies the viability of undertaking nonscheduled flights over the winter season.

As is the case with the **Northwest Airlines** strike in the U.S., a number of other carriers provide accommodation for displaced **Air Canada**,

Ltd. passengers when a job action begins against that airline on September 2. Chief among these is CAI, **Canadian Regional Airlines, Ltd.**, and CAI's domestic partners. All accept AC tickets, space permitting, and without penalty or service charge. In addition, CAI responds to the increase in passenger and cargo demand by adding flights wherever possible, including the eastern and western triangle cities and flights from Toronto to both Halifax and Vancouver.

As the demand for transcontinental booking increases on September 3, CAI tasks a B-747-475 and two DC-10-30s to the Toronto-Vancouver route. A dedicated CAI group works hand in glove with a similar unit from **Air Canada, Ltd.** to minimize Canadian air passenger travel disruption.

With **Air Canada, Ltd.** remaining shut down, CAI is flooded with travelers over the three-day Labor Day holiday, September 5-7. Nearly 100 flights are added to the CAI schedule to help accommodate the influx and a systemwide load factor of 95% is experienced on September 7. A total of 19 extra flights are ordered for September 8, 21 for Wednesday, and 10 on September 10 and crews and personnel across the country continue to meet overtime requirements.

The **Air Canada, Ltd.** strike is settled on September 11, allowing CAI to gradually return its overtime services over the next few days to normal levels of operation.

It is announced at a London news conference on September 21 that **Cathay Pacific Airways (Pty.), Ltd.** has joined its first airline alliance, the new "OneWorld" grouping established to compete with the "Star Alliance" headed by **United Airlines** and **Deutsche Lufthansa, A.G.** Leadership for the new enterprise is provided by **American Airlines** and **British Airways, Ltd. (2)**, which continue their battle to gain regulatory approval for a separate arrangement that would provide U.S. antitrust immunity on prices set for the transatlantic market. CAI and **Qantas Airways (Pty.), Ltd.**, both of which already have marketing partnerships with AA and BA, are also charter members.

Leaders of the five companies indicate that they will coordinate ticketing and flight schedules, while cooperating on frequent flyer programs. Other carriers will be invited to join and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces its membership before the day is over.

One airline that will not be invited to join, **Virgin Atlantic Airways, Ltd.**, hires a truck with a sign painted on its side proclaiming "no way" and has it parked, illegally, outside the building where the "OneWorld" news conference is held. A spokesman for Virgin indicates that his airline will gladly pay the parking ticket to get its point across.

A new code-sharing partnership is announced on September 29 with **Helijet Airways, Ltd.** Effective October 14, CAI passengers with premium-fare tickets will have the option to travel on one of 10 daily Helijet-operated shuttles between Vancouver's South Airport and Victoria's downtown inner harbor.

The next day, electronic "Virtual Ticketing" becomes available on all CAI flights from Canada to the U.S.

Also during the month, the airline's northern division is sold to the 100% aboriginal-owned holding company NorTerra Inc., which is jointly owned by Inuvialuit Development Corporation and Nunasi Corporation. Under the name **Canadian North**, the division, based at Yellowknife with a regional office in Iqaluit, immediately enters into a comprehensive agreement with CAI. Under its terms, CAI will provide operational and maintenance support, including wet-leased B-737-200s, as well as joint marketing, scheduling, and fare structures. All flights operate with the CP code and Canadian North is included in CAI's frequent flyer program, is a partner in Canadian Cargo, and is included in the major's travel agency Sales Incentive Program.

Canadian North continues to offer services to and from Iqaluit, Rankin Inlet, Cambridge Bay, Resolute, Yellowknife, Norman Wells, Inuvik, Hay River, and Fort Smith.

It is announced on October 6 that the Toronto-based designer Brian Bailey has been chosen to create new uniforms for the carrier's 12,000 employees. The new clothes will be unveiled and tested early in 1999 with an eye toward their introduction during the year 2000.

The pact with **Air Pacific, Ltd. (2)** is expanded on October 16. Under its terms, the two carriers, beginning on December 7, combine their marketing and fleet strengths to provide three weekly flights between Auckland and Honolulu. Canadian offers daily nonstop flights from Toronto to Honolulu and 13-times-a-week service from Vancouver to Honolulu. At the Hawaiian city, passengers seamlessly transfer to the Air Pacific B-767-3X2ER for any of the three onward nonstop weekly flights on which they are booked.

A strategic marketing agreement is signed with **Reno Air** on October 23. On November 2, a lease is taken with GE Capital Aviation Services for the charter of 4 B-767-375ERs, including 2 not yet built, and an A320-211. The 5 aircraft will be added to the fleet in 1999 and will allow retirement of the carrier's older DC-10-30s.

The new winter schedule is announced three days later. In addition to more frequencies before Christmas, the airline will, in association with **American Airlines**, offer daily nonstop roundtrips between Ottawa and Raleigh/Durham beginning on January 4.

On November 6, the number of weekly flights from Toronto and Vancouver to Tokyo (NRT) and Nagoya, respectively, are increased from three to five, while the number of weekly flights to Manila rise by one. The use of B-767-375ERs instead of B-747-475s in the Japan marketplace will insure that the increase in frequencies will not result in unneeded capacity.

The number of weekly services from Vancouver to Taipei are increased by two on November 10, while the number of roundtrips to Beijing are boosted by one. Simultaneously, the number of dual-designator flights operated with **British Airways, Ltd. (2)** between Toronto and London grows from 14 each week to 17.

Two Canadians, David Spencer and Christine Lamont, who had kidnapped Brazilian businessman Abilio Diniz to fund leftist guerrillas in 1989 and had been caught and sentenced, are turned over to Canadian officials at São Paulo on November 20 under terms of a bilateral prisoner exchange treaty. They are whisked aboard a company B-767-375ER in handcuffs just before its regular departure for Canada.

Beginning on November 22, **Reno Air** places its QQ designator on CAI flights from Vancouver to San Jose and San Diego. The arrangement will continue even though Reno is purchased by **American Airlines** shortly thereafter.

On December 3, company officials announce a major Vancouver hub expansion in the spring that will triple daily connections in North America, Asia, and the South Pacific from over 500 to more than 1,450.

While on final approach to New York (LGA) on December 8 following a service from Toronto, Flight 528, a B-737-275A with 6 crew and 46 passengers, is nearly involved in a midair collision with a Cessna 172, which quickly dives at the last possible moment. At 4,000 ft., the planes have 0-ft. vertical and 500-ft. horizontal separation.

Due to heavy snowfall in Vancouver on December 24, the carrier is forced to cancel a number of flights in and out of the British Columbia city, while delaying others.

Traffic figures during the 12 months are mixed. Passenger boardings advance by 4.7% to 28,804,318, while freight drops 5.1% to 714.37 million FTKs. As the result of plummeting fares, intense competition, and a weak domestic economy, the carrier's revenues for the year increase only 3%, to C\$3.2 billion. Costs bring about a C\$137.6-million loss.

By the start of 1999, airline employment has been increased by 12.4% to 16,000. A severe winter storm hits the U.S. Midwest and eastern Canada between January 2-4; CAI and **Canadian Regional Airlines, Ltd.** are forced to cancel all of their traffic to and from Toronto, Montreal, and Ottawa on January 3.

In association with **American Airlines**, Canadian begins to offer daily nonstop roundtrips between Ottawa and Raleigh/Durham on January 4. A comprehensive marketing agreement, effective April 1, is announced by CP on January 12 with **Alaska Airlines** and its sister carrier, **Horizon Air**.

The next day, the company is renamed **Canadian Airlines, Ltd.**

CANADIAN AIRWAYS, LTD.: Canada (1926–1942). Organized at Trois Rivières, Quebec, in early 1926, CAL's first move is to take over Harold S. Quigley's **Dominion Aerial Exploration Company, Ltd.** The new entrant, of which Quigley is also president, begins operations on May 1 with 4 Curtiss HS-2L flying boats, while orders are placed for 7 more. During the next 7 months, a total of 537 passengers, 9 tons of cargo, and 100 pounds of mail are flown.

While attempting to make a transatlantic flight from Paris in early May 1927, Charles Nungesser and François Coli disappear. Canadian pilot B. W. "Bill" Broach, piloting an HS-2L, undertakes a search pattern from Trois Rivières to the Rivière aux Outardes to Natashquan. An engine failure on May 21 inhibits the search. Flying a second Curtiss, pilot F. V. "Turk" Robinson continues the unsuccessful search between May 28 and June 4, concentrating along the St. Lawrence River and into Labrador.

Flying an HS-2L from Montreal to Rimouski via Trois Rivières on September 12, President Quigley makes the first of 10 successful airmail linkups with ocean liners, beginning with R.M.S. *Doric*. The route is followed in reverse four days later with 37 bags of incoming mail from R.M.S. *Empress of Australia*. The seven additional experimental flights made between September 28 and November 11 are supported by a C\$75,000 government subsidy.

Twice-weekly airmail flights are inaugurated between Montreal and Toronto on May 5, 1928 by HS-2L pilot Harold P. Ayres. On October 1, the weekday service is subcontracted to the **Fairchild Aviation Company, Ltd.**

During the year, the fleet is enhanced by the delivery of 1 Junkers W.34 and the last of 7 additional HS-2Ls requested two years earlier. In addition, 3 HS-2Ls are upgraded into HS-3Ls by Canadian Vickers, Ltd. at Montreal. A total of 22 tons of mail is transported on the Montreal–Toronto run.

On July 15, 1929, the company extends its Toronto run to Detroit; international mail is carried on the weekly flights. Simultaneously, CAL begins the first official airmail service between the Ontario cities of London and Windsor. Experimental daily Montreal–St. John via Quebec City and Moncton airmail service begins on December 9. Late in the year, the carrier is absorbed into the Aviation Corporation of Canada, Ltd. At this point, all HS-2L/HS-3L operations cease and the Curtiss seaplanes are sold.

Mail flights begin during the first half of 1930 from Lac du Bonnet to Wadhope via Bissett; from Montreal to Moncton via St. John, and from Montreal to Ottawa. As the result of discussions between the company's owners, the Aviation Corporation of Canada, Ltd., Canadian Pacific Railway, Ltd. and Canadian National Railway, Ltd., the carrier is merged with **Western Canada Airways, Ltd.** on November 25. The emerging operation retains the name Canadian Airways, Ltd.

The combined fleet of the merger partners now includes 1 Junkers W.34, 1 Fokker Model 8 Super Universal, 1 Fokker F-XIVa, and 1 Lockheed Vega. All are painted in new livery that employs WCA's famous Canada goose emblem. Late in the year, plans are made to inaugurate a Prairie Air Mail service in fulfillment of a new contract from the central government.

A lighted airway is built with searchlights installed at high points near the airfields at Winnipeg, Brandon, Regina, Moose Jaw, Medicine Hat, Calgary, Saskatoon, North Battleford, and Edmonton.

Night-airmail service is launched by pilot Hollick-Kenyon, flying the Fokker F-XIVa, between Calgary and Lethbridge on January 15–16, 1931. This is the beginning of scheduled night service in Canada.

Winnipeg–Pembina mail flights begin in early February. Contract mail flights from Lac du Bonnet to Wadhope via Bissett are dropped on May 9. The experimental mail routes between Montreal and Moncton via St. John and from Montreal to Ottawa end on June 1.

Beginning on August 1 and extending through November, a mail service is provided between Vancouver and Seattle via Victoria. Two weeks later, on August 15, the Regina–Edmonton and Montreal–Quebec City mail services are ended; simultaneously, the Regina–Calgary service is

extended to allow a Winnipeg and Edmonton connection. The contract mail service from Montreal to Toronto ends the next day.

Winnipeg–Edmonton contract mail flights stop on March 1, 1932 and on April 30, the Toronto–Detroit mail link is severed. Indeed, the entire carriage of airmail in Canada ends when postal estimates are cut back as an economy measure during the Depression. Beginning on May 1, passenger and express service is operated between Calgary and Edmonton, Lac du Bonnet to Wallace Lake, and between Toronto and Windsor for three months. At the same time, Montreal–Quebec City flights begin.

En route to Cameron Bay from Fort Rae in the Northwest Territories on July 5, the Fokker Model 8 Super Universal crashes; among the three killed is pilot David "Andy" Cruickshank, onetime general manager of **Yukon Airways and Exploration Company, Ltd.**

Later in the month, a Travelair 6000A is purchased from the American carrier **Northwest Airways**. A contract mail route is opened between Fort Resolution and Great Bear Lake on December 6.

The Fort Resolution–Great Bear Lake service is stretched to Camsell River on November 29, 1933. On December 14, a winter airmail route is extended from Quebec City to Natashquan via Sept Îles. During the year, Canadian Pacific Railways acquires a C\$ 50,000 block of stock.

Between May and September 1934, the carrier offers twice-weekly service from Moncton to Charlottetown to New Glasgow and from Vancouver to Bridge River. In December, a previous Sioux Lookout–Gold Pines–Red Lake service is replaced by a new route from Sioux Lookout to Gold Pines to Casummat Lake via Jackson Manion and Narrow Lake. The same month, a frequency is initiated from Kenora to Red Lake via Mackenzie Island.

Weekly Winnipeg to God's Lake service begins on January 13, 1935. Weekly Kenora–Whitefish Bay flights commence later in the month. On February 3, the railroad-backed operator begins flying from Berens River to Norway House on a weekly basis; the Norway House terminus is simultaneously stretched monthly to Cross Lake.

During the spring, a National Geographic Society expedition, headed by U.S. explorer Bradford Washington, surveys and maps the border between Alaska and Canada from the air. From a Canadian aircraft piloted by Capt. Robert Randall Sr., every major peak is photographed and named. Randall is elected a Society member in April.

A new associated company, **Quebec Airways, Ltd.**, assumes the carrier's St. Lawrence River area services, also in April.

Other services operated during the year include a Sioux Lookout to Collins via Pickle Lake run and weekly flights from Prince Albert to La Ronge via Big River and Ile à la Crosse.

Services continue without significant change until November 15, 1939 when new daily services are inaugurated between St. John's and Moncton and between Halifax and Moncton. These provide a link to the new transcontinental route of **Trans-Canada Air Lines, Ltd. (TCAL)**. In July 1941 the Canadian Pacific Railway purchases CAL. Its operations are now combined with those of **Mackenzie Air Service, Ltd.** and are flown under the marketing name of **United Air Services, Ltd.**

Six months later, CAL is one of several companies merged on January 30, 1942 to form **Canadian Pacific Air Lines, Ltd.**

CANADIAN-AMERICAN AIRLINES: United States (1929–1930). This little-known international carrier is established at St. Paul, Minnesota, in the summer of 1929 to offer scheduled flights through the Dakotas to Winnipeg. The entire fleet consists of but one Travel Air 6000, which begins scheduled revenue flights in August.

Without mail subsidy and with poor passenger traffic, the enterprise is forced to fold in January 1930.

CANADIAN COLONIAL AIRWAYS (1): United States (1928–1934). Canadian Colonial Airways is formed on March 6, 1928 to offer international service from New York to Montreal via Albany. A bid is made and awarded for Foreign Air Mail Route No. 1 (FAM-1) from New York to Montreal via Albany. Simultaneously, the sixth Canadian

government airmail contract for the year is awarded to the carrier providing for six-a-day subsidized roundtrips in reverse to New York.

Daily New York and Montreal to Albany on to Montreal and New York Fairchild FC-2 and Pitcairn PA-6 Super Mailwing service, with contract mail, is inaugurated on October 1. Flights are conducted by the company's four pilots, D. S. Bondurant, W. H. Hughes, Paul Reeder, and O. C. Wallace. On December 31, records reveal that an amazing 15.5 tons of mail has been transported.

In 1929, the company is merged into Colonial Airways Corporation and is then purchased in May by The Aviation Corporation (AVCO), a forerunner of today's **American Airlines**.

On January 25, 1930, **American Airways** is created as AVCO's principal operating airline by an exchange of stock with its former subsidiaries. Colonial receives 2,226 shares and becomes not only a division, but also a stockholder in the new entity. In April, a Fairchild 71 crashes at Newark, killing all aboard, including Count George de la Vaux, former president of the Federation Aeronautique Internationale.

The New York-Montreal route continues to be flown in 1931-1933 under the name Canadian Colonial Airways. Following **American Airways'** reincorporation as **American Airlines** in April 1934 and passage of the new airmail law in the summer, Canadian Colonial is allowed to continue operating passenger and mail flights over its previous route, again as a subsidiary.

CANADIAN COLONIAL AIRWAYS (2): United States (1935-1942). As a result of the divestiture of AVCO the previous year, a new Canadian Colonial, a separate entity from the old carrier of the same name and of **American Airlines**, is created on January 1, 1935. Outfitted with a Stinson Model U and a Vultee V-1A, both leased from its former parent, CCA undertakes the same New York-Montreal route. Operations continue in 1936-1937 with leased **American Airlines** aircraft, including Douglas DC-2s.

The first owned aircraft, a DC-2, is purchased from C.R. Smith's fleet in August 1938. Largely forgotten during the remainder of the decade, the airline is acquired in October 1939 by an investors' group led by Sigmund Janas.

A pair of DC-3s are ordered and begin operations in early 1940. At the end of 1941, the carrier is still operating over FAM-1, the 333-mile New York to Montreal route, but is doing so with 6 DC-3s. A separate entity, CCA is renamed **Colonial Airlines** on May 1, 1942.

CANADIAN FLYING SERVICE, LTD.: Canada (1929-1931). Six-times-per-week international contract mail flights begin from the company's base at Toronto to Buffalo, New York, on July 1, 1929.

The route is withdrawn and the company stops flying on June 1, 1931, another air transport victim of the Depression.

CANADIAN FRONTIER, LTD.: Canada (1988-1991). Based at Thunder Bay, Ontario, since its founding, CF, also known as Frontier Air, Ltd., undertakes local services with a fleet of 2 Beech King Air 100s and 5 Beech 1900s. A contract is accepted to undertake flights as part of the provincial government's **NorOntair** air service. Passenger, cargo, and mail services are provided to 11 northern Ontario communities: Timmins, Moosonee, Fort Albany, Kashechewan, Attawapiskat, Peawanuck, Geraldton, Naikina, Ogoki, Fort Hope, Thunder Bay, Hearst, Timmins, Chapleau, Sudbury, Wawa, and Sault Ste. Marie.

In March 1989, the company's parent, Rog-Air, Ltd., along with the airline, is purchased by **Ontario Express, Ltd.** Duncan Fischer now succeeds Robert Mauracher as general manager and the 2 King Airs are withdrawn.

Operations continue under the previous name during the amalgamation process, which is concluded at the end of 1991. The company now flies as **Ontario Express**.

CANADIAN HELICOPTER CORPORATION, LTD. (CHC): P.O. Box 5188, Hangar 1, St. John's Airport, St. John's, Newfoundland

A1C 5V5, Canada; Phone (709) 570-0700; Fax (709) 570-0506; <http://www.chc.ca>; Year Founded 1987. To increase market share, the Canadian helicopter carriers **Toronto Helicopters, Ltd.**, Richmond, British Columbia-based **Okanagan Helicopters, Ltd.**, and **Sealand Helicopters, Ltd.** of St. John's, Newfoundland, join together to form CHC Helicopter Corp., Ltd. during the summer of 1987. Corporate headquarters are located in St. John's and Sealand's chairman, Craig Dobbin, provides the amalgamation's leadership. The merger partners continue under their own identities through the end of November as their combined fleet reaches 163 helicopters, each of which must now receive a new red, white, and blue livery.

The new corporation, under Chairman/CEO Dobbin and President J. C. Jones, reports a significant start-up loss for its first quarter, ending January 31, 1988. On revenues of C\$18.1 million, the loss is C\$2.4 million. In late February, an experimental Sikorsky S-76A EMS service provided in the Vancouver area by **Okanagan Helicopters, Ltd.** is halted. The specially equipped helicopter is sold to Englewood, Colorado-based **Air Methods** for use in a Minnesota EMS program.

A letter of intent for purchase is signed in late April with **Ranger Helicopters Canada, Ltd.** of Sault Ste. Marie, Ontario. The takeover adds 31 light helicopters to the huge CHC fleet, 20 of which are immediately assigned to the company's western division. The second-quarter loss is C\$800,000.

In July, following approval by Prime Minister Brian Mulroney, a project is started by five oil companies to develop the Hibernia oil field off the nation's east coast. The former Sealand Helicopters, now the eastern division based at St. John's, begins to position itself to involve the corporation in Hibernia.

At the company base, the FBO Aero Flight Holdings, Ltd. provides services while the former **Okanagan Helicopters, Ltd.** division, Helicopter Survival Rescue Services, Ltd., offers rescue services to government agencies. A new VFR base is opened at Halifax and a new hangar is built at Goose Bay, Labrador, to handle local charter work.

Based at Toronto, the former **Toronto Helicopters, Ltd.** is the central division. During the year, its fleet is expanded from 8 light helicopters to more than 30, which operate a variety of charter services from 4 bases. Three EMS contracts are accepted on behalf of the communities at Sudbury, Thunder Bay, and Toronto.

The former Vancouver-based Okanagan, now the western division, sells an Aerospatiale AS-332L Super Puma to **British International Helicopters, Ltd. (BIH)** for C\$4.5 million, while accepting 20 of the former Ranger helicopters. Four new bases are established and greater emphasis is placed on the unit's logging business. Okanagan's award-winning Advanced Mountain Flight Training School at Penticton, British Columbia is maintained.

An international division is also established at Vancouver to recruit non-Canadian contracts. During the remainder of the year, the division is awarded contracts for work in Trinidad and Ecuador and also accepts jobs in Thailand, China, Bangladesh, Gabon, Egypt, the U.S., the Philippines, and Morocco. Export sales will come to account for 60% of the company's business.

On October 1, the carrier reports a C\$4.4-million net profit for the third quarter and a C\$1.8 million for the period since January 1. During the same nine months, CHC sells C\$12.9 million in aircraft assets, while purchasing C\$13.5 million worth. At the same time, the western division becomes an approved S-76 service provider at its Richmond base. In November, an AS-332L Super Puma is purchased from **ERA Aviation** and is delivered from that firm's Dead Horse, Alaska, base.

In December, Chairman Dobbin's personal holding company, Discovery Helicopters, Ltd., purchases 1.7 million common shares in CHC from United Helicopters, Ltd., the U.K. holding company that owns **Bristow Helicopters, Ltd.** Discovery's stake thus rises from 29% minority to 52% majority shareholding. Revenues total C\$114.91 million (\$94.6 million U.S.) and a net C\$4.02-million (US\$3.3-million) profit is generated.

At the beginning of 1989, CHC operates five divisions: Eastern, Central, Western, international, and engineering support. From St. John's,

the eastern unit focuses on offshore support with 17 light helicopters and 3 AS-332L Super Pumas. The central division based at Toronto administers the company's 3 EMS contracts (Thunder Bay, Toronto, and Sudbury) and undertakes a variety of charter operations with a fleet of 30 helicopters from 4 bases. The western division continues the work of its noted Okanagan predecessor while the international division recruits all non-Canadian contracts. The engineering support division is an outgrowth of **Okanagan Helicopter, Ltd.**'s successful and profitable maintenance and overhaul operation.

On a contract with Arco Oil, 2 Sikorsky S-76s begin offshore oil support in Ghana, West Africa, in early March. The S-76 offshore support with Gabon is continued while a Bell 212 supports Egyptian government exploration offshore and another is active off Morocco. On April 6, Montreal-based **Viking Helicopters, Ltd.** joins the helicopter conglomerate and expands its fleet with some 60 light aircraft. In August, company officials evaluate a Kamov Ka-32 Helix during its visit to Airshow Canada at Vancouver; discussions are held for several months of test service.

On December 1 and employing a pair of AS-350Bs, daily scheduled rotary-wing flights commence from Vancouver International Airport and Vancouver's downtown heliport to the winter sports destination of Chateau Whistler, at Whistler, British Columbia, some 87 miles away. Net gain is C\$1.6 million.

After a period of poor loads due to lack of snow, more wintry weather leads to full loads for the Whistler shuttle by February 1990. It is reported, on April 30, that the first quarter's income has declined by 9%. The reason is identified as declining income and higher maintenance costs for the Super Puma fleet. Consequently, the carrier begins to reduce its 9 AS-332Ls by sale or lease, with 2 of the French-made helicopters acquired by other carriers during the summer. The fiscal picture does not improve during the remainder of the year. Net gain for the year skyrockets to C\$7 million.

In January 1991, to prepare itself for a period of recession, CHC begins to amalgamate its four domestic divisions into two. Over 60 employees are laid off and underutilized assets continue to lead a program of selective disposition.

On July 1, it is announced that Montreal-based **Heli-Littoral, Ltd.** will be absorbed by the new CHC Viking Helicopters, Ltd. division. The liaison will bring 12 more Aerospatiale AS-350B and Bell 206B Jet-Rangers into the Canadian fold. Operations continue apace during the remainder of the year; however, bad weather and the nation's slumping economy bring a decrease in operating revenues.

Following the death of Robert Maxwell, **British International Helicopters, Ltd. (BIH)** goes into receivership with the rest of Maxwell Aviation International Group on December 12. The death of Maxwell ruins his entire financial empire in 1992, including BIH, which is now forced into Administration (the U.K. equivalent of Chapter XI of the U.S. bankruptcy law). During the first quarter, purchase bids for BIH are received from **Bristow Helicopters, Ltd.** and **Bond Helicopters, Ltd.** The former offer is withdrawn in July as the two proposals are referred to the U.K.'s Monopolies and Mergers Commission for approval.

Meanwhile, over the objections of Bond, as well as newer bidders that include **KLM/ERA Helicopters**, **Evergreen International**, and **Lloyd Helicopters**, a joint buyout team from BIH management and CHC (Canadian Helicopter Corporation, Ltd.) receive U.K. government approval and CAA licenses in August to form two BIH subsidiaries. The establishment of **BIH (Isle of Scilly), Ltd.** and **BIH (North Sea), Ltd.** are part of a complicated effort by CHC to secure a better position in its bid to buy the administered helicopter line.

During these maneuvers in Europe, the company also receives a number of contracts from the United Nations to provide helicopter support services in five nations in Africa. The arrangement will eventually lead to the commitment of some 40 helicopters.

On December 1, it is announced that the management buyout team from CHC and BIH, together with the British merchant bank of Brown and Shipley, Ltd., has secured sale of **British International Helicopters, Ltd. (BIH)** from its court-appointed administrators. Both the bank and Canadian operator are required to pay \$8 million each for matched 40% stakes, while BIH managers acquire 20% shareholding. On December 8, the Department of Transport voids the August licenses for subsidiaries and requires reapplication.

Brintel Helicopters, Ltd. completes purchase of the carrier and its assets out of administration at the end on January 27, 1993. Major shareholders in this \$45.5-million buyout include the CHC (80%), British venture capitalists, and the new company directors.

The world's second-largest commercial helicopter operator after **Petroleum Helicopters**, CHC now operates a total of 242 helicopters, including 2 Bell 412s, 2 dozen Bell 212s, 3 Bell 204s, 14 S-76As, 4 AS-332Ls, and 7 S-61Ns. In October, the corporation purchases all of the S-76As owned by BIH. Late in the year, a public securities offering is made, generating \$C85 million for use in paying down long-term debt. Brintel shareholding on December 15 is 90%.

In January 1994, CHC completes a buyout of **British International Helicopters, Ltd. (BIH)** for C\$27 million. CHC Chairman/CEO Dobbin obtains Irish citizenship, which allows the Canadian corporation to meet U.K. and EEC ownership regulations. Additionally, 10 million new shares are issued to the BIH management team, which is initially left in place. The British operator, a fully owned subsidiary, continues to fly under its previous name.

As of February, the Brintel ownership is 100%. In March, the U.K.'s Civil Aviation Authority (CAA) determines that the purchase of BIH complies with EC regulations on air carrier licensing.

During the summer, several of the company's repair and overhaul operations are merged together into one large Vancouver facility. Meanwhile, the United Nations' requirements for the company's support in five African countries are significantly reduced.

In October, BIH Managing Director Stewart Birt abruptly steps down. A month later, a major management change occurs at the Canadian parent. CEO Dobbin resigns his operational post to concentrate on the board chairmanship while President/COO Patrick Callaghan departs. Mark Dobbin is now vice president, while former CHC Western Division President Rudy Palladina becomes overall president/chief executive officer.

During the first quarter of 1995, the company and several of its subsidiaries receive contracts from Diamond Field Resources to provide helicopter support for its new mining operations at a major new nickel find at Voisey Bay, Labrador.

In July, the company is awarded a contract from a major 11-company multinational oil consortium for support of offshore shore operations in the Caspian Sea. The five-year arrangement is a joint venture with **Azerbaijan Airlines**. In August an S-76A+ and its crew are dispatched to Baku and on September 1 begin shuttling workers out to a number of drilling platforms.

From its base at Penticton, British Columbia, the company's Advanced Mountain Flight Training School continues to train helicopter pilots from around the world; much of the flying occurs in the nearby Cascade Mountains.

Airline employment stands at 1,600 in 1996. During mid-February, Jan Rustad, CEO of the Advanced Mountain Flight Training School, confirms that plans are being made to expand the facility and its curriculum.

Designed for greater lift capacity by Helipro International Corporation, a shortened S-61 enters service with CHC from Vancouver on March 12. A second shortened S-61 joins the fleet three days later; both machines begin heli-logging contracts with the western division in British Columbia.

Despite a reduction in revenues and a onetime cost of merging its eastern and Viking operations, CHC reports, for its fiscal year ending April 30, its highest-ever earnings—C\$7.6 million (US\$5.85 million).

On June 7, the company enters into a strategic partnership with Frde, Norway-based **Airlift, A.S.** via its Brintel Helicopters, Ltd. parent, **British International Helicopters, Ltd.** A specially equipped AS332L1 Super Puma is sold to the new partner for deployment at Spitzbergen.

The international division and its Thai Aviation Services partner receive a five-year, C\$70-million contract in August to support the offshore production operations of Unocal Corp. in the Gulf of Thailand.

A third shortened S-61 joins the heli-logging fleet of the western division in early fall. In mid-November, the company, through its affiliate **Thai Aviation Services, Ltd.**, receives a C\$70-million, five-year contract (with an additional two-year option) from Unocal of Thailand, Ltd. Support of Unocal offshore production will be provided by a Sikorsky S-76 and an S-61N.

In December, the company's British International Helicopters, Ltd. subsidiary wins the two-year Talisman offshore support contract previously operated by **Bond Helicopters, Ltd.** and **Bristow Helicopters, Ltd.** to provide flight services to the former British Petroleum-owned North Sea fields at Beatrice, Buchan, and Clyde.

In reaction, **Bond Helicopters, Ltd.**, acting on behalf of its new partner, the Norway-based Helikopter Service Group, challenges the operator's right to a U.K. operating permit, claiming that less than a third of BIH is owned by European Union nationals. Bond hopes to show that such a minority shareholding exists and that BIH is in violation of U.K. and EU laws. A high court in London agrees to a judicial review.

A two-year contract with Shell Prospecting and Development (Peru) B.V. is landed by CHC on December 11. A few days later, the western division renews a helicopter support contract with British Columbia-based Alcan Smelters and Chemicals, Ltd. that the carrier has held for 45 years.

Income for the year reaches C\$334.2 million and there are net earnings of C\$7.6 million.

The Shell contract, employing a dedicated Bell 212, begins in January 1997. The helicopter provides transportation to a remote project 500 km. east of Lima. In early April, President Rudy Palladina signs an order for 2 Bell Boeing BB-609 civil tilt-rotors. As of April 30, the company operates 222 helicopters in Canada and overseas.

Two new contracts are received on July 1. The first is a C\$24-million award that will require two medium-sized helicopters to operate from Yangon, Myanmar, for a minimum of five years and a third to fly from a remote campsite for a year.

The second contract, valued at C\$7 million, sends a medium-sized helicopter to Baku, where it will support the Caspian Sea offshore operations of a major oil consortium, Azerbaijan International Operating Company, for the next three years. During the year, helicopter operations account for 65% of the carrier's income, with the remainder coming from the ACRO Aerospace aviation repair and overhaul group.

Also on July 1, **Bond Helicopters, Ltd.**, a subsidiary of **Helikopter Services, A.S.**, challenges the ruling of a London court concerning a 1993 determination by the CAA that BIH complies with applicable U.K. and European licensing regulations with respect to ownership nationality.

At the year's FireExpo held in Abbotsford, British Columbia, during the summer, an S-61L demonstrates impressive water drops for crowds of spectators.

A major contract is completed in Argentina during the fall, somewhat earlier than expected.

Revenues increase to C\$351.7 million and profits jump to C\$10.1 million.

Following the major ice storm in Quebec on January 8–10, 1998, CHC, using its patented Helinas technology, is able to help speed power restoration throughout the province. The technology involves transporting of people and equipment to the tops of transmission towers for live-line maintenance and repair.

The company's stake in **Airlift, A.S.** is increased on January 30 from 10% to 45%, making CHC the major shareholder in the Norwegian helicopter operator.

On February 18, CHC receives two major contract extensions valued at C\$15 million. The first is a two-year extension of the arrangement with Azerbaijan International Operating Company while the second is a three-year extension of a deal with Mobil Equatorial Guinea, with a two-year option.

A two-year, C\$12-million contract is received from Sable Offshore Energy, Inc. on March 2 for support of the company's activities off Halifax. Also in the second quarter, support renewal contracts are received from utilities, including a two-year renewal with Newfoundland Hydro and a three-year renewal with the New Brunswick Power Commission. Newfoundland Telephone retains CHC's services until 2001.

On March 27, **Bristow Helicopters, Ltd.** wins a £175-million, seven-year contract from Shell Expro for operations in the central and northern North Sea, with support flights from Aberdeen and Shetland effective July 1. The contract had previously been held for 31 years by CHC subsidiary **British International Helicopters, Ltd.** (and its predecessors) and, in fact, made up more than half that operator's business.

Top BIH executives meet in Aberdeen, Scotland, on March 30 to decide future strategy in light of the loss of the Shell Expro contract. In an interview with that city's *Press and Journal*, Managing Director Conway admits that the Shell Expro decision had come as a big surprise—and quite a shock—to BIH. Meanwhile, CHC President Palladina resigns in a move described in the necessary press release as having come because of disagreements over the long-term direction of CHC. Loss of the Shell business is not mentioned.

Under terms of the March 2 Sable arrangement, CHC begins operations in Halifax in April, employing a Sikorsky S-76A and an S-61N to transport workers to offshore platforms. The company's EMS contracts in Ontario and Nova Scotia are renewed.

On May 19, the company signs a five-year, C\$19-million pact with the Arabian Oil Company, Ltd. and a one-year, C\$2.5-million deal with the Georgian Pipeline Company.

Due to unusual weather in western Canada during the annual fire fighting season, which begins in May, the demand for air drops of retardant will, by November, reach a near record low.

On June 13, the *Press and Journal* reports that CHC is targeting either Norway's **Helikopter Services, A.S.** or one of its subsidiaries (most likely U.K.-based **Bond Helicopters, Ltd.**) as a possible takeover target.

Also in June, a Bell 212 is dispatched to Tbilisi, Georgia, to assist the Georgian Pipeline Company in its construction of a 600-km. pipeline in the Caspian Sea area. The company also receives a two-year contract to provide helicopter support services to the C\$2-billion first phase of the Sable Offshore Energy Project, a consortium enterprise on the Scotian Shelf led by Mobil Oil.

On July 27, an agreement is signed with the government of Newfoundland and Labrador, whereby the province will contribute C\$9.5 million to help CHC to establish company at St. John's. The high-technology CHC subsidiary, Newfoundland Bonding and Composites, Ltd., will manufacture composite aerospace materials.

A second Sikorsky S-61N is added to the Halifax support group in early September. Simultaneously, preparations are made by the **British International Helicopters, Ltd.** subsidiary to celebrate the thirty-fifth anniversary of the Penzance to St. Mary's, Scilly Isles, route the following year. The route provides the world's oldest scheduled helicopter service and is fully and enticingly described when CHC opens a British International-Penzance homepage on the World Wide Web on September 21 (<http://www.chc.ca/bipz>).

The Arabian Oil Company contract begins in December. A Bell 212 is dispatched to Al-Khafji, Saudi Arabia, to assist the energy company in its oil and gas exploration, development, and production activities in the offshore area of the divided Ex-Neutral Zone between Saudi Arabia and Kuwait.

Also in December, Canadian Helicopter is outbid by **Cougar Helicopters, Ltd.** on a new C\$20-million contract from Terra Nova. Under the agreement, Cougar will employ its Super Pumas in support of Terra Nova's glory hole, subsea construction, drilling and operations activities off Newfoundland for 1999–2002.

CHC's helicopter operations generate operating income of C\$224.5 million and operating gain of C\$32.1 million. The corporation's overall net profit hits C\$10.1 million.

The *Aberdeen Press and Journal* reports on January 12, 1999, that the corporation has purchased a package of 5.1 million shares in **Helikopter Services, A.S. Group**. The 25% stake in the Norwegian operator, valued at a "knock-down price" of £16 million (Nkr 40 per share), is acquired from an institutional investor via the CHC Norwegian subsidiary Vinland Helicopters. The purchase makes CHC the largest shareholder in HAS, as well as its subsidiaries, **Bond Helicopters, Ltd.** and Australia's **Lloyd Helicopters (Pty.), Ltd.**

An additional 5% stake in HSG is acquired on March 24, together with controlling interest. Interviewed by the *Press and Journal*, Helikopter Services Group Chairman Reidar Lund indicates that the action is regarded as an "unfriendly takeover" attempt. CHC CFO Jo Mark Zurel discourages "takeover speculation" and claims the share purchase is a moneymaking exercise.

On April 14, Reuters, Ltd. publishes news that CHC will bid 45 crowns per share for the remaining shares in Helikopter Services, A.S. Group and that the official offer will be released within a week, again through Vinland Helicopters. After a preliminary discussion, the Norwegian operator indicates that the offer, compared to booked capital, is too low. CHC requires acceptances from those who hold 90% of HAG shares in order to accomplish the takeover.

CHC counters on April 26 with an offer, via Vinland, of Nkr 45 per share for the remaining shares. The purchase would be subject to successful completion of a due diligence review and government approval. A statement from CHC also indicates that the offer is conditional upon Vinland gaining a minimum of 90% of HSG stock.

Because it has not yet received the required consent from HSG for the shares previously acquired, Vinland Helicopters (acting on behalf of CHC), on May 10, extends its voluntary offer to acquire all the shares of HSG to May 28.

A major minority shareholder with a 20% stake, the U.S.-based investment firm Tiger Management moves on May 21 to block the CHC takeover of HAG. Tiger, like the HAG management, believes CHC's 45 crowns per share bid is too low. A spokesperson tells the Norwegian business daily *Dagens Naeringsliv* that the current share price does not reflect the real value of the company.

CHC will again counter, raising its offer to Nkr 60 per share.

Acting through Vinland Helicopters, **Canadian Helicopter Corporation, Ltd.** announces on August 2 that all of the remaining conditions to its offer to purchase all shares in **Helikopter Services Group, A.S.** (HSG) have been satisfied or waived and that the acquisition is completed. CHC now finds itself the owner of two major U.K. rotary-wing subsidiaries, as well as the giant Norwegian operator's foreign subsidiaries, that include **Court Helicopters (Pty.), Ltd.** of South Africa and **Lloyd Helicopters (Pty.), Ltd.** of Australia. In a move that foreshadows a corporation-wide integration a year later, **Bond Helicopters, Ltd.**, the HSG U.K. subsidiary also acquired is now renamed **CHC Scotia, Ltd.**

On October 28, HSG is deleted from the Oslo Stock Exchange. This is the final step in CHC's takeover of its former rival; with completion of the acquisition, the Canadian giant is now the world's largest helicopter operator.

By November, the activities of CHC's **British International Helicopters, Ltd.** subsidiary and **CHC Scotia, Ltd.** at Aberdeen, Scotland, have been amalgamated and over 100 nonflight positions are eliminated.

This year, the company's rotary-wing services have generated operating income of C\$214.6 million and operating gain of C\$37.7 million. Sale of the company's overhaul business and other costs drop corporate net profit to C\$8.7 million.

The carrier's famous Mountain Training School at Penticton, British Columbia, is awarded a new contract by the National Defence Department on January 6, 2000. Special-conditions flying will not only be taught to RCMP and other Canadian personnel, but to crews from the USN and USCG. On January 26, the U.K. Department of Trade and Industry and the Competition Commission both clear the merger of CHC's UK operations and those of **Helikopter Services Group, A.S.**

Two days later, the company sells its 33% stake in **Helicsa, S.A.** to its other major partners, **Helicoptereros, S.A.** and **Schriener Airways, B.V.**, for C\$6.8 million.

Working with the Welsh Development Agency, the U.K. managers of **British International Helicopters, Ltd.** open negotiations with the parent organization during the first quarter concerning a possible management buyout. With the acquisition of **Bond Helicopters, Ltd.**, now **CHC Scotia, Ltd.**, BIH has become the redundant U.K. subsidiary (publicly referred to as a non-core operation in the United Kingdom) for the giant North American concern.

A satisfactory arrangement is concluded on May 17, under which BIH, sold for \$51 million, once again becomes the largest U.K.-owned helicopter operator. The Canadian corporation's U.K. offshore activities will now center fully on **CHC Scotia, Ltd.**

Trading as **British International, Ltd.**, the new company retains or acquires from CHC 6 Sikorsky S-61Ns, 2 Eurocopter AS-365N2 Dauphins, and 2 light helicopters. The scheduled passenger service to Penzance is maintained, as are operations for the Ministry of Defence in Plymouth, England, and the Falkland Islands. Light helicopter operations are also undertaken in Cardiff.

The sale of non-core operations continues in July as Norway-based **Lufttransport, A.S.** is sold to the **Norwegian Air Shuttle, A.S.** for C\$14.3 million. Proceeds from the sale are applied to the senior debt associated with the previous year's takeover of Helikopter Services Group.

Effective October 19, all of the corporation's subsidiaries adopt the CHC moniker and are renamed in the manner of **CHC Scotia, Ltd.** Thus, **Helikopter Services, A.S.** becomes **CHC Helicopter Service, A.S.**, **Court Helicopters (Pty.), Ltd.** is renamed **CHC Helicopters Africa (Pty.), Ltd.**, and **Lloyd Helicopters (Pty.), Ltd.** emerges as **CHC Helicopters Australia (Pty.), Ltd.** Aircraft from all subsidiaries are now repainted in the CHC red, blue, and white livery and a common look is adopted for all company literature. The reason for the changeover is reported in a single key sentence in the CHC newsletter, *Rotortales*: "The integrated global oil companies which have emerged in recent years seek an integrated global helicopter company to provide services around the world."

CANADIAN NORTH, LTD.: Northwest Tower, Suite 300, 5201 50th Ave., Yellowknife, Northwest Territories X1A 3S9, Canada; Phone (867) 669-4000; Fax (867) 669-4040; <http://www.nunavut.com/cgi-bin/nbse...nuit>; Year Founded 1998. In September 1998, the northern division of **Canadian Airlines International, Ltd.** is sold to the 100% aboriginal-owned holding company NorTerra Inc., which is jointly owned by Inuvialuit Development Corporation and Nunasi Corporation. Under the name Canadian North, the division, based at Yellowknife with a regional office in Iqaluit, immediately enters into a comprehensive agreement with CAI.

Under its terms, CAI will provide operational and maintenance support, including wet-leased B-737-200s, as well as joint marketing, scheduling and fare structures. All flights operate with the CP code and Canadian North is included in CAI's frequent flyer program, is a partner in Canadian Cargo, and is included in the major's travel agency Sales Incentive Program.

Canadian North continues to offer services to and from Iqaluit, Rankin Inlet, Cambridge Bay, Resolute, Yellowknife, Norman Wells, Inuvik, Hay River, and Fort Smith.

CAI is renamed in early 1999 as **Canadian Airlines, Ltd.** In conjunction with code-sharing partner CA, thrice-weekly B-737-275C roundtrips are started by Canadian North on April 6 linking Ottawa with Iqaluit, capital of Canada's newest territory, Nunavut. Plans are announced to double the schedule in October.

After four months of maneuvering, the carrier's larger partner, **Canadian Airlines, Ltd.** is taken over by **Air Canada, Ltd.** in January 2000. During the majors' integration period, no change occurs in the Canadian North-CP relationship.

CANADIAN PACIFIC AIR LINES, LTD. (CPAL): Canada (1942–1986). With an interest in Canadian commercial aviation since its acquisition of shareholding in **Canadian Airways, Ltd.** in 1930, the Canadian Pacific Railway makes a survey of the country's private airlines during 1939, learning many are in deep financial difficulty. In 1940, the railway plays a major role in organizing the Air Transport Auxiliary to ferry aircraft across the North Atlantic to England. Acting on the suggestion of the British Ministry of Aircraft Production, an Air Ferries Department had been established on November 11 for the purpose and placed under the direction of Maj. George E. Woods Humphrey, long-time managing director of **Imperial Airways, Ltd.** During that year and next, the railway begins to purchase control of the nation's independent air transport concerns.

On January 30, 1942, CPAL is founded as a subsidiary of the Canadian Pacific Railway. Amalgamated into the new entrant are three smaller airlines, which are themselves the results of earlier mergers, **Yukon Southern Airlines, Ltd.**, **Canadian Airways, Ltd.**, **United Aircraft Services, Ltd.**, and four bush lines, **Arrow Airways, Ltd.**, **Dominion Skyways, Ltd.**, **Prairie Airways, Ltd.**, and **Starrett Airways, Ltd.**

The resulting combined fleet totals 77 single- and twin-engine planes, including Junkers W.33s and W.34s and de Havilland DH 84 Dragons and DH 89A Dragon Rapides. Five Boeing 247Ds, first flown by **United Air Lines** but acquired by the Canadian Department of Munitions two years earlier, are leased and enter service.

Former **Yukon Southern Airlines, Ltd.** CEO Grant McConachie, one of the nation's most famous pilots, is named managing director. His biography by Ronald A. Keith, *Bush Pilot with a Briefcase: The Happy Go-Lucky Story of Grant McConachie* (Toronto: Doubleday, 1972) will recognize his dual accomplishments as aviator and executive.

All flight personnel wear new uniforms; those for pilots and flight attendants are military-style suits in dark colors and gloves and hats are *de rigueur* for female flight attendants.

A variety of British Commonwealth Air Training Plan responsibilities are inherited as is the completion and operation of five repair and overhaul plants.

A Lockheed Model 14H Super Electra acquired from **Yukon Southern Airlines, Ltd.** crashes on Mt. William Knight, 70 mi. E of Vancouver, on December 20; there are no survivors from the aircraft, which will not be found until August 10 of the following year.

Enplanements for the first 11 months of the new operation total 29,267.

In 1943–1945, the mixed fleet provides service over the acquired routes. One of the most unusual flights occurs in November 1944 when 26 orphaned babies aboard a B-247D sleep through their transfer from Montreal to Chicoutimi. Many of the aircraft are withdrawn during this period in preparation for newer types, including the first of 17 Douglas transports. Bookings for this three-year period are, by year: 1943, 56,634; 1944, 82,858; 1945, 125,110. In the spring of the latter year, 3 Boeing 247Ds are sold to Bert Zimmerly, who places them into service during July with his Idaho-based carrier, **Zimmerly Airlines**.

As **Trans-Canada Airways, Ltd. (TCA)** has neither the equipment or personnel to participate, the Canadian government declines to join the 1946 consortium forming **British Commonwealth Pacific Air Lines (BCPAL)**. Enplanements for the year are 175,461.

During 1947, the fleet of 17 Douglas DC-3s (converted to civil standard from war surplus C-47s) finishes entering service. McConachie is promoted to president/CEO on February 7. Due to TCA-biased parliamentary legislation, little progress is made with plans for long-haul service. An exchange of a Vancouver–Victoria shuttle service is arranged with **Trans-Canada Airways, Ltd. (TCA)** in return for a Vancouver–Prince Rupert coastal route. The swap is followed by government awards for operations Vancouver–Calgary and Winnipeg to Dauphin, The Pas, Flin Flon, and Seven Islands to Knob Lake. Bookings drop significantly, down to 71,847.

The Canadian Air Transport Board in 1948 awards McConachie a monopoly route to Hong Kong and Australia. With the nation's currency frozen, thereby preventing orders to the U.S., CPAL requests 4 Canadair

C-4-1 (pressurized DC-4) North Stars. Pride of the airline is a fleet of 11 Lockheed L-18 Lodestars operated by the western division. Bookings rebound to 96,015.

The 4 North Stars are delivered in May and June 1949. One, the *Empress of Sydney*, makes the first overseas flight for the carrier on July 10, a proving run from Vancouver to Sydney via San Francisco, Honolulu, Fiji Islands, and Auckland. Meanwhile on May 11 and July 9, two Consolidated PBY Cansos are lost in crashes, one at Prince Rupert and the other at Asisko Lake, British Columbia. Regularly scheduled service is inaugurated on July 13, almost exactly in reverse of the route flown by BCPAL, but omitting the New Zealand stop.

On September 9, a DC-3 of **Quebec Airways, Ltd.**, operating as an affiliate since 1942, is destroyed by a time bomb over St. Joachim, Quebec (23 dead). C-4-1 Vancouver–Tokyo and Hong Kong flights via Anchorage and Shemya, commence on September 19. On December 15, the carrier announces an order for 2 de Havilland DH 106 Comet 1A jetliners.

Enplanements for the year soar to 126,826.

Quebec Airways, Ltd. is integrated in 1950. Although all aboard are safe, the C-4-1 *Empress of Vancouver* with 5 crew and 10 passengers must be written off following a hard landing at Tokyo (HAD) on February 9.

Also in December, the first 2 of 5 Douglas DC-4s purchased from **Pan American World Airways (1)** are delivered. On December 2, one of these establishes a new Honolulu to Vancouver flight record of 9 hrs. 7 min.

Approaching Penticton on initial approach to Vancouver Airport on December 22, a DC-3 with 3 crew and 15 passengers flies too low and smashes into trees of the Okanagan Mountain at 4,500 ft. (2 dead).

The year's bookings accelerate to 145,000.

Flying via the Great Circle Route to Japan, BCAL participates in the UN's Korean War airlift, beginning in early 1951.

After several years of disuse, the company's original Canada goose symbol is now returned, replacing the beaver previously employed.

A contract is started on June 15 to operate the RCAF No. 10 Repair Station at Calgary.

A C-54A with 6 crew and 31 passengers disappears into the Gulf of Alaska during a flight from Sitka to Yakutat on July 21; there are no survivors.

Auckland is added as a stop on the Sydney route and the 3 surviving C-4-1s are sold to TCA in November–December, the same months in which the last 3 DC-4s are delivered.

Boardings this year climb to 175,903.

The carrier in the spring of 1952 announces its intention to fly the Sydney–Honolulu leg of its transpacific route with DH 106 Comet 1As just as soon as they can be delivered. Meanwhile, orders are placed for 4 Douglas DC-6Bs. Arrangements are made to acquire 5 Convair CV-240s from **Continental Airlines** and the first arrives in December. Enplanements are up again, to 193,189.

The first 3 DC-6Bs arrive during January and February 1953. CV-240 service begins on February 2 over the Vancouver–Sandspit route. The remaining 4 CV-240s are delivered in February–March.

En route to Australia from England on March 3, the DH 106 Comet 1A *Empress of Hawaii* crashes on takeoff from Karachi; all 11 aboard are killed in the world's first fatal crash of a pure-jet airliner. Investigators will report that the tragedy is due to the nose of the airliner being held too high upon takeoff. The British aircraft's manufacturer will make modifications to the Comet, including the addition of drooped wing leading edges.

Resolved that his carrier will not operate the type, President McConachie orders the second Comet 1A, *Empress of Vancouver*, sold to the **British Overseas Airways Corporation (BOAC)**. In April, 3 newly received DC-6Bs are placed on the Pacific routes as more of these Douglas-made Comet replacements are ordered.

On May 1, a Consolidated PBY-5A crashes while landing at Prince Rupert, British Columbia (two dead).

During the summer, the UN's Korean War airlift ends; in its support since 1951, BCAL has made a total of 703 roundtrip 4,800-mile flights

to Japan ferrying 39,313 U.S. and Canadian personnel and logging over 7 million miles. The DC-6B *Empress of Lima*, on October 16, launches a frequency from Vancouver to Lima via Mexico City.

On November 16, an order is announced for 3 DH 106 Comet 2s; they will never be delivered. The year's bookings skyrocket to 218,886.

On June 23, 1954, a DC-6A is sold to **Northwest Airlines** in the U.S. The year's enplanements total 233,376.

In January–April 1955, 8 Curtiss C-46s are acquired from **The Flying Tiger Line** and the first are placed in all-cargo services in support of DEW-Line construction on March 15.

Two de Havilland Canada DHC-3 Otters are purchased in April and begin operations from Edmonton to Norman Wells, Fort Norman, Aklavik, and other destinations in the Northwest Territories.

On April 11, a DC-6B leaves on a preinaugural Vancouver–London flight, which is completed next day via the Great Circle Route.

The DC-6B *Empress of Amsterdam*, piloted by Capt. R. B. Leslie, links western Canada and the Pacific with Europe on June 3–4 when it inaugurates Amsterdam–Sydney service over the Polar route via Sondrestromfjord, Greenland, Edmonton, and Vancouver.

On November 1, the **Quebec Airways, Ltd.** routes in Ontario and Quebec are traded to TCA for a Toronto–Mexico City route. The DC-6B *Empress of Auckland* launches nonstop service over the new route on November 6, thereby providing a link to Lima. The year's boardings swell to 269,509.

The Lima route is extended to Buenos Aires on June 1, 1956.

En route to Tokyo on August 29, Flight 307, a DC-6B with 8 crew and 22 passengers catches fire and attempts, unsuccessfully, to make an emergency landing at Cold Bay, Alaska (15 dead).

Enplanements for the 12 months drop to 251,542.

Orders are placed in 1957 for 6 C\$2.9-million Bristol Britannia 314s. On May 30, the DC-6B *Empress of Lisbon* inaugurates central Atlantic flights Toronto and Montreal to Lisbon; five days later, the route is extended down to Madrid.

On September 1 the Winnipeg–Churchill route is sold to **Transair, Ltd.** Santiago de Chile is added to the South American network on September 23.

In November, the carrier's Prairies Service, Edmonton–Regina via Prince Albert, Moose Jaw, and Saskatoon, is transferred to **Pacific Western Airlines, Ltd.** Boardings rebound to 268,602.

Transport Minister George Hess, on February 7, 1958, announces a new air transport policy for regulated competition on domestic routes. Late in the first quarter, aviation history is made during a DC-6B service to Amsterdam via the polar route. Capt. Robert Randall Sr. is pilot, his son Ted is copilot, and his second son, Bob Jr., is second officer.

The first Britannia 314 is delivered on April 9; christened *Empress of Buenos Aires*, it launches nonstop Vancouver–Amsterdam service on June 1. As additional 314s are received, they are placed on the Vancouver–Tokyo run, beginning on August 23. Bookings for the year dip to 245,182.

A second DC-6A is sold to Northwest Airlines on April 19, 1959. Daily Britannia 314 transcontinental Canadian Empress service, Vancouver–Montreal via Winnipeg and Toronto is inaugurated on May 4.

Eleven days later, on July 14, **Northwest Airlines** purchases a DC-6B. Also in July, the Mackenzie Service, linking Edmonton, Uranium City, Yellowknife, and Inuvik, is transferred to **Pacific Western Airlines, Ltd.** The Britannia 314 *Empress of Montreal*, on September 11, extends the Tokyo route to Hong Kong.

Enplanements soar to 296,567.

On March 1, 1960, Britannia 314s stretch the Lisbon and Madrid twice-weekly frequencies on to Rome. The last PBY-5A Canso is sold as the coastal routes of British Columbia are transferred to **B.C. Airlines, Ltd.** Livery and logos are changed and orders are placed for Douglas DC-8-43s. Bookings climb to 336,072.

The first DC-8-43 is delivered on March 25, 1961; christened *Empress of Vancouver*, it is placed in service on April 30 over a route from Amsterdam to Sydney via Edmonton, Vancouver, Honolulu, Nadi, and

Auckland. Upon its return, it is assigned to the European Polar route on May 31, flying from Vancouver to Amsterdam. The fleet now comprises 6 Bristol Britannia 314s, 2 Bristol Britannia 324s, 8 DC-6Bs, 5 Convair CV-240s, 2 Curtiss C-46s, and 3 DC-3s.

While attempting an overshoot of Hickam Field at Honolulu on July 22, the *Empress of Vancouver* crashes; it will be repaired. A second DC-8-43 is received in late summer and is placed on the Tokyo service on October 10. In terms of passenger kilometers flown, the carrier now ranks as the world's 27th largest airline.

One DC-6B is retired in 1962 as 2 additional DC-8-43s enter service.

A Britannia 314 with 7 crew and 40 passengers crashes in flames at Honolulu, Hawaii on July 23; the plane was returning for propeller repairs after takeoff for the Fiji Islands 20 minutes earlier (27 dead).

Enplanements for 1963 total 498,245. A net profit of C\$347,000 is earned.

Airline employment in 1964 stands at 2,634. As another DC-8-43 is placed into operation, the fleet is decreased through the retirement of 1 DC-6B, 5 CV-240s, 2 C-46s, and 6 Britannia 314s. A sixth DC-8 (a Dash-54) is ordered for 1965 delivery.

Passenger boardings increase to 541,014 during the 12 months and freight traffic rises a strong 47%. The Pacific route is now the company's fastest growing, up 36%. The average trip length is 1,817 miles. The net profit is C\$4.8 million, the largest in the company's 22-year history to date.

The workforce is increased to 3,080 in 1965. The DC-8-54 is received and orders are placed for 3 DC-8-63s. CEO McConachie dies on June 29.

On July 8, en route from Vancouver via Prince George to Whitehorse, Flight 21, the DC-6B *Empress of Buenos Aires* with 6 crew and 46 passengers, including several Winnipeg Blue Bomber CFL All-Stars, is blasted from the sky by a suspected bomb over Dog Creek, British Columbia. There are no survivors and no one is ever charged in what is widely believed to be a suicide-for-insurance plot by an unknown passenger.

A deposit (later refunded) is filed with the U.S. FAA for 3 Boeing SSTs, which are never built. Nonstop Toronto–Rome service begins during the summer.

Boardings accelerate to 630,816 and passenger miles jump 16.5% to pass the billion mark for the first time (1,144,936,200).

John C. Gilmer becomes president/CEO on January 1, 1966. Another DC-8-43 enters service.

En route for Vancouver from Hong Kong on March 4, Flight 402, the DC-8-43 *Empress of Edmonton* with 10 crew and 62 passengers, crashes after striking several support lights 2,800-ft. from the runway while landing at Tokyo (HAD). The jetliner then strikes a sea wall and catches fire (64 dead).

Toronto to Hawaii nonstop flights begin on October 9. Passenger boardings grow to 739,000.

The employee population in 1967 is now 3,402. An order is placed for 4 DC-8-63s and 7 Boeing 737-217s.

Flight attendants on the Vancouver to San Francisco route are now wearing a special tartan uniform to celebrate the Canadian Centennial and the first U.S. service.

On March 27, a new Canadian air transport policy is announced, dividing international routes between CPAL and **Air Canada, Ltd.** CPAL is designated carrier the on routes to the Pacific area, Asia, Australia, New Zealand, southern and southeastern Europe, the Netherlands, and Latin America.

Also, capacity on domestic routes for the carrier will be allowed to increase to 25% of transcontinental capacity by 1970 and new stops at Calgary, Edmonton, and Ottawa are authorized. While awaiting delivery of the DC-8-63s, a Boeing 707-138B is wet-leased on October 15 from Seattle-based **Standard Airlines** and is operated as the *Empress of Sydney* by that carrier's pilots. Passenger enplanements rise to 885,599.

Airline employment in 1968 is 4,270. Coming in from Honolulu on February 7, Flight 322, the B-707-138B *Empress of Sydney* with 9 crew

and 52 passengers, overruns the runway while landing at Vancouver and collides with parked planes, vehicles, and two buildings; one person aboard the aircraft is killed, as is one on the ground.

The carrier accepts delivery of 5 B-737-217s and 4 DC-8-63s and orders are placed for 2 B-727-17s.

Late in the year, a new corporate image and new name (CP Air in Canada and Canadian Pacific Air overseas) are adopted. The Canada goose symbol is replaced by a logo of five rectangles, standing for "wings across five continents." New uniforms are also introduced for employees; those for flight attendants are also available to the public at Toronto's Eaton's department store.

Freight soars 38% and passenger boardings for the year pass the million-mark for the first time, up 17% to 1,036,641. Revenues exceed C\$100 million for the first time (C\$106,700,000).

The last DC-3s and DC-6Bs are retired in 1969 and the Auckland frequency is suspended. A C\$24-million Air Operations Center (maintenance, overhaul, training) is opened on 52 acres on the north end of Vancouver International Airport.

En route from Shannon to Toronto on June 29 with 260 aboard, the No. 3 engine on a DC-8-63, 600 mi. W. of Shannon breaks away, punctures the aircraft's fuselage, and damages a fin. The jetliner suffers an engine shutdown and emergency descent before recovery and turnback; no injuries are reported and a USAF C-130 is able to intercept and escort the Douglas back to Ireland.

Enplanements for the year are 1,257,375 and the net profit is C\$3.5 million.

The 2 B-727-17s ordered in 1968 join the fleet during 1970. Passenger boardings jump 12.5% to 1,437,000. Revenues grow 23.9% to C\$149.6 million and the net profit shrinks to C\$1 million.

The unduplicated miles in the route system total 58,450 in 1971 and the fleet now includes 11 DC-8s, 14 B-737-217s, and 2 B-727-17s, one of which is delivered on March 11. **Pacific Western Airlines, Ltd.** purchases the carrier's old hangars on the south end of Vancouver International Airport. Orders are placed for 2 B-747-217s. Enplanements are 1,505,438.

The workforce in 1972 stands at 5,787. The fleet receives 1 more B-727-17 and 1 DC-8-55F, the latter being converted during the late spring and early summer to passenger standard. In September, the re-configured aircraft flies three charters to Peking for the Canadian Department of Industry, Trade and Commerce.

Passenger boardings accelerate 9.8% to 1,669,000 and freight swells 2.9%. A C\$5.2-million net profit is recorded.

A lone assailant takes over a CV-640 at Vancouver on January 4, 1973 and demands to be flown to North Vietnam. During negotiations, the man releases the plane's passengers and, finally convinced that the turboprop does not have the range to fly across the Pacific Ocean, surrenders to the RCMP.

An agreement is signed during the spring with the People's Republic of China for the start-up of Vancouver to Peking and Shanghai service in 1974.

Late in the year, Transport Minister Jean Marchand details a new division of international air routes between **Air Canada, Ltd.** and CP Air, Ltd. Except for Colombia, Venezuela, and the three former Guianas, CP Air is allocated all of South America, Morocco, Algeria, Tunisia, south and southeastern Europe plus the Netherlands, Australia, New Zealand, the Pacific Islands, Israel, Iran, China, Japan, and 4 of the 18 destinations contained in the new bilateral agreement with the U.S.

The first 2 of 4 ordered B-747-217Bs are delivered on November 15 and December 3 and are christened *Empress of Italy* and *Empress of Japan*, respectively. One is leased to **Braniff International Airways**, while the other enters service on December 16 on the Vancouver to Tokyo and Hong Kong service. Interestingly, the upstairs lounge of the *Empress of Japan* features an early Canadian railroad decor. Traffic suffers somewhat due to a two-month strike.

Enplanements drop to 1,596,516. Operating revenue climbs 7.5% to C\$185.8 million, but increased fuel costs in the fourth quarter cause an overall 9.1% jump in expenses. The profit falls to C\$4.2 million.

The employee population in 1974 is 6,780. Two additional Jumbo-jets are received and join a fleet that now includes 2 B-747-217s, 4 B-727-17s, 2 B-727-217s, 7 B-737-217s, 5 DC-8-43s, 1 DC-8-53, 1 DC-8-55, and 5 DC-8-63s. The Peking and Shanghai inaugural route is postponed indefinitely. A third B-747-217B, the *Empress of Canada*, is delivered on November 5 and placed into service between Vancouver and Toronto.

En route from Winnipeg to Edmonton on November 29, Flight 71, a B-737-217 with 86 passengers is captured by a lone assailant, who holds a knife to a stewardess. Demanding to be flown to Cyprus, the aircraft lands at Saskatoon for refueling, where the hijacker surrenders to the plane's captain. Tried, the Turkish-speaking man is sentenced to seven years in prison.

The second and the last of 4 B-747-217Bs arrives on December 2; christened *Empress of Australia*, it begins operations to Italy.

Passenger boardings soar 30.1% to 2,284,000. Revenues skyrocket 47% to a record C\$279.5 million, but expenses, led by an 8% jump in fuel costs, climb 49%, reducing the profit to C\$2.5 million.

Airline employment in 1975 continues to grow and is up to 7,541. In April, nonstop Vancouver-Los Angeles service is begun. A DC-8-55 is leased to **ABC Charters, Ltd.** for its final four years. Late in the year, President/CEO John Gilmer retires and flights begin to Morocco.

Passenger boardings jump 11.6% to 2,548,967 and freight zooms upward by 25%. Revenues reach C\$322 million, but operating expenses explode by 25%, forcing a C\$6.4-million loss.

On January 1, 1976, Ian A. Gray is named president/CEO. As a result of the previous year's loss, airline employment is reduced 6.8% to 7,027. The Customer Service and Marketing departments are consolidated into a single Sales and Service group. Frequencies are suspended to Madrid and Tel Aviv and reduced to Mexico City; however, a new route is opened to Lima. A new operations and maintenance center becomes operational at Toronto.

Although freight is up 9.1%, passenger boardings climb only 0.5% to 2,561,253.

The 4 B-727-17s are sold in May 1977, 2 to **Mexicana Airlines, S.A. de C.V.** and 1 each to **Nigeria Airways, Ltd.** and **LAB (Lloyd Aero Boliviano, S.A.)**. Service to Amsterdam is now suspended as recession is felt. Two hundred employees are laid off. Still, orders are placed for 3 DC-10-10s, 2 DC-10-30s, and 3 B-727-217s.

A total of 2,685,120 passengers are carried during these 12 months.

The workforce is boosted 6.2% in 1978 to 7,117. Total unduplicated route mileage is now 66,644. A government ruling allows the company to increase its percentage of transcontinental traffic from 25% to 35% of that flown by **Air Canada, Ltd.**; the percentage can be boosted to 45% in the next year. A Courier Jet package express service is introduced, along with a program of domestic ABC Charters and Apex Charters. The 3 DC-10-10s and the last B-747-217B are received.

Passenger boardings jump 12.6% to 1,960,440 and cargo soars 12.2%. On revenues of C\$411.9 million, a record C\$18.5-million profit is realized.

Three DC-10-30s and 3 B-737-217s join the fleet in 1979 as 1 DC-8-43 and the DC-8-55 are sold. Orders are placed for 4 B-767-200s and 14 more B-737-217s. Government rights to unlimited transcontinental services are awarded in May. On June 1, no frills B-747-217B Skybus Service is initiated between Toronto and either Edmonton, Calgary, or Vancouver; DC-10-63s replace the Jumbojets in October.

Passenger boardings advance by 10.7% to 3.28 million and freight is up 2.6%. Revenues expand by 13% to C\$465.4 million, but profit falls to C\$13.9 million.

Two DC-10-30s and 2 B-737-217s are delivered in 1980 and 2 DC-8-43s and 1 DC-8-53 are retired. A new marketing approach emphasizing premium Express Service at premium fares is adopted on Canadian and Pacific routes in October, following introduction of what would prove an unsuccessful launch of business-oriented Montreal-Toronto "The Company Jet" service in September.

Government route concessions for Victoria and Halifax are awarded and construction of a new hanger is begun at Toronto. An agreement is reached

with **Philippine Airlines** to begin offering C\$1,999 economy/\$2,999 around-the-world flights utilizing resources from both carriers.

Cargo swells 19.5% and passenger traffic grows by 10.7% as 3.6 million passengers are flown. Although revenues jump 25% to C\$684 million, expenses skyrocket 28.5%—due largely to increases in fuel costs—to C\$677 million, cutting the operating profit down to C\$6.8 million.

Six B-737-217s and 1 DC-10-30 are placed in service in **1981** as the remaining DC-8s are all sold. Amsterdam is returned to the route network, but Mexico City is dropped. Montreal–Halifax flights begin in March. Upgraded full-fare Express Service is extended to most Canadian and European destinations during the summer and DC-10-30 charters are started to Reno, Nevada from Vancouver and Alberta. The Skybus Service approach is dropped during the fall, with ABC Charters stepped up.

Reclining sleeper seats are installed in the first-class cabins of the carrier's DC-10-30s and B-747-217s. A C\$16.3-million expansion of the Vancouver operations center is begun while a C\$54-million contract is let for the construction of a gas turbine overhaul facility, also at Vancouver. Two B-727-217s are sold to **Dan Air/Dan Air Services, Ltd.** in November.

Passenger boardings rise 7.5% to 3.9 million and freight grows 8.9%. Revenues total C\$680 million, but expenses, led again by fuel, swell to C\$682 million. Losses are C\$2.3 million (operating) and C\$14.6 million (net).

As a result of the losses, the workforce is cut back more sharply in **1982** than at any time in the carrier's history, declining 9.8% to 7,994. Regina, Saskatchewan, is added as a stop on the Vancouver–Toronto run in April, followed by Saskatoon in June. Nightly Vancouver–Toronto frequencies are increased, with Calgary and Winnipeg added as stops. In October, **Eastern Provincial Airways, Ltd.** and CP Air, Ltd. announce plans to integrate their services from Halifax to Montreal, Ottawa, or Toronto.

Having resigned in April, CEO Gray is succeeded in November by former **Pan American World Airways (1)** boss Daniel A. Colussy. The carrier's fortieth anniversary is celebrated throughout the year. Two DC-10-30s and 1 B-737-217 are placed in service while, in November–December, the first 3 of 5 B-737-217s are sold to **PEOPLExpress**.

Passenger boardings dip 4.9% to 3,708,000, but cargo bolts skyward by 27.8%. Revenues are C\$690.7 million, but expenses are now up to C\$712 million. The operating loss worsens to C\$21.3 million and the net loss doubles to C\$28.2 million.

Airline employment is cut another 7.8% in **1983** to 7,370. The previous order for 4 B-767-200s is cancelled and replaced by one for 10 B-737-317s. The last **PEOPLExpress** B-737-217s are delivered to that U.S. carrier in March and May. After trading **United Airlines** 3 DC-10-30s for 3 DC-10-10s for 3 (later 5) years, the fleet now includes 4 B-747-217s, 5 DC-10-30s, 3 DC-10-10s, and 19 B-737-217s.

An interchange is begun with **Eastern Provincial Airways, Ltd.** in June integrating that company's Halifax–Montreal and Toronto flights with CP Air's transcontinental frequencies. All but one Vancouver–Victoria frequency is turned over to CP Commuter associate **Air BC, Ltd.** in October. **Pem Air, Ltd.** begins a CP Commuter route from Pembroke to Toronto in Ontario. Saskatchewan service, suspended in late winter, resume in November with weekly B-747-217B flights from Regina to Honolulu via Vancouver.

Cargo climbs again, up 11.2%, but passenger enplanements are down once more, off 0.6%, to 3,270,000. Revenues drop to C\$675.2 million, and thanks to a stringent cost-cutting program, expenses decline to C\$676.4 million. The operating loss is cut to C\$1.2 million and a tiny C\$350,000 net profit is earned.

Again in **1984**, the employee population is chopped, down 2.2% to 7,207. Service is started to Saskatoon and Regina. Negotiations are begun for the acquisition of both **Nordair, Ltd.** and **Eastern Provincial Airways, Ltd.** The latter is purchased in April for C\$15.6 million. Majority control is also taken in **Nordair, Ltd.** and an interest is obtained in the newly formed commuter **Air Atlantic, Ltd.** Government approval for the purchases is given during the summer.

Attache business-class service is introduced aboard B-737-217s that have been configured to 62 seats and given a special livery; the service proves extremely successful. Also during the summer, a second South American service is begun that allows DC-10-30s to fly twice weekly from Toronto and Vancouver, meet in Lima, and continue to Buenos Aires via Santiago de Chile. Charter flights are initiated between Vancouver and Kelowna, British Columbia in October.

Overall passenger boardings grow 2.1% to 3,774,000 and freight, seemingly always strong, accelerates another 13.1%. The worst of the financial reversals suffered during the world economic downturn appear over as revenues rebound 7.9% to C\$686.5 million and expenses drop to C\$647.5 million. Profits are C\$35.3 million (operating) and C\$2.1 million (net).

The employee total rises 5.5% to 8,578 in **1985**. A fleet standardization program is begun, designed to have the carrier become an all-DC-10/B-737 operator. After delivery of the first three machines early in the month, the first B-737-317 service in Canada is initiated on April 17 over the Vancouver–Toronto via Winnipeg transcontinental run. Also in April, former **American Airlines** Senior Vice President/Controller Donald J. Carty is named president/CEO, effective at the first of the year.

After taking on connecting passengers and baggage from Tokyo at Vancouver on June 22, Flight 003, a B-747-217 flies to Tokyo. There, a bomb explodes as the luggage, scheduled to be shifted over to Air India Flight 301 for a Bangkok service, is being unloaded; two baggage handlers are killed and four injured.

The B-747-217Bs are sold to **Pakistan International Airways Corporation (PIA)** while B-737-217s are delivered and 6 DC-10s (3 Dash-10s and 3 Dash-30s) are leased out. Nine more B-737-217s (one-third of the fleet) are converted to 62-seat configuration and placed on the Attache business-class service.

As part of CEO Colussy's plan for the achievement of greater domestic feed, **Eastern Provincial Airways, Ltd.** (and its fleet of 7 B-737-217s and 4 Hawker Siddeley HS 748s) begins final integration; it will be allowed to finish out the year as a separate entity.

In July, the former name, logo, and livery of CP Air, Ltd. is dropped in favor of a return to the original Canadian Pacific Air Lines, Ltd., this time with the last two words merged into the single "Airlines." (For the sake of consistency in this work, the original two words will be retained.) After 18 years of a noticeable orange livery, all aircraft are repainted in red, white and blue.

Internally, the airline negotiates new contracts with its unions. Moderate wage hikes and job security is given in exchange for work-rule concessions and a two-tier wage structure. The first Jumbojet is delivered to **Pakistan International Airways Corporation (PIA)** in December.

Passenger traffic for the enlarged carrier grows dramatically. Boardings soar 20.2% to 4,530,000. Freight, for the first time in the memory of many, dips down, but only by 1% to 324 million FTKs. Revenues grow 16% to C\$801.7 million and the operating profit is C\$24.8 million. Increased competition under deregulation, a weak Canadian dollar, higher interest costs, and the price of acquisitions and interests in other carriers bring a net loss of C\$26.6 million.

On January 1, **1986**, **Eastern Provincial Airways, Ltd.** is fully absorbed and ceases to exist as a separate airline. During January, Donald J. Carty becomes president/CEO.

In February, the small package Dispatch Service is introduced, followed in March by Airpac, a joint effort with CANPAR in Ontario. During late winter and spring, Hong Kong–Vancouver services become nonstop and are extended on to Toronto. The Amsterdam and Tokyo runs are, simultaneously, made daily and service is reintroduced to New Zealand.

On April 30 after more than a decade's wait, weekly Vancouver–Shanghai and Beijing flights begin. Also in April, the last 2 B-737-317s are delivered and it is again decided to withdraw service from low-yield Saskatchewan.

Phaseout of the B-747-217Bs continues in May as another unit is turned over to **Pakistan International Airways Corporation (PIA)**. In

June, feed arrangements are announced with **Air Atlantic, Ltd.** and **Norcanair, Ltd.** In cooperation with the latter, Toronto-Pittsburgh service is launched.

The 5 B-737-317s are in service by July, at which time the decision is taken to discontinue use of the type and to replace it with additional B-737-217s. All 5 are sold to **VASP Brazilian Airlines (Viacao Aerea São Paulo, S.A.)** by year's end.

In August, the carrier begins a joint service with **The Flying Tiger Line**, linking Montreal with the American freighter's Columbus, Ohio, hub for cargo shipments worldwide.

The B-747-217B phaseout is completed on October 25, the same day a DC-10-30 flight is subjected to a bomb threat from a disgruntled **Quebecair, Ltd.** employee. Under a new Canadian-Thailand bilateral agreement, the carrier announces new scheduled service to Bangkok. On December 2 and in something of a surprise, parent CP, Ltd. sells the carrier to **Pacific Western Airlines, Ltd.** parent PWA, which pays the CPA holding company C\$217 million in cash while assuming the C\$600-million debt of its acquisition.

On April 26, 1987, PWA Corporation integrates its two subsidiaries under the new name **Canadian Airlines International, Ltd.**

CANADIAN PARTNER/PARTNAIRE CANADIAN. See **AIR ALMA, LTD.; AIR ATLANTIC, LTD.; AIR LABRADOR, LTD.; AIR SAINT-PIERRE, S.A.; AKLAK AIR, LTD.; CALM AIR INTERNATIONAL, LTD.; CANADIAN REGIONAL AIRLINES, LTD.; INTER-CANADIAN AIRLINES, LTD. (1); NORCANAIR, LTD. (1); ONTARIO EXPRESS, LTD.; TIME AIR, LTD.**

CANADIAN REGIONAL AIRLINES, LTD.: 8050 22 St., NE, Calgary International Airport, Calgary, Alberta T2E 7H6, Canada; Phone (403) 974-2300; Fax (403) 974-7760; <http://www.cdnair.ca/eng/corp/01corp/cdnreg.html>; Code KI; Year Founded 1991. CRA is initially formed at Calgary, Alberta, in December 1991 as a holding company for the commuter affiliates in **Canadian Airlines International, Ltd.**'s Canadian Partner network. **Calm Air, Ltd., Inter-Canadian, Ltd., Ontario Express, Ltd., and Time Air, Ltd.** Air Atlantic, Ltd. also participate in the network, but CRA is not, like the others, owned in part by CIS.

In March 1993, **Inter-Canadian, Ltd.** and **Ontario Express, Ltd.** are amalgamated and the holding company's corporate identity also becomes the new regional's name. Overseeing all CIS commuter operations under the holding company's banner, President Duncan Fischer employs a workforce of 1,600 and his fleet includes 14 British Aerospace BAe Jetstream 31s, 5 Beech 1900s, 2 de Havilland Canada DHC-8-100s, 14 DHC-8-300s, 4 Embraer EMB-120 Brasílias, 7 Fokker F.28-1000s, and 3 Shorts 360s. Orders are outstanding for 3 more EMB-120s and 12 Avions de Transport Regional ATR42-300s.

Destinations visited now include Allentown, Attapiskat, Bagerville, Baie-Comeau, Blanc-Sablon, Bonaventure, Buffalo Narrows, Calgary, Campbell River, Castellar, Charlo, Chevery, Columbus, Comox, Cranbrook, Dayton, Dryden, Edmonton, Fort Albany, Fort Nelson, Fort McMurray, Fort St. John, Fort Smith, Gaspé, Grande Prairie, Harrisburg, Haver St. Pierre, Hay River, High Level, Iles-de-la-Madeleine, Kamloops, Kashechewan, Kegaska, Kelowna, Kingston, La Tabatière, La Grande, La Romaine-Gethesmaine, Lethbridge, London, Medicine Hat, Minneapolis/St. Paul, Mont-Joli, Montreal, Moosonee, Nanatimo, Natashquan, North Bay, Ottawa, Peace River, Penticton, Port Hardy, Quebec, Rainbow Lake, Regina, Rouyn-Noranda, Sandspit, Sarnia, Saskatoon, Sault St. Marie, Schefferville, Seattle, Sept-Iles, Smithers, St. Augustin, Toronto, Val d'Or, Vancouver, Victoria, Wabush/Labrador City, Watson Lake, Windsor, Winnipeg, and Yellowknife.

In December, **Time Air, Ltd., Ontario Express, Ltd., and Inter-Canadian, Ltd.** align their marketing efforts under this parent.

Pilots, members of the Canadian Union of Public Employees rather than the Canadian Air Line Pilots Association, go on strike at the beginning of July 1994 over working conditions and salaries. There are 283

pilots involved and their action causes scheduling nightmares for the company as it attempts to keep up service between Kingston, Ontario, and Comox, British Columbia. The dispute is resolved on July 30.

Company flight attendants threaten to strike; however, their concerns are more peacefully resolved.

On November 2, three near-collision incidents involving four aircraft occur within a period of about two minutes of each other at Sioux Lookout, Ontario. A **Bearskin Airlines, Ltd.** Fairchild Metro III, arriving from the southwest on instruments, passes within 0.7 mi. horizontal and 500 ft. vertical separation behind a Canadian Regional F.28-1000, also approaching for a landing. A minute later, the Metro passes within 0.4 miles horizontal and no vertical separation to the left of a private Cessna 152, which is conducting traffic observations. The F.28-1000 initiates a missed approach procedure when it discovers a private Cessna 414 in a holding position for takeoff from the runway upon which it is preparing to alight.

Also in November, the company, in competition with the SAAB 340 service of **Business Express Airlines (BEX)**, inaugurates the first non-stop roundtrip service between Toronto and Washington, D.C. (IAD).

The carrier's 8 new ATR42-320s and 7 SAAB 340s are grounded on December 10 in the wake of icing warnings from the U.S. FAA and an order from Transport Canada.

Still, enplanements for the year total 1,988,060.

The fleet is increased to its full complement of 12 ATR42-320s in 1995 and equipment increases are also reflected in the addition of 6 F.28-1000s and 5 DHC-8-300s. The ATRs return to service early in the new year.

Added capacity, the new Canada-U.S. "open skies" agreement, and the beginning of the end of the world airline depression combine to provide the company a good traffic year, with passenger boardings up 17% to 2,461,348.

The legal consolidation of **Time Air, Ltd.** and **Ontario Express, Ltd.** is finally completed in 1996. Enplanements for the year total 3.1 million.

Company business dramatically increases after January 9, 1997, when competing "Air Canada Connector" pilots go on strike.

A group of 12 company employees, led by Alain Horchower, gather up the provisions required to host a traditional pancake breakfast for Winnipeg area flood workers on May 2.

On June 22, twice-weekday F.28-1000 roundtrips commence between Toronto and Raleigh/Durham. The Fokkers are also assigned to a number of new "shuttle" routes on behalf of business travelers.

The Raleigh/Durham service proves so popular that it is increased on October 2 to twice daily.

On October 21, the carrier announces the introduction of a Business Class product on its western fleet of 6 F.28-1000s. The refurbished jetliners feature new interiors, along with a new seating configuration.

The upgraded Fokkers enter the following markets: Calgary, Edmonton, Fort St. John, Fort Smith, Hay River, Kelowna, Prince George, Regina, Sandspit, Saskatoon, Vancouver, and Winnipeg.

The number of daily roundtrip F.28-1000 frequencies from Toronto to Raleigh/Durham is increased on November 2 from two to three.

In support of CAI's continued commitment to Alberta's energy industry, the company, on December 1, inaugurates six-times-a-day roundtrips from Calgary and Fort McMurray. Two frequencies are non-stop; four are operated via Edmonton.

Due to increased economic activity, the company simultaneously boosts its direct services out of Grand Prairie. The number of F.28-1000 roundtrips to Edmonton reach five a day, with four a day to Calgary.

The number of roundtrip flights from Vancouver to Comox is increased from four to five; to Cranbrook from five to six; and to Portland, Oregon, from three to four.

Passenger boardings reach 4 million.

The carrier, Canada's largest regional airline, seeks new leadership at the beginning of 1998. Its fleet now includes 10 DHC-8-100s, 14 DHC-8-300s, and 30 Fokker 28-1000s.

Canadian Regional and **Canadian Airlines International, Ltd.** cancel all regularly scheduled flights into and out of Ottawa and Montreal on January 8–10, during a great ice storm. Service from Toronto to Sault Ste. Marie is increased on January 12 from four flights each day to five, with new Beech 1900Ds employed on the services.

In May, former **Reno Air** President/CEO Robert W. Reding is appointed president/CEO. The union of Time Air and Ontario Express is legally amalgamated in June.

As is the case with the **Northwest Airlines** strike in the U.S., a number of other carriers provide accommodation for displaced Air Canada passengers when its pilots go out on strike September 2. Chief among these is **Canadian Airlines International, Ltd.**, Canadian Regional, and CAI's domestic partners. All accept AC tickets, space permitting, and without penalty or service charge, until the strike is concluded.

Due to heavy snowfall in Vancouver on December 24, the carrier is forced to cancel a number of flights in and out of the city, while delaying others.

Although boarding figures for the year are unknown, it is noted that a total of 1.94 million revenue passenger kilometers have been flown by the 2,221-worker company.

A severe winter storm hits the U.S. Midwest and eastern Canada between January 2–4, 1999; CRA and **Canadian Airlines International, Ltd.** are forced to cancel all of their traffic to and from Toronto, Montreal, and Ottawa on January 3.

The company's Canadian Partner parent, **Canadian Airlines International, Ltd.** is renamed **Canadian Airlines, Ltd.** on January 13.

Another severe winter storm assaults Toronto on the evening of January 14, forcing the airline, together with **Canadian Airlines, Ltd.**, to cancel over 30 departures. Additional manpower is laid on at Montreal, Calgary, and Vancouver to accommodate customer inquiries. Blizzard conditions continue at Toronto, Ottawa, and Montreal the next day forcing the two carriers to cancel all of their departures. The situation returns to normal by January 17.

The federal Competition Bureau in January 2000 orders the sale of the **Canadian Airlines, Ltd.** subsidiary, but grants permission for its integration into the Air Canada commuter network if it is not sold by August 30. Five-times-a-day return flights are launched on April 3 between Toronto and Detroit.

The commuter is put on the block for 60 days beginning on July 1.

Canadian Airlines, Ltd., on July 7, becomes an indirect, but wholly owned **Air Canada, Ltd.** subsidiary. At this point, **Air Canada, Ltd.** is permitted to officially place the regional subsidiary up for sale.

During the summer, the three **Air Canada, Ltd.** regionals, **Air BC, Ltd.**, **Air Nova**, and **Air Ontario** take a major step towards their consolidation into a single unit when a head office for a joint carrier is established in Halifax and a western hub at Calgary.

At the same time, a number of Canadian Regional DHC-8-300s are transferred to Toronto, from which they begin flying to the Ontario cities of London, Sault Ste. Marie, and Sudbury.

Having failed to find a buyer, AC is permitted to take over Canadian Regional on August 30 and add that feeder into its regional airline consolidation process. When the integration process is completed at year's end, it is anticipated that the (as yet) unnamed airline will be one of the largest regional airlines in the world, with over 5,000 employees and some 135 aircraft, mostly Dash-8 turboprops.

CANADIAN TRANSCONTINENTAL AIRWAYS, LTD.: Canada (1927–1930). Established in the new year, CTA inaugurates mail service on February 19, 1927 between Moncton, New Brunswick, and Charlottetown, Prince Edward Island. Two days after Christmas, Romeo Vachon, flying a Fairchild FC-2, initiates on a weekly basis the first mail service along the north shore of the St. Lawrence river, flying from La Malbaie to Sept Iles via intermediate stops.

On January 11, 1928, J. Cooper's FC-2 begins weekly contract mail service from Moncton to the Magdalen Islands. This frequency is followed on February 8 by pilot Vachon's introduction of a monthly con-

tract mail service from Sept Iles to Port Menier. These January flights end in April, as do the Moncton–Charlottetown and La Malbaie–Sept Iles mail operations begun the previous year.

During the 30-week St. Lawrence River shipping season beginning on May 1, the company's 4 FC-2s launch twice-weekly scheduled flights from Rimouski to Montreal, saving passengers anywhere from 24 to 96 hours. Simultaneously, a weekly service is begun from Montreal to Ottawa. While returning to La Malbaie from New York City with a ski-equipped Fairchild FC-2W, pilot Vachon overflies Quebec City on December 21 and drops a bag of unofficial mail, the first dropped by parachute in Canadian commercial history.

Four days later, he makes the year's only airmail delivery to points along the north shore of the Gulf of St. Lawrence from La Malbaie to Sept Iles, leaving 753 pounds of Christmas mail. During the year, a total of 67,195 pounds of mail are carried over 41,360 miles in 94 flights.

Winter mail services are flown as earlier and the St. Lawrence route is resumed the following spring. Flying the company's new Fairchild, J. Cooper inaugurates scheduled mail service from Moncton to Grindstone Island on January 11, 1928. On February 28, Romeo Vachon makes the first airmail flight to Anticosti Island. On May 5, a new contract is obtained for the Ottawa–Rimouski via Montreal route and it is busily flown by the company's four pilots into late fall.

In late 1929, the carrier is acquired by the holding company Aviation Corporation of Canada, Ltd. On November 25, 1930, the company is one of several merged to form **Canadian Airways, Ltd.**

CANAFRICA, S.A.: Spain (1987–1989). Canafrika, S.A. (CTA Espana) is established at Palma in 1987 to operate inclusive-tour and other passenger charter flights to destinations in Spain and the Mediterranean. Operations commence with 2 Douglas DC-8-61s and 2 McDonnell Douglas MD-83s leased from GPA Group.

Operations continue apace in 1988; however, by 1989 the company is in such financial distress that it must shut down.

CANAIR CARGO, LTD.: Canada (1995–1997). Canair Cargo is established at Mississauga, Ontario, in 1995 to offer international, regional, and domestic cargo services. Flights begin with 2 Boeing 737-2E1Fs, 7 Convair CV-580s, and 1 Shorts 330-100, all leased. Business is good and during the year 2 more chartered CV-580s enter service, together with 1 each B-737-275CA, B-737-242C, and B-737-242CF.

In the fall, a contract is signed with four Toronto air travel firms to offer winter inclusive-tour services. Two Airbus Industrie A320-231s, formerly flown by **Translift Airways, Ltd.**, are subleased from the Irish carrier on October 31 and flights from Toronto commence on November 4.

Service is maintained throughout 1996, with company freighters visiting St. John's, Moncton, Halifax, Montreal, Toronto, Hamilton, Winnipeg, Regina, Saskatoon, Edmonton, Calgary, and Vancouver.

One of the A320-231s is returned to Translift, which, in May, is renamed **Transaer, Ltd.** It is subleased to **America West Airlines**.

Although passenger traffic figures are not released, it is reported that 474.2 million FTKs are operated.

On August 19, 1997, those assets related to CanAir Cargo's transcontinental network are acquired by **Royal Aviation, Ltd.**, including 2 B-737-2E1Fs and 1 each B-737-2A9C and B-737-242C. Nine Convair CV-580s are also acquired; one is out of service, the two leased units are returned, and the six remaining are sold. CanAir President Daniel Goliger joins Royal as VPC.

CANARIAS REGIONAL AIR, S.A.: Avda, Generalisimo, 8, Puerto de la Cruz, Tenerife Islas Canarias, 38400, Spain; Phone 34 (928) 360 438; Fax 34 (928) 360 445; http://www.irinfo.es/aviacion/can_reg.html; Code FW; Year Founded 1996. CR is established as an independent operator at Puerto de la Cruz, Tenerife, during May 1996. Mario Hidalgo is named director general, with Juan Socrasto as president. Plans are unveiled to operate independent, high-quality scheduled

services throughout the Canary and Balearic Islands, linking them with the Spanish mainland at Barcelona. Orders are placed with BAe Asset Management-Turboprops for eight British Aerospace ATPs.

On October 1, **Air Europa, S.A.** takes a 50% stake and the new regional becomes its first "Air Europa Express" franchise partner. The first three ATPs to arrive are painted in a modified Air Europa livery and are employed, beginning in November, to operate scheduled flights from Palma, Mallorca, and Madrid.

Two additional ATPs arrive in January 1997 and services are increased from Tenerife to additional Canary Islands destinations.

Also during the first quarter, Canarias, along with **Spanair, S.A.** and **Futura, S.A.**, complain to the European Commission that part of the government funds injected into **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** during the fall of 1995 have been employed to finance a fare war against them. In addition, Canarias claims that Iberia has engaged in predatory pricing, arranging some of its schedule to directly affect private carriers such as itself. The Commission investigates.

A sixth ATP arrives in April and enters service on a route from Las Palmas to Lanzarote. The last two leased ATPs are delivered in May. Later in the year, the company is divided. One unit retains the "Air Europa Express" moniker and flies in the Canaries. The other reverts to the original Canarias Regional name and operates in the Balearics.

Air Europa, S.A. signs a franchise agreement with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** in January 1998. During the year, the company acquires a pair of wet-leased B-737-36Qs from its new partner.

Scheduled flights end on January 31, 1999 as the company begins to concentrate on charter flights from the Canary Islands to Europe. This service reorientations lasts only a short time before scheduled frequencies are resumed.

Two more ATPs are acquired in the fall, bringing the total to ten. FW now operates the world's largest ATP fleet, and anticipates delivery of four more units during the first year of the new Millennium.

Air Europa, S.A. mainline pilots vote on May 5, 2000 not to fly with Canarias on "Air Europa Express" services. Yet another ATP joins the fleet on May 20.

The new **Spanair, S.A.** regional **AeBal (Aerolineas de Baleares, S.A.)** begins direct competition on July 4 employing 2 new Boeing 717-2CMs. Within days, Canarias and **Air Europa, S.A.** officials are reconsidering their turboprop fleet.

CANBERRA AIRLINES (PTY.), LTD.: Australia (1992-1993). Canberra Airlines is formed at the federal capital in 1992 to offer scheduled third-level passenger and cargo flights to Sydney. Revenue operations commence with 3 Embraer EMB-110 Bandeirantes, but cease within a year.

CANJET AIRLINES, LTD.: Halifax International Airport, Suite 300, 693 Barnes Road, Enfield, Nova Scotia B2T 1K3, Canada; Phone (902) 873-2650; Fax (902) 873-2619; <http://www.canjet.com>; Year Founded 2000. In February 2000, taking advantage of Canada's liberalized skies occasioned by the bankruptcy of **InterCanadian, Ltd.**, as well as **Canadian Airlines, Ltd.**'s takeover of **Air Canada, Ltd.** the IMP Group of Halifax announces plans to begin a competing low-fare jet passenger service. The IMP Group also owns **Exeaire, Inc., Air 500, Ltd.**, and had owned the defunct **Air Atlantic, Ltd.** Flights will be made from a base at Hamilton, Ontario, to major airports between St. John's and Winnipeg.

When Calgary-based **WestJet, Ltd.** introduces its own deep-discount service from Toronto and Hamilton at the end of February, IMP Chairman Kenneth Rowe postpones the start-up to the summer. The airline will use Toronto slots that **Air Canada, Ltd.** is being forced to relinquish as part of the Canadian merger.

Plans for the new entrant proceed apace during the spring as IMP seeks an operating certificate from Transport Canada, recruits ground staff and flight crews, and makes arrangements to acquire 6 B-737-201s

under lease from **USAirways**. Maintenance will be provided at **Exeaire, Inc.** bases throughout Canada. Public progress reports are regularly made to promote the coming new services, modeled after those of **Southwest Airlines**.

Former "Air Canada Connector" executive and **Cayman Airways, Ltd.** President/CEO Mark Winders is named chief operating officer under Chairman Kenneth Rowe on May 11. As spring turns into summer, the company eagerly awaits its Transport Canada operating certificate, which finally arrives on August 31. Six days later, the carrier's two "Baby Boeings" launch thrice-daily roundtrips from Toronto to Halifax via Ottawa and twice-daily roundtrips from Toronto to Windsor.

Within a week, Chairman Rowe files a complaint with the federal Competition Bureau alleging that **Air Canada, Ltd.** is engaged in predatory pricing tactics against CanJet on the new routes.

With the arrival of a B-737-296A, the new carrier, on September 25, inaugurates a revised schedule which features the addition of linked stops at Montreal, St. John's, and Winnipeg. New thrice-daily frequencies are instituted from Toronto to Winnipeg and Montreal and from Halifax to Montreal, along with twice-daily roundtrips between Halifax and St. John's.

The federal Competition Bureau on October 17 orders **Air Canada, Ltd.** to stop selling special discount fares on the five CanJet routes in eastern Canada. Commissioner of Competition Konrad von Finckenstein issues the temporary, but renewable, order on the grounds that CanJet would otherwise "likely be eliminated" from the routes. The first of its kind issued by the Bureau since Parliament amended the Competition Act earlier in the year, the order allows Bureau officials time to examine CanJet's charges. **Air Canada, Ltd.** immediately challenges the ruling.

Due to poor loads, the morning roundtrip between Toronto and Windsor is suspended on October 30; when the situation does not improve, the afternoon service is discontinued on November 27.

Meanwhile, the arrival of 2 more B-737-201As since October allows initiation in mid-December of additional frequencies from Halifax to Winnipeg, Toronto, and St. John's.

CANNON AVIATION (1): United States (1966-1968). Emerging as the air transport division of a Tulsa-based FBO, Cannon acquires FAA certification on January 3, 1966. With 1 each Piper PA-23 Aztec and PA-32 Cherokee Six, the commuter inaugurates scheduled passenger and cargo flights on December 7 to Muskogee and McAlester.

A route is stretched from Albuquerque to Lubbock via Clovis in 1967 and operations continue until the carrier goes out of business in 1968.

CANNON AVIATION (2): United States (1974-1976). Cannon Aviation is established at Hickory, North Carolina, in 1974 as the airline division of Carolina Airways, Inc. Daily Cessna lightplane passenger and cargo flights to Charlotte are duly inaugurated, but last only a few months.

The route is reopened again in 1975 and is operated into 1976.

CANTERBURY AVIATION COMPANY, LTD.: New Zealand (1921). New Zealand's first commercial airmail carrier is founded at Christchurch in early January 1921. Equipped with a fleet believed to have comprised 4 Avro 504Ks and 3 de Havilland DH 9Cs, Canterbury inaugurates services from Christchurch to Ashburton via Timaru on January 31. The unsubsidized operation survives until April 7, when it is taken over by the government to form the New Zealand Permanent Air Force.

CAP (COMPANIA AEROVIAS PERUANAS, S.A.): Peru (1934-1938). To begin servicing Peru's smaller cities while concentrating on long-haul operations, the giant U.S. airline **Pan American-Grace Airways (PANAGRA)** forms CAP on August 8, 1934. Ford 5-ATs are transferred to the subsidiary while the traffic rights held as a result of PANAGRA's 1929 acquisition of **Peruvian Airways, S.A.** are turned in for a new concession on July 23, 1935. Two weekly services, one each

from different directions, are now started along the coast, linking towns from Talara to Arequipa.

Inland scheduled passenger and cargo flights from Lima to Huancayo are inaugurated on May 1, 1936. Between June 28 and August 26, the carrier transports 350 tons of mining equipment to Piaz from Huamachuco. The passenger route is stretched south to Taca on December 1.

Service is maintained in 1937 against competition from **Faucett Peruvian Airlines, S.A.** In order to avoid difficulties with the government, PANAGRA trades CAP to Faucett on April 26, 1938 in exchange for a 20% interest in Elmer Faucett's enterprise.

CAP (COMPANIA DE AVIACION PERUANA, S.A.): Peru (1991–1992). CAP is established at Lima in 1991 to offer nonscheduled passenger and cargo flights throughout the nation and to neighboring regional destinations. Revenue operations commence and continue with a pair of Antonov An-12Bs leased from **Aeroflot Soviet Airlines**. Operations cease in 1992.

CAP AIRLINES, S.A.: BP 720, Auiray-sur-Bala, F-93613, France; Phone 33 (1) 48 14 94 94; Fax 33 (1) 48 14 94 99; Year Founded 1995. E. Chambard sets up CAP in April 1995, together with G. Simon and R. Amout to provide all-cargo services on behalf of the French parcel concern Extand; the three owners also plan to offer passenger charters. A. Doma is named director general and he recruits a staff of 18. Three Avions de Transport Regional ATR42-320s are ordered and, following the receipt of the first, revenue flights commence in October.

Flights continue in 1996–2000 as the two other turboprops arrive.

CAPAIR SERVICES. See AIR NEVADA (2)

CAPE AIR: Barnstable Municipal Airport, East Ramp, Hyannis, Massachusetts 02601, United States; Phone (508) 790-3122; Fax (508) 778-1870; <http://www.flycapeair.com>; Code 9K; Year Founded 1979. Based at Barnstable Municipal Airport in Hyannis, Massachusetts, Cape Air is formed by Daniel Wolf in 1979 to fly scheduled passenger and cargo services with a pair of Cessna 402s. Revenue services begin to Martha's Vineyard and Nantucket and Boston to New York (JFK). The first two destinations are passenger markets and the last two are cargo markets.

Enplanements in 1980, the first full year of service, total 12,000. Flights continue without change in 1981–1983.

Scheduled services are suspended in 1984; however, charter operations continue quietly apace for the remainder of the decade. A pair of Cessna 402s and several pilots are obtained from **Provincetown-Boston Airline (PBA)** when it folds.

On October 16, 1989, passenger flights are restarted to Boston.

In December 1990, four-times-daily scheduled roundtrip frequencies are inaugurated from Hyannis to Martha's Vineyard, over a route purchased from **Edgartown Air**.

The fleet in 1991 includes 4 Cessna 402s. During the year, President Wolf signs a joint-fare agreement with **Delta Air Lines** and another with **USAir** covering his company's services from Boston to Hyannis, Provincetown, and Martha's Vineyard. Enplanements reach 10,000.

The Cessna fleet is increased by one in 1992 and, in June, an interline agreement is signed with **American Airlines**. Under its terms, the two will provide joint ticketing and interline baggage handling on Cape Air's flights from Boston to Provincetown, Martha's Vineyard, and Hyannis and from Hyannis to Martha's Vineyard. Enplanements for the year reach 74,988.

At the beginning of 1993, President Wolf oversees a 50-person workforce and a fleet of 4 Cessna 402s. Another 16 aircraft increase the fleet during the year and the workforce grows to 200.

In June, the company enters into full participation in the Gemini computerized reservations system at Toronto; the agreement allows the carrier's schedule to be made known to travel agents throughout Canada. The expansion allows services to be started in December linking Naples and Key West, Florida.

Customer bookings increase 20.2% to 89,567.

In 1994, the carrier combines its resources and route system with that of Naples, Florida-based **Nantucket Airlines**; however, both carriers continue operations under their own identities. During the winter holiday season, the number of C-402Cs in Florida is increased from 3 to 8. These north-south swaps had been pioneered by board member John Van Arsdale Sr.'s **Provincetown-Boston Airline (PBA)** years earlier.

Overall passenger boardings for both locations swell 17.4% to 39,294.

The workforce for the combined CapeAir-Nantucket concern is increased by 16% in 1995 to 45 and the fleet now operates 27 Cessna 402Cs. Destinations visited from the Naples hub include Key West and Ft. Myers. An official merger with **Nantucket Airlines** occurs in February.

Enplanements accelerate 12.8% to 282,000 and revenues total \$12 million.

Five new employees are hired in 1996. The company's short-stage routes are particularly damaging to the Cessnas' Continental TSIO-520 VB piston engines, leading to the retirement of 5 of them. Daily roundtrips commence on January 15 from Ft. Myers to Key West.

Following the example of **Pacific Western Airlines (Westpac)**, several Cessna's receive theme liveries, including one, designed by the Provincetown-based artist Jurek, promoting the Nantucket High School Whalers football team. The "Art in Flight" program will result in memorable liveries being applied to several Cessnas in the years ahead.

Customer bookings this year move up 3.8% to 293,201 and operating revenues climb to \$15 million.

During the first quarter of 1997, another theme-livery Cessna 402C is unveiled, this one, also painted by Jurek, promotes the attractions of the Florida Keys. The nose of the Cessna from the windshield forward is designed to resemble a gray shark.

Board member and PBA founder van Arsdale dies during the year.

Passenger boardings increase 25.8% to 368,808 on 80,000 scheduled departures. Revenues reach approximately \$25 million.

In June 1998, the company receives a special citation from the FAA for its outstanding safety record of 100,000 accident-free flight hours.

The southern operation is expanded with the introduction of every-other-hour roundtrip service between San Juan and St. Thomas on December 8. Upwards of 26 daily departures are flown.

Cape Air is now the largest nonaffiliated U.S. regional airline. Enplanements during the 12 months jump 19.5% to 441,000.

Cape Air's flights from Boston to Provincetown, Martha's Vineyard, and Hyannis and from Hyannis to Martha's Vineyard are all disrupted by a severe winter storm on February 25–27, 1999.

Customer bookings jump 16.4% to 513,000.

CAPE & ISLANDS FLIGHT SERVICE: United States (1951–1970). George Parmenter establishes this third-level operation at Hyannis, Massachusetts, in early 1951 to fly scheduled Beech 18 passenger and cargo service to Nantucket and additional offshore islands. Operations commence on April 15 and continue apace.

Over the next 15 years, the airline, employing Beech 18s, changes ownership twice, being taken over by the FBOs **Wiggins Airways** of Norwood, Massachusetts, and **Transair** of Bangor, Maine.

On June 16, 1969, Cape & Islands signs an agreement with **Northeast Airlines** to takeover the latter's local routes between Maine and Nantucket. This expansion makes the company an ideal takeover target and it is acquired by **Air New England** in 1970.

CAPE COD AIRWAYS: United States (1929). Also known as Ludington Flying Service, short-lived Cape Cod is formed by the Philadelphia brothers C. Townsend and Nicholas Ludington in the late spring of 1929. The brothers purchase a Travel Air 6000 and a Fairchild 71 to fly a July–September passenger service from Camden Airport (which they had set up in 1927) to Newport, Rhode Island, and Woods Hole, Massachusetts.

CAPE COD FLYING SERVICE. *See* **PROVINCETOWN-BOSTON AIRLINE (PBA)**

CAPE SMYTHE AIR SERVICE: P.O. Box 549, Barrow, Alaska 99723, United States; Phone (907) 852-8333; Fax (907) 852-8332; <http://www.capesmythe.com>; Code P6; Year Founded 1975. Long the nation's northernmost small regional carrier, Cape Symthe is formed as **Fel Air** at Barrow, Alaska, in February 1975 to link its base with Point Lay, Atkasuk, Nuiqsut, Barter Island, Deadhorse, and Kotzebue. Nonscheduled charter operations commence with 3 Cessna 207As. From the Kotzebue base above the Arctic Circle, flights are also operated to the villages of Noatak, Kivalina, Kiana, Noorvik, Selawick, Buckland, Deering, Ambler, Shungnak, Kobuk, Point Hope, and Point Lisburne.

In 1976 the company name is changed after it is purchased by Thomas P. Brower.

Late in the decade, the carrier, upgraded with 3 de Havilland Canada DHC-6-100 Twin Otters, signs an exclusive contract with **Wien Air Alaska** for scheduled commuter and cargo services. These are initiated in July 1979 from Barrow's Wiley Post Memorial Airport to Nuiqsut, Point Lay, and Wainwright.

Passenger enplanements in 1980 total 14,374 while airline employment is 28.

A year later in 1981, the workforce grows by 21% to 34 while bookings climb 3% to 14,983. President Brower's fleet includes 2 DHC-6-100s, 5 Cessna 207As, and 1 Cessna 210.

A Shorts SC-7 Skyvan and a DHC-2 Beaver join the fleet in 1982, along with a Cessna Citation 501. Enplanements are 16,986.

In 1983, a new hub is established at Kotzebue and new services are undertaken to Point Hope, Barter Island, Deadhorse, and Anaktuvuk Pass.

During its landing rollout from Barrow on September 1, a DHC-2 with a pilot and four passengers collides with a ditch and one of the main landing gears collapses. No injuries are reported.

Bookings for the year climb to 18,564.

In 1984, the fleet is upgraded by the addition of 2 DHC-6-100 Twin Otters. Operations continue apace in 1985-1989, during which years 6 Piper PA-31-310 Navajos are added to the fleet.

Airline employment in 1990 stands at 45 and the fleet now includes the 2 Twin Otters, 2 Cessna 185s, 5 Cessna 207As, 2 Piper PA-31-350 Navajo Chieftains, 4 Piper T-1020s, and 1 T-1040. A total of 28,039 passengers are flown on the year.

The sixth largest Alaskan operator adds 2 Beech 99s in 1991 and, with 28,563 boardings, passenger traffic is level. A total of 5,970,307 pounds of mail are also flown.

Airline employment in 1992 stands at 45 and the fleet is altered by the deletion of 1 Cessna 185 and 1 T-1020, plus the addition of 1 Cessna 207A. Passenger boardings jump 27% to 36,342.

In 1993, Chairman/CEO Brower's fleet includes 7 207As, 2 DHC-6-100s, 6 PA-31-310 Navajos, 2 C-185s, and 1 Piper T-1040. Customer bookings accelerate 18% to 42,906.

Three Beech 99s are acquired in 1994, but cannot prevent passenger boardings from falling by 8% to 39,294. A total of 510,000 FTKs are also operated.

The workforce in 1995 is unchanged from 1992. The carrier's 17 aircraft, including 2 recently acquired Beech 99s and a PA-31-350 Navajo Chieftain, transport a total of 36,702, a 7% decline.

Neither employee population nor fleet is altered in 1996.

While on approach to Barrow on May 21, a small duck penetrates the windshield of the copilot of a Beech 99, glancing off the man's face; the aircraft is able to complete its landing without additional incident.

Two days later while on takeoff from Point Hope on a service to Wainwright, the nose baggage door of a departing Piper PA-31-350, with a pilot and five passengers, comes fully open. Baggage and boxes spew out, one of which hits the left-hand propeller. The pilot elects to land on sea ice, but just prior to touching down the plane rolls left and crashes. Four aboard are injured, two seriously.

While landing at an off-airport beach site at Wainwright on August 2 with a load of cargo, the pilot inadvertently applies too much braking, causing her Cessna 185 to nose over.

Customer bookings for the year rebound, accelerating 15% to 42,220. Charter passengers are also flown.

Grant B. Thompson is president in 1997 and his fleet now includes 7 Cessna 207As, 3 Piper T-1040s, 3 Piper Navajos, 3 Beech 99s, 2 Cessna 185s, and 1 Douglas DC-3 freighter.

While landing at Stebbins in bad weather on April 7, the right wing of a Piper PA-31-310 Navajo, with a pilot and six passengers, strikes the runway; although no one aboard is injured, the aircraft is damaged.

On October 31, a Cessna 185F with a pilot and a passenger sustains substantial damage during an aborted takeoff from a remote camp some 83 mi. SE of Barrow. Neither man aboard is hurt.

Although scheduled passenger boardings decline 5.4% to 39,954, the 45-employee company also flies 11,150 charter customers and operates 5.9 million pounds of mail and freight.

Flights continue in 1998. While on final approach to the airstrip at Point Lay Long Rang Radar Station on December 3 after a night service from Kotzebue, a Navajo freighter collides with level terrain some 1,500 ft. short of the runway; the pilot receives minor injuries and the aircraft is damaged.

Scheduled customer bookings ascend 24.3% to 50,000.

The year passes quietly. Customer bookings slide 1.3% to 49,000.

The carrier suffers three crashes in the first three quarters of 2000, the last of which is fatal.

Flight 350, a Piper T-1040 with a pilot and eight passengers, crashes while landing at Wales, Alaska, after a February 9 service from Nome; the flyer and one customer are seriously injured.

While on final approach to Kotzebue on a February 21 cargo service from Barrow, Flight 170, a Piper T-1040 is destroyed after colliding with frozen pack ice in the Chukchi Sea; the pilot is badly hurt.

Flight 181, another Piper T-1040 with one pilot and nine passengers, crashes while landing at the North Slope village of Nuiqsut during a multistop September 18 service from Deadhorse to Barrow; five aboard are killed and the rest are injured. The carrier's first fatal disaster is the 9th accident for the company in the past 5 years and the 12th in the last decade.

CAPE YORK AIR (PTY.), LTD.: Australia (1995-1996). Privately held CYA is established at Cairns in January 1995 to offer third-level passenger and cargo service to Cooktown. A fleet of 3 Piper PA-31-350 Navajo Chieftains is assembled and twice-daily return flights commence in February. Traffic and financial data is not released and the company shuts down within a year.

CAPITAL AIR (PTY.), LTD.: Capital Hangar, Rand Airport, P.O. Box 18009, Germiston, 1419, South Africa; Phone (11) 827-0335; Fax (11) 827-3898; Year Founded 1982. Capital is established at Rand Airport in 1982 to offer air taxi, passenger and cargo charters, and aerial agricultural rotary-wing work.

By 1998-2000, Managing Director Joao Francisco Vinagre oversees the operation of a fleet that comprises 1 Beech King Air 90, 1 Beech Bonanza, 5 Bell 206B JetRangers, 2 Bell 206L LongRangers, and 3 Robinson R.22s.

CAPITAL AIR SERVICES. *See* **JAMES AIR, LTD.**

CAPITAL AIRLINES: United States (1948-1961). On April 21, 1948, **Pennsylvania-Central Airlines** is renamed Capital Airlines. C. Bedell Monro is board chairman, with James H. Carmichael as president/CEO and James B. Franklin as vice president-operations. The Detroit Lions become the second professional football team to fly with the carrier following the Baltimore Colts the previous year. In late summer, 2 Douglas DC-3s transport a total of 51 players, officials, and press representatives to Akron, Ohio, for an exhibition game with the Cleveland Browns.

Beginning on November 4, the carrier makes passenger airline history by offering a \$33.50 one-way fare during off-hours—the first American trunk line to offer sustained coach-class, low-fare service. The austere flights are labeled Nighthawk or Skycoach Service.

Operations continue apace in 1949. En route from Norfolk to Milwaukee on August 7, a DC-3 collides with a private plane over Maitland Field, Wisconsin. Despite the loss of an aileron and four feet of wingtip, the Douglas transport lands safely, but the private aircraft crashes, killing its pilot.

On November 5, two DC-3s are leased for the first aerial trip of the Pittsburgh Steelers professional football team; a total of 50 players, club officials, coaches, newspapermen, trainers, and equipment people are flown to Washington, D.C. for a game with the Washington Redskins.

Five more flights are made during the season and the team will remain a loyal Capital charterer for the life of the airline. Also in the fall, a contract is signed with the Douglas Aircraft Company for 3 DC-3S conversions at \$275,000 each. They will be the only such conversions ever sold to a U.S. carrier.

While attempting to land at Washington, D.C. (DCA) in heavy fog on December 12, a DC-3 crashes (four dead). On December 23, a Douglas is involved in a near-miss with a Piper Cub over the Port Erie Airport in Pennsylvania.

In June 1950, President Carmichael authorizes purchase of the ex-KLM (Royal Dutch Airlines, N.V.) Lockheed L-049 *Utrecht*; the Constellation is placed into service between New York and Atlanta as *Capitaliner United States*. Two other ex-Dutch Constellations follow, along with two converted U.S. Air Force C-69s. The Lockheeds are refurbished to include 4-abreast seating for 56 passengers in their main cabins and 8 people in a "Cloud Club Room" in the forward part of the fuselage.

Meanwhile, nonstop Washington–Chicago DC-4 flights begin on July 1; in an effort to deceive uninitiated passengers into believing they are boarding a DC-6, a square of dark paint edged with a white strip is painted around the Skymaster's circular windows.

The 3 DC-3Ss are delivered on July 24, August 22, and September 15, respectively, with the latter christened *Capitaliner Cotton Queen*. All three are assigned to Air Mail Route 51, Washington, D.C. to Memphis via Norfolk, Elizabeth City, Rocky Mount, Raleigh/Durham, Greensboro, Winston-Salem, Charlotte, Asheville, Knoxville, Chattanooga, and Huntsville. This Flight 201 requires 7–8 hrs. in each direction.

Access to Miami is obtained in an around-about fashion on March 16, 1951 when Capital and National Airlines sign an interchange agreement that allows them to alternate flights from Detroit to Miami via Cleveland, Pittsburgh, and Washington, D.C. (DCA).

During the late summer, arrangements are made to purchase 7 Lockheed L-749A Constellations that had been traded back to their manufacturer as partial payment by KLM (Royal Dutch Airlines, N.V.) on new Super Constellations. At the end of the year, Capital contracts with the Dutch line to modify and refurbish the Connies to its U.S.-oriented specifications.

On January 28, 1952, loose binding tape from the left elevator causes a DC-4 with 23 aboard to nose-dive 2,200 feet before it can be leveled off over Pittsburgh; five aboard are hurt. While claiming satisfaction with the type, company officials, nevertheless, sell their three DC-3Ss to the US Steel Company at Pittsburgh on April 15.

In an effort to expand, company officials join with those from Northwest Airlines, including President Croil Hunter, in presenting a merger proposal to the stockholders of the latter carrier on May 19; it fails to win approval.

On February 18, 1953, an L-049 flies from Birmingham, Alabama, to New York in record time. On August 22, in cooperation with Pan American World Airways (1), the carrier begins an experiment with Pittsburgh–Bermuda package tours on an installment payment basis. During the year, KLM (Royal Dutch Airlines, N.V.), having modified 5 of its old L-749As to Capital specifications in company workshops at Amsterdam's Schiphol Airport, ferries the aircraft across the Atlantic to America, where Capital places them into service on its northeast U.S. routes.

With the beginning of the winter schedule, the interchange with National Airlines is extended to the Capital cities of Milwaukee and Minneapolis/St. Paul.

Following a CAB study, undertaken during the remainder of the year and in 1954 of the whole service area between New York and Chicago, the so-called Chicago Service Case, Capital is awarded, at the expense of most other majors, nonstop authority to many significant markets in the examined region.

To some, it appears that Capital is being employed as a CAB tool against the prior dominance of the "Big Four" group over the nation's most lucrative routes. For Capital, this is an extremely risky business as the reward of these several new routes (many of them very short) means that a new aircraft must be financed and employed, one which is clearly superior to other available types.

To meet the challenge, Capital elects to become the first large American launch customer for a foreign-built airliner. The machine chosen is Great Britain's Vickers Viscount 745D, the world's first turboprop passenger transport.

In May 1954, President Carmichael announces an order for 3 of the British-made turboprops; the order is increased to 40 in August and augmented by an additional 20 in November. Meanwhile, 2 more former Dutch L-749As are placed into service during the year.

During the summer, Capital agrees to a major equipment exchange with British Overseas Airways Corporation (BOAC), which is badly in need of additional aircraft after the grounding of its de Havilland DH 106 Comet Is. The Americans turn over their 7 L-749As for an equal number of L-049s, plus £1,375,000 in cash. The first ex-British Constellation received is the *Balmoral*, which arrives in the U.S. on October 8.

The first Viscount 745D is flown by Carmichael and a crew from Weybridge, England, to New York on June 16, 1955 via Prestwick, Reykjavik, Narsarsuaq, and Montreal. The last of the L-049s obtained in trade the previous year arrives at month's end. The first Viscount service in the U.S. begins on the carrier's Washington–Chicago run on July 26 and proves a great success.

Everywhere the British-made airliner flies (to New York, New Orleans, Detroit, Pittsburgh, etc.), Capital's traffic grows. The new aircraft inspire impressive titles for their services, i.e., Independence, Diplomat, President.

Still, there are some defeats. In the face of growing competition from Northwest Airlines in late fall, the interchange service with National Airlines is withdrawn from Milwaukee, Minneapolis/St. Paul, Detroit, and Cleveland. The only points the two companies jointly serve north of Washington, D.C. are Buffalo and Pittsburgh.

Late in the year, the CAB grants the company nonstop authority from New York to Chicago and such additional segments as Pittsburgh to Birmingham and Atlanta.

Capital is now at its apex. Frequencies on all major routes are increased and by February 20, 1956, the former chief route from Washington, D.C. to Chicago sees six roundtrips every day.

A Vickers Viscount 744 with 5 crew and 37 passengers is destroyed in a bad landing at Chicago's Midway Airport, also on February 20; although the aircraft must be written off, there are no fatalities.

As the boarding level jumps, the company orders more Vickers aircraft. On May 25 after completing a Baltimore–Pittsburgh flight, 22 deplaning a Viscount are urged to get polio inoculations after it is discovered that a container of live virus still aboard had broken and leaked during an earlier flight from Washington, D.C.

The Viscount order book receives another 15 entries (for a total of 75) on July 24, while President Carmichael also requests 14 de Havilland DH 106 Comet 4B jetliners.

On August 1, 6 daily Viscount frequencies are initiated from New York to Buffalo via Rochester. Unfortunately, the expense of fleet improvement and continued operations over an inadequate route structure overshadows and, indeed, impacts upon the profits earned. Capital's bright future begins to dim beginning in September.

As profits fall, an order for 14 de Havilland DH 106 Comet 4Bs must be suspended. Still, frequencies on the New York to Chicago run are in-

creased to four per day on October 1 and five-times-per-day flights from New York to Minneapolis/St. Paul via Cleveland, Detroit, and Chicago begin on November 13. For its part, the CAB refuses to grant longer segments until the carrier has jetliners.

Nonstop New York to Norfolk Viscount service is inaugurated on January 17, 1957 followed by the opening of daily New York–Washington service on February 20. A DC-4 with 4 crew and 51 passengers is destroyed in an accident at Pittsburgh on April 18; there are no fatalities.

On July 24, Carmichael becomes board chairman; former USAF Maj. Gen. David H. Baker is named president/CEO. Vickers quickly approaches him for Viscount progress payments.

Chairman Carmichael and **Continental Airlines** Chairman Robert "Bob" Six discuss merger possibilities in September, but they come to naught. With finances still headed downward, the Comet order is cancelled and the company petitions the government for subsidy.

On January 24–25, 1958, the CAB, convinced that Capital is at a critical stage, authorizes a fare increase. It also authorizes routes from the East and Midwest to Florida in March. As Vickers officials, in the wake of late equipment payments, intensify collection activities, President Baker, in what can only be termed a surprise, turns around and orders 9 Convair CV-880s. Direct government support, in the form of \$12.2 million in subsidies to be spread over two years, is now received.

En route from Newark to Chicago on April 6, a Viscount 745D with 3 crew and 44 passengers crashes while landing at Tri-City Airport in Midland, Michigan; there are no survivors of this first U.S. disaster for the aircraft type.

A Maryland Air National Guard Lockheed T-33 trainer with 2 crew crashes into the forward left side of the fuselage of a Vickers Viscount 745D with 4 crew and 11 passengers, near Brunswick, Georgia, on May 20. Both aircraft crash and are destroyed; the T-33 pilot safely ejects and is the only person involved not killed in the airline's second tragedy of the year.

A DC-3 with three crew is lost on a training flight at Martinsburg, West Virginia, on June 4 (one dead).

Chairman Carmichael now begins secret merger negotiations with William "Pat" Patterson of **United Air Lines**. These nearly succeed, except that Patterson objects to certain Capital board members and in the boardroom politics attempted for their removal, Carmichael cannot succeed.

He thus resigns on July 23. Longtime director and major shareholder George R. Hann becomes the new board chairman, with Thomas D. Needlands Jr. as president. Fate and competition now play hardball with the carrier. Beginning on October 15, the IAM strikes Capital, closing the company down and plunging it farther into red ink.

The machinists accept a 41-cents-per-hour-wage increase on November 26, ending the 37-day job action. The interchange agreement with **National Airlines** ends on December 14.

The new routes to Florida are finally inaugurated in January 1959. On February 18, a Viscount pilot reports to the FBI that his craft was apparently fired on by tracer bullets from the ground during his landing at Baltimore's Friendship Airport. The next day, a Viscount and a USAF B-47 bomber narrowly avoid collision over Charlotte, North Carolina. Despite these isolated incidents, traffic is brisk until May 12, when two of the carrier's airliners crash the same day.

En route from New York to Atlanta, a Viscount 745D with 4 crew and 27 passengers disintegrates in the air near Baltimore during a thunderstorm (31 dead). Meanwhile, Flight 983, an L-1049E Super Constellation with 6 crew and 38 passengers en route from Rochester to Atlanta, skids off the runway while making a scheduled landing at Kanawha Airport in Charleston, West Virginia (2 dead). Journalists and historians are quick to claim this to be the first case of two fatal crashes for the same U.S. airline in occurring one day.

An unoccupied DC-3 is destroyed on the ground at Pittsburgh on August 2 when it is hit by a **Northwest Airlines** B-377.

These accidents hurt Capital's public image, as rivals trumpet their new jetliner or Lockheed Electra services, stealing passengers made

squeamish by Capital's crashes. Even the August 15 inauguration of a new reservations system using a Univac computer does not help much. With Vickers in England still demanding payment, the carrier orders its own Lockheed L-188s in October. Meanwhile, a stopgap Douglas DC-6B is leased from **Pan American World Airways** (1).

A Viscount 745D with 4 crew and 46 passengers en route from Chicago to Norfolk, develops engine trouble due to icing and crashes into a swampy ravine at Holdcroft, Virginia, near the city of Richmond, and burns on January 18, 1960; there are no survivors. The tragedy is the fourth fatal Viscount crash since the line began their use in 1955.

On March 3, a DC-3 lands at the wrong Michigan airport and then takes off from the wrong—too-short—runway; the FAA suspends the plane's captain the next day. The Pan Am DC-6B *Clipper Liberty Bell* arrives in mid-month.

The 10 Constellations are withdrawn from service and parked, beginning in April. In what will prove the airline's death sentence, Vickers-Armstrong, Ltd., unable to collect \$34 million in overdue Viscount payments, initiates a foreclosure suit against Capital in May. Simultaneously, President Needlands reopens merger negotiations with **United Air Lines**' Patterson.

By June, Capital is in terminal financial difficulty; over \$5 million is lost in the year's first quarter. Only two avenues of escape are open to company officials—shut down or merge. Meanwhile, on June 1, the Pan Am DC-6B *Clipper Liberty Bell* runs into severe turbulence over Charlotte, North Carolina, resulting in injuries to all 88 passengers. Following successful negotiations, Needlands and Patterson announce on July 28 that United will take over the ailing Capital early the next year.

The boards of directors of the two airlines approve the union on August 11 and hearings on the pact begin before the CAB on September 15. Meanwhile, on September 13, a Viscount crashes at Minneapolis on takeoff due to a blown tire; no significant injuries are reported.

The stockholders of the two carriers approve the marriage on October 14; the **United Air Lines** vote is 3,291,237 to 35,014 while the Capital margin is closer, 677,687 to 34,604. Hearing examiner Thomas L. Wrenn, on December 15, recommends CAB approval.

On January 8, 1961, 2 B-720-22s (B-720Bs) are leased for 6 months from **United Air Lines**; while flying for Capital, they will retain their United colors and titles. The new jetliners inaugurate twice-daily roundtrips each from Cleveland to Miami and from Pittsburgh to Miami.

All but 3 of the 44 persons aboard a Viscount receive minor injuries when the British-made turboprop crashes at Pittsburgh on January 24. The CAB entertains oral arguments regarding the United-Capital merger the next day, issuing its final approval of the petition from the two companies on January 31. Meanwhile, four days earlier, a Viscount's landing gear had collapsed during a landing at Knoxville, Tenn., resulting in minor injuries to all 27 passengers.

The CAB publicly announces its January 31 decision on April 4. On April 30, the B-720Bs initiate twice-daily day and night roundtrips from New York's Idlewild Airport to New Orleans via Atlanta. The next day, a New York to Cleveland nonstop roundtrip is offered.

Also on May 1, the Florida service is cut back to a single Cleveland–Pittsburgh–Miami roundtrip. A DC-6B with 20 aboard encounters clear air turbulence near Vero Beach, Florida, on May 9, resulting in severe injury to a flight attendant.

The merger takes effect on June 1 when **United Air Lines** assumes Capital's assets and liabilities. The last flight by a DC-4 is completed on June 30, the airline's final day of existence. The schedules of the two companies are integrated on July 1 with the new owner retaining, in its own colors, only the 41 Viscount 745Ds, now finally paid off. The amalgamation is the largest (to that date) in the history of the U.S. passenger airline industry.

CAPITAL AIRLINES, LTD.: United Kingdom (1987–1990). The former **Brown Air Services, Ltd.**, a wholly owned subsidiary of Brown Group International, Ltd., is organized at Leeds–Bradford Airport in November 1987 to offer scheduled commuter services. Adrian Thompson is

appointed managing director of the new concern and the world's first production model Shorts 360-300 certified for 39-seats is secured.

Revenue flights commence early in **1988** linking the company's base with Cardiff, Glasgow, and Jersey. Four additional 360s are acquired and Luton, Belfast, and Dublin join the route network. The Luton-Dublin route is a transfer from **Virgin Atlantic Airways, Ltd.** Orders are placed for 2 British Aerospace BAe 146s.

The fleet in **1989** includes 2 BAe 146-200s and 6 Shorts 360-300s. In late March, a feeder arrangement between **Virgin Atlantic Airways, Ltd.** and **British Air Ferries, Ltd.** is cancelled; Virgin officials contract with Capital, which begins BAe 146-200 service from London (CTN) to Dublin on behalf of VAA on March 29 using Virgin's license.

A total of 300,000 passengers are transported on the year.

The fleet in **1990** includes 2 BAe 146-200s and 6 Shorts 360s. Rapid expansion and steep increases in expenses in a time of recession prove disastrous and the carrier is forced to cease operations in July, being officially shut down on October 11.

Hungarian-born Sal Berkowitz and his new managing director, Donald MacKenzie, unsuccessfully attempt a financial rescue in November. When the CAA rules that foreign ownership in this case is illegal, the regional is liquidated at year's end.

CAPITAL AVIATION OF SANTA FE: United States (1992-1993). Jerry Wigger establishes a charter and contract service airline at Santa Fe, New Mexico, in **1992**. A workforce of 25 is recruited and revenue services commence and continue with a fleet of 1 each Cessna 210, Cessna 182, Cessna 172, Cessna 152, and Beech Super King Air 200. Flights cease a year later.

CAPITAL CARGO INTERNATIONAL AIRLINES: P.O. Box 622334, Orlando, Florida 32862, United States; Phone (407) 855-2004; Fax (407) 855-6620; <http://www.capitalcargo.com>; Code PT; Year Founded 1994. Freight consolidator Peter F. Fox and Clinton Beaty, who together own Capital Management Corporation, found CCA at Orlando in **1994** to provide FAA Part 121 all-cargo services linking that city with points in Latin America. Charles Greene is named vice president and general manager.

A Douglas DC-8-62 is wet-leased from **Emery Worldwide** and on October 1, **1995**, begins flying ad hoc charters on weekdays and services specifically to Puerto Rico, Guatemala, and Costa Rica on weekends. At the same time, the subsidiary, Capital Cargo Logistics, is established to provide cargo warehousing.

Over a million pounds of perishable goods are transported by year's end, largely via **Emery Worldwide**. Revenues for the year total \$16 million, costs are \$14 million, and a \$2-million profit is generated.

The employee population stands at 30 in **1996**. On April 15, the company wins airline certification from the U.S. government. The carrier returns the Emery Douglas and replaces it with a Boeing 727-2J7F, the first of 3 ordered B-727-200Fs. The company's mission statement now calls for it to provide contract lift to domestic and foreign air carriers who need additional capacity, or for other concerns requiring flights without themselves entering the airline business.

With a shipment of machines, auto parts, and other general freight, the Boeing makes its first official flight on April 18 to Port-au-Prince, Haiti. Thereafter, the aircraft flies fabrics from Greensboro, North Carolina, to Mexico City, returning with completed clothes.

A total of 16.7 million FTKs are operated and revenues of \$725,000 are generated through July. Expenses for the same period are \$946,000 and leave an operating loss of \$221,000 and a net loss of \$228,000.

The request for 3 Boeings is cut back to 2 and the second, a B-727-214AF, arrives early in **1997**. Services continue and cargo traffic jumps 12.7% on the year to 18.81 million FTKs.

Operating revenues skyrocket 180% to \$12 million, while expenses climb even more, rising 165% to \$11.93 million. Still, the previous year's operating loss becomes a \$67,000 operating gain, while the net loss is turned into a \$108,000 net gain.

Freight traffic during the 12 months of **1998** increases by 28% to 55.88 million FTKs. Revenues rise 73.7% to \$22.05 million, while costs are held to \$20 million. The operating profit increases to \$2.04 million, while net gain jumps to \$1.3 million.

Flights continue in **1999-2000**.

CAPITAL CITY AIR, INC.: Suite 203, 11710 Kingsway Ave., Edmonton, Alberta T5G 0X5, Canada; Phone (780) 482-6400; Fax (780) 482-6500; <http://www.capitalcityair.com>; Year Founded 2000. To take advantage of western Canada regional route opportunities provided in the wake of the **Air Canada, Ltd.** takeover of **Canadian Airlines, Ltd.**, Capital City Air is established at Edmonton in the spring of **2000**. Under the direction of President/CEO David McPherson, the new concern obtains authority from Transport Canada, recruits ground and flight staff, and acquires a fleet of British Aerospace BAe Jetstream 31s.

The first of several new airlines to start flying this year, CCA launches an Edmonton to Calgary shuttle service on July 1. Additionally, flights are started on August 15 to Fort McMurray, Grand Prairie, Peace River, and Prince George. Route expansion to nine additional destinations will occur during the winter schedule, with frequencies to nine more Alberta and Northwest Territories slated to follow in 2001.

CAPITAL JET CHARTER (PTY.), LTD.: P.O. Box 13, Canberra International Airport, Piallago ACT, 2609, Australia; Phone 61 (2) 6262 6222; Fax 61 (2) 6262 6226; <http://www.capitaljetcharter.com>; Year Founded 1998. CJC is set up at Canberra in **1998** to provide executive and small group passenger charters, particularly for businessmen needing transport into and out of the nation's capital city. Revenue flights begin and continue with a Cessna Citation bizjet.

CAPITOL AIR: United States (1982-1984). On January 6, **1982**, **Capitol International Airways** is reorganized and renamed Capitol Air. The fleet comprises 12 Douglas DC-8-61/63s, 1 Airbus Industrie A-300B4, 3 Douglas DC-10-10s, and 2 Boeing 727-200s; airline employment is 1,571. Frequencies to former CIA destinations are maintained or stepped up.

A DC-10-10 with 215 aboard loses cabin pressure and falls 20,000 feet over Nebraska on January 12 before recovering to make a safe landing at Denver.

New York to Aquadilla, Puerto Rico, service begins on October 12. For the first three quarters of the fiscal year, the carrier sets new records for itself: passenger boardings rise by 51.2% and earnings of \$7.2 million are posted.

During the fourth quarter, a dispute arises with **Eastern Air Lines** over 5 DC-8-61s leased several years earlier. Unable to successfully dispute the major's claim, Capitol returns the aircraft. As a result of this conflict, owner George E. Batchelor's company begins a period of financial turbulence, reduced capacity, traffic decline, and revenue loss, exacerbated by national recession.

Although the year's overall enplanements skyrocket 51.2% to 1,824,000 and cargo grows 36.8% to 20.18 million FTKs, revenues drop, expenses shoot up, and a \$21-million net loss is suffered.

The payroll is cut by 28.3% in **1983** to 1,130. Faced with intense discount competition, the carrier on January 10 begins to reduce services. Nonstop flights between New York and Los Angeles or San Francisco are replaced with one-stop frequencies. Flights from the U.S. to Europe are cut from nine per week to seven. It is also announced that the workforce will, as noted above, be significantly trimmed.

En route from San Juan to Miami on May 1, Flight 236, a DC-8-61 with 212 passengers, is subjected to a cruel hoax. A passenger, claiming to have a bomb, threatens to blow up the aircraft and goes up and down the aisles distributing notes describing his unemployment and unhappiness and demanding the plane's diversion to Cuba. At Havana, Cuban police take the pirate in hand and he is committed to a mental facility.

Flight 236, a DC-8-61 carrying 17 crew and 231 passengers between Puerto Rico and Chicago via Miami, is hijacked to Havana on May 12 by a woman armed with a flare pistol.

Claiming to be armed with dynamite, a man with a pistol (in reality a toy gun) hijacks a third Flight 236, this DC-8-61 with 264 passengers en route from San Juan to Miami, to Cuba on August 4. The diversion from the U.S. to Fidel Castro's island is the ninth of the year to date; once again, the pirate is taken into Cuban custody.

In September, controlling interest in Capitol Air is acquired by Capitol Holding Company, a firm controlled in turn by Farhad Azima, majority owner of **Global International Airways**. Among the first decisions taken by the new ownership is elimination of the 3 DC-10-10s. Of the 11 DC-8s, 4 maintain charter commitments while 7 work the major long-haul scheduled route from Los Angeles to Frankfurt via Chicago, New York, and Brussels. In mid-December, service is also started, five times per week, from New York to Miami.

Bookings drop 29.3% during the year to 1,335,000 and freight is off an equal percentage, 29.9%, to 14.15 million FTKs. Significant losses continue and by year's end, the carrier has fallen from its national CAB classification category into the ranks of the large regionals. While not as terrible as that of 1982, the net loss is still a dismal \$11,147,000.

Early in **1984**, Capitol lays off 1,200 employees and withdraws its DC-10-10s as ownership changes again. Daily New York to Miami flights commence on February 1, followed by \$89 one-way frequencies over the route beginning on February 9.

During the summer, a five-times-per-week schedule is initiated from Miami to San Pedro Sula and San Salvador, while service to Port-au-Prince becomes daily. In September, the Airbus and 9 DC-8-60s stand down and passenger flights are suspended. For the first 9 months of the year, the company has flown 924,000 passengers, a 6.8% decline.

Hard times reach a peak on November 25, when the company ceases operations and lays off all but 80 of its employees. A spokesman claims that the carrier is in a state of involuntary bankruptcy by virtue of a creditor's petition filed by 4 employees with the U.S. Bankruptcy Court in New York seeking \$29,000 in back wages, retroactive pay increases, and vacation pay. It is reported by the Associated Press that the employees had missed paychecks for several weeks and were growing more concerned that the airline did not have the resources to handle their compensation. By November 28, 176 additional workers have joined the action of the original 4.

The carrier's majority interest is sold on December 9 to an investor's group headed by Puerto Rico's state senator, Nicolas Nogeras. However, the line must formally file for Chapter XI bankruptcy on December 14, at which time all it has left in its fleet are 2 leased DC-8-61s and 1 Boeing 727-200.

Hoping to resume operations, company officials in **1985** fight the DOT's efforts to lift the dormant airline's operating certificate. In March, John Jackson, president since the December takeover, resigns and Capitol Air expires.

CAPITOL AIR EXPRESS: 823 11th Ave., 5th Floor, New York, New York 10019, United States; Phone (615) 223-0233; Fax (615) 459-0825; Code C6; Year Founded 1993. With its paperwork completed, CAE is officially established at Philadelphia on January 2, **1993** to offer regional and domestic charter flights with a fleet of 2 Boeing 727-251s. Revenue flights begin the same day from a base at Smyrna, Tennessee.

Although traffic figures are not provided, it is reported that revenues of \$4.2 million are generated. The operating loss is \$1.9 million and the net loss is \$1.76 million.

The fleet in **1994** includes 3 B-727-251s and 1 B-727-227. Passenger boardings for the first full year total 76,000. Revenues for the entire 12 months inch ahead by 1.6% to \$6.42 million. Even though expenses decline by 13.6%, they still total \$7.17 million and leave losses of \$752,000 (operating) and \$751,000 (net).

Operations continue apace in **1995–1998**, during which time a fourth B-727-251 joins the fleet.

CAPITOL AIR LINES: United States (1928–1929). Capitol is established at Detroit in the fall of **1928** to offer scheduled, multistop passenger services to Chicago and Louisville. The company assembles a fleet that grows to comprise 4 Ryan B-1 Broughams and 3 Alexander Eaglerocks, which are employed to inaugurate scheduled flights on October 22.

Operations cease in **1929**.

CAPITOL AIRLINES (1): United States (1966–1990). In **1966**, the Manhattan, Kansas-based air taxi and charter operator Gary Cromer, owner of **Capitol Air Service**, creates a scheduled airline division, calling it Capitol Airlines. Employing 5 Cessna 402s and 5 Cessna 207s, CA-1 inaugurates flights linking the company's base with Topeka and Kansas City.

Operations continue with little change through the remainder of the decade and into the **1970s**. Allen Aviation is purchased on August 13, **1975** and the fleet is enhanced by the addition of a de Havilland Canada DHC-6-100 Twin Otter.

During the early **1980s**, Lawrence and Salina join the route network and the fleet includes 2 Twin Otters plus the Cessna lightplanes owned earlier. Enplanements in **1983** total 83,700.

During **1984**, the FAA revokes the carrier's FAR Part 135 operating certificate for irregularities and grounds the company. The decision is taken to close down the airline division and continue operations under the previous name. John Jackson is named president in November, but resigns in April **1985**. Enplanements for the year total 41,280.

The 52-employee small regional enters into a code-sharing agreement with **Braniff, Inc.** in late fall **1986** and begins to feed the national's Kansas City hub on December 15 via three routes from the Sunshine State. Passenger boardings jump 14% to 48,000. "Braniff Express" flights continue apace in **1987**.

William Fogerson becomes general manager in **1988**. In September, **Braniff, Inc.** restructures its hub at Kansas City and serves notice that its agreement with Capitol will be cancelled at the end of the fourth quarter. The regional airline goes to court.

Fogerson becomes president in **1989**; however, he is powerless to halt the implementation of **Braniff, Inc.**'s code-sharing cancellation on January 2. The affiliation loss causes a dramatic downturn and the fleet is changed. Gone are the Twin Otters, replaced by a Cessna 421. In deep fiscal difficulty for two years, the carrier ceases operations on March 30 and files for Chapter XI bankruptcy protection.

Attempts are made during the remainder of the year to reorganize, but prove unsuccessful. Just after New Year's **1990**, the bankruptcy court orders the regional liquidated, a process which is completed by October.

CAPITOL AIRLINES (2): United States (1993–1995). Coeur d'Alene, Idaho-based **Empire Airlines** establishes this separate subsidiary at Minneapolis (MSP) in the fall of **1993**. Equipped with 3 Fairchild Metro III, the new regional inaugurates scheduled flights to Chicago (MDW) in December.

Early in **1994**, routes are stretched to Omaha and Milwaukee. Financial losses are significant enough to force the company to suspend operations at year's end. The carrier is purchased by **Air LA** during the first quarter of **1995**.

CAPITOL AIRWAYS: United States (1946–1967). American Airlines pilot Jesse Stallings (87.5%) and a partner (11.5%) found Capitol Airways at Cumberland Field in Nashville, Tennessee, on June 11, **1946** as an FBO and flying school. Three years later, Stallings resigns his job with American to devote more time to his prospering business.

In early **1950**, a war-surplus Lockheed L-18 is acquired for charter work, followed by a Douglas DC-3 in **1951** and a second Douglas transport in **1952**. A significant portion of the company's flight business revolves around the transport of Grand Ole Opry performers.

To take advantage of the income to be earned from USAF "Mercury" resupply flights, predecessor to the Logair program, Stallings purchases 3 Curtiss C-46 Commandos in **1954**. These are used to operate contract

military flights in the continental U.S. Simultaneously, the entrepreneur also acquires 2 Douglas DC-4s that are introduced on long-haul transatlantic passenger charters.

In September, the newly established subsidiary **Volunteer Airlines** (1) begins operating the DC-3s on scheduled intrastate commuter flights. Although this venture is profitable, Stallings closes it down on August 12, 1955 in order to devote his full attention to the larger supplemental business.

During the remainder of the decade, Capitol engages in a full menu of supplemental operations, specializing in low-cost, long-haul passenger and cargo charters. Employing over 40 surplus military C-46s, 5 Lockheed L-749As and L-1049E Super Constellations, Stallings's company spreads its wings over both transatlantic and Caribbean routes.

This expansion is not cost-free. A C-46F with two crew is lost near Fort Collins, Colorado, on November 16, 1958; there are no survivors. An L-1049H is purchased from the Babb Company in April 1959.

The carrier's first L-1049G is purchased in January 1960. The company suffers two crashes in one day later in the year. On October 4 at Sacramento, a private Cessna fails to see a taxiing C-46; no one is hurt in the resulting collision. A second Commando suffers an in-flight wing failure at Plain City, Utah, but lands without injury to its crew.

A C-46F with two crew crashes at Plain City, Utah, on October 15; both men are killed and the aircraft must be written off.

An in-flight fire causes a C-46F to crash near Katy, Texas, on January 22, 1961, killing its two-man crew.

Three L-1049Ds, previously flown by **Seaboard World Airlines**, are leased in May 1962. When **Riddle Airlines**, because of financial difficulties, is forced to sell its 6 Armstrong-Whitworth AW.650 Argosy Is back to their manufacturer in late June, Chairman Stallings acquires 5 for his own Logair military contracts. The landing gear of one of these fails while it is on a training flight at Wilmington, Delaware, on July 2; none of the six crewmen is hurt. A second Argosy I makes a wheels-up landing at Rome, New York, on July 23.

Later in the summer, 4 L-1049Hs are chartered from **Seaboard World Airlines**. Later, the carrier will purchase 2 Super Ds and 1 Super H. At the same time, 4 ex-Hughes Tool Company L-1049Hs are leased from **Trans-International Airlines**, which also sells the company an L-1049G previously flown by **Qantas Empire Airways (Pty.), Ltd.**

The Argosy Is continue to have difficulties in 1963. While landing at Fairfield, Ohio, on June 9, the pilot of one inadvertently retracts the landing gear, causing the aircraft to crash. A hydraulic failure aboard a second aircraft, while it is parking at Seymour Johnson AFB in North Carolina on November 21, causes it to ram into an obstruction.

In 1964, the company employs 323 workers and owns a fleet that still includes the Argosies plus 17 C-46s. Certification as a Supplemental Air Carrier, good for five years, is received from the CAB on April 18. A C-46 suffers substantial damage at Charleston, South Carolina, on October 10 when one of its engines catches fire. Five C-46s are wet-leased to **Deutsche Lufthansa, A.G.** and are employed to operate night cargo flights in Northwest Europe.

This year, a total of 141,000 charter passengers are carried and 12.58 million freight ton-miles are flown. Revenues total \$18.27 million.

In 1965, as a result of the withdrawal of the Argosy Is, the fleet is down to 9 aircraft, which will fly 23,330 million freight ton-miles over the next 12 months.

A Lockheed L-1049E is leased from **Cubana (Empresa Consolidada de Aviacion, S.A.)** on June 1. The carrier must inform a teachers group on June 30 that four charter flights to Europe, for which each member had prepaid \$300 to a New York State teachers study group, will be cancelled because of the disappearance of the persons who took the reservations. Revenues for the year total \$19.8 million and a net profit of \$1.18 million is reported.

Two of the three leased **Seaboard World Airlines** L-1049Ds are purchased in March 1966. Revenues for the year climb to \$31.18 million. The operating profit is \$102,545 and the net profit is \$75,244.

On March 22, 1967, the company is reformed into a public stock company and its name is changed to **Capitol International Airways** to reflect its worldwide capability.

CAPITOL HELICOPTERS: United States (1983–1984). An unsuccessful attempt to create a helicopter commuter airline for Washington, D.C.'s airports begins in late 1983 with the establishment of this company at Dulles International Airport. With the acquisition of 3 Aerospatiale 365N Dauphin 2 helicopters, rotary-wing flights begin in early 1984 linking Capitol's base with Baltimore (BWI) via the downtown district's National Airport.

As the result of high operating costs associated with the Dauphin 2s, ticket prices quickly reach a point more than double ground transport costs. In addition, maintenance problems contribute to a service suspension. Without subsidy and with little public demand for its high-priced, uncompetitive service, the debt-ridden new entrant cannot generate the traffic or finances to continue. Consequently, it shuts down in the fall.

CAPITOL INTERNATIONAL AIRWAYS: United States (1967–1982). To better reflect and finance its worldwide capability, **Capital Airways** is reorganized into a public stock company on March 22, 1967 and its name is changed. Airline employment totals 660 and the fleet includes 2 Douglas DC-8-61CFs, 2 DC-8-31s, and 3 DC-8-11Fs. Orders are outstanding for 4 DC-8-63CFs as the Super Constellation fleet is put up for sale. Among the last charters flown by the Connies before their removal are a series of inclusive-tour flights out of West Berlin on behalf of the travel agency Berliner Flug Ring.

In August, a Lockheed L-1049H Super Constellation is sold to James Flannery of Pendel, Pennsylvania. The aircraft is dismantled at New-castle Airport in Delaware and trucked to the owner, where it is erected on 25-ft. high pillars, just behind a sign that reads "Joe Flannery's Constellation Lounge and Restaurant."

Now the third largest supplemental carrier, CIA operates 33.4 million freight ton-miles and originates 312,804 charter passengers. Overall revenues are up 5% to \$32,661,694. The operating profit is \$4.78 million while the net profit is \$2.17 million.

The employee population numbers 583 in 1968. Two DC-8-63CFs join the fleet and the last of the Super Constellation freighters are phased out.

While executing a go-around, one of the new jetliners, on an April 28 training flight, yaws to the right, crashes, and burns at the National Aviation Facilities Experiment Training Center at Atlantic City; the four crewmen aboard are injured.

In anticipation of renewed growth, the company opens new offices at Cleveland and Detroit and upgrades six others.

On June 2, nearly 1,000 New York City area residents are delayed up to 8½ hours at Freeport, in the Bahamas, when a company aircraft fails to arrive on time for the chartered return flight to the Big Apple. **Eastern Air Lines** returns 537 of the passengers.

Customer bookings fall to 304,270 and freight ton mileage is down to 12.54 million. Still revenues are up 36% to \$44,392,244. The operating profit climbs significantly to \$4,745,766 and net income rises by a million dollars to \$3,453,376.

The workforce in 1969 is 820 and the fleet is increased by the addition of 2 more DC-8-63CFs. The night cargo contract with **Deutsche Lufthansa, A.G.** is concluded and the 5 Curtiss C-46s employed, the last owned by Capitol, are withdrawn from service and sold.

Enplanements rise to 359,379. Revenues advance to \$48,118,890 and an operating profit of \$1.52 million is reported; there is, however, a \$105,411 net loss.

The fleet in 1970 includes 4 DC-8-63CFs, 4 DC-8-55Fs, and 1 DC-8-31. A total of 180 new employees are hired.

On November 27 en route from McChord AFB in Washington State to Cam Ranh Bay via Anchorage and Yokota, Flight C2C3/26, under U.S. Military Airlift Command (MAC) charter, fails its takeoff from an icy Anchorage runway. T DC-8-63CF with 10 crew and 219 passengers makes a forced landing off the pavement, coming to a stop in a 12-ft.

drainage ditch where it catches fire (47 dead). John Godson remembers the disaster in his *Runway* (New York: Scribner, 1974).

Charter bookings jump 10% to 399,309 and cargo tonnage flown skyrockets 81.9%. Still, the decline in Vietnam business and the U.S. recession hurt income. Revenues fall to \$43,096,404 while the profit lines show more red ink: \$578,399 (operating) and \$1,193,449 (net).

In 1971, company headquarters are transferred from Wilmington, Delaware, to the deactivated Stewart AFB at Smyrna, Tennessee, near Nashville. Enplanements total 454,770.

Passenger boardings increase by 2.2% in 1972 to 465,000 and freight traffic grows a healthy 20.4%. Income is \$38.58 million and with expenses nearly under control, the charter operator is able to report profits of \$181,000 (operating) and \$754,000 (net).

The workforce in 1973 is 508. Passenger boardings accelerate 18.7% to 552,000, but freight traffic is off by a huge 50.9%. Revenues, however, increase to \$46 million with expenses trailing at \$42.48 million. The operating profit is \$1.86 million and net profit declines slightly to \$709,000.

The workforce is reduced in 1974 to 467. On July 9, the Federal District Court in Philadelphia orders the carrier to hire male applicants for flight attendant positions and to seek out males who had sought such jobs with the airline earlier, but who had been rejected because of their sex.

Enplanements decline 9% to 503,779 and freight traffic is down a whopping 84.9%.

While only 22% of Capitol's charter customers are military, almost all of its freight business comes from MAC, which is rapidly downsizing its transport needs now that the Indochinese situation is cooling.

Total income grows by 7.9% to \$47.8 million, but fuel costs force expenses to shoot up by 17.6% to \$49.9 million. As a result, the supplemental has an operating loss of \$2.12 million and a net loss of \$551,000.

Seventeen employees are laid off or not replaced in 1975, a drop of 25%. In addition to this and other cost-cutting measures, the Smyrna-based supplemental begins to concentrate on higher-yield charters.

As a result, it is able to transport 25% fewer passengers (367,880) while increasing its income. On revenues of \$43.97 million, expenses are \$43.84 million. As a result, the operating profit is \$131,000 and net gain reaches \$1.62 million.

The workforce in 1976 is increased by 24% to 528. Three DC-8-61s are purchased to increase capacity.

Nonscheduled operations with a fleet of 2 DC-8-63Fs, 5 DC-8-61s, and 5 DC-8-30s continue into the era of deregulation. During these years, CIA, one of the largest American supplemental carriers, derives 80% of its income from commercial charter work, mostly across the North Atlantic to Frankfurt and Brussels. The remaining 20% is derived from contract cargo flights made for the USAF.

Customer bookings accelerate 30.5% to 479,675. Expenses are \$50.71 million, but are submerged by total revenues of \$51.88 million. As a result, the operating profit is \$1.17 million and net income doubles to \$2.94 million.

Eighteen are reported injured on January 16, 1977 when a DC-8-30 catches fire on the runway at Baltimore (BWI). A DC-8-61 with 250 aboard catches fire at Shannon, Ireland, on October 2; 24 are injured. Twice-weekly tourist charter flights to Cuba are initiated on December 1 and help to bring the year's passenger charter total to 702,000.

Bookings in 1978 are 857,000, an 18.2% increase. The Tennessee-based operation, losing money in the face of stiff competition from challengers, now elects to begin offering scheduled service.

New York to Brussels return services commence on May 4, 1979. Employing a pair of leased DC-10-10, Capitol introduces \$180 one-way transcontinental Sky Saver flights from New York to Los Angeles.

Flight engineers, members of the Teamsters, strike the company between September 23 and October 6; a mediated agreement between the parties takes effect on October 17.

Bad traffic news, however, continues as CIA's 6 aircraft haul only 753,000 passengers, a 12.1% decline. Revenues total \$89.9 million, but

expenses are \$103 million. Consequently, an operating loss of \$13.5 million and a net decline of \$9.2 million are reported.

The fleet is cut to 6 DC-8-61s (including 5 leased from **Eastern Air Lines**) and 2 DC-8-63s in 1980. These continue to specialize in low-cost, long-haul, sometimes nonscheduled flights, despite the supplemental's being relabeled as a national carrier under the CAB's new airline classification scheme.

George E. Batchelor of Miami, who also controls **Arrow Airways** (2), acquires the carrier and its 829-employee workforce on June 30. A DC-8-61 must be evacuated at New York (JFK) on July 14 when an engine catches fire prior to takeoff.

Customer bookings fall 21% to 611,397. Revenues accelerate to \$109.9 million and, for the first time, income from scheduled services exceeds that from charters. Costs also jump, to \$111.9 million. Despite these larger numbers, the decline in both capacity and traffic lessens the flow of red ink. This year, the losses are down to \$2 million (operating) and \$3.8 million (net).

The workforce increases 89.5% in 1981 to 1,571. CIA now acquires a variety of new long-haul routes utilizing 3 Douglas DC-10-10s. Destinations now served include Boston, Chicago, Kansas City, Las Vegas, Los Angeles, Miami, New York (JFK), Philadelphia, Aguadilla, Port au Prince, Puerto Plata, San Juan, San Pedro Sula, and San Salvador. Other gateways include the European terminals of Brussels and Frankfurt, plus Tel Aviv in the Middle East.

Enplanements skyrocket 89.3% to 1,153,000 while freight is up 85.5% to 14.75 million FTKs. Operating revenues total \$185.03 million and expenses are \$180.52 million; as a result, there are profits: \$4.5 million (operating) and \$2.58 million (net).

Capitol International is reorganized on January 6, 1982 and renamed **Capitol Air**.

CAPRIVI AIRWAYS (PTY.), LTD.: Namibia (1978–1982). Formed as a subsidiary of the Chantenis Group at Windhoek in early 1978, Chairman/Managing Director B. Drew's 65-employee carrier begins scheduled services in September. Five Douglas DC-3s undertake daily return flights to Khorixas, Ondangwa, Bundu Katima, and Muillo.

Traffic proves too light and expenses, led by surging fuel price increases in 1979–1980, too high, forcing Caprivi to halt operations in 1982.

CARAIBBENNE DES TRANSPORTES AERIENS. See **AIR FRANCE; AIR MARTINIQUE (COMPAGNIE ANTILLAISE D'AFFRETEMENTS AERIENS, S.A.); AIR SAINT MARTIN, S.A.; SATA (SOCIETE ANTILLAISE DE TRANSPORTS AERIENS, S.A.-AIR GUADELOUPE)**

CARAVAN AIRLINES: United States (1965–1967). Caravan Airlines is set up at Phoenix, Arizona, in 1965 to provide scheduled passenger and cargo flights on local routes out of the city.

De Havilland DH 104 Dove and DH 114 Heron flights continue into 1967, when the company is purchased by and merged into **Apache Airlines**.

CARCO AIR SERVICE: United States (1963–1973). When William P. Cutter and Clark Carr, founders and operators of **Cutter-Carr Flying Service**, split up in 1963, Carr forms his own airline, Carco Air Service, to take over the Atomic Energy Commission contract previously operated.

The company receives CAB commuter certification in 1964 and continues to operate scheduled air services for workers at the nuclear station at Los Alamos, New Mexico.

Competition from **Ross Aviation** results in that firm winning the government contract in 1970 and the first great oil crisis puts the company out of the flying business in 1973.

The company does not, however, fail entirely. Under the direction of William R. Cutter, William P's son, Carco, remains an FBO operator with stations at Albuquerque, El Paso, and Phoenix.

CARDIFF & PEACOCK AIR LINES: United States (1933–1934). Established at Bakersfield, California, in early 1933, C & P inaugurates scheduled, multistop passenger flights to Los Angeles with Travel Air 6000s and Stinson Juniors.

During early summer, a new Lockheed Model 9 Orion is acquired and operations are added linking Fresno with San Francisco. On July 11–12, the Orion and its pilot, Donald MacIntyre, is lost when it unexplainably dives into a swamp northwest of Fresno.

Without a mail subsidy, traffic proves to light to justify the continuance of operations too far into 1934.

CARDINAL AIRLINES: United States (1968–1976). Rodney Jaeger, owner of the Lynchburg, Virginia-based FBO Flight America, establishes Cardinal Airlines in the early fall of 1968 to provide scheduled passenger and cargo services to the two principal airports at Washington, D.C. (DCA and IAD) plus Charlottesville, Va.

Employing a fleet of Britten-Norman BN-2 Islanders, Beech 99s, and Cessna lightplanes, Cardinal inaugurates daily roundtrips on October 1, maintaining them into 1976. Jaeger will establish **Air Virginia** in 1979.

CARDINAL AIRWAYS: United States (1968–1969). Established at Jefferson City, Missouri, in 1968, Cardinal offers scheduled air taxi services to local destinations employing a Piper PA-31 Navajo. The operation can only be maintained into 1969.

CARE AIRLINES (PTY.), LTD.: South Africa (1991–1996). NAC, established at Lanseria Airport in 1991 to provide scheduled and charter regional, as well as domestic passenger and cargo services, initially remains dormant. Vernon Bricknell is named managing director.

Revenue services commence in 1993 with a single British Aerospace BAe (HS) 748-B2. Thrice-weekly scheduled return services are added between Johannesburg and Margate.

The BAe is sold in 1994 as the company elects to lease its future capacity, chartering a Series-A2 in its place. Managing Director Bricknell now assembles a larger fleet that includes 3 British Aerospace (BAC) 1-11-537GFs, 4 Beech Super King Air 200Cs, and 1 each BAC 1-11-531FS, BAC 1-11-518FG, BAC 1-11-509EW, and BAC 1-11-409AYF.

Scheduled services are inaugurated by the 85-employee company in January 1995, linking its primary base with Cape Town and the Transkei. Services are also provided for the South African Post Office to Cape Town and Durban. Traffic and financial figures are not released.

Two Boeing 727-100Fs and 2 more BAC 1-11-500s are acquired in 1996. The little-known carrier is now the second largest BAC operator in the world. Charters are flown throughout Southern Africa. Operations continue as before until the company takes a new corporate identity later in the year, becoming **Nationwide Airlines (Pty.), Ltd.**

CARGA AEREO TRANSPORTADA, S.A.: Bolivia (1983–1991). CAT is set up at La Paz Airport in 1983 to offer nonscheduled all-cargo flights around the country. Flights commence and continue with a Convair CV-440. During the next eight years, at least four Convairs are employed, one after the next.

CARGA DEL CARIBE, S.A. de C.V.: Espino 352, Col Santa Maria La Rivera, Mexico City, Mexico; Phone 52 (5) 547-3308; Fax 52 (5) 547-6648; Year Founded 1994. CDC is established at Mexico City in 1994 to offer all-cargo charter and contract service flights to Mexican and regional destinations in Central America and the Caribbean. Operations commence and continue with a single Douglas DC-6 freighter.

CARGO D'OR, LTD.: Ghana (1989–1997). Cargo d'Or, Ltd. is set up at Accra in 1989 to offer regularly scheduled weekly all-cargo roundtrip services to London. Revenue flights commence with a single Douglas DC-8F. The following year, the company is taken over by London-based **MK Air Cargo, Ltd.**, which will provide it with chartered aircraft and operate it as a subsidiary for seven years.

CARGO LION, S.A.: Lion Aviation Building, Findel Airport, Luxembourg, Luxembourg 1110, Luxembourg; Phone 32 (59) 513 984; Fax 32 (59) 513 985; <http://www.cargolion.com>; Code TLX; Year Founded 1991. During the summer of 1991, Bertram Pohl, Konrad Homberger, and Thomas Hamilton decide to form an all-cargo airline in Switzerland. As the name *Swisscargo* is not available, the new entrant is named Cargo Lion, A.G. in honor of the pioneering American line named for a big cat, **The Flying Tiger Line**. Start-up is postponed due to a combination of the economic downturn caused by the Gulf War and the inability of the partners to obtain a suitable fleet.

With Homberger remaining behind, Pohl and Hamilton decide to look elsewhere, and, early in 1992, join with Roger Tolley and Richard R. Le Lion to establish Lion Aviation Holdings, Ltd. at St. Peter Port, Guernsey, in March, with Cargo Lion, Ltd. as the principal subsidiary. Founder Pohl is named president with Le Lion as commercial director. Although the head office is established at St. Peter Port, Guernsey, operations are centered at Ostend Airport.

A workforce of 13 is recruited and 1 Douglas DC-8-62F is leased from **AOM French Airlines, S.A.** to be flown from the Belgian base. The inaugural revenue flight is made on August 1; a shipment of machinery, medicine, and general cargo is flown to Ghana and the narrow-body returns with 40 tons of pineapples.

African markets fill the company's itinerary for the remainder of the year and over the next two. In 1993–1994, the company begins to consolidate and slowly moves away from the ad hoc charter market to the operation of long- and medium-term contracts. Clintele comes to consist of major airlines such as **Air France**, **Deutsche Lufthansa, A.G.**, and **Sabena Belgian World Airlines, S.A.** and air freight consolidators and brokers such as ACS, Chapman Freeborn, East African Flowers, and Raeford. Many charters are also accepted from relief organizations such as the International Red Cross and the UN.

During the spring of 1994, the company enters into negotiations to purchase the Irish all-cargo airline **Aer Turas, Ltd.**; however, that company is eventually acquired by **Aer Lingus Irish Airlines, Ltd.** Another unsuccessful effort is simultaneously made to begin a passenger charter operation with Toronto-based **Advance Air Charter, Ltd.**; however, the Canadian company goes out of business.

In the fall, the paper airline Translux International Airlines, S.A., formed by Airmec Aviation Services, is taken over and its license application is completed in Luxembourg under the Cargo Lion name.

A second DC-8-62F is acquired in March 1995 as the company transfers its base and licensure to Luxembourg. As the only independent European all-cargo airline entirely equipped with hush-kitted aircraft, Cargo Lion finds itself in heavy demand for the operation of replacement services for major carriers into airports where noise control measures are in place. Indeed, the new plane's first flight is operated on April 7 on behalf of **Deutsche Lufthansa, A.G.** In September, both aircraft are in Ostend for routine overhauls.

During the summer, the company begins to operate a long-term contract on behalf of **British Airways, Ltd. (2)**, transporting cargo between London (LGW) and Johannesburg. At the same time, a one-year contract is received from **Lufthansa Cargo Airlines, A.G.** to operate on its behalf to India.

Airmec Aviation Services is purchased on October 1 and the company is able to open its own maintenance department in Luxembourg one month later.

The **Lufthansa Cargo Airlines, A.G.** expires in August, at which point a new service to Sweden and the Middle East is launched on behalf of the Panalpina Group.

Ground is broken in February 1997 for a new maintenance facility in Luxembourg. The BA contract service to Johannesburg ends during the summer. At this point, the company enters into a long-term contract with **Air France** to operate a pair of DC-8-62Fs from Paris to points in the former colonies in Africa. At the same time, arrangements are made to operate a passenger Airbus Industrie A310-203 on behalf of Air Charter, the French major's charter subsidiary.

A third DC-8-62F is acquired in January 1998 and is immediately sent for an inspection. The **Air France** DC-8 contract ends at the beginning of March. Meanwhile, on March 8, an agreement is reached by **Gemini Air Cargo** with **Air France** under which Gemini will operate a trio of DC-10-30Fs for the French line, replacing the DC-8Fs that it had previously wet-leased from Cargo Lion.

The Air Charter service is concluded in April. At this point, the two original DC-8-62Fs begin flying under contract to **DHL Worldwide Express** to points in Europe and Africa. The third DC-8-62F enters service in June. In late October, it is wet-leased to **Air Afrique, S.A. (2)** to serve their link between West Africa and Europe.

During the first quarter of 1999, a DC-8-62F flies nightly domestic express service in France on behalf of **Aeropostale, S.A. (2)**. On May 21, a letter of intent is signed for the acquisition of two retired **British Airways, Ltd. (2)** DC-10-30s. Both are sent to Aeronavali, Curtis & Co. for conversion into freighters, with the first scheduled for delivery in November and the second the following July.

The freight operator actually takes delivery of its first Douglas DC-10-30F on February 16, 2000. On March 12, the company is approached by **Atlas Air** with a proposal that it become the U.S. carrier's European operating arm. A month later plans to add the second DC-10F are shelved.

CARGOLUX AIRLINES INTERNATIONAL, S.A.: Luxembourg International, S.A., Luxembourg Airport, L-21990, Luxembourg; Phone 352 4211; Fax 352 4354; http://www.cargolux.com; Code CV; Year Founded 1970. Luxair, S.A., Loftleider Icelandic Airlines, H.F., and the Swedish shipping concern Salenia, A.B. form this all-cargo carrier at Findel Airport on March 4, 1970. The carrier's first aircraft, a Canadair CL-44, is delivered on April 4 and worldwide cargo charters begin in May. As additional work is undertaken during the next year, four additional freighters are received.

On final approach to the airport at Dacca, Bangladesh, on December 2, a Canadair CL-44J with four crew crashes into a farmhouse; all aboard the aircraft are killed, plus four people on the ground.

By 1972, the workforce totals 35 and the fleet includes 5 Canadairs. Operations to the Far East and South Africa are expanded and freight traffic grows 100%.

The workforce is expanded to 190 during 1973. The first Douglas DC-8-63CF is delivered on October 8, on lease from **Loftleider Icelandic Airlines, H.F.** The **Loftleider Icelandic Airlines, H.F.** maintenance base at Findel Airport is acquired and freight service to West Africa is inaugurated. Frequencies to the Far East and other African destinations are increased. A total of 146 million FTKs are flown, a 64.9% increase over the previous year.

The fourth anniversary is celebrated in March 1974. A new head office and maintenance center begins construction along with a new freight terminal while a DC-8-55F is chartered. Cargo traffic soars by 35% with 201.18 million FTKs flown.

Freight traffic rises 30% in 1975 to 261 million FTKs as another DC-8-63CF joins the fleet.

Airline employment stands at 385 in 1976. Outside maintenance contracts are increased and air freight frequencies are begun to a number of new areas, including the Arabian Gulf, Vietnam, and the People's Republic of China. The first stage of the new cargo terminal is activated during the fall.

Cargo carried climbs 16% to 261 million FTKs.

A third DC-8-63CF and 2 Boeing 707-331Cs, formerly flown by **Trans World Airlines (TWA)**, are delivered in 1977 as 2 CL-44s are deleted. An interest is taken in the new **Aero Uruguay, S.A.** and DC-8-41s/53s are leased on behalf of **Air Algerie, S.A.** in 1978 to transport Muslim pilgrims on Hadj flights to Mecca. The remaining Canadairs are all retired as a Boeing 747-2R7F is added to the fleet in December. President Roger Sietzen's company employs 450 workers and the year's freight traffic is up 16%.

The new B-747-2R7F *City of Luxembourg* is placed on the Luxembourg to Hong Kong route in February 1979. The airline is now the first European all-cargo carrier to operate a dedicated Jumbojet.

Cargo frequencies on the Europe-Taiwan weekly route are doubled and, under the leadership of Vice President Lucien Schummer, development is begun on a CHAMP (Cargo Handling and Management Planning) computerized cargo management system. New sales offices are opened in London and Paris as the workforce is increased by 16.4% to 469. Again, cargo climbs 16%, to 472 million FTKs.

Twenty-three new employees are hired in 1980. Weekly DC-8-63CF service to Mexico City and Houston is launched in February and twice-weekly flights begin in May to Nairobi. A second B-747-2R7F is delivered in September.

The B-747-2R7F *City of Esch-sur-Alzette* is purchased on October 10. On October 23-24, the company becomes involved in the U.S.-Iran hostage crisis. A company DC-8-41F, chartered by the Israeli government, transports a cargo of F-4 fighter jet tires from Nice to Tehran using a call sign supplied by **Iran Air** in an unsuccessful "spares-for-hostages" release scheme.

Freight traffic climbs a scant 2.9% to 486.17 million FTKs.

The workforce is increased by a scant 1.9% in 1981 to 500. Frequencies to the U.S. are doubled and contract maintenance work is increased. Service from Europe to the Far East is also stepped up.

Cargo traffic zooms upward by 29.4% to 629.28 million FTKs.

An agreement is signed with **China Airlines, Ltd. (CAL)** in May 1982 providing for the exchange of space on flights between Luxembourg and Taipei. The world recession catches up with the carrier; freight traffic falls 10% to 564.7 million FTKs. As a result, the workforce is cut to 350 and the number of DC-8-63CFs in the fleet is reduced to 3. Hadj service is provided to Mecca by DC-8-61s and B-747-100s leased on behalf of **Nigeria Airways, Ltd.** Late in the year, the first three elements of CHAMP I come on line.

Following the introduction of cost-cutting procedures and with slight recoveries in some traffic regions in 1983, cargo grows a tiny 0.6% to 568.31 million FTKs. The 3 remaining DC-8-63CFs are all sold as a loss of Flux 230 million is suffered.

The world economic upturn in 1984 allows the carrier's 2 B-747-2R7Fs to boost the freight traffic a whopping 31% to 744 million FTKs.

A Flux 82-million (\$1.3-million) net profit is posted by the 296-employee Luxembourg-based cargo airline, on top of an operating gain of \$7.06 million.

The carrier's fifteenth anniversary is celebrated in 1985 and, in February, the B-747-2R7F *City of Esch-sur-Alzette* is sold to the Government of Taiwan for delivery to **China Airlines, Ltd. (CAL)**. A new route is extended to Fukuoka, Japan, and, in May, a B-747-254F is chartered from **Korean Airlines/Korean Air (KAL)**. A leased B-747-100 provides Hadj flights to Mecca on behalf of **Air Afrique, S.A.**

Late in the year, the B-747-2R7F *City of Luxembourg* is employed to deliver 281,000 pounds of a special Spanish pink granite rocks from Carrara, Italy to Seattle on behalf of a contractor completing the facade of a 30-story office building.

Despite a 9.7% drop in freight traffic to 672 million FTKs, the carrier, in terms of cargo carried, ranks 19th among all world airlines. Other services (e.g., maintenance) are expanded. Revenues advance 30% to \$130.6 million and costs are kept low, allowing an operating profit of \$8.1 million and net gain of \$24.5 million.

The employee population is increased 15.6% in 1986 to 364 and the Icelandair shareholding is purchased by Italian and Arab interests. The **Korean Airlines/Korean Air (KAL)** B-747-254F is replaced in April by a B-747-271C, previously flown by **Transamerica Airlines**, leased on a long-term basis.

During July, 3 B-747-123s, formerly operated by **American Airlines**, are leased for 10 months from Citicorp; 2 are leased to **Iran Air** and provide Hadj services from Mashad and Teheran to Mecca, during which 90,000 passengers are flown.

In November, another ex-Transamerica B-747-271C freighter is leased for use on routes to the U.S. and the Far East. Service to the Far East is now the major source of the company's revenues, with over 40% of its income originating in Asia.

Cargo traffic revives, jumping upward by 22.5% to 823.21 million FTKs. Revenues accelerate to \$127 million, expenses total \$114.5 million, and the operating profit is \$12.5 million.

The payroll grows 18.2% in **1987** to 436. A GE-engine model replaces the carrier's Pratt & Whitney-powered B-747-271C, also from **Transamerica Airlines**, giving the fleet 4 GE freighters. The leasing of the B-747-123s continues, both on an individual trip basis and to **Iran Air** for Hadj flights.

Bangkok joins the route network and frequencies to Asia are increased to four-per-week. During the fall, the carrier (45%) joins with **Luxair, S.A.** (55%) to form the passenger charter operator **Lionair, S.A.** In December, the German state airline **Deutsche Lufthansa, A.G.** purchases a 24.7% interest. The arrangement calls for cooperation and coordination in a number of areas.

Freight traffic this year ascends 21.7% to one billion FTKs.

Airline employment climbs 19.7% in **1988** to 522 and the fleet includes 5 Jumbojet freighters. Employing a pair of 505-seat B-747-121s formerly flown by **Pan American World Airways (1)** and delivered on January 13 and 20, respectively, **Lionair, S.A.** passenger charters begin in February. On behalf of the national airline of Barbados, **Caribbean Airways, Ltd.**, one Jumbojet undertakes scheduled roundtrip service over a route from Manchester to Barbados.

In November, the company's entire fleet is chartered to transport, in time for the official uncorking, the year's Beaujolais Nouveau to the world's wine connoisseurs.

Cargo traffic for the 12 months rises 8% to 1.08 billion FTKs.

The workforce swells 33% in **1989** to 694. During the spring, the frequency of the decade-old weekly return service between Luxembourg and Taiwan, flown via Dubai in cooperation with **China Airlines, Ltd. (CAL)**, is doubled.

Three Dash-271C Jumbojet freighters are acquired in July after refurbishment at Seattle from B-747-271Cs previously flown by **Transamerica Airlines**. In August, French fertilizers are flown to Alaska to aid in the cleanup of the *Exxon Valdez* oil spill disaster.

Freight moves ahead by 7% to 1.16 billion FTKs and a \$13.9-million operating profit is reported.

Company employment falls 3.5% in **1990** to 670, as one Jumbojet is withdrawn. Recession causes the **Lionair, S.A.** experiment to fold and its two Jumbojets are put up for sale. In September, the company enters into a lease arrangement with **Air Foyle, Ltd.** to operate a Soviet-made Antonov An-124 on weekly out-size cargo flights from Luxembourg to Singapore. Following three trial flights, regularly scheduled weekly flights commence on September 22.

A regional office is opened at Seattle in October, taking over services previously leased from Aviation West.

Freight traffic ascends a slight 2% to 1.18 billion FTKs. Although revenues are \$266.3 million, higher fuel costs, occasioned after Iraq's August 2 invasion of Kuwait, lower the operating profit to \$10.9 million.

The payroll is sliced another 9% in **1991** to 610 and orders are placed for 4 B-747-4R7Fs. In January, the carrier receives U.S. DOT authorization to offer seven roundtrip weekly flights from Houston, New York, San Francisco, Seattle, and Miami to Luxembourg.

During the spring, the company contracts with **Air Foyle, Ltd.** to operate 3 Antonov An-124 Ruslans on out-size service flights to the Persian Gulf and Asia. In September, a second weekly flight is added from Luxembourg to Edmonton, Alberta, using the carrier's newly received B-747-228F.

Cargo swells during the year by 9% to 1.29 billion FTKs.

The workforce is revitalized in **1992** and increased by 10.4% to 873 as a fifth B-747-2D3BC is delivered. The carrier now leases, on an almost monthly basis, service from **Air Foyle, Ltd.**'s Antonov An-124 freighter. The last B-747-100 passenger plane is sold and new all-cargo flights are initiated to Damascus and Colombo.

On November 8, a Cargolux B-747-200F becomes the first foreign airliner to land at Shenzhen Airport, on the Chinese border with Hong Kong.

Freight slips 1.9% to 1.26 billion FTKs. Long-term debt stands at \$142 million.

In **1993**, Chairman Robert Stetzen and President/CEO Sten Grotenfelt oversee a workforce of 610, down 30.1% from the previous year. The fleet now includes 3 B-747-271Cs, 1 chartered B-747-2D3F, 1 B-747-228 that is leased to **El Al Israel Airlines**, and 2 B-747-4R7Fs. The latter, valued at \$275 million and received in November, are the first of their type delivered anywhere in the world.

From Luxembourg, all-cargo flights are made to Abu Dhabi, Athens, Bangkok, Colombo, Damascus, Dubai, Fukuoka, Hong Kong, Houston, Huntsville, Istanbul, Kuala Lumpur, Kuwait, Mexico City, San Francisco, Seattle, Singapore, Tacoma, and Taipei.

New service to Los Angeles begins in the fall and, in October, a new alliance is signed with **Deutsche Lufthansa, A.G.** Under its terms, the two carriers agree to code-share their flights over the routes from Luxembourg to Frankfurt and from Frankfurt to Los Angeles and San Francisco.

Cargo remains level at 1.26 billion FTKs and, despite an operating loss of \$1.7 million, there is a net profit of \$1.44 million.

Operations continue apace in **1994**. Permission is received from the Japanese government in January to shift services from Fukuoka to Komatsu Airport. Traffic rights to Bahrain are also acquired. Early in the year, **Deutsche Lufthansa, A.G.** purchases block-space on the carrier's Dash-4R7F Jumbojet service to Los Angeles and abandons its own.

During the last week of July, the company begins its first around-the-world scheduled freight route; twice weekly, a B-747-4R7F flies to Taipei, Komatsu, Khabarovsk, and Fairbanks and then, via the North Pole, returns to Luxembourg.

In August, a joint development agreement is signed with **Vietnam Airlines**. On August 8 weekly all-cargo flights commence between Ho Chi Minh City and Luxembourg employing a Cargolux B-747F.

Overall freight traffic increases dramatically during the year, rising 37% to 1.73 billion FTKs. Revenues swell 27% to \$307 million and with expenses only up 20.1% to \$296.3 million, there is an operating surplus of \$3.2 million. This year, however, there is a net loss of \$1.7 million.

Airline employment is increased by 20.5% to 735 in **1995**, the twenty-fifth anniversary year.

During the spring, new services are started to Madras, Detroit, and New York. In July, the carrier's fully integrated, on-line cargo system, CHAMPS, is successfully introduced.

Late in the year, weekly service is inaugurated between Europe and the South African cities of Johannesburg and Cape Town. The weekly roundtrip service to South Africa is doubled on December 18.

Cargo traffic jumps again during these 12 months, up 12% to 1.94 billion FTKs. Revenues total \$389 million and there is a \$15.3-million net gain.

The workforce grows another 7.3% in **1996** to 886 and the owned fleet now includes 2 B-747-271Cs and 1 each B-747-428F and B-747-4R7Fs. Also operated, under charter, are 1 B-747-4R7F and 1 B-747-228F, which is subleased to **Atlas Air**.

Doubling the size of existing storage facilities and warehousing, a new cargo terminal is opened at Luxembourg early in the year. When the giant Swiss forwarder agrees to take half of the space on every flight, Cargolux launches weekly roundtrips to São Paulo, Brazil.

Weekly roundtrip service to Chile is inaugurated in July.

A total of 2.02 billion FTKs are operated, a 4.1% increase. There are profits on top of the \$404 million in revenues: \$4.77 million (operating) and \$7.33 million (net).

Airline employment jumps 13.7% in **1997** to 1,007. In early October, a \$825-million order is placed for 4 B-747-400Fs that will begin to be delivered in 12 months.

When **Lufthansa Cargo, A.G.** determines during the month that it no longer requires its 25.4% stake in Cargolux, that shareholding is sold by parent **Deutsche Lufthansa, A.G.** to **Swissair, A.G.**'s **Swisscargo**, which is owned by SAirGroup's SAirLogistics subsidiary.

Meanwhile, the company continues to visit destinations throughout Europe, as well as Abu Dhabi, Bangkok, Damascus, Detroit, Fairbanks, Houston, Huntsville, Los Angeles, Miami, Mexico City, Miami, New York, San Francisco, São Paulo, Santiago de Chile, Seattle, and Tacoma.

On August 19, a contract is signed with **Southern Air Transport**, which will serve eight cities from a Luxembourg base on behalf of Cargolux, including Huntsville, Miami, and Bradley, Connecticut, as well as cities in Scotland, Mexico, Colombia, and Venezuela.

Two B-747-4R7Fs are delivered at the end of the year.

FTKs this year surge 19% to 2.41 billion, which also translates into 273,696 tons of goods flown. Revenues climb 20% to \$477.43 million, while expenses grow only 12.5% to \$440.7 million. Consequently, the operating profit surges to \$36.72 million and a huge \$30.7-million net gain is celebrated.

At the beginning of **1998**, Cargolux is the 15th largest airline in the world in terms of freight carried.

In January, the company receives the 1997 "Cargo Development Award" from *Air Transport World* magazine.

During the spring, the company's 2 B-747-271Cs are sold to **Southern Air Transport**. Although scheduled to depart the fleet, they will be leased back until the remaining 2 B-747-400Fs on order are received.

At a special ceremony at Cargolux Headquarters in Luxembourg on May 18, the 2 new B-747-4R7Fs received in December are christened *City of Dudelange* and *City of Grevenmacher*. The mayors of Dudelange and Grevenmacher unveil the city names on coats of arms of the two giant freighters. Each aircraft is configured with six-seat upper-deck passenger compartments, plus two bunks. A reserve crewman occupies one seat during long-haul flights, while couriers, staff accompanying shipments, company officials, and even grooms for horses, will use the others.

A long-term agreement is signed with **Atlas Air** on July 16 for the use of the American company's second new B-747-47UF as soon as it is delivered. The second Atlas B-747-47UF arrives in early August and is immediately put to work under contract to Cargolux.

The B-747-271Cs, off the table to **Southern Air Transport** and still operated by Cargolux are purchased by **Atlas Air** on September 30; it is anticipated that the trio will be operating in the U.S. line's colors by year's end.

A third B-747-47UF is delivered to **Atlas Air** in mid-October and, on October 20, Atlas signs a second contract to provide air freight services for Cargolux.

President/CEO Heiner Wilkens travels to Everett, Washington, on December 8 to take delivery of a B-747-4R7F. At the same time, he delivers a \$335-million order for two more of the type. The freighter now accepted returns to Luxembourg with a full load of cargo, making the delivery flight its first revenue-earning flight.

Several new services are undertaken at mid-month. The weekly flight to Damascus and Istanbul is rerouted to allow resumption of service to Beirut on December 16. Services to South America are enhanced with the simultaneous introduction of a B-747-47UF routing from Luxembourg–Recife–Santiago de Chile–Buenos Aires–Vittoria–Luxembourg. With this added frequency, Cargolux now offers two weekly roundtrips from Santiago de Chile to Europe and three from Buenos Aires.

A fourth stop (after Prestwick, Shannon, and Keflavik) on the European network is added on December 16 when one of the carrier's B-747-47UFs begins stopping at Manchester during its weekly service from Luxembourg to Seattle. It will later be noted that, during the 12 months, the company has transported various cargos, ranging from a huge Rolls Royce Trent engine to over 900 racehorses.

Freight traffic this year climbs by 11% to 2.68 billion FTKs, while actual tonnage carried increases to 321,982. Revenues jump 5.2% to \$578 million. There is an operating profit of \$38.5 million and a net gain of \$92 million, which includes income generated from the sale of the last B-747-271Cs.

Airline employment stands at 1,087 in **1999**, a 7.9% increase. Pilots come from every European country, including Iceland. The company

provides both scheduled and charter all-cargo service to 33 destinations around the world. It also operates a ground transportation network between major European cities from its Brussels base.

Beginning on April 13, the company introduces a weekly B-747-47UF roundtrip route from Luxembourg to Luxembourg via Mexico City, Dallas (DFW), and Prestwick, Scotland.

At the end of April, Vice President Schummer informs reporters that the company will make a public offering later in the year designed to raise \$100–\$150 million. The income, derived through an expansion of 25–30% in share capital, will be employed to increase the fleet from 7 to 12 B-747-47UFs by 2002.

Twice-weekly service to Melbourne and Auckland begins on September 18, with the return flight via Los Angeles and Portland; on September 3, twice-weekly roundtrips are operated from Luxembourg to Sydney, with returns via Asia and Abu Dhabi.

The Airbus A300-600F *Toucan* is wet-leased from **City Bird, S.A.**, also in September; the wide-body is employed to operate twice-weekly cargo roundtrips to Ghana and the Ivory Coast.

Thrice-weekly B-747-47UF roundtrips to Johannesburg via Nairobi are introduced on October 3.

Another highlight of the year is the placement into service of the world's first B-747-400 simulator in freighter configuration.

Although FTKs surge 20.8% to 3,246,555,000, fuel costs have an impact on the financial return. Revenues advance 11% to \$644 million and expenses are \$634 million. The operating profit falls to \$10 million and the net gain to \$30 million.

Airline employment stands at 1,300 at the beginning of **2000**, a 1.9% increase. Among the world's top 25 airlines at the beginning of the new millennium, Cargolux is 13th in terms of FTKs.

On March 31, the carrier suspends its Johannesburg–Luxembourg service operated via Harare, Nairobi, and Maastricht. The deteriorating political and economic situation in Zimbabwe is cited as the principal reason.

Concentration on information technology and e-commerce growth occupies much of the first quarter. In April, the carrier, like others hit by rising fuel prices, levies fuel surcharges. The **City Bird, S.A.** wet-lease now ends.

In May, the carrier, on behalf of Panalpina, undertakes a new dedicated weekly service between Luxembourg and Macau, adding a weekly service to Brazil in June. On June 11, in cooperation with **Asiana Airlines, Ltd.**, twice-weekly B-747-47UF roundtrips are started from Brussels to Seoul.

Also in June, the London *Daily Telegraph* reports that the carrier will undertake a flotation later in the year that will value the company at an estimated £500 million (\$1.3 billion).

In July, it begins a daily Jumbojet freight run between Luxembourg and Huntsville, Alabama. Stops, also on behalf of the Swiss forwarder, are made at Shannon and Guadalajara beginning in August.

CARGOMAN, LTD.: Oman (1977–1983). Cargoman, Ltd. is established by its principal owner, Dr. Omar Zawawi, at Muscat's Seeb International Airport in January **1977** to provide ad hoc freight services between Oman and Europe. General Manager T. M. Longmore acquires a single Douglas DC-8-55F from the former **Affretair, Ltd. (1)** subsidiary **Air Gabon Cargo, S.A.** and employs a large number of that carrier's Caucasian workers. Weekly flights are launched from Dubai to Amsterdam late in the month.

Additional leased freighters come and go from various sources and flights link the nation with various cities in Europe, Africa, and the Middle East.

Until **Air Zimbabwe, Ltd.** acquires Affretair's assets in 1983, reports persistently link Cargoman and the owners of the ex-Rhodesian operation. Cargoman itself appears to have ceased trading in **1983**.

CARGOMASTERS AUSTRALIA (PTY.), LTD.: Australia (1981–1985). Established at Melbourne in **1981** as a joint venture between **Airlift, Ltd.** and **Alaska International Air** (later **Mark Air**), Cargomaster's fleet is leased, as required, from its parents. Revenue flights by

the new domestic and international all-cargo and contract services carrier commence in August 1982 and cease three years later.

CARGOSERVICE OF BERKSHIRE AIRLINES: Ufa, 4500059, Russia; Phone 3472-143-332; Fax 3472-245-971; Year Founded 1990. Initially established as Shonkar Airlines, this all-cargo division of Bashkirskie Airlines changes its name. By 2000, Vilmir K. Gaziyeu is the unit's chief and he operates freight flights with aircraft leased from the parent.

CARGOSUR (COMPANIA DE EXPLOITACION DE AVIONES CARGUEROS, S.A.): Avenida de la Hispanidad No. 13, Edificio Iberfreight, Madrid, E-28042, Spain; Phone 34 (1) 320-3721; Fax 34 (1) 320-4015; Code OW; Year Founded 1988. Cargosur, S.A. is established by Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.) at Barajas Airport at Madrid in 1988 to undertake supplemental all-freight flights to destinations throughout Europe, the Mideast, the Canary Islands, and Africa. Manuel Mederos Cruz is appointed managing director and his fleet comprises 1 leased DC-8-62CF and 2 DC-8-62Fs.

Revenue flights to London (STN), Paris (ORY), Frankfurt, Hamburg, and Maastricht commence during the fall; return flights south not only stop at Madrid, but Barcelona as well. One Douglas narrow-body is dedicated to a daily morning flight transporting perishables, newspapers, and general cargo to Tenerife and Las Palmas. An owned DC-8-62F, the former Japan Air Lines Company, Ltd. (2) *Taisetsu*, is acquired from bankrupt Interstate Airlines in October. The Detroit-based carrier had only been able to employ it for a few rotations before closing down.

Service continues apace in 1989–1992 without change in fleet or employment. Airline employment increases to 130 in 1993. The two chartered DC-8-62Fs are returned late in the year and in early 1994 are placed with a DC-8-71F leased from GPA Group, Ltd.

In July 1995, the company is authorized to provide all-cargo, scheduled replacement services from various destinations in Spain to points in the United States on behalf of Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.). Another DC-8-71F is acquired and employed to inaugurate a new route from Madrid to Mexico City via Montreal and Chicago. Additional DC-8-71F routes are also started to New York and, via Miami, to Los Angeles.

These and other flights continue in 1996–2000, during which years airline employment slips to 127 and a third chartered DC-8-71F is received and used to stretch the Mexico City route to Bogota and São Paulo. A Boeing 747-256BC chartered from Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.) inaugurates thrice-weekly service to Tokyo via Moscow.

CARIB AVIATION, LTD.: P.O. Box 318, V.C. Bird International Airport, St. Johns, Antigua, West Indies; Phone (268) 462-3147; Fax (268) 462-3125; <http://www.candoo.com/carib/>; Code K7; Year Founded 1990. Carib Aviation is established at V.C. Bird International Airport in 1990 to provide executive and small group passenger charters from Antigua and from St. Kitts and Nevis to destinations throughout the eastern Caribbean.

During the remainder of the decade, the company provides not only VIP transport, but also shuttles for island events, general cargo service, special-handling cargo service, and, upon request, medevac flights. The fleet in 2000 includes 1 each Partenavia P.68C, Cessna 402C, Beech B80 Queenair, and Britten-Norman BN-2 Islander.

CARIB EXPRESS, LTD.: Barbados (1995–1996). Carib Express is established at Bridgetown during January 1995 to provide regional scheduled services. Shareholding is divided between private investors (70%), British Airways, Ltd. (2) (20%), and the governments of Barbados, Dominica, St. Lucia, St. Vincent, and Grenadines (10%). Geoffrey Cave is named chairman with Roy Barnes as managing director; a workforce of 100 is recruited.

A British Aerospace BAe 146-100 is chartered from Asset Management Organization and revenue services commence on February 15 be-

tween Bridgeport and Dominica, Grenada, St. Lucia, and St. Vincent. Two more leased BAes, one equipped with TCAS, join the fleet in April and are employed to inaugurate services to Antigua, Guyana, Port-of-Spain, Tobago, and San Juan. For lack of traffic, flights to Guyana and Antigua are suspended in November.

Traffic and financial figures for the year are not released. By the date of the first service anniversary in February 1996, an estimated \$6.5 million has been lost.

During the first quarter, negotiations are begun with British West Indies Airways, Ltd. (2) (BWIA) concerning a possible franchise arrangement. Under its terms, Carib Express would take over several of that airline's Caribbean routes. Company employees would tender two months of unpaid labor and take a 10% cut in pay for the next 10 years, receiving shares in the airline in return.

The proposal is also made to Barbados Prime Minister Owen Arthur. Arthur, through a spokesman, informs airline officials that he will see that it receives a \$1-million interest-free loan if the employees accept the wage proposal and if additional financial support can be found.

The carrier is unable to achieve this degree of viability and shuts its doors for good on April 18.

CARIB SKY ALLIANCE. See AIR CARAIBES, S.A.; LIAT (1974), LTD.; WIA (WINDWARD ISLANDS AIRWAYS INTERNATIONAL, N.V.)

CARIB WEST AIRWAYS, LTD.: Barbados (1971–1980). Barbadian investors form Carib West in January 1971 to develop and provide charter cargo flights. Chairman Harold A. Went and his eight employees acquire a pair of Douglas DC-3s and use them to inaugurate services in March. Flying from Bridgetown's Seawall International Airport, the freighters fly to islands in the Windward and Leeward groups, plus Jamaica, Trinidad, Puerto Rico, and Miami.

Having arrived from Trinidad and Dominica on September 9, a DC-3 with two crew strikes a mountain while on approach to Guadeloupe; there are no survivors.

Following removal of the DC-3s in mid-decade, the company is able to lease one each DC-6A and Lockheed L-188CF, the latter first flown by Eastern Air Lines. The chartered Electra is returned in 1978.

Unable to maintain viability in the face of economic downturn and increased fuel bills, the carrier stops trading in 1980.

CARIBA AIR: United States (1980–1982). Frederick H. Rehm founds Cariba Air at San Juan, Puerto Rico, in 1980 to undertake scheduled passenger and cargo services to St. Thomas in the U.S. Virgin Islands. Employing a fleet of 2 Douglas DC-3s, the company undertakes revenue flights in the spring.

Unable to overcome fiscal hardships in a year of recession, the Cariba ceases operations in 1982.

CARIBAIR (1). See CARIBBEAN ATLANTIC AIRLINES (CARIB-AIR)

CARIBAIR (2). See CARIBBEAN AIRBOATS

1804. CARIBBEAN AIR CARGO, LTD. (CARICARGO): Trinidad and Tobago/Barbados (1979–1993). Organized on December 28, 1979, this all-cargo operation begins revenue service in 1980 with a pair of Douglas DC-4Fs. Later in the year, it acquires 2 former Northwest Airlines Boeing 707-351Cs. Regular, but nonscheduled, flights are inaugurated on February 27, 1981. New York, Miami, and Houston are the principal U.S. destinations; however, a Caribbean feeder service is linked via Dominica, Grenada, Martinique, Puerto Rico, St. Kitts, St. Lucia, and St. Vincent.

After losing the No. 3 engine to fire, a DC-4 with two crew suffers control difficulties and is ditched at sea off St. Croix on March 28; there are no fatalities.

Flights continue in **1982–1986**.

Following the **1987** demise of **Caribbean Airways, Ltd.**, Barbados takes a financial interest and a leased Curtiss C-46A is brought into the fleet.

In May **1988**, the carrier begins to offer weekly B-707-351C services from New York (JFK) to Trinidad and Barbados on Saturdays, with connecting service to Guyana, Grenada, St. Kitts, St. Vincent, St. Martin, Dominica, Martinique, Guadeloupe, and Antigua. Specific commodity rates to the U.S. and Canada are offered for manufactured goods, agricultural products, and seafood.

Beginning in **1989**, the marketplace becomes more difficult and by **1992**, the 200 employees of what is sometimes known as “Caricargo,” led by Chairman Peter Look-Hong are down to a single Boeing freighter. Unable to maintain its viability, the company closes down in **1993**.

CARIBBEAN AIR SERVICES (CASAIR) (1): United States (1968–1979). When **Virgin Island Airways** ceases operations in **1968**, its assets are purchased by Bill Bohike Sr., who establishes this successor company at St. Croix and resumes Beech 18 flights to San Juan, Puerto Rico.

On May 1, **1974**, the company is purchased by Midland Capital. The earlier emphasis on scheduled and nonscheduled air taxi operations is now changed. The company’s new certificate from the CAB grants it authority to operate a scheduled commuter line with an exemption to operate large aircraft. Priority is now given to cargo operations as a fleet of Curtiss C-46s, eventually 8 in total, is assembled to supplement the Beech 18s and Douglas DC-3s already available.

Daily, roundtrip, revenue passenger flights commence to San Juan, St. Lucia, St. Kitts, Antigua, and Guadeloupe. All-freight services are flown from St. Lucia to Haiti.

Other destinations served during the remainder of the decade and in the **1970s** include Miami, Aguadilla, St. Martin, and St. Thomas. Douglas DC-3s and DC-6s join the fleet and airline employment in **1978** stands at 60. The base of operations is transferred to San Juan in **1979** when the airline is sold to the owners of **Southern Air Transport**.

CARIBBEAN AIR SERVICES (CASAIR) (2): United States (1979–1984). In early **1979**, the base of **Caribbean Air Services** is transferred to San Juan, Puerto Rico, where the company is purchased by the owners of **Southern Air Transport**. Jack Bastian is named president. Reformed as a wholly owned subsidiary operating under the name CASAIR (Caribbean Air Services), flights are resumed in the spring. Passenger operations are halted as renewed emphasis is placed on cargo service. The Beech 18s are withdrawn and 2 Douglas DC-3s and 2 Curtiss C-46s are flown on scheduled air frequencies to Antigua, St. Croix, St. Thomas, and St. Lucia.

A total of 3 million FTKs are operated in **1981**. The carrier’s 4 freighters stretch routes in **1982** to St. Martin and St. Kitts. Cargo blossoms to over 500,000 pounds per month and reaches a 6 million FTK high by December 31.

Operations cease in August **1984**. Unable to restart, the company’s assets are liquidated in October, with 1 of the C-46s sold to **Air Manitoba, Ltd.**

CARIBBEAN AIRBOATS: P.O. Box 37942, International Airport Station, San Juan, Puerto Rico 00937, United States; Phone (787) 791-1240; Fax (787) 791-4115; Code B9; Year Founded 1991. Fred Berkobin founds CA at St. Croix, U.S. Virgin Islands, in the spring of **1991** to offer amphibious flights to other regional destinations in the eastern Caribbean. Operations are inaugurated with a Grumman Mallard and a Turbo-Mallard.

Landplane services appear to be a more profitable approach to additional markets and thus, in **1992**, the company relinquishes its Grumman in favor of 2 de Havilland Canada DHC-6 Twin Otters.

Operations continue apace in **1993–1996**. During the latter year, a total of 8,678 passengers are flown. Alfred Ramos is president in **1997–2000** and his fleet comprises 3 Pilatus Britten-Norman PBN2 Islanders and 3 Piper PA-31-350 Navajo Chieftains.

CARIBBEAN AIRLINES: United States (1995). CA is one of the shortest-lived airlines on record. Officially founded at Miami on January 1, **1995**, it leases a Boeing 737-247 from **Viscount Air Service** and begins daily roundtrip service to Kingston and Montego Bay. Flights continue only until January 11, when the company shuts down and returns its aircraft.

CARIBBEAN AIRWAYS, LTD.: Barbados (1972–1989). English financier Norman Ricketts, who had established airlines in the Bahamas, sets up **International Caribbean Airways** at Barbados in September **1970**. After leasing a former **Northwest Airlines** Boeing 707-351B, ICA inaugurates discount flights to Luxembourg beginning on December 14. These low-cost services are continued on to London (LGW), beginning on December 14, **1971**. Later, **Laker Airways, Ltd.** DC-10-30s are occasionally wet-leased.

Upon its independence, the Barbados government designates ICA as the national airline and purchases 51% majority shareholding in January **1975**; the remaining 49% is subscribed by **Laker Airways, Ltd.**, which provides management and air crew support. “International” is dropped from the title in April **1976** and operations continue apace in **1977**.

Airline employment in **1978** is 65 and service is initiated to Boston, Washington, and Montreal. Passenger boardings jump 44% to 62,000 (of which 50,000 are carried on transatlantic flights). A total of 892,000 FTKs are also flown.

The U.S. markets are dropped early in **1979** at which time the company is flying 4 DC-10-30s and 3 B-707-351Bs. Enplanements total 57,000.

By the early **1980s**, the North American destinations have been suspended and replaced by Brussels and Frankfurt; much of the traffic is seasonal and includes tour and other promotional groups. The Barbados-based company transports 54,000 customers in **1980** with one less Boeing. Passenger boardings jump 12% in **1981** to 61,424.

The sudden collapse of **Laker Airways, Ltd.** in February **1982** removes its interest and assistance. Leased equipment is now obtained from other sources. For example, a B-747-123 is leased from **Cargolux Airlines International, S.A.** in December **1986** and is flown over a route from Barbados to Frankfurt via London and Brussels.

The revenues generated are insufficient to maintain operations and, without a backer, the company suspends operations in April **1987**, following the return of the Belgian Jumbojet in March.

Barbados now looks to **Caribbean Air Cargo, Ltd.**, joining that enterprise in **1988**. Meanwhile, during the year, the physically dormant airline contracts with **Lionair, S.A.**, a subsidiary of **Luxair, S.A.** and **Cargolux Airlines International, S.A.**, to provide scheduled roundtrip flights between Manchester and Barbados with one of its two B-747-121s.

One DC-10-30 is brought back into service during five months of **1989**, but is again grounded after flying just 28,776 passengers. The company ceases flying and elects to make money another way—running a duty free shop at the Bridgetown Airport, a pursuit which continues into **1994**.

CARIBBEAN AIRWAYS INTERNATIONAL, LTD.: Barbados (1994–1995). CAI is established at Bridgetown as the flag carrier of Barbados on November 1, **1994**. A Boeing 757-3M8 is wet-leased from the Turkish carrier **Birgenair, A.S.** and is employed, beginning in December, to offer two regularly scheduled roundtrips per week on a rotating basis via Gander, Newfoundland, to Vienna, Munich, Hamburg, Stuttgart, and Cologne. Charters are flown on weekends.

Flights cease within a year.

CARIBBEAN ATLANTIC AIRLINES (CARIBAIR): United States (1939–1973). Caribair, as it is nicknamed, is incorporated under territorial law at San Juan, Puerto Rico, by Dionisio Trigo on February 27,

1939 to take over the **Powelson Air Service's** year-old operation from the capital to Ponce. Employing a Stinson SR Reliant, the company inaugurates nonscheduled services on June 1. Late in the year, flights commence to the U.S. Virgin Islands.

Trigo's third-level carrier receives a CAB route certificate on July 23, **1942**. Scheduled roundtrip service is now inaugurated between San Juan and Mayaguez via Ponce and from San Juan to Christiansted via Charlotte Amalie.

A Lockheed Model 18 Lodestar is leased from **National Airlines** in April **1945** as the mainland major unsuccessfully proposes to extend its own Atlantic and Gulf coast routes into the Caribbean through the company's purchase.

A year later, in **1946**, the company's first large purchased airliners arrive—3 Douglas DC-3s. The final significant development of the 1940s is the inauguration of a December 27, **1948** frequency to Ciudad Trujillo in the Dominican Republic.

The CAB license is renewed on November 13, **1952** and again in **1957**. Flights to St. Martin, capital of the Netherlands West Indies, commence on January 15, **1958**. Late in the decade, the fleet is upgraded by the addition of 2 Convair CV-340s. In **1961**, the same year in which scheduled services are initiated to Guadeloupe, **Trans Caribbean Airways** obtains minority shareholding.

Airline employment by **1964** stands at 551. As the result of a premature takeoff, a DC-3 crashes at San Juan on September 22.

With a fleet of 13 aircraft, the company boards 815,892 passengers on the year and flies a total of 343,000 freight ton-miles. Revenues are \$7.98 million.

Thirty-eight employees are hired in **1965** and the fleet now includes 7 CV-340s (several of which have been converted to CV-640 status) and 1 each DC-3 and Lockheed L-18 Lodestar. One of the former, with 44 aboard, is damaged during its April 27 landing at Ponce, Puerto Rico. A CV-640 joins the fleet in December. Enplanements total 923,995.

In **1966**, CAB permission is received to extend company service over an 11-stop network through the Leeward and Windward Islands as far out into the Caribbean as Port of Spain, Trinidad.

Airline employment in **1967** totals 825. On January 23, Caribair begins daily service to the eastern Caribbean resort islands between San Juan and Trinidad and Tobago and is the first scheduled U.S. local service carrier permitted to compete with foreign lines in that area.

The same day, Flight 101, a CV-640 with 3 crew and 25 passengers touches down 250-ft. short of the runway while landing at San Juan. Although the nose and right main landing gear collapse, the right wing separates, and the No. 2 engine comes off, no fatalities are reported.

The Lodestar freighter is forced to ditch into the sea, near Lima, Peru, on April 2 (five dead). In December, the company begins to fly the first of 3 ordered DC-9-31s, marketed as "Fiesta Jets," to its new destinations.

At this point, direct connections are made possible between San Juan, Port-au-Prince, Aruba, and Curacao. The fleet now includes not only the jetliner, but also 2 CV-340s, 1 CV-440, 6 CV-640s upgraded from previously owned CV-340s, and 6 DC-3s.

Enplanements for the year total 968,000.

The employee population in **1968** is 858 and after 2 more DC-9-31s are delivered, the fleet totals 13 aircraft.

Enplanements total 1,008,000 and the number of freight ton-miles flown increases to 636,000. Revenues are \$13.69 million.

An unsuccessful **1969** application for a route from San Juan to Miami and increasing competition from **PRINAIR (Puerto Rico International Airlines)**, when added to financial difficulties, leads to company decline.

A DC-9-31 with 103 aboard crashes through the fence at the end of the runway while landing at Harry S. Truman Airport, Charlotte Amalie, St. Thomas, on August 12 and hits a bus; remarkably, no one aboard either the plane or the bus is hurt. In November, officials announce that merger discussions have begun with **Eastern Air Lines**. Enplanements are 654,641.

Employment in **1970** is 669 and the fleet includes 11 aircraft. On October 22, **Eastern Air Lines** completes purchase of the carrier for \$10.4 million—routes, DC-9s, properties, and all. Caribair is operated as a subsidiary under its own name pending required Federal approval of the takeover. Passenger boardings drop 36.1% to 481,000 and freight traffic falls by 13.7%.

The major's acquisition move receives the support of the CAB examiner on May 21, **1971**. The takeover is opposed by **Pan American World Airways (1)**, fearful of losing its grandfather rights into the Caribbean. As the case engages the lawyers, the company enplanes 531,790 customers for the year.

Failure to achieve required White House approval in early October **1972** results in **Eastern Air Line's** withdrawal of financial support, already totaling \$5 million. On October 31, the CAB, at presidential suggestion, rejects Eastern's buyout. The issue drags on. Meanwhile, the customer bookings for the year are down 7% to 497,000 and freight is off by 11.5%.

In late **1973**, the go-ahead is received for the 1970 arrangement and Caribair disappears.

CARIBBEAN EXECUTIVE AIRLINES: United States (1969–1972). CEA is established at San Juan, Puerto Rico, in **1969** to provide scheduled air taxi services to St. Thomas in the American Virgin Islands. Daily Beech 18 roundtrips are duly inaugurated and are maintained into **1972**.

CARIBBEAN EXPRESS: United States (1983–1988). This international third-level commuter airline is established at Miami in late **1983** to provide scheduled passenger and cargo services from Miami, Ft. Lauderdale, and West Palm Beach to the Bahamian destinations of Treasure Cay, Freeport, Georgetown, Governor's Harbour, North Eleuthers, and Rock Sound. Initial airline employment is 48 and the fleet comprises 6 Cessna 402Bs. A total of 542 passengers are carried during the remainder of the year.

Operations continue apace in **1984–1985**, although the fleet is reduced to 4 Cessnas. Enplanements in **1986** total 13,758 as orders are placed for 13 Embraer EMB-110P Bandeirantes.

In **1987**, President Richard Caswell's carrier receives the first 5 Bandeirantes. A major expansion of services is started and passenger boardings skyrocket to 71,103.

Overextended, the Miami-based small regional operates only the first two months of **1988**, transporting 13,000 passengers. Unable to continue, the company now shuts down and in July, files for Chapter VII liquidation.

CARIBBEAN HELICORP: Fernando Luis Ribas Dominicki Airport, Pan Am Dock Lot 1-2, San Juan, Puerto Rico 00935, United States; Phone (787) 722-1984; Fax (787) 724-8260; Year Founded 1995. Roberto Villami sets up CH at San Juan in **1995** to provide executive and small group passenger charters and various other forms of aerial contract work. By **2000**, he employs three pilots and flies one each Beech Super King Air 200, Aerospatiale AS-350B Astar, and a McDonnell Douglas MD-500E.

CARIBBEAN INTERNATIONAL AIRLINES: United States (1980–1981). CIA is established at Santurce, Puerto Rico, in **1980** to provide scheduled passenger and cargo services linking San Juan with St. Thomas in the U.S. Virgin Islands. Although daily Douglas DC-3 roundtrips are duly inaugurated, they are only maintained for a year.

CARIBBEAN INTERNATIONAL AIRWAYS, LTD.: Cayman Islands (1948–1953). When King Parker loses his **Cayman Islands Airways, Ltd.** to creditors in 1947, his backers, the following year, establish a successor company at Grand Cayman. Former RAF wing commander Owen Roberts is named managing director and seaplane operations commence to Tampa. Service is maintained apace over the

next four years, although during this time, three seaplanes are lost in bad weather incidents.

Roberts is also able to persuade various constituencies to construct an airport on Grand Cayman that is named in his honor. Roberts lands the first aircraft at the new facility on November 28, 1952.

Late in the first quarter of 1953, CIA receives a significant upgrade when a Lockheed Model 18 Lodestar is acquired. Unhappily, the aircraft crashes at sea in April, killing Roberts and all others aboard save one passenger; the tragedy ends this second Cayman-based airline.

CARIBBEAN ISLAND AIRWAYS: United States (1969–1975). Caribbean Island is formed at St. Thomas, U.S. Virgin Islands, in 1969 to offer scheduled third-level Beech 18 passenger and cargo flights to San Juan, Puerto Rico.

On October 28, 1970, Robert Manley, copilot of a Beech 18 making a San Juan to St. Thomas flight falls to his death while attempting to close a door that had opened during flight.

Operations continue with no further problems until the carrier ceases operations in 1975. During these years, the fleet is enhanced by the addition of a single de Havilland Canada DHC-6-100 Twin Otter.

CARIBBEAN STAR AIRLINES, LTD.: Airport Road, Coolidge, Antigua, Year Founded 2000. Caribbean Star is established at Antigua in the late spring of 2000 by R. Allen Stanford, a Texan and owner of the local newspaper *The Antigua Sun*. Former **BWIA West Indies Airways, Ltd.** President Gilles Filiatreault is named president. Orders are placed for 5 de Havilland Canada DHC-8-100/300s, necessary government applications are filed, a staff is hired and trained, and arrangements for participation in the Gabriel reservations system are completed.

After several delays, the carrier receives its aircraft operating certificates in early September, along with authority to launch scheduled services to several Caribbean destinations. Ground is broken for an 11,000-sq.-ft. hangar that will be completed at V. C. Bird International Airport in November. The first two proving flights, to St. Lucia, are completed by the three available DASH-8s at mid-month.

On October 6, Grenada becomes the first government to grant route rights; **LIAT (1974), Ltd.**, the most probable competitor, files objections to permits from Barbados, Dominica, Trinidad, and St. Lucia. To protect cash-strapped LIAT, the Antigua and Barbuda government refuses Caribbean Star flying rights on the profitable route to St. Martin.

Even before scheduled flights commence, the airline is engaged in moneymaking charters. On October 7–8, the Antigua Hash House Harriers employ the carrier for its weekend flights to and from St. Kitts. A special charter to Dominica is flown on October 13 for persons attending the funeral of the late Prime Minister Rosie Douglas. Two days later, three charters transport citizens from St. Kitts to a special Gem Radio event at San Haven Beach.

On October 14, the new entrant receives a provisional Trinidad and Tobago route license and the inauguration of scheduled services from Antigua to that point, as well as Puerto Rico, are announced for October 18.

Employing 3 DASH-8-100s and 1 DASH-8-300, Caribbean Star launches low-cost roundtrip service on October 18 from Antigua to Trinidad via Grenada. Receipt of route rights from Dominica allows the inauguration of service between Antigua and Roseau on October 23.

In the wake of the failure of **Air Caribbean, Ltd.**, Caribbean Star on October 27 applies to the Air Transport Licensing Authority to operate a service on the Trinidad and Tobago air bridge. After an objection by **BWIA West Indies Airways, Ltd.**, ATLA Chairman Ramsaran Bissessar announces that law and international treaties exclude the Antigua-based carrier's bid.

CARIBBEAN UNITED AIRWAYS, S.A.: Trinidad and Tobago (1973–1974). Originally established at Trinidad as Arawak Airlines, S.A. in June 1970, this company changes its name in 1973. Revenue flights to Tobago continue until January 1974 with a single Beech 99 and 3 Convair CV-440s.

CARIBJET, S.A.: Belgium (1995–1996). Caribjet is established at Brussels in 1995 to operate long-haul charters, both for it and for other carriers. A pair of Airbus Industrie A310-324s, previously operated by **Delta Air Lines**, are put into service on behalf of **Air India, Ltd.** Later, two Lockheed L-1011-500s are chartered from **TAP-Air Portugal, S.A.** and also begin flying on behalf of the New Delhi-based major.

During the first quarter of 1996, the two TriStars go out of service. They are, however, replaced by a third Portuguese L-1011-500 on March 8. After it has been repainted, it begins flying on behalf of **Air Mauritius, Ltd.** on March 15. Flights end after the summer season.

CARICARGO, LTD. See **CARIBBEAN AIR CARGO, LTD.**

CARL MILLER, LTD. See **MILLARDAIR, LTD.**

CARNIVAL AIR LINES: United States (1989–1997). At the instigation of former **El Al Israel Airlines, Ltd.** executive, Reuven Wertheim, and CCL's majority shareholder, Theodore Arison, the charter carrier **Majestic Airlines** is reformed into this new subsidiary in 1989 and renamed. (Majestic was formed from the assets of bankrupt **Pacific Interstate Airlines** in 1988 and owned by Ft. Lauderdale-based Carnival Cruise Lines.)

Under the direction of Chairman Wertheim and President Daniel Ratti, Carnival's single Boeing 727-51 is repainted and employed to help cruise passengers make rendezvous with the company's holiday steamships. Scheduled services are now initiated linking the carrier's Miami base with cruise ship destinations in the Caribbean, especially its Crystal Palace in Nassau, as well as New York, Islip, Ft. Lauderdale, Newark, Santo Domingo, Puerto Plata, and Santo Domingo.

Although passenger traffic figures are not released, the company makes known that its airline division has earned revenues of \$17.1 million. Costs are high and the losses are \$162,880 (operating) and \$183,038 (net).

The company is acquired outright by Theodore Arison's son Mickey Arison in 1990. The new owner, chairman of the Carnival Corporation, retains Wertheim as the airline's chairman and openly pledges that his airline will henceforth function as neither a division nor subsidiary of his Carnival Cruise Lines. Just 90 days after inaugurating services to the Dominican Republic, it is found that the island is too seasonal to be profitable; Carnival reverses course and pulls out.

Enplanement figures are released and show a total of 316,956. Revenues advance 101.9% to \$34.49 million, expenses rise 94.7% to \$33.59 million, and operating income is \$900,498. Net gain climbs to \$383,358.

The fleet in 1991 totals 3 each B-727-100s and B-727-200s. Plans are made at year's end to offer scheduled service from the northeast's underserved airports to Florida, replacing capacity lost by the failure of **Eastern Air Lines**.

Passenger boardings shoot up by 56.7% to 732,000, but freight is down by 35.2% to 183,000 FTKs. Revenues surge 53.8% to \$53 million, but rising costs bring an operating loss of \$2.3 million and a net downturn of \$5.1 million.

Company employment is increased a spectacular 98.1% in 1992 to 634 and the fleet is increased by the addition of 1 B-727-200, 4 B-737-200s, and 1 B-737-400. From Ft. Lauderdale, the company continues to fly to Islip, New York, and Newark. Operations are also conducted from Miami to San Juan, Santo Domingo, and Puerto Plata and from New York (JFK) to Miami.

Customer bookings increase 43.9% to 1,046,442 and a total of 88,000 FTKs are operated. Revenues jump 67.8% to \$88.48 million, expenses climb 50.5% to \$82.86 million, and operating income is \$5.61 million. There is a \$3.08-million net profit.

The payroll grows another 17.4% in 1993 to 723. Chairman Wertheim and President Daniel Ratti operate a fleet comprising 7 Boeing 727-200As, 4 B-737-200s, and 4 B-737-400s. Orders are outstanding for 1 each B-737-400 and Airbus Industrie A300B4.

Early in the year, the company joins with the Spanish national airline, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, to

petition the U.S. DOT for permission to code-share flights from Miami to New York, Chicago, New Orleans, Los Angeles, and Houston. The arrangement calls for the Spanish flag carrier to purchase blocks of 150 seats per Carnival flight. Authority is granted on June 11 and all but the New York are new destinations for the cruise line's airline.

On October 1, **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** drops its thrice-weekly service from Madrid to Los Angeles. The first trial code-shared flight with the Madrid-based major, from Miami to Los Angeles, is completed on October 11 employing an A300B4 leased from **Viasa (Venezolana Internacional de Aviacion, S.A.)**.

Later, a B-767-284ER of **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** is employed on an interchange basis. Following completion of the wide-body's overnight service from Santiago to Miami, it is taken over by a Carnival crew that flies it on to New York (JFK); in the evening, Carnival operates a return flight to Miami.

During the year, the fuselage of the carrier's first B-727-51, which has been sold out of service, is sunk to become an artificial reef off the southeastern Florida coast. Also, a maintenance base is established in a former **Eastern Air Lines** hangar at Miami (MIA) and a fifth anniversary celebration is held aboard the sister corporation's newest cruise ship, the *Sensation*.

On December 3, daily (except Saturday) roundtrips are inaugurated from Ft. Lauderdale to White Plains, New York; 15 days later, daily flights begin to and from Worcester, Massachusetts.

Passenger boardings ascend by 5.2% to 1,067,797 and freight skyrockets 104.4% to 2.12 million FTKs. Revenues swell 39.8% to \$123.74, expenses rise 43.4% to \$118.92 million, and operating profit slips to \$4.82 million. Net gain rises slightly to \$3.75 million.

Airline employment is increased 24.5% in 1994 to 900. Following receipt of DOT authority on February 4 Carnival acquires an A300B4, formerly operated by **Eastern Air Lines**, under lease from **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, as the two carriers begin to regularly code-share Miami to Los Angeles service.

The Airbus was originally to have been provided by **Viasa (Venezolana Internacional de Aviacion, S.A.)** and had even been painted in Carnival colors; however, that arrangement falls through. On June 23, service is inaugurated from Orlando to Islip, Ft. Lauderdale to San Juan, and West Palm Beach to New York (JFK). During the summer, B-737 pilots are trained for **Air Ukraine**.

During the fall, the airline introduces the world's first frequent flyer program for dogs and cats; for every 10 roundtrip flights an animal makes, accompanied by a fare-paying owner, the animal receives a free roundtrip ticket. The same provisions apply to humans not owning pets.

The airline becomes the official carrier for the Miami Heat professional basketball team. A B-737-201, painted with the team's logo and markings, is dedicated to transporting the players to and from their games. At the end of December, Carnival is the largest scheduled passenger airline based in Florida and plans are made to replace the **LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** connection with a **LADECO (Linea Aerea del Cobre, S.A.)** arrangement.

Customer bookings for the year move ahead by 29.4% to 1,399,000 and 6.09 million FTKs are operated. Revenues increase 35.4% to \$199.29 million, while expenses grow 38.3% to \$195.3 million. The operating surplus declines to \$3.91 million and the net gain slides to \$2.15 million.

The workforce stands at 1,300 in 1995, a 44.4% increase. The **LanChile Airlines (Linea Aerea Nacional, S.A.)** agreement ends in February, but a new code-sharing agreement is almost immediately signed with **LADECO (Linea Aerea del Cobre, S.A.)**. Prior to its inauguration, the U.S. carrier employs one of its B-737-225s to provide connecting "USAir Express" service on behalf of the Chilean line between Miami, Washington/Baltimore, and New York. Dual-designator service with LADECO officially begins on April 28 over the route and is provided daily by a CAL A300B4 wearing "USAir Express" colors.

Daily nonstop scheduled service begins on June 23 between New York and Nassau. During the summer, passengers presenting airport

ticket agents with a wedding certificate less than 60 days old are granted an automatic class upgrade. In August, partner **LADECO (Linea Aerea del Cobre, S.A.)** is taken over by former partner **LanChile Airlines (Linea Aerea Nacional, S.A.)**. Contact between LanChile and Carnival is, by necessity, resumed.

During the fall, the maintenance hangar is closed down at Miami (MIA) and repair and overhaul work is moved to the former **Federal Express** building at Ft. Lauderdale Airport.

When the winter vacation schedule begins in October, two B-737-4Q8s are leased from the Turkish operator **Pegasus Airlines (Pegasus Hava Tasimaciligi, A.O.)** and are sent to Miami wearing a hybrid color scheme.

A code-sharing agreement is initiated with **SAETA (SA Ecuatorianas de Transportes Aereos)** in November covering several services out of Miami. When Pat Riley transfers from the New York Knicks to become head coach of the Miami Heat, he finds the team plane inadequate. As a result, the previous aircraft is replaced with a B-727-225 similarly painted.

In December, service is inaugurated from Ft. Lauderdale and West Palm Beach to Hartford; from West Palm Beach to New York (JFK); from Ft. Myers to Islip; and from Newark (EWR) to Nassau.

Enplanements accelerate 39.2% to 1,948,000 while cargo skyrockets a remarkable 511.9% to 37.26 million FTKs. Revenues well exceed costs and allow the company to enjoy an operating gain of \$7 million and to post a net \$4.47-million profit.

The employee population is increased by 23.1% in 1996 to 1,600 as the 2 B-737-4Q8s from **Pegasus Airlines (Pegasus Hava Tasimaciligi, A.O.)** are retained.

In January, **LanChile's** B-757-2Q8 is dry-leased and employed to open a new dual-designator service with Carnival from Miami to Punta Cana, Dominican Republic, over the existing LanChile route that continues on to Santiago de Chile.

Martin R. Shugrue, principal in an effort to launch a new **Pan American World Airways (2)**, reaches a tentative agreement on July 17 to buy CAL for a price that includes \$100 million in cash and about half of Pan Am's stock. If consummated, the arrangement would, by use of CAL's papers, give the new Pan Am the necessary certificates to immediately begin flying again.

Also during the month, the carrier petitions the DOT for three weekly frequencies to Peru over a route from Ft. Lauderdale and Miami to Lima.

Two weeks later, on August 1, Carnival Chairman Wertheim calls off the tentative agreement with the new Pan Am, stating that he and Shugrue have been unable to come to terms for what would essentially be Carnival's sale.

The DOT, on August 16, fines Carnival \$10,000 for its failure to disclose the passenger facility charge in an ad promoting fares from Miami to New York. Payment of half the fine must be made immediately; however, the government agrees to suspend the remainder in a year if the airline commits no further violations.

On August 17, an A300B4 flight from Newark to Puerto Rico returns to its point of origin shortly after takeoff when a passenger finds a note warning that the plane is going to explode. An intensive search is made, no bomb is found, and the plane lands safely, where another search is conducted, still without finding an explosive.

On September 15, Carnival and **Paradise Island Airlines** enter into a five-year code-sharing agreement under which the latter cancels its participation in the "USAir Express" program, while adding more flights in cooperation with the potential Pan Am-2 merger partner. During the fall, CAL becomes the first low-fare carrier to offer cyber-fare deals over the World Wide Web.

Under the five-year, block-seat, dual-designator pact of September 15, Carnival and Paradise Island on November 15 increase the number of flights between Florida and Paradise Island, a Bahamian resort island. Paradise also adds connecting service from Ft. Lauderdale to Key West, from Miami to Ft. Myers, and from Orlando to Key West.

Former **Alaska Airlines** Chairman/CEO Raymond Vecchi succeeds Daniel Ratti as president/chief operating officer in December.

Customer bookings accelerate 12.8% to 2,197,000, but cargo is down by 12.6% to 32.58 million FTKs. Revenues rise 7.8% to \$263.51 million, but expenses jump 18.4% to \$281.01 million. The previous years gains are turned into losses: \$17.49 million (operating) and \$19.77 million (net).

The employee population is slashed 15.6% in 1997 to 1,350. Executive-class service replaces first-class service in January. The new product is marketed primarily to corporate passengers. In late winter, merger discussions with Shugrue of **Pan American World Airways (2)** resume as Shugrue once again seeks to accelerate his carrier's expansion plans.

After marathon negotiations on March 19–20, Shugrue is able to announce on March 21 that the new Pan Am will acquire CAL. Carnival's majority owner Mickey Arison will invest \$30 million in the combined company, thus gaining 42% shareholding. Chairman/CEO Wertheim resigns on April 17 and is succeeded by President Vecchi.

On May 22, the company's FunPass becomes a partner in Pan Am's WorldPass frequent flyer program. Carnival flight attendants vote to join the Association of Flight Attendants union on May 29. The next day, the two merging carriers agree to code-share flights as of May 30.

Consolidation and integration of the two companies occupies the remainder of the year. On July 8, Chairman Vecchi resigns to accept a senior executive position with **Northwest Airlines**; he is succeeded by former **Eastern Air Lines** Vice President Lee Steele.

On July 18, Carnival secures \$25 million in revolving credit to assist with the costs of the merger. The funds are guaranteed by **Pan American World Airways (2)** and Carnival's principal shareholder, Mickey Arison.

On September 4, the company inaugurates direct B-737-4Q8 services from MacArthur Airport in Islip, New York, and Southwest Florida International Airport at Ft. Myers via Orlando.

In early September, the DOT grants an exception to PAA-2 to complete its stock acquisition of Carnival even before the government completes its review of the merger of the two airlines.

The takeover by PAA-2 is officially completed on September 26, the first anniversary of the new Pan Am. The Articles of Merger are filed with the Florida Secretary of State. Meanwhile, Carnival Corporation Vice Chairman/Chief Financial Officer Howard Frank is elected to the board of directors of Pan Am Corporation. Plans are announced for the launch of a joint World Wide Web site later in the year.

Revenue figures are provided for Carnival's last three independent quarters. These show operating income down 1.3% to \$203.94 million, while expenses are up a huge 33.7% to \$283.67 million. The operating loss reaches \$79.73 million and a net \$82.35-million net loss is suffered.

By fall, the combined workforce has been reduced to the figure given above. Having encountered financial reversals, Pan Am in October grounds its long-haul Airbus A300B4 fleet and halts flights from New York to Los Angeles. Hereafter, it concentrates on operating its merged Pan Am and Carnival network of routes from the Northeast to Florida and the Caribbean.

With completion of the merger of the two carriers' reservations systems on November 16, both airlines operate all flights under the well-known "PA" code. Carnival, however, retains its DOT and FAA certificates.

Boardings through integration decline 5.1% to 2,085,000.

CAROLINA AIR TRANSPORT: United States (1933–1935). Joseph Musleh and George M. Keightly establish CAT at Greenville, South Carolina, in the spring of 1933 to offer all-cargo services to southeastern destinations. Keightly of Jacksonville, Florida, supplies the Ford Tri-Motor 4-AT-50 that he had acquired from the **Curtiss Flying Service of Boston (New England)** at the close of the previous year.

The Ford 4-AT-51 is purchased from **Curtiss Flying Service of New York** on April 7 and undergoes modification, including the fitting of a large cargo door built by the plane's manufacturer. With Musleh at the controls, the 4-AT-50 commences company revenue flights on May 15. When the aircraft enters service on November 10,

it is dedicated to the transport of a race horse on a special charter that continues until May 15, 1934.

CAT maintains services for two more years. The 4-AT-50 is lost in a landing accident at Asheville, North Carolina, on June 15, 1935, leaving the 4-AT-51 to soldier on until it is sold to two Pittsburgh brothers on July 1, 1936.

CARPATAIR (CARPATHIAN AIR TRANSPORT): 7 Rarier Lorand 40, Budapest, 1185, Hungary; Phone 373 (0422) 529 365; Fax 373 (0422) 529 367; Code KC; Year Founded 1999. Carpatair is set up at Chisinau in the spring of 1999 as the regional affiliate of **Moldavian Airlines**. Scheduled flights linking Moldavia and Budapest are operated with a Yakovlev Yak-40 wet-leased from the parent. A new hub is later established at Timisoara, Romania.

As **Crossair, Ltd.** continues to eliminate its SAAB 340A fleet, arrangements are completed by Carpatair in the spring of 2000 for the dry-lease of two of the Swedish-built turboprops. With the arrival of the second Swiss aircraft in June, new regional services are launched from Timisoara to the Italian cities of Bergamo, Verona, Treviso, Trieste, Bologna, and Firenze.

CARPATHIAN AIR TRANSPORT. See **CARPATAIR (CARPATHIAN AIR TRANSPORT)**

W. R. CARPENTER AND COMPANY (PTY.), LTD.: Australia (1934–1944). In the spring of 1934, J. R. Carpenter of the trading firm W. R. Carpenter and Company, Ltd. obtains a three-year New Guinea mail and passenger contract from the civil administration of the territory. After purchasing 1 de Havilland DH 84 Dragon and 2 DH 83s, Carpenter, flying under the trading house's name, begins service on August 1. The initial mail routes are Wau–Port Moresby, Bulolo–Wau, and Salamaua–Wau, Port Moresby, and Bulolo. Passengers and freight are soon carried from Salamaua and Lae to the mining towns of Wau, Surprise Creek, and Upper Ramu.

The air transport branch of W. R. Carpenter and Company is merged with **Pacific Aerial Transport (Pty.), Ltd.** on October 16, 1936 to form **Mandated Airlines (Pty.), Ltd.** The new entrant, a subsidiary of the trading company, obtains additional contracts, destinations, and a fleet comprising 3 Dragons, 3 Fox Moths, 1 Avro 642, 1 Australian-built de Havilland DH 50A, and 1 Fokker V-II.

W. R. Carpenter and Company prepares to resume aerial activities in 1938 when it obtains a five-year mail contract, separate from that held by **Mandated Airlines (Pty.), Ltd.**, and takes delivery of 3 DH 86Bs. The renewed operation begins weekly return flights from Sydney–Rabaul via Port Moresby and Salamaua on May 30.

Following the Japanese attack in December 1941, the carrier's DH 86Bs are taken over by the Royal Australian Air Force. Service is, however, maintained with 2 Lockheed Model 14H Super Electras. One is lost to enemy action. The W. R. Carpenter and Company mail route from Australia to New Britain via Papua expires on February 13, 1942. It is resumed on February 1, 1943, although Port Moresby is the northern terminus. The operation, flown by the carrier's one remaining aircraft, the L-14H *Coronia*, is suspended on March 16.

Following a year of contract work by the Lockheed, the assets of Carpenter's air transport division are acquired for A£44,000 by **Qantas Empire Airways (Pty.), Ltd.** in October 1944. The traders, however, still control its other subsidiary, **Mandated Airlines (Pty.), Ltd.**

CARSON HELICOPTERS: 32-H Bloomberg Glen Road, Perkaspie, Pennsylvania 18944, United States; Phone (215) 249-3535; Fax (215) 249-1352; Year Founded 1957. Carson Helicopters is established by Franklin Carson at Perkaspie, Pennsylvania, in October 1957 to offer passenger and freight charter and contract helicopter services within the eastern U.S. Operations commence in April 1958.

By the middle to late **1980s**, Carson has been renamed and acquired a large rotary-wing fleet of Sikorsky S-61s and S-58Ts. President Carson's operation continues in **1994** with 2 S-58Ts and 3 S-61Ns. By **1998–1999**, the fleet has been altered to include 6 S-61Ns.

The **2000** fire season is the worst in the U.S. West since 1994, with over 67,000 fires consuming in excess of five million acres in Washington, Oregon, California, Idaho, New Mexico, and Montana by mid-summer.

Spectacular fires first grasp the attention of world viewers in May and June when television networks picture the huge fires raging through New Mexico, including the Los Alamos area where a nuclear facility is located. The Cerro Grande fire consumes over 47,650 acres of federal forest and wildlands in the Bandelier National Monument while the stubborn Viveash fire in Santa Fe National Forest burns over 30,000 acres. Carson is 1 of 10 civil helicopter operators assigning assets to the blazes; its S-61s first battle the New Mexico blazes before moving on to other states as the summer fires spread.

CARVER AERO: 5701 Grandview Ave., Muscatine, Iowa 52761, United States; Phone (319) 263-8672; Fax (319) 263-8693; Year Founded 1951. Carver is established in **1951** as the FBO at Muscatine Municipal Airport in Iowa. Over the next 46 years, the company also branches out into the executive and the small group passenger charter business. By **2000**, the company employs seven full-time pilots and operates from three locations in Iowa and one in Illinois.

A Beech 58 Baron is flown from Muscatine, a Piper PA-23 Aztec is based at Clinton, and the largest contingent in the state is housed at Davenport. Here Carver maintains 1 each Beech King Air 90 and King Air 100, 1 Piper PA-31-310 Navajo, and 1 PA-32 Cherokee Six. A Baron is also operated from Moline.

CASAIR (CASAIR AVIATION, LTD.): United Kingdom (1980–1988). Established at Teesside Airport as a charter operator, Casair, Ltd. at first supports the England–Scotland commuter network of **Genair, Ltd.** After the failure of that small carrier, Casair takes over its scheduled network in **1982**. Employing a fleet comprising 2 Cessna 404 Titans and 1 Piper PA-31-350 Navajo Chieftain, services are maintained linking the company base with Glasgow and Humber-side. A number of flights are undertaken in conjunction with **Air Ecosse, Ltd.**

In **1986**, Managing Director Jack Cassidy adds a Piper PA-23 Aztec to the fleet to assist with air ambulance and air taxi portion of the business. Another Cessna 404, a second Navajo Chieftain, and a Twin Commanche are purchased in **1987** as Aberdeen, Belfast, and Manchester join the route network.

Overextended in a time of airline recession, the carrier is forced to shut its doors in March **1988**. Efforts to reestablish are unsuccessful.

CASCADE AIRWAYS: United States (1969–1986). Cascade is established at Spokane on April 1, **1969** to provide scheduled commuter service to points in the Pacific Northwest. Founder Mark M. Chestnut is named president. Over the next year, the carrier is organized and a fleet of Beech 99s is assembled.

Revenue flights commence on May 24, **1970** over a Spokane–Seattle route. Operations continue apace in **1971–1972** as service is also extended to Yakima and Wenatchee. A mail service is introduced connecting Spokane with Portland via Pasco.

In **1973**, officials report their boardings up by 12% and freight by 63%. The number of scheduled flights climb by 7% and the completion factor is 96.7%. Enplanements are 87,630 in **1974**.

The workforce in **1975** is 126 and the sixth Beech 99 is acquired, painted in the company's new livery and logo. A lease is for the use of the computerized reservations system of **Braniff International Airways** is undertaken. On behalf of **Hughes Airwest**, replacement flights are inaugurated to Pullman and Moscow and to Walla Walla. Passenger boardings jump 31% to 126,832.

Operations continue apace in **1976** and fleet now includes 11 Beech 99s and 2 Swearingen Metro IIs. Enplanements for **1977** total 152,123.

Airline employment is increased 48.2% in **1978** to 295. In November, the routes of **Columbia Pacific Airways** are purchased and merged.

Bookings for the year total 217,952, a 43% increase, and freight traffic accelerates 31.5% to 656,000 FTKs. Still, a \$21,000 net loss is suffered.

The number of employees is increased 19.4% in **1979** to 339. The fleet now comprises 10 Beech 99s and 3 Embraer EMB-110 Bandeirantes. Orders are placed for 2 BAC 1-11s and 4 British Aerospace BAe (HS) 748-B2s, marketed by its builder as the Intercity 748.

Passenger boardings rise to 305,404, a 40% boost, and cargo is up 21.4% to 797,000 FTKs. On revenues of \$12.17 million, expenses jump 48.4% to \$12.56 million. The operating loss is \$431,000 and the net decline grows to \$350,000.

Despite its certification as a large regional carrier under terms of the CAB's new airline classification scheme in **1980**, passenger boardings drop by 8% to 280,865. Freight, on the other hand, accelerates by 3.2% to 822,024 FTKs. Sixty employees are laid off, despite the cargo growth and a \$10,085 operating profit.

As the situation begins to improve in **1981**, the workforce is increased by 1.5% to 347.

As the result of a premature descent, Flight 201, a Beech 99A with two crew and seven passengers en route from Moses Lake to Spokane on January 20, crashes into a 2,646-ft. high hill 3 mi. from the runway (seven dead).

During the remainder of the year, 2 British Aerospace BAe (HS) 748-B2s are acquired, with orders outstanding for 2 more. Frequencies are initiated to the Montana cities of Butte and Missoula.

Customer bookings plunge 16.2% to 235,268 and only 95,000 FTKs are operated. Operating income rises 2.4% to \$15.62 million and expenses grow only 0.1% to \$15.24 million. As a result, the operating profit improves to \$376,000 and net income jumps to \$1.92 million.

The workforce in **1982** totals 347 and the fleet consists of 2 British Aerospace BAe (HS) 748-B2s, 4 Swearingen Metroliners, 2 Embraer EMB-110s, and 7 Beech 99s. The carrier begins replacement service to Yakima in February on behalf of **Republic Airlines**.

Enplanements begin to surge, rising 29.8% to 305,412. Freight traffic is also up, by 19%, to 822,387 pounds.

The payroll grows to 367 in **1983**. As preparations are made for the acquisition of new equipment the following year, 1 Bandeirante and 5 Beech 99s are replaced by 2 Fairchild-Swearingen Metro IIIs.

Boarding figures are up 14.5% to 349,776 and cargo increases 58.2% to 189,889 FTKs. Revenues total \$35 million.

In **1984**, 1 Metro III arrives in early spring, while the first 3 of 5 new Beech 1900s to enter service during the late spring and summer is delivered in May, followed by a fourth in June.

In July, 2 BAC 1-11-401s arrive from **Bahamasair, Ltd.**, along with 3 leased BAC 1-11-201s operated by **Pacific Express**. Eleven-times-per-week service linking Spokane and Olympia is now begun, with stops at the Tri-Cities Airport that services Pasco, Richland, and Kennewick.

Although enplanements jump 11.3% to 389,279, cargo plunges 18.7% to 1.05 million pounds.

In June **1985**, the company's stock is largely acquired by Sarasota, Florida-based Aerospace Leasing Company, which outlines new plans for route and fleet expansion, a broader service territory, and an Oregon mini-hub. Among the ideas are hopes that, within six months of the takeover, the BAC 1-11s will be phased out and replaced by an equal number of Boeing 737-200s. An effort is made, beginning in August, to sell the carrier to major rival **Horizon Air**.

At this point, the carrier is so cash-poor that Beech Acceptance Corporation is forced to step in and repossess the 6 Beech 1900s so far delivered. This dreaded step pushes Cascade into Chapter XI bankruptcy on August 19 and, henceforth, its traffic figures plunge. In September, service is suspended to several communities and 80 employees are laid off.

As discussions with **Horizon Air** continue, Horizon takes over operation of Cascade's 2 BAC 1-11-401s and provides certain cash infusions. The government repossesses the 2 BAe (HS) 748-B2s purchased years earlier with FAA-guaranteed loans.

As a result of good bookings during the first 8 months, the year's overall enplanements advance 4.6% to 323,472, although cargo is off 0.1% to 1.05 million FTKs.

On January 31, 1986, a day after the DOT approves the merger, **Horizon Air** pulls out of the arrangement, citing certain government-imposed competitive restrictions as the reason. All Cascade services are ended on March 7 after Beech repossesses 6 of its 1900s from the Spokane-based regional.

Unable to find new financing, the carrier files for Chapter VII liquidation in April. The last remaining assets of the once-viable regional are sold at public auction on September 17, with the bankruptcy judge approving the use of the proceeds to settle accounts with Cascade's creditors.

CASEMENT AVIATION: United States (1965-1969). Robert W. Sidley sets up Casement as the FBO at Painesville Airport in northeast Ohio. During the summer of 1965, the decision is taken to offer daily scheduled roundtrip shuttles to Cleveland. Employing Cessna light-planes and a refurbished Lockheed Model 10A Electra, revenue frequencies are inaugurated on July 29 and are maintained into 1969.

CASINO AIRLINES: 1500 Airport Dr., Suite 155, Shreveport, Louisiana 71107, United States; Phone (318) 227-2121; Fax (318) 424-0000; <http://www.shreve.net/casinoair>; Code CALA; Year Founded 1996. CA is set up at Shreveport in April 1996 to operate passenger services under the direction of founder David Belcher. Operations are not immediately begun. Brad Galbraith becomes president in the fall, with Lewis McPherson as chief financial officer. All three men and two others are the company shareholders.

Plans and the permits required for a launch of scheduled service are finished and acquired during the fourth quarter of 1997. A workforce of 42 is assembled, along with a pair of used, but owned British Aerospace BAe Jetstream 31s. The latter commence daily return services to Baton Rouge and to Dallas (DAL) on December 16.

A third Jetstream 31 arrives in February 1998. The company unsuccessfully bids to take over the Essential Air Service routes of **Aspen Mountain Air**, losing out to **Big Sky Airlines**. Still, a total of 3,000 passengers are flown during the year.

Service is maintained in 1999-2000.

CASINO EXPRESS: 976 Mountain City Highway, Elko, Nevada 89801, United States; Phone (702) 738-6040; Fax (702) 738-1881; <http://www.redlioncasino.com/CasinoExpress>; <http://travelgazette.com/casair1.htm>; Code XP; Year Founded 1989. Previously under contract with **Spirit of America Airlines**, the Red Lion Inn and Casino of Elko, Nevada, elects in early 1989 to provide its own air service. The casino owns a Boeing 737-214, the *King of Hearts*, whose green tail has the face card painted on it, that has been employed by the contractor for Reno-bound charter flights.

Spirit of America Airlines hands off the airliner in July and through the year's second half, the 46-employee casino airline division, under General Manager Bud Phillips, transports a total of 54,956 passengers. Revenues total \$3.84 million, but costs are high and an operating loss of \$439,000 is suffered.

Airline division employment is increased by 4.3% in 1990 to 48 as passenger boardings increase to 87,000. Revenues increase 69.8% to \$6.51 million, expenses explode by 95% to \$8.34 million, and the operating loss worsens to \$1.82 million. The net failure is \$1.74 million.

Certification is received for scheduled service on July 11, 1991. On August 1, to settle charges that it has operated gambling junket flights in violation of the DOT's charter rules for the past two years, the parent Red Lion Inn and Casino agrees to pay a \$40,000 penalty and of-

fer cash refunds to hundreds of passengers. Had it not settled under the consent order, the organization could have faced a \$300,000 civil penalty.

Despite the recession and fine, this is a very good traffic year for the specialty carrier as customer bookings accelerate 32.8% to 115,532. The financial picture is not nearly as bright. Although revenues are up 30.2% to \$8.48 million, expenses swell 25.4% to \$10.46 million and guarantee an operating loss of \$1.97 million. The net loss moves up to minus \$1.91 million.

Although enplanements continue to multiply in 1992, finances continue their deterioration. A second B-737-200, a Dash-282A with the face of the *Queen of Hearts* displayed on its red tail, joins the fleet during the fall.

The 48-employee Nevada-based charter operator flies 156,000 passengers, a 35.7% increase. Although revenues ascend 18.8% to \$10.08 million, expenses jump 18.2% to \$12.36 million and cause an operating loss of \$2.28 million. The net loss deepens to \$2.23 million.

The workforce is increased by 9.8% in 1993 to 90 as customer bookings shoot up to 269,266. Revenues increase 46.3% to \$14.82 million, but expenses grow by 55.3% to \$16.09 million and cause an operating loss of \$1.26 million. The net loss grows to \$4.53 million.

Airline employment falls 11.1% in 1994 to 80. A third B-737, a Dash-2P5A, is chartered from Polaris/GE Capital in the summer; painted in a blue and white livery with the *Ace of Clubs* on its tail, the airliner begins flying services on behalf of **Turks and Caicos Airways, Ltd.** between that Caribbean island destination and Miami. Following its certification check in September, the red fuselage top paint scheme of the *Queen of Hearts* is exchanged for white.

Enplanements through September total 198,506 and revenues for the whole year increase by 5.6% to \$15.4 million. Expenses decline 4.2%, but still total \$17.62 million. Consequently, there is an operating loss of \$2.22 million and a net downturn of \$4.53 million.

The workforce is increased by 27.5% in 1995 to 102 but the leased B-737-2P5A *Ace of Clubs* is returned. The company's planes fly a total of 205,000 passengers, a 1.9% decline. Costs again exceed operating income and losses, although down, are still suffered: \$1.64 million (operating) and an equal \$1.64 million (net).

The employee population remains the same in 1996, but customer bookings inch up 1.5% to 208,000. Revenues move up 0.3% to \$16 million and expenses fall 7.3% to \$16.31 million. The fiscal picture brightens as an operating loss of \$310,000 and a net \$309,000 loss are reported.

The workforce is reduced by 21.6% in 1997 to 80. Destinations now visited include Cedar Rapids, Elko, Eugene, Kalispell, Lewiston, Omaha, Salt Lake City, San Jose, Santa Maria, Seattle, Springfield, Wichita, and Wichita Falls.

Passenger boardings rise 3.8% to 216,000. Unhappily, operating revenues climb just 2.2% to \$16.34 million, while expenses are up 16.5% to \$19 million. The operating loss worsens significantly, rising to \$2.65 million. The net loss is just as bad, hitting the same \$2.65 figure.

Service is maintained without fanfare in 1998. Customer bookings decline 13.9% to 205,000 and revenues are down 8.2% to \$15 million. Although expenses are down by 16.6%, they still total \$15.85 million. The bottom line remains black, but "improves"; the operating loss is \$848,000 and the net downturn is also \$848,000.

Arrangements are completed in late spring 1999 to lease 85% of the seats aboard the carrier's B-737-214 to start-up **Tahoe Air**. The aircraft is painted in Tahoe colors and allows the company to launch services on July 1.

Customer bookings accelerate 18.5% to 243,000.

During the first quarter of 2000, the B-737-282A *Queen of Hearts* is repainted; wearing the colors of the affiliated Red Lion Hotels and Inns, the plane is rechristened *Red Lion-I*.

The B-737-214 *King of Hearts* is withdrawn on August 1 and sold for scrap.

CASPAIR AIR CHARTERS, LTD.: Uganda/Kenya (1963–1979). Following the reformation of **Campling Bros. & Vanderwal, Ltd.** into **Safari Air Service, Ltd.** in early 1963, the subsidiary, **Caspar Air Charters & Agencies, Ltd.**, the majority of which has also been sold to Blackwell Enterprises, is likewise renamed, becoming Caspair Air Charters, Ltd.

Maxwell Dove becomes general manager of the renamed concern, which continues basing at Entebbe. Plans are immediately made to upgrade the fleet of his 17-employee company with 2 de Havilland DH 89A Dragon Rapides and 5 small Cessnas.

During the remainder of the year and into early 1964, 2 new C-206 Super Skywagons, 2 more C-182s, and another C-150 are acquired. With these additions, Caspair is able to retire its last Dragon Rapide in March.

In cooperation with **East African Airways Corporation (EAAC)**, scheduled service continues to be offered between Entebbe and Mwanza via Bukoba in addition to a variety of nonscheduled bush operations, including stops at Ukerewe Island and Geita.

Considering the company to be a security risk, the government of Uganda shuts the airline down in 1965; all but one aircraft are flown to Nairobi, where a new base is established at Wilson Airport. Although one Rapide remains available, the mainline Cessna flies a total of 3,150 passengers on the year.

Operations continue apace during the remainder of the decade and into the early 1970s. During these years, W. J. Cardwell becomes general manager and new routes, again, in cooperation with EAAC, are opened from Nairobi to Kisumu via Kericho, and from Musoma to Bukoba via Mwanza.

Investco Africa purchases the concern in 1972. During the middle part of the decade, the fleet comprises 1 each Cessna 401, 1 Britten-Norman BN-2 Islander, 1 Douglas DC-3, and 1 Hamilton Westwind 3. Two more Douglas transports are acquired from EAAC in 1977, just before its failure. Flights continue in 1978–1979 and, during July of the latter year, the carrier is reformed into **Sunbird Aviation, Ltd.**

CASPAR AIR CHARTER & AGENCIES, LTD.: Kenya/Uganda, (1946–1963). Keith Campling establishes, with his brothers, an FBO at Nairobi West Airport in 1946, together with a flight school and a lightplane charter service. In addition to **Campling Bros. & Vanderwal, Ltd.**, this sight-seeing service, **Caspar Air Charter & Agencies, Ltd.**, is formed as a subsidiary to offer flights around Lake Victoria from bases both at Nairobi and at Entebbe, Uganda. Revenue flights commence with 2 Piper J-3 Cubs and 1 PA-12 Super Cruiser.

During the early 1950s, several de Havilland DH-89A Dragon Rapides are acquired and they begin twice-weekly roundtrips linking Nairobi and Entebbe with Bukoba and Mwanza. If there is demand, stops can be arranged at Ukerewe Island and Geita. The latter two points are dropped when, in cooperation with **East African Airways Corporation**, the route becomes scheduled in 1957.

By the start of the 1960s, the fleet includes 2 Dragon Rapides, 2 Cessna 180s, 2 C-182s, and 1 C-150. Yugoslav-born Zivota Boskovic is chief pilot and one of four directors, with L. K. Campling, F. K. Campling, and H. van der Wal.

In June 1963, 77% of the company is sold to New York-based Blackwell Enterprises for £120,000. Chief pilot Boskovic moves across the airport to form his own airline, now known as **ZB Air, Ltd.** Blackwell reforms Campling into **Safari Air Service, Ltd.**, but leaves intact the Entebbe-based portion of the Caspar subsidiary.

CASPIAN AIRLINES: Enghiab Ave., Kaledge, Apt. No. 1020, Tehran, Iran; Phone 98 (2) 451-4702; Fax 98 (2) 67-8547; Code CPN; Year Founded 1993. Iranian and Russian businessmen establish Caspian at Tehran in 1993 to offer domestic services. M. Rajabian is named president and he begins revenue operations with 3 leased Yakovlev Yak-42Ds and 1 Tupolev Tu-154M.

Invisible service is maintained in 1994–1999, with enplanements of 191,000 reported in 1998.

While taking off from Tehran on August 29, 2000, two tires burst on the Tu-154M. The aircraft circles for three hours burning off fuel and then completes a safe emergency landing back at its point of origin.

CASSOVIA AIR: Slovakia (1991–1994). Cassovia is established at Bratislava in 1991 to offer regional charter services with a single Beech Super King Air 200. In late 1993, a British Aerospace BAe Jetstream 31 is ordered for a planned new scheduled route between Kosice and Vienna and Munich. Operations cease in 1994.

CASTLE AVIATION: Portage County Airport, 8101 State Rte. 44, Ravenna, Ohio 44266, United States; Phone (330) 296-5563; Fax (330) 296-2265, Year Founded 1984. Castle is established by Michael Grossmann at Ravenna, Ohio, in 1984 to provide executive and small group passenger charters as well as express cargo services in the U.S. east of the Mississippi River.

By 2000, Castle employs four pilots and operates 1 each Grumman 690A Turbo Commander, Piper PA-31-325 Navajo, and PA-60 Aerostar in passenger configuration and 1 each Navajo, PA-31-350 Navajo Chieftain, PA-32 Cherokee Six, and Cessna 208B Caravan I strictly for freight.

CAT (CORPORACION DE AERONAUTICA DE TRANSPORTES, S.A.): Mexico (1929–1932). Los Angeles banker Theodore Hull, who is also a private pilot, sets up his airline at El Paso in early 1929. With 2 Ryan B-1 Broughams and ex-major Bernard Law as managing director, CAT initiates service on March 9 over a route from Brownsville to Matamoros; this service is soon extended to Mazatlan on the Pacific coast via Torreon.

Three \$18,500 Lockheed Model 5 Vegas are now delivered to new company headquarters at Torreon and a number of pilots are employed, including four who later become widely known: Lowell Yerex, Gordon Barry, Paul Braniff, and Wiley Post. On August 11, an 1,104-mile route is opened from El Paso to Mexico City via Chihuahua, Torreon, Zacatecas, and Aquascalientes.

The fleet is increased in 1930 as 7 additional Vegas, a Bellanca P-200, and a Bach 3-CT-6 Air Yacht are purchased; the initial Ryan Broughams are lost in crashes in the Sierra Madre. Enplanements total 2,283.

Founder Theodore Hull is killed in the crash of a new Bellanca in Pennsylvania on November 25, 1931. Despite the company's success in transporting nearly 4,500 passengers on the year, Managing Director Law is unable to keep the carrier going and it ceases operations on February 9, 1932.

CAT CAY AIRLINES. See **SOUTHEAST AIRLINES**

CATA LINEA AEREA SACIFI, S.A.: Argentina (1989–1993). Roque Publiese's Moron-based air taxi CATA is upgraded at Buenos Aires in 1989 to provide scheduled, third-level commuter service. A pair of former **Horizon Airlines** Fokker Fairchild F-27Js are purchased and placed into service to Iguazu and Bariloche.

The fleet grows to comprise, by 1992, 4 Fokker-Fairchild F-27Js, 1 Israeli Aircraft Industries IAI Arava 102, and 2 Aero Commander 690s. Passenger flights continue to be undertaken from Buenos Aires to Bariloche, Viedma to Buenos Aires, and Viedma to Bariloche.

In 1993, the company is renamed **LASA (Linea Aerea Sacifi, S.A.)**.

CATAIR. See **COMPAGNIE D'AFFRETEMENTS ET DE TRANSPORTS AERIENS, S.A.**

CATALINA AIR LINES (1). See **AVALON AIR TRANSPORT; AERO COMMUTER AIRLINES**

CATALINA AIR LINES (2): United States (1955–1959). Catalina is established at Long Beach, California, in the spring of 1955 to provide scheduled Douglas DC-3 and de Havilland DH 104 Dove passenger and cargo service to Catalina Island. The company should not be confused

with the renamed **Avalon Air Transport**. Revenue flights commence on May 1 and continue until the company goes out of business on May 1, 1959.

CATALINA AIRLINES (3): United States (1978–1981). Catalina Airlines is established at Long Beach in mid-1974 to provide scheduled passenger and commuter flights to San Pedro and Catalina Island. Grumman Goose frequencies commence in July and continue into 1978 when the company is reformed into a scheduled helicopter carrier. Rotary-wing flights are begun to Avalon on Catalina Island with a fleet of 2 Sikorsky S-58Ts and 2 Bell 206s. Enplanements reach 58,383 in 1979, the first full year of service.

Recession and higher fuel costs cause significant decline in 1980. Passenger boardings plunge downward by 49.7% to 38,945 and cargo falls 15.9% to 257,146 pounds.

After operating only into February 1981 and flying 3,183 passengers, the fiscally depleted California helicopter carrier goes out of business on February 22.

CATALINA AIR TRANSPORT: United States (1941–1942). Originally formed as **Wilmington-Catalina Air Lines** in 1931, this Douglas Dolphin operator changes its name on March 29, 1941. On July 22, the CAB changes the route certificate making Los Angeles the main terminus with Long Beach and Wilmington as intermediate stops.

Work is begun on the creation of a landplane airport at Avalon and orders are placed for two Lockheed Model 18 Lodestars. The transports, however, are needed for the British war effort and are not delivered. Meanwhile, the company's two Dolphins continue to operate twice daily the 31-mile scheduled route—the industry's shortest. Enplanements for the year total 31,164.

Operations cease due to wartime restrictions on September 3, 1942 and the Dolphins are transferred to the U.S. Army Air Forces. In 11 years of operation under two names, the company has made 44,000 trips and transported just over 300,000 passengers.

CATALINA CHANNEL AIRLINES: United States (1958–1965). CCA is established at Long Beach on December 26, 1958 to offer scheduled passenger flights to Avalon, which is located on Santa Catalina Island, 32 miles offshore. Revenue flights are inaugurated during the first week of January 1959, employing Grumman G-21 Goose amphibians. Charters are also available.

Operations continue without change until 1965 when the mainland base of operations is shifted to San Pedro and the company is renamed.

CATALINA FLYING BOATS: 3215 East Spring Street, Long Beach, California 90806, United States; Phone (310) 595-5080; Fax (310) 990-0777; Year Founded 1993. Steve Franklin sets up CFB at Long Beach in 1993 to provide all-cargo services around the Los Angeles area and to Santa Catalina Island. Revenue flights begin and continue with 3 Beech 18s and 2 Douglas DC-3 freighters.

CATALINA SEABOARD AIRLINES: United States (1983–1985). Catalina Seaplanes is reformed and renamed on December 21, 1983. Employing a Piper PA-31-310 Navajo, the airline links its Orange County base with Santa Catalina, Bullhead City, and Bermuda Dunes.

Operations continue apace in 1984; in 1985 the company is renamed **California Seaboard Airlines**.

CATALINA SEAPLANES (1): United States (1965–1983). Catalina Channel Airlines is relocated to San Pedro in 1965 and renamed Catalina Seaplanes, doing business as **Air Catalina**. Scheduled passenger operations between the California coastal city and the island town of Avalon, which is 32 miles out to sea on Santa Catalina Island, are maintained without much fanfare with Grumman G-21 Geese. Charters are also available.

In 1978, the year of the Airline Deregulation Act, the carrier's 3 Geese board a total of 87,000 customers. Costs begin to accelerate in 1979 and bookings fall by 13.9% to 77,000. Freight, on the other hand, climbs 17.3% to 306,000 pounds.

Operations continue apace during 1980–1985; however, traffic figures are not released in these years. On December 21 of the latter year, the company is renamed **Catalina Seaboard Airlines**.

CATALINA SEAPLANES (2): United States (1983–1984). A second Catalina Seaplanes is reformed from the amphibious assets of the first during November 1983. The Grumman Geese, joined by a Cessna 421, maintain services between Long Beach, Avalon, and Santa Barbara for just over a year before the company ceases in December 1984.

CATALINA-VEGAS AIRLINE: United States (1964–1981). Catalina-Vegas is set up at San Diego, California, in the early fall of 1964 to provide seasonal scheduled passenger and cargo flights to Catalina Island and to Las Vegas. Beech 18 and de Havilland DH 104 Dove services commence on October 1 and continue until the company goes out of business in 1981.

CATAWBA AIR TRANSPORT: United States (1972–1991). CAT is established at Charlotte, North Carolina, in 1972 to provide daily round-trip air taxi flights to Wilkesboro via Hickory. Cessna lightplane revenue frequencies are duly inaugurated, but because of energy costs cannot be maintained beyond 1973.

Charter flights are, however, continued for the next 15 years and, in 1987, Catawba resumes a limited schedule of air taxi flights to Hickory. The company ceases operations in 1991.

CATHAY PACIFIC AIRWAYS (PTY.), LTD.: Swire House, 9 Connaught Road, Central Hong Kong, Hong Kong; Phone 852 747-5000; Fax 852 845-2039; <http://www.cathaypacific.com>; <http://www.cathay-usa.com>; Code CX; Year Founded 1946. Having returned to the U.S. after V-J Day in September 1945, Roy Clinton Farrell, like many other ex-G.I. flyers, has dreams for his own air service. He joins with four other **China National Aviation Corporation (CNAC-1)** veterans, Millard Nasholds, Bob Russel, Bill Geddes-Brown, and Australian Sydney de Kantzow, to purchase a war-surplus Douglas C-47 for \$30,000 from the War Liquidation Commission.

Christened *Betsy*, in December the plane acquires a cargo of toothbrushes and tuxedos and departs with it for China via Miami, Recife, Dakar, Karachi, Calcutta, Kunming, and Kweilin. The *Betsy* arrives at Shanghai on January 6, 1946, following a 26,000-mi., 26-day flight.

Farrell decides that the future lies in flying cargo from China to Australia and, on February 4, the *Betsy* ferries a load of freight down to Sydney via Hong Kong. Joined by de Kantzow, the American pilot forms the Roy Farrell Export-Import Company, Ltd. in Sydney on March 11 to legitimize the operation. Nonscheduled roundtrips between China and Australia continue.

Farrell and de Kantzow are forced by political unrest to flee the mainland to Hong Kong's damaged Kai Tak airfield in May. There they hold a number of meetings with journalist colleagues to discuss future possibilities. It is decided to form a real Hong Kong-based air cargo concern. The group subscribes capital of HK\$5 million, purchases a second Douglas transport (the *Nikki*), and formally incorporates its airline at Hong Kong on September 24. The registration fee is HK\$1 for each aircraft.

Nonscheduled service is now extended to Manila, where, legend has it, the company's name, Cathay Pacific Airways, is created by Farrell and several journalists at the bar of the Manila Hotel. The fleet is increased by the addition of 4 more war-surplus C-47s and several Consolidated PB5Y-5A Catalina flying boats.

One of the latter evacuates the Vietnamese emperor Bao Dai from Tourane, now Da Nang, at month's end. In November, 2 Avro Ansons are acquired and employed to ferry fish from Hong Kong to Malaya and Burma.

On January 5, 1947, Farrell and de Kantzow open a new DC-3 route across the harbor to the new grass landing field at the racetrack at Macau. The inaugural flight is something of an embarrassment as the Douglas, on final approach, hits the retaining wall of a water reservoir, loses its landing gear, and must execute a belly landing. When the dust settles, the pilots step out onto a red carpet which leads to a reviewing stand where dignitaries are waiting to give speeches before a large crowd.

It is thereafter decided to operate what will prove to be a profitable "gold run," twice-daily Catalina Hong Kong to Macau service. Additional frequencies are available on demand.

With support and equipment from **British Overseas Airways Corporation (BOAC)**, **Hong Kong Airways (Pty.), Ltd.** is set up on October 22 to feed traffic coming out of China to the British flag carrier at the crown colony's airport. Another purpose is to regain commerce lost to **Pan American Airways (PAA)** via its subsidiary **China National Airways Corporation (CNAC-1)**. Outfitted with Douglas DC-3s from BOAC, HKA inaugurates twice-daily service to Shanghai on December 2.

Twice-daily frequencies are initiated by HKA on January 10, 1948 between Hong Kong and Canton. While on a fish flight, a Cathay Avro Anson crashes in Burma on February 9. Meanwhile, the new HKA route proves so rewarding that it is doubled to four times per day on March 22. Later in the spring, HKA begins flights to Manila and a spirited competition is undertaken with Cathay.

On July 1, the 3 Cathay flying boats are transferred, for financial reasons, to a subsidiary, the Macao Air Transport Company, Ltd.

Ten minutes out en route from Macao to Hong Kong on July 16, a four-man robbery team seizes the company's Consolidated PB5-A *Miss Macao*, with 3 crew and 26 passengers, killing pilot Dale Cramer and his copilot. Their bodies jam the controls forcing the aircraft to crash in the Pearl River estuary 10 mi. NE of the twin-engine aircraft's point of origin. The lone survivor of the wreck is one of the pirates, who survives long enough to tell the story of what has been labeled the first nonpolitical skyjacking (actually, it is second after the 1932 **Panair do Brazil, S.A.** incident) and the first crash during an airline hijacking. The scheduled Macao to Hong Kong service is suspended.

Later, with considerably less fanfare, new DC-3 services begin to Singapore and Bangkok. Late in the summer, Hong Kong's British administration enacts legislation requiring local financial participation in foreign-owned companies based in the Crown Colony. Cathay's owners are notified that, unless their interest is reduced to just 10%, the airline's landing rights will be cancelled.

On October 18, **Australian National Airlines (Pty.), Ltd.** and the old and established Hong Kong-based *hong*, or trading house, Butterfield and Swire, Ltd., acquire 80% shareholding and the 6 DC-3s and 3 PB5s, leaving Farrell (operating as Cathay Holdings) and de Kantzow with 10% shareholding each. John K. Swire is named chairman. Cathay Pacific Airways (Pty.), Ltd. is formally registered the same day, with nominal capital of HK\$10 million.

To handle the airline's logistics and repairs, Cathay's owners establish the Pacific Maintenance and Supply Company (Pty.), Ltd. (PAMAS) on November 4.

A DC-3, coming into Hong Kong from Manila on February 24, 1949 with 23 aboard, crashes while attempting to land and burns; there are no survivors.

On May 13, the Hong Kong government, acting on orders from the Colonial Office in London, divides the routes emanating out of Hong Kong between HKA and Cathay. The BOAC-supported company receives all of those to the north, except Manila, which it must share with Cathay.

Cathay places its first DC-4 into service on September 23, joining the 5 remaining DC-3s in the fleet. The four-engine Douglas transport is employed to inaugurate services to Saigon on November 2 and to Hanoi and Haiphong on November 12.

When the forces of Mao Tse-tung take power in China, they order all Chinese contact with the West be severed, including HKA services. As a result, BOAC, on November 30, sells its stake to Jardine, Matheson. The new owners sell the Douglas transports and consider new services.

By January 1950, **Hong Kong Airways (Pty.), Ltd.**, which had once aspired to a large area of operation, is reduced to a single route to and from Taipei, Formosa, with a Curtiss C-46 Commando leased from **The Flying Tiger Line** and a DC-4 chartered from **Northwest Airlines**. This service is the company's entire business for the next five years. Cathay, on January 5, initiates frequencies to Sandakan, Labuan, and Jesselton in British North Borneo. Rangoon and Calcutta also become DC-4 stops during the first quarter. In April, shareholder de Kantzow reduces his stake to just 5%; Cathay Holdings retains 10%, with Swire and ANA owning the rest.

Economics dictate that HKA seek avenues of cooperation with its former rival. On November 23, it merges its own Jardine Aircraft Maintenance Company (Pty.), Ltd. with PAMAS to form Hong Kong Aircraft Engineering Company (Pty.), Ltd. (HAECO), which becomes one of the world's best known aviation support organizations during the next half-century.

Late in the year, Cathay founder Farrell sells his interest and returns to the U.S. Meanwhile, the airline acquires another DC-4.

In April 1951, cofounder de Kantzow departs to his Australian home, even as the four-engine Douglas opens a route to Singapore via Saigon. Shareholding is again rearranged. The Butterfield and Swire interest is placed in control (66%), ANA's percentage drops dramatically (to 14%), and the Peninsular & Oriental Steam Navigation Co. becomes the chief minority shareholder (30%).

Service continues apace in 1952 and, on May 23, 1953, the Manila route is extended to Labuan and North Borneo while new services are started westward to Bangkok, Rangoon, and Calcutta.

As the First Indochina War reaches a conclusion in early 1954, Cathay finds it increasingly difficult to conduct its operations. In April, the company suspends flights to Haiphong and Hanoi. The Geneva accords take effect on July 21, dividing North and South Vietnam; political and military tensions in the area are high.

Mistaken for a Nationalist Chinese aircraft, the leased DC-4 piloted by Capt. Cedric Carlton and with 18 aboard, while en route from Bangkok to Hong Kong, is shot by Red Chinese MIG-15s on July 23, and forced to ditch in the South China Sea off Hainan Island (2 dead). A Grumman Albatross from Clarke AFB at Manila rescues seven people and eight are still missing when the U.S. rescue operation is broken off due to its proximity to the Chinese mainland.

A week later, Peking radio admits the attack was a mistake and offers compensation to victims or their families. DC-4 services are now suspended until August 12 when a replacement aircraft, leased from **Canadian Pacific Air Lines, Ltd. (CPAL)**, becomes available. During the stand-down, it is announced that flights to North Borneo will be suspended.

In October, longtime competitor **Hong Kong Airways (Pty.), Ltd.** orders a pair of Vickers Viscount 760Ds, while its Curtiss lease with **The Flying Tiger Line** ends in November. Meanwhile, receipt of £367,000 compensation for the July tragedy is announced in the British House of Commons on November 3. A DC-6 is purchased from **Pan American-Grace Airways (PANAGRA)** on December 30 and a route is opened to Kuala Lumpur.

In January 1955, BOAC reenters the local picture, taking back the stake in **Hong Kong Airways (Pty.), Ltd.** it had sold six years earlier. In the interim, while awaiting delivery of the Viscounts, an effort is made by the British company to revitalize HKA and expand its services with leased aircraft.

The PANAGRA DC-6 purchased by Cathay arrives in April. The signal event of the year for Cathay, not recognized at the time, is the sale out of service to Australia of the carrier's first plane, the DC-3 *Betsy*.

When the Borneo Company, Ltd. purchases a 4% stake in the Swire airline in 1956, flights to North Borneo, suspended in 1954, are resumed.

The HKA Viscounts arrive in January 1957 and enter service on February 25 between Hong Kong and Seoul, South Korea. The turboprops expand HKA business in March when they begin flying to Manila, following up with services in April to Taipei and in May to Tokyo. Strong, but unprofitable, competition now resumes with Cathay Pacific.

Cathay, meanwhile, is not standing still. New services are inaugurated during the spring and summer to Phnom Penh in Cambodia, Vientiane in Laos, Kuching in Sarawak, and Kuala Lumpur, Malaysia. Orders are placed in September for 2 Lockheed L-188s. Cofounder Sydney de Kantzow is killed in an automobile accident on November 21.

Taking a new approach, Cathay receives a HK\$6.75 million DC-6B on June 22, **1958**; it is the first airliner purchased new by the carrier, as well as its first pressurized aircraft. Eighteen months into the fiscal bloodletting, BOAC, acting on behalf of HKA, and Cathay officials agree to rationalize the situation by combining forces. Cathay Pacific Holdings (Pty.), Ltd. is established in December for the purpose of organizing a merger of the two airlines.

Management of HKA passes to Cathay Pacific on February 1, **1959**. Cathay becomes the first East Asian turboprop operator as its initial Lockheed L-188A is delivered on April 1 and begins service on the Manila-Bangkok-Singapore route on April 24.

Assimilation of HKA, already begun, is formally announced on June 8; the process is completed on July 1. Cathay Pacific Holdings (Pty.), Ltd. formally receives **Hong Kong Airways (Pty.), Ltd.** from BOAC Associated Companies on July 1 with shareholding divided three ways: Butterfield and Swire (73%), BOAC (15%), and **Ansett-ANA, Ltd.** (12%). HKA's 2 760Ds are sold to **Malayan Airways, Ltd.**

The second L-188A now arrives and begins operations on routes to Saigon, Kuala Lumpur, Darwin, and Sydney on July 25. The same day, service to Seoul is ended.

Service to Labuan is dropped in mid-February **1960**, while flights to Brunei commence on February 25. Twice-weekly DC-6B flights are inaugurated on April 1 over routes to Taipei and Kyoto and to Osaka and Tokyo; the frequency to Osaka is the first international service to Japan's second-largest city. Service to Vientiane is suspended as civil war flares.

As the result of structural concerns raised by a series of L-188 crashes in the U.S., the company's 2 Electras are withdrawn from service on December 4 for modifications. On December 12, a Bristol Britannia 102, leased from **British Overseas Airways Corporation (BOAC)**, replaces them in service. The market at Kuching is abandoned on December 15; however, flights to Seoul are restarted. Enplanements reach 100,000.

The Electras return to service on February 4, **1961**. As the result of a generous financial incentive from General Dynamics, orders are placed for Convair CV-880-22M jetliners. At the same time, the last DC-3 is sold. Routes are extended to Jakarta and Jesselton (now Kota Kinabalu) on September 7, but, as a result of poor loads, flights to Sydney are halted.

The first CV-880-22M is delivered on February 20, **1962**, and enters service on the Tokyo run via Manila, Bangkok, Singapore, and Taipei, on April 8. The flight marks the company's first jetliner service. The fleet now comprises 1 DC-4, 1 DC-6, 2 L-188As, 1 Convair CV-880-22M, and 2 Viscount 820s.

On January 9, **1963**, a pooled-service agreement is signed with **Thai Airways International, Ltd. (THAI)** and **Malayan Airways, Ltd.** Cathay holds a 32% stake, with the THAI stake pegged at 30% and Malaya's at 28%. All fleet units, except for the Convair and 2 Lockheeds, are retired and service to Kuala Lumpur is suspended.

Due to decreasing traffic, the Rangoon office is closed in July **1964** and the last flight to that point, following the end of U.K.-Burmese negotiations, is made in late August. Nineteen years of service is thus ended. Meanwhile, the company's flight kitchen at Kai Tak Airport is expanded. It now prepares over 11,000 meals per month for Cathay, plus meals for **Malaysian Airways, Ltd.**, **Philippine Airlines**, and **Thai Airways International, Ltd.** In September, H. J. C. Browne succeeds the retiring W. C. G. Knowles as chairman. A second Convair CV-880-22M enters service on November 15, replacing one L-188A.

Enplanements increase 14% as the one-millionth passenger (cumulative) is boarded in mid-November.

Airline employment in **1965** stands at 958. CV-880-22M services to Osaka and Tokyo begin on February 15. The Japanese city of Fukuoka joins the route map on September 2 and the Vientiane route (operated

briefly in 1960) is reopened during the month. In late fall, following the opening of the new Subang International Airport, services are restarted to Kuala Lumpur after a two-year hiatus. At year's end, a third CV-880-22M is received and undergoes acceptance checks. Enplanements grow to 227,891.

The third CV-880-22M joins the fleet in early January **1966**, allowing the Japan frequency to be increased to 10 times per week on January 10 and giving Nagoya its first international jet service. Orders are placed for 2 additional CV-880-22Ms.

A total of 297,000 passengers are flown on the year.

The last L-188A is retired in **1967** as the fourth CV-880-M enters service during the summer; simultaneously, service is withdrawn from Brunei. Flights to Okinawa commence on October 1.

While taking off from Hong Kong on a November 5 service to Saigon, Flight 30, a CV-880M with 11 crew and 116 passengers, suffers a severe vibration. The crew attempts to abort the takeoff, but the jetliner overshoots the runway and crashes into Kowloon Bay (Hong Kong Harbor), where it breaks into three parts (one dead).

Passenger boardings for the year increase to 313,423.

Airline employment in **1968** is 1,381. A fifth CV-880-22M enters service on Southeast Asian routes and, in something of a surprise, the company purchases majority control of **Bahamas Airways, Ltd.** in October. In **1969**, orders are placed for 2 Boeing 707-367Bs as 2 more CV-880-22Ms join the fleet. Service is withdrawn from Phnom Penh and Calcutta.

The work force totals 2,082 and enplanements reach 490,230.

On April 1, **1970**, CV-880-22M thrice-weekly services are inaugurated to Perth via Kuala Lumpur, linking Western Australia with Hong Kong, Tokyo, Osaka, and Taipei. Hong Kong to Singapore and Bangkok jet service begins on December 1.

Freight traffic is up 7% and passenger boardings jump 16% to 583,607.

The workforce rises 6% in **1971** to 2,215. The corporate structure is revised again on April 14 when the Hong Kong and Shanghai Banking Corporation purchases a 25% stake for HK\$21 million. Swire Butterfield and Swire, through its China Navigation Company subsidiary, Ansett Transport Industries, and BOAC hold the remaining shares. On June 15, Swire severs the Australian connection begun by Sydney de Kantzow when it purchases Ansett's 12% stake. On July 2, two IBM reservations computers, known as CPARS, come on line.

A deal is now struck with **Northwest Airlines** in the U.S. for the purchase of a number of Boeing 707-351B Stratoliners fitted with wide-body interiors and B-707-351Cs. The first of 2 B-707-351Bs to be received on the year enters service on August 24 and begins flying to Denpasar, Bali, on September 17. Within a month, Jakarta must, by an Indonesian government order instigated by **Garuda Indonesian Airways**, be made a stop on the Bali route. The second B-707-351B arrives on December 27.

Bookings for the year are 573,498.

The second B-707-351B begins flying on company revenue routes in March **1972**; two CV-880-22Ms are sold during March and April.

Flight 700Z, a CV-880-22M en route from Singapore via Bangkok to Hong Kong with 10 crew and 71 passengers, crashes into the mountains in the Central Highlands of South Vietnam near Pleiku, on June 15; there are no survivors from the suspected bombing.

It is reported on July 1 that a bomb has definitely caused the Flight 700Z disaster when it exploded on the plane's right side near the wing. Services to Kagoshima, Japan, commence on August 17 and the third former **Northwest Airlines** B-707-351B arrives on August 28.

A Thai police lieutenant, S. Chaiyasut, is arrested on August 31 for the fatal June bomb. His motive was to collect \$225,000 from insurance policies on his daughter and fiancée, who were passengers on the ill-fated flight and in whose luggage the device was placed. The following spring he will be charged with premeditated murder, but later acquitted by a Thai court on because of insufficient evidence.

The fourth B-707-351B is delivered on November 18. Also in November, the company enters into a pool agreement with **British**

Caledonian Airways, Ltd. (BCAL) to provide low-fare service from London to Perth via Singapore or Jakarta.

Passenger traffic accelerates 27.68% to 793,000 while freight skyrockets 78.6%.

Airline employment stands at 2,791 in **1973**. Following a six-year suspension, service is resumed via Kota Kinabalu to Brunei on January 27. New in-flight amenities are now introduced, including new interior designs by Walter Dorwin Teague Associates. The five-millionth passenger (cumulative) is transported on March 14.

The largest order in Hong Kong trading history to date is made on July 3 when HK\$120 million in requests are placed with Northwest Airlines for 4 additional Stratoliners. A B-707-351C joins the fleet on August 6 as 3 CV-880-22Ms are retired. Bankrupt **Bahamas Airways, Ltd.** is shut down in late summer.

The year's customer boardings soar 33% to 1,054,690, the first time in which the annual passenger count surpasses a million. Cargo traffic is up a spectacular 64.9%.

The employee population grows to 2,952 in **1974**; new flight attendant uniforms are introduced and the 4 former **Northwest Airlines** B-707-351Cs are added. On January 1, the airline is appointed general sales agent for the Peninsula Hotel Group and receives shareholding. It also establishes Peninsula Overseas Management, Ltd. to develop and manage hotels in the Far East, including Singapore's Marco Polo, which opens in February.

The next day, Butterfield & Swire is reformed into John Swire & Sons (Pty.), Ltd.

On March 14, orders are placed for 2 Lockheed L-1011 TriStar 100s. As Hong Kong and Japan engage in new bilateral negotiations during the month, the Japanese restrict Cathay access to Osaka. In retaliation, **Japan Air Lines Company, Ltd. (2) (JAL)** is forced to drop Hong Kong from its Tokyo to Sydney service. Two more B-707-351Cs join the fleet as another CV-880-22M is sold.

In pool with **British Airways, Ltd. (2)** and **Qantas Airways (Pty.), Ltd.**, the only nonstop service both ways is added from Hong Kong to Sydney.

Following the collapse of **Court Line Aviation, Ltd.** on August 15, Cathay is able to purchase that carrier's 2 L-1011 TriStar 1s, *Halcyon Days* and *Halcyon Breeze*.

On September 15, JAL is prohibited from Hong Kong altogether. This action has a positive impact on bilateral discussions between Tokyo and Hong Kong and a new agreement is shortly thereafter signed, allowing reciprocal services by the flag carriers of each to resume on November 1.

Cargo soars 29.7% while passenger bookings advance 13.7% to 1,215,000.

A total of 280 flight attendants are added in **1975** as the payroll grows to 3,334. The company closes its Saigon office on April 25 and terminates weekly flights between that city and Hong Kong. The first carrier to acquire the extended-range TriStar, Cathay Pacific takes delivery of its first L-1011-100 on August 8, and a second shortly thereafter. On September 15, the two are placed in service on routes connecting Hong Kong with Taipei, Tokyo, Manila, Singapore, and Jakarta.

The last 2 CV-880-22Ms are now retired and, together with 5 withdrawn earlier, are sold to Miami-based International Air Leases. Following increases and reorganization of share capital since 1970, the carrier's parent, Cathay Holdings (Pty.), Ltd. in May holds 60% of the issued capital. Cathay Holdings (Pty.), Ltd. is made up of Swire Pacific, Ltd., the new name for combined China Navigation Company and John Swire & Sons (Pty.), Ltd. and Peninsular & Oriental Steam Navigation Co., Ltd. Other shareholders include the Hong Kong and Shanghai Banking Corporation, Ltd. (25%) and British Airways Associated Companies, Ltd. (15%).

Freight traffic this year jumps 22% and passenger boardings move ahead 18% to 1,429,000.

Employment rises 1% in **1976** to 3,363. On February 10, Flight Operations Director Capt. Bernard Smith admits that he had taken a US\$10,000 bribe from Lockheed back in 1973-1974 to promote the carrier's choice of the TriStar; he resigns.

B-707-351C freight service is started from Hong Kong to Seoul, Singapore, and Bangkok in July. In September, a third L-1011-100 enters service. Routes are extended thrice weekly to Bahrain on November 16 and twice weekly to Melbourne in December.

Freight swells 38% and passenger boardings in this thirtieth anniversary year rise 14.4% to 1,622,000.

Penang is added as a stop on the Singapore route on April 3, **1977**, bringing to 18 the airline's total number of destinations. Daily nonstop return flights commence on November 1 to Osaka and Tokyo, bringing the number of weekly services between Hong Kong and Japan to 41. The two Lockheed units acquired from failed **Court Line, Ltd.** join the fleet and enplanements are up to 1,789,575.

Airline employment at Managing Director D. R. Y. Bremridge's carrier totals 3,500 in **1978**. The fleet now comprises 5 TriStar 100s and 9 B-707-351Bs/Cs. Daily return service to Jakarta via Singapore begins on April 1. Frequencies to Australia are now 17 per week with 18 roundtrips flown each week to Manila.

Needed to expand capacity on the route to London, B-747-267Bs are ordered in October. TriStar flights to Kaohsiung, Formosa, and Nagoya commence on November 1 while B-707-351B roundtrips commence to Port Moresby on November 3. The 22nd weekly service to Bangkok is started on December 18.

An order is placed in **1979** for 1 additional L-1011 while 2 B-707-351Cs are sold. A bilateral air services agreement is signed between Hong Kong and the People's Republic of China, opening the possibility of services to mainland China. The first B-747-267B is delivered on July 20 and in late August it begins operations from Hong Kong to Melbourne and Sydney and north to Seoul via Taipei and Tokyo. Darwin now disappears from the company's route map.

Capacity on existing routes is increased through the use of TriStars in preference to B-707s and the average passenger trip length is 1,270 miles. The Hong Kong Air Transport Licensing Board (ATLB) in November approves the company's application to begin long-desired services to London.

Freight traffic this year moves ahead by 18.1% while passenger traffic increases 13.6% to 2.6 million passengers flown.

The workforce is increased during **1980** by 7.9% to 5,549. On January 1, D. R. Y. Bluck assumes the airline's chairmanship. The **British Airways, Ltd. (2)**, ex-BOAC, 15% interest is bought out and the shareholding realigned; Cathay Holdings, the Swire parent group, now holds 50.59% with the remaining 29.41% taken by the Hong Kong and Shanghai Banking Corporation (HK&SBC). For the first time since its founding, the airline is completely owned by Hong Kong interests.

Almost 30 years after retiring from China, flights to the People's Republic commence on February 1 with a service to Shanghai. Three additional B-747-267Bs are received on April 24, July 16, and December 19, respectively, and 3 more B-707-351Cs are sold.

Following the receipt of London route authority on June 17, thrice-weekly B-747-267B service is inaugurated to Gatwick Airport at the U.K. capital on July 16 via Bahrain and Dubai. During the fall, Cathay Capt. Martin Willing discovers the carrier's first aircraft, the DC-3 *Betsy*, in Australia and arranges for Swire Group to purchase her back.

Largely as a result of the new U.K. frequency, passenger boardings grow 9.5% to 2,879,683 while cargo leaps 17.4% to 229.77 million FTKs.

Airline employment grows by 4.4% in **1981** to 5,795. A fifth B-747-267B joins the fleet on June 25 and another is ordered; one L-1011-100 is sold. A passenger route is opened to Abu Dhabi and the multistop London frequency becomes daily on July 1. In cooperation with **Deutsche Lufthansa, A.G.**, joint Hong Kong-Frankfurt freight service is introduced on October 1 with a German B-747F. A new computerized reservations system is placed into operation.

Freight soars 28.8% to 295.92 million FTKs and passenger bookings jump 10.9% to 3,192,245.

The workforce is increased 1.7% in **1982** to 5,895. After a 12-year suspension, service to India resumes on January 2 when Bombay is added as a stop on the company's route to the Mideast.

The last remaining B-707-351Cs are sold as a new B-747-267B is acquired, together with a B-747-267C, the former *British Trader*, from **British Airways, Ltd. (2)**. As *Hong Kong Trader*, the latter begins twice-weekly cargo flights, in cooperation with **Deutsche Lufthansa, A.G.**, to destinations in Europe, including Frankfurt via the Middle East and thrice-weekly operations to Tokyo. The freighter assists the airline in increasing by 18% its annual mail and cargo revenues.

Passenger service is also inaugurated to Brisbane on August 1, simultaneously becoming nonstop to Perth. In cooperation with **Air New Zealand, Ltd.** and **Air Niugini (Pty.), Ltd.**, flights commence to Auckland via Port Moresby the same day. The partnership requires that every three months each company takes a turn flying the service. The average passenger trip length is now 1,725 miles and the entire route network covers 56,535 unduplicated miles. The last B-707-351C departs Hong Kong on November 12.

Freight traffic skyrockets 59.6% to 472.2 million FTKs while passenger traffic is up 7.3% to 3,425,404 passengers carried.

The employee population is 5,987 in 1983, up 1.6%. A ninth B-767-267B is acquired on May 23 and immediately takes over the new Hong Kong to Vancouver nonstop route begun at the beginning of the month. The trip requires 11 hrs. 15 min. to Canada and 13 hrs. 15 min. back. Simultaneously, the company takes over the Auckland service from **Air New Zealand, Ltd.**, flying via Port Moresby.

Beginning on July 2, the first nonstop London to Hong Kong service (taking 12 hrs. 30 min.) is offered once every week. It will take a year to reengine with Rolls Royce RB211 power plants sufficient to provide nonstop outward bound service. An order is placed for a B-747-367 with an option taken on another.

The company's first aircraft, the *Betsy*, restored by HAECO and repainted in her original 1947 livery, makes her final flight, across Hong Kong harbor, on September 24. Thereafter she is donated to the Hong Kong Science Museum at Tsimshatsui East to which she is taken, disassembled, by barge across Kowloon Bay and put back together on static display.

Longtime company pilot Capt. Charles E. Eather now publishes a book of recollections and history, *Syd's Pirates: A Story of an Airline* (Sydney: Durnmount, 1983). The work will be followed in 1993 by a second, *We Flew in Burma: A Story of Flying in Burma, with Cathay Pacific Airways and Union of Burma Airways* (Surfer's Paradise, Queensland: Ching Chic Publishers, 1993).

Freight continues to expand, up by 20.1% to 566.93 million FTKs, but passenger boardings hold level.

Airline employment rises 6.9% in 1984 to 6,400 and the fleet now includes 9 B-747-267Bs, 9 B-747-267Cs, and 9 L-1011-100s. On January 1, Peter D. A. Sutch becomes managing director, succeeding Duncan Bluck. Thirty days later, B-747-267B service is inaugurated from Hong Kong to the Saudi city of Dhahran. Also during the month, the company receives the 1983 "Passenger Service Award" from *Air Transport World* magazine.

Passenger flights to Frankfurt commence on March 3. The last B-747-267B is delivered on April 27 and is employed, beginning on May 5, to fly nonstop from Hong Kong to London on 13 hr. 15 min. passages.

Customer bookings accelerate 10.1% to 3,550,000 and freight increases 17.8% to 668.03 million FTKs.

The employee population is increased 9.4% in 1985 to 7,043. In April, thrice-weekly L-1011 service is initiated to Shanghai and to Vancouver. The first B-747-367 is delivered on June 13 after a 14-hour delivery flight from Seattle via Vancouver and twice-weekly service begins to Amsterdam via Frankfurt in October.

In cooperation with **Air New Zealand, Ltd.**, Cathay begins direct, weekly B-747-267B flights from Hong Kong to Auckland on December 3. The United Kingdom and Peoples Republic of China sign a Basic Law agreement returning Hong Kong to China in 1997; Annex Four of the document specifically guarantees that Cathay and **Dragonair (Pty.), Ltd.** will be able to operate beyond the turnback.

Passenger enplanements rise 8.5% to 3,850,000 and cargo accelerates 10.8% to 739.94 million FTKs; in terms of freight traffic, Cathay Pacific

now stands 15th among all of the world's airlines. A net HK\$115.2-million profit is reported.

A second B-747-367 arrives on February 14, 1986 and is deployed on the Hong Kong to London and Frankfurt route. When a two-year **CAAC (General Administration of Civil Aviation of China)/British Airways, Ltd. (2)** agreement for weekly joint service from Hong Kong to Beijing ends at the end of March, Cathay remains as the only British-registered airline on the route.

The carrier is now listed on the Hong Kong Stock Exchange and, in a partial privatization move, the 7,000-employee airline in April places 397 million shares (15% of total) up for sale, bringing to 22.5% the total offering since the first of the year. The offering is a huge success and is oversubscribed 55 times, bringing in \$6.5 billion U.S., and shattering all local records to become the largest stock distribution in the history of the Hong Kong Stock Exchange.

The same month, an L-1011 route is opened to Beijing while a second weekly B-747-267B service begins to Paris and Rome, with two more London frequencies added, bringing the total flown to the British capital to 10 per week. Flights to Amsterdam start in May.

A legal battle is enjoined against the new entrant **Dragonair (Pty.), Ltd.** In June, 2 B-747-467s powered by Rolls Royce RB211-524G engines are ordered and in July five-times-per-week B-747-267B service is launched to San Francisco via Vancouver.

During late summer, a fifth B-747-367B is ordered and the carrier joins **United Airline's Mileage Plus** frequent flyer program. A second B-747-367 is delivered on October 10 and on October 31 it begins twice-weekly service to Amsterdam as an extension of the nonstop Hong Kong-Frankfurt route.

In November, two airlines and a number of employees from the subsidiary Swire Air Caterers, Ltd. (SACL) are arrested on corruption charges. On December 4 and in cooperation with **Air New Zealand, Ltd.**, weekly joint service, halted for a year, is restarted Hong Kong-Auckland with Cathay Pacific Jumbojets.

As a result of the November scandal, Deputy Managing director Patrick Tsai now also becomes acting director of SACL.

Customer bookings jump 9% to 4,198,000 and a 15.9% boost is seen in freight traffic, to 857.28 million FTKs. Profits are HK\$206 million (operating) and HK\$190 million (net).

The workforce is increased by 12.1% in 1987 to 8,581 and the fleet is improved by the addition of a 10th L-1011, 2 B-747-367s, and 1 B-747-267CF. Orders remain outstanding for 2 more L-1011s, 1 B-747-367B, and 2 B-747-467Bs.

In January, over 30 changes are made at middle and senior management levels. Simultaneously, the Peoples' Republic of China purchases a 12.5%, HK\$1.94-billion interest through its China International Trust & Investment Corporation (CITIC). Holdings of the Swire Group are reduced to just over 50%, while the HK&SBC holds the remaining 16%.

Also during the first month of the year, the carrier is named 1986 "Airline of the Year" by *Air Transport World* magazine.

Existing B-747-367B routes to Frankfurt, Paris, and Rome are cancelled in August in favor of a new schedule, which has service to Paris routed via Frankfurt while Rome becomes a turnaround destination routed via Dhahran.

By September, the average passenger trip length is 2,230 miles. Twice-weekly L-1011 frequencies are initiated from Hong Kong to Kaohsiung, Taiwan, in October, along with a new, daily TriStar turnaround service from Hong Kong to Taipei. In December, the carrier joins with **Thai Airways International, Ltd.** and **Singapore Airlines, Ltd.** to develop a computerized reservations system to be called ABACUS. It also purchases 2 TriStars from **Air Lanka, Ltd.**

Passenger boardings accelerate 21.2% to 5,085,825 while cargo climbs 25.2% to 1.03 billion FTKs and makes Cathay the fourth largest Asian freighter. Revenues increase by 29.2% to \$1.5 billion as predictable fuel prices and helpful currency movements keep operating costs down. Operating income ascends to HK\$376.8 million and net profit to HK\$330 million.

The payroll grows again in 1988 by 18.2% to 10,142 and the route system now covers 96,861 unduplicated miles. Cathay operates two of the world's longest routes from Hong Kong—7,225 miles to London and 6,632 miles to Vancouver.

Beginning in January, the company offers its first-class and business-class passengers a personal mobile telephone for a nominal fee plus charges when they visit Hong Kong. During the month, Cathay receives *Air Transport World* magazine's 1987 "Airline of the Year" award.

A 50% interest is taken during February in Cathay Performa Consulting (Pty.), Ltd.

Marco Polo business-class service is unveiled and, in April, a fourth daily L-1011 service is added from Hong Kong to Bangkok.

Workers unloading an **Air New Zealand, Ltd.** B-747-219B that had flown to Auckland under the joint pact with Cathay on April 27, are unable to find NZ\$300,000 (US\$181,000) shipped in the diplomatic locker of a service container. The Hang Seng Bank of Hong Kong and the Bank of New Zealand file suit against the two airlines seeking restitution.

Twice-weekly B-747-267B service from Hong Kong and Zurich via Frankfurt is begun on June 1. The same month, Deputy Chairman D. A. Gledhill becomes chairman of Cathay Pacific, as well as other companies in the Swire Pacific group; Peter Sutch remains managing director. Later in the month, a 50% interest is acquired in Abacus Distribution Systems (Pty.), Ltd.

Two more Lockheed L-1011s are acquired in August, both from **Eastern Air Lines**. The B-747-467B order is increased to five and, in cooperation with **Air New Zealand, Ltd.**, frequencies on the Hong Kong to Auckland return service is increased in December from one weekly service to two. During the year, an *ab initio* program is started to recruit Hong Kong Chinese as pilots; successful applicants are sent to the British Aerospace Flying College in Prestwick, Scotland.

Customer bookings zoom upward 21.6% to 6,193,000 and cargo climbs 18.9% to 1.17 billion FTKs. Revenues jump 29% to HK\$1.9 billion and net profit swells to HK\$363.3 million.

The number of employees swells 15.6% in 1989 to 11,728 and the fleet this year comes to include 2 B-747-467Bs, 6 B-747-367Bs, 8 B-747-267Bs, 2 B-747Fs, and 17 L-1011s. Orders remain outstanding for 2 B-747-467Fs and 10 Airbus Industrie A330-300s. In January, improved *Marco Polo* business-class service is introduced and six more flights are initiated from Hong Kong to Brisbane, Melbourne, and Sydney. Later in the month, 49% shareholding is taken in Metro Travel (Pty.), Ltd.

In February a fifth weekly roundtrip is inaugurated, in cooperation with **Malaysian Airlines, Ltd. (MAS)**, between Hong Kong and Kuala Lumpur; simultaneously, a nonsmoking flight is offered between Hong Kong and Taipei. Late in the month, the airline switches from the frequent flyer program of **American Airlines** to that of **United Airlines**.

In March, a third daily service is added from Hong Kong to Manila and, also in cooperation with Malaysian, a third joint weekly flight begins to Kota Kinabalu in April. Also in April, the 2 B-747-467Bs are delivered; Cathay is the second airline after **Northwest Airlines** to take delivery of the long-range Jumbojet and the first to accept such a plane powered by Rolls Royce engines. CityCheck, Hong Kong's first full-service downtown check-in center, is opened in May.

On June 1, service to Seoul is increased from twice daily to 10 times per week; these are followed on July 1 by the initiation of a second daily nonstop to London and a fourth roundtrip service to Paris. At the same time, smoking is banned on all turnaround flights from Hong Kong to Taipei, Kaohsiung, Bangkok, and Manila. In August, the airline launches *Cathay Pacific Express*, a new small package express and cargo airport-to-airport service between Hong Kong and the U.K.

For the summer season in Australia beginning in September, the airline lays on over 150 additional frequencies. Two regular supplementary B-747 services are initiated weekly between Hong Kong, Melbourne, and Brisbane, including the company's first ever nonstop from Brisbane back to Hong Kong. Additionally, 24 Jumbojet roundtrips are provided from Hong Kong to Sydney for a 4-month period. A number of these

flights are made on behalf of **Qantas Airways (Pty.), Ltd.** and **Australian Airlines (Pty.), Ltd.**, whose pilots are on strike.

On October 28 and in cooperation with **Air Mauritius, Ltd.**, joint weekly nonstop service is introduced between Hong Kong and Mauritius. Twice-weekly roundtrip flights between Hong Kong and Manchester, England via Frankfurt commence on October 31. Earlier in October, check-in-by-telephone service is introduced for passengers departing Hong Kong with only cabin baggage and the operational base at Paris (ORY) is transferred to Terminal One at Charles De Gaulle International Airport.

The contract with its local rival calls for the pioneer to provide management, administrative, and technical services. In cooperation with **Air Niugini (Pty.), Ltd.** and employing its A310-324, joint weekly nonstop and roundtrip service is initiated between Port Moresby and Hong Kong on November 3. Employing an **Air New Zealand, Ltd.** B-747-219B, joint service is inaugurated with the New Zealand flag carrier, also in November, over a third weekly route from Auckland to Hong Kong.

In December, service is increased from Hong Kong to Brisbane, Melbourne, Sydney, and Perth for the Australia and Asia summer season. The Swire Group acquires a 30% share in **Dragonair (Pty.), Ltd.** during the month, ending forever any possibility that the new entrant will emerge as a competitor.

Passenger boardings jump 14.5% to 7,057,000 and freight is up 8.7% to 1.32 billion FTKs. Revenues surge ahead by 14.4% to HK\$2.21 billion, expenses are up 13.2% to HK\$1.72 billion, and operating income moves ahead to HK\$504.7 million. Net gain balloons to HK\$425.8 million.

Company employment grows another 8.8% in 1990 to 12,764. In January, longtime Vice President Jerry Penwarden is seconded to **Dragonair (Pty.), Ltd.** as its day-to-day manager under a 15-year management contract. An additional 5% stake in Dragonair is acquired on February 1 and the total arrangement is valued at \$125 million, of which a third is tied up in Dragonair's 4 B-737-200s. Hong Kong-based CITIC, with backing from China, increases its share in Dragonair to 38%.

The company's ground staff and cabin crews begin, also in February, to introduce new uniforms designed by Nina Ricci of Paris. The same month, a new service agreement is signed with **China Airlines, Ltd. (CAL)**. In an effort by CAL to freeze out proposed newcomer **Evergreen Airways** (later **Eva Airways, Ltd.**), its terms call for only Cathay and CAL to exercise technical third and fourth freedoms between the two regions.

Passengers of a B-747-267B are evacuated and 27 are injured when their Jumbojet begins leaking fuel after landing at Tokyo (NRT) on March 24. Also in March, the company receives certification from the Hong Kong Civil Aviation Department (CAD) for Category 3A landings by its B-747-467s and joins with **American Airlines** to announce an expansion of the joint code-sharing agreement to include over 100 Canadian and U.S. cities served by the U.S. major.

In April, the company is licensed by the Hong Kong government to inaugurate scheduled service to Hanoi and Ho Chi Minh City. During the month, **Dragonair (Pty.), Ltd.** takes over Cathay's China route network to Shanghai and Beijing. Employing a B-747-200F, twice-weekly all-cargo flights are inaugurated on May 26 between Hong Kong and Paris. Also in May and in cooperation with **Korean Airlines/Korean Air (KAL)**, joint freight flights commence from Hong Kong to Seoul. At the same time and acting through a subsidiary, Cathay acquires 50% interest in International Aviation Services (Hong Kong), Ltd., previously known as Caledonian Far East Airways, Ltd.

In June, the company's ban on smoking is extended to all of its Southeast Asian routes. In addition, a code-sharing agreement is signed with **American Airlines** for the transpacific shipment of freight over Cathay's nonstop Jumbojet route from Los Angeles to Hong Kong.

As part of the code-sharing agreement with **American Airlines**, four-times-per-week roundtrip B-747-467 flights begin on July 1 between Hong Kong and Los Angeles and San Francisco and are the only nonstop service on the market between those destinations. **American**

Airlines is responsible for the westbound flights with Cathay marketing cargo space out of Hong Kong and Southeast Asia. Under a cooperative code-sharing agreement with **Air Canada, Ltd.** that comes into effect on the same day, the Hong Kong company purchases blocks of seats aboard the Canadian line's B-767-233ER services from Vancouver to Toronto; the move essentially extends the Hong Kong route into Eastern Canada.

Also on July 1, the company joins IATA. A dual-designator understanding is signed with **Japan Air Lines Company, Ltd. (2)** signed later in the month for the start of joint thrice-weekly flights to Sapporo.

In August, a new nonstop route replacing the Vancouver and San Francisco run is opened five times per week from Los Angeles to Hong Kong. Many extra frequencies are added in September. Coordinating with **Air France** frequencies, the company begins twice-weekly B-747F flights from Hong Kong to Paris in October.

The joint L-1011 service with JAL to Sapporo opens in November. Daily nonstop B-747-467 frequencies commence from Hong Kong to London in December.

Customer bookings accelerate 9.5% to 7,731,254 while cargo jumps 13.8% to 1.44 billion FTKs, 13th highest among all of the world's airlines. Revenues ascend 14.7% to HK\$2.54 billion, expenses total HK\$2.07 billion, and operating income dips to HK\$463.8 million, which is still 17th best among all world carriers. Net gain falls to HK\$384 million, but ranks third in the world after **Singapore Airlines, Ltd.** and **Japan Air Lines Company, Ltd. (2)**.

The payroll is sliced 0.2% in 1991 to 12,747 and the fleet now includes e8 B-747-267Bs, 1 B-747-236F, 2 B-747-267Fs, 6 B-747-367s, 10 B-747-467s (half of which join the fleet during the year), 16 L-1011 TriStar 1s, and 2 L-1011-TriStar 100s. One of the latter aircraft is leased to **Dragonair (Pty.), Ltd.** Meanwhile, orders are outstanding for 6 B-747-467s, 2 B-747-467Fs, and 10 Airbus Industrie A330-300s.

Flights begin from Hong Kong to Rome via Zurich on March 31. The same day, the service to Amsterdam via Frankfurt is increased from twice to thrice weekly and the frequencies to London via Bahrain are reduced to thrice weekly. On April 30, Heathrow Airport London is regularly visited for the first time.

Daily nonstop service is inaugurated from Hong Kong to Los Angeles on May 1, along with similar flights to Johannesburg. In July, the new CATCH computer system, just four days after it is turned on, intercepts its first stolen ticket.

On December 16, twice-weekly joint service is opened with **Vietnam Airlines** from Hong Kong to Ho Chi Minh City employing Cathay's TriStars under a code-sharing agreement signed between the two companies. Meanwhile, the Vietnamese flag carrier takes a 60% stake in Cathay Pacific Catering Services, Ltd. and that airline subsidiary acquires 40% shareholding in Vietnam Air Caterer.

As a result of recession and high fuel costs generated by the Gulf situation, Cathay suffers its worst fiscal year in memory. Passenger boardings fall 4.4% to 7,391,429 and freight grows only 0.6% to 1.45 billion FTKs. Revenues swell 5.6% to HK\$2.68 billion and the operating profit is up to HK\$471.2 million. Net gain declines, however, to HK\$380.55 million.

A B-747-267B is withdrawn in 1992 as 4 B-747-467s arrive. An order is placed for 11 Rolls Royce-powered B-777-200s. Early in the year, *Cathay Pacific First* upgraded first-class service is introduced on transpacific flights. Also in the first quarter, shareholding in **Dragonair, Ltd.** becomes 35% as CITIC, the foreign investment department of the People's Republic of China, boosts its stake to 48%. At the same time, the Vietnam service is doubled to four weekly flights. Managing Director Sutch is promoted deputy chairman in April and is succeeded by Rod Eddington.

Sutch becomes chairman of both the airline and its parent, Swire Pacific, on June 1. Shortly thereafter, a productivity-enhancement program, *Operation Better Shape*, is unveiled, along with corporate restructuring. Twice-weekly transpacific B-747F freighter flights connecting Hong Kong with Los Angeles begin in June and represent the carrier's first all-cargo transpacific service.

Toward month's end, the airline acquires additional holdings: Steels Aviation Services, Ltd., Steels Aviation Services (Pty.), Ltd., and Steels Aviation Services (In-flight) (Pty.), Ltd., which will be reformed into Cathay Pacific Catering Services, Ltd., Cathay Pacific Catering Services (Pty.), Ltd., and Cathay Pacific Catering (Holdings) (Pty.), Ltd.

Nonstop flights begin to London (LHR) and Paris (CDG) in July. Later in the month, it is announced that the company is changing the configuration of its aircraft as it reworks its first-class cabins and services. In addition, shareholding in International Aviation Services (Hong Kong), Ltd. is reduced from 50% to 20%.

CAAC (The General Administration of Civil Aviation of China)'s subsidiary, **China National Aviation Corporation (CNAC-2)**, and China Travel Service, each purchase 5% shareholding in August from Port Hall, Ltd., itself a subsidiary of the HK&SBC. Mainland Chinese interests now control 22.6% of the airline as the deal is worth HK\$440 million.

A 10% interest is acquired during September in Hong Kong Air Cargo Terminals, Ltd., which provides cargo handling at Kai Tak Airport. In October, direct flights are inaugurated to Adelaide returning via Melbourne. A new accounting subsidiary, Guangzhou Guo Tai Information Processing, Ltd. is formed.

Nonstop passenger service is also initiated during the year to Jakarta and Penang, Hanoi, Ho Chi Minh City, and Amsterdam. A new first-class lounge, the largest in Asia, is occupied at Kai Tak Airport. Stringent cost-cutting measures bring a flight attendants' strike.

Customer bookings increase 13.1% to 8,362,673 and cargo jumps 14.7% to 1.67 billion FTKs. Revenues ascend 11.9% to HK\$3 billion and expenses rise 13.9% to HK\$2.53 billion. As a result, the operating surplus is HK\$423 million and net profit hits HK\$385.3 million.

Chairman Sutch and Managing Director Eddington oversee a workforce of 13,240 in 1993 and a fleet of 53 aircraft, increased this year by 3 B-747-467s and 1 Lockheed TriStar. Two L-1011-1s are leased to **Dragonair (Pty.), Ltd.** for use on the subsidiary's routes to Beijing and Shanghai. When **Philippine Airlines (PAL)** is unable to take delivery of a pair of Airbus Industrie A340-211s, the manufacturer arranges to dry-lease them to Cathay.

Coinciding with the Lunar New Year holiday, the company's busiest period, 25% of the company's cabin crews go on strike during the last 10 days of January. With their numbers too insufficient to shut down the airline, the cabin crews must watch it successfully fly with its own and wet-leased airliners.

The new accounting subsidiary, Guangzhou Guo Tai Information Processing, Ltd., with some staff, is transferred to Guangzhou Province on the mainland in February. In March, Taikoo Aircraft Maintenance Company, Ltd. is established as a joint venture aircraft maintenance operation in Xiamen, Fujian province.

New services are initiated to Colombo and Cairns, which joins a network that includes stops at Amsterdam, Auckland, Bahrain, Bangkok, Bombay, Brisbane, Brunei, Denpasar, Dubai, Frankfurt, Fukuoka, Hanoi, Ho Chi Minh City, Jakarta, Johannesburg, Kaohsiung, Kuala Lumpur, London (LHR), Los Angeles, Manchester, Manila, Melbourne, Nagoya, Osaka, Paris, Penang, Perth, Rome, Sapporo, Seoul, Singapore, Sydney, Taipei, Tokyo, Vancouver, Zurich.

In June, the company takes a 10% stake in Taeco Engineering; other partners include **Japan Air Lines Co., Ltd. (2)** and **Singapore Airlines, Ltd.** In July, the company becomes, with **Malaysia Airlines, Ltd. (MAS)** and **Singapore Airlines, Ltd.**, a founding partner in the joint *Passages* frequent flyer program. At the same time, CPA takes a 10% stake in the Taeco maintenance concern and 28% shareholding in Royal International Air Catering, Ltd.

Weekly scheduled freighter service is initiated to Bombay along with 10-times-per-week passenger flights from London (LHR) and daily service from Manchester.

A new position, deputy managing director, is created in November and filled by Linus Cheung, who will soon resign to take a more lucrative position elsewhere. When an order for 4 A340-211s is cancelled in December by **Philippine Airlines**, they are quickly spoken for by

Cathay for delivery a year hence as interim replacements for an order, now made, for 6 owned A340-300s.

Passenger boardings increase by 5.7% to 8,866,930 and freight moves ahead by 19.4% to 1.99 billion FTKs. The previous year's flight attendants strike continues and, when combined with recession and local inflation, contributes to only 3% growth in revenues, or HK\$3.07 billion. Expenses swell 8.5% to HK\$2.78 billion and cut the operating surplus to HK\$294.5 million. Net gain is exactly the same figure: HK\$294.5 million.

The number of employees is cut by 2.7% in 1994 to 13,772. Early in the year, in anticipation of a new livery, the company begins to paint out the Union Jack on the tails of its aircraft. It will be replaced with a new Landor Associates-designed "brushwing" design, a Chinese calligraphy stroke which suggests the wing of a bird and is designed to help the British-oriented company project a "more Asian" image. At the same time, first-class service is gradually eliminated on intraregional L-1011 flights.

Also in January, the final 20% stake in International Aviation Services (Hong Kong), Ltd. is sold to **Dragonair (Pty.), Ltd.** In February, a strategic alliance is entered into with **Air Mauritius** that provides for a joint flight between Hong Kong and Mauritius.

On March 1, all flights between Hong Kong and Europe become non-smoking. In April, the carrier purchases 75% majority control of **Air Hong Kong (Pty.), Ltd.** from Shun Tak Holdings for HK\$200 million (\$26 million). The former independent all-cargo operation, now operated as a subsidiary on the **Dragonair (Pty.), Ltd.** model, places a third chartered B-747-200F into service.

In response to the murder of 24 Taiwanese tourists on the mainland, the government of Taiwan bans group travel to China during May. Consequently, Cathay reduces its Hong Kong to Taipei schedule in response. Also in May, a 40% interest held in Cathay Pacific Catering Services, Ltd. in Canada is sold to **Deutsche Lufthansa, A.G.** and a management contract is inked with **Air Hong Kong (Pty.), Ltd.**

An unfounded rumor that John Swire & Sons, Ltd. will divest itself of its 52% interest in Cathay is circulated in June, but quashed. Meanwhile, the Taiwanese ban on flights to the mainland begins to have a financial impact.

During August, the carrier makes a conditional agreement to purchase a one third interest in Xiamen International Airport Group Company, Ltd. for HK\$366 million.

First to wear the company's paint scheme and to mark the first livery change in 20 years, an A330-342 is displayed at the Airbus Industry factories in France on August 31 and then flown to England for participation in the annual Farnborough Airshow in England.

A joint venture with its Japanese partner, Cathay Kansai Terminal Services Company, Ltd., begins operations when the new air facility opens in September.

The first of two leased ex-**Philippine Airlines (PAL)** A340-211s arrives at the end of October; in two days of training prior to its introduction into scheduled services, 10 pilots make a total of 62 practice take-offs and landings at the Thai air force base at Utapao.

The chartered A340s will fly with Cathay until new, purchased A340-300s can be delivered in 1996. Retirement of the TriStar fleet begins on November 5. Also during the year, service is initiated to Toronto. Plans are made for the inauguration of scheduled flights in the following 12 months to Stockholm and Surabaya.

Customer bookings climb 10% to 9,750,000 while cargo swells 19% to 2.37 billion FTKs. Revenues advance by 13.3% to HK\$3.5 billion, leaving profits of HK\$306 million (operating) and HK\$333 million (net).

A total of 128 employees are hired in 1995, an increase of 0.9 per cent. Early in the year, airline officials publicly condemn **Qantas Airways (Pty.), Ltd.** for turning Hong Kong Kai Tak Airport into an unofficial hub where it picks up passengers to fly onward to Singapore and Bangkok. It is stated that the Australian carrier exceeds the normal 50% "fifth freedom" norm.

The first of 9 ordered A330-342s joins the fleet in February; when it enters service, Cathay will become the first carrier to fly both the A340 and A330 as complementary aircraft on regional and international services. It is this concept which Airbus Industrie originally had in mind when it launched the expanded Airbus family.

In March, the dormant **CAAC (The General Administration of Civil Aviation of China)** subsidiary **China National Aviation Company (CNAC-2)** announces that it will begin a rival airline in Hong Kong before the British colony is handed back to the PRC in 1997.

Negotiations to resolve the "fifth freedom" difficulty commence between the Hong Kong and Australian government aviation ministries, but are broken off in mid-April. At this point, the Hong Kong Economic Service Branch decrees that, after July 1, no more than 50% of Qantas' passengers flying to Singapore and Thailand may originate at Kai Tak. The Australian Transport minister now shortens Cathay's operating permit to Australia to June 30, at which point Hong Kong threatens to cut off all Australian flights to Hong Kong the same day.

During the last week of April, **China National Aviation Company (CNAC-2)** applies for a scheduled license to operate service into Hong Kong as complement to the charter flights into Kai Tak already made with aircraft leased from **China Southwest Airlines Company, Ltd.** Cathay bitterly opposes the PRC move, even though CNAC is a 10% shareholder in the British colony's flag carrier.

Simultaneously, a temporary accord is signed between Taiwan and Hong Kong that enables the two to circumvent difficulties that have occurred in their bilateral air negotiations and permit Cathay and **China Airlines, Ltd. (CAL)** to continue exchanging services.

With no direct air service between the two Chinas, Hong Kong continues to serve as Taiwan's PRC gateway. Talks between the U.S. and Hong Kong and Hong Kong and India are also stalled over "fifth-freedom" issues.

During the second week of June, **Qantas Airways (Pty.), Ltd.** threatens to sue the Hong Kong CAD for its July 1 proposal. The following week, the Australian Transport Minister Christopher Pratt weighs into the conflict. Offering to extend Cathay's Australian operating permit through the end of June rather than the usual October 28, he also proposes that the number of seats allowed to the Hong Kong flag carrier in Australia be reduced by 60%. **Cathay Pacific Airways (Pty.), Ltd.** also files suit in Sydney to overturn any such Australian government action.

Negotiators from the two countries resume talks on June 26. While neither gives in to the assertions and demands of the other, a six-month "cooling off" period is imposed during which time both sides will seek a solution to their difference.

A new B-747-267F is received in July. In August, the company begins to implement a policy of cross-crew qualification training for the pilots of its A330-342s and A340-313s. Although the practice will be successful for this airline, it will prove difficult to institute with others with more complex union arrangements, e.g., **Deutsche Lufthansa, A.G.**

During the last week of October, the carrier pledges itself to a move in April 1998 from Kai Tak Airport to the new Chek Lap Kok airfield. The new B-747-267F is employed in November to open a regularly scheduled freight-only route, in cooperation with **Air Canada, Ltd.**, to Toronto via a technical stop at Anchorage. The new service will replace a previous one that had been flown on a nonscheduled basis using B-747-267Bs with a technical stop at Seoul.

Code-sharing begins with **British Midland Airways, Ltd.** in September on frequencies from Hong Kong to London (LHR) and on to Belfast, Edinburgh, Glasgow, and Leeds/Bradford. During the second week of November, plans are announced for the construction of a HK\$453-million headquarters at the new Hong Kong Airport at Chek Lap Kok, which will open in 1998.

Late in the year, 3 B-747-200s are sent to Boeing's Wichita Division for conversion into freighters for **Air Hong Kong, Ltd.** Also during the year, service is inaugurated to Stockholm and Surabaya.

A compromise arrangement in December ends the dispute with **Qantas Airways (Pty.), Ltd.** Under its terms, Hong Kong gains the

principle of imposing a cap on lift out of the Crown Colony. Qantas will only have difficulties if it increases Hong Kong-originating boardings beyond 50% of capacity or 200 passengers per day.

Also in December, the carrier withdraws from a HK\$144.4-million joint venture that has been discussed with CAAC for the operation of a new airport at Xiamen. A number of differences suggest that a 33% stake will not prove commercially attractive.

At the same time, a September decision to relocate Cathay's flight training center from Hong Kong to Sydney is opposed as being more expensive than leaving it in place.

Passenger boardings move ahead by 6.5% to 10,381,407 and freight accelerates 17.5% to 2.78 billion FTKs. Revenues rise 11.9% to HK\$3.94 billion and costs climb only 10.9 per cent. The result is a HK\$482 million operating profit and a net gain of HK\$389 million.

Airline employment stands at 13,857 in 1996, a 0.4% increase. In an effort to save \$26 million in costs, a number of the new hires are American and Canadian cargo pilots. The fleet includes 56 aircraft and orders are placed for 7 B-777-300s, 1 A330-300, and 6 A340-300s. Thirteen L-1011s, including the 2 now returned by **Dragonair (Pty.), Ltd.**, are retired and 4 leased A340-200s are returned. The TriStars are soon placed with other carriers, including **Air Operations of Europe, A.B.**, **Nordic East Airlines, A.B.**, and **Air Atlanta Icelandic, H.F.**

In January, Cathay receives the "Media/Public Relations Award" from *Air Transport World* magazine. Although it had originally decided to transfer its flight simulators to Australia and the U.K., the company announces during the second week of January that the move will not, in fact, be made.

In March, a marketing agreement is begun with **Ansett New Zealand, Ltd.** In addition to reciprocal frequent flyer program participation and reciprocal lounge and club access, Cathay passengers may enjoy code-sharing flights on ANZ between Christchurch and Auckland.

The PRC expands its stake in Hong Kong's major airlines during the last week of April. Under a stock offering arrangement worked out between Swire Pacific (Pty.), Ltd. and China's foreign investment firm CITRIC Pacific, Swire will sell out its majority stake in Cathay, while retaining its management contract. It will also turn over 35% controlling interest in **Dragonair (Pty.), Ltd.** along with the Chinese right to appoint its own management team.

Citic Pacific, on its part, will acquire 572.9 million shares of Cathay stock for HK\$6.3 billion (\$815 million) and advance its shareholding from 10% to 25%. Meanwhile, **China National Aviation Company's** stake shrinks from 10% to 8%, public shareholding falls from 27.40% to 23.10%, and the 52.60% holding of Cathay Pacific is reduced to 43.9%. The infusion from the stock offering is almost twice what is needed by Cathay to cover the costs of the new headquarters and training center it is building at Chek Lap Kok Airport, which is due to open in April 1998.

At the same time, Cathay loses its control of **Dragonair (Pty.), Ltd.** Under the same agreement, **China National Aviation Company** takes over with a 35.86% majority stake. For this, the **CAAC (The General Administration of Civil Aviation of China)** subsidiary pays HK\$1.97 billion (\$254.8 million), including HK\$971.1 million (\$125.6 million) each to Swire Pacific and Citic Pacific and \$4 million to the founding Chao family. Swire Pacific's stake drops from 43.16% to 25.50%, that of CITIC Pacific falls from 46.15% to 28.50%, and that of the Chao family from 5.57% to 5.02%; public interest of 5.12% remains unchanged.

After company stockholders approve the arrangement during late spring, the sale by Cathay of its share in its **Dragonair (Pty.), Ltd.** subsidiary will bring a pretax gain of HK\$69 million. Meanwhile, an A330-342 arrives in April under charter from the International Lease Finance Corporation (ILFC).

The first of 4 B-777-267s is delivered as May begins and for the media its arrival largely overshadows the boardroom ownership changes. During the month's final week it enters service on routes from Hong Kong to Bangkok, Seoul, Taipei, Osaka (KIX), Tokyo (NRT), Bahrain, and Dubai.

This is the company's fiftieth anniversary year and during the spring, the airline launches a \$5-million saturation campaign advertising the inauguration of its return service from New York to Hong Kong. The first of 4 owned A340-342s to be delivered this year arrives on June 1; it will be employed to inaugurate the new frequencies.

In June, the Beijing government opens airspace over central and northern China allowing for the creation of new air routes for Cathay services to Europe, North America, and Hanoi. For European flights, the fastest of these from Hong Kong is via Wuhan, Beijing, Mongolia, and Novosibirsk and is over 540 nm. shorter than the existing route via southwest China, India, and Iran. In winter, the route offers a timesaving of 2 hrs.—even more in the summer.

While approaching the gate at Hong Kong's Kai Tak Airport on June 19 following a flight from Hong Kong, the cockpit crew of a B-777-267 with 321 passengers receives a fire warning from the cargo hold; the aircraft is immediately halted and all aboard are evacuated down slides without incident. The emergency is, in fact, a false alarm caused by moisture vapors from 2, 12,000-lb. containers of live frogs, plus additional cargo of fruit, flower, and seafood, much of which, like the frogs, is more or less uncovered.

All-cargo B-747-467F flights commence between Hong Kong and New York via Anchorage on July 1. Cathay is the first Asian airline to introduce the sophisticated Jumbojet freighter. The same day, Cathay begins B-747-467 code-sharing flights with **United Airlines** from Hong Kong to New York via Vancouver five times per week. The American major sells seats to Cathay for its thrice-weekly nonstop B-747-238B frequencies from Chicago to Hong Kong, which begin on July 16.

The weekday dual-designator flights with **United Airlines** become daily on September 1. Three more B-777-267s arrive and enter service on Asian routes to Bangkok, Seoul, Taipei, Osaka (KIX), Bangkok, Sydney, Melbourne and to Dubai and Bahrain in the Mideast. Also during the month, orders are placed for 3 A330-300s and 2 A340-300s. Managing Director Eddington, citing "family reasons," resigns at the end of the month, effective in December. He will return to Australia to become executive chairman of **Ansett Australia (Pty.), Ltd.**

The final roundtrip L-1011 service is flown on October 13 from Hong Kong to Taipei and Nagoya. The type is now withdrawn after the fleet, in 21 years, has accumulated 487,000 flight hours for the carrier.

A Frequent Traveler's Medical Card is issued to regularly flying disabled passengers beginning during the last week of November.

Upon the departure of Managing Director Eddington in December, Managing Director-Corporate Development David Turnbull assumes the Australian's post. Turnbull is, in turn, succeeded by Director-Service Delivery Tony Tyler, while General Manager-Cargo Robert Cutler becomes the new director-service delivery.

Enplanements move ahead by 5.8% to 10,984,774 and 3.23 billion freight FTKs are operated, a 15.8% increase. Operating income climbs 6.3% to HK\$4.15 billion and costs ascend 7.1% to HK\$3.66 billion. Operating gain increases by HK\$4 million to HK\$488.91 million and a HK\$490-million profit is reported.

The workforce grows a scant 0.3% in 1997 to 13,900. During the first week of January, Cathay begins to warn those passengers flying under British Dependent Territory Citizen (BDTC) passports that their documents will not be valid after June 30. Former Managing Director Eddington officially becomes the new executive chairman of **Ansett Australia (Pty.), Ltd.** on January 9.

Also during the month, one additional A330-300 is ordered. The industry magazine *Air Transport World* in its January issue honors Cathay with the journal's annual "Airline Media/Public Relations Award" for its work in handling news concerning the airline's place in the transition of Hong Kong to the PRC, scheduled for July.

The two A340-211s dry leased from Airbus three years earlier are turned over to **Philippine Airlines (PAL)** during the first quarter. On March 29, another frequency is added to Sapporo.

During the spring, a "Heart of Asia" print advertising campaign is begun as part of the preparation for return of the British colony to China

on July 1. A special "Heart of Asia" paint scheme, designed by artist Annie Lee, is scheduled by Taikoo Aircraft Engineering Company for a Boeing 747-267B. When it appears, *The Spirit of Hong Kong '97* has a depiction of the Hong Kong skyline and the Chinese character *Ga* (Home) on the side of the fuselage. There is also a message in Chinese that reads "May Prosperity and Progress Lead Us to a New Era." It enters service to various destinations around mainland China.

A340-313 flights commence on May 1 from Hong Kong to Johannesburg and Auckland. For the second time this month and the third since the previous November, a company A330-342 on May 10 suffers an unexplained in-flight shutdown of one of its Rolls Royce Trent 700 engines. The carrier suspends its ETOPS flights and begins to inspect its fleet. Two days later, the colony's CAD withdraws its ETOPS approval for Trent 700-powered Airbuses.

On May 23, an A330-342 of **Dragonair (Pty.), Ltd.**, en route from Hong Kong to the Malaysian tourist destination of Kota Kinabalu, also suffers a Trent 700 in-flight shutdown and must divert to Subic Bay in the Philippines. At this point, the A330 fleets of both Cathay and Dragonair, plus that of **Gardua Indonesia**, are grounded.

Five days later on May 28 a short-term deal is signed with **Air Canada, Ltd.** Under terms of the arrangement, the Hong Kong-based major will wet-lease an Air Canada A340-313 for a few flights at the end of May and beginning of June as its own A340-313 fleet is being modified. The wet-lease commences with Cathay's May 29 return service from Toronto to Hong Kong. The last wet-leased flight is operated on June 4.

While the long-haul jetliners are under repair from May 26 to June 5, Cathay must reshuffle its schedules, cancel some flights, and consolidate others. A B-747-230B is leased short-term from **Deutsche Lufthansa, A.G.** and is employed, with other units in the Cathay fleet, to maintain 85% of the company's flights. Bookings for the July 1 political transfer of the British colony to the PRC are not affected.

Chairman Sutch estimates, however, that the grounding of his fleet has cost Cathay between HK\$120–150 million (US\$15.5–19.4 million) and weighs a suit for compensation against Rolls Royce. Three-class A340-313 service begins to Auckland in mid-June. Simultaneously, service to Osaka (KIX) becomes daily. Cathay now operates 80 weekly flights to Japan.

At the end of June, the B-747-267B *Heart of Asia* aircraft is unveiled; Chinese brushstrokes along the fuselage depict the Hong Kong skyline along with the Chinese symbols for "Home."

After much pomp and ceremony, the former British colony of Hong Kong is reclaimed by the PRC on schedule on July 1. The same day, **China National Aviation Co. (CNAC-2)** assumes final management control of **Dragonair (Pty.), Ltd.**

For the June 30–July 1 handover period, Cathay notes an overall downturn in traffic, including a sharp decline in arrivals at Hong Kong from Japan. Chairman Sutch will later note that the anticipated boom in business has not materialized largely due to visa uncertainties and overpriced hotel rooms.

On July 5, the *Heart of Asia* Jumbojet becomes the first Cathay jetliner to have its former Hong Kong registration changed to PRC, from VR-HIB to B-HIB. It will take six months to finish reregistering the remainder of the fleet.

According to a chart in an article by Dave English, Cathay A340-313s now operate one of the longest routes in the world—Hong Kong to Toronto, a distance of 7,788 st. mi. via Anchorage in 15 hrs. 15 min. (*Airways* [July–August 1997]: 21.)

After a nine-year legal battle waged in the Hong Kong Courts, Judge William Waung finds on August 25 that under the terms of the Warsaw Convention governing civil aviation, neither Cathay nor **Air New Zealand, Ltd.** are liable for the loss of the NZ\$300,000 (US\$181,000) that mysteriously disappeared from a jointly operated Hong Kong to Auckland service on April 27, 1988. The two airlines are ordered to pay the Hang Seng Bank of Hong Kong and the Bank of New Zealand the maximum legal compensation of NZ\$100 and the two banks are required to pay the cost of the legal action.

Pains are taken at the beginning of August to assure the world that CNAC-2 will not take over Cathay Pacific; however, CNAC-2 Vice President Zhang Xianlin does note that the possibility exists of leveraging its 35.86% interest in **Dragonair (Pty.), Ltd.** via a listing on the Hong Kong stock exchange. In September, CNAC-2 receives Chinese government approval to go public on the Hong Kong stock exchange.

Enplanements continue to slide as summer fades. Currency fluctuations in the region have an impact on pricing.

On October 28, three additional roundtrips are inaugurated to Sydney employing A340-313s. In an effort to help revive Hong Kong's slumping tourist industry, the company, on November 20, begins to offer economy roundtrips from either New York or Los Angeles for just US\$999 plus taxes.

It is announced on December 12 that, under terms of a recent agreement between the government of North Korea and IATA, Cathay has agreed to employ a B-747-467s to make the first overflight proving flight by an international carrier through that country's formerly closed airspace on March 1. Cathay's international operations manager, Paul Horsting, who is also a pilot and chairman of IATA's Asia-Pacific Coordinating Group, will fly the trial, which will depart from the carrier's normal route from Anchorage to Hong Kong via Takhtayamsk, Khabarovsk, Harbin, and Beijing.

To help recover lost traffic, the company introduces a two-for-one ticket sale; initial response to the promotion is good.

New services are introduced between October 26 and November 22. These include the addition of two flights between Hong Kong and Kuala Lumpur, bringing the total number of flights to 13 per week. In addition, one more weekly flight is added to Jakarta; Cathay now offers 14 flights a week to the Indonesian capital, the highest frequency of any carrier on that route.

An additional nonstop flight from Hong Kong to Singapore gives customers the option of three nonstop flights per day. Four new frequencies are added on the Manila service, bringing the total number of flights to that city from Hong Kong to 32 per week.

In late December, the company newspaper *The Weekly* reports that traffic for the first 10 months is down 7.4% over the same period the previous year. In light of the Asian economic crisis and its own traffic downturn, the carrier will now hold onto its 25 aircraft options, but will decide on which to turn into firm orders at a later date.

All of the year's challenges and problems lead to an 8.8% drop in passenger boardings, to 10,018,072; however, cargo rises 10.4% to 3.6 billion FTKs. Revenues are off by 3% to HK\$3.95 billion, while costs of HK\$3.64 billion are taken. Operating profit falls to HK\$309.72 million, while net gain drops to HK\$218 million.

At the beginning of 1998, Cathay is the 15th largest airline in the world in terms of operating profit, 18th in net profit, and 19th in operating income. Airline employment stands at 14,000 and the fleet, all of which is Stage III certified, includes 38 B-747s, 4 B-777-267s, 11 A330-342s, and 6 A340-313s.

Cathay, in January, receives the "Passenger Service Award" from *Air Transport World* magazine. In mid-month, the company must report the unhappy news that the success of its two-for-one ticket sale has been blunted. Asian tourists, especially those from Taiwan, are cancelling reservations at the rate of 15% because of the Hong Kong bird flu, which has caused the government to slaughter thousands of chickens to prevent human disease.

The Hong Kong Airport Authority now announces that, due to delays in operation of a connecting railway, the opening of the new Chek Lap Kok Airport will be pushed back two weeks to July 6.

In response to the continuing Asian economic downturn, the company announces in February that it will phase out all 7 of its B-747-267Bs by the end of the year, laying off the 40 flight engineers assigned to them.

A Cathay flight during the month results in a documented case of air rage. According to the Australian Broadcasting Corporation, while en route from Hong Kong to Sydney the British rock group *Oasis* and, in

particular its lead singer Liam Gallagher, and his 30-person entourage behave obnoxiously, disturbing many other passengers with their swearing, drunkenness, and other juvenile actions. The pilot and crew are largely unsuccessful in their attempts to control the group. After landing, Gallagher is interviewed by an Australian television crew and threatens to stab the pilot who had tried to provide discipline. The broadcast tape is provided to Cathay, which, after reviewing it, bans the rock group on March 12 from ever flying with Cathay again.

In accordance with the announced December 12 agreement between the government of North Korea and IATA, Cathay, on March 1, makes the initial trial flight through a North Korean corridor opened to international civil transport. Departing from the carrier's normal Anchorage to Hong Kong route flown via Takhtayamsk, Khabarovsk, Harbin, and Beijing, Cathay's pilot, Horsting, flies a B-747-467 from Anchorage to Takhtayamsk. He then flies to Yedinka, then south to the North Korean coastline (spending 20 min. in Communist airspace), across the South Korean border to Seoul, and then to Hong Kong.

Depending on weather, it is anticipated that the new routing can save as much as 50 min. on flights from East Asia to North America. Beginning on April 1, connecting passengers are able to obtain a free night in Hong Kong as part of their booking on the new daytime service that will be launched to or from Los Angeles.

On behalf of the *Star Alliance*, **Deutsche Lufthansa, A.G.** undertakes negotiations with Cathay during April concerning its possible membership in the consortium.

The company receives its first B-777-367 during a special ceremony at Everett, Washington, on May 21. Cathay is the first airline in the world to take delivery of the physically longest airliner type ever built.

At the beginning of June, Chairman Sutch announces his transfer, the following May, to the London headquarters of John Swire & Sons, Ltd. He will be succeeded by James Hughes-Hallett. At month's end, plans are announced for the inauguration of nonstop service in December from Hong Kong to San Francisco. A memorandum of understanding is signed with **Swissair, A.G.** on June 29.

Twice-daily B-747-467 nonstops commence on July 1 between Hong Kong and Los Angeles; one aircraft departs in the morning and one in the evening. Additional personnel changes also occur on July 1. Deputy Chairman Tsai retires and is succeeded by Managing Director Turnbull, who now becomes the airline's CEO. Turnbull's replacement is his lieutenant, Deputy Managing Director Philip Chen, who is named managing director/chief operating officer.

Capt. Horsting on July 5 again pilots a Cathay B-747-467 on a record-breaking flight. This time, while conducting a FANS-1 satellite navigation system test, his aircraft also conducts a revenue service from New York that departs on July 5.

Meanwhile, in the 12 hours before midnight on July 5, the entire administration, support services, and all tenants of Kai Tak Airport are transferred to the new Chek Lap Kok Airport some miles away. Trucks, vans, service carts, air stairs, and all other available vehicles are pressed into service to help handle the switch.

After departing Vancouver and Anchorage, Capt. Horsting's Jumbojet passes over the North Pole and then down to Hong Kong via Russian, Mongolian, and Chinese airspace. Having cut the normal 20 hrs. 20 min. flight time by 4 hrs. 30 min., the aircraft arrives at Chek Lap Kok Airport on its opening day, July 6.

Also on July 6, under terms of the new pact with **Swissair, A.G.**, the two companies introduce code-sharing on their seven weekly nonstops between the Zurich and the new Chek Lap Kok Airport.

The cargo-handling capability of the new airport is severely strained by start-up difficulties, leading to an embargo on air cargo by Hong Kong Air Cargo Terminals, Ltd. The move will have an impact on numerous airlines, including Cathay, as will the airport's dramatically increased landing, parking, and terminal charges, which are up by as much as 60%.

Cathay begins discussions with **KLM (Royal Dutch Airlines, N.V.)** on July 14 concerning a possible strategic partnership. The talks are announced by KLM's CEO, Leo van Wijk, during a visit to Bombay. Per-

mission is received from the U.S. government on July 22 for the launch of new daily nonstops to San Francisco.

Management and the carrier's pilot union become deadlocked during the month as contract negotiations break down.

Twice-weekly B-747-467 nonstops from Hong Kong to Istanbul commence on August 8. On September 6, an A340-313 with 260 passengers en route from Zurich to Hong Kong, narrowly avoids a midair collision with an **Aeroflot Russian International Airlines** Tu-154 passenger liner over Samara, Volga region. Turbulence eddies in the wake of the Tupolev jolt the Airbus, causing its onboard warning system to sound. Air traffic control on the ground does not inform the Hong Kong crew that the Tu-154 is close; however, its commander later radios an apology. Cathay officials report the incident in writing to both Russian and Hong Kong aviation authorities.

It is announced at a London news conference on September 21 that Cathay has joined its first airline alliance, the new *OneWorld* grouping established to compete with the *Star Alliance* headed by **United Airlines** and **Deutsche Lufthansa, A.G.** Leadership for the new enterprise is provided by **American Airlines** and **British Airways, Ltd. (2)**, which continue their battle to gain regulatory approval for a separate arrangement that would provide U.S. antitrust immunity on prices set for the transatlantic market. **Canadian Airlines International, Ltd.** and **Qantas Airways (Pty.), Ltd.**, both of which already have marketing partnerships with AA and BA, are also charter members.

Leaders of the five companies indicate that they will coordinate ticketing and flight schedules, while cooperating on frequent flyer programs. Other carriers will be invited to join and **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)** announces its membership before the day is over.

One airline that will not be invited to join, **Virgin Atlantic Airways, Ltd.**, hires a truck with a sign painted on its side proclaiming "no way" and has it parked, illegally, outside the building where the *OneWorld* news conference is held. A spokesman for Virgin indicates that his airline will gladly pay the parking ticket to get its point over.

After months of labor-management discord, **Philippine Airlines (PAL)** shuts down at 12:01 a.m. local time on September 23. A government-appointed management committee, which had begun negotiating with several foreign carriers concerning equity shareholding, agrees when President Joseph Estrada's administration, via its partially owned holding company PBN, contracts with Cathay on September 26 for the operation of short-term cabotage charter flights. Estrada defends his action to the media as having been taken on a temporary and emergency basis so as not to disrupt tourism and commerce.

Under the direction of Cathay Managing Director Chen, the Hong Kong-based major begins flying Philippine domestic routes on September 28, initially operating six roundtrip flights each day from Manila to Cebu City, Davao, Cagayan de Oro, Bacolod, Tacloban, and Puerto Princesa. The airline contributes 5 A330-342s to the endeavor, while also employing 3 PAL aircraft staffed by PAL pilots and flight attendants. PAL ground crews service the aircraft. Cathay continues to maintain its 38 weekly roundtrips between Hong Kong and Manila.

President Estrada is a passenger on the first flight between Manila and Cebu City, where he meets with local officials and again stresses that these cabotage flights will only be maintained until Filipino carriers can take over.

The sight of the Cathay aircraft in Philippine skies has a significant impact on businessmen, government officials, members of the public, and, perhaps most importantly, upon those continuing in the negotiations between management and labor at PAL. During the day, President Estrada is able to announce an end to the strike and notes that the Cathay cabotage flights will cease as soon as PAL returns to service, hopefully as early as the first week of October.

While these overseas activities continue, Cathay works to position itself for a healthy recovery from the regional economic crisis that has been labeled "the Asian flu." By October 1, the fleet includes 63 aircraft, including 10 added so far this year and at least 3 to be added throughout

1999. Plans are also well underway for the deployment of these jetliners to more stable markets, such as Los Angeles and Sydney, and for the improvement of one-on-one customer services.

In Hong Kong on October 5, Managing Director Chen announces that he has received word that PAL will return to service within two days. Given this development, it is further noted that Cathay will cease its temporary cabotage operations for the island nation on October 7, having provided a total of 60 chartered flights. The last Cathay cabotage service operated in the Philippines is the 10 p.m. Wednesday flight from Manila to Cebu City.

On October 8, it is revealed that the Asian economic crisis has caused a 20% drop in 1998 revenues for the carrier. A net loss of HK\$175 million (\$22.6 million) is posted for the first half of the year, compared to a HK\$1.07-billion profit at the same point in 1997.

Rumors concerning the future of **Philippine Airlines (PAL)** become rampant. Although Cathay is in negotiations with the government of President Estrada concerning a possible investment, the talks are far from finished. PAL scraps plans to resume international flights on October 13 at the request of potential investors, including Cathay. The foreign companies wish to undertake feasibility studies.

On October 15, two Hong Kong newspapers run reports that a deal has been struck and that **Northwest Airlines**, another suitor for PAL's hand, has withdrawn from negotiations. Both airlines deny these assertions.

On a more factual basis, it is also reported on October 15 that Cathay has entered into a strategic alliance with **Japan Air Lines Company, Ltd. (2)**. Under its terms, the two will share codes on some routes between Hong Kong and Japan and their frequent flyer programs will be linked. The pact will take effect in early 1999.

Four days later, the company admits to the media that "active discussions" are underway concerning a possible equity stake in PAL, but emphasizes that no decision has been taken on whether or not to invest in the troubled Philippine flag carrier.

Also on October 19, the company's Flight Training Center at Hong Kong's new airport is topped off. When completed, the building will house flight simulators and provide flight safety training.

The carrier eliminates smoking on flights between Hong Kong and Japan beginning on October 25, thereby becoming totally smoke-free. It also eliminates service to Sapporo and cuts back the number of weekly return flights to Indonesia from 24 to 19.

Swissair, A.G.'s five weekly frequencies from Zurich to Hong Kong are augmented on October 25 by four additional weekly flights operated by Cathay under the new dual-designator pact. A company spokesperson on October 26 insists that no decision on acquisition of a stake in **Philippine Airlines (PAL)** has yet been made. The next day, a PAL executive expresses interest that Cathay will acquire a 40% interest and that its proposal will be submitted before the close of business.

Philippine Airlines (PAL) Executive Vice President Aquino informs the press on November 5 that Cathay had made a conditional equity offer for PAL two days earlier. President Estrada indicates that Cathay has his blessing to take over management control.

At Cebu for a meeting, Philippine Finance Secretary Edgardo Espiritu also confirms to the media the existence of a proposal, while adding further detail. He, however, raises a number of management issues yet to be ironed out. Among these is a Philippine law which requires that certain of the airline positions be held by citizens, including 60% of the board seats, and that no more than 40% of a utility may be owned by foreign interests.

Espiritu indicates that the process for the transaction will be for PAL to implement a capital hike that will dilute the holdings of Chairman Lucio Tan's group from the present 56.63% and allow the new partner to join. Tan, himself, will be stripped of his management roles, but will retain a board seat. Stockholders, old and new, will need to infuse P 6 billion (\$150 million). At least two or three weeks will be required to complete final arrangements in order to allow Cathay time to study PAL's technical systems.

When contacted for his reaction to the optimistic Filipino comments, Cathay Chairman Sutch indicates that the airline will insist on having

management control. "That will need quite a lot of negotiations," he tells Reuters, Ltd., "I expect them to continue for a long time yet."

While negotiations between PAL and Cathay continue, **Northwest Airlines** makes an offer on November 6. It involves only management support, without a capital infusion.

During the talks between the airlines, Cathay also unveils a new frequent flyer program called *Asia Miles*. The program will take effect in February and replace the previous *Passages*, for which only premium-class passengers were eligible.

A "source involved in the talks" refuses on November 9 to confirm Asian media reports of the past few days that Cathay is willing to inject \$75 million-plus into **Philippine Airlines (PAL)**, but does note that the figure will be less than the carrier had sought. Additionally, the unnamed reporter indicates that PAL will not only accept the figure, but also turn over management control to Cathay in any manner the Hong Kong-based major desires. The Filipino laws will be followed and methods will be found to bend them to meet necessity.

Cathay Pacific and the interim rehabilitation receiver of **Philippine Airlines (PAL)** jointly announce on November 10 that the PAL receiver has accepted Cathay's conditional proposal for a possible investment in PAL. Their statement indicates that the two sides will now work together to draw up a comprehensive rehabilitation plan for the financially troubled Filipino flag carrier, which will be submitted to the Philippine Securities and Exchange Commission (SEC) and creditors for final approval. Although the exact amount of equity infusion by Cathay and the Tan Group and local investors is not yet determined, it is expected to be in the \$75 million-plus range the media has been reporting. It is anticipated that as much as a month may be required to complete the rehabilitation plan.

The next day, Cathay CEO Turnbull indicates that his carrier has made a provisional offer of P 3-4 billion, but that he expects the offer will include a group of foreign investors, which together will hold the 40% stake allowed under Filipino law. It is also reported that Cathay wishes the Philippine government to divest its shareholding in **Philippine Airlines (PAL)**, although PAL Executive Vice President Aquino stresses that such a divestment is not an absolute condition of Cathay's investment.

Jaime Bautista, the Filipino company's chief financial officer, informs reporters that it would be perfectly acceptable for Cathay to link up with the Philippine National Bank or a local affiliate of the American International Group to obtain 50% control of the airline. This would skirt the national law limiting foreign ownership to a 40% maximum.

On November 13, PAL, in light of developments, requests that the SEC extend its deadline for the submission of a rehabilitation plan. In light of foreign creditor's support and the relaunch of two more long-haul routes on November 18, the SEC approves the request on November 19. The new due date will be December 7, the same day Cathay is set to complete its 25-day final due diligence leading to the hoped-for injection of fresh capital.

Having become restless over fears of retrenchments should a deal with Cathay actually be struck, an independent group of PAL workers calls for a rally outside company headquarters in Manila's Makati business district on November 20. Few workers turn up.

Of greater concern are mounting losses, which must also be reported this Friday. The net loss for the period from March through the end of September has accelerated to P 6.099 billion (\$154 million), up from P 2.11 billion a year earlier. Revenues for those six months, meanwhile, have plunged to P 11.74 billion from P 17.58 billion the previous year. PAL officials from Executive Vice President Aquino on down realize that the loss will have an impact on Cathay's valuation of the company and may eventually undermine talks between the two carriers. There is no immediate comment from Hong Kong.

While en route from Auckland to Hong Kong at 33,000-ft. on November 21, Flight 108, an A340-342 with 232 passengers, suffers the failure of an air valve in its pressurization system, which causes loss of cabin pressure. An emergency dive, requiring just 2-3 min., is made

down to the 10,000-ft. level and the aircraft diverts to Sydney. The wide-body lands without incident and no injuries are reported; the customers all make it to Hong Kong the next day aboard another flight.

A senior Philippine government official, noting on November 25 that the proposed arrangement with Cathay is in significant difficulty and probably will not go through, now openly suggests that **Northwest Airlines** might be better suited for a tie-up with his country's flag carrier. The source, Executive Secretary Ronaldo Zamora, in a radio interview reported by Reuters, Ltd., indicates that Cathay has put forward new and unacceptable conditions, including the removal of pilots who had returned to work following the June pilots' strike. He confirms, as does President Estrada in a separate interview, that Chairman Tan is in the U.S. for talks with Northwest.

Daily nonstop A340-342 return service is inaugurated on December 1 between Hong Kong's new Chek Lap Kok Airport and San Francisco. Having negotiated for another week, both Cathay and **Northwest Airlines** pull out of investment discussions with **Philippine Airlines (PAL)** on December 2.

Philippine President Estrada confirms that the Northwest talks have fizzled, but expresses hopes that he can convince the Hong Kong-based major to continue. In a statement from Manila, a Cathay spokesman indicates that the parties involved could not resolve "certain critical issues" and, consequently, the airline chooses not to pursue this investment opportunity.

Insiders let it be known to the media that neither PAL's unions or Estrada himself have been flexible in the matter of management control issues, particularly requested staff cuts, while Cathay has also been troubled by valuation of the airline and the lack of profit margins on domestic routes. These are now mostly unprofitable as a result of the depreciation of the Philippine peso.

Estrada indicates the next day that he has a letter of assurance from Cathay that it will return to the bargaining table. There is disagreement on that point from Cathay. In Manila, Cathay's local station manager Peter Foster bluntly indicates, "We are not having talks with them, the talks are over." In Hong Kong, Cathay CEO Chen more gently but just as firmly confirms withdrawal from talks with PAL and thanks the Philippine government for allowing the carrier an opportunity to pursue the opportunity. "We wish Philippine Airlines well," he adds, "and we will remain open to future cooperation in other areas of mutual benefit."

Following a directive from the U.S. FAA on December 4 urging that the fuel pumps of B-747s employed on very long-haul routes be inspected, a spokesman for the airline indicates that a crew will be sent to Anchorage, just in case head winds force weekend Los Angeles services to stop for fuel.

Philippine Finance Secretary Espiritu announces on December 7 that his government's financial institutions could provide bridge financing for **Philippine Airlines (PAL)** through April if necessary. At the same time, President Estrada indicates that he has once again invited Cathay to a meeting the next day where the parties may resume talks.

On December 8, Espiritu sweetens the deal for Cathay, indicating that the Filipino government will provide bridge financing through April if Cathay will come in; no capital infusion would be expected from Cathay before that time. The company rehabilitation plan presented to the SEC the previous day envisages an injection of fresh capital of \$150 million. The first tranche of \$90 million, to be paid as soon as the plan is approved, would be put up by PAL Chairman Tan and other investors.

Despite the new offer, Cathay does not send a representative to meet with Chairman Tan or other PAL officials during the day. A disappointed President Estrada indicates a meeting has been rescheduled for sometime within the next week.

Cathay Managing Director Chen notes for reporters on December 9 that the airline has had no formal approach by the Philippine government for a resurrection of equity discussions, despite all of the information coming out of the Philippines to the contrary. Indicating that his airline has put a lot of financial and manpower resources on the due diligence, Chen reiterates that talks to acquire a stake in PAL are over.

At the same interview, Chen reports that the carrier's workforce has been trimmed by 1,000 staff since the beginning of the year to a present 14,100. Additionally, it is admitted that the air cargo problems at Hong Kong's new Chek Lap Kok Airport will cost the airline HK\$400 million in lost revenues by year's end.

In a radio interview on Christmas Day, Philippine Executive Secretary Zamora indicates that **Philippine Airlines (PAL)** is holding discussions with both **Northwest Airlines** and Cathay Pacific concerning their possible investment. Although both foreign airlines had indicated weeks earlier that talks were dead, Zamora is quoted to the contrary by the Associated Press. "The truth is their discussions are continuing," the official notes, "However, in order not to disturb the talks, they are not disclosing this to the public."

Four days later, on December 29, President Estrada also confirms the talks and optimistically hopes that a settlement, probably with Cathay, will be concluded "by next month."

On every flight since July, Cathay has distributed envelopes to passengers encouraging them to donate all of their small change to help UNICEF. It will be reported on March 15 that the effort has brought in HK\$24 million for the children's organization.

During the 12 months, passenger bookings have risen a slight 2.8% to 10.29 million. Cargo traffic is off by 7.8% to 3.33 billion FTKs.

Revenues of HK\$3.44 billion are generated; however, costs, at HK\$3.52 billion, are high. At least HK\$100 million is tied up in the move to the new Hong Kong airport as well as in the delivery of 10 B-777-367s and A340/330s. The net loss, for one of the world's most consistent airline money makers, is HK\$542 million (\$70 million). Cathay records show an annual net loss last reported in 1963.

It is announced on January 8, 1999, that PAL has hired a team of former Cathay officials to help it restructure. Regent Star Services (Pty.), Ltd., a consultancy firm established and led by former Cathay Taiwan/Philippines General Manager Foster and Swire Pacific (Pty.), Ltd. Financial Director Michael Scantlebury, receives a five-year technical services contract. The new management team is given extensive powers to turn around the debt-ridden carrier and Foster is personally guaranteed by President Estrada that the investment required to restructure the airline will be provided.

Once the team takes over on January 13, Foster quickly moves to revisit a number of creditors who have so far rejected the airline's rehabilitation plan. He also rejects the idea of renewed negotiations with Cathay, his former employer.

After weeks of negotiation, the union representing Cathay's flight attendants put forward a proposal on January 14 which would see its members fly more hours (though not as many as the carrier desires) in exchange for a pay increase. Management rejects the plan. Matthew Cheung, the territorial commissioner for labor, is drawn into the talks, which continue amidst rumors of a possible strike.

Six days later, on January 20, the flight attendants back off of their demands of the struggling airline and agree to work an extra four hours each month for a 3.5% pay increase.

The *OneWorld* global alliance is formally implemented on February 1 with **American Airlines**, **British Airways, Ltd. (2)**, **Canadian Airlines, Ltd.**, and **Qantas Airways (Pty.), Ltd.**

Cathay joins with **Japan Air Lines Company, Ltd. (2)**, also on February 1, in linking their frequent-flyer programs as part of the implementation of their new code-sharing agreement.

A new "Spirit of Hong Kong Into the New Millennium" campaign is launched on February 6 designed to remind citizens of the resilience of Hong Kong and urging them to work together to overcome the challenges faced by the former British crown colony. To that end, a design contest, running through April 1, is announced for a livery design to be painted on a B-747-467. The winner will receive HK\$25,000 and a trip to Seattle to join in the delivery flight of the new Jumbojet.

Documents are completed on February 8 to lease a pair of B-747-267Bs to **Virgin Atlantic Airways, Ltd.** for five years on a lease-purchase

contract. Cathay will refurbish and repaint the Jumbojets to Virgin's specification before delivery.

Also on February 8, the U.S. trade magazine *Aviation Week & Space Technology* announces its aerospace laureates for 1998. Among those honored, in the category of commercial air transport, is Chairman Sutch. The award winners will receive their prizes at a dinner at the Smithsonian Air and Space Museum at the end of April.

The *South China Morning Post* reports on March 2 that the carrier's management will seek permission from the board of directors at their March 10 meeting to offer stock options to pilots during salary negotiations that would also have the flyers facing maximum 27% pay cuts. The threat of industrial unrest is raised again the next day when the Hong Kong Aircrew Association (HKACA) says it will not accept any form of salary reductions unless the airline can prove it faces serious long-term financial difficulties. The situation is reminiscent of that faced by **Air France** in mid-1998.

After some weeks of negotiation, a long-term agreement is signed with **Pakistan International Airlines Corporation** (PIA) on March 5 under which the North Asian airline will charter all 6 of Cathay's B-747-367s. Meanwhile, 2 B-747-267Bs are chartered to **Virgin Atlantic Airways, Ltd.**, 2 are leased by **Air Atlantic Icelandic, H.F.**, and 3 are parked.

Having posted its first net loss in 35 years, the company's directors, on March 10, authorize management to proceed with its plan to cut pilot salaries an average of 8% under a stock option plan. News of the implementation, minus the details, is released to the public on March 16.

On March 19, the HKACA, with 1,040 members, files a writ in the High Court alleging "continual erosion" of their contracts through a series of amendments in the operations manual made in 1996 and 1997.

The HKACA action is in addition to the separate battle being waged by the airline's pilots over proposed pay cuts. On March 20, representatives of the pilots' union, which does not accept the plan and does not rule out industrial action, meets with management for further discussions.

On March 26, management offers its pilots the opportunity to choose, by April 9, from a number of pay cut and stock options to be made available as part of the airline's cost-cutting exercise. The principal choices are the acceptance of stock options in return for pay cuts of up to 27% or resignation with six months severance pay.

Under its terms of the accord signed in the fall, Cathay and JAL begin dual-designator service on March 28 from Osaka (KIX) to Hong Kong. Two days later, the company extends its pay-stock deadline for pilots from April 9 to April 30.

Flights with JAL between Nagoya and Hong Kong start on April 1.

For the second time, the company, on April 26, resets to May 31 the deadline for pilots to accept a proposal for pay cuts.

A memorandum of understanding is signed at Hong Kong on April 28 by Deputy Chairman Turnbull and **South African Airways (Pty.), Ltd.** President/CEO Coleman Andrews for a long-term commercial agreement. Under its terms, the two companies will link their frequent flyer programs, offer code-sharing flights, and cooperate on ground handling.

On April 30, Cathay signs with CNN International and Time, Inc., becoming the first category-exclusive sponsor of CNNI's weekly interactive discussion program *Q & A Asia*.

Given the pilot situation and the general Asian economic climate, Cathay, in early May, puts out feelers to other airlines concerning the possible lease to them of two A340-342s and one B-747-467.

With the time for the pilots decision fast approaching, Cathay management, on May 26, informs its 650 senior pilots that their employment contracts will be cancelled if they reject the company's latest offer.

Three days later, the pilots begin a 12-day slowdown that forces the company to cancel hundreds of flights and costs HK\$25 million (US\$3.2 million) daily. Following intercession by the Hong Kong Labour Department, the HKACA caves in on June 10 and accepts the management offer.

Following an upswing in the regional economy and an improvement in the economic outlook, including bookings, for the airline, Cathay, on July 15, withdraws its May offer to lease three large aircraft.

Typhoon Sam plays havoc with service at Chek Lap Kok Airport on August 22-24. Following the **China Airlines (CAL)** crash on August 22 that causes delays, additional problems are encountered by Cathay and CAL, in particular, during the next two days. A total 77 incoming flights are delayed on August 23, 20 are cancelled, and 14 diverted, with 122 outgoing flights delayed and 16 cancelled. The next day, a total of 175 scheduled flights in and out of Hong Kong are delayed, none are diverted, and 39 are cancelled.

A new code-share service begins with **Canadian Airlines, Ltd.** on October 31, with Cathay placing its code on Canadian services from Toronto to Hong Kong via Vancouver.

The company's new corporate headquarters, Cathay Pacific City, is opened in November. By year's end, the fleet has been increased by the addition of 3 A340-313s chartered from **Air China International Corporation**, while, also in December, 3 more of the same type are ordered new, along with 2 B-747-400Fs.

Customer bookings this year climb 2.1% to 10,516,000 while cargo accelerates 14.3% to 3.76 billion FTKs. Operating revenues swell 7.9% to HK\$3.69 billion, while costs are held to HK\$3.33 billion. The operating profit is HK\$363.19 million while the previous year's net loss becomes a HK\$281.98 gain. The carrier's cargo division is justly proud that it has been able to turnover HK\$1 billion.

By the start of 2000, airline employment has been reduced by 5.3% to 13,224. Among the world's top 25 airlines at the start of the new millennium, Cathay is 10th in FTKs, 22nd in operating revenue, 14th in operating profit, and 12th in net gain.

On January 26, a comprehensive code-sharing agreement is signed with **American Airlines**. Pending government approval, Cathay will place its designator code on American's U.S. domestic services beyond Cathay's U.S. gateway cities, as well as flights between the U.S. and certain Latin American destinations. Another A340-300 is requested of ILFC in February.

A new code-sharing agreement begins with **British Airways, Ltd. (2)** on March 26. Under its terms, Cathay places its designator on BA flights operating from London (LHR) to Belfast, Edinburgh, Glasgow, and Manchester.

A proposal to purchase a minority stake in **China Eastern Airlines Company, Ltd.** is rebuffed by the management of the mainland carrier on April 1. In May, plans are announced for the employment of another 80 pilots.

Also in the spring, landing and parking fees at Hong Kong's international airport are lowered and help the airline to somewhat offset steadily rising fuel costs.

On May 18, Flight 829, an A340-313 with 16 crew and 127 passengers, operates for proving purposes via the Polar 2 route directly over Hudson Bay, the first nonstop commercial service between Toronto and Hong Kong. The first transpolar flight from Canada and the first transpolar service operated with an Airbus product comes within 50 nm. of the North Pole and covers the 7,221 nm. distance in 14 hrs. 59 min.

A new company one-month boarding record of 1,085,533 passengers is set in July. The same month extra frequencies are added to Cebu, Bahrain, Dubai, Rome, and Seoul.

The number of company cargo destinations is increased to 19 on September 1 with the inauguration of twice-weekly B-747F service to San Francisco, thrice-weekly flights to New Delhi, and a weekly run to Penang.

On September 2, the thrice-weekly Hong Kong-Bangkok return route is extended with A340-313s to Karachi. Thrice-weekly B-747F flights begin on September 20 from Hong Kong to London (LHR) via Delhi. Twice-weekly B-747F return flights to the Malaysian city of Penang start on September 23.

A code-sharing agreement is signed with **THY Turkish Airlines (Turk Hava Yollari, A.O.)** on September 22 covering service over the Hong Kong-Istanbul route.

During the month, extra frequencies are also added to Jakarta, Johannesburg, Kuala Lumpur, Los Angeles, Rome, Seoul, and Singapore.

During its climb after takeoff from Rome for Hong Kong on November 1, Flight 292, an A340-313, encounters a flock of birds that damage two of its four engines; a safe emergency landing is made back at the point of origin and no injuries are reported.

CATSKILL AIRWAYS: United States (1966–1989). Stephen Low forms this New York air taxi operation in the summer of 1966 to offer daily roundtrip scheduled as well as charter and contract service flights from a base at Oneonta Municipal Airport to New York (LGA). A Rockwell Aero Commander 500 is employed to launch scheduled revenue frequencies in September, while a Beech B-58 Baron is assigned to handle nonscheduled work.

The Aero Commander is traded in during 1967 for a Beech B-80 Queenair. One plane-one route operations continue apace during the remainder of the decade and through the 1970s.

By 1981, enplanements are 8,675. The Queenair is replaced by a Beech 99 in 1982, but does not arrive in time to prevent a slip in bookings to 8,175. Passenger boardings do rise to 9,550 in 1983 and to 10,818 in 1984.

Following the purchase of **Empire Airlines** by **Piedmont Airlines** in 1985, founder Low elects to expand his tiny origin and destination carrier. In a move unique at this time, the founder appoints Sandra Wallace as general manager and promotes Capt. Carol Lind operations director.

The two women begin recruiting additional staff and order 2 more Beech 99s. In November, flights commence from Oneonta to Utica and Rome. Bookings reach 11,163.

With the recession largely over by 1986, Low's workforce is increased 400% to 60 and 2 more Beech 99s are acquired. Scheduled service is inaugurated to Boston and Newark. Enplanements soar 144.8% to 27,315.

In 1987, Islip and Philadelphia are added to the route network, but traffic statistics are withheld. By 1988, the company has added routes to Boston, Newark, and Utica. During the summer, the company moves to the latter destination.

Robert Peach Jr., son of the longtime president/CEO of **Mohawk Airlines** (1), establishes the holding company **Horizon Air, Inc.** at Syracuse in early 1989. Peach employs the new entity to acquire **Catskill Airways** in the spring. The new owner at first plans to name his prize **Mohawk Airlines** (2) after Peach Sr.'s company. **USAir**, the renamed **Allegheny Airlines** that had purchased Mohawk in 1971, files an objection.

At this point, the Catskill subsidiary is labeled **Manhattan Air** and is shifted to a Syracuse hub. On June 24, service is introduced to Martha's Vineyard and Nantucket from Islip, New York, and New Bedford, Massachusetts. **USAir** now agrees to Peach's moniker request and Manhattan Air becomes the second Mohawk, launching service in July with a fleet of 2 Beech 1900s and 7 Beech 99s.

CATSKILL HOLIDAY AIRLINES. See **HOLIDAY AIRLINES** (4)

CAUSA (COMPANIA AERONAUTICA URUGUAYA, S.A.): Uruguay (1936–1967). Uruguayan industrialist Luis J. Supervielle forms CAUSA at Montevideo on December 29, 1936. With initial capitalization of a million pesos (approximately \$550,000), the new entrant acquires a pair of Junkers Ju-52/3m floatplanes from Germany. Christened *El Uruguayo* and *El Argentino*, they are used to inaugurate daily service to Buenos Aires on March 12, 1938.

The route is extended beyond Montevideo to Punta del Este in January 1940. Colonia, opposite Buenos Aires, becomes a destination in 1943.

In 1946–1962, in cooperation with first Dodero shipping line subsidiary **ALFA (Aviacion del Litoral Fluvial Argentino, S.A.)** and after 1949, its state-run successor, **Aerolineas Argentinas, S.A.**, CAUSA runs twice-daily turnaround flights between the two national capitals. This service is initially undertaken by 3 Short S.25 Sunderland 3s and later 2 ex-**British Overseas Airways Corporation (BOAC)** Short S.25 Sandringham 7s.

Although a Sandringham 7 is lost on October 22, 1955 and a Sunderland 3 on September 11, 1956, the route proves successful enough for the carrier to add a third Sandringham flying boat, along with 4 Curtiss C-46 freighters.

Facing increasingly stiff competition from the Douglas DC-3s and Vickers Viscount 745s of **PLUNA (Primera Uruguayas de Navegacion Aerea, S.A.)** and Curtiss C-46s of **ARCO (Aerolineas Colonia, S.A.)**, the latter offering coach-air service, CAUSA's finances and service begin to deteriorate. Despite the addition of 3 former **KLM (Royal Dutch Airlines, N.V.)** Lockheed L-749A Constellations in 1963, the carrier cannot maintain its viability and suspends operations in 1966.

In 1967, an effort is made to restart operations as backers apply to the Dynallectron Corporation for the lease-purchase of 3 Lockheed L-1049H Super Constellations, including one once flown by **Resort Airlines**. The company again encounters financial difficulties and this time the Uruguayan government cancels its operating permit at year's end.

CAUSEY AVIATION SERVICE: 6120 Smithwood Rd., Liberty, North Carolina 27298, United States; Phone (910) 685-4423; Fax (910) 685-4419; Year Founded 1967. B. Winfield Causey Jr. sets up this concern as an FBO at Liberty, North Carolina, in 1967. Simultaneously, executive and small group passenger charters are also undertaken.

Thirty-three years later in 1998–1999, Causey employs seven pilots and operates the following aircraft from Causey Field: a pair of Beech King Air 100s and Cessna 550 Citation IIs, plus one each Super King Air 200, Beech 58 Baron, and Piper PA-325 Navajo.

CAVE (COMPANIA AEREA VIAJES EXPRESOS, S.A.): Venezuela (1992–1994). Established as an air taxi at Caracas in 1987, CAVE begins to undertake scheduled passenger and cargo commuter flights to surrounding destinations beginning in early 1993. Managing Director Dr. William Pacanins's fleet comprises 3 Cessna 402Cs, 3 Swearingen Metro IIIs, 1 Britten-Norman Islander, and 1 Britten-Norman Trislander. A fourth Metro III arrives in 1994, just before the company shuts its doors.

CAVSA (COMUNICACIONES AEREAS DE VERACRUZ, S.A. de C.V.): Mexico (1934–1945). At Jalapa, capital of Veracruz state, Francisco "Pancho" Buch de Parada forms CAVSA in early 1934. A number of route concessions are obtained within the state, which the owner begins flying with a bright red Fairchild 71 christened *El Espinazo del Diablo* (*The Devil's Backbone*).

During the late 1930s, the fleet is upgraded by the addition of Pilgrim 100s and multistop service is inaugurated to Puerto Mexico. Two Curtiss Condor IIs are added in 1940.

William T. Churchill Morgan purchases CAVSA in June 1943 for 575,000 pesos. Immediately, the new owner purchases Garrett "Peck" Woodside's **Compania Aeronautica del Sur, S.A. de C.V.** Lockheed Model 10 Electras are placed in service. In 1945, Morgan changes the carrier's name to **ALASA (Aerovias Latino Americanas, S.A.)**.

CAYMAN AIRWAYS, LTD.: P.O. Box 1101, Grand Cayman, Cayman Islands; Phone (809) 949-8200; Fax (809) 949-7607; <http://www.cayman.com.ky/com/cal/index.htm>; http://www.caymans.com/~caymans/cayman_airways.html; Code KX; Year Founded 1968. Cayman Brac Airways, Ltd., founded by **LACSA (Lineas Aereas Costarricenses, S.A.)** of Costa Rica in 1955 to operate a feeder service on behalf of **British West Indies Airways, Ltd. (2)**, is reorganized by the Cayman Islands government in July 1968 to form the present carrier. Shareholding is divided between the government (51%) and **LACSA (Lineas Aereas Costarricenses, S.A.)** (49%). Services to Jamaica are maintained with a British Aircraft Corporation BAC 1-11-409 leased from the airline partner.

In 1971, Cayman is designated the U.K. carrier to serve the Miami–Grand Cayman route under the Bermuda Agreement between Britain

and the U.S. Flights over the new route commence and operations continue apace through **1976**.

During these years, LACSA upgrades its BAC contribution to Cayman, providing the *Arenal*, a chartered DASH-531 that operates under the name *Cayman Progress*. The British-made jetliner flies from Georgetown to Kingston, Miami, and later, to Houston.

For the winter season of **1977** that begins in October, a Douglas DC-9-15RC is leased from **Air Florida**.

In December, the government purchases the **LACSA (Lineas Aereas Costarricenses, S.A.) interest** and the carrier becomes state-owned and operated.

The domestic route of Cayman Brac, Grand Cayman, and Little Cayman is maintained in **1978** with a Britten-Norman BN-2A Trislander and a Douglas DC-3. The **Air Florida** Douglas is returned in March. A Douglas DC-6F is employed on an all-cargo route to Miami and the fleet's BAC flies not only to Miami, but also to Jamaica and the Turks and Caicos Islands. A second 1-11, a BAC 1-11-523 previously operated by **Transbrasil, S.A. (Linha Aerea)**, is delivered in late May. Christened *Cayman Victory*, it, too, flies to Miami.

By the end of the **1970s**, Chairman V. G. Johnson's airline employees 52 workers.

Financial difficulties caused by high fuel prices, low traffic totals, and the world economic situation plague the carrier throughout the early **1980**.. Still, the fleet is upgraded by the addition of 2 Boeing 727-227As (previously operated by **Air Florida**) and a DC-8-51F in **1982** the 1-11s are returned to BAC and sold.

In December **1984**, Miami to Grand Turk and Providenciales service becomes thrice-weekly. Enplanements for the year total 226,177.

In mid-December **1986**, the B-727-227As inaugurate holiday charter and inclusive-tour flights to the Cayman Islands from Chicago, New York, Detroit, Tampa, Atlanta, Philadelphia, Baltimore, Boston, and St. Louis. Simultaneously, and in cooperation with **Piedmont Airlines**, the company expands its Cayman Caper vacation program to nine Florida cities.

Cayman inaugurates thrice-weekly nonstop service from Grand Cayman to Tampa and twice-weekly flights from Grand Cayman to Atlanta in September **1987**. Operations continue apace in **1988**.

In **1989**, the fleet of the government-owned flag carrier includes 2 leased B-727-227As and 1 owned Shorts 330. Orders are placed for 2 leased B-737-4Y0s, the first of which is placed into service on November 26. On Fridays, Saturdays, and Sundays beginning on December 15, the new "Baby Boeing" makes roundtrip flights to New York (JFK).

In **1990**, the trimotors are replaced when the second chartered B-737-4Y0 arrives. From February through March 31, the airline offers deep discount same day fares from its Miami (\$186) and New York (\$286) gateways, respectively, to the Cayman Islands. In December, twice-weekly flights are initiated to Grand Cayman from Houston and 21 per week coming in from Miami. Enplanements for the year total 356,073.

Cayman increases its number of short-haul jetliners significantly in **1991**, adding by lease one each B-737-205A, B-737-236A, and B-737-2S2C. An order is placed for a B-737-4Q8 and the Shorts is withdrawn. In January, five weekly return flights are inaugurated from New York to both Grand Cayman and Grenada. In June, roundtrip flights begin from Miami to Provo Island.

In a protest against **American Airlines'** decision to add a second daily flight between Miami and the islands, the flag carrier places an open letter into *The Wall Street Journal* on June 18. The company asks the major's chairman, Robert Crandall, to discontinue his new service at the risk of jeopardizing the jobs of Cayman's 360 employees. American's schedule is not altered. Late in the year, a B-737 overshoots the runway at Roberts Airport and crashes into the bay; no injuries are reported.

Passenger boardings climb 6.5% to 380,826.

The fleet in **1992** grows by the addition of the B-737-4Q8. Cayman becomes a code-sharing partner of **USAir** in January and inaugurates services to Baltimore-Washington International Airport in April, along with connecting service at Tampa. Not only does the company face com-

petition in its markets from **American Airlines**, which doubles its frequency to twice-daily in July, but, beginning in November, but from **United Airlines** as well.

In **1993**, Chairman Leonard Ebanks and Managing Director Ray Wilson oversee a workforce of 300. The chartered B-737-4Q8 enters service and markets served from George Town include Atlanta, Houston, Kingston, Miami, and Tampa. Cayman Brac and Little Cayman are linked. A huge \$8.8-million operating loss is suffered.

Operations continue apace in **1994**. In December, a comprehensive code-sharing and marketing agreement is signed with **United Airlines**. In addition to linked frequent flyer programs, schedule coordination, and joint advertising and promotion, the two code-share services from Miami and Tampa to Grand Cayman and Cayman Brac.

Although traffic figures are not released, financial figures are; these show an operating loss of \$3.2 million on revenues of \$30.9 million.

The number of U.S. gateways served directly or by dual-designator stands at five in **1995**—Charlotte, Baltimore (BWI), Houston, Tampa, and Miami. On May 1, **1996**, daily nonstop B-737-236A roundtrips commence between Grand Cayman and Orlando.

Destinations visited in **1997** include Atlanta, Houston, Miami, Montego Bay, Tampa, and various markets in the Caribbean. In April, the Boeing 727-23 of U.S. start-up carrier **Panagra Airways** is chartered for six weeks while Cayman's two B-737s undergo certification maintenance checks. The trijet is operated on all Cayman routes; the aircraft comes with a first-class section that is test-marketed as a business-class. A \$1.62-million operating loss is reported.

Flights continue in **1998**. On November 1, the company posts a choice of six new aircraft color schemes on its website and asks visitors to vote for their favorite.

On May 1, **1999**, Cayman aviation minister Truman Bodden presents information on the airline's finances to the national parliament. Despite a \$5.38-million government subsidy, the airline's operating loss for 1998 grew by 32.2% to \$2.15 million.

Having acted as deputy board chairman in the absence of now-retired chairman Leonard Ebanks, Caymans lawyer Sheridan Brooks-Hurst is elevated to the airline's top post on October 15. She becomes one of, if not the, first women to head a Caribbean airline.

Despite a \$5.38 million government subsidy, the year's operating loss jumps 32.2% to \$2.15 million.

Service and income continues to deteriorate during the first quarter of **2000**. In early March, over 400 passengers are stranded at Miami awaiting CAL services. Blaming the airline's problems on President/CEO Mark Winders, the Cayman Airways Pilots Association calls for his resignation. Following a controversial meeting with staff, during which irate employees continually shout him down, Winders resigns on March 17. Two months later, he signs on as the new chief operating officer of **CanJet Airlines, Ltd.**

CAYMAN ISLANDS AIRWAYS, LTD.: Cayman Islands (1945–1947). Just after the end of World War II in **1945**, King Parker, a former U.S. Army Air Forces bomber ferry pilot, establishes a single-seaplane service to operate charter passenger and cargo flights between Grand Cayman and Tampa, Florida.

Operations continue apace for 14 months; however, when engine trouble forces Parker to make an unscheduled landing at Miami in **1947** creditors seize his aircraft, putting the company out of business.

CCAIR: P.O. Box 19929, Charlotte, North Carolina 28219, United States; Phone (704) 359-8990; Fax (704) 359-0351; <http://www.ccairinc.com>; Code ED; Year Founded 1985. Following its acquisition in July **1984** by a group of private investors, including minority owner Air Transportation Holding Company (Air T), which also owns **Mountain Air Cargo**, Hickory North Carolina-based **Sunbird Airlines 1984, Inc.** is transferred to Charlotte-Douglas International Airport by Roy Hagerty, founder and president.

When in the spring of 1985 both **American Airlines** and **Eastern Air Lines** seek commuter affiliates at Charlotte, **Piedmont Airlines** responds by working out a code-sharing arrangement with Hagerty. His desire to avoid any further traffic or financial decline leads to the birth of Sunbird, the "Piedmont Commuter" on May 1.

Employing a fleet of 5 Beech 99s and 3 Shorts 330s, given new paint schemes and livery, the company undertakes the mission of feeding the major at Charlotte and Atlanta. It undertakes 64 daily departures to Asheville, Hickory, Raleigh/Durham, and Winston-Salem, Greenville, Spartan, and Atlanta.

During the year, new services are inaugurated to Charleston, Knoxville, and Macon. A Beech 99 crashes while on a training flight at Conover, North Carolina, on August 28, killing the pilot trainer and two pilot trainees.

In December, the fleet of 3 Shorts 330s and 5 Beech 99s is enhanced by delivery of the first 3 of 8, later 10, ordered British Aerospace BAe Jetstream 31s on order. Enplanements for the year shoot up 120.7% to 149,093.

Airline employment rises 68.9% in 1986 to 309 and, to avoid continuing confusion with Murray, Kentucky-based **Sunbird**, the company's name is changed to CCAir on January 1. The fleet grows further when 5 Shorts 360-200s and 7 Jetstream 31s arrive, the latter beginning in May.

The route system is increased from 13 cities in 3 states to 20 destinations in 6 states. Now a large regional, the "Piedmont Commuter" partner once again significantly increases its passenger bookings, this year by 155% to 380,232.

The fleet in 1987 includes 5 Beech 99s, 10 Jetstream 31s, and 7 Shorts 360-200s. Customer boardings increase 59.5% to 606,299 and the carrier earns profits of \$2.1 million (operating) and \$1.58 million (net).

The workforce is increased by 35.1% in 1988 to 550 and the fleet is increased by the addition of 5 more Jetstream 31s and 6 Shorts 360-300s. One Shorts 360-200 is withdrawn and orders are placed for 2 more Dash-300s. As the fleet is changed, so too is the carrier's code-sharing affiliation.

Negotiations begin with **USAir** concerning a transformation from "Piedmont Commuter" to "Allegheny Commuter." During the year, the company begins to offer overnight cargo services for freight forwarders. The flights, undertaken by the new CCAir Cargo subsidiary, are made with 3 Beech 99s and 2 each leased Shorts 330s and Dornier Do-228-212s.

Passenger boardings balloon another 36.7% to 828,560. Revenues rise 50% to \$52.4 million, expenses climb 46.5% to \$48.13 million, and operating income doubles to \$3.37 million. Net gain is \$2.67 million. The company owes \$5 million in long-term debt and holds only \$2.1 million in equity.

The employee population grows another 23.6% in 1989 to 680 and the fleet now includes 15 Shorts 360-200/300s, 16 Jetstream 31s, and 2 Beech 99s. Service is provided to 23 cities in 6 states. In July, the company goes public, via an offering of 1.8 million shares of common stock valued at \$60 million.

With **Piedmont Airlines** absorbed in August, the company, having renegotiated its code-sharing future with **USAir**, becomes a "USAir Express" partner. It is quickly realized that the fare proration with the major is extremely unfair and the remainder of the year is necessary to obtain a more equitable contract and retroactive payments.

Customer bookings, meanwhile, move ahead by 12.6% to 932,797. Revenues zoom upward by 43% to \$60 million. The operating profit is \$3.86 million and, despite a \$5.8-million net loss during the year's second half blamed on the proration formula, net gain reaches \$2.09 million.

The payroll is cut by 21.9% in 1990 to 539 and the fleet now includes 10 Jetstream 31s and 13 Shorts 360-200/300s. The CCAir Cargo operation is sold to **Martinaire** on January 2 for \$478,000, to be received in monthly installments for the next three years. The commuter's relationship with its major partner continues to deteriorate, along with CCAir's operational reliability (down to 88%) and the removal of 20 flights from its published schedule in violation of its code-sharing contract.

Recession and a claim that **USAir** is not fairly settling weekly ticket revenues combine to push the company into Chapter XI bankruptcy on July 5.

The steep rise in fuel prices following Iraq's August 2 invasion of Kuwait add further to the company's problems.

Just prior to boarding at Charlotte on August 20, a sudden 70-mph gust of wind blows a Shorts 360-300 and its two-person crew into an electrical power cart. The aircraft catches fire and is damaged, but no injuries are reported.

In September, the board is faced with a **USAir** ultimatum to remove its president or lose affiliation; there is no question as to its decision.

Former **MGM Grand Air** official Kenneth W. Gann succeeds President Hagerty in November and immediately orders the company downsized.

Passenger boardings for the year fall 2.4% to 910,006 and losses total \$7.59 million (operating) and \$8.67 million (net).

The employee population is reduced another 22.5% in 1991 to 416. President Gann continues to oversee the required financial reorganization, as well as a revision of the large regional's route network. The fleet is also changed as the number of Jetstream 31s is increased by 3 and the number of Shorts 360-200s is cut by 4.

By late spring, the company offers 160 daily departures centered on Charlotte and, in July, the U.S. Bankruptcy Court located in that city approves a new reorganization plan under which customers, employees, and creditors agree to accept an average \$700,000 per year payment for eight years. The company emerges from Chapter XI in September. Despite this progress, both traffic and finances are negative.

Customer bookings decline another 17.2% to 753,370 and revenues drop 9% to \$55.19 million. Expenses drop 19.9% to \$57.4 million and guarantee an "improved" operating loss of minus \$1.73 million. The net loss is cut to \$5.91 million.

Company employment grows 8.9% in 1992 to 634 and the fleet now includes 12 Jetstream 31s, 4 DHC-8-102s, and 9 Shorts 360-300s.

As the result of a crew error while on a training mission from Knoxville's McGee Tyson Airport on March 12, a Jetstream 31 with two crew makes a wheels-up landing, which turns into tragedy when control is lost and the plane crashes; there are no survivors.

The carrier sells its leasehold in the hangar facilities occupied at Hickory, North Carolina.

Passenger boardings stop their descent during the year and actually gain 13.1% to 852,047. Revenues ascend 13.6% to \$58.82 million, expenses rise 17.6% to \$59.59 million, and the operating loss is cut to \$669,000. The net loss is \$1.86 million.

In 1993, President Gann oversees a workforce of 450 and a fleet of 9 Shorts 360-300s, 4 DHC-8-102s, and 12 Jetstream 31s. Destinations now visited include Pittsburgh, Baltimore, Hunting, Charleston, Beckley, Bluefield, Shenandoah Valley, Danville, Rocky Mount/Wilson, Raleigh/Durham, Hickory, Winston-Salem, Asheville, Greenville, Kingston, Pinehurst/Southern Pines, Wilmington, Charlotte, Greenville/Spartanburg, Anderson, Columbia, Tri-Cities, Knoxville, Chattanooga, Athens, Augusta, Huntsville, and Montgomery.

During the spring, all administrative and maintenance operations are moved into a brand new 55,000-sq.-ft. facility at Charlotte. On May 2, new nonstop service is inaugurated between Charlotte, and Columbus, Georgia.

Customer bookings for the year inch up 1.8% to 866,813. Although revenues climb 18.8% to \$63.1 million, expenses jump 24.8% to \$65.8 million and force a \$2.7-million operating loss. The net loss is \$1.86 million.

Early in April 1994, the financially troubled carrier, after turning down two inquiries in the first quarter, agrees to be taken over by **Mesa Airlines** in a \$32-million exchange of stock. The arrangement is not consummated and company executives are able to gain concessions from its employee groups and lessors that will help it to cut costs and survive.

Operations continue and passenger boardings inch up 1% to 875,486. Revenues total \$62 million and losses are suffered again: \$3.9 million (operating) and \$4.8 million (net).

"USAir Express" services continue in **1995** as the route structure is rationalized and employment grows 3.3% to 630. In March, the FAA issues a directive requiring airlines to inspect the windscreens of any BAe Jetstream 31s in operation. CCAir flies 21 flights without performing the necessary reviews, an oversight that is discovered by company maintenance workers in June. The airline discloses its violations to the FAA immediately.

Enplanements fall 14.8% to 389,235, but revenues increase 4.7% to \$64.3 million. Expenses inch up 0.3% to 63.27 million and allow a \$1.03-million operating profit. The previous year's net loss is turned into a small \$188,000 net profit. Both of these latter figures are later rewritten to show a \$55,153 operating gain and another net loss, \$362,123.

The employee population is increased 7% in **1996** to 867 and the fleet now includes 14 Jetstream 31s, 4 DHC-8-102s, and 9 Shorts 360-300s. An average of 200 daily departures are made to points within the southeastern U.S.

Customer bookings rise 3.8% to 806,124 and operating income ascends 5.1% to \$66.23 million. Costs inch up 1.4% to \$65.34 million and leave an \$886,315 operating gain. A net \$95,755 profit is reported.

The workforce is cut 25.5% during **1997** to 646. On February 27, **US-Air** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional begins to repaint its aircraft in a modified version of the major's grey and dark blue livery.

In May, minority owner (6.6%) Barlow Partners, in which **Virgin Express Airlines, S.A.** CEO Jonathan Ornstein is a principal, is asked by President Gann to provide assistance in the redeployment and choice of future aircraft. Negotiations begin with several unnamed aircraft manufacturers.

Peter Murname, a **CCAir** board member and principal in Barlow Partners, together with former **Mesa Air Group** executive Ornstein, makes a \$50-million offer in October for Mesa's "United Express" operation at Denver, along with **WestAir Commuter Airlines**. The tender is rejected.

The FAA, on December 4, proposes a \$94,500 fine against the airline for the windscreen inspection lapses reported by the carrier 18 months earlier. The carrier proposes to protest the fine on the grounds that it had voluntarily made the lapses known.

On December 5, Mickey Bowman is named vice president-marketing. At the same time, Barlow Partners assists the company with its request for the lease of 20 BAe Jetstream 32EPs from British Aerospace AMT. Fourteen of the new aircraft will replace the company's current Jetstream 31/DHC-8 fleet, while 6 will succeed, on an interim basis, the Shorts 360-300s that are to be returned to their lessor.

At the same time, the carrier completes a private placement of 545,000 shares of common stock at \$2.75 per share. The placement is arranged by Barlow Partners.

Passenger boardings fall 3.3% to 779,450. Revenues rise 3.4% to \$68.48 million, while expenses are up 2.7% to \$67.09 million. The operating gain reaches \$1.39 million, while a net \$886,000 profit is reported.

While climbing from of Charlotte on January 4, **1998** for the day's "USAirways Express" flight to Augusta, Georgia, a DHC-8-102 with 3 crew and 32 passengers begins to vibrate. The aircraft returns to Charlotte without incident and the passengers are deplaned. A subsequent examination of the turboprop reveals that the right wing inboard leading edge is missing; 26 screws are found missing on the leading edge of the right wing. Records show they had not been replaced during an earlier maintenance inspection.

Return of the Shorts 360-300s to their lessor is completed on January 7. The carrier now operates an average of over 185 "USAirways Express" departures per day.

Early in the year, Barlow Partners acquires a sufficient enough level of stock in **Mesa Air Group** to enable partner Ornstein to acquire a seat on its board. There is also some speculation that that CCAir and Mesa might merge. As Mesa's difficulties worsen through the spring, Ornstein is persuaded to become its CEO on May 1.

Thrice-daily "USAirways Express" Jetstream 31EP roundtrips are started on June 1 between Washington, D.C. (IAD) and Raleigh/Durham. By the end of the month, the independent carrier operates 6 DHC-8-102s and 20 Jetstream 32s to 27 communities in 7 southeastern U.S. states. Earnings for the second quarter total \$2.1 million.

Given the history between the leadership of the two organizations, it does not come as a surprise when, on August 27, it is announced that **Mesa Air Group** has signed a letter of intent for the acquisition of CCAir. The all-stock transaction, valued at approximately \$60 million (including \$15 million in debt assumption), will be complete as soon as shareholders and government regulators approve. Mesa will operate CCAir as a wholly owned subsidiary, which will retain its own name. Through their relationship with **USAirways**, the acquisition is also seen as a way for the combined "USAirways Express" companies to serve all of the major's hubs on the East Coast.

On October 4, nonstop "USAirways Express" DHC-8-102 roundtrips commence between Charlotte and Tallahassee, four times a day.

Customer bookings during the 12 months jump 11% to 865,000. Revenues climb 5.9% to \$71.32 million, while costs are held to \$66.96 million. Consequently, there are profits: \$4.35 million (operating) and \$3.38 million (net).

By the beginning of **1999**, airline employment has been increased by 2.2% to 660.

In a move calculated to rebuild the strength and size enjoyed before the "United Express" disaster, **Mesa Air Group**, on February 1, officially moves to fold CCAir into its "USAirways Express" division, with the merger to be complete by early June. Under terms of the \$54-million stock deal, each CCAir share will be exchanged for between 0.435 and 0.6214 Mesa share. There are no initial plans to change CCAir's operations or to link the carrier's route system to that of MAG.

Mesa CEO Ornstein and CCAir CEO Gann jointly sign an extension of the "USAirways Express" service contract on March 5; the renewed marketing agreement is good through December 31, 2003.

The Mesa Airlines, Air Midwest, and CCAir divisions of **Mesa Air Group** all complete 100% of their flights on May 2. To celebrate this achievement, on May 6 President/CEO Ornstein hosts a company-wide pizza party, ordering pizza for all 3,800 employees in every unit spread over 100 locations.

Another direct result of the carrier's MAG purchase is the November consolidation of the seniority lists for the 1,305 ALPA represented pilots of CCAir and Mesa Airlines.

Passenger boardings drop 8.6% to 845,000.

CCF MANAGER AIRLINE, GmbH: Hangar 3, Room GR-317, Cologne Airport, Cologne, D-51147, Germany; Phone 49 2203-95280; Fax 49 2203-95286; Year Founded 1984. CCF is established at Cologne in 1984 to offer worldwide executive and small group passenger charters. By **2000**, the concern employs six pilots and operates two Cessna 421s, a C-441, and a C-550 Citation II executive jet.

CDA (COMPANIA DOMINICANA DE AVIACION, S.A.): Dominican Republic (1944-1957). Guillermo Santoni Calero forms CDA (Compania Dominicana de Aviacion) on May 4, **1944**; cooperating and providing support, **Pan American Airways (PAA)** assumes 40% shareholding. Employing a Ford 5-AT-11 leased from **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**, domestic services are started on July 5 over a route from Ciudad Trujillo to La Romana via Santiago.

During **1945-1950**, the fleet is improved by the addition of several Douglas DC-3s and 8 Curtiss C-46 Commandos. In addition to the maintenance of local routes, the Curtiss transports, beginning in **1948**, make 70 trips each month flying chilled beef to San Juan, Puerto Rico. A total of 18 million pounds will be transported in the next 3 years. The U.S. CAB refuses to allow the freighters to transport anything home, so the aircraft are only laden one way.

In **1951**, the CAB grants the company foreign air carrier route certification for scheduled services from Santo Domingo via San Juan to

Miami; C-46 flights begin before the end of the year. In 1955, Port-au-Prince, Haiti, is added as a stop, but it will be discontinued early at the end of 1956.

Pan American World Airways (1)'s last 40% shareholding is purchased by the *Corporacion Dominicana de Empresas Estables* in 1957 and the carrier becomes the national flag line, **Dominicana (Compania Dominicana de Aviacion, S.A.)**.

CEA (COMPANIA ECUATORIANAS DE AVIACION, S.A.): Ecuador (1957–1970). CEA is formed at Quito in February 1957. U.S. citizen Elly Heckacher holds 19% of the shares with a pair of Ecuadorians owning control. Two Curtiss C-46 Commandos are purchased, an association is entered into with Cornell N. Shelton's **TAN (Transportes Aereos Nacionales, S.A.)**-sponsored airline consortium, and traffic rights from Quito to Miami are obtained in August. In association with Shelton-controlled carriers, CEA, at year's end, inaugurates Miami-Lima C-46 flights via Panama, Cali, Quito, and Guayaquil.

Quito–Antofagarta, Chile, C-46 service is started in 1958; the first of seven ordered DC-6s joins the fleet, allowing retirement of one Curtiss aircraft. Enplanements reach 5,990 in 1959 and a DC-6B is placed in service in 1960. A DC-6, with 38 aboard en route from Guayaquil to Quito on November 7, crashes near the latter city; there are no survivors.

The Antofagarta route is suspended in 1961 as service is extended southward only as far as Talara, Peru. Bookings exceed 20,000.

During 1962–1966, Cali is dropped from the route network, domestic service Quito–Guayaquil is intensified, a DC-6B is acquired, and an order is placed for 4 Douglas DC-4s and 8 Lockheed L-188s. A merger tender from rival **AREA (Aerovias Ecuatorianas, S.A.)** is rejected. Meanwhile, on September 17, 1965, a C-46 with nine aboard crashes on a domestic flight (eight dead).

The first Lockheed Electra is acquired from **Cathay Pacific Airways (Pty.), Ltd.** on March 11, 1967 and enters service over a route from Santiago de Chile–Lima–Guayaquil–Quito–Panama City–Miami. Cali operations resume in December. The DC-4 freighters commence all-cargo services to Miami. Quito–Mexico City via Panama L-188 flights commence in March 1968. At this point, the last C-46 is withdrawn. Rival **AREA (Aerovias Ecuatorianas, S.A.)** ceases trading in November.

Ten persons unsuccessfully attempt to take over a Lockheed turboprop with 88 aboard during a Guayaquil to Quito flight on January 19, 1969; all will receive prison terms.

On April 11, 3 gunmen divert a DC-6 with 60 persons aboard en route from Guayaquil to Quito, to Cuba. The L-188 order is completed with the delivery of the eighth Electra. The fleet now comprises 8 Lockheeds, 7 DC-6s, 1 DC-6A, 1 DC-6B, and 4 DC-4s.

The company is reorganized in 1970; the new name **Ecuatoriana Airlines, S.A.** is chosen along with a new livery and logo.

Plans are made to acquire up to 3 former Boeing 720-023Bs, first flown by **American Airlines**, from **Pan American World Airways (1)**.

CEBU PACIFIC AIR: 30 EDSA Cor Pioneer, Mandawiyong City, Metro Manila, 5505, Philippines; Phone 63 (2) 637 1810; Fax 63 (2) 637 9170; <http://www.jgsummit.com.ph/cebuair.htm>; <http://www.cpacific.com.ph>; Code 5J; Year Founded 1995. Philippine industrialist John Gokongwei founds CPA at Manila Domestic Airport in late 1995 as a division of his JG Summit Holdings. With Gokongwei himself as chairman and Lance Gokongwei as president/CEO, the carrier purchases 4 Douglas DC-9-32s, formerly operated by **Garuda Indonesia**, and prepares to inaugurate deep-discount services.

Emulating the American carrier **Southwest Airlines (2)**, Cebu, with advertising, onboard contests, and minimal snacks, launches twice-daily frequencies to Cebu and Cagayan on March 16, 1996. On April 1, twice-daily flights commence to Tacloban. By month's end, twice-daily frequencies have been introduced to Bacolod and three times per day to Davao. A variety of seat sales are offered throughout the year, including one in December which cuts prices on the Manila–Cebu run to just \$32.

At the beginning of 1997, plans are announced for the acquisition of 4 McDonnell Douglas MD-83s with which to undertake services to Bangkok, Jakarta, Kuala Lumpur, Hong Kong, and Seoul. In July, 2 DC-9-32s are purchased from **Air Canada, Ltd.**

In August, the company enters into an alliance with **Aboitiz Air Transport** for domestic cargo operations. Aboitiz leases all of the cargo holds of Cebu's Douglas transports. Wearing bright yellow and white liveries, the **Air Canada, Ltd.** DC-9-32s arrive at year's end. Turnover for the year is P 1.22 billion, and Cebu is the only profitable domestic airline this year.

En route from Tacloban to Cagayan de Oro on February 2, 1998, as a continuation of a flight from Manila, Flight 387, a DC-9-32 with 104 passengers, crashes near the 8200-ft. level of Mount Balatucan. There are no survivors from the worst airline crash in Philippine aviation history.

The airline is grounded on February 5 and its 220 employees are laid off. On February 24, the Philippine Air Transportation Office (ATO) undertakes a detailed review of the airworthiness of the Cebu fleet in an effort to make certain that all safety and maintenance standards are maintained.

On April 6, the ATO finds the crash to have been caused by pilot error and completes safety inspections of three of Cebu's seven aircraft. At this point, the carrier recalls its workers and resumes services. Plans are made to charter two more DC-9-32s from **Air Canada, Ltd.** and to inaugurate international services to Singapore.

From June onward, the air transport situation in the Philippines enters crisis as labor and management at **Philippine Airlines (PAL)** moves toward closure for Asia's oldest airline. When this fate becomes inevitable in mid-September, the leaders of the nation's four independent airlines are summoned to a meeting with Philippine President Joseph Estrada in Malacanang. It has become necessary to find a way to increase the gap between the 230,000 monthly domestic seats provided by them and the 280,000 offered by PAL.

Meeting with Estrada on September 22, President/CEO Gokongwei and the leaders of **Asian Spirit**, **Grand International Airways**, **Air Philippines**, and several other small operators promise to acquire additional aircraft and fill any vacuum left by PAL within a month. For its part, the government indicates a willingness to grant incentives, including higher fares and concessional loans, designed to help them speed up their capacity build-up.

Specifically, Gokongwei indicates that the 2 former **Air Canada, Ltd.** DC-9-32s will arrive under charter in October and December and will allow the carrier to increase its monthly passenger capacity from 180,000 to 300,000. Negotiations will also be opened shortly for two more planes.

Simultaneously, the number of daily flights to points in 6 major provinces is increased from 38 to 48. The Asian economic "flu" and the currency situation do not warrant overseas flights.

Although all of the company's Douglas transports are in service, the company is unable to immediately and significantly increase its domestic commitment following the grounding of **Philippine Airlines (PAL)** at 12:01 a.m. local time on September 23.

Frequencies are increased during October and arrangements are made to purchase another DC-9-32 in January and two more in March. Deep discount fares are continued on flights from Manila to Bacolod, Cagayan, Cebu, Davao, Iloilo, Kalibo, and Tacloban. All flights originate from Manila except two, from Cebu to Davao and to Iloilo.

One of the former **Air Canada, Ltd.** DC-9-32s arrives on schedule during the month. It wears a bright color scheme that features a red and blue ribbon across the forward fuselage, along with six stars and two large suns on the rear fuselage just inboard of the engine nacelles.

By the end of the month and despite the return of PAL, the carrier is able to seize 30% of the domestic market.

In November, a new homepage is opened on the World Wide Web. Among the data it provides are ground statistics: 11 city ticket offices, 9 airport ticket offices, 262 subagents in Metro Manila, and 228

subagents throughout the Visayas and Mindanao. The page admits that, while public confidence and patronage have remained remarkably unscathed as a result of the February crash and the PAL situation, Cebu is, quite frankly, redoubling its efforts to provide safe, on-time, and affordable transportation.

The on-line news service *Asia Pulse (Pty.) Ltd.* reports the results on March 10, 1999, of a two-week snapshot of domestic market share, compiled for February 1–15. Between them, **Air Philippines**, Cebu Pacific, and **Philippine Airlines (PAL)** offered 31,714 seats during the period (not all were occupied). Of the total number of passengers boarding planes of the 3 airlines, PAL got 15,250 or 63%, followed by Cebu Pacific with 7,715, and Air Philippines with 1,350.

Now a line pilot for Asian Spirit, former Vice President-Operations Capt. Rolando Salandanan is killed, along with 16 others, when the plane he is flying crashes while on a December 7 scheduled flight.

CELTIC AIRWAYS, LTD.: United Kingdom (1988–1993). Organized at Bristol Airport in December 1988, Celtic Airways, Ltd. names Graham Mimms as managing director. A fleet comprising 3 Shorts 330s and 3 Fokker F.27-200s and the company inaugurates its specialized service, the six-night-per-week delivery of letters and Datapost.

These charter operations continue apace in 1989–1991 and the fleet in the latter year includes 3 Shorts 330s, 1 of which is leased, and 2 Friendships.

The fleet is decreased in 1992 by 1 aircraft of each type and its workforce, in 1993, stands at 40. In deep financial difficulty, the company stops flying early in the year.

CENTENNIAL AIR: International Cargo Terminal, Pasay City, Manila, Philippines; Phone 63 (2) 831 1061; Fax 63 (2) 552 5106; Year Founded 1997. Jose Alvarez establishes his domestic all-cargo charter airline in 1997, but problems in the national aviation industry prevent the launch of operations for two years. Employing a single Boeing 737-205C, Centennial begins flying newspapers, perishables, and livestock in 1999 from Manila to Cebu and Davao City.

CENTENNIAL AIRLINES: United States (1981–1987). Established at Worland, Wyoming, in 1981, CA undertakes scheduled passenger services to Cody, Powell, and Laramie, as well as Denver and Billings. Operations commence on June 15 with a fleet of 2 Beech 99s. The privately owned commuter does not release its traffic figures during the first half of the decade. Flights to Powell are suspended in December 1984.

Two Beech 1900s are purchased in 1985 as enplanements reach 13,025. Airline employment is increased by 75.6% in 1986 to 72 as service is inaugurated to Logan, Utah, and Lander, Wyoming. Passenger boardings balloon 65.4% to 37,646.

During 1987, the company enters into merger discussions with the large regional **Mesa Airlines**. When creditors cannot be brought to terms on an arrangement, the planned takeover fails. Centennial now suspends operations and is liquidated; the Wyoming-based company's routes are taken over by **Mesa Airlines**.

CENTENNIAL AIRLINES, S.A.: Spain (1993–1996). Centennial is established at Madrid in 1993 to undertake regional passenger charter flights. Revenue operations begin with a pair of McDonnell Douglas MD-83s leased from **Transwede Airways, A.B.** By year's end, a total of 267,600 passengers have been transported to holiday destinations.

Passenger traffic explodes for the operator in 1994, requiring the addition of two more MD-83s. Charters are inaugurated from a variety of north European destinations to the Spanish holiday locations. For example, U.K. vacationers are transported from London (LGW) and Manchester to Palma and other points, beginning in February. Customer bookings accelerate 114.9% to 575,000.

The workforce stands at 80 in 1995 as the nonscheduled Spanish airline enjoys another wonderful traffic year. Costs climb as the company engages in a start-up war with several other new entrants that also serve Palma de Mallorca. Enplanements increase 43.1% to 822,900.

The company is wildly overextended in 1996 and runs up significant debt that is later reported to be in the neighborhood of \$23 million. By fall, it is unable to keep up payments on its aircraft leases; indeed, one MD-83 is impounded by Gatwick Airport at the request of the aircraft's owner, the aviation finance company GECAS. The aircraft is literally seized at the departure gate by airport security police.

Centennial stops flying and goes into voluntary liquidation on October 30. A number of foreign passengers are stranded in Spain as a result.

CENTENNIAL FLIGHT CENTRE, LTD.: Building 15, 25 Airport Rd., Edmonton, Alberta T5G 0W6, Canada; Phone (403) 451-4951; Fax (403) 452-3575; <http://www.ccinet.ab.ca/centflt/charter.html>; Year Founded 1967. Centennial is established as an FBO and charter operation at Edmonton Airport in 1967. Executive charter and cargo flights, together with air ambulance, flight training, and maintenance services continue with little fanfare over the next 30 years.

Robert Lamoureux is president/general manager in 2000 and employs a 30-person workforce. The fleet comprises 1 Cessna 152, 5 C-172s, 1 C-182, 2 C-337s, 3 Piper PA-31-350 Navajo Chieftains, and 2 PA-34 Senecas. Revenues total C\$1.5 million.

CENTRAL AEREA, S.A.: Brazil (1948–1950). Central is formed at Rio de Janeiro on March 29, 1948 to offer scheduled services into northern São Paulo state. A fleet of 3 ex-military Douglas C-47s (reconfigured to DC-3 civil standard) is assembled and regular operations begin on June 11 over a route from Rio to Belo Horizonte.

Late in the year and into 1949, flights are initiated into the states of Mato Grosso and Goiás and in April 1950 additional stops in the former jurisdiction are inaugurated. Six months later, the expanding **TAN (Transportes Aereos Nacional, S.A.)** persuades company officials to join the consortium it is assembling and thus the carrier is merged in October.

CENTRAL AFRICAN AIRWAYS CORPORATION (CAAC): Southern Rhodesia/Northern Rhodesia/Nyasaland (1946–1967). Absorbing the functions of the Rhodesian Air Force's 1941–1945 **Southern Rhodesian Air Services**, this multinational air carrier is incorporated at Salisbury on June 1, 1946. With the motto *Conservimus Africae Alis* (We Serve Africa With Wings), the company's ownership is divided between the governments of Southern Rhodesia (50%), Northern Rhodesia (35%), and Nyasaland (15%). T. Ellis Robins is chairman, with P. J. S. Wimbush as general manager.

The initial fleet of 5 Avro Ansons and 13 de Havilland DH 89As Dragon Rapides begin services over routes previously flown by the military. Orders are placed for 12 Vickers Viking Mk. 1Bs.

The first DH 104 Dove is delivered on October 8; seven others join the fleet, of which five are named: *Luorie*, *Egret*, *Ibis*, *Weaver*, and *Hoopoe*. The premier Vickers Viking Mk. 1B joins the fleet on November 3 and is placed in service over the Johannesburg–Salisbury–Nairobi run on November 19. Dove service is begun on December 9 over routes from Salisbury to Bulawayo and Blantyre. Bookings for the first half-year are 11,670.

Kasama–Abercorn Viking Mk. 1B flights are inaugurated on January 1, 1947. Freight tariffs are reduced on September 1 in an attempt to make air cargo more competitive with surface transport. Passenger boardings for the year double to 23,000.

Twice-weekly Copper Viking flights link Northern Rhodesia with Johannesburg, beginning in January 1948. Flights from Salisbury to Elisabethville commence on April 12. On May 4, Sunday-only Johannesburg–Ndola newspaper service is started.

Leased from the British Ministry of Civil Aviation, the first of two Bristol 170 Wayfarer delivered in Africa arrives at Salisbury on August 2, entering freight operations shortly thereafter. The Bristol Copper Trader flights that started in September represent the first indigenous all-cargo services provided anywhere on the continent. The route started is from Johannesburg to Ndola via Bulawayo and Lusaka and from Salisbury to Lusaka. In September, the Copper Trader service is extended to Dar es Salaam and Lindi via Mbeya and Kasama.

Enplanements reach 38,000.

It is reported in April 1949 that, during its first six months of operation, the Bristol Copper Trader route has logged 246,711 ton-miles.

CAAC introduces the first family excursion fare anywhere outside of the U.S. on June 1. Frequencies for the Copper Viking route are increased to thrice-weekly during July. Technical problems with the Bristol Freighters plague the airline during the year's second half and, in December, their lease is terminated and they are sent back to the U.K.

Bookings accelerate to 42,000.

On April 1, 1950, a Viking Mk. 1B route is extended from Johannesburg to Dar es Salaam via Salisbury. The same day, nonstop roundtrip Viking flights begin between Salisbury and Johannesburg. Package express service is introduced on July 1 over routes to Johannesburg and throughout central Africa. On July 29, Skybeach charter flights are undertaken to Lake Nyasa.

Late in the year, the first 2 of 6 de Havilland Canada DHC-2 Beavers are delivered. Passenger boardings reach 50,000.

The new Beavers are introduced on flights to bush communities, including Bulawayo, Fort Victoria, Gatooma, Gwelo, Que Que, and Umtali, on January 1, 1951, while £10 Salisbury to Victoria Falls day charters begin on March 25. Twice-weekly Johannesburg–Victoria Falls nonstop Viking Mk. 1B service begins on April 1 and the same frequency is established between Lusaka and Fort Jameson on October 9.

Meanwhile, the first local African low-fare night service, Starflights, begins on the Salisbury–Bulawayo–Johannesburg route on July 1. Weekly Salisbury–Lourenço Marques via Bulawayo Viking Mk. 1B operations begin on August 10 and, on December 1, DHC-2s replace DH 104s on local service flights in Nyasaland. Enplanements climb to 70,777.

On January 1, 1952, DHC-2 service is started to local points in the Rhodesias, as the Doves are phased out. Simultaneously, package express service is begun between Salisbury and Bulawayo and twice-weekly Nairobi–Victoria Falls–Johannesburg Viking Mk. 1B service is opened.

Daily Salisbury–Nairobi service is inaugurated on February 14. Passengers are flown from Southern Rhodesia to Kenya via Blantyre and Dar es Salaam or Lusaka, Ndola, and Tabora. CAAC ends its own services to South Africa from Livingstone and Bulawayo in May as **British Overseas Airways Corporation (BOAC)** introduces its de Havilland Comet Is over the route.

A total of 94,216 passengers are carried on the year.

A Vickers 616 Viking 1B with five crew and eight passengers disintegrates in the air over Mkwana, Tanganyika, on March 29, 1953; there are no survivors. Low-cost Zambezi Viking Mk. 1B coach-class service is opened on April 3 between London and Salisbury via Malta, Wadi Halfa, and Nairobi. The fare is lower than that offered by BOAC. Although the service requires 4 days, it is still 10 days faster than that offered by the steamships of the Union Castle shipping line, the airline's principal competitor on the route.

In late spring, the first 4 Douglas DC-3s are delivered.

During the year, Southern Rhodesia joins with Northern Rhodesia and Nyasaland to form the Federation of Rhodesia and Nyasaland. Bookings advance to 108,783.

Coastal Viking Salisbury–Durban flights commence on April 3, 1954. Many of the customers on this new service are Rhodesian vacationers headed to the beaches of Natal. Four Vickers Viscount 748s are ordered on May 15 in a deal valued at £2 million—including spare parts. Frequencies on the Zambezi route are doubled in June.

Passenger traffic continues to grow, rising to 131,431 passengers flown.

Flight 626, a DC-3 with 5 crew and 21 passengers fails its initial climb away from Salisbury on February 23, 1955, and makes an emergency belly landing (1 dead).

A Vickers 616 Viking 1B is lost on the ground at Belvedere, Rhodesia, on March 17; there are no fatalities.

Specially priced excursions begin on April 1 from Johannesburg to Victoria Falls. Salisbury to Beira flights commence on September 10.

A total of 151,507 passengers are transported during the year.

The first Viscount 748 is delivered on April 25, 1956 and is christened *Malvern*; as additional machines join the fleet, Viscount service is started on June 1 over routes to Nairobi, Johannesburg, Durban, Lusaka, Ndola, and Blantyre. Orderly retirement of the Viking Mk. 1Bs begins as the remainder of the Viscount order is filled in succeeding months through July; only one additional machine is named, the *Mlanje*.

A new airport opens at Salisbury on July 1. Tourist-class Zambezi Viscount service now begins from Johannesburg and Salisbury to London.

Having failed its climb away from Salisbury on October 5, a Vickers 610 Viking 1B with two crew is destroyed in the ensuing forced landing (two dead).

Bookings this year are 169,446.

Thrice-weekly Viking 1B service is initiated on April 1, 1957 between Bulawayo and Johannesburg. In May, a 10-year contract is signed with **British Overseas Airways Corporation (BOAC)** authorizing the British flag carrier to operate all CAAC long-haul service in return for a guaranteed £1.34-million profit. BOAC C-4 Argonauts undertake intercontinental flights for CAAC beginning on July 1, the day the May contract takes effect.

The Queen Mother flies in a Viscount 748 during her July visit to central Africa and, in August, Viscounts replace Viking Mk. 1Bs on the Salisbury–London run. Enplanements for the year are 174,981.

With the Viscount fleet underutilized, it becomes possible to lease one of the units to **Kuwait Airways Corporation** in May 1958 for six months.

Bearing CAAC titles and livery, leased BOAC Bristol Britannia 312s, with British crews, are introduced on the company's long-haul routes on July 31.

On August 9, a Vickers Viscount 748D with 7 crew and 47 passengers is lost SE of the city of Benina, Libya, while on approach to Benghazi (36 dead).

Also in August, a pooling agreement is signed with **East African Airways Corporation**, to take effect on January 1. In addition, a long-standing agreement with the Witwatersrand Native Labour Association's carrier, Wenela Air Service, Ltd., is terminated as that concern acquires a DC-6 of its own.

Commercial Air Services (Rhodesia), Ltd., at CAAC behest, takes over a number of DHC-2 routes in November, ending the pioneering bush operation launched back in 1951.

Bookings for the year dip to 158,841.

On January 3, 1959, Viscounts are introduced on the Salisbury–Bulawayo–Johannesburg route; the midway stop is completed at a new airport. Late in the month, the last Viking is sold and all-inclusive Sky-coast holiday charter services to the Natal coast are initiated in partnership with the Union Castle Steamship Line. It is operated with the Viscount 748 returned from **Kuwait Airways Corporation**.

When a state of emergency is declared for Nyasaland in March, CAAC ends scheduled service to and from that region. On the other hand, DC-3 and Beaver charters are operated on behalf of the government for the transfer of goods and equipment.

During the summer, the DC-3s operated on tourist flights are refurbished, with larger passenger windows the principal feature installed. In the fall, a new livery is unveiled, featuring blue and white stripes on aircraft tails.

The first Comet 4s, operated under contract by **British Overseas Airways Corporation (BOAC)**, enter long-haul service on December 4. Enplanements drop further, down to 153,717.

In January 1960, shared Skycoast service to East Africa is opened with **East African Airways Corporation**. The Central African Airways Corporation Act of February 1 transfers ownership to the separate governments of the Central African federal government.

The same day, low-fare, weekly DC-3 Skybus service is introduced between Salisbury and Blantyre, increasing to thrice-weekly on July 4.

During the summer tourist season, the company introduces Skycruise and Flame Lily package tours to South Africa.

The last Salisbury to London Zambezi service is flown by the *Malvern* on October 1. Simultaneously, Skybus flights are started to Northern Rhodesia, with stops at Fort Jameson, Fort Rosebery, Lilongwe, and Ndola. On October 8, weekly Viscount service is begun over the Salisbury to Nairobi route via Blantyre and Dar es Salaam. Passenger boardings soar to 191,741.

Corroded stress cracks are found in the wings of several Viscounts during January 1961 and the Vickers fleet is grounded for repairs. While the 4 turboprops are being repaired (2 in England), a contract is entered into with the Royal Rhodesian Air Force, which will fly 129 hours on behalf of the airline.

A Viscount 754 is purchased from **Middle East Airlines (2), S.A.L.** in March and is christened *Zambezi*; it replaces the unit lost back in 1958.

The leased Britannia 312 arrangement with **British Overseas Airways Corporation (BOAC)** is terminated; all long-haul flights are now made by Comet 4s, which extend their southern service south from Salisbury to Johannesburg beginning April 1.

The regional fleet now includes 4 Viscount 748s, 1 Viscount 754, 6 DC-3s, and 6 DHC-2s. On April 5, Chairman A. E. P. Robinson resigns to accept a government post in London; he is succeeded by Sir Robert Taylor.

DC-3 service to Kitwe begins on June 30. Tourists are able to visit the Cape Province under a new Protea travel package unveiled on September 1. The following month, a new route is started from Salisbury to Kasama via Lusaka and Kitwe.

Direct Viscount 748 roundtrips commence on January 7, 1962 between Salisbury and Lourenco Marques. The route's Jameson-Kitwe segment is dropped and replaced with a stop at Lusaka. Another Viscount 748 is acquired and is employed in April.

Salisbury to Fort Victoria Sunday DC-3 service begins on July 1; the next day, Beavers begin flying tourists to the Wankie Game Reserve.

On October 26, orders are placed for a pair of BAC 1-11-207s; together with spare parts, the purchase is valued at £3 million.

In November, Skycoach service between Central Africa and London is reduced to twice-weekly roundtrips.

In January 1963, DHC-2 service is initiated to a number of domestic points in the Mongu to Kalabo region. Points visited include Balovale, Fort Hill, Fort Johnson, Kalabo, Karonga, Lilongwe, Lukulu, Mankoya, Mbeya, Mongu, Monkey Bay, Mumbwa, Mzimba, Mzuzu, and Zomba.

A second weekly Comet 4 route from Salisbury to London is opened on March 1. Extra capacity is provided in the spring by DC-6s operated under wet-lease from **British United Airways, Ltd.** DC-3 services between Salisbury and Beira are withdrawn in June.

In July, DC-3s replace Beavers on the Wankie Game Reserve service, with flights operating via the Reserve from Salisbury, Bulawayo, Kariba, and Livingstone. A DC-6B, to be employed on long-haul charters, is leased in August for three years from **Alitalia, S.p.A.**

On September 20, the company joins with **British Overseas Airways Corporation (BOAC)** in withdrawing from a profit-sharing pool with **South African Airways (Pty.), Ltd.** in protest against South Africa's racial policies. A contract is signed to provide maintenance and training support to **Aden Airways, Ltd.**

Corporate shareholding is redistributed on December 4. Ownership is shared between the governments of Rhodesia (45%), Zambia (45%), and Malawi (10%).

On January 1, 1964, CAAC is reconstituted as the jointly owned national carrier of Southern Rhodesia, Zambia, and Malawi. Three wholly

owned subsidiaries are created to operate as the national airlines of the respective countries; given considerable autonomy, they must all still depend on the parent for technical and accounting functions.

The new national airlines include **Air Malawi, Ltd.** founded in March, **Zambia Airways, Ltd.**, founded in April, and **Air Rhodesia, Ltd. (1)**, set up in June. CAAC retains the Viscounts, while the DC-3s and Beavers are distributed among the new entrants.

Viscount service is initiated on April 1 from Salisbury to Kariba and Livingstone, while the contract to train personnel for **Aden Airways, Ltd.** is concluded. On April 18, Ndola to Salima service is initiated.

Enplanements for the year total 223,171. Revenues increase by 6% over 1963 and the net profit is \$1.35 million.

The workforce stands at 1,387 in 1965. The fleet now includes 4 DHC-2s, 7 DC-3s, and 5 Viscount 748s. D. F. Fairbairn becomes the new chairman on April 1.

Southern Rhodesia Premier Smith makes his unilateral declaration of independent speech on November 11, causing the country's neighbors to regard Rhodesia as an illegal regime against which sanctions must be applied. Other nations will also join in the punishment. Only **TAP-Air Portugal, S.A.** and **South African Airways (Pty.), Ltd.** will continue to operate through Salisbury.

Passenger boardings rise 12.7% to 255,637 and cargo traffic is also up. A net \$1.6-million profit is earned on total revenues of \$9,558,000.

Receipt of the BAC 1-11-207s is deferred in 1966 as preparations are begun to end the CAAC consortium. Denied landing rights in Madagascar, the company's Viscounts must complete their service to Mauritius by flying via Nampula.

R. P. Hartley becomes the last chairman in early 1967.

Zambia Airways Corporation is established on September 1 and the **Alitalia, S.p.A.** DC-6B is returned. The Central African Airways Corporation is disbanded on December 31, when Zambia ends its direct air link as part of the anti-Rhodesia sanctions policy. Its responsibilities pass to the newly independent **Air Malawi, Ltd.**, **Air Rhodesia, Ltd. (1)**, and **Zambia Airways Corporation**.

CENTRAL AIR TRANSPORT: United States (1977–1978). CAT is established at Nashville in 1977 to provide daily scheduled passenger and cargo roundtrips to Indianapolis. Beech B-80 Queenaire revenue frequencies are duly introduced, but cannot be maintained beyond 1978.

CENTRAL AIR TRANSPORT CORPORATION (CATC): China (1943–1949). Central Air Transport Corporation (CATC) is established at Shanghai on March 1, 1943 from the remnants of the former **Deutsche Luft Hansa (DLH)**-sponsored **Eurasia Aviation Corporation**, which had been taken over by the Chinese government following its break with the Third Reich in August 1941. Total assets consist of one Junkers W.34 and a captured **Japan Air Lines Company, Ltd. (1)** Nakajima AT. Shareholding is divided between the Nationalist government's Ministry of Communications (80%) and private Chinese investors (20%).

Given the intensity of the war against Japan, CATC undertakes only limited operations during the remainder of the year and into 1944–1945, even though the fleet by the beginning of the latter year is increased by the addition of 3 lend-lease Lockheed Hudsons.

Employing 12 Douglas C-47s purchased in India during December of the previous year, CATC undertakes a full schedule of domestic services in 1946, often in competition with **China National Aviation Corporation (CNAC-1)** and the new **Civil Air Transport (CAT)**. The principal duty is the transport of government and other personnel from inland cities such as Chongqing back to their offices in communities like Hankow, Shanghai, Nanking, and Canton.

In July, the company is given access to a stock of 150 surplus C-47s and C-46s in the Chongqing area; many will be taken up to be cannibalized for spare parts.

A Curtiss C-46 with 49 passengers fails its takeoff from Tsinan on July 13 and crashes a mile from the runway (13 dead).

During the year, a total of 45,000 passengers and 4,000 tons of freight are flown.

The fleet in **1947** grows to comprise 32 DC-3/C-47s and Curtiss C-46 Commandos. On July 15, orders are sent to the U.S. for 6 Convair CV-240s. Passenger services from Shanghai to various Chinese cities are maintained, although flights into various markets now begin to cease in the face of the developing civil war.

Still, the carrier books 116,080 passengers and flies 14,050 tons of freight and 1,377 tons of mail.

In **1948**, 5 DC-3s are purchased from **Northwest Airlines**. During the year, the route network includes 27 destinations.

During the civil war now grown in intensity, CATC is often called upon by the government to aid the air force and its competitors in providing support to Nationalist troops surrounded in key cities. A C-46 with 3 crew and 37 passengers is lost at Kiangwan on December 5 (9 dead).

These operations continue into **1949**, occasionally with losses. During the months January to April, 10 C-46s—one-third of the company's fleet—are committed to the resupply of Taiyuan, which cannot, however, be held.

Early in the second quarter, the first CV-240 enters service; until the demise of the airline, it will remain the only one of its type in service in China.

A C-36 with 3 crew is lost 200 miles north of Chongqing, on June 2; there are no survivors.

Late in the year, the carrier is disbanded and its men and planes are transferred to Hong Kong. There the aircraft are claimed by the Civil Air Transport. On October 1, Mao Tse-tung proclaims the establishment of the new People's Republic of China. On November 9, pro-Peking CNAC employees fly the Convair and 11 other aircraft to Tientsin, where they are welcomed by Premier Chou En-lai and the Convair becomes the *Beijing*, flagship of the new Red Chinese airline.

CENTRAL AIRLINES (1): United States (1928–1929). Short-lived Central Airlines is established at Kansas City in mid-**1928** to provide passenger service to Oklahoma City via Wichita and Tulsa. Employing Travel Air 4000 biplanes, Central inaugurates scheduled flights on July 28.

The carrier completes less than a year of service when, in April **1929**, it is purchased by the Universal Aviation Corporation and made a subsidiary division of its **Universal Air Lines System**.

CENTRAL AIRLINES (2): United States (1934–1936). On February 9, **1934**, as a result of investigations into an airmail scandal, the U.S. Post Office cancels all existing airmail contracts and the White House orders the Army Air Corps to fly the mail. When the military option fails, the post office rebids the routes at the end of March.

At Pittsburgh, Central is established by James G. Condon and Theodore Taney, backed by John D. and Richard W. Coulter, to bid against **Pennsylvania Airlines** for the latter's old Washington to Cleveland route, which it wins when bids are opened on April 20.

The carrier now begins to hire pilots and the first man chosen is James H. Carmichael, who will eventually run the company. Helen Richey wins out over seven male applicants to achieve a position as a copilot, the first female flight crew member hired in the U.S. for regularly scheduled services.

Central, equipped with 2 Lockheed Model 5 Vegas, 2 Stinson SM-6000 Tri-Motors, and 1 Pitcairn PA-5 Mailwing, commences scheduled passenger, mail, and air express services on May 31 linking Washington, Pittsburgh, Cleveland and Detroit. The competition between Central and **Pennsylvania Airlines** now becomes quite intense.

A Vega crash-lands at Pittsburgh on June 1; there are no injuries reported. En route to Providence, Rhode Island, from Pittsburgh on a September 12 charter carrying 395 pounds of tear-gas shells, a Vega flown by Theodore Taney encounters difficulty over Everett, Pennsylvania. Taney bails out, but his parachute does not open.

Following a publicity ceremony in which she shakes hands for photographers with Assistant Postmaster General William Howes, Helen

Richie makes her first official flight as a copilot on December 31. Her pilot is Horace Stark and the Washington, D.C.–Detroit trip is undertaken in the 5-AT-67, the first Ford Tri-Motor leased from **American Airlines**. Central now also begins to operate two other chartered **American Airlines** Ford Tri-Motors, 5-AT-28 and 5-AT-43..

Although company officials support her work, copilot Richie is discriminated against by her male colleagues, who complain to the Air Line Pilot's Association (ALPA) and the Air Commerce Bureau (ACB). Less than a week into **1935**, the latter "suggests" to the carrier that women might not be suitable crew members. Richie's story is told years later by Glenn Kerfoot in his *Propeller Annie: The Story of Helen Richie, the Real First Lady of the Airlines* (Lexington: Kentucky Aviation Historical Roundtable, 1988).

On April 21, a Tri-Motor, piloted by James H. Carmichael Jr. (future president of **Capital Airlines**) with six passengers, literally loses an engine just after departure from Washington's Hoover Airport for Detroit. The damaged aircraft is successfully returned to Bolling Field, coming to rest without any injuries following a spectacular one-wheel landing and ground loop. On October 29, pilot Carmichael will be awarded the Air Mail Flyer's Medal of Honor by President Franklin Roosevelt in White House ceremonies.

The **American Airlines** Ford Tri-Motor lease ends during the first quarter of **1936**. Five new Stinson Model A Tri-Motors are, however, purchased in July and August and are employed to upgrade frequencies on the Washington to Detroit service. C. Bedell Monro, chairman of competing **Pennsylvania Airlines**, recommends a merger as Central, like his carrier, is in deep Depression-era financial difficulty.

Meanwhile, the ACB, acting at the request of the airline's male pilots, issues a regulation limiting women pilots on scheduled carrier routes to flying only in fair weather. Helen Richey, against whom the new regulation is aimed, resigns in protest in November.

His merger offer spurned, the Pennsylvania chairman also watches as Central's owners lose control to **American Airlines**, which then secretly resells Central's stock to Monro. Following a bitter negotiation, the outmaneuvered Central is taken over by the larger and older **Pennsylvania Airlines** on November 1, **1936** to form **Pennsylvania-Central Airlines**.

CENTRAL AIRLINES (3): United States (1944–1967). Founded at Fort Worth in March **1944** to provide feeder service in Texas and Oklahoma, Central is certified by the CAB on November 14, **1946** and begins commercial flight operations on September 15, **1949**, employing Beech Bonanzas. Early routes continue in Oklahoma and Wichita–Dallas–Fort Worth in Texas.

Traffic grows and Douglas DC-3s are introduced toward the end of **1950**; indeed, the last of these is acquired from **Northwest Airlines** on June 7, **1957**. In **1958**, the fleet is made up of 13 Douglas transports. Convair CV-240s join the fleet in **1959–1960**. The Fort Worth-based airline expands somewhat by replacing **Braniff International Airways** and **American Airlines** on several routes in **1961**.

This move, however, proves to be counterproductive, as Central encounters financial and traffic difficulties during **1962–1963** in attempting to compete on its unviable network. Efforts are made to convert the company's Convairs into CV-580 turboprops.

Airline employment in **1964** is 839. Applications are filed with the CAB for permission to operate from St. Louis to Albuquerque via Kansas City, Wichita, and Amarillo. On July 20, a DC-3 with 14 aboard encounters clear air turbulence over Pueblo, Colorado that severely injures a stewardess.

Enplanements for the year total 413,381. Revenues advance by 7.3% to \$11.45 million; the carrier now ranks third among local service carriers in terms of revenues originated at military bases. A net profit of \$107,040 is announced, about half the 1963 figure.

Early in **1965**, Marion Lamar Muse, who will become CEO of **Southwest Airlines** a decade later, is named president. The workforce grows to 868 and the fleet includes 14 DC-3s and 7 CV-240s. One of the latter, with 12 aboard, makes a wheels-up landing at Tulsa on January 8;

no injuries are reported. To win traffic, Muse begins a series of marketing promotions, while also changing the corporate image, symbol, and colors.

In December, Central is able to offer service with new equipment as 2 CV-660s, powered by Rolls Royce Dart turboprop engines, begin flying the longer route segments. A total of 441,712 passengers are originated during the year, the lowest by any of the U.S. local service airlines.

Due to lender objections, the carrier is unable to merge with **Ozark Airlines** in 1966. In a lightning move completed between May 4 and October 1, 1967, Central is purchased by and merged into **Frontier Airlines** (1).

There is an unofficial website at <http://members.tripod.com/~LAMKINS/central>.

CENTRAL AIRLINES (4): United States (1974). This short-lived Central Airlines is set up at Omaha, Nebraska, in 1974 to provide scheduled daily roundtrips to Omaha. Employing an Aero Commander 500B, the commuter inaugurates revenue passenger flights, but cannot maintain them beyond year's end.

CENTRAL AIRLINES (5): 411 Lou Holland Drive, Kansas City, Missouri 64116; Phone (816) 472-7711; Fax (816) 472-1682; Code CT; Year Founded 1993. The fifth Central Airlines is founded by Dewey Towner at Kansas City in 1993 to operate regional scheduled cargo services. Operations commence with a fleet of 30 Rockwell Aero Commander 500s. Flights continue during the remainder of the decade as 3 more Aero Commander 500s and 1 Turbo Commander are acquired.

CENTRAL AIRWAYS: United States (1985). Central Airways is set up at Ft. Lauderdale, Florida, in 1985 to provide daily roundtrip **Air Florida** commuter services to Sarasota. Although Cessna 402 revenue frequencies are duly inaugurated, **Air Florida's** failure brings the same result for this new commuter.

CENTRAL AMERICAN INTERNATIONAL: United States (1978–1982). CAI is established at Louisville, Kentucky, in 1978 to offer on-demand worldwide cargo charter and contract service flights. Operations commence with a fleet of 3 Convair CV-880s, 1 Lockheed L-18 Lodestar, and 1 Douglas DC-3. Much of the business is undertaken for the air freight forwarder Profit Express.

Unable to maintain viability in a recessionary environment, the carrier stops flying in 1982. Its assets will later be purchased by **Trans International Airlines** (2).

CENTRAL BRITISH COLUMBIA AIRWAYS, LTD. (CBCA): Canada (1945–1953). Bush pilot Russell Baker and mining executive Earl Springer form CBCA at Fort St. James on July 1, 1945 to operate charter and contract service flights throughout British Columbia. Revenue flight operations commence with a single, leased Beech 17 Staggerwing.

On-demand services are provided to remote mining camps and logging operations in 1946–1947, particularly in support of the British Columbia Forest Service.

The first production de Havilland Canada DHC-2 Beaver, registered CF-FHB, is purchased and placed in service in 1948.

During 1949, aerial surveys are flown and support services provided under contract to the developers of the aluminum and power complexes at Kitimat and Kemano. While "ordinary" on-demand flights continue, the carrier now hauls 95% of the Alcan air traffic.

The small bush operation **Kamloops Air Services, Ltd.** is purchased in the spring of 1950 and CBCA headquarters are transferred to Richmond. Terrace-based **Skeena Air Transport, Ltd.** is acquired in July 1951 and in 1952, the licenses of **White Horse Flying Services, Ltd.** and **Port Alberni Airways, Ltd.** are assumed.

After taking over larger rival **Associated Air Taxi, Ltd.** (and its Vancouver to Powell River and Port Alberni routes), Baker's carrier is renamed **Pacific Western Airlines, Ltd.** on May 15, 1953. The combined

fleet now comprises 1 Douglas DC-3, 4 DHC-2 Beavers, 2 Consolidated PB-Y-5A Cansos, 4 Norsemen, 1 Grumman Widgeon, 2 Fairchild 71s, 1 Beech 17 and 1 Beech 18.

CENTRAL CANADA AIR LINES, LTD.: Canada (1926). CCAL is established at Kenora, Ontario, in May 1926, with J. M. Clarke as president and W. M. Emery as general manager and chief pilot. James A. Richardson of Winnipeg, noted for his later work with **Western Canada Airways, Ltd.**, purchases controlling interest and the new entrant is outfitted with a single Curtiss HS-2L flying boat acquired from **Elliot-Fairchild Air Service, Ltd.**

Nonscheduled passenger and cargo services are undertaken during the summer, including the delivery of newspapers to mining camps. Dissatisfied with his company's progress, Richardson withdraws his financial backing and the company shuts down in October. The Curtiss is sold to **Patricia Airways, Ltd.**

CENTRAL FLYING SERVICE: United States (1975–1978). CFS is set up at Little Rock, Arkansas, in 1975, to provide scheduled local air taxi services. Cessna lightplane revenue flights are duly begun and continue through the next three years.

CENTRAL HIGHLANDS AIR TAXI (PTY.), LTD.: Australia (1991–1992). This air taxi operator is established by Jim Johnson at Emerald, Queensland, in 1991. The 17-employee company undertakes both passenger and cargo charters and contract service flights with 2 Piper PA-31-350 Navajo Chieftains, 2 Piper PA-23 Aztecs, 1 Piper PA-34 Seneca, 1 Rockwell SR.2, and 3 Piper PA-32 Cherokee Sixes. Operations continue for approximately a year.

CENTRAL IOWA AIRLINES: United States (1973). CIA is set up at Davenport in the spring of 1973 to provide daily scheduled roundtrips to Minneapolis and Ottumwa. Douglas DC-3 passenger and cargo flights are duly inaugurated, but cannot be maintained beyond October.

CENTRAL JAPAN AIRLINES. See **NEW CENTRAL AVIATION COMPANY, LTD.**

CENTRAL MOUNTAIN AIR, LTD.: P.O. Box 998, Smithers, British Columbia V0J 2N0, Canada; Phone (604) 847-4780; Fax (604) 847-3744; Code 9M; Year Founded 1991. Pilots Neil Blackwell and Douglas McCrea join **Central Mountain Air Service, Ltd.** at Smithers, British Columbia, in 1983. The company, one of Canada's numerous north country bush operations, flies a de Havilland Canada DHC-2 Beaver, Cessna 185, and Piper PA-31-310 Navajo to back country villages and airstrips.

When the air service's owner retires in 1986, he sells out to the two flyers, who rename the company and work to establish a scheduled airline with five employees, themselves included.

Following two years of additional on-demand frequencies, Central Mountain is able to offer its first scheduled service in 1988, a thrice-weekly Piper Navajo return run from Smithers to Prince George.

Although charter flights continue, additional scheduled destinations are added in 1989—Dease Lake, Telegraph Lake, Sturdee Valley, Vancouver, and Bronson Creek. A total of 2,000 travelers are accommodated on scheduled services during the first full year they are offered. Revenues total \$C2 million.

The Smithers–Vancouver frequency becomes twice, later thrice, daily in 1990 and, in 1991, scheduled services are launched to Watson Lake, Edmonton, Kelowna, Kamloops, and Fort St. John. The fleet now includes 3 Beech 1900Cs, 3 Beech King Air 200s, 3 de Havilland Canada DHC-3 Otters, 2 Douglas DC-3s (one an unconverted military C-47B), 1 Beech 18, and 1 Piper PA-31-350 Navajo Chieftain.

While on a service in heavy snow squalls from Sturdee on April 4, the C-47B with three crew and four passengers crashes into frozen Lake Thutade (six dead).

Income for the year reaches C\$10 million.

Airline employment in **1992** stands at 97. The 1900Cs and King Air 200s maintain scheduled operations to 12 destinations, while the other aircraft fly charter and nonscheduled services.

Climbing away from the airport at Bronson Creek, British Columbia, at too steep an angle on January 13, **1993**, the surviving Douglas transport stalls and noses over to crash 500 feet from the end of the runway and explode; the two crewmen aboard are killed. The tragedy casts a pall over the rest of the year and finances nose-dive.

In an effort to cut costs in **1994**, 1 Beech 1900C, the Otters, the Chieftain, and 1 Super King Air 200 are withdrawn. Nevertheless, the company must file for bankruptcy protection in April. Flights continue and Central Mountain prepares a restructuring plan.

The reorganized regional offers service to 10 communities in **1995**. The company's fleet is increased in **1996** by the addition of 2 Beech 1900Cs and, in July, it signs a marketing agreement with the **Air Canada, Ltd.** subsidiary **Air BC, Ltd.** The airline transports a total of 60,000 passengers.

At the beginning of **1997**, CMA serves 20 destinations throughout Alberta, the Yukon, and British Columbia. In the spring, a C\$50-million order is placed for 10 Beech 1900Ds, with options for 10 more. They will be rapidly delivered during the remainder of the year and into the next, together with spare parts, manuals, and training, which are provided for under terms of the initial contract.

In March, following a costly strike by pilots at its regional subsidiaries, **Air Canada, Ltd.** begins a review of its regional airline arrangement designed to stem losses. **Air BC, Ltd.** is directed to drop 6 of its 24 destinations and to sell 3 turboprops. Most of the dropped routes are picked up by Central Mountain, which, under a new code-sharing agreement with Air BC, facilitates passenger connections with **Air Canada, Ltd.** flights in Vancouver and Calgary.

On April 6 services are expanded to seven new destinations. Service is now offered from Vancouver to Castlegar, Cranbrook, Nanaimo, and Penticton; from Calgary to Castlegar, Cranbrook, and Penticton; from Prince George to Dawson Creek and Grande Prairie; and from Grande Prairie to Fort St. John.

Two new destinations join the company network on October 26. From Vancouver, six new frequencies are introduced to Campbell River, including four which are nonstop, while five daily roundtrips are simultaneously started to Comox, three of which are nonstop.

In November, thrice-daily return service is inaugurated between Calgary and Spokane; it is the only nonstop route operated between Alberta and eastern Washington. CMA passengers flying from Spokane to Calgary are able to connect at the Alberta city with **Air BC, Ltd.** flights elsewhere.

The fleet in **1998–2000** includes 11 Beech 1900Ds, 3 Beech 1900Cs, 3 Beech 1900Cs, and 2 King Airs.

CENTRAL MOUNTAIN AIR SERVICE, LTD. *See* **CENTRAL MOUNTAIN AIR**

CENTRAL STATES AIRLINE: United States (1980–1982). **Green Bay Airlines** (founded in 1978) is renamed CSA in **1980**. President Terry Kunes's 2 Cessna 421s and 2 Cessna 402s continue to maintain scheduled passenger and cargo flights between the home of the pro football Packers and the state capital at Madison.

Fiscal difficulties, largely due to the recession, force the company out of business in January **1982**.

CENTRAL STATES AIRLINES: United States (1989–1990). CSA is founded by Thomas Small and associates at Cleveland's Cuyahoga County Airport in the summer of **1989** to offer daily roundtrip scheduled passenger and cargo service to Cincinnati Lunken Airport, Pittsburgh, and Detroit City Airport. Two British Aerospace Jetstream 31s are acquired from their manufacturer. A September inauguration date is pushed back to November when limited services finally begin.

A full schedule of services begins on January 2, **1990**. With substantial start-up debt already accumulated, the carrier is ruined by a traffic slowdown in the wake of Iraq's invasion of Kuwait. Unable to make payments on its flight equipment, the carrier has no option but to return the Jetstreams to BAe on October 11 and shut down.

In its 10-month life, the little Ohio regional never does start service to Pittsburgh, but does fly 10,000 passengers.

CENTRAL TEXAS AIRLINES (1): United States (1967–1970). Jim Hadden establishes CTA-1 at Kileen during the summer of **1967** to provide scheduled intrastate passenger and cargo services with a fleet of Cessna 402s. Daily roundtrips commence on August 31 linking the commuter's base with Dallas, Tempe, Waco, Lafayette, New Orleans, Lake Charles, and Houston.

Operations continue apace until **1970** when the state's aeronautical commission, which has jurisdiction, revokes CTA's operating certificate for regulatory omissions.

CENTRAL TEXAS AIRLINES (2): United States (1981–1983). CTA-2 is established at Brownwood, Texas, in **1981** to provide scheduled Piper lightplane shuttle flights from a base at Waco to Houston.

Also known as Cen-Tex Airlines, the little carrier maintains daily roundtrips until late **1983**.

CENTRAL VERMONT AIRWAYS. *See* **BOSTON-MAINE/CENTRAL VERMONT AIRWAYS**

CENTRE AVIA. *See* **BYKOVO AVIA; TSENTR AVIA**

CENTRE D'AVIATION GENERALE, S.A.: Aeroport de Charleroi, Brussels South Airport (S7), Gosselies, B-6041, Belgium; Phone 32 (71) 357777; Fax 32 (10) 655749; Year Founded 1976. CAG is established at Brussels in **1976** as a flying school and aircraft rental operation. Over the next quarter century, employing a variety of lightplanes, the company also undertakes ad hoc air taxi, charter, and special cargo flights.

In **1999–2000**, Flight Manager Etienne Verhellen has available a fleet that numbers 5 Cessna 150s, 2 each C-172s, C-182s, and Piper PA-34 Senecas, plus 1 each Grumman American AA-1B, AA-5B, and Piper PA-32.

CENTRE SOUTH (TSENTR-YUG TOO): Russia (1994–1995). Centre South is established at Belgorodskaya's airport in **1994** to offer scheduled third-level services to regional destinations. S. P. Sidorov is appointed general director and he begins revenue flights with a pair of Yakovlev Yak-40s. Flights cease in **1995**.

CENTRELINE AIR CHARTER, LTD.: Bristol International Airport, Bristol, North Somerset, England, BS19 3DP, United Kingdom; Phone 00 (44) 1275 474 501; Fax 00 (44) 1275 474 851; <http://www.b-f-c.co.uk>; Year Founded 1987. Gordon Olson and Martin Barnes form the Bristol Flying Centre as an FBO at Bristol International Airport in **1987**. With the former as managing director, the company over the next 13 years establishes a reputation as both a flight training and charter operation.

Charter flights, managed by Chief Pilot Barnes, are operated under the name CentreLine Air Charter. By **2000**, the fleet includes a mix of 14 Piper PA-34 Senecas and PA-31-350 Navajo Chieftains. Nonscheduled passenger and cargo flights are mounted throughout the U.K. and into Western Europe.

CENTURION AIR SERVICE: United States (1973). CAS is established at Bangor, Maine, in early **1973** to provide scheduled air taxi services to Greenville and Augusta. Although daily Cessna 402 roundtrips are duly inaugurated, they are only operated for a few months.

CENTURY AIR LINES: United States (1931–1932). Century Air Lines is founded at Chicago Municipal Airport by Auburn Motor

Company owner Errett Lobran Cord to provide low-fare passenger service with single-pilot Stinson SM-6000Bs. Eighteen-per-day operations in the Great Lakes area are begun between Detroit and Cleveland and Chicago and St. Louis with the first 8 SM-6000Bs on March 23, 1931. The public flocks to Cord's carrier and, in July, the auto magnate begins another, **Century Pacific Lines**, in California.

By fall, extra stations are being added at Springfield and Toledo and the senior carrier is linked to its junior via a multistop route from St. Louis to Cleveland. Passenger boardings through October total 40,213. Late in November, four-times-per-day nonstop Detroit to Chicago roundtrips are introduced. Only three other airlines will book more passengers than Century for the entire year. The fleet now totals 14 Stinson Tri-Motors.

Errett Cord is able to operate economically during the Depression because he offers his customers discount fares and his employees rock-bottom wages. In February 1932, the new ALPA, led by David L. Behncke, in one of its first job actions, strikes Cord's airborne empire. Much of the dispute is played out at Chicago, scene of Century's base.

Replacement pilots are found and enter training. On March 8–9, while practicing night landings at East St. Louis, Illinois, an SM-6000B crashes on its 23rd approach, killing two of the five pilot-trainees aboard.

Meanwhile, Errett Lobran Cord, who is under intense pressure, offers a cut-rate mail service to the U.S. government in an effort to obtain subsidy. The move is turned down in Washington due largely to what such liberal members of Congress as Fiorello H. La Guardia and the press point out as the evils of the "Century Strike."

Unable to obtain a mail contract and with his people still unhappy, Cord sells his airlines in a 140,000 share stock exchange to The Aviation Corporation (AVCO), a forerunner of today's **American Airlines**, in April.

As part of the arrangement, which, incidentally, ends the strike, Cord receives an AVCO directorship.

CENTURY AIRLINES (1): United States (1972–1992). S.S. Airways is set up at Olathe, Kansas, in 1972 to provide both charter and scheduled passenger and cargo flights. Employing both an Aero Commander 500B and a Beech B-80 Queenaire, the company, employing the Century name, inaugurates scheduled frequencies in September, linking its base with Kansas City, Springfield, Lake of the Ozarks, and St. Louis.

Scheduled operations cease in 1980. Although air cargo and mail flights are continued, these, too, end in the recession of 1991–1992.

CENTURY AIRLINES (2): United States (1979–1981). Willi Jilke establishes a third-level commuter operation at Eureka, California, in the summer of 1979 under the name **Six Rivers Air Service**. Scheduled Cessna 402 passenger and cargo services are inaugurated in August linking the carrier's base with San Francisco, Sacramento, Medford, Crescent City, and Santa Rosa.

In 1980, the carrier is renamed and the fleet is expanded by the addition of an Australian-made GAF Nomad II. Significant fiscal problems are encountered.

The carrier is in such economic difficulty at the beginning of 1981 that it is must shut down after its final flight on March 24. Company assets are literally turned over to the tax collectors.

CENTURY AIRLINES (3): United States (1980). This short-lived Century Airlines is set up at Kansas City, Missouri, in early 1980 to provide scheduled air taxi flights to Dodge City via Salina. Employing a Beech 18, the company duly begins daily revenue flights, but cannot maintain them beyond year's end.

CENTURY AIRLINES (4): 7002 Highland Road, Pontiac, Michigan 48054, United States; Phone (810) 666-1200; Fax (810) 666-1450; Code CT; Year Founded 1983. Originally established as **Cryderman Air Service**, this Pontiac-based contract and charter freighter operator is renamed in 1983. Operations during the remainder of the decade and

into the 1990s are maintained with a fleet of Douglas DC-3s and a Piper PA-31-310 Navajo.

In 1993–1994, President C. F. Cryderman operates 5 Douglas freighters, 1 Rockwell Aero Commander, and 1 Learjet 25B. Domestic flights continue during the remainder of the decade, however, the fleet is changed. Gone are 2 DC-3s, replaced by 1 Convair CV-640.

CENTURY PACIFIC LINES: United States (1931–1932). Given the popular support of his eastern enterprise, **Century Air Lines**, Errett Lobran Cord establishes another deep discount carrier at Glendale, California, in early summer 1931. Using the first of 10 delivered Stinson SM-6000Bs, he opens scheduled passenger and air express service on July 3 linking Glendale with San Diego, Fresno, Oakland, and San Francisco. In August, routes are stretched to Sacramento and Tucson.

Some 26 daily schedules are offered by October and by year's end, services have been extended from Glendale to Yuma and Phoenix and from Phoenix to Tucson. The Arizona segments are challenged before that state's railroad commission by **American Airways**, which has similar routing.

For the year, CPL transports 26,167 passengers and 36.6 tons of small packages.

En route to Los Angeles from Bakersfield on January 29, 1932, a Stinson SM-6000B, piloted by James V. Sandbloom, crashes into a canyon wall northwest of Lebec, California (eight dead). CPL is unaffected by the pilot strike which hits **Century Air Lines** on February 1 and during the month begins flying to El Paso.

It is, however, adversely affected when the Arizona Railroad Commission sides with **American Airways** in March and orders the Cord company to cease its flights in that state. CPL is now shut down, but becomes a part of the Cord sale of **Century Air Lines** to The Aviation Corporation (AVCO) in April.

CESKOSLOVENSKE-CSA. See **CSA CZECHOSLOVAK AIRLINES (CESKOSLOVENSKE STATNI AEROLINIE)**

CESSNYCA, S.A.: Columbia (1962–1974). Following the closure of **AVISPA (Aerovias Pilotas Asociados, S.A.)** in 1962, one of the associated founders of that carrier, Jaime Castro, elects to continue. Forming a new company, Cessnyca, S.A., Castro purchases and employs a number of AVISPA's Douglas DC-3s, Beech 18s, and 2 DC-6Bs to continue services from Medellin to such destinations as Chigorodo, Caucasia, and Puerto Berrio.

A DC-3, with 14 aboard, crashes near Chigorodo on January 17, 1974; there are no survivors. Unable to overcome the adverse impact of the tragedy or to compete in the cutthroat airline war raging between **Aerocondor (Aerovias Condor de Colombia, S.A.)** and **SAM Colombian Airlines, S.A.**, Jaime Castro is forced to quit the air transport business later in the year.

CETA. See **COMPAGIA ESPANOLA DE TRAFIC AEREO, S.A.**

CEYLON AIRWAYS: Ceylon (1947–1948). Ceylon Airways is formed at Colombo's Ratmalana Airport in the spring of 1947 and is the marketing name taken by the Air Transport Branch of the government's Directorate of Civil Aviation. A technical assistance contract is signed with **Air India, Ltd.** and 3 Douglas DC-3s arrive from the subcontinent. They are christened *Sita Devi*, *Sunethra Devi*, *Vihara Maha Devi* (*devi* means "queen" in Sinhalese).

In June, the *Viharamaha Devi* completes a nine-day roundtrip flight to London to obtain a set of electoral registers for use in the upcoming national elections.

During the summer, cockpit and cabin crews fly the Douglas transports on training missions and route-proving flights. Emergency supply and rescue flights are operated in August when floods ravage the country.

On December 10, four-times-per-week Douglas DC-3 Colombo to Madras via Kankasanturai service is launched. The initial flight is operated by the *Sita Devi*, piloted by Capt. Peter Fernando.

Ceylon's independence from Great Britain is achieved on February 4, 1948. All three DC-3s participate in a celebratory air show. Early in the year, frequency on the Colombo to Madras route becomes daily and a daily Colombo to Trichinopoly via Jaffna service is introduced.

A fourth DC-3 is acquired in May and is christened *Sri Lanka Devi*. The Douglas transports begin to fly Muslim pilgrims to Jeddah as part of the Hadj. In June, the *Sunethra Devi* is ordered to fly Ceylonese Navy personnel to Sydney via Singapore for additional training. The DC-3 becomes lost over Malaya, but is put back on course by an RAF aircraft that answers its distress calls. Upon its arrival, it becomes the first plane from Ceylon to land in Australia.

During the summer, the former British crown colony of Ceylon is granted dominion status and, in August, the company is renamed **Air Ceylon, Ltd.**

CF AIRFREIGHT: United States (1987–1989). When **Eastern Air Lines** cancels its Moonlight Special arrangement with the air freight forwarder on March 1, 1987, CF AirFreight parent Consolidated Freightways, Inc. moves to begin its own cargo service. Donald G. Berger is named the subsidiary's president and the hub is transferred from Houston to Indianapolis.

Initially, a facility is shared with **Purolator Courier**, which is scheduled to move into its own new facility in midyear. Over \$5-million worth of ground equipment is purchased, including 8 elevating loaders, 40 tractors, 300 dollies, and 40 forklifts. A fleet is assembled comprising 4 DC-8-50Fs, 2 B-707-320Cs, 9 B-727-100Cs, 1 Convair CV-580, and 1 Shorts SC-7 Skyvan. By summer, the company is providing its own airlift.

The route system is restructured in September–October. Following Purolator's purchase by **Emery Air Freight**, the Purolator facility is purchased by **Federal Express**, which gives CF AirFreight until the beginning of the next year's second quarter to vacate. B-727-100Cs are positioned at Austin, Syracuse, Baltimore, Atlanta, and Ft. Lauderdale while three newly received and hush-kitted DC-8-50Fs are based at Oakland, Phoenix, and Orlando.

At this point, 900,000 pounds of freight pass through the Indianapolis hub nightly. Overall, the company has 115 U.S. and Canadian terminals and service is offered to over 125 international destinations.

As operations continue apace in 1988, the CF AirFreight fleet grows by the addition of 9 more DC-8-50Fs and 2 CV-580s; 4 B-727-100s are withdrawn. Service begins in January to five new destinations—Norfolk, Raleigh/Durham, Peoria, Champagne, and San Diego. A 4,000-sq.-ft., \$427,000, expansion is added to the carrier's warehouse and distribution space at the Charlotte, North Carolina, terminal in April. In May, the company begins operating from its own new Indianapolis facility.

In October, nightly B-727-100C flights commence from Indianapolis to Detroit and Nashville, while DC-8-50F frequencies are begun from Indianapolis to Oklahoma City, Shreveport, and Ontario, California. Tampa and Jacksonville from Indianapolis DC-8-50F routes are opened in November. Although traffic figures are again not provided, company officials reveal that the year's revenues are \$389 million. The operating profit is \$10.2 million.

In the spring of 1989, Consolidated Freightways, Inc. purchases struggling **Emery Air Freight** for \$247 million. Berger takes charge of the new acquisition and combines it with his own to form **Emery Worldwide**, a CF Company.

CFI, INC.: 135 E. Reno Ave., Suite F-6, Las Vegas, Nevada 89119, United States; Phone (702) 736-0077; Fax (702) 736-6258; Year Founded 1985. Ira Eichenfield sets up CFI at Las Vegas in 1985 to provide corporate charters. By 2000, 11 full-time pilots are employed and the company flies 2 Beech 2000 Starships and 1 each British Aerospace BAe (HS) 125-800 Hawker executive jet, Beech Super King Air 200, and King Air 90.

CHALK'S FLYING SERVICE. See CHALK'S INTERNATIONAL AIRLINES

CHALK'S INTERNATIONAL AIRLINES (1): United States (1919–1996). Arthur Burns (A. B. or "Pappy") Chalk, an Illinois farmer-turned-mechanic, starts **Chalk's Flying Service** on newly formed Watson Island, across the causeway from downtown Miami, on June 1, 1919. Burns had received his first flying lessons in 1911 from the barnstormer Tony Jannus in exchange for repairs on a Benoist flying boat.

With its headquarters under an umbrella at a rented base on Flagler Street, the world's first air taxi begins flying a float-equipped three-seat Stinson Voyager on charters to Bimini during the 1920s. The heydays of Prohibition, many of Chalk's best customers are gangsters, including the likes of Al Capone, a sometime resident of nearby Star Island.

A Waco ASO is purchased in 1930, but more importantly, Chalk marries in 1932. Mrs. Chalk will remain an active partner in the airline as long as A. B. owns it. Following repeal of the 18th Amendment in 1933, Chalk's clientele become somewhat less colorful, although a pet raccoon, remembered by many for the hours it logs, is now acquired. Most are big game fishermen, who base their boats at Bimini for easier access to the sport fishing grounds.

During summer, a newly added Fairchild 71 and the Waco are supposedly employed to rescue Cuban leader Gerardo Machado from Havana. Arriving at Mariel on August 24 to carry the dictator and his party to exile, the aircraft are fired upon by the forces of Fulgencio Batista; too riddled to fly, the Waco must be left behind, but Chalk does manage to fly Machado to exile at Nassau.

This story, repeated down through the history of the Chalk company, is legend, not fact. General Machado had peacefully departed Havana on August 12 aboard a **Cubana (Compania Nacional Cubana de Aviacion, S.A.)** Sikorsky S-38 piloted by Cubana's chief pilot Capt. Arthur Lee. Cubana at that time was a subsidiary of **Pan American Airways (PAA)** and both the aircraft and flyer had been seconded over from the U.S. carrier.

Chalk continues Fairchild 71 fishing flights in 1934–1935; among his passengers are Wilbur Wright, Howard Hughes, Errol Flynn, and Ernest Hemingway. A formal terminal building (actually just a tiny building built from hand-gathered seashore rocks) replaces the umbrella headquarters on Watson Island in 1936, at which time the company is renamed. A. B. continues to fly charters in 1937–1939, while management is largely left to Mrs. Chalk.

In 1940, the one-plane fleet is tripled by the addition of a pair of Sikorsky S-38s. During World War II, Chalk serves as a ferry pilot, training Navy pilots and flying Civil Air Patrol antisubmarine patrols. Although several Grumman G-21 Geese are acquired by his company, scheduled services are intermittent.

In 1945–1946, the Chalk's enter into a loose business association with former barnstormer Dean Franklin, who contributes a Stinson SRH and his considerable experience to the operation. At the same time, orders are placed for Grumman G-44 Widgeons.

Services become somewhat more regular following the official post-war announcement of their inauguration on November 21, 1947, the same day Chalk receives certification from the CAB as an irregular carrier.

As an aside, we might note here that it is this official certification date which long caused a debate as to which of two airlines, Chalk's or **KLM (Royal Dutch Airlines, N.V.)**, is the world's oldest. The debate will become mute in 1996.

In 1948, a Grumman G-44 Widgeon is finally acquired. Permanent certification is received on July 18, 1950.

For the next 20 years, traffic continues to consist primarily of sport fishermen intent upon flights to Bimini. Frequencies return to their intermittent pattern during the 1950s and early 1960s and income is slight.

In 1955, the City of Miami attempts to evict the carrier from its Watson Island base for nonpayment of rent; fortunately, Chalk and his friends are too politically acute to allow such an event to occur, and squatter's rights are successfully defended.

In October 1962, 3 Geese are temporarily based at Great Inagua Island in the Bahamas to fly members of the media on charters during the Cuban Missile Crisis. With an excess of 16,000 flight hours in his logbook, 75-year-old Arthur Chalk retires in 1964 following the death of his wife. He does, however, remain chairman of the company.

Longtime Chalk colleague Franklin purchases 100% shareholding in the company from Chalk in 1966 in exchange for an \$800-per-month pension and A. B.'s personal Widgeon. During the remainder of the decade and into the next Franklin increases the fleet. In addition to 2 of his own Geese, 2 more are added, and orders are placed for 5 Grumman G-73 Mallards. At the same time, a "Route 9" certificate is acquired from the Bahamian government, which allows the company access to any point in the islands from Ft. Lauderdale, Orlando, Palm Beach, Miami, or Tampa.

The first Mallard, formerly operated by the Japanese air taxi service Nitto Aviation, Ltd., is acquired in late 1968; christened *City of Miami*, it is placed into service during 1969. The company changes its corporate identity to Chalk's International Airlines in 1970 and also acquires access to Cat Cay. The attraction of taking off from water and low cruising speeds that allow excellent sight-seeing appeals to numerous passengers.

During those years of growth, the most compelling incident occurs on March 7, 1972. After shooting and wounding the pilot, Jim Cothron, and a mechanic on the ground at Miami (MIA), J. W. Brewton and another member of the National Black Liberation Army, armed with shotguns, hijack a Grumman G-73 Mallard and force copilot Douglas McKenzie to fly them to Havana. In 1975, one of the pirates will be shot and killed in Jamaica; the other will return to the U.S. a decade later and will be captured, tried, and sentenced to 10 years in prison.

After this incident, no Chalk's aircraft is ever fueled sufficiently to reach Cuba.

Late in the month, a sixth Mallard N73556 is obtained from Canada. Chalk's now operates the largest number of Mallards by a single owner.

The hijacking is extremely bad for publicity and the company begins to fail in 1973. At this point, Franklin sells controlling interest to Pennsylvania contractor Edward F. Dixon. Fiscal difficulties continue and, with the sale of 2 G-73s to **Antilles Air Boats**, the fleet is reduced to only 4 Mallards.

With Chalk's near extinction, Dixon, having held the company for less than a year, resells it in 1974 to aviation buff James Crosby, owner of Resorts International. The company, under its new owners, continues flying to the Bahamas, with half of the passengers enplaned for Paradise Island (formerly Hog Island) and the others for Nassau, Bimini, and the islands of south Florida.

Meanwhile, on his 85th birthday, founder and former owner A. B. Chalk makes his final flight, being required by the FAA, successor to the CAA, to surrender his license that day. Chalk will continue to be a welcome visitor at the Watson Island base, where he will feed the birds and regale customers with stories of the early days of aviation.

In 1975, President I. G. Davis Jr.'s fleet comprises the 4 Grumman Mallard amphibians. Enplanements for the year total 40,000. Airline employment in 1976 stands at 40. Another Mallard is acquired and all 5 are now provided new livery. In addition, the company establishes a certified repair station at its new Miami maintenance facility, adding a night shift. Passenger boardings accelerate to 44,762.

Founder Chalk is killed on May 26, 1977, when he falls out of tree at home while pruning it. Operations at his former airline continue apace both during that year and in 1978, when owner Crosby begins to look for a larger seaplane.

Hoping to fill a long-existing need for a medium-sized amphibian for the Caribbean island-hopping scene, company engineers visit Grumman in 1979 and join in the redesign of the HU-16 Albatross, several units of which are made surplus by the government. An order is placed for 13 of the ships. While awaiting the new aircraft, Chalk's receives its first G-73T Turbo Mallard on November 27.

The surplus HU-16s are modified to 28-passenger configuration at the manufacturer's St. Augustine facility in 1980. Meanwhile, the Mallard fleet is increased by the addition of 4 additional machines, all G-73Ts. On May 15, gunman James Thomas Wright surrenders to Miami police following his unsuccessful attempt to commandeer a Mallard to Cuba. Badly managed and overextended, Chalk's has lost nearly \$1.5 million during the past two seasons.

Having been initially test flown on February 13, 1981, the first G-111 Albatross is received in the fall and is placed into service on December 15 over the route from Ft. Lauderdale and Miami to Nassau and Bimini. With added capacity, Chalk's passenger traffic grows rapidly. A total of 45,000 travelers are boarded on the year.

Two more G-111s join the fleet in 1982 and, with over 32 flights per day offered between Florida and Bimini, Cat Cay, and Paradise Island, customer bookings jump to 118,000.

In 1983, services are maintained and the 115-employee company becomes one of the nation's most unique amphibious air transport companies and the oldest continuously operated carrier in the world. Enplanements for the year total 93,234.

The fleet in 1984 includes 3 G-111s and 5 Grumman G-73T Mallards. Three direct roundtrip flights are offered daily between Ft. Lauderdale and Paradise Island and Nassau and one roundtrip from West Palm Beach. There are five roundtrips between Miami's downtown Watson Island to Paradise Island and Nassau; four to Bimini Island; two between Nassau and Bimini; and one between Cat Cay Island and Miami. In addition to passengers, the carrier also transports more than 2.5 tons of essential food supplies and perishables each month.

Destinations served in 1985 include Miami, Ft. Lauderdale, West Palm Beach, Bimini, Cat Cay, Nassau, and Walker's Cay. During the Southern Ocean Racing Conference, company aircraft fly world-class crews and thousands of pounds of hi-tech sails for the racing boats in Nassau Harbour.

During the former year, the company becomes the beneficiary of five years worth of free publicity as its aircraft are prominently displayed in the weekly opening scenes of the popular television police drama *Miami Vice*.

Enplanements in the latter year total 118,773.

The fleet of the 85-employee small regional in 1986 includes 3 G-111s and 5 G-73T Turbo-Mallards. Following the sudden death of owner Crosby, the airline passes to his sisters. They make plans to construct a STOL strip on Paradise Island, to begin landplane services, and to retire the noisy, uneconomical G-111s. Passenger boardings climb 7.3% to 128,126.

In 1987, Donald Trump purchases Resorts International from the Crosby sisters and authorizes the construction of their 3,000-ft. runway STOL airport on Paradise Island, one capable of handling de Havilland Canada Dash 7s. The seaplane fleet is reduced to 4 Turbo Mallards while all of the Albatross amphibians are withdrawn and placed into storage at Evergreen Air Center at Marana, Arizona.

Customer bookings for the year decline by 11.7% to 112,668.

In late 1988, Resorts International, which has been forced by its junk-bond play to enter Chapter XI bankruptcy protection, is purchased by TV mogul Merv Griffin who sees the airline as a vehicle with which to transport passengers to the newly completed STOLport on Paradise Island. To qualify for Part 121 certification, the airline is renamed **Paradise Island Airlines**, doing business as Chalk's International Airlines. General Manager S. P. Allen's company, having lost its independence, sees the fleet revised to include 4 Grumman Turbo Mallards and the first company landplanes, 2 DHC-7s. Beginning on March 25, the Canadian-built turboprops operate five round trips per day from Ft. Lauderdale to

Paradise Island and four per day from Miami, while the Mallards maintain their earlier routes to the U.S. Virgin Islands. Enplanements for the year grow by 12% to 96,000.

In May 1989, Resorts International, under requirements of its bankruptcy proceedings, splits Griffin's air transport subsidiary into two divisions: Chalk's International Airlines and **Paradise Island Airways**. Retaining the original Chalk's certificate but not its name, the landplane operation is turned over to Paradise. It is announced that the Chalk's, retaining its name but with a new Part 135 license, will be sold on December 15. Due to public outcry and a request from the Bahamian government, the sale does not occur and the Mallards continue their amphibious shuttle flights from Watson Island Seaplane Base at Miami to Nassau and Bimini. Because it is operating under bankruptcy protection, the carrier does not release traffic figures.

Miami Vice is cancelled in the spring of 1990 ending five years of free worldwide television exposure for the carrier. During the summer, negotiations are opened with Seth G. and Connie Atwood, owners of Rockford, Illinois-based United Capital Corporation and original investors in **Midway Airlines**. The Atwoods form a new subsidiary, Flying Boats, Inc., and, in December, purchase from Resorts the new Part 135 operating certificate, the Chalk's name, and all 16 seaplanes. Meanwhile, the year's traffic figures are reported with those of **Paradise Island Airways**.

Seth G. Atwood becomes chairman/CEO with Bill Jones as vice president operations on January 1, 1991. The carrier, Flying Boats, Inc., doing business as Chalk's International Airlines, is born and an Albatross is reinstated. Four G-73T Turbo Mallards join it in undertaking service between the Watson Island seaplane base at Miami and Bimini, Paradise Island, and Ft. Lauderdale. Additional charters, in the form of air tours, are undertaken over Miami and south to the Florida Keys. In June, the company inaugurates its first domestic route to downtown Key West.

The harbor of Fort Jefferson in the Dry Tortugas joins the route network in 1992. In August, Hurricane Andrew devastates the company terminal at Bimini. Enplanements for the first full year under Atwood's direction reach 40,000. Airline employment in 1993 stands at 65 and a new Bimini terminal is opened in September. The success of the Atwoods in boosting the company's fortune leads to the need for a reintroduction of a stored Albatross.

A fifth Mallard is acquired in 1994 by the world's last scheduled international flying boat (not floatplane) operation is now in its 75th year, but the Key West service is suspended for lack of traffic. If one overlooks the ownership changes and certification date, Chalk's remains the oldest continuously operated airline in the world, four months and a week senior to **KLM (Royal Dutch Airlines, N.V.)**. At the very least, it is the world's first air taxi and the oldest water-based operator.

Except for Christmas Day, services continue to be offered all-year-round in 1995. Much of the Mallard fleet is placed into storage at Ft. Lauderdale or in Arizona. Two Mallards, together with an Albatross, work the Miami-Ft. Lauderdale-Bimini-Paradise Island route network. During the summer, new turboprop engines are fitted to the Albatross. Plans are laid to commence service to Havana as soon—or if—the political climate improves. Traffic figures are still not released.

On January 30, 1996, Charles Cobb, Craig Robins, and Chuck Slagle, interested in a possible feeder link with the new **Pan American World Airways (2)**, purchase the historic carrier and rename it **Pan Am Air Bridge** in honor of the earlier pioneer, **Pan American World Airways (1)**. Although the Chalk's name will remain (for awhile) on the terminals at Paradise Island, Bimini, Miami, Watson Island, and Ft. Lauderdale, the first repainted Mallard begins Air Bridge flights on March 1.

There is an unofficial website at http://pages.prodigy.com/jttoad/pam_am.html.

CHALK'S INTERNATIONAL AIRLINES (2). See **PARADISE ISLAND AIRWAYS**

CHALK'S OCEAN AIRWAYS: 704 S.W. 34th Street, Ft. Lauderdale, Florida, United States; Phone (800) 414-2557; <http://www.chalksoceanairways.com>; Code OP; Year Founded 1999. On Wednesday, February 10, 1999, **Pan Am Air Bridge** files for Chapter XII bankruptcy protection with the U.S. Bankruptcy Court at Dallas, Texas, and suspends service next day. On February 12, the court reaches an agreement with **Gulfstream International Airlines** to resume service to Bimini on a temporary basis, effective February 26, as the historic carrier attempts to reorganize under the protection of the bankruptcy laws.

The U.S. Bankruptcy Court at Dallas, on February 24, requests that Gulfstream, also, continue to operate **Paradise Island Airways** as it, too, reorganizes under the protection of the bankruptcy laws.

GIA's President Cooper indicates that the historic airlines will be preserved and that they will resume 12 daily Grumman amphibian roundtrips on February 26 from Miami to Bimini and Paradise Island and from Ft. Lauderdale to Bimini, Paradise Island, and Walker's Cay. While a final decision on the future of **Pan Am Air Bridge** is made, its planes, like those of **Paradise Islands Airways**, are repainted in the colors of Chalk's International Airlines (2).

As Chalk's International Airlines (2), PIA and PAAB continue and expand daily services as of February 26.

In August, the seaplane operation is purchased out of bankruptcy by South Florida businessman and former **Eastern Air Lines** pilot James Confalone for \$925,000. A holding company, Flying Boat, Inc., is established under Chairperson Patricia Long to provide management and recapitalization, and William "Bill" Jones is named airline president. Reclaiming for the carrier the title of world's oldest continuously operated scheduled air carrier, Confalone renames the venture in honor of founder Arthur B. Chalk and financier Ocean Bank. Work begins to upgrade and modernize the Albatross and Mallard fleet and flying, temporarily halted, is resumed to, from, and between Watson Island at Miami, Ft. Lauderdale, Palm Beach, Bimini, and Walker's Cay.

With the airstrip on Paradise Island fortuitously closed in September, Confalone now approaches Sun International, owner of the Atlantis resort on the island and offers a direct seaplane service to replace the 45-min. taxi ride now the only way to the resort from Nassau. Mallard service to Atlantis is inaugurated on December 17.

Due to the changing ownership and financial situation, customer boardings for the variously named carrier over the year fall 12.7% to 29,000.

At the beginning of March 2000, a de Havilland Canada DHC-6-300 is acquired for charters from Ft. Lauderdale to Walker's Cay and Great Harbour.

On May 24, Chalk's opens a site on the World Wide Web and its summer schedule with an increased number of flights begins on June 1.

When a new seaplane terminal opens at Freeport in the Bahamas, Chalk's initiates thrice-daily Mallard flights to the resort from Ft. Lauderdale in December.

CHALK'S PARADISE ISLAND AIRWAYS. See **CHALK'S INTERNATIONAL AIRLINES**

CHALLENGEAIR, S.A.: Avenue Louise 416, BTE 17, Brussels, B-1050, Belgium; Phone 32 (2) 647-2515; Fax 32 (2) 646-5997; Code CH; Year Founded 1994. Owned by Luc Mellaerts and Pierre Jottrand, ChallengeAir, S.A. is set up at Brussels on April 12, 1994 to operate inclusive-tour and other charter passenger flights on behalf of other airlines and travel industry groups. With Mellaerts as chairman and Jottrand as president/chief pilot, ChallengeAir recruits a workforce of 12 and leases 1 Douglas DC-10-30 from **Air France**.

Revenue operations commence on June 1 as the company begins flying weekend roundtrips between Manchester and Tenerife on behalf of **Britannia Airways, Ltd.** Later in the year, services are also provided for **Air Europe Italy, S.p.A.**

A second DC-10-30, also painted in an all-white scheme with olive drab and red markings, is acquired in **1995**. It is almost immediately wet-leased to the French charter operator **Corse Air International, S.A.**, better known as **Corsair**, to assist that tour operator to meet its summer capacity requirements.

The first Douglas wide-body is also wet-leased to **Corsair** in **1996** and the carrier operates relatively few flights of its own this year. In **1997-1998**, the capacity charter is split between Corsair and **Caledonian Airways, Ltd.**

It is understood that flights continue without change during the remainder of the decade; exact information is, however, unavailable.

CHALLENGE AIR CARGO: 3401 NW 67th Ave., Building 805, Miami, Florida 33122, United States; Phone (305) 590-1850; Fax (305) 590-1860; <http://www.challengeaircargo.com>; Code WE; Year Founded 1985. The second of two wholly owned subsidiaries created by **Challenge Air Transport**, CAC is born in **1985** and provided with the parent's Boeing 707-320C under lease. Regularly scheduled and charter all-freight revenue operations commence in the fall over several of CAT's previously flown cargo routes.

In June **1986**, the subsidiary severs its connections with its parent and becomes a separate entity under William F. Spohrer, the founder and chairman/CEO. Employing 2 B-707-320Cs, the carrier's extensive network of Latin American destinations is maintained; places visited come to include Bogota, Cali, Guatemala City, La Paz, Lima, Managua, San Pedro, Sula, San Salvador, São Paulo, and Manaus.

Freight traffic skyrockets 113% this year to 62.17 million FTKs.

During **1987**, the carrier transports 69.5 million FTKs. Although a \$2.7-million operating profit is generated, there is a \$740,000 net loss. Airline employment is increased by 50.5% in **1988** to 167. In December, the fully owned subsidiary **Challenge Air Express** is established at Miami to employ dedicated space on regular CAC flights.

Cargo rises by 38.7% to 110,553 FTKs. Revenues accelerate 25.1% to \$26.6 million and even though costs rise only 2.2%, operating income falls to reach \$1.5 million. The net bottom line turns around and shoots up to \$263,700.

The workforce swells 55.2% in **1989** to 450 and the fleet includes 1 B-707-330C and 2 DC-8-63Fs. Orders are placed with Ansett Worldwide for 2 more B-757-23PFs as Challenge Air Express overnight, international document, and small package service to Bogota and Cali and second-day service from Miami to any other major city in Colombia begins in January. Weekly scheduled routes are stretched in July to Asuncion, San Salvador, Caracas, Quito, and Guayaquil.

The Luxembourg-based all-cargo airline **Cargolux Airlines International, S.A.** now becomes the company's general sales agent in Europe. The first B-757-23PF, *Spirit of Miami*, is received on August 1. During the summer, U.S. Customs discovers 120 pounds of cocaine aboard a company aircraft just landed in Miami and imposes a \$2 million fine.

The carrier reacts by expending \$500,000 in security investments and hiring a well-trained seven-man crew of security agents, ex-policemen all. Impressed by the good-faith effort, the government drops its fine in September. Also in September, twice-weekly service begins from Miami to Chicago and weekly flights start from Miami to Los Angeles; the Douglas freighters bring in, via both routes, flowers, fruit, and vegetables from Chile, Ecuador, and Venezuela.

Beginning in October the *Spirit of Miami* is employed to offer weekly freighter service from Miami to Chicago and Los Angeles.

Freight traffic nearly doubles, accelerating 49.8% to 166.42 million FTKs. Revenues do even better, jumping 59.6% to \$42.5 million. Operating income ascends to \$10.26 million and net gain reaches \$2.48 million.

Airline employment is cut by 33.3% in **1990** to 300, but the fleet is increased by the addition of another B-757-23PF. A second hub is opened at Atlanta, from which flights are scheduled to Panama City and San Jose, Costa Rica.

Cargo moves ahead by 6% to 173.24 million FTKs and revenues climb 27.3% to \$54.08 million. Expenses, however, increase by 73.3%

to \$55.8 million and force an operating loss of \$1.72 million. The net loss is \$2.09 million.

The employee population increases by 50% in **1991** to 450 as a code-sharing agreement is signed in December by Chairman Spohrer with **Deutsche Lufthansa, A.G.**

Orders are placed for a fourth B-757-23PF and freight traffic climbs 3.3% to 192.08 million FTKs. Revenues jump 18.5% to \$64.11 million, expenses ascend only 4.2% to \$57.96 million, and there is an operating profit of \$6.14 million. Net gain surges to \$3.38 million.

Company employment is increased by another 50% in **1992** to 675. In accordance with the new pact, the German flag carrier in January adds a B-747F to its Frankfurt-Miami route, feeding European cargo to Challenge for continuation to Bolivia, Costa Rica, Ecuador, Guatemala, and Peru. A marketing agreement is signed in March with **Iberia Spanish Airlines (2) (Lineas Aereas de Espana, S.A.)**, providing for Central American connecting flights to and from Madrid.

In July, a marketing agreement is signed with **Aeroflot Russian International Airlines (ARIA)**; under its terms, the two carriers pledge to feed each other's routes between Europe and Latin America via Miami. Scheduled all-freight flights commence in August from Miami to Brazil, followed by Los Angeles to Brazil service in September, as well as Miami-Honduras frequencies.

Cargo advances by 21.1% to 236.33 million FTKs and revenues move up 22.2% to \$78.3 million. Expenses are lower and allow profits—also lower—to be generated: \$1.66 million (operating) and \$407,787 (net)

The payroll is slashed by 35.6% in **1993** to 435 and the fleet includes 3 B-757-203PFs and 1 B-707-330C. A new air cargo center is opened at San Juan, Costa Rica, in January and new flights commence from Miami to San Pedro Sula in Honduras. Weekly service is initiated in April between Los Angeles and Brazil.

Freight falls 9.4% to 214.05 million FTKs and revenues ascend 14.9% to \$90.03 million. Expenses rise 18.4% to \$91.09 million and the operating loss is \$1.06 million. The net loss is \$1.31 million.

Airline employment is increased by 2.1% in **1994** to 661 and papers are signed for the construction of a 165,000-sq.-ft., \$20-million, fully automated cargo center at Miami (MIA).

Cargo recovers, moving ahead by 3.1% to 257.34 million FTKs, and revenues advance by the same percentage to \$91.62 million. Expenses decline 1.9% to \$69.46 million, allowing a pretax gain of \$22.13 million and a net profit of \$2.3 million.

The workforce grows another 21% in **1995** to 800. In August, a DC-8-73F is leased from **Southern Air Transport** for eight months.

The company's 5 aircraft operate a total of 250.2 million FTKs, an increase of 11.2%. The operating profit plunges to \$197,000 and there is a \$674,000 net loss.

The employee population does not change in **1996**. The carrier's status as the only all-cargo operator between the U.S. and Peru is challenged by seven other carriers, who request routes from the DOT.

In May, Challenge leases a B-767-34AFER from **UPS (United Parcel Service)** on a month-to-month basis. The wide-body, which replaces a DC-8F previously leased from **Southern Air Transport**, will be employed to operate weekend all-cargo services from Miami (MIA) to Venezuela and Brazil.

Cargo moves up 5.9% to 264.87 million FTKs and revenues (through September) reach \$79.84 million. Unhappily, expenses total \$87.15 million and the previous year's small operating gain becomes a \$7.5-million loss. The net loss deepens to \$8.26 million.

Destinations visited in **1997** include Bogota, Cali, Caracas, Guatemala City, Guayaquil, La Paz, Lima, Managua, Manaus, Panama City, Quito, San Jose, San Pedro Sula, San Salvador, and São Paulo.

Arrangements are made to acquire 3 (with 2 options) former **Japan Air Lines Company, Ltd. (2)** Douglas DC-10-41s that are being converted into freighters by Aeroavali for Ten Forty Corporation.

A total of 310.56 million FTKs are operated, a 17.3% increase over the previous year.

Operating revenues advance 18.8% to \$131.43 million, while expenses climb 5.8% to \$124.97 million. The previous year's loss becomes a \$6.45-million operating gain. In addition, a \$6.65-million net gain is celebrated.

In early September 1998, the carrier leases the newly completed 205,000-sq.-ft. Air Cargo Center at Dallas (DFW). The center becomes a second hub and is employed to help Challenge service its growing South American business.

At the same time, as the result of a recently signed strategic agreement with UPS, enhanced scheduled express service via Brazil to South America becomes available five days a week. Beginning on September 15, Challenge operates a wet-leased UPS B-767-34APF into Campinas, one hour from São Paulo.

This service complements additional Latin American routes also announced by UPS and Challenge as part of their pact. Under this agreement, Challenge has contracted with UPS to operate wet-leased B-757-24APF freighter flights between Miami and the Dominican Republic on Tuesdays, Thursdays and Sundays and between Miami and Venezuela on Wednesdays and Fridays. A wet-leased B-767-34APF is also operated by Challenge for UPS from Miami and Honduras to Costa Rica on Saturdays.

The first 2 of 3 ex-JAL DC-10-41Fs are acquired in October–November; they will be joined by the third in June.

Freight traffic during the 12 months advances by 8.61% to 324.79 million FTKs. Revenues climb 5.1% to \$138.19 million, while expenses move ahead by 14% to \$142.53 million. The resulting operating loss is \$4.33 million and there is also a \$5.5-million net loss.

Following several weeks of negotiations, the company's assets, including all leased facilities, ground equipment, computer systems, and route authorities, but not including aircraft, are sold to UPS (**United Parcel Service**) on June 28, 1999.

Overall cargo traffic declines 5.7% to 306.28 million FTKs. Revenues advance 7.8% to \$148.95 million, while expenses jump 12.4% to \$160.26 million. The operating loss almost triples, deepening to \$11.3 million, while the net loss doubles to \$10.9 million.

Airline employment at the beginning of 2000 stands at 704, a 12.3% reduction in force over the previous 12 months.

CHALLENGE AIR EXPRESS. *See* CHALLENGE AIR CARGO

CHALLENGE AIR INTERNATIONAL: United States (1984–1987). CAI is established at Miami in the fall of 1984 as the passenger division of **Challenge Air Transport**, itself founded in 1978 and now concentrating on all-cargo operations. Employing a Boeing 737-2K2 leased from **Transavia Holland, N.V.**, the semi-autonomous operator inaugurates charter and inclusive-tour flights on December 31 from Miami to San Pedro via Tegucigalpa.

In early 1985, a second leased B-737-2K2 is acquired and scheduled passenger flights begin in the spring. Destinations visited now include San Pedro, Sula, Tegucigalpa, San Salvador and Belize City. Charters are offered from Baltimore and Philadelphia to Nassau and Freeport in the Bahamas. Two more B-737-2K2s are acquired and almost 100,000 passengers are transported during the start-up year.

The 100,000th customer is boarded on January 6, 1986 and, later in the month, another B-737-2K2 is delivered from **Transavia Holland, N.V.**

Following a June reorganization, which sees the cargo division become the separate **Challenge Air Cargo**, the company is purchased for over \$1 million by the Airline Holding Company investment group headed by Eli Timoner, **Air Florida's** founder and former chairman. Timoner becomes chairman of Challenge Air International, with another onetime **Air Florida** executive, Robert "Bobby" Booth, as president/CEO.

CAI expands to additional markets, including Guatemala City, Kingston, Montego Bay, Port au Prince, Grand Turk, Providenciales, San Jose, Belize, Panama City, and the Dominican Republic. Traffic and financial figures are not made available; however, expansion proves very costly.

The fleet is reduced to 1 B-727-200 and 1 B-737-2K2 in 1987. Thrice-weekly scheduled flights begin in June from Washington, D.C. (IAD) to Miami, offering through service from the nation's capital to El Salvador and Belize and connecting services to Costa Rica and Honduras through its Miami gateway. Northbound flights continue to Newark.

On September 28, the company stops flying and in November it files for Chapter XI bankruptcy. During the first 11 months of the year, the carrier flies a total of 120,000 passengers and earned revenues of \$21.3 million. Although an operating profit of \$552,000 is generated, a net loss of \$699,000 is suffered. In December, an unsuccessful effort is made to sell 80% of the carrier's assets to Milam International, a Colorado-based corporation.

Efforts to resume in 1988 are unsuccessful and the airline contracts with **LACSA (Lineas Aereas Costarricenses, S.A.)** in January to handle many of its Latin American contracts. The DOT revokes its operating permit in the fall.

CHALLENGE AIR TRANSPORT: United States (1978–1987). Established by William F. (Bill) Spohrer in 1978 to provide scheduled and charter cargo flights to Latin America, CAT's initial fleet comprises 2 Douglas DC-6s and 1 Boeing 707-320C. Service is started from the Miami base to Panama City and from Miami to Lima via Iquitos. The principal cargo is fresh cut flowers.

Two years later, in 1980, 1 DC-8-55F freighter is acquired. It is, however, returned in 1981 and replaced by another DC-6A and 2 Curtiss C-46As. Challenge now operates 1.18 million FTKs of piston-engine freight. Expenses of \$1.38 million exceed operating income of \$1.11 million, leaving an operating loss of \$270,000 on a net downturn of \$385,000.

The fleet in 1982 includes 2 DC-6As, 2 Curtiss C-46As, and the DC-8-55F, which is reintroduced. The jetliner's arrival helps to insure a significant upturn in cargo to 7.19 million FTKs.

Freight drops at the 28-employee concern in 1983, to 6.4 million FTKs. Service to Peru is temporarily halted for diplomatic reasons in May 1984. Late in the year, a new passenger subsidiary, **Challenge Air International**, is established.

Although cargo flights to Peru remain grounded in early 1985, the new CAI subsidiary inaugurates scheduled passenger services with a leased B-737-2K2. At this point, CAT establishes a second wholly owned subsidiary, **Challenge Air Cargo**. The parent's B-707-330C is chartered and operations begin in the fall.

In June 1986, CAC severs connections with CAT and becomes an independent airline under Chairman Spohrer. Of CAT's two subsidiaries, only CAI remains and, when it suspends operations on September 30, 1987, the parent retires, giving up on a plan to fly to South America.

CHALLENGE AIRWAYS (PTY.), LTD.: Australia (1988–1989). The new Queensland third-level passenger and cargo commuter inaugurates regional services from Coolangatta in October 1988 with a Piper PA-31-310 Navajo and a Beech B-58 Baron. The operation is not successful and shuts its doors in June 1989.

CHALLENGE INTERNATIONAL AIRLINES. *See* CHALLENGE AIR INTERNATIONAL

CHALLENGER AIRLINES: United States (1946–1949). Originally formed as **Summit Airways** at Denver in January 1946, this local service carrier is equipped with DC-3s. After receiving CAB certification on March 29, the company opens scheduled passenger and cargo flights to Salt Lake City via Cheyenne on May 5.

Summit is renamed in January 1947 and continues to grow. Destinations served during the year and in 1948 increase and include Casper and Billings in the north and Colorado Springs, Pueblo, and Grand Junction in the south.

Late in 1949, the airline is purchased by and merged into **Monarch Air Lines**.

CHAMPAGNE AIRLINES, S.A.: Aéroport de Reims Champagne, Reims, France; Phone 7 07265 34 2107; Fax 7 07265 13 640; Code CPH; Year Founded 1998. Champagne is established in the summer of 1998 to offer on-demand executive and small group passenger charters. The seven-worker company begins revenue operations with 1 Beech 1900C and 2 Beech King Air 90s.

CHAMPION AIR (PTY.), LTD.: Australia (1979–1982). Formed at Adelaide in 1979, Champion Air launches scheduled commuter service from that city to Kimba and Wudinna with a Piper PA-34 Seneca and Smith Aerostar 600.

Unable to maintain viability in the face of world economic recession and steadily higher fuel costs, the flights are suspended in 1982.

CHAMPION AIRLINES: 5101 Vernon Ave., S., Suite 300, Edina, Minnesota 55436, United States; Phone (612) 920-6822; Fax (612) 920-8513; <http://www.championair.com>; Code MG; Year Founded 1995. During the first week of January 1995, American International Airways (3) purchases the failed MGM Grand Air and its fleet of 3 DC-8-62s. American International is now restructured into Grand Holdings, Inc., with AIA and MGM Grand Air as its two subsidiaries. Grand Holdings, Inc. President David P. Ahles indicates that MGM's outstanding charters will be honored.

On July 1, majority interest in MGM is sold to Richard Page's Minneapolis-based Front Page Tours; AIA continues to hold a 20% interest. President Page renames his new unit Champion Airlines and it is provided with 1 DC-8-62 and 1 each Boeing 727-91, B-727-223, and B-727-224A, all leased from AIA, plus a 200-person workforce (a 66.7% increase over what it had been under MGM), that includes most of the former MGM employees.

Public charters from a new base at Los Angeles begin in August with emphasis placed upon the transport of professional sports franchises. These include the NBA teams of the Chicago Bulls, Denver Nuggets, Utah Jazz, Indiana Pacers, and Minnesota Timberwolves; the San Jose Sharks and Los Angeles Kings NHL teams; and the Minnesota Twins and Chicago White Sox MLB teams. The B-727-91 briefly carries the logo of the Denver Nuggets.

Enplanements total 41,000 and operating income reaches \$20.3 million. Expenses are high and leave a \$3.89-million operating loss and a net \$3.55-million loss.

There is no change in either employee population or fleet during 1996. Although the transport of professional sport teams remains a prime business focus, team affiliation is not displayed on the carrier's aircraft. Dallas-based Adventure Tours is a major client.

Customer bookings skyrocket 182.9% to 116,000 and revenues of \$8.15 million are generated. With costs at \$8.11 million, the previous year's start-up losses continue: \$3.78 million (operating) and \$2.73 (net).

The workforce is cut 17.5% in 1997 to 165. The company, which is still struggling during the first quarter, receives a major increase in capitalization on March 26 when Northwest Airlines and Carl Pohlad purchase stakes of 40% and 60%, respectively. The Northwest shareholding is acquired via its MLT Vacations subsidiary. Northwest and Pohlad Companies form a holding company, GHI-CA Corporation, to manage the acquisition. Lawrence J. Tighe is named executive vice president/chief operating officer under President Page, with Stephen M. Spellman as chief financial officer.

In addition to sports team flights, the company now undertakes public charter flights to a variety of popular vacation destinations, e.g., Cancún. MLT Vacations, which is owned by Northwest Airlines, becomes a major client. In July, a B-727-212A is delivered under a 7-year lease from The CIT Group.

New pilots and flight attendants are now trained by Northwest at its Minneapolis training center.

The company experiences a mixed traffic and fiscal year. On the plus side, passenger boardings soar 159.5% to 301,000 and operating revenues climb 22.9% to \$38.29 million. On the down side, costs increase

46.5% to \$51.17 million, boosting the operating loss to \$12.88 million. The net loss also significantly worsens, growing from \$2.73 million to \$20.77 million.

Airline employment in 1998 stands at nearly 300. Destinations visited include Acapulco, Cabo San Lucas, Cancún, Cozumel, Dallas (DFW), Des Moines, Detroit, Ft. Myers, Grand Cayman, Las Vegas, Los Angeles, Minneapolis (MSP), Montego Bay, Oklahoma City, Orlando, Puerto Plata, Puerto Vallarta, Steamboat Springs/Crested Butte, Purgatory, Reno/Lake Tahoe, San Francisco, and Seattle.

Founder Page resigns during the second quarter to pursue other interests. Former Wisconsin Brewing Co. president and principal owner, Michael J. Gerend, is named the airline's president/CEO on July 15. Gerend had earlier served as a mid-level executive with Northwest Airlines.

Company pilots on September 24 vote to be represented by ALPA.

Flights continue during the remainder of the year. Cross-town rival Sun Country Airlines monitors Champion's growth, concerned that it might become a low-cost division of Northwest in the manner of Metro-Jet with USAirways.

During the 12 months, customer bookings skyrocket 79.4% to 540,000. Revenues increase 68.3% to \$64.44 million, while costs, up 37.5%, reach \$70.4 million. Losses lessen and include \$5.96 million (operating) and \$7.67 million net.

By the beginning of 1999, airline employment has been boosted 21.2% to 200.

In February, 2 hush-kitted B-727-290As are received on 7-year leases from the CIT Group.

Customer bookings increase 95.4% to 1,055,000 while operating revenues rise 58.1% to \$101,878,000. With expenses up only 28% to \$90.13 million, the previous year's losses are turned into profits: \$11.73 million (operating) and \$10.22 million (net).

CHAMPLAIN AIR TRANSPORT: United States (1932–1934). CAT is formed at Plattsburgh, New York, in the spring of 1932 to offer scheduled passenger and air express flights across Lake Champlain to Burlington, Vermont. A single Stinson SM-8A is employed to begin revenue flights in April.

Unable to maintain viability in a time of depression, the carrier folds in 1934.

CHANGAN AIRLINES COMPANY, LTD.: P.O. Box 2, Laodongnan Road, Xi'an, Shaanxi, 710082, China; Phone 86 (29) 792 483; Fax 86 (29) 792 483; Code 2Z; Year Founded 1992. Changan Airlines is established at Xian on December 24, 1992 to provide passenger and cargo flights to destinations within Shaanxi province. Briefly known as Air Changan, the new entrant is a joint venture between the local municipal government and the Xian and Shaanxi aircraft manufacturers.

She Yining is named president and he begins services at the beginning of 1993 with a pair of Xian Y-7s, Chinese license-built Antonov An-24s.

Operations throughout Shaanxi province continue apace in 1994. One more Y-7 is placed into operation. Enplanements reach 120,900 in 1995.

Airline employment stands at 280 in 1996 and the fleet includes 5 Y-7s. Passenger boardings skyrocket 93% to 130,000. Freight traffic increases 106.9% to 700,000 freight FTKs.

Flights continue in 1997. During the first quarter of 1998, the regulatory body CAAC (The General Administration of Civil Aviation of China) significantly increases pressure for the amalgamation of the country's regional airlines into three large groups centered around major carriers. It is hoped that, by 2001, Changan Airlines will become part of China Northwest Airlines Company, Ltd.

President She, together with Bai Zhijian, president of China Aviation Supplies Corporation, travel to Toronto where, on April 16, 1999, they sign an agreement with Bombardier Aerospace for 3 DHC-8Q-400 turboprops. The transaction, valued at over C\$89 million (\$60 million), represents the first sale of Bombardier's Next Generation DHC-8 in the People's Republic of China.

The year's enplanements total 93,000 and 36,000 FTKs are operated.

During the spring of **2000**, Changan becomes the first airline in China to order the DHC-8-Q400 from Bombardier Aerospace, placing an order for three. Deliveries are slated to begin at the end of October.

On September 1, an arrangement is signed between the provincial government and **China Hainan Airlines Company, Ltd.** under which that carrier will acquire Changan, the identity of which will, for now, be retained.

As a subsidiary, Changan will continue to operate as before with its fleet of 6 Yun Y-7-100s and 2 Y-7-200s, but the new DHC-8-Q400s will be delivered to China Hainan instead.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including Changan, increase fares on November 5.

CHANNEL AIR BRIDGE, LTD. See AIR CHARTER, LTD.

CHANNEL AIR FERRIES, LTD.: United Kingdom (1936–1939). Channel Air Ferries, Ltd., is registered at London on May 8, **1936** as a subsidiary of **Olley Air Services, Ltd.** Employing a Short Scion, the company begins daily summer-only Brighton–Ryde service on May 23. Flights cease in late September.

In the spring of **1937**, the Great Western and Southern railroads purchase shareholding. On July 3, a new London (Croydon)–Deauville weekend de Havilland DH 84 Dragon service is undertaken, with the frequency changed to daily in August and ad hoc in September; flights to Deauville from Brighton are offered on the same basis during August–September. Timed to connect with the Cornish Riviera express of the Great Western Railway, a weekday Penzance–Scilly Dragon return service is initiated on September 15. From the new Land's End airfield near St. Just on the mainland, the DH 84 flies to a golf course on St. Mary's, Scilly.

In order to transport staff and gramophone disks for Radio Luxembourg, twice-weekly London (Croydon)–Luxembourg service is started in June **1938**. On August 8, alternating with **Railway Air Services, Ltd.**, the company undertakes a Bristol–Cardiff–Plymouth route.

Other routes undertaken include Penzance–Scilly–Plymouth, Brighton–Bembridge–Bournemouth, which becomes London (Croydon) to Cardiff, via Brighton, Bembridge, Bournemouth, and Bristol. Also, a summer-only, on-demand London (Heston)–London (Croydon) is initiated. In accordance with the Air Navigation Order of September 16, the new Air Transport Licensing Board (ATLB) issues a provisional permit to the company for operation of a Land's End–Scilly service.

Following the formation of **Great Western and Southern Air Lines, Ltd.** on December 5, the new entrant gradually assumes Channel Air Ferries' services plus several of Railway Air Services, operating them under the Channel Air Ferries name until March 24, **1939**.

CHANNEL AIR LIFT: United States (1966–1970). CAL is set up at Honolulu in **1966** to operate all-cargo services between the major islands of the state with a pair of Curtiss C-46 Commandos. Operations continue apace for the remainder of the decade and the fleet grows to comprise 5 Curtiss freighters. With the cutback in Vietnam war-related shipping opportunities, the carrier is forced, by dwindling business, to close down in August **1970**.

CHANNEL AIR SERVICE, LTD. See AIR CHARTER, LTD.

CHANNEL AIR SERVICES, LTD. See FAIRWAYS AVIATION (JERSEY), LTD.

CHANNEL AIRWAYS, LTD.: United Kingdom (1962–1972). Although the marketing title has been employed since **1952**, Channel Airways, Ltd. is officially born from **East Anglian Flying Services, Ltd.** in an October 25, **1962** renaming ceremony. On December 31, the financially troubled **Tradair, Ltd.** is purchased along with its 4 Vickers Vikings and 1 Viscount 707.

On April 11, **1963** the ex-**Riddle Airlines** DC-4, purchased by EAFS the year before, enters services with the Viscount on passenger flights across the Channel from Southend to Ostend and seasonally, to Paris.

During the 12 months, 5 Vikings and 3 DC-3s are removed while, in December, 3 more of **British European Airways Corporation (BEA)**'s Viscount 701s are purchased.

Enplanements for the year total 258,739 (30,649 charter).

Three Vikings are withdrawn in **1964** and 4 Viscount 701s, 1 Viscount 702, and 1 Viscount 707 are added. A new route is opened from Southend to Rotterdam. Former Southend Airport Manager Bernard Collins becomes deputy managing director in July.

Passenger boardings jump 27% to 369,890.

In addition to the regularly scheduled routes, Channel's Viscount fleet mounts a large number of inclusive-tour flights during **1965** from Manchester and Southend. One Bristol 170 Mk. 21 remains in operation on the Ostend run and in May, an order is placed for 4 Hawker Siddeley HS 748s.

The last Viking is withdrawn, along with a DC-3 and 2 Viscount 701s. The first 2 HS 748s are delivered in October and December, but are leased out to North American carriers. The company considers jet aircraft and obtains detailed studies on the BAC 1-11, Douglas DC-9, and Boeing 737.

Enplanements jump 18.4% to 437,950.

Two more HS 748s are delivered in February and March **1966**, respectively, with the first beginning service on the Southend–Jersey scheduled route on February 24. The Viscount 812s operated by **Continental Airlines** in the U.S. are purchased for just under £3 million and the first three are delivered during the second quarter. A subsidiary travel agency, Mediterranean Holidays, Ltd., is now established to take advantage of the Viscounts' ability to fly inclusive tours to southern Europe and North Africa.

During the summer, HS 748s replace DC-3s on the Ipswich–Jersey via Southend and Portsmouth, scheduled service while in September they open a new frequency from Southend to East Midlands Airport. Also on September 5, orders are placed for 4 BAC 1-11-408EFs, with options taken on 2 more. Other fleet changes during the year include the retirement or sale of 2 DC-3s and 5 Viscount 701s.

The majority of the ex-**Continental Airlines** Viscount 812 fleet is delivered in early **1967**; 8 machines are placed in service between February and April.

While on a test flight from Southend on May 3, the wing of one of the new Vickers Viscount 812s with three crew hits the ground during a turn. The aircraft crashes into a fence and catches fire; although no one aboard the plane is hurt, two people on the ground are killed.

The first BAC 1-11-408EF arrives at Southend on June 14 and is placed in service on June 26–27 on a night charter flight to Palma. The mission allows Channel the honor of being the first British independent to operate the Dash-400 version of the BAC.

The HS 748s succeed DC-3s and Viscount 701s on such routes as those from Portsmouth to Paris and to the Channel Islands. On the afternoon of August 15, 2 HS 748s are damaged in landing accidents at Portsmouth, but are repaired there.

On October 5, orders are placed for 5 Hawker Siddeley Trident 1Es. Four days later, a BAC 1-11-408EF undertakes a proving flight over a new scheduled multistop route from Portsmouth to Aberdeen. An HS 748 is sold in December.

A Trident 1E and a BAC 1-11-408EF are delivered in May **1968** followed by another of each type in June, the same month another HS 748 is sold.

A Vickers Viking 812 with 4 crew and 79 passengers is destroyed by a bad landing at Southend Airport on May 4; there are no fatalities.

The first Trident 1E revenue service is flown on June 1. Plans to lease a BAC 1-11-408EF to Compania Dominicana de Aviacion, C. por A. fall through in June just after the plane is painted in the colors of the Caribbean carrier.

Environmental and landing difficulties force removal of the BAC 1-11s to London (STN). At this time, a BAC 1-11-408EF is chartered to **Bavaria Fluggesellschaft, mbH.** for six months.

Two more HS 748s are sold during the year and the first of 5 ordered DH 114s is delivered in November. Over the holidays, another BAC 1-11-408EF is leased to **Austral/ALA, S.A.** of Argentina.

The multistop Portsmouth–Aberdeen service proven in 1967 is started by a Viscount 812 on January 20, 1969; it is marketed as The Scottish Flyer. Simultaneously, connecting feeder flights begin Norwich–East Midlands Airport. This “bus route” and its feed prove unprofitable, losing £160,000 before suspension on November 28.

Having been refurbished after its South American lease, a BAC 1-11-408EF is sold to **Bavaria Fluggesellschaft, mbH.** in February. As the summer schedule begins, a BAC 1-11-408EF is leased to **Autair International Airways, Ltd.** on weekends. Meanwhile, in response to the April award of a £5-million inclusive-tour contract from Lyons Tours, the carrier, on August 27 purchases 6 ex-**British European Airways Corporation (BEA)** Comet 4Bs. Five DH 114 Heron 1Bs are added during the year and 5 Viscount 812s are sold in October.

Five Comet 4Bs are added in the first half of 1970, one each month except March. The first revenue service flown by a former state-owned jetliner is a Lyons Tours flight undertaken on May 17, East Midlands Airport to Palma. Once per week London (STN) to Rimini night flights commence on May 25.

In September, three West German tour operators contract with the airline to fly charters from West Berlin to the Mediterranean. Other fleet changes during the year include the deletion of 1 DH 104 Dove 1B, 2 DC-3s, the Viscount 702 and both Viscount 707s, the last HS 748, and 2 Viscount 812s.

The year 1971 marks the company's last full year of operations. The £1.5-million West German contract is started in March. Although a full variety of scheduled and nonscheduled services are provided, a lack of spare parts for company jetliners leads to delays, leasing of aircraft from other fleets, and a severe financial drain. A **Mexicana Airlines, S.A. de C.V.** Comet 4 is purchased for spare parts in June.

At the end of the summer, cash flow difficulties force Channel to retrench. In October, a Viscount 812 is sold and the carrier's 2 Trident 1Es are purchased by **British European Airways Corporation (BEA)** in December. Bookings for the year are 542,000.

Although scheduled routes are maintained, the fiscal picture becomes so bleak that the company enters receivership on February 1, 1972. Jetliner operations cease on February 15 and the last revenue service is a DH 114 flight Ostend–Southend on February 29.

CHANNEL EXPRESS (AIR SERVICES), LTD.: Building 470, Bournemouth International Airport, Christchurch, Dorsetshire, England, DH23 6SE, United Kingdom; Phone 44 (1202) 593 344; Fax 44 (1202) 573 512; <http://www.channel-express.co.uk>; Code LS; Year Founded 1978. Express Air Services, Ltd. is formed at Bournemouth–Hurn Airport in 1978 to offer passenger and cargo charter flights, contract cargo operations, and aircraft leasing. The initial fleet comprises 2 Handley Page HPR 7 Dart Heralds, which initiate daily roundtrips to the Channel Islands. The following year, the company is merged with Jersey-based **Intra Airways, Ltd.** to form **Jersey European Airways, Ltd.**

In 1984, Channel Express (Air Services), Ltd. is set up at Bournemouth Airport as successor to Express Air Services, Ltd. and the fleet is upgraded by the addition of a de Havilland Canada DHC-6 Twin Otter and a Partenavia P-68.

Services from Bournemouth to the Channel Islands continues for the remainder of the decade. In addition, the carrier undertakes night all-cargo flights on behalf of various express companies, including **Federal Express**, and the British Royal Mail.

By 1989, the fleet has grown to include 8 Dart Heralds; a Lockheed L-188CF arrives under lease from **Zantop International Airlines** in December.

A dedicated Fokker F.27-600 added in 1990 to handle the FedEx contract. During the first quarter, 2 L-188CFs are acquired from **Evergreen International Airlines**.

Through the first 8 months of the year, cargo tonnage rises to 4.9 million.

Airline employment stands at 300 in 1991 and the fleet now includes the FedEx F.27-600, 9 Heralds, and 4 Lockheed L-188AF and CFs, including the 1 leased from **Zantop International Airlines**.

As of October, freight is up 20.3% to 7.78 million FTKs.

One L-188AF is replaced in April 1992 by 2 L-188CFs acquired from **Evergreen International Airlines**. Enplanements for the first 9 months total 2,622.

In 1993, President/CEO Philip Meeson, who remains the company's majority shareholder, and Managing Director Ian Fox employ 150 workers and possess a fleet of 9 Heralds and 4 Electra freighters.

Passenger boardings through September are off 10.4% to 2,375.

Airline employment is increased a whopping 87.5% in 1994 to 300 and the fleet now includes 1 Fokker F.27-600, 1 F.27-500 leased from **Jersey European Airways, Ltd.**, 10 Heralds (2 are out of service), and 5 Electras.

Customer bookings decline 3.6% to 2,455 while cargo falls 6.9% to 403,000 FTKs.

There is no change in the workforce in 1995 as traffic falls again. The company remains a subsidiary of the Aviation Division of the Dart Group, plc. An Electra begins to participate in the Royal Mail Skynet system.

Enplanements are off by 8.7% to 2,242 through September.

Airline employment is reduced 16.7% in 1996 to 250. The fleet now includes 4 F.27-500s, 2 of which are chartered from **Jersey European Airways, Ltd.**, 2 chartered F.27-600s, 10 Heralds (2 of which are still in storage), 2 Lockheed L-188CFs, and 3 L-188AFs, including 2 leased from **Zantop International Airlines**.

Despite the size of its capacity, Channel operates only 11.24 million FTKs and passenger traffic is not reported.

An Airbus Industrie A300B4-203F is placed into service during the spring of 1997, followed by a second later in the year.

Just after landing at Jersey Airport on May 6, the nose landing gear of an F.27-500CRF freighter collapses; there are no injuries reported.

A contract is signed on July 1 with **TNT Express Worldwide**. Cargo more than doubles, growing to 23.5 million freight FTKs.

Following delivery of a third A300B4-203F during the summer of 1998, the carrier inaugurates freight flights on behalf of TNT in September, from the U.K. to Liege, Belgium. In the fall, an Electra is chartered to **Lyden Air Cargo**.

Freight traffic increases 4.5% to 45.75 million FTKs.

By the beginning of 1999, airline employment has been increased by 28% to 320.

A fourth A300B4-203F is acquired and the schedule for ad hoc charters throughout Europe, North Africa, and the Mideast is increased.

In mid-May 2000, CE sells its original A300B4-203F to **TNT Express Worldwide**. The fleet remaining comprises 3 A300B4-203Fs, 8 F.27Fs, and 4 Lockheed L-188AFs.

Displeased by progress at the renewed U.S.-U.K. bilateral talks in London in mid-August, **Federal Express** Chairman Frederick Smith allegedly threatens to withdraw his line's arrangements with all British airlines. Channel Express' expectations of a renewal of the FedEx contract are dashed when a new agreement is not offered.

CHANNEL FLYING SERVICE: United States (1954–1989). Established by Ken and Craig J. Loken at Juneau, Alaska, in 1954, CFS undertakes scheduled and nonscheduled air services to destinations in the southeastern portion of the territory, plus the Canadian provinces of British Columbia and the Yukon. Most of the operations are conducted with floatplane types, such as the de Havilland DHC-2 Beaver, amphibians like the Grumman G-21 Goose, and small convertible landplanes such as the Cessna 206.

In addition to bush charters, the company introduces scheduled air transport in 1971 to Angoon, Corner Bay, Eight Fathom Bight, Elfin Cove, Fresh Water Bay, Funter Bay, Hobart Bay, Juneau, Kake, Pelican,

and Tanakee. Many of these flights are performed under contract with **Alaska Airlines**.

As the result of a fatal **Ryan Air Service** crash in 1987, the FAA, in early 1989 launches a regulatory crackdown on Alaska's regional carriers. At the beginning of the year, Channel employs 13 people, operates 5 aircraft, and offers scheduled flights to 11 destinations in southeast Alaska.

While en route from Juneau to Pelican on April 19, a DHC-2 with two aboard crashes into a 1,950-ft. high vertical rock wall while crossing over Chichagof Island some 12 mi. E of its destination; there are no survivors.

CFS continues flying until May 21, when the FAA, alleging the airline guilty of five counts of safety violations, issues an emergency license revocation.

The Lokens spend the remainder of the year working with government officials, who eventually drop many of their complaints. The FAA allows the owners of the closed airline to recertify a reduced number of aircraft and to resume operations as the charter and air taxi operation **Loken Aviation**.

CHANNEL ISLAND AIRWAYS, LTD.: United Kingdom (1934–1947). Once Whitehall Securities takes an interest in **Jersey Airways, Ltd.**, this airline, capitalized at £100,000, is formed as a nonflying holding company. **Guernsey Airways, Ltd.** is formed on November 24, 1934 by Jersey Airways owner W. L. Thurgood with support from Whitehall Securities. On December 1, Channel Islands Airways, Ltd. is registered at Jersey to coordinate the work of the two carriers. On March 2, 1943, two railroads, the Great Western Railway and the Southern Railway, purchase control of the holding company, naming K. W. C. Grand as chairman.

On September 1, 1945 the railroad owners merge **Jersey Airways, Ltd.** and **Guernsey Airways, Ltd.** into one carrier, giving it the name of the holding company and equipping it with a fleet of 6 DH 89A Dragon Rapides. One is a former RAF Dominie, modified by de Havilland to civil Dragon Rapide standard.

Southampton–Jersey and Guernsey six-times-per-day passenger and mail flights are reopened on September 10 and thrice-weekly DH 89A Jersey–Alderney service is resumed, beginning on December 20.

In the spring of 1946, Douglas DC-3s, leased from **British Overseas Airways Corporation** with BOAC crews, are placed in service to cope with an expected large summer holiday traffic. Wanting to test its new Bristol 170 Wayfarer in actual operations, the manufacturer provides example G-AGVB under lease; it begins proving flights to the Channel Islands from London (Croydon) on May 9.

These proving flights are concluded on June 21, revenue service begins on July 1, and continue until November 4, during which time the aircraft makes 399 flights, carrying 10,961 passengers, 37.5 tons of cargo, and 2.3 tons of mail. **British European Airways Corporation (BEA)** is established on August 1. Total passenger boardings for the year are 74,626.

Despite a month-long legal battle waged by the carrier and the states of Jersey and Guernsey, on April 1, 1947 the new state carrier takes over the independent's services, personnel, and aircraft, thereby bringing its history to an end.

CHANTILLY AVIATION. See AMERICAN FLIGHT SERVICES

CHAPARRAL, INC.: United States (1979–1996). Wallace Thrash establishes an FBO and charter operation at Lubbock, Texas, in 1979. Services are inaugurated and by 1994 the company has 16 full- and 10 part-time pilots on the payroll. From its main Lubbock base, President Thrash's concern flies passenger charters with a fleet that includes 1 each Gates Learjet 24F, Beech Super King Air 200, King Air 90, and Turbo Commander 690C. All-cargo services are available from a Falcon 20 and a Lear 24D stationed at Dallas (DFW), as well as a Lear 24D based at Pontiac, Michigan.

Operations cease in 1996.

CHAPARRAL AIRLINES: United States (1975–1990). This small regional is organized at Abilene, Texas, in August 1975 as the scheduled airline division of Ollie Higgins and Kent Waddell's FBO Abilene Aero, Inc., later **Abilene Aero-Lubbock Aero**. John Stevens is named president and is assigned to oversee 11 employees.

The new commuter inaugurates scheduled Piper PA-31-310 Navajo (with two aircraft) service to Austin on September 15, 1976. Enplanements in 1977, the first full year of service, total 18,271.

The fleet in 1978 includes 3 Piper PA-31-350 Navajo Chieftains and 1 Beech 99. Following an increase in customer bookings to 27,482 passengers—a 50.4% jump—the fleet is increased by the addition of 5 Beech 99s. Incidentally, freight traffic rises an incredible 320.6% to 166,140 pounds.

The workforce is increased by 66.7% in 1979. Destinations visited now include Austin, Houston, Midland, Lubbock, San Antonio, Dallas (DFW) and Alexandria, Louisiana.

The carrier's 6 Beech 99s assist boardings to skyrocket by 85.5% to 50,716. Cargo is up by 60% to 266,000 pounds.

In 1980, frequencies are significantly increased to Dallas (DFW) and Houston and the carrier joins the **American Airlines** computerized reservations system and provides feed for the major.

Passenger boardings increase 43.7% to 73,013 and freight rises 9.7% to 291,508 pounds.

Airline employment reaches 142 in 1981. The company replaces all but 1 of its Navajos with 3 CASA C-212 Aviocars. The schedule now offers 50 flights each day. Orders are placed for 2 Grumman Gulfstream G1-Cs.

Customer bookings rise by 48% to 107,908 and cargo increases 62.5% to 474,000 pounds.

Traffic rises 8.4% to 119,248 passengers plus 360,000 pounds of freight (down 24%) carried in 1982. The G1-Cs are received in 1983 and help passenger boardings leap 6.5% to 127,019. Cargo is, however, down 11.4% to 239,609 pounds.

In late 1984, as its flights continue into Texas and Louisiana markets, the company is completely reorganized and becomes a part of the **American Airlines** "American Eagle" commuter network on December 1.

As a result of feeding passengers to the major's Dallas (DFW) hub, passenger traffic and profits begin a dramatic ascent, traffic rising 30.2% for the remainder of the year. Since January, Chaparral has booked 165,370 passengers and flown 212,000 pounds of cargo, the latter figure representing an 11.4% decline.

Traffic continues to boom for the "American Eagle" affiliate in 1985. Passenger boardings jump 10.3% to 182,406 and cargo increases 56% to 332,000 pounds.

The 145-employee small regional enjoys a good 1986 as customer bookings rise 8.4% to 197,707. Freight, however, falls 10% to 300,000 pounds. Revenues total \$14.1 million.

The carrier is purchased for \$5.7 million in cash by Dallas (DFW)-based **Metro Airlines** in August 1987. The fleet is repainted in "American Eagle" livery.

Prior to its takeover, the small regional shows passenger boardings off during the first 6 months by 2.8% to 123,849. Freight is off by 20.4% to 164,000 pounds.

In 1988, President Steven's fleet comprises 3 Beech 99s, 5 Grumman 1-Cs, and 2 Shorts 330s.

While on approach to Dallas (DFW) on March 25, a BAe Jetstream 31 with two crew and on a positioning flight suffers the failure of its No. 1 engine and must land in uneven terrain near Decatur, Texas; although the aircraft is damaged beyond repair, no injuries are reported.

As one of two Metro divisions providing "American Eagle" services at Dallas (DFW), Chaparral's traffic figures for the year are released as part of its parent's.

From Abilene in 1989, flights are made to Austin, San Antonio, and Laredo and from Dallas (DFW) service is undertaken to Abilene and to Shreveport and Alexandria, Louisiana. Statistics show enplanements of 580,034.

In May 1990, Chaparral and its 19 aircraft are merged into Metro's main Texas division, **Metroflight**.

Prior to its disappearance, the operator flies a total of 312,185 passengers, a 46.2% decline from the same period a year earlier.

CHAPLIN AIR LINE: United States (1919). One of the nation's first, if unsustained, airlines is formed at San Pedro by actor Charlie Chaplin's brother Syd in late June 1919. Employing a single Curtiss MF flying boat, the three-employee carrier inaugurates thrice-daily return flights on July 4 to the holiday resort of Avalon on Catalina Island, 34 miles offshore. Service is maintained until mid-September.

The regular schedule is then abandoned in favor of a single pilot's ad hoc flights, which are offered until the end of December when the company is purchased by Foster Curry's **Pacific Marine Airways**.

CHARDZHOU AIRLINE: Chardzhou Airport, Chardzhou, Turkmenistan; Phone 7 (37822) 21032; Year Founded 1995. Chardzhou Airline is set up at Chardzhou in Turkmenistan in 1995 to offer domestic passenger services as a feeder for **Turkmenistan Airlines**. Kadyr Khatamov is general director and he begins flights with 10 Yakovlev Yak-40s and 30 Antonov An-2s, plus a rotary-wing fleet of 14 Mil Mi-8/17s and 11 Mi-2s.

CHARRAK (PTY.), LTD.: Australia (1996–1997). The all-cargo carrier Charrak is set up at Cairns, North Queensland, in early 1996. Outfitted with a single Lockheed L-188CF Electra first flown by **Northwest Airlines**, the company begins hauling shipments of tuna to Japan on April 23. Flights continue through January 1997.

CHARTAIR: United States (1988–1991). Chris and Jamie Marsden set up Chartair at Friday Harbor, Washington, during the summer of 1988 as successor to **San Juan Airlines**. Employing Cessna 172s, Cessna 402s, and a Piper PA-34 Seneca, scheduled passenger and commuter flights are inaugurated on August 1, linking the company's base with Seattle, Bellingham, Anacortes, and other of the San Juan islands.

Operations continue until recession puts the company out of business in 1991.

CHARTAIR, LTD.: United Kingdom (1946–1961). Equipped with a single Percival Proctor 1, Chartair, Ltd. is formed at Aylesbury (Thame) airfield on August 8, 1946. A one-third interest is taken, together with **Instone Airlines, Ltd.** and the British Aviation Services (Britavia) company **Silver City Airways, Ltd.**, in the new **Air Malta, Ltd.** In December, the company purchases 4 Airspeed AS.65 Consuls, which are sent to the Mediterranean to operate **Air Malta, Ltd.**'s scheduled services.

Four more Consuls are acquired during the first half of 1947 and these, too, are sent to the Mideast, specifically to fly services in Israel on behalf of the UN Commission. Also, in late winter, Thame airfield is purchased and the company agrees to operate it, registering its FBO Airtech on February 11; Airtech will become a major rework facility.

In May, Chartair merges with **British American Air Services, Ltd.** Chartair General Manager Guy Lawrence is named operations chief of both carriers, which will continue to operate under their previous names. A delineation of emphasis is agreed upon; Chartair will pursue passenger charter and BAAS will seek cargo work for its ex-military Handley Page Halifax 8s.

Operating from London (Croydon), Chartair, Ltd. Consuls undertake a variety of long-distance charter operations during 1947–1948. At the end of the latter year, the company's interest in **Air Malta, Ltd.** is sold.

The Israel operation ends in early 1949 and all but 3 Consuls are sold.

Two of the 3 surviving AS.65s are sold to **Air Jordan, Ltd.** in December 1950 and all charter flights cease in early 1951. The Chartair name, however, remains viable until November 1961 when Airtech absorbs the title and the few remaining assets of its associate.

CHARTER AIRLINES: United States (1977–1979). CA is established as **Charterair** by the Charter Air Center at Gainesville, Florida, in February 1977 to offer scheduled third-level passenger and cargo services to Tallahassee, Tampa, Ft. Lauderdale, and Marsh Harbour in the Bahamas. Daily roundtrip revenue operations commence during March with 2 Cessna 402s and 2 C-404s. Enplanements during the following 10 months reach 2,958.

The corporate identity is changed in 1978 and passenger boardings increase 438.7% to 15,934. Skyrocketing fuel and expansion costs force the carrier to cease operations in 1979.

CHARTER CRUISE AIR (PTY.), LTD.: Australia (1983–1994). Charter Cruise is formed at Mascot in 1983 to provide inclusive-tour services and sight-seeing flights. At decade's end, Managing Director Nancy Knudson's commuter employs 20 workers and has a fleet of 1 Fokker F.27-100 and 1 F.27-500. In early 1990, the company receives government authority to inaugurate scheduled services.

Operations continue apace in 1991–1994; during the latter year the company name is changed to **Air Cruising Australia (Pty.), Ltd.**

CHARTER FLIGHT: 5400 Airport Drive, Charlotte, North Carolina 28208, United States; Phone (704) 359-9124; Fax (704) 359-9128; Year Founded 1993. CF is established at Charlotte in 1993 to provide executive and small group passenger charters throughout the U.S., Canada, and Caribbean. By 2000, the company employs 6 pilots and operates 2 Cessna 550 Citation IIs and 1 each C-560 Citation V, Beech Super King Air 200, King Air 90, and Cessna 340.

CHARTER SERVICES: West Ramp, Mobile Regional Airport, Mobile, Alabama 36608, United States; Phone (334) 633-6090; Fax (334) 633-6850; Year Founded 1991. Bobby Marks establishes Charter Services at Mobile in 1991 to offer executive and small group passenger charters throughout the U.S., Canada, Mexico, and the Caribbean.

By 2000, Marks' concern operates 2 each Cessna 501 Citation Is and C-550 Citation IIs, plus 1 each Beech King Air 90 and C-414 Chancellor.

CHATHAM AVIATION: United States (1964–1970). Chatham is established by Jack Cullen as **Lemco Flying Service** at Teterboro Airport in New Jersey in the fall of 1964. Scheduled Cessna 207 flights are inaugurated to New York (LGA) in November.

In early 1965, the company is reformed, renamed, and in September, becomes one of five small third-level operators joined together to feed **American Airlines** at its New York City gates under the major's Metro Air Service scheme.

Operations halt in the recession year of 1970.

CHAUFFAIR, LTD.: General Aviation Terminal, London Heathrow Airport, Hounslow, Middlesex, England, TW6 3AE, United Kingdom; Phone 44 1252 377880; Fax 44 1252 377872; Year Founded 1980. Chauffair is established at London (LHR) in 1980 to provide executive and small group passenger charters first throughout the U.K. and then on into Northwest Europe.

By 2000, the carrier, which occasionally also stations aircraft at Farnborough, is operating 2 each British Aerospace BAe (HS) 125 Hawkers and Cessna 550 Citation IIs and 1 each C-560 Citation V and Learjet 35A.

CHAUTAUQUA AIRLINES: P.O. Box 160, 2500 South High School Road, Indianapolis, Indiana 46241, United States; Phone (317) 484-6000; Fax (317) 484-6040; <http://www.flychautauqua.com>; Code CHQ; Year Founded 1972. Created by Edward Joel and Gloria Hall at Jamestown, New York's Chautauqua County Airport in early 1972, this new entrant is invited, in the spring of 1974, to become a member of the "Allegheny Commuter" network. Within months, preparations are com-

pleted and initial Beech 99 service is inaugurated over a route to Pittsburgh on August 1.

Enplanements in **1975** total 50,019. They increase by 10% in **1976** to 55,576. A total of 746,837 pounds of freight are carried during the year. By **1977**, the Beech 99 operator has increased its passenger enplanements to 66,906.

Local commuter service is dramatically extended in **1978** following passage of the Airline Deregulation Act. In this landmark year, the carrier boards 75,224 passengers (a 12% increase) and opens additional frequencies to Pittsburgh, which becomes the carrier's hub, and to Buffalo via Jamestown from Bradford, Pennsylvania.

Also under "Allegheny Commuter" auspices, Chautauqua begins a Florida division on February 1, **1979**, launching service from Orlando to Vero Beach, Lakeland, and Ocala. Two new Shorts 330s come on line to help the 4 Beechcraft handle an expected growth in enplanements. Still, employment is cut by 42.2% during the year to 52.

The Florida service does result in a large traffic surge, as boardings skyrocket 93% to 145,526.

That upswing levels off in **1980**, however, as 148,190 passengers are boarded, an increase of only 1.9%. Upward growth occurs again in **1981** as Chautauqua officials see their fleet of 2 Shorts 330s and 4 Beech 99s fly 165,974 travelers, a 12% increase. New flights are inaugurated from Pittsburgh to Akron and Canton, Ohio, on June 2, replacing service previously provided by **USAir**.

The fleet in **1982** includes 3 Shorts 330s and 4 Beech 99s. Enplanements grow an additional 9.4% to 181,643.

Passenger boardings are sluggish in **1983**, climbing only 2% to 185,239.

The "Allegheny Commuter" affiliate moves into the ranks of the large regionals in **1984**. Frequencies from Pittsburgh to Akron and Canton jump from 8 daily roundtrips in February to 10. On March 15, service is inaugurated five times a day to Hagerstown, Maryland, and Martinsburg, West Virginia. Five-times-per-day roundtrips from Pittsburgh to Charlottesville, Virginia, commence on May 1.

Passenger bookings jump 46.3% to 271,017.

As **1985** begins, the fleet comprises 3 Beech 99s, 2 Shorts 330s, and 3 Fairchild-Swearingen Metroliners and serves 12 cities in 7 states—Pennsylvania, Virginia, New York, Maryland, Ohio, West Virginia, and Florida. Customer boardings swell 32.3% to 358,607.

The 100-employee large regional is no more successful in **1986** than it was the previous year. Indeed, passenger bookings actually dip 0.1% to 358,087.

Airline employment is up by 100% in **1987** to 200 and the fleet includes 7 Fairchild Metro IIIs, 3 Beech 99s, and 2 Shorts 330s. During the year, the founders sell the commuter to Guarantee Security Life Insurance Corp.

Customer boardings recover and rise 7.4% to 384,726.

In January **1988**, the 200-employee "Allegheny Commuter" carrier orders 2 SAAB 340As, which are delivered in August and September. Enplanements ascend 8.3% to 416,534.

The fleet is altered in **1989** to include 7 Metro IIIs, 3 Beech 99s, and 2 SAAB 340As. On July 1, **USAir** revamps its "Allegheny Commuter" network into "USAir Express" and Chautauqua's aircraft and facilities are revamped and repainted accordingly.

Passenger boardings jump another 5.8% to 440,840.

The payroll is increased by 9% in **1990** to 206 and the fleet gains 3 Metro IIIs. One of these is destroyed on the ground at Washington County Airport, Pennsylvania, on January 4.

A new route is stretched from Jamestown to Buffalo and Syracuse and authority is sought for a Pittsburgh to London, Ontario, route.

Customer bookings ascend 8.7% to 479,078 and revenues rise by 18.9% to \$29 million.

The workforce is cut by 2.9% in **1991** to 200 and the fleet now includes 8 owned and 2 leased Metro IIIs, plus 5 SAAB 340As and 3 Beech 99s.

The carrier's parent, Guaranteed Security Life Insurance Company, goes into receivership in August, leaving the State of Florida to put the airline up for sale and handle its business. President Thomas Hall attempts to recruit the financing necessary for purchase.

Passenger boardings slip 2.1% to 469,200 and freight drops 5.1% to 196,853 pounds.

Company employment grows 2% in **1992** to 256; however, during the summer, President Hall resigns to seek other opportunities. I. Edward London is appointed his successor. At the same time, a long-term contract is signed with FlightSafety International for the initiation of a single-source pilot training and upgrade program.

In September, following the announcement of a probable merger between **USAir** and **British Airways, Ltd. (2)**, the State of Florida takes the commuter off the market and continues to provide oversight as it operates to 14 northeastern cities with a fleet of 10 Metroliners and 5 SAAB 340As. A sixth 340A arrives in November and overall customer bookings for the year swell 16.6% to 546,930.

In **1993**, President London oversees 270 employees and the fleet includes 10 Metros and 6 SAAB 340s.

The Guaranty Reassurance Corporation (GRC), based at Jacksonville, Florida, is set up to dispose of the airline's assets. John Erickson becomes president of GRC; however, Ed London remains president of the airline.

A major route swap is engineered late in the year with fellow "USAir Express" partner **Jetstream International Airlines**. A new hub is established at Indianapolis and the company inaugurates twice-daily flights from the Indiana capital to Fort Wayne. Customer bookings slide 3.5% to 528,274 and revenues are \$38 million.

Airline employment is increased by 18.2% in **1994** to 292. The operator now begins to realign its route network, with emphasis on connections to Detroit City Airport via Indianapolis in accordance with the previous year's network redistribution.

Smaller eastern routes are turned over to **Mesa Airlines**, which has acquired **Crown Airways**.

In the wake of the "American Eagle" Lake County crash, Chautauqua passenger loads plunge 40%.

Passenger boardings decline 24.6% to 398,573 and freight is off 12.7% to 244,826 pounds. Revenues plunge 18.3% to \$30.99 million. The fiscal downturn, attributed to the fallout from the competitor's disaster, is the first major loss in 20 years.

The workforce is increased a huge 54.6% in **1995** to 425 and the fleet grows through the addition of 6 SAAB 340Bs and 8 British Aerospace (BAe) Jetstream 31s.

Despite the increase in capacity and new route network, traffic continues to fall. Enplanements fall 3.9% to 414,067, but cargo swells to 372,000 pounds. Revenues rebound by 34.9% to \$41.82 million.

The employee population grows 20.5% in **1996** to 512. Nine additional Jetstream 31s join the fleet and 6 of the 10 Metro IIIs are retired.

On January 6, **USAir** replaces its jet service into Fort Wayne from Pittsburgh with 5 new Chautauqua SAAF 340 frequencies. SAAB 340s replace Jetstream 31s on the twice-daily Fort Wayne to Indianapolis service.

As of April 15, the carrier has 41 daily departures to more than 20 destinations.

The British-made turboprops are largely withdrawn by year's end. The company's owner, Guaranty Reassurance Corporation, enters into takeover discussions late in the year with an investor group led by Timothy Coon.

Customer bookings increase 65.3% to 684,432 and operating income soars 63.9% to \$68.58 million.

The workforce is increased by 10.4% during **1997** to 565. GRC, in January, authorizes its agent, Alex Brown & Son, to complete arrangements with Coon's investment group for a purchase agreement. To facilitate the process, President London resigns and is succeeded by Mr. Coon. James Muroski is named vice president operations and is, in effect, chief operating officer.

On February 27, **USAir** is renamed **USAirways** and "USAir Express" becomes "USAirways Express." During the remainder of the year, this regional will begin to repaint its aircraft in a modified version of the major's new grey and dark blue livery. The fleet now includes 4 Metro IIIs, 8 Jetstream 31s, and 12 SAAB 340s.

Challenging the penetration of Ohio by **Air Ontario, Inc.**, Chautauqua, on June 15, inaugurates thrice-daily roundtrips from Columbus to Toronto. Toronto is the only international nonstop market served from the Buckeye capital city.

The Metros are withdrawn at the end of the year when the company is purchased by Greenwich, Connecticut-based Wexford Management, a diversified investment company well known for its airline activities.

Passenger boardings rise 3% to 704,809.

Subject to government approval, Wexford Management acquires 100% shareholding in January 1998. President/CEO Coon is succeeded by Edward Wegel. Several of the 20 Embraer ERJ-145 ExpressJets that Wexford has on order are expected to be placed with Chautauqua. This does not, at least immediately, turn out to be the case. Instead, the fleet is increased to include not only the 12 SAAB 340s, but 17 Jetstream 31s as well.

"USAirways Express" Flight 4205, a Jetstream 31 with 2 crew and 11 passengers strikes 4 deer while taking off from Johnston, Pennsylvania, on February 19; the aircraft runs off the runway, but no serious injuries are reported.

On September 9, thrice-daily "USAirways Express" Jetstream 31 nonstops are inaugurated between Newark and Harrisburg, with continuing service to Hagerstown. Beginning on September 13, the carrier introduces twice-daily flights to Harrisburg, with one continuing to Hagerstown.

By fall, the carrier is operating 211 daily flights to 25 communities.

On December 2, the company announces that it will launch thrice-daily SAAB 340 roundtrips on January 6 between Washington, D.C. (IAD) and Dayton.

Customer bookings during the 12 months advance by 7.7% to 759,252.

By the beginning of January 1999, airline employment has been boosted 6.2% to 600.

The new "USAirways Express" services duly commence on January 6. They are followed on March 3 by the introduction of thrice-daily nonstop SAAB 340 roundtrips between Washington, D.C. (IAD) and Buffalo. Like the Dayton service, this new one includes a single nonstop Sunday roundtrip. Twice-daily nonstop "USAirways Express" SAAB 340 roundtrips are also initiated from Washington, D.C. (IAD) to Indianapolis.

Twice-daily "USAirways Express" SAAB 340 roundtrips commence on April 7 between Washington, D.C. (IAD) and Grand Rapids, Michigan.

On May 3, the company enters into an agreement with **USAirways** to operate 10 Embraer ERJ-145LR Express Jets on "USAirways Express" services. The first 2 aircraft will enter service in July, with the remaining 8 coming on line every other month between September and the end of 2000.

Two daily SAAB 340 and two daily J-31 roundtrips are launched on May 24 between Pittsburgh and Hamilton, Ontario.

Mesaba Airlines President/CEO Bryan K. Bedford assumes the same post with Chautauqua on June 30.

Daily "USAirways Express" ERJ-145LR roundtrips commence on July 9 between New York (LGA) and Columbia, South Carolina. ExpressJet roundtrips begin daily between New York (LGA) and Charleston, South Carolina, on August 6, followed by the same "USAirways Express" service from La Guardia to Savannah, Georgia, starting on September 9.

The first of 10 newly ordered SAAB 340As is delivered in December.

Passenger boardings climb 4.6% to 793,000.

Another SAAB arrives in January 2000; it will be followed by two aircraft each month through May. The new aircraft expand the company's route network and replace its Jetstream 31s.

New SAAB 340A "TWExpress" service is initiated on April 2 from St. Louis to Knoxville and Lincoln, Nebraska; the carrier also replaces **Trans States Airlines** on flights from the Missouri hub to Fort Wayne, Lexington, and Sioux City.

ERJ-145 roundtrips between Indianapolis and Boston begin in mid-June.

At the end of August, company ERJs replace TWA's DC-9s on the route from St. Louis to Cincinnati; the new "TWExpress" return service is flown five-times-a-day.

"USAirways Express" service from Pittsburgh to London, Ontario, ends on December 1.

CHC (CILENROC HELICOPTER SERVICE, S.A.). See **HELI EUROPE, S.A.**

CHC HELICOPTERS AFRICA (PTY.), LTD.: P.O. Box 2546, Cape Town, 8000, South Africa; Phone 27 (21) 934-0560; Fax 27 (21) 934-0568; <http://www.chc.ca/court>; Year Founded 2000. Effective October 19, 2000, all of the subsidiaries of **Canadian Helicopter Corporation, Ltd.** adopt the CHC moniker and are renamed in the manner of **CHC Scotia, Ltd.** Thus, **Court Helicopters (Pty.), Ltd.** is renamed. Aircraft from all subsidiaries are now repainted in the CHC red, blue, and white livery and a common look is adopted for all company literature. The reason for the changeover is reported in a single key sentence in the CHC newsletter, *Rotortales*: "The integrated global oil companies which have emerged in recent years seek an integrated global helicopter company to provide services around the world."

Managing Director Jeremy Labuschagne's 160-employee concern continues operations as before, employing a fleet of 29 aircraft. The main focus remains support of oil and gas exploration, although a variety of EMS, search and rescue, and charter flights continue to be offered.

CHC HELICOPTERS AUSTRALIA (PTY.), LTD.: 45 Greenhill Road, Wayville, South Australia, 5034, Australia; Phone 61 (8) 373-0700; Fax 61 (8) 373-3366; <http://www.chc.ca/lloyd>; Year Founded 2000. Effective October 19, 2000, all of the subsidiaries of the **Canadian Helicopter Corporation, Ltd.** adopt the CHC moniker and are renamed in the manner of **CHC Scotia, Ltd.** Thus, **Lloyd Helicopters (Pty.), Ltd.** emerges as CHC Helicopters Australia (Pty.), Ltd. Aircraft from all subsidiaries are now repainted in the CHC red, blue, and white livery and a common look is adopted for all company literature. The reason for the changeover is reported in a single key sentence in the CHC newsletter, *Rotortales*: "The integrated global oil companies which have emerged in recent years seek an integrated global helicopter company to provide services around the world."

Employing a mixed fleet of Bell and Eurocopter aircraft, including Super Pumas and Dauphins, the concern continues operations as before. The main focus remains support of oil and gas exploration, although a variety of EMS, search and rescue, and charter flights continue to be offered, including the dedication of 2 AS-332Ls and 1 Bell 212 to the UN effort in East Timor.

CHC HELIKOPTER SERVICE, A.S.: P.O. Box 522, Stavanger Lufthavn, N-4055, Norway; Phone 57 (51) 941000; <http://www.chc.ca/helikopter>; Year Founded 2000. Effective October 19, 2000, all of the subsidiaries of the **Canadian Helicopter Corporation, Ltd.** adopt the CHC moniker and are renamed in the manner of **CHC Scotia, Ltd.** Thus, **Helikopter Services, A.S.** becomes CHC Helicopter Service, A.S. Aircraft from all subsidiaries are now repainted in the CHC red, blue, and white livery and a common look is adopted for all company literature. The reason for the changeover is reported in a single key sentence in the CHC newsletter, *Rotortales*: "The integrated global oil companies which have emerged in recent years seek an integrated global helicopter company to provide services around the world."

Operations continue as before, employing a fleet of 30 aircraft, including 19 AS-332L Super Pumas. The main focus remains support of oil and gas exploration, although a variety of EMS, search and rescue, and charter flights continue to be offered, along with a scheduled passenger service from the north Norway town of Bodo to the island of Vaeroy.

Norsk Hydro awards the operator a C\$26-million, 3-year contract on October 20 that renews the existing crew change contract for 2 major North Sea oil fields and grants a 5-year component for a search and rescue service to be flown from the Oseberg Platform. A minimum of two Super Pumas and a Sikorsky S-61N will be dedicated to the contract.

CHC SCOTIA, LTD.: Aberdeen Airport East, Dyce, Aberdeen, Scotland, AB21 7BZ, United Kingdom; Phone 44 (0) 1224 846000; Year Founded 1999. Acting through Vinland Helicopters, **Canadian Helicopter Corporation, Ltd.** announces on August 2 that all of the remaining conditions to its offer to purchase all shares in **Helikopter Services Group, A.S. (HSG)** have been satisfied or waived and that the acquisition is completed. In a move that foreshadows a corporation-wide integration a year later, **Bond Helicopters, Ltd.**, the HSG U.K. subsidiary also acquired, is now renamed CHC Scotia, Ltd. Interestingly enough, Bond Helicopters (Ireland), Ltd. is not renamed.

In addition to a continuation of its offshore activities, CHC Scotia is almost immediately tasked to operate four helicopters out of Esbjerg in Denmark to service a contract for Maersk Helicopters, A.S., the rotary-wing subsidiary of **Maersk Air, A.S.**, in the Danish sector of the North Sea.

The BBC reports on September 13 that CHC Scotia and **British International Helicopters, Ltd.**, the CHC U.K. subsidiary, are, in fact, combining their operations at Aberdeen Airport. Some 71 permanent and 23 temporary positions at the 2 carriers will be lost by November and upwards of 100 positions overall.

On January 7, 2000, ARCO British, Ltd., as a result of its pending merger with BP/Amoco, drops its longtime contract with **Bristow Helicopters, Ltd.** in favor of a 1-year, C\$4-million (\$2.75-million) support deal with Bond. The new contract will be filled by an S-76 operating out of the North Dunes Airport.

On January 26, the U.K. Department of Trade and Industry and the Competition Commission both clear the merger of CHC's UK operations and those of Helikopter Services Group.

Working with the Welsh Development Agency, the U.K. managers of **British International Helicopters, Ltd.** open negotiations with CHC during the first quarter concerning a possible management buyout of this now-redundant U.K. subsidiary. A satisfactory arrangement is concluded on May 17, under which BIH, sold for \$51 million, once again becomes the largest U.K.-owned helicopter operator. The new company trades as **British International, Ltd.** The Canadian corporation's U.K. offshore activities will now center fully on CHC Scotia, Ltd.

Despite hard times in the North Sea oil support business, CHC Scotia, in July, places \$60 million in firm orders for 15 copies of the Next Generation Eurocopter EC-135; deliveries will begin later in the year.

Effective October 19, all of the subsidiaries of the **Canadian Helicopter Corporation, Ltd.** adopt the CHC moniker and are renamed in the manner of CHC Scotia, Ltd.

CHEBOKSARY AIR ENTERPRISE (CHEBOXSRKOE A/P): Cheboksary Airport, Privolzhskiy Zone, 428021, Russia; Phone 7 (8352) 21 31 17; Fax 7 (8352) 22 33 61; Code CBK; Year Founded 1995. CAE is set up at Cheboksary in October 1995 just as the airport at that city gains international status. Anatol Mikhailov is CEO and he begins, and continues, scheduled services to Moscow, Ekaterinburg, Surgut, Mineralnye Vody, and Siktivkar with a fleet of 5 Tupolev Tu-134As. Charter flights are also established to Antalya, Istanbul, and the United Arab Emirates.

CHECK AIR: United States (1979–1981). Jack Kravit forms Check Air at Milwaukee in 1978 to offer scheduled Essential Air Service (EAS) cargo flights to local communities. Employing a Douglas DC-3, the carrier hauls 2.76 million FTKs during the year.

With a workforce of 16, freight traffic is increased by 22% in 1979 to 3.54 million FTKs.

The company's fleet is altered in 1980 to comprise 1 Fairchild Hiller FH-227 and 2 Israel Aircraft Industries 1123 Westwinds. The capacity

shift cannot prevent recession and higher fuel prices from causing a 48.5% downturn in cargo traffic to 2.29 million FTKs. Operations cease in 1981.

CHEE AIR (PTY.), LTD.: Papua New Guinea (1966–1976). Formed at Lae in 1966, Chee undertakes a decade of passenger and cargo charters and contract service flights within Papua New Guinea. Most of the aircraft employed are lightplanes.

CHELAI-CHELYABINSK AIRLINE (CHELYABINSK CHIEF AVIATION ENTERPRISE): Chelyabinsk Airport, Urals Zone, 454043, Russia; Phone 7 (3512) 290325; Fax 7 (3512) 280886; Code H6; Year Founded 1993. Chelyabinsk Avia, taking its name from its Chelyabinsk Airport base in Russia's Urals District, is established in 1993 to offer regional and domestic passenger and cargo charter flights. Edward M. Bobrovskiy is general manager and a huge workforce of 4,000 is recruited. Shareholding is divided between employees (51%), the state (15%), and other private investors (34%).

Revenue operations commence with a fleet that includes Tupolev Tu-154s, Tu-134s, and Yakovlev Yak-42s.

Operations continue in 1994, although Mr. Bobrovskiy is demoted to deputy manager and is succeeded at the top by Gennadiy P. Osintsev. Enplanements for the year total 398,102.

Airline employment stands at 4,000 in 1995 and the fleet includes 3 Tu-134As, 6 Tu-154Bs, 4 Yak-40s, and 7 Yak-42s.

Passenger boardings decline 10.4% to 360,600, but freight traffic is up by 11% to 6.96 million FTKs.

Flights continue in 1996–1998. During these years, Yevgeni Razu-mov becomes general manager and the fleet is increased by the addition of 2 Tu-154Ms. Enplanements during the latter year total 245,000.

Although traffic figures for all of 1999 are not available, it is reported on September 20 that the carrier's passenger volume has increased by 3.3% during the first half of the year.

Weekly Tu-154 roundtrips commence on June 4, 2000 from Ekaterin-burg to Hanover. It is admitted in July that the company has lost \$900,000 during the past 12 months.

CHEREMSHANKA AIRLINE: Cheremshanka Airport, Krasnoyarsk, Krasnoyarsk Zone, 6603022, Russia; Phone 7 (3912) 236741; Fax 7 (3912) 233341; Code YME1; Year Founded 1994. Cheremshanka is established at Krasnoyarsk in early 1994 to provide scheduled regional and domestic passenger flights. Rafkat R. Nabiulin is general director and he operates a large fleet that includes 12 Antonov An-24s, 85 Let L-410s, and 60 Yakovlev Yak-40s, plus a rotary-wing unit of Mil Mi-2s, Mil Mi-6s, Mil Mi-8s, and Mil Mi-26s.

Bad weather prevents a Yak-40 with 4 crew and 28 passengers on a service from Krasnoyarsk to land at Tura on September 26; the aircraft is diverted to Vanavara, 450 km. SSE. While still 41 km. NNW from its new destination, the aircraft runs out of fuel. A forced landing is attempted onto a river, but the plane hits the riverbank instead and explodes. There are no survivors.

Flights continue without further incident into the new millennium.

CHERNOMOR SOYUZ AIR COMPANY: 204 Lenin Street, Sochi, 354353, Russia; Year Founded 1996. CSAC is set up at Sochi in 1996 to offer nonscheduled domestic and regional passenger charters. Flights begin and continue with a single Tupolov Tu-134.

CHEROKEE AIRLINES: United States (1972–1973). Cherokee Airlines is established at Flushing, New York, in 1972 to provide scheduled passenger and cargo services linking its New York (JFK) base with Islip and Wilmington.

Although daily Beech 18 roundtrips are duly inaugurated, they cannot be maintained beyond 1973.

CHEROKEE AIRWAYS: United States (1968–1970). When service to Albany, Georgia, is cancelled in 1968, **Albany Air Service and Athens Aviation** is renamed Cherokee Airways. The fleet now includes 1 Beech 18, 1 Piper PA-32 Cherokee Six, and 1 PA-23 Apache and the previous route is maintained from Athens to Atlanta, Jefferson, Winder, and Gainesville.

Services are now inaugurated from Atlanta to Auburn, Lanette, and LaGrange/Pine Mountain. Flights continue until the company closes down in 1970.

CHERRY RED AIR LINE, LTD.: Canada (1929–1930). Cherry Red is established in Saskatchewan in 1929 to offer scheduled passenger and express services using a float-equipped Buehl CA Airedan. Operations cease in late 1930.

CHESTER COUNTY AIR: United States (1988–1989). CCA is established at Coatesville, Pennsylvania, in 1988 to offer six-times-per-day service to Philadelphia with a Piper PA-23 Aztec and a Mitsubishi Mu-2.

Operations cease in the spring of 1989 as the result of poor traffic.

CHICAGO AIR: United States (1986–1987). Chicago Air is established in the spring of 1986 to offer feeder service to Midway Airport on behalf **Midway Airlines** under a code-sharing agreement between the new commuter and the national.

With 6 Fokker F.27s leased from **Midstate Airlines**, Chicago Air inaugurates scheduled services on May 29, linking its base with Peoria, Springfield, Moline, Madison, La Crosse, Green Bay, Traverse City, Eau Claire, and Wausau. Orders are placed for 10 SAAB SF340s, the first of which are to be delivered (but are not) in August.

The new operator is soon in deep financial difficulty and in order to save itself, its officials offer the carrier to **Midstate Airlines** in October. President Bryce Appleton's large regional agrees to operate Chicago as a subsidiary, beginning on October 14. Even with this support, the new affiliate must stop flying at the end of December.

Midstate Airlines steps in during the first week of January 1987 and takes over the dormant airline's Midway Connection. Unable to proceed, Chicago Air files for Chapter XI bankruptcy in February and is shortly thereafter liquidated.

CHICAGO AND SOUTHERN AIR LINES: United States (1935–1955). A new company name, Chicago and Southern Air Lines, which is much more geographically correct, is chosen when Carleton Putnam incorporates **Pacific Seaboard Air Lines**, under Delaware law, on February 1, 1935.

A Stinson SM-6000B crashes at Yorkville, Illinois, on February 11 while a second is lost in an accident at Maywood, Illinois, near Chicago, on May 28 (two dead).

The company's headquarters at Memphis will be moved to St. Louis in September, but will return to Tennessee five years later. The Pacemakers and Pitcairn PA-6 are all sold between February and November and are replaced by 3 more Stinson SM-6000Bs (purchased from **Eastern Air Lines**, **Rapid Air Transport**, and **Central Airlines**) and a Stearman C3R mailplane. An order is now placed for modern Lockheed Electras.

The first Lockheed Model 10B Electra is delivered on March 31, 1936. Christened *City of New Orleans*, it is placed into service just before the arrival of another 10B on April 11, the *City of Memphis*. Two more Electras are received in April, the *City of St. Louis* and *City of Jackson* and between April and May, all five of the company's Stinsons are retired.

En route from New Orleans to Chicago, the *City of Memphis* crashes at St. Louis on August 5 (eight dead). A replacement Lockheed arrives on September 10 and is also named *City of Memphis*. The Stearman C3R is sold in November.

In September 1937, a fifth Lockheed Model 10B is acquired from Eastern Air Lines and is christened *City of Springfield*. The Electras are

now able to maintain three, daily Chicago–New Orleans return frequencies. The first profits are recorded in 1938–1939.

Four new Douglas DC-3s join the fleet in April 1940, followed by a fifth in September. In some cases, given names are removed from the Electras and given to the DC-3s. Three are christened as *City of St. Louis*, *City of Memphis*, and *City of Chicago*. These not only enhance frequencies but make expansion possible as well.

The primary destinations served, however, continue to be those located along The Valley Level Route from New Orleans to Chicago. Meanwhile, between December and January, 4 Lockheed Model 10Bs are withdrawn and 3 are sold to the British Purchasing Commission.

With CAB permission granted on March 1, 1941 Chicago and Southern opens a branch route on June 12 from Memphis to Houston, Texas, via Little Rock, Hot Springs, Pine Bluff, El Dorado, and Shreveport. Company headquarters are shifted to Memphis in August.

A week after Pearl Harbor, Putnam accepts a contract to fly new aircraft from factories to the Mississippi and forms a C&S Military Transport Division (MTD). The fleet at year's end includes 6 DC-3s and enplanements for the period are 62,125.

As part of their campaign against Midway Island in the Pacific, Japanese naval forces attack the Aleutian Islands on June 3, 1942, capturing Attu and Kiska while grasping at underdefended Dutch Harbor. In a textbook example of the mobilization foreseen by Air Transport Association (ATA) President Edgar Gorrell at the beginning of the year, the U.S. Army orders 11 airlines to halt their normal passenger and contract cargo activities and dispatch aircraft to Edmonton, Alberta. There they will participate in a massive contract airlift that is quickly organized for the defense of Alaska.

Over 100 aircraft from this airline and 10 other carriers execute daily roundtrips between Edmonton and Dutch Harbor through mid-July, transporting troops and supplies. Over 90% of the pilots involved had never flown to or from Alaska before and few had encountered such tough weather conditions.

Beginning in mid-July, the company contributes aircraft to a 50-transport group from 6 contract carriers (also including **American Airlines**, **Braniff Airways**, **Northeast Airlines**, **Pennsylvania Central Air Lines**, **Transcontinental and Western Air Lines**, and **United Airlines**) that are rushed to Presque Isle. From here, the planes, joined by 110 Air Transport Command C-47s, will transport the supplies and men required to set up and man the bases at Newfoundland, Labrador, Greenland, and Iceland that will facilitate "Operation Bolero," a mass bomber ferry from the U.S. to England.

Also in July, 2 DC-3s, including the *City of Chicago*, having survived the Alaska airlift, are taken over by the government as C-49s and are reassigned to the C&S MTD. One crashes at Memphis on November 6 and the other, formerly *City of Chicago*, at Del Valle, Texas, on March 10, 1943.

During the spring of 1944, Col. Roscoe Turner, employing single-engine Stinson SR Reliants, undertakes what he calls "scheduled charters," multistop flights from Detroit to Memphis, on behalf of his Roscoe Turner Aeronautical Corporation (later **Turner Airlines**). The new service is protested by C&S and the CAB orders it shut down.

Two ex-military C-49s (military DC-3s) are obtained in June and are christened *City of Detroit* and *City of Little Rock*.

Late in the year, the carrier is awarded route certification by the government for an extension to Detroit.

Four additional C-49 converted DC-3s are received from the USAAF between February and May 1945 and the last 3 are christened *City of Fort Wayne*, *City of Memphis*, and *City of Chicago*. Like those received the previous year, they are assigned to the airline's Military Transport Division. When it commences operations on a CAB-approved route from Houston to Detroit on June 1, Carleton Putnam's airline "owns" a vast airspace over the central United States.

New stops between the Memphis base and the Detroit include Paducah, Evansville, Terre Haute, Indianapolis, Anderson, Fort Wayne, and Toledo. The last 2 C-49s to be received from the military arrive

in August and are christened *City of Hot Springs* and *City of Evansville*. Five more are purchased from the Reconstruction Finance Corporation later in the month and shortly thereafter the Military Transport Division is closed.

The first DC-4, converted to civil standard from a military C-54, is delivered on November 23, but is not named. Four more C-54 conversions are received in December and are christened *City of Caracas*, *City of Kingston*, *City of San Juan*, and *City of New Orleans* in anticipation of CAB approval of a Latin American route application.

During the year, founder Putnam publishes his recollections, *High Journey: A Decade in the Pilgrimage of an Air Line Pioneer* (New York: Scribners, 1945).

On January 1, 1946, the company flies a 2,153-mile route network throughout the Mississippi Valley and offers the shortest flights from Chicago and Detroit to New Orleans and Houston. It has route applications before the CAB requesting that its present routes be extended to 50 new cities. A New Orleans-Havana route certificate is received on May 22.

Chicago and Southern inaugurates Douglas DC-4 domestic service on June 1, and on November 1, begins flying to Havana, Cuba, from New Orleans, thus becoming the first U.S. airline to launch a route awarded as the result of CAB hearings on the "Latin American Case."

An interline agreement is reached with **PIA (Peruvian International Airways, S.A.)** in the fall of 1947 allowing passengers to continue on as far as Lima. The Memphis-based airline initiates New Orleans-Caracas, Venezuela, flights in August 1948 and, on September 9, begins a new domestic route linking its base with Kansas City via Springfield.

In 1949, orders are placed for Lockheed Constellations. The first L-649A is delivered on August 12, 1950; christened *City of Houston* (later *Ciudad Trujillo*), it is placed into service on the main domestic trunk route in October prior to assignment to the Caribbean in December. Meanwhile 2 more arrive in September and October, but only 1 is named, *City of Detroit* (later *City of Caracas*). During the last half of the year, 4 DC-4s are withdrawn and sold, including the *City of New Orleans*, which goes to Brown & Brown on December 15.

The last named Constellations, *City of San Juan* and *City of Kingston*, are received in February 1951 and the last 2 DC-4s are sold in March. On March 15, the carrier completes a billion miles of safe flying. A final L-649A is delivered on May 18 but is not named.

Operations continue apace in 1952 and the Havana route is stretched to Port au Prince, Ciudad Trujillo, and San Juan on January 10, 1953. On April 1, an interchange agreement is made with **Trans World Airlines (TWA)**, which results in the availability of a through service from New York to Houston for both carriers. By this time C&S's independent days are numbered. Chairman Putnam engages in negotiations with **Delta Air Lines**, which agrees to buy him out on May 1.

For two years of integration, the combined company will be known as **Delta-C&S Air Line**, but by late 1955, all vestige of the earlier pioneer has disappeared.

CHICAGO AND SOUTHERN AIRLINES: United States (1969-1971). Having failed to legally protect the name of its 1955 merger partner, **Delta Air Lines** cannot prevent this small regional, established at Peoria, Illinois, in the late spring of 1969, from assuming the C&S moniker. Employing a Beech 18S and de Havilland Canada DHC-6-100, the new company inaugurates scheduled daily passenger and cargo roundtrips on July 7, linking its base with Chicago, Springfield, and St. Louis.

Operations continue in 1970 but, after the Beechcraft crashes, with the loss of 16 lives, near Peoria, Illinois, on October 21, 1971, the company is forced to shut down.

CHICAGO-DETROIT AIRWAYS: United States (1931). Attempting to fight the failure rate for small Midwestern airlines started during the Depression, C-DA is formed at Chicago in late spring 1931 to offer scheduled Travel Air 6000 passenger services to Detroit. The attempt proves futile as traffic is so light that operations last only from June 1 to September 30.

CHICAGO EXPRESS AIRLINES: Midway Airport, 5700 South Cicero Avenue, Chicago, Illinois 60638, United States; Phone (312) 585-0585; Fax (312) 585-4877; <http://www.chicago-express.com>; Code C8; Year Founded 1993. CEA is established at Chicago (MDW) in early summer 1993 as an affiliate of Phoenix Airline Services, the holding company for Northwest Airlink partners **Express I** and **Express II**.

Outfitted with a fleet of 6 British Aerospace BAe Jetstream 31s, the new regional begins revenue services on August 9, linking its base with Cedar Rapids, Green Bay, Lansing, Madison, Milwaukee, South Bend, and Toledo. By year's end, Chicago Express has transported 22,888 passengers.

Operations continue apace in 1994 and plans are made to begin flying from Raleigh/Durham in the following year, as a feeder for **Midway Airlines (2)**. Customer bookings accelerate to 156,372.

The move to North Carolina is completed in early 1995, but the company's 9 aircraft are only able to board 104,718 passengers during the year, a 32.7% decline.

The traffic picture improves for President Courtney Anderson in 1996 as customer bookings decline only 2% to 102,571. Destinations visited in 1997 include Daytona Beach, Des Moines, Grand Rapids, Lansing, and Madison.

During the summer, the company becomes the Chicago (MDW) feeder for **American Trans Air** under the marketing name "ATA Connection." Daily nonstop Jetstream 31 roundtrips from that point on behalf of the larger carrier commence on October 26 to Madison, Lansing, Des Moines, Dayton, Milwaukee, and Indianapolis.

Passenger boardings jump 22.2% to 125,349.

Flights continue in 1998. Customer bookings accelerate 40.9% to 177,000.

Airline employment stands at 200 at the beginning of 1999.

Daily ATA service from Milwaukee to Orlando is discontinued on April 30. Customers may, however, continue to take advantage of the 6 daily roundtrips from Orlando to Chicago (MDW), where connections with ATA service to Milwaukee and 21 others cities might be made.

Effective the end of March, **American Trans Air**, on February 26, purchases Chicago Express for an undisclosed sum.

On May 26, the ATA's Amtran parent announces that it has completed the previously announced acquisition of all outstanding stock of Chicago Express.

Brokered by the manufacturer, the airline signs an agreement in December to take nine refurbished SAAB 340Bs previously operated by **American Eagle Airlines (2)**. Overall passenger boardings for the year surge 18.8% to 210,000.

Wearing a new blue and yellow color scheme, the first former AMR SAAB is delivered in mid-March, followed by one per month through May. The large turboprops begin to replace the carrier's smaller Jetstream 31.

Employing Embraer ERJ-145s, the company opens "Trans World Express" service to Cincinnati and Shreveport in August. On September 1, twice-daily ERJ "Trans World Express" roundtrips are started over a new route from St. Louis to Jackson, Mississippi. Two weeks later, four-times-per-weekday SAAB 340B roundtrips are launched from Chicago (MDW) to South Bend, site of the carrier's new SAAB maintenance base.

To help provide pilots for this growing expansion, the carrier, in October, signs a three-year training contract with Pan Am International Flight Academy.

Thrice-daily SAAB 340B roundtrips are started on November 9 between Indianapolis and Chicago (MDW). The commuter liners replace ATA mainline jets.

CHICAGO HELICOPTER AIRLINES: United States (1949-1965). Selected by the CAB to operate local mail routes in the Windy City area, **Helicopter Air Services**, the second helicopter mail shuttle in the U.S., is founded on August 26, 1949. Employing 6 Bell Model 47s

equipped with special saddle boxes for mail sacks, the new entrant inaugurates 18 daily return flights between Midway Airport and the downtown post office building, in addition to over 30 suburban heliports. During the first five years, seven tons of mail are flown.

In an effort to augment the high cost of the postal operation, the CAB encourages the chopper carrier to expand into the transport of passengers. On June 8, 1956, the regulators authorize HAS to establish this passenger service and the enterprise is renamed Chicago Helicopter Airways on August 20.

An interline ticket contract is signed with **United Air Lines** on September 7 and, on October 5, service is opened between the Conrad Hilton Hotel and the city's two airports.

CHA, employing Sikorsky S-55s, now maintains scheduled 16-times-a-day (\$6 one-way) roundtrip frequencies between Midway and O'Hare Airports in what proves, at least initially, to be a successful undertaking.

Traffic grows and, in June 1957, the company adds larger Sikorsky S-58s to its fleet. Service is launched to lakefront Meigs Airport. Enplanements for the year total 55,000.

The fleet in 1958 comprises 8 Sikorskys. Flights begin from Chicago to the new heliport at Gary, Indiana, on May 3. The new aircraft and route help CHA to become the first rotary-wing scheduled airline to fly 100,000 passengers (actually, 108,911) in a year.

Flights are extended in 1959 to the city of Winnetka, Illinois. With a load factor of 51% and 158 daily flights, bookings swell to 204,000.

On January 5, 1960, a Bell 47G hits an obstruction at Frankfort, Illinois, and crashes, injuring its pilot. In order to operate jet equipment, the major airlines now begin to transfer much of their business to O'Hare International Airport.

The company now suffers its first fatal accident and, indeed, the first ever in the scheduled rotary-wing airline industry. En route from Midway Airport to O'Hare with 13 aboard on July 27, an S-58 crashes when a lifting rotor fails; there are no survivors.

Still, with a 53% load factor, enplanements increase by 34% to 309,000 passengers flown.

At this point, the helicopter airline's fortunes begin to decline as the major airlines speed their shift away from Midway Airport to O'Hare and a new freeway provides rapid ground transport to that complex.

A Bell 47G crashes near Joliet, Illinois, on March 9, 1961, injuring the pilot. Another of the same type goes down at Chicago on April 17, followed by a third on April 21; again, only the pilots are hurt. A fourth Bell 47G crashes on October 4, at Lambert, Illinois; this time the pilot dies. In December, CHA is forced to suspend mail services.

The majors' shift away from Chicago (MDW) continues in 1962–1963. To help make ends meet, the company, which now provides only 34 scheduled daily services, undertakes a number of unconventional services, including training flights, helicopter maintenance, and aerial traffic survey work on behalf of both the Chicago police and local radio stations. CHA does turn in a slight \$21,401 profit in the latter year.

United Air Lines resumes Midway operations in July 1964, allowing the 81-employee rotary-wing carrier to initially increase frequencies on its airport shuttle. While conducting a nonscheduled cargo flight to Joliet on October 31, an S-58C with four aboard crashes; one crewman is seriously hurt. Overall bookings decline 21% to 39,233. Revenues total \$1.21 million and a net profit of \$207,057 is earned.

The workforce is reduced in 1965 to 41 and the fleet includes 7 helicopters, 4 of which are Sikorsky S-58Cs. When Congress terminates the mail subsidy to all helicopter carriers in April, the end is in sight.

Without federal aid or a feeder contract with a fixed-wing airline, the operationally expensive experiment in rotary-wing passenger service, which can only generate 32,125 riders for the year, is unable to continue and shuts its doors to scheduled passengers on December 31.

CHICAGO JET CHARTER GROUP: 907 North Elm Street, Suite 100, Hinsdale, Illinois 60521, United States; Phone (847) 808-0812; Fax (847) 808-0813; Year Founded 1996. CJCG is founded at Chicago

(MDW) in 1996 to provide executive and small group passenger charters throughout the U.S. Four years later, the company employs 10 pilots and operates 2 Learjet 25s and 1 each Learjet 35A and British Aerospace BAe (HS) 125-400 Hawker.

CHIEF AIR, LTD.: P.O. Box 200, Ben Gurion Airport, Tel Aviv 70150, Israel; Phone 09-504095; Fax 03-9699113; http://www.givat-hayeladim.co.il; Year Founded 1997. Chief Air is established at Ben Gurion Airport in 1997 to provide executive and small group passenger charters to and from all airports in Israel. Equipped with a pair of Cessna King Airs, the company undertakes charters, as well as flightseeing, air ambulance, and VIP services.

CHIEFTAIN AIRWAYS, LTD.: United Kingdom (1986–1987). William "Bill" Stevenson establishes Chieftain Airways, Ltd. at Edinburgh, Scotland, in November 1986. Government authority is received, 2 British Aerospace BAe (HS) 748-B2s painted in soft green and lilac livery are acquired, and George Gilson and Max Gaunt are appointed joint managing directors. Capitalization of £9 million is raised from financial and private investors.

With **British Caledonian Airways, Ltd. (BCAL)** acting as general sales agent and £450,000 subsidy from **British Airways, Ltd. (2)**, Chieftain inaugurates daily return service from Edinburgh and Glasgow on March 30, 1987 to Brussels, Frankfurt, and Hamburg.

On May 1, daily roundtrips are introduced to Hamburg from London (LGW). Unable to achieve fiscal viability, the company is forced out of business at year's end.

CHILEINTER, S.A.: Chile (1998). It is reported on January 4, 1998, that the Canadian carrier **Royal Airlines, Ltd.** has joined with a local Chilean investor to establish the charter operator Chileinter, S.A. The new company leases one of Royal's L-1011-100s, with a second scheduled to join the new entrant at Santiago within three months.

During April, Chileinter begins to operate TriStar passenger charters to Caribbean destinations on behalf of the Argentine all-cargo carrier **STAF Airlines (Servicios de Transportes Aereos Fuenguinis, S.A.).**

Chileinter is purchased outright by STAF Airlines on September 20.

CHINA AIR CARGO (1): China (1987–1988). CAC is organized in the People's Republic in 1987 to offer scheduled cargo services to Japan and Hong Kong with a pair of Lockheed L-100-30 Hercules freighters acquired in September. Flights continue for less than a year.

CHINA AIR CARGO (2). See **CHINA CARGO AIRLINES COMPANY, LTD.**

CHINA AIRLINES, LTD. (CAL): 191 Nanking East Road, Section 3, Taipei, 104, Taiwan; Phone 886 (2) 715-2626; Fax 886 (2) 514-5689; http://www.china-airlines.com; Code CI; Year Founded 1959. With capitalization of US\$14,000, retired Nationalist Chinese Air Force personnel privately form this airline at Taipei on December 16, 1959. In January 1960 the 26-person concern inaugurates domestic charter services with 2 Consolidated PBY-5A Catalina flying boats.

Nonscheduled ad hoc flights are also undertaken, in 1961–1962, with ex-military Curtiss C-46s. Destinations visited include Hualien, Kaohsiung, and Makung. Taitung becomes the carrier's first scheduled route in October of the latter year.

In October 1963, scheduled domestic Douglas DC-3 services begin. The employee population in 1964 is 329 and the fleet now comprises 1 DC-3 and 3 former NCAF C-46s. A total of 116,000 passengers are carried on the year and revenues of \$526,000 are generated.

Orders are placed in 1965 for 2 Boeing 727-109s as the fleet grows to include 2 Beech 18s, 2 ex-military C-123s, 4 C-46s, and 1 DC-3. A Lockheed L-1049H and 3 DC-4s are acquired from **The Flying Tiger Line** in 1966, joining 10 C-46s and several other aircraft already on hand. International service (primarily for the convenience of U.S. ser-

vicemen) is launched on December 2 over a Taipei–Saigon route. During the second half of the year, 6 C-46s are leased to **Air Vietnam, S.A.** to help the South Vietnamese carrier provide additional required cargo lift in support of the war.

The B-727-109s are delivered in March 1967 and in April commence new tour flights to Hong Kong, Osaka, and Tokyo. A DC-3 freighter crashes into the sea off South Vietnam on August 21 (two dead).

Another chartered Douglas transport with 3 crew and 13 passengers is lost taking off from Phan Rang, Vietnam, on October 24. At month's end, CAL takes over the **Civil Air Transport (CAT)** services from Taipei to Seoul and Manila.

Airline employment in 1968 is 2,387. In January, the carrier succeeds CAT as the principal flag airline of Taiwan. That airline, operated for years as a proprietary company of the U.S. CIA, now turns over to CAL its routes to Bangkok, Kuala Lumpur, and Singapore. An order is now placed for a third B-727-109 and 2 B-707-309Cs, plus 2 Nihon YS-11As. CAT is shut down on May 29.

Enplanements total 509,111 and revenues are \$16.3 million.

Service is started to Okinawa on January 1, 1969.

En route from Taitung to Kaohsiung from Hualien on January 2, Flight 227, a DC-3D with 5 crew and 19 passengers crashes into Mount Paku in the southern part of Taiwan near Nan-Pao Shan; the wreckage is found the next day and there are no survivors.

The carrier now joins IATA and inaugurates service to Okinawa. Domestic and international frequencies are increased by 38.5% as the 2 B-727-109s, 2 B-707-309Cs, and 1 of the 2 YS-11As are placed in service through the year. In anticipation of transpacific operations, offices are opened in Los Angeles and San Francisco. Bookings decline to 492,794.

The workforce is increased 43% in 1970 to 2,894. Daily (except Monday) B-707-309C service is inaugurated from Hong Kong to San Francisco via Taipei, Tokyo, and Anchorage, on February 2 and Taipei to Los Angeles via Tokyo and Honolulu on April 26.

One of the two YS-11As with 5 crew and 26 passengers arriving from Hualien, crashes in bad weather on final approach to Taipei on August 12 (4 dead).

Passenger boardings increase 41% to 835,522 while freight traffic skyrockets 352%.

Service is started to Bangkok and Singapore in early 1971 and a B-707-351B is purchased from **Northwest Airlines** on March 6. Additionally, in April, four-times-per-week flights to Los Angeles from Hong Kong via Taipei and Honolulu are inaugurated. The fleet now includes 2 Stratoliners, 3 B-727-109s, 1 Caravelle III, 3 DC-3s, 1 YS-11A, 4 DC-4s, 3 C-46s, 2 C-123s, and 2 Beech 18s. The 6 C-46s out on loan to **Air Vietnam, S.A.** are now returned.

When the Taiwan government is evicted from the UN on October 25, China Airlines is no longer eligible for membership in the UN-sponsored ICAO.

En route from Osaka to Hong Kong via Taipei on November 20, the Caravelle III, operating as Flight 824 with 8 crew and 17 passengers, suddenly disappears from ATC radar screens as it is flying at 25,000 ft. near the Pescadores Islands. A small amount of debris washes ashore on Penghu Island, but no other wreckage or any bodies are ever found. Sabotage is suspected as the cause of the disaster, but cannot be proved.

Enplanements for the year drop to 348,300.

Orders are placed in 1972 for 2 Sud-Est SE-210 Caravelles as a third B-707-309C is placed in service. The staff now numbers 3,456. A C-123, chartered to **Air America**, crashes at Pleiku, South Vietnam, on August 26 (eight dead). The company's lone active Caravelle is forced to ditch into the Formosa Strait on November 25 (25 dead). At month's end, permission to land at Kuala Lumpur is withdrawn by the Malaysian government.

Passenger boardings jump 14% to 405,000 and cargo climbs 12%.

The 2 Caravelles join the fleet in 1973. Increasingly, foreign governments, facing a two-China dilemma, elect to withdraw landing rights; in Europe, only the Netherlands permits operations.

Passenger traffic soars 72% to 1.4 million and cargo accelerates by 38%.

The employee population is increased in 1974 to 3,662. The 18-machine fleet is enhanced by the addition of another SE-210, although the last C-46 is now retired. A diplomatic dispute between governments over the two-China policy leads to a suspension of Tokyo service. Taipei to Los Angeles B-707F all-cargo service is inaugurated on June 1.

Under terms of the IATA constitution that requires its members be eligible for ICAO, the carrier must now also depart the trade association, which it does on September 15. President Ben Y. C. Chow becomes board vice chairman and is succeeded, late in the year, by Gen. Cliff Yen-Chun Louie.

Freight traffic soars 75% to 85.9 million FTKs while passenger bookings are up a slight 0.7% to 1,388,000.

General Louie, in January 1975, also assumes the post of chairman. The workforce is reduced by 162 and orders are placed for 3 B-737-281s and 1 B-747F.

A DC-3 is involved in a midair collision with an L-19 over Kompong Chom, Cambodia, on March 26; there are no survivors from either aircraft.

The company closes its Saigon office on April 25 and ceases flights to South Vietnam from Taiwan. A B-747-132 formerly flown by **Delta Air Lines** in the U.S. and leased from its manufacturer, is delivered on May 16 and is placed in service in June on the Taipei–Los Angeles via Honolulu route. Service is resumed to Tokyo on August 10 following a 14-month hiatus.

Although cargo is up 44%, passenger boardings dip 3% to 1,342,000.

The workforce is up 1% in 1976 to 3,363. Chang Lin-teh becomes president on February 1; two days later, an order is placed with Boeing for a single B-747SP-09. CAL is the first airline in Asia to request the long-range Jumbojet.

On February 27, a marketing agreement is signed with **Saudia (Saudi Arabian Airlines)**, covering services between the two company's home countries.

A second ex-**Delta Air Lines** B-747-132 leased from Boeing arrives on June 15 as 3 B-737-281s join the fleet to begin service on a 6-point domestic network. The 2 Caravelles, 1 DC-4, and the last C-123 are retired. A route is opened to Jeddah, the carrier's first destination in the Middle East, on July 1, while flights to Fukuoka via Seoul are launched the same day.

Passenger bookings this year soar 41% to 1,894,000 and freight increases 14%.

When the carrier pulls out of an arrangement to accept a Douglas DC-10-30, it is sent to **British Caledonian Airways, Ltd. (BCAL)** in February 1977. Following acquisition of the B-747SP-09 on April 6, non-stop transpacific Taipei to Los Angeles and San Francisco frequencies are initiated twice-weekly on May 18. Another B-727-109 is placed in service during the summer.

Enplanements are 2,518,839. Revenues are \$220.2 million and the net profit is \$9.8 million.

Airline employment is up 8.2% in 1978 to 4,460. In January, weekly, direct Taipei–Seoul service is inaugurated, frequency on the route is increased to thrice-weekly in July. Meanwhile, on March 9, the flight engineer of a B-737-281 en route from Taipei to Hong Kong attempts to take over the scheduled service, with 101 passengers, and divert it to Communist China. The plot is foiled when a security guard shoots the pirate dead.

In April, the Jumbojet leased from Boeing is returned as a new B-747-209B combi is delivered. On July 28, orders are placed for 4 Airbus Industrie A300B4s. A second B-747SP-09 is requested on December 8.

Passenger boardings grow 9.1% to 2,771,000 and freight moves ahead 26.1%. On total revenues of \$300 million, a \$28-million net profit is recorded.

One B-727-109 and 1 B-737-281 are sold as orders are placed in 1979 for 4 additional Jumbojets; 1 B-747-209B joins the fleet in July, allowing commencement of service to Amsterdam via New York.

A B-707-324C with six crew crashes into the sea off Taipei while on a September 11 training flight; there are no survivors.

Freight drops 13.6% and passenger bookings decline 6.9% to 2,580,452. Profits are \$4.7 million (operating) and \$10.9 million (net).

The workforce is reduced by 0.07% in 1980 to 4,956.

A B-707-309C with 11 crew and 124 passengers undershoots the runway while landing at Taipei on February 27 and catches fire (2 dead). A third B-747SP-09 is ordered in March.

A B-747SP-09 enters service on April 30 and a B-747-209F in July; the freighter begins all-cargo services to Amsterdam, Dhahran, Dubai, and Luxembourg. Jeddah service is rerouted via Singapore and a new freight route is started to Los Angeles via Fairbanks, Alaska. The third B-747SP-09 is delivered on September 30.

Just after landing at Manila on an October 16 flight from Taipei with 135 aboard, a B-707-309C catches fire and explodes (1 dead).

Passenger boardings drop another 16.3% to 2.16 million and cargo remains level. World economic conditions and the introduction of new domestic service transport options allow revenues of \$371.9 million and an increase of 22.5% in expenses to \$392.1 million. The resulting losses are \$20.1 million (operating) and \$19.2 million (net).

A total of 4,956 people work for China Airlines in 1981. Another B-747-209B is added on April 17 as 2 B-707-309Cs and 4 B-727-109s are retired. An order is placed for 6 more Airbus Industrie A300B4s and 3 B-767-209s. Direct Taipei to New York City all-cargo B-747-209F flights commence in January.

Freight traffic soars 60.1% to 304.62 million FTKs. Passenger traffic also rebounds, up 8.89% to 2,352,025 passengers flown.

The employee population in 1982 stands at 4,956. On May 10, the company joins with **Cargolux Airlines International, S.A.** to provide exchanged space cargo flights between Taipei and Luxembourg via Singapore and Jeddah westbound and Jeddah and Dubai eastbound.

The first of 3 A300B4s delivered during the year arrives on June 22 and is placed into service on regional routes. The last of 4 B-747SP-09s arrives on June 29; it is the last passenger-configured 747SP constructed.

One passenger is killed and 17 are hurt as a B-747-209B with 300 aboard hits air turbulence over the China Sea on August 16. In December, a B-767-209 arrives as 3 B-707-309Cs are sold. China Airlines is now the first airline in the world to operate the advanced Boeing and Airbus wide-bodies simultaneously.

Freight traffic dips 4.3% to 291.41 million FTKs, but passenger boardings increase 20% to 2,822,130.

The workforce is increased 12.6% in 1983 to 5,562 and Gen. Wu Yueh becomes chairman. The first B-767-209 enters service on January 1. The last of 4 A300B4-220s enters service in July.

On August 21, a B-707-309C returns former Filipino senator Benigno S. Aquino Jr. from exile to Manila, where he is assassinated as he steps off the plane; the flight results in the carrier losing its Philippine landing privileges on September 3. Two B-767-209s are placed in service later in the year.

Freight rebounds, up 44% to 420.04 million FTKs, and bookings accelerate 10.3% to 3,113,532. On revenues of \$513.5 million, an operating loss of \$25.8 million is suffered.

The airline staff is up another 1.6% in 1984 to 5,652. The fleet now includes 7 Jumbojets, 3 B-707-309Cs, 3 B-737-281s, and 2 B-767-209s, as 2 B-747-209Bs and all 4 A300B4-220s are leased out.

Dynasty Class luxury service is introduced on April 1. The New York route is extended on April 12 to Amsterdam, the carrier's only European passenger destination for several years to come. The B-747-132 is sold to Guinness Peat, also in April.

Cargo grows 13.8% this year to 478.02 million FTKs and passenger boardings jump 5.9% to 3,297,441. While the operating profit is \$11.3 million, the net loss is \$15.9 million.

The workforce is increased 2.8% in 1985 to 5,908.

En route to the U.S. from Taiwan on February 19 with 272 aboard, a B-747SP-09 that is 300 nm. NW of San Francisco loses power to all 4 engines. The aircraft stalls, rolls—almost inverted—and dives at a

60-degree angle, plunging 32,000 feet (6 miles) in less than 2 minutes. Just 36 seconds before the plane would have crashed into the ocean, the pilot is able to restart the engines and flies 500 miles with a damaged tail before making a safe emergency landing at San Francisco. Only four injuries are reported. The incident is reviewed by Peter Garrison in his "Tumbledown Jumbo: A Trans-Pacific 747 Falls More Than 30,000 Feet to the Brink," *Flying*, 113 (October 1986): 22–25.

A B-747-2R7F is acquired on February 26 from **Cargolux Airlines International, S.A.** for \$60 million. En route from Taipei to Kaohsiung on April 26, a B-737-281 with 80 passengers is hijacked by a disgruntled Taiwanese soldier, who wishes to be flown to Hong Kong. The aircraft lands, instead, at its original destination and the perpetrator surrenders to police.

Freighter service is now inaugurated from Taipei to New York (JFK) and Dallas (DFW) and, in terms of cargo carried, CAL now ranks 24th among all world airlines.

Passenger boardings for the year rise 1.9% to 3,360,000 and freight climbs 11.8% to 559 million FTKs. On revenues of \$539.4 million, expenses grow 4.1% to \$545.9 million, leaving a \$6.46-million operating profit; the net loss is down to \$8.35 million.

Employment is reduced by 0.6% in 1986 to 5,871.

Following a missed approach to the offshore island of Penghu on a February 16 service from Taipei, a B-737-281 with seven crew and six passengers goes around, but in the process crashes into the sea; there are no survivors.

Defector and pilot Wang Hsi-chuen subdues his two fellow crew members and commandeers his B-747-209F on May 3, flying it to Guangzhou in order to see his 82-year-old father.

The first negotiations between Nationalist and Communist representatives of the two Chinas in 37 years are completed on May 20 and result in the return of the Jumbojet to Taiwan via a formal Hong Kong ceremony 4 days later.

Customer bookings decline 4.2% to 3,217,454, but freight jumps 21.4% to 646.18 million FTKs. Revenues accelerate 14.2% to \$703 million and costs are low, allowing an \$56.4-million operating profit and a net of \$17.7 million.

The payroll grows 2.1% in 1987 to 5,960. Work begins on a \$13-million, 55,000-sq.-ft. air cargo building at New York (JFK). In July, cargo space is purchased on **Japan Asia Airways Co., Ltd.** flights between Tokyo and Taipei.

During the year there is a general relaxation in relations between the two Chinas. The Nationalist government abolishes martial law and relaxes travel restrictions on its citizens. Passenger boardings jump 27.9% to 4,115,000 and cargo rises 15.6% to 777 million FTKs. Revenues increase by 42% to \$971.6 million and with expenses in line, the operating line rises to \$116.9 million and net gain reaches \$70.9 million.

The number of employees is cut 1.5% in 1988 to 5,871. In January, the weekly New York to Amsterdam service ends, as does the carrier's status as an around-the-world airline.

While en route on a February 22 domestic service, an A300B4 is subjected to an attempted hijacking; before the aircraft can be diverted to mainland China, the lone assailant is overpowered by the crew.

In September, the company is placed under control of a newly formed supervisory body, the China Aviation Development Foundation (CADF). Nominally private, the carrier is controlled by the Kuomintang, with that party's Wang Chin-hail as chairman.

Still, the flag carrier of the Republic of China increases enplanements by 15.8% to 4,764,036. Freight grows by a more modest 2.6% to 773.27 million FTKs. Income exceeds expenses and there are profits: \$134.48 million (operating) and \$65.28 million (net).

The workforce is increased a slight 0.7% in 1989 to 6,805 and the fleet is enhanced by the introduction into service of the first 3 of 6 new A300-600Rs. The company now joins the Asian Abacus computerized reservations system and opens a cargo sales and service office in Europe. The weekly roundtrip cargo service from Taiwan to Luxembourg via Dubai is now doubled.

Beginning in May, Boeing is forced to pay the company \$5 million in compensation for delays in the delivery of the airline's first B-747-400s. The shootings in Beijing's Tiananmen Square scuttle plans for the inauguration of scheduled services between the two Chinas while a government decree prevents CAL from withdrawing from domestic services on July 1.

Just three minutes after takeoff from Hualien on October 26, Flight 204, a B-737-209 with 7 crew and 47 passengers flies into the side of a 7,000-ft. mountain in rain and darkness after the pilot makes a wrong turn during the initial climb; there are no survivors.

A frequent-flyer program, Dynasty Flyer, is unveiled and passenger boardings move ahead by 3.7% to 4,938,300. Freight is up 11.8% to 858.03 million FTKs. Revenues advance by 18.1% to \$1.24 billion, expenses rise 14.6% to \$1.05 billion, and operating income advances to \$190.83 million. Net gain reaches \$115.63 million.

Company employment inches upward in 1990 by 0.5% to 6,841. In February, new service agreements are signed with **Cathay Pacific Airways (Pty.), Ltd., Thai Airways International, Ltd. (THAI), and Philippine Airlines**. As there are no diplomatic links between Taiwan and the countries of the other three flag carriers, routes are covered by interline agreements. Indeed, route access between any two countries is controlled by the airlines involved.

In an effort to freeze proposed newcomer **Evergreen Airways** (later **Eva Airways**) out, the agreement states that only Cathay and CAL will operate technical third and fourth freedoms between the two areas. The arrangement with THAI calls for the expansion of weekly frequencies from 20 to 28, while that with PAL boosts services from daily to 10 per week.

The first of 5 ordered B-747-409s arrives in March, the same month the company announces plans to begin discussions concerning the resumption of airline service to Vietnam. A new code-sharing agreement with **Garuda Indonesia** begins in October covering passenger flights from Taipei to Denpasar and cargo frequencies from Taipei to Jakarta.

Customer bookings jump 8.2% to 5,345,096 as cargo balloons 25.4% to 1.11 billion FTKs, a figure 18th highest among all world airlines. Revenues ascend 8% to \$1.4 billion, 24th best in the world, and expenses allow a 17% net gain of \$152 million.

The payroll is increased by 2.3% in 1991 to 7,309 and the fleet now includes 1 owned and 5 leased A300B4-220s, 5 leased A300-600Rs, 3 B-737-209As, 4 B-747-209Bs, 2 B-747-209Fs, 1 owned and 3 chartered B-747SP-09s, and 1 owned and 2 leased B-747-409s. Orders are outstanding for 1 A300-600R, 2 B-747-409s, and 4 McDonnell Douglas MD-11s. Flights begin during the first quarter to Phuket and Bali; in April, service is undertaken to Vancouver, Johannesburg, and Phuket.

A new subsidiary, **Mandarin Air, Ltd.**, is formed with backing from the Koo family's China Trust group to fly into those areas where its parent's name is still anathema. It is, for example, allowed to resume flights in August between Taipei and Ho Chi Minh City. In order not to offend the PRC, the Hanoi government, in September, orders the service halted.

Just after takeoff from Taipei on December 29, the No.3 engine of a B-747-2R7F separates from the plane; while falling, it also takes off the No. 4 engine. Control is lost and the freighter carrying 5 crew crashes into the 700-ft. level of mountains near Wanli; there are no survivors.

Passenger boardings climb 2.6% to 5,483,464 and freight is up 3% to 1.12 billion FTKs. Expenses exceed income and there are profits: \$171.3 million (operating) and \$154.75 million (net).

The workforce grows again in 1992, climbing 8% to 7,894. New services are initiated from Kaohsiung to Manila and flights resume from Kaohsiung to Ho Chi Minh City in August. Indeed, the service is code-shared with **Vietnam Airlines** and includes a route from Taipei to Hanoi.

The Koo family interest in **Mandarin Air, Ltd.** is purchased, making that airline a fully owned subsidiary. The first of 4 MD-11s is delivered in December, making the company the fifth Asian carrier to operate the trijet.

Customer bookings advance by 5.6% to 5,790,000, but cargo slides 0.4% to 1.34 billion FTKs. Revenues move ahead by 3.7% to \$1.63 billion and produce an operating surplus of \$155.66 million. There is also a net profit of \$143.61 million.

The employee population stands at 8,104 in 1993, up 2.7%, and a fleet that is increased by the addition of 1 A300B4-622R, 1 B-747-409, and the 3 outstanding MD-11s. In January, Mandarin Air Chairman Liu Teh-min becomes China Air's chairman with former Civil Aeronautics Administration Director General Yuan Hsing-yuan as president; former China Air President Peter Bien becomes **Mandarin Air, Ltd.**'s new chairman.

Frankfurt via Mandarin joins the route network, which also now includes flights from Taipei to Amsterdam, Anchorage, Bangkok, Chicago, Dallas, Denpasar, Dubai, Fukuoka, Ho Chi Minh City, Hong Kong, Honolulu, Kaohsiung, Jakarta, Johannesburg, Kuala Lumpur, Los Angeles, Luxembourg, Manila, Nagoya, New York, Okinawa, Phuket, San Francisco, Seoul, Singapore, and Tokyo. Frequencies to San Francisco become daily and 10 per week to Los Angeles. The domestic network is reduced to flights only between Taipei and Kaohsiung.

In late May, representatives from several airlines, including CAL, visit Shanghai to discuss with PRC authorities a proposed opening of direct commercial air links across the Formosa Strait.

For the first time, company stocks are listed on the Taiwan Stock Exchange.

While landing at Hong Kong on a November 4 service from Taipei in heavy weather caused by tropical storm Ira, Flight 605, a B-747-409 with 22 crew and 374 passengers, is unable to stop on the wet runway. The Jumbojet steers to the left to avoid approach lights, skids, and stops just dipping into Hung Hom Bay and partially blocking departures. There are no fatalities, but airport engineers must blow off the vertical tail, destroying the airliner and bringing an insurance claim of \$145 million.

Passenger boardings accelerate 7.8% to 6,241,000 and freight rises 33.2% to 1.43 billion FTKs. Revenues inch up 0.7% to \$1.64 billion, but costs climb 1.8% to \$1.5 billion and lower the operating surplus to \$140.17 million. Net gain falls to \$115.43 million.

The number of employees is cut by 1.7% in 1994 to 7,969 and it is announced, in January, that the L-1011 fleet will be retired within the next 18 months.

On April 26, on a flight from Taipei, the crew of an A300B4-622R becomes confused in the use of certain instruments while attempting to execute a go-around maneuver on its final approach into the airport at Nagoya, Japan. Under command of Capt. Wang Lo-chi with 14 other crew and 256 passengers, the aircraft stalls at 1,800 ft. and crashes tail-first 300 ft. to the right of the runway, bursting into flames (264 dead). The fatal accident, specifically attributed to crew error and problems with the plane's automatic pilot, is the second-worst civil aviation disaster in Japanese history after the August 12, 1985 **Japan Air Lines Company, Ltd. (2)** crash that killed 520.

Assuming responsibility for the disaster, Director General Sun Chao-liang of Taiwan's Civil Aeronautics Administration resigns on May 6 and is replaced by Mao Chih-kuo. At approximately the same time, the airline's chairman, Liu Teh-min, and president, Yuan Hsing-yuan, also step down; the president of **Far East Air Transport** succeeds Liu and Fu Chun-fan, CAL's chief auditor, becomes president.

Following the murder of 24 Taiwanese tourists on the mainland during the month, the government bans group tour flights to China. The airline is forced to cut back its flights between Taipei and Hong Kong, a major transit center, in response. The move begins to have an economic impact as early as June. During the fall, a contract for wet-lease use of a B-747 freighter is signed with **Atlas Air**.

In an effort to increase business, a pair of A320-231s are leased from **Region Air, Ltd.** in December and plans are made to increase frequencies, early in the new year, to Kuala Lumpur, Singapore, Nagoya, and Jakarta.

Customer bookings for the year decline by 5.3% to 5,911,284, but cargo increases 29.2% to 1.84 billion FTKs. Revenues inch up 1.2% to

\$1.64 billion and expenses jump 11.2% to \$1.34 billion. Consequently, the operating profit falls to \$306.44 million and net gain plunges to \$17.25 million.

Airline employment in 1995 stands at 8,100. During the first week of February, the company accepts 2 Beechjet 400As for use in its new Jet Spectrum advance pilot training program, which it has designed and implemented with the University of North Dakota.

During late April, a temporary accord is signed between Taiwan and Hong Kong that enables the two to circumvent difficulties that have occurred in their bilateral air negotiations and permits **Cathay Pacific Airways (Pty.), Ltd.** and CAL to continue their exchange of services. With no direct air service between the two Chinas, Hong Kong continues to serve as Taiwan's PRC gateway.

Service is launched to Zurich and Rome. In May, the carrier joins with **Singapore Airlines, Ltd.** as each carrier takes a 24.5% stake in a Taipei-based engine compressor repair venture. At the Paris Air Show in June, a letter of intent is signed with Boeing for 4 B-777-200s.

CAL passengers are the beneficiaries in July when seven PRC carriers agree to make service with Taiwan easier for passengers from both Chinas. Beginning in August, **Air China International Corporation**, **China Eastern Airlines Company, Ltd.**, **China National Aviation Corporation (CNAC-2)**, **China Northern Airlines Company, Ltd.**, **China Northwest Airlines Company, Ltd.**, **China Southern Airlines Company, Ltd.**, and **China Southwest Airlines Company, Ltd.** will offer double boarding passes to customers traveling via Hong Kong on a CAL connection.

During the last week of October, the company unveils a new corporate identity. In a significant gesture, the flag of Taiwan, which disturbs political leaders in Beijing, is removed from the tails of the company's jetliners and replaced with a plum blossom, a Chinese symbol of renewal.

A new five-year pact is entered into with **Atlas Air** on November 13 for utilization of the American carrier's Jumbojet freighters. Plans are also announced for the addition of 44 additional jetliners to the fleet over the next 7 years.

In December, CAL becomes the Asian launch customer for the Next Generation B-737-800 with a \$750-million order to Boeing for 15 machines, for delivery beginning in 1998.

Traffic growth resumes as enplanements accelerate by 9.5% to 6,473,521 and freight jumps 14.9% to 2.1 billion FTKs. Revenues jump 11.6% to \$1.73 billion, while costs are up 13.2% to \$1.71 billion. Profits of \$20 million (operating) and \$45 million (net) are posted.

Fifty-two people retire or are laid off from the workforce in 1996. A B-747-412 is leased from **Singapore Airlines, Ltd.** while an MD-11 is chartered to **Mandarin Airlines, Ltd.** Aviation authorities in Hong Kong and the Philippines make a list of recommendations to assist the carrier to improve on its safety record. Lufthansa Technik, A.G. is contracted to build up complete operations and maintenance systems that will enhance its aircraft safety.

All-cargo service is launched to Miami and, by June, the Nationalist Chinese carrier is fully-utilizing 4 wet-leased Jumbojet freighters from **Atlas Air**.

Also in June, the company becomes an alliance partner with **Continental Airlines**; preparatory to the signing of a full dual-designator pact in the fourth quarter, the two begin jointly marketing frequent flyer programs, shared airport lounges, and one-stop check-in.

In the wake of the **ValuJet Airlines** and **Trans World Airlines (TWA)** disasters, CAL, on August 12, bans all dangerous cargo from passenger aircraft.

A code-sharing pact begins with **American Airlines** in September. The arrangement covers CAL flights from Taipei to Los Angeles and San Francisco and AA domestic routes.

A code-sharing agreement is entered into with **Continental Airlines** during October covering return flights from Taipei to Houston. On October 27, after South Africa refuses to grant CAL fifth freedom rights to fly passengers and cargo from Singapore to Johannesburg, CAL sus-

pends its already unprofitable twice-weekly services between Taipei and Johannesburg. The B-747SP-09 employed on the service is transferred to the carrier's Hawaii route.

Customer bookings jump 8.1% to 6,996,471 while cargo climbs 13.3% to 2.388 billion FTKs. A pretax profit of \$68.13 million is reported.

The airline's employee population increases by 8.4% in 1997 to 8,728.

To promote business links between Taiwan and Latin America, a B-747-209F launches weekly roundtrip cargo services on March 15 to Miami (MIA). An A300B4-622R arrives in April under charter from the International Lease Financing Corporation (ILFC).

Plans to make a public stock offering of 16.6% in two tranches are delayed when the government insists on adding four members to the CADF, the organization that owns 71% of the airline.

Following two years of planning and construction, a \$74-million joint venture catering operation, **China Pacific Catering Services, Ltd.**, is launched at Taipei during July. Designed to produce 30,000 meals per day, the project is held with **Swire Pacific (Pty.), Ltd.**

According to an article by Dave English, CAL now operates one of the longest routes in the world, Taipei to New York (JFK). The distance of 7,790 st. mi. is flown via Anchorage in 14 hrs. 30 min. (*Airways* [July-August 1997]: 21.) Also during August, the government's Ministry of Transport and Commerce wins control of the CADF, renaming it the **China Airlines Foundation (CAF)** and reconstituting its board of directors with its own appointees.

In a follow-up to the Russian Federation's establishment of a representative office in Taipei the previous December, the Ministry of Foreign Affairs announces on September 4 the opening of direct commercial aviation links between Taiwan and Moscow. CAL and Moscow-based **Transaero Airlines** are authorized to fly the route.

In mid-September, 2 B-747-209Bs are sent to Boeing's Wichita facility for conversion into freighters. They are due back between November 1998 and June 1999. Code-sharing is started with **Continental Airlines** on September 20 over a weekly return-route from Taipei to Houston via San Francisco.

In November, a contract is signed with ILFC for the charter of an A300-600R the following February.

A new agreement with **American Airlines**, signed on November 5, comes into effect on December 1. In addition to linking frequent-flyer programs and simplifying check-in procedures, the two will code-share on services between Taipei and Dallas, Chicago, Miami, New York, and Washington, D.C. via the CAL gateways at Los Angeles and San Francisco.

Late in the year, officials of the airline and Transport Minister Tsay Jaw-yang become embroiled in a dispute over the interest rate the carrier must pay on a major aircraft lease initiated 19 years earlier.

Passenger boardings accelerate 5.7% to 7,395,755 while 2.76 billion FTKs are also operated. Sales total T\$55.85 billion and allow a profit of T\$2.34 billion.

At the beginning of 1998, CAL is the 12th largest airline in the world in terms of freight carried.

Arriving at Taipei's Chiang Kai Shek Airport on February 16 on a flight from Denpasar, the pilot, Capt. Kang Long Lin, of Flight 676, an Airbus Industrie A300-622R with 197 passengers misses his approach in light rain and fog. After turning around to make another approach, the airliner smashes into buildings in a residential area and bursts into flames; there are no survivors and 6 people are killed on the ground. Since 1959, CAL has suffered 12 fatal accidents in which 622 people have died.

At the end of the month, Premier Vincent Siew, in the wake of the nation's worst-ever airline accident orders the government-owned CAF to reduce its 71% stake in the carrier. Directors of the foundation had enjoyed immunity from lawsuits and were not accountable to public stockholders. Premier Siew believes that CAL must become more accountable before it can get a handle on its terrible safety record.

As a result, a new board of directors is put in place representing the three main factions within Taiwan's government and President Fu Chun Fan resigns. Under the direction of Chairman Hung-I Chiang and acting

CEO Cheong Choong Kong, the search is begun for an equity partner who can provide outside assistance and what some refer to as a "fast track" recovery from the problems of the past year.

Simultaneously, a fleet revision study is undertaken. It will reveal a corporate desire to emphasize B-777s and B-747-400s in long-haul operations. Should this approach come to pass, the company will remove and sell 5 B-747SP-09s, 5 A300B4-220s, 8 A300B4-622Rs, and 4 MD-11s.

In May, Taiwan aviation authorities order CAL not to purchase or lease any additional aircraft until it has improved its air safety standards. The freeze does not include plane purchases already approved.

A memorandum of understanding is signed with **Singapore Airlines, Ltd.** on August 1 to form a strategic alliance. SIA will acquire up to 10% equity in the Taipei-based flag carrier within six months, with the possibility of increasing its stake at a later time. At mid-month, it is announced that the equity stake will actually be closer to 30% and that the next CAL president will undoubtedly be appointed from SIA.

It is reported in mid-September that, for the year's first half, CAL has lost \$1.56 billion (\$45 million). This is the airline's first deficit in 12 years and reflects the impact of the Asian economic crisis.

Capt. Pow Tuk Kwan, a former SIA A340 chief pilot, is seconded to CAL on September 1 to serve as the airline's vice president-flight operations and training. Meanwhile, Capt. Gui Wee Kee becomes special assistant to the CAL president for flight safety.

While en route from Tokyo (HND) to Honolulu on September 11, Flight 018, a B-747-209B, encounters clear air turbulence at a point 1,230-mi. NW of Honolulu at 37,000-ft.; 11 people aboard are injured.

On October 26, CAL takes delivery of a brand new Next Generation B-737-809 passenger airliner, the first of its type in Asia, and announces that 7 more will be received by the end of the year. The new aircraft will replace the carrier's 5 existing B-737-409s on short- and medium-haul domestic and regional routes.

During a meeting of the CAF on October 30 the decision is taken to sell more than 50% of its 71% stake in the airline in order to improve its operational structure by finding additional long-term investors. A financial consulting firm will be retained to help the foundation plan its share release. Also, the board, aware of the fact that CAL has been unable to find a president, recommends that the airline consider a promotion from within.

That suggestion is taken and, on November 6, Sandy Liu, a longtime CAL executive, is named acting president.

Negotiations with **Singapore Airlines, Ltd.**, which have continued since August, become difficult in December. CAL and nationalistic Taiwanese government officials balk at the prices suggested as well as the percentage to be sold and management responsibilities to be surrendered. They demand that the foreign stake be capped at just 10%.

Passenger boardings dip 1% to 7.32 million, while freight traffic inches up 1.4% to 2.79 billion FTKs. Revenues are down 7.2% to \$1.58 billion, while costs are up 3.4% to \$1.7 billion. The operating loss is \$118.95 million, while the net loss is \$66.76 million.

Airline employment stands at 9,100 at the beginning of 1999. It is announced on January 7, that the company's top 400 managers will take pay cuts this year totaling \$T10 million (US\$310,000). Chairman Liu's income will be reduced by a full 10%, but pay will not be cut for flight crews or technical personnel.

When political interference in the talks becomes too intolerable, they collapse on January 9. Although the SIA captains assigned to assist CAL with safety and training will be allowed to remain, the memorandum of understanding is torn up and there will now be no equity stake in CAL purchased by SIA.

Having elected not to take a stake in CAL, **Singapore Airlines, Ltd.** will now turn its attention to **Ansett Australia (Pty.), Ltd.**

Later in the month, in an effort to cut costs, the company cuts out the unprofitable Germany to Switzerland segment of its twice-weekly roundtrip service from Taipei to Zurich via Frankfurt.

In March, the company's board of directors approves the merger of the two subsidiaries **Formosa Airlines, Ltd.** and **Mandarin Airlines,**

Ltd., with the latter the surviving partner. Plans are announced for the transfer of domestic and certain secondary regional routes to Mandarin, with CAL taking over Mandarin's international flights.

Relatives of the 264 passengers who died in the 1994 Nagoya disaster gather on April 26 at a memorial to mark the fifth anniversary of the accident.

After a safety audit uncovers major continuing deficiencies and Captains Pow Tuk Kwan and Gui Wee Kee report that significant differences exist between their ideas on training and those of CAL instructors, the two-year SIA pilot training contract is cancelled during the last week of May, 16 months ahead of its scheduled conclusion.

A third weekly MD-11 roundtrip from Taipei to Rome via Abu Dhabi is added on June 18. At this point, the China Aviation Development Foundation (CADF) contracts with the U.S. investment bank Salomon Smith Barney to help broker a divestiture.

During July, plans continue by the CADF for a 35% reduction in its 71% stake in the carrier by year's end. The sell-off is seen as central to a strategy of modernization needed to forge alliances with leading foreign airlines.

While landing at Hong Kong after a service from Bangkok and Taipei on August 22, Flight 642, an MD-11 piloted by Capt. Gerardo Lettich with 14 crew and 300 passengers, is caught in the fierce winds and heavy rains of Typhoon Sam, which is moving through the area. A wingtip catches the runway and the aircraft flips over, killing three passengers and trapping the remainder of the occupants, some for as long as two hours. A total of 211 aboard are injured; many will remain in hospital for several days. The CAL incident is the first major accident at Chek Lap Kok Airport since its opening.

Typhoon Sam continues to play havoc with service at Chek Lap Kok Airport on August 23-24. Following the CAL crash on August 22 that adds to that day's delays, additional problems are encountered by CAL and **Cathay Pacific Airways (Pty.), Ltd.**, in particular, during the next two days. A total of 77 incoming flights are delayed on August 23, 20 are cancelled, and 14 diverted, with 122 outgoing flights delayed and 16 cancelled. The next day, a total of 175 scheduled flights in and out of Hong Kong are delayed, none are diverted, and 39 are cancelled.

The MD-11 crash sends company stock prices downward, but does not impact on CADF plans for divestiture. In Taipei on August 25, a leading potential bidder, the China Development Industrial Bank, indicates that it must have a full 36% and management control if it is to invest.

On August 31, in light of continuing government safety concerns over CAL, the airline announces that for the month of September only it will suspend one daily roundtrip between Taipei and Hong Kong, as well as two daily roundtrips from Taipei to Los Angeles and to San Francisco.

As the result of a quota dispute with Manila, service between Taiwan and the Philippines is suspended on October 2. In November, **Mandarin Airlines, Ltd.** trades its Vancouver, Sydney, and Brisbane routes to CAL for the parent's Taipei-Kaohsiung route.

As the year ends, the company has made much progress on its three principal goals: cost control, flight safety, and enhanced passenger service.

Customer bookings jump 7.7% to 7,883,000 while cargo increases 20.9% to 3.38 billion FTKs. Revenues surge 17.3% to \$1.93 billion and permit the previous year's net loss to rebound into an \$87.31-million net gain.

Among the world's top 25 airlines at the beginning of the new millennium, CAL is 12th in FTKs.

The dispute with the Philippines is settled on January 28, 2000, but resumed service between the two countries is again suspended on March 16 for the same reasons as before.

Flights begin from Taipei to Auckland, via Sydney, on March 26.

A weekly B-747-200F cargo route is opened on May 5 from Taipei to Frankfurt and back, via Bangkok and Abu Dhabi. Flight 652, an A300-600 en route from Taipei to Ho Chi Minh City the next day is forced to return to its point of origin when the pilot dies of a heart attack; a safe emergency landing is made by the copilot.

During the first five months, company unit costs fall 7% and productivity rises 20%; sales advance 13% to NT\$5.56 billion (\$180 million).

As the summer begins, the carrier launches negotiations with **China Eastern Airlines Company, Ltd.** and China Ocean Shipping (Group) Company, Ltd. concerning a possible minority buy into Shanghai-based **China Cargo Airlines Company, Ltd.**

The previously operated twice-weekly MD-11 route from Taipei to Sydney and Auckland flown by **Mandarin Airlines, Ltd.** is replaced on July 4 by a new CAL thrice-weekly MD-11 service.

Despite the marked improvements, the administration of incoming Taiwanese President Chen Shui-bian sets the stage for wholesale changes at the 71% state-owned CAL in early July. Chairman Chiang Hung-i is replaced by former **Far Eastern Air Transport Corporation** Vice President Lee Yun-ling. Of the nine members of the China Aviation Development Foundation, which administers CAL, all but Chiang are sacked. With no airline experience, former Kaohsiung city government consultant Christine Tsai-yi Tsung succeeds Sandy Liu as president.

Flight International reports on August 15 that the new board is reconsidering the carrier's ambitious Airbus and Boeing order announced a year earlier.

At the beginning of September, **China Eastern Airlines Company, Ltd.** is granted permission to sell CAL a 25% stake in **China Cargo Airlines Company, Ltd.**

An A300-600 with 256 passengers makes two emergency landings at Nagoya on September 6. En route to Taipei, a warning light comes on in the aircraft's cockpit and it makes a safe emergency landing where repairs are made and the plane is cleared to takeoff again. Once it departs, the same warning light comes on for a second time, requiring return for a second safe emergency landing.

The yearlong aviation dispute between Taiwan and the Philippines ends on September 26 with an agreement for the restoration of services. On September 29, weekly charters are started from Taipei to New Delhi.

Ten MD-11 roundtrips between Taipei and Manila occur between October 8 and October 27. Meanwhile, on October 13, it is revealed that CAL is one of four international airlines with which **Philippine Airlines** Chairman Lucio Tan is negotiating a possible sale of his carrier.

Regularly scheduled, daily Next Generation B-737-809 return flights commence the same day between Kaohsiung and Manila, with the schedule advanced to 14 weekly roundtrips between the cities as of October 29. Also on October 29, five-times-a-week Next Generation B-737-809 return service is inaugurated from Taipei to Medan, Indonesia, via Penang, Malaysia.

CHINA AIRWAYS CORPORATION (ZHONGHAU HANG-KONG GONGSI): China (1938–1945). Fifteen days after the establishment of **Japan Air Lines Company, Ltd. (1)** on December 1, 1938, the Japanese Army in China, seeking a more effective support tool than is currently available to it via **Huitong Hangkong Gongsi** or **Huitong Airways**, directs the establishment of this carrier. Publicly, it is created as a joint investment by JAL-1 and three local Chinese governments to provide commercial service. In fact, the carrier is an air transport arm of the military, which provides most of its passengers and all of its income.

The new entrant is outfitted with 20 Manshu Hayabusas and these conduct military support operations exclusively in 1939–1940. With a number of Fokker Model 8 Super Universals and Nakajima AT-2s transferred over from the airline parent, scheduled passenger operations commence in June 1941. A total of 31 destinations in China and Manchuria are visited. In October, the company establishes a special transport group, which is dispatched to French Indochina in preparation for war with the West, which erupts on December 7.

China Airways Corporation reaches its peak on January 1, 1942. At bases at Saigon and north China, the company employs a total of 4,000 and operates 100 aircraft, including 20 new Mitsubishi MC-20 Is. The service network in China and Manchuria covers 12,000 unduplicated km. On July 10, the unit in Indochina is merged, with similar groups

from JAL-1 and **Manchurian Air Transport Co.**, into the Army's Southern Air Transport Command.

Flight operations continue through 1943–1944 and until Japan surrenders on August 15, 1945. Little is known of specific operations or losses.

CHINA AIRWAYS FEDERAL, LTD.: China (1929–1930). Curtiss-Wright/North American Aviation CEO Clement M. Keys dispatches a group of experts, led by Maj. William R. Robertson, to China in February 1929 to form an airline. With shareholding divided between American (60%) and Chinese (40%) interests, **China National Aviation Corporation (CNAC-1)** is founded at Shanghai on April 12; Minister of Railways Sun Fo, son of political hero Sun Yat-sen, is named president. On April 20, he signs an exclusive 10-year airmail contract with CNAC-1 to operate three routes radiating from Shanghai, as well as for the construction of airports and aircraft and the operation of flying schools.

As the result of opposition from the Chinese military, the new airline is prohibited from the use of most airfields in the nation. Consequently, President Sun Fo requests that Curtiss-Wright fund the use of amphibians, thereby avoiding the cost of constructing private airports. Curtiss-Wright, also controlled by Clement Keys, agrees, although he additionally dispatches Harry G. Smith to manage CNAC-1 under Sun Fo. Five Leoning Air Yachts are crated up and, together with support personnel, depart Seattle for China on July 29.

China Airways Federal is established on August 22 as a wholly owned subsidiary of the Curtiss-Wright subsidiary Intercontinental Aviation and is incorporated under provisions of the China Trade Act of 1922. Ernest R. Price is appointed president and plans are made to initiate service under a contract with CNAC-1. Employing the first reassembled Leoning Air Yacht amphibian, the company undertakes Yangtze River proving flights on October 12–13.

CAF inaugurates scheduled service on October 21 over a route from Shanghai up the Yangtze River to Hankow via Nanking, Anking, and Kiuking. As the other 4 Leonings come on line, daily flights are undertaken.

On November 15, President Price approaches CNAC-1 for an initial payment on the company's contract. CNAC-1 drags its feet to a point where Sun Fo feels obligated to resign. He is succeeded by Communications Minister Wang Po-chun, who had originally supported military opposition to CNAC-1 creation. Still unpaid, CAF halts services on December 15. Price now seeks the assistance of Chinese Finance Minister T. V. Soong, who authorizes contract payment.

CAF is able to resume its Yangtze River services on December 17; however, a fatal split occurs between Price and Wang Po-chun, who stop communicating. It is reported at year's end that, since start-up, a total of 354 passengers have flown over 8,650 miles.

As the result of CNAC financial difficulties and the feud between Price and Communications Minister/CNAC President Wang, the CAF contract with CNAC-1 is cancelled on January 31, 1930. Price publicly protests the government action and the State Council overrules the cancellation order on February 7. The rift between Price and Wang is now too deep to repair and the former is dismissed on March 31.

Max S. Polin arrives in Shanghai in April to negotiate a new contract and the protracted talks drag on. On July 8, Polin and the Chinese government complete their discussions and enter into a new contract. Under its terms, a new **China National Aviation Corporation (CNAC-1)** is created into which CAF will be merged. CAF ceases operations on July 26, the day the deal is confirmed by the Chinese State Council.

CHINA ASIA AIRLINES, LTD.: Taiwan (1987–1994). China Asia Airlines is established at Taipei in 1987 and is controlled by the Kaohsiung Industrial Group. Two former air force generals, Lee Chia-Wen and Yin Heng-Yuan, are appointed joint general managers. Employing 1 Shorts 360-200, flights are inaugurated to Kaohsiung and Makung.

During 1988–1989, the original route is maintained and three more are opened, including a monopoly sector between Kaohsiung and the Kinmen Islands. A second Shorts 360-200 is added in 1991. In 1992,

both Dash-200s are replaced by 2 360-300s with an order outstanding for a third.

In 1993, President Gen. Lee and Gen. Yin, the vice president-operations, oversee a workforce of 100. Only 1 Shorts is in service during 1994 and the carrier shuts down at year's end. In early 1995 the company is purchased by the U-Land Enterprise group and is renamed **U-Land Airlines, Ltd.**

CHINA CARGO AIRLINES COMPANY, LTD.: 2550 Hingqiao Road, Hongqiao International Airport, Shanghai, 200335, China; Phone 86 (21) 6268 2868; Fax 86 (21) 6268 6505; Code CK; Year Founded 1998. Late in the second quarter of 1998, **China Eastern Airlines Company, Ltd.** joins with the state-owned China Ocean Shipping Company (COSCO) to create a seventy-thirty joint venture, all-cargo subsidiary, which will be known as China Air Cargo (2). The two partners provide \$63-million capitalization, with the airline arranging for cargo aircraft and providing management under contract.

The new freight operation, China's second all-cargo airline, will at first employ B-747Fs leased from **Polar Air Cargo** or **Evergreen International Airlines**. Meanwhile, CEA will convert its 11 passenger MD-11s into freighters, while assigning its only MD-11F to the concern. That aircraft currently operates a twice-weekly roundtrip all-cargo service between Shanghai and Chicago.

Revenue services by the new freight subsidiary, now renamed Cargo Airlines, commences from Hongqiao International Airport on August 18. Initial operations include domestic and international freight and mail delivery plus the subcontracting of aircraft for the delivery of goods for China Ocean and other non-airline concerns.

It is noted early in 1999 that CEA will send its 5 MD-11s to Boeing for conversion beginning in September. The first MD-11F will be received back in December and, like the others, will be transferred to China Cargo.

As the summer of 2000 begins, **China Airlines Company, Ltd.** launches negotiations with **China Eastern Airlines Company, Ltd.** and China Ocean Shipping (Group) Company, Ltd. concerning a possible minority buy into Shanghai-based **China Cargo Airlines Company, Ltd.**

At the beginning of September, CEA is granted permission to sell CAL the desired 25% stake in China Cargo. On September 7, an ACMI contract is signed with **Atlas Air**.

CHINA EASTERN AIRLINES COMPANY, LTD.: 2550 Hingqiao Road, Hongqiao International Airport, Shanghai, 200335, China; Phone 86 (21) 268-8899; Fax 86 (21) 268-8668; <http://www.china-on-the-web.com/sh-air/index.htm>; <http://www.chinaeastern-air.com>; Code MU; Year Founded 1988. China Eastern Airlines is the primary enterprise of China Eastern Air Group, one of the 55 experimental large enterprise groups approved by Chinese government. With its headquarters at Shanghai and additional hubs at Nanchang, Jian, and Hefei, it is a government-owned business separated from the former Shanghai Administration Bureau of **CAAC (The General Administration of Civil Aviation of China)** on June 25, 1988.

Although the company is involved in developing other industry-related business, CEA is first and foremost committed to air transportation.

The carrier is outfitted with a fleet that includes the first 4 of 10 McDonnell Douglas MD-82s coproduced in China. In addition, a fleet of 4 Xian Y-7 (Chinese license-built Antonov An-24s) is acquired to fly local routes, plus 5 Airbus Industrie A310-304s—the first Airbus product to be delivered in the PRC—4 MD-82s, 6 British Aerospace (HS) Trident 3Bs transferred from CAAC, and 3 British Aerospace BAe 146-100s.

In November–December, the carrier begins eight new routes. Fuzhou–Xian and Yantai–Beijing using the Trident 3Bs; Nanjing–Guangzhou and Nanjing–Hong Kong using the BAe 146s; Jinan–Hangzhou using the Shorts 360; Nanchang–Changzhou using the An-24; Nanchang–Gangzhou using the Xian Y-7; and Shanghai–Xiamen using the A310-200. Passenger boardings total 2,700,000 and 64.36 million FTKs are operated.

In early spring 1989, orders are placed for 3 A300B4-605Rs and 5 MD-11s. Two freight-configured Lockheed L-100-30 Hercules begin to fly fish products to Japan on behalf of Taiyuan-based China General Aviation Corporation (CNAC-2).

When the pro-democracy movement at Beijing is crushed on June 4, the U.S. government delays shipment of aircraft navigation equipment and McDonnell Douglas employees, engaged with China in airliner joint manufacture, are evacuated from Shanghai to Hong Kong until June 26. Still, the CAAC “associate” will add 4 more MD-82s in late summer and early fall.

Just after takeoff from Shanghai on August 15, an An-24RV with 6 crew and 34 passengers loses power and crashes into a river (34 dead).

The first A300B4-605R arrives in November, followed by 2 others in December.

In 1990 routes are served from Shanghai's Hongqiao Airport to Beijing, Fuzhou, Hangzhou, Hefei, Jiman, Nanchang, Tunxi, Wuhan, Xi'an, Xiamen, and Zhengzhou. The three new Airbus aircraft enter service on regional routes to Hong Kong, cities in Japan, and from Shanghai to Beijing. A new \$80 fare is instituted for non-Chinese citizens flying between Shanghai and Beijing. In May, the airline receives its two-letter designator code, MU.

In 1991, the fleet includes 4 A300B4-605Rs, 2 A310-304s, 3 Antonov An-24RVs, 3 BAe 146-100s, 14 MD-82s, 1 MD-11 (which arrives in June), 1 MD-11F, 4 Shorts 360s, 5 Xian Y-7s, and 5 Y-7-100s. A number of personnel are sent to **Japan Air Lines Company, Ltd. (2)** and a Japanese travel college to learn Western cabin service standards.

En route to Los Angeles from Shanghai on April 5, Flight MU53B, an MD-11 with 340 passengers, encounters severe turbulence over the North Pacific and is forced to make a nonscheduled landing at Shemya Air Force Base in the Aleutians; 160 passengers are injured, several seriously.

During the Easter Sunday holiday, eight MD-82 charters are flown to Hong Kong. Employing the MD-11, the carrier takes over **Air China International Corporation's** twice-weekly Shanghai to Los Angeles route in August, becoming the only Chinese airline to serve Shanghai roundtrip from the U.S. West Coast. The MD-82s now fly regional routes to Hong Kong, during off-peak hours to Singapore, and other provincial capitals in China.

A total of 3,600 workers are employed at the company's Shanghai hub in early 1992 and the fleet is altered again. One A300B4-605R is withdrawn along with 2 An-24RV. Added are 3 Fokker 100s and 2 MD-11s, 1 of which is a freighter. Weekly MD-11F roundtrip, all-cargo flights are initiated in January from Beijing to Chicago via Seattle and Tacoma.

In May, an order is placed for 7 (later 10) leased Fokker 100s. International passenger frequencies are launched in June from Shanghai to Madrid via Bahrain and Brussels.

With the assistance of 36 technicians from **Swissair, A.G.** over a 41-day period, the carrier completes its first MD-82 home-base D-level maintenance check on June 27. Los Angeles service is increased during the summer and capacity to Hong Kong and Japan is augmented. Passenger service to Chicago begins during the third quarter and, during the fourth quarter, nonstop roundtrip service is initiated to Hong Kong from the regional cities of Fuzhou, Hefei, Jinan, Nanchang, Nanjing, Ningbo, and Qingdao.

It is reported several years later that enplanements for this year total eight million.

In 1993, President Wang Lian and Vice President Operations Hu Ding Zhou oversee a workforce of 6,290. Along with **Air China International Corporation** and **China Southern Airlines Company, Ltd.**, China Eastern is one of three former state airline divisions elevated in stature by CAAC, now acting as a regulatory body, to that of an independent “aviation group.” It is given the authority to acquire its own fleet and responsibility for its own finances, including permission to trade shares on the newly allowed Chinese stock exchanges.

As a result, the fleet includes 4 leased A300B4-605Rs, 2 chartered A310-304s, 1 An-24RV, 10 Fokker 100s, 13 MD-82s, 2 owned and 3 leased MD-11s, 1 MD-11F, 4 Shorts 360s, 4 Xian Y-7s, and 3 Y-7-100s.

On April 6, an MD-11, en route from Los Angeles to Shanghai with 256 aboard, suffers an accidental deployment of its wing slats at altitude over the North Pacific. This lapse in control causes the aircraft to pitch so wildly that 2 passengers are killed and 160 are injured before the plane can be successfully diverted to Shemya AFB in the Aleutians.

Evergreen International Airlines complains to the U.S. DOT in September charging that CEA has threatened its Chinese customers with retaliatory actions if they ship with the American carrier; in October, the DOT terminates China Eastern's all-cargo operating rights to the U.S.

Just after landing at Fuzhou on October 26, Flight 5398, an MD-82 with 9 crew and 71 passengers overruns the runway into flooded ground, where the landing gear is sucked in and the fuselage breaks into 3 pieces (2 dead).

Operations continue apace in 1994. A company MD-82, en route from Seoul to Shanghai with 99 passengers makes an emergency landing on South Korea's southern Cheju Island on September 22 because of mechanical trouble. With the aid of **Korean Airlines/Korean Air (KAL)** maintenance personnel, repairs are made within half an hour and the plane is allowed to proceed. This is the first emergency landing by a Chinese airliner on Korean territory since China and South Korea opened an irregular air service the previous year. Negotiations, under way between the two nations to open regular flight services, continue.

The airline receives acclaim from the National Quality Management Association and is awarded "Best Cabin Service" for the year.

In January 1995, China Eastern begins revenue sharing with **Asiana Airlines** on services between Shanghai and Seoul. Orders are now placed for 9 McDonnell Douglas MD-90-30s.

It should be noted that China Eastern Air Group is responsible for the professional and specialized training of staff. Its training center, equipped with a cockpit simulator of an MD-82 and certified by the U.S. FAA, allows CEA to train its own pilots, as well as offer instruction to pilots of other airlines. All its MD-11 and MD-11F crews are trained by McDonnell Douglas Aircraft Company Training Center in California. Transport staff training, cabin attendant training, aircraft maintenance training, and management staff training are all provided by China Eastern Air Group.

When the summer schedule begins on March 26, the carrier begins twice-weekly services from Shanghai to Singapore, Qingdao, Jinan, Xian, and Harbin. Previously operated twice weekly, the route from Shanghai to Los Angeles is increased to thrice weekly. Frequencies from Shanghai to Seattle, Chicago, Brussels, Madrid are doubled from weekly to twice weekly, while services are resumed, expanded, or introduced from Shanghai, Dalian, Ningbo, Wenzhou, Yantai, Nanjing, and Yanji.

China Eastern in July is one of seven PRC carriers agreeing to make service with Taiwan easier for passengers from both Chinas; beginning in August, it will offer double boarding passes to customers traveling via Hong Kong on a **China Airlines, Ltd. (CAL)** connection. Service from a new hub at Qingdao begins on August 1 with service to Osaka (KIX).

At the same time, seven female Japanese cabin attendants begin working on company flights from Shanghai to Tokyo and Osaka (KIX); their appointment represents an experiment designed to test the actual response of business passengers who, in surveys, have expressed a preference for such cabin crew on Japan frequencies.

The company, at year's end, receives CAAC's annual "Flying Horse" award as well as the honor of being named one of the 50 best service companies in China.

Enplanements total 6,285,820 passengers, while 176,000 tons of cargo and mail are also transported. A net profit of \$76.4 million is reported, which now ranks the carrier 11th in terms of profit and 60th in sales revenue in the world aviation industry.

Airline employment stands at 9,300 in 1996 and the owned fleet now comprises 4 A300B4-605Rs, 1 A340-313, 5 Fokker 100s, 13 MD-82s, 2 MD-11s, 4 Xian Y-7s, and 3 Y-7-100s. The company also charts 6 A300-600Rs, 5 Fokker 100s, 3 MD-11s, and 1 MD-11F. Orders from the largest Airbus customer in China are outstanding for 4 more A340-313s, which will be delivered over the next two years.

In January, officials from **CAAC (The General Administration of Civil Aviation of China)** inform the Orient Airline Association that it will not support the applications for membership of its three largest airlines, **China Southern Airlines Company, Ltd.**, China Eastern Airlines, and **Air China International Corporation**. Rather, they insist that China National Aviation Co. (CNAC-2) will be the first admitted.

During March, the carrier contracts with FlightSafety International to dispatch a group of *ab initio* pilots to the American concern's Flight Academy at Vero Beach, California. CAAC's Civil Aviation Flying College participates in the design of their curriculum that will conclude with flight training on the company's Fokker 100 and MD-82 simulators.

The company has an exhibit in the CAAC pavilion at "Airshow China '96," the first PRC international airshow, which is held at Zhuhai Airport on November 5-10.

CAAC, the parent company, ranks CEA as the top Chinese airline in terms of management, service, on-time performance, and operating performance.

Passenger boardings surge 13.1% to 6,938,000, while 474.67 million FTKs are operated, a 7.7% increase over the previous year. Operating revenues reach \$870 million but, due largely to a 23% drop in international yields and an increase in interest rates, pretax gain falls to \$65 million. The carrier's debt and equity ratio, at 3 to 1, is now higher than that for any other airline in Asia.

There is no change in the size of the employee population during 1997.

On February 5, the Shanghai-based carrier, which has spent two years preparing its issue and waiting for the right market conditions, becomes the first Chinese airline to complete a public stock offering. It floats about one-third of its equity, or 1.4 million shares, for \$250 million, listed on the Hong Kong and New York exchanges. Those American depository shares that trade in New York are equal to 100 Hong Kong shares—the shares are not traded in Shanghai.

Partially due to a last-minute decision by the Beijing government to hike the voting rights of foreign shareholders to one vote per share, the issue is oversubscribed. Originally, foreign investors were to be limited to only 25% of the voting rights. Encouraged by the new terms, foreigners buy up 65.4% of the issue.

During April, a memorandum of understanding for cooperative, interline services is signed with **American Airlines**. The two will develop reciprocal code-sharing programs for flights between the U.S. and Shanghai and Beijing.

China Eastern now adds flights to cope with the spring and summer peak seasons. The Shanghai-Los Angeles flight becomes daily on May 1, and the route is extended to New York and Chicago. Daily flights also become available on the route linking Shanghai and Yellow Mountains in East Anhui Province. The route between Shanghai and Guilin, a tourist attraction in South Guangxi Zhuang Autonomous Region, will be flown with larger aircraft.

On May 6, the route between Shanghai and Quanzhou City, Fujian Province, is given two flights weekly. The direct service between Shanghai and Chongqing, a newly established municipality in southwest China, are resumed in July as is a link between Shanghai and Zhangjiajie, a tourist city in central China's Hunan Province.

On July 17, air passengers cite China Eastern for the third consecutive time as the best among large Chinese airlines that carry more than six million passengers annually. The survey sent out a total of 1.33 million questionnaires to solicit passenger opinion on the service quality of 25 airports and 16 major Chinese airlines. Other winners are **Xiamen Airlines Company, Ltd.** and **Shenzhen Airlines Company, Ltd.**, which each win first place in separate contests for the annual passenger volume exceeding two million and less than two million.

The first of 9 MD-90-30s is delivered in August and, in September, **Shanghai Airlines Company, Ltd.** wins CAAC approval to begin competing with CEA on international routes. With the arrival of the second MD-90-30 in October, the new jetliners are placed into service in eastern China's Anhui Province.

During the fall, CEA becomes the first to acquire one of the country's smaller regional airlines. The process, which will require 18 months, is begun in November for the takeover of **China General Aviation Corporation**. Meanwhile, CEA establishes a management working group to study additional acquisitions.

As the year closes, the carrier seeks a European code-sharing partner and enters into marketing discussions with **Deutsche Lufthansa, A.G., Air France**, and **British Airways, Ltd.** (2). A code-sharing agreement, which requires government approval, is signed with **American Airlines**. Pro rata agreements are also sought from **Qantas Airways (Pty.), Ltd.** and **Ansett Australia (Pty.), Ltd.** The European marketing partner is **Air France**.

For the year, passenger enplanements total 6,987,000, a 0.7% increase, while cargo moves up 14.6% to 544.01 million freight FTKs. On a 17.7% increase in revenues to \$1.03 billion, a \$76.5-million net gain is reported.

Reciprocal code-sharing flights are announced at the end of January 1998. In February, the carrier is specifically praised by **CAAC (The General Administration of Civil Aviation of China)** for its excellent 1997 safety record.

Also during the first quarter, an A320-214, leased from GE Capital Aviation Services, is delivered and enters service.

At the same time, the regulatory body **CAAC** significantly increases pressure for the amalgamation of the country's regional airlines into three large groups centered on major carriers. It is hoped that **China Southwest Airlines Company, Ltd.** will be acquired by China Eastern by 2001.

On March 1, the company signs a full code-sharing marketing alliance with **American Airlines**. Once government approvals are received, the two will share codes on flights from Los Angeles, Chicago (ORD), and Washington, D.C. (IAD) to Shanghai and Beijing.

Dual-designator roundtrip flights with **Air France** commence on April 1 thrice weekly from Shanghai to Paris.

Late in the second quarter, the company joins with the state-owned China Ocean Shipping (COSCO) to create a seventy-thirty joint venture all-cargo subsidiary, which will be known as China Air Cargo (2). The two partners provide \$63 million in capitalization, with the airline arranging for cargo aircraft and providing management under contract.

The new freight operation, China's second all-cargo airline, will at first employ B-747Fs leased from **Polar Air Cargo** or **Evergreen International Airlines**. Meanwhile, CEA will convert its 11 passenger MD-11s into freighters, while assigning its only MD-11F to the concern. That aircraft currently operates a twice-weekly roundtrip all-cargo service between Shanghai and Chicago.

A new twice-weekly route is inaugurated on July 1 between Shanghai and the Japanese city of Okayama.

The Asian financial crisis, competition from foreign airlines, retrenchment of state enterprises, and falling business traffic caused by improved road infrastructure all contribute to a decline in demand for air transport. The situation is exacerbated by an increase in domestic airline capacity.

The airlines, with little success, introduce a variety of fare reductions. **CAAC (The General Administration of Civil Aviation of China)** now steps in and requests that the companies delay new aircraft deliveries. Some will lease out or park their latest additions.

Revenue services by the new freight subsidiary, now renamed **China Cargo Airlines Company, Ltd.**, commences from Hongqiao International Airport on August 18. Initial operations include domestic and international freight and mail delivery plus the subcontracting of aircraft for the delivery of goods for China Ocean and other non-airline concerns.

Under terms of a fifty-fifty code-sharing agreement worked out with **Korean Airlines/Korean Air (KAL)** in July, a KAL MD-11F inaugurates scheduled weekly all-cargo roundtrips into China from Seoul at the end of August.

Just after takeoff for Beijing from Shanghai on September 11 on the continuation of a service from Los Angeles, Flight 586, an MD-11 with 17 crew and 120 passengers, suffers a jammed landing gear. Rather than

dump fuel, the jetliner circles Shanghai for three hours, while airport officials apply a coat of protective foam to the airport's main runway. The wide-body lands with its front gear retracted and skids along the runway, with emergency vehicles keeping pace spraying it with water and foam. When the plane comes to rest, all aboard are safely evacuated, with only minor injuries reported.

On September 15, CEA becomes the first airline from the PRC to place its codes on the flights of a U.S. airline. The company's two-letter designator is assigned to selected **American Airlines** flights between Los Angeles (LAX) and New York (JFK), Chicago (ORD), Dallas (DFW), and Washington, D.C. (IAD) as well as on services between San Francisco and Chicago (ORD).

The largest and most advanced pilot training center in the PRC is opened by CEA at Shanghai on October 5; the Eastern Flight Training Center has cost \$100 million to build and equip.

American Airlines begins dual-designator service in October when it places its AA code aboard CEA flights from Los Angeles (LAX) and San Francisco to both Shanghai and Beijing.

Just after takeoff from Shanghai on a November 2 service to Osaka (KIX), Flight 515, an A300B4-605R with 15 crew and 87 passengers, loses a wheel from its front landing gear. The pilot seeks permission to return to his point of origin, where he circles for 90 min. while airport workers clear the runway and race fire trucks and ambulances to the scene. A safe emergency landing is made and, with local television broadcasting live, once the aircraft is stopped, all aboard deplane via the aircraft's stairs and not its emergency slides.

A strategic alliance is entered into with **All Nippon Airways Company, Ltd. (ANA)** on November 11. Under its terms, code-sharing is scheduled to begin on February 1 over routes from Osaka (KIX) to Shanghai and also to Qingdao and Beijing.

Richard Branson, the chairman of **Virgin Atlantic Airways, Ltd.**, visits Shanghai on November 24. He announces plans to meet with representatives of China Eastern in London in the new year to conclude a commercial agreement in the event that they are both designated to operate services on the London to Shanghai route. Both the British and Chinese governments will decide in December which of their carriers will be authorized to operate the two weekly roundtrips.

Early in December, Virgin gains route authority from the CAA in Great Britain. Also at the start of the month, CEA enters into a major code-sharing agreement with **Asiana Airlines**. In addition to the usual sharing of frequent flyer programs, marketing, and ground handling, the two undertake regular shared roundtrip service from Seoul to Yantai, four times a week.

In response to the Asian financial situation, which has an impact on all of China's airlines, CEA withdraws 5 MD-82s late in the year. These are returned to a lessor, which will pass them on to **Spanair, S.A.** just after Christmas.

The dual-designator arrangement with **Asiana Airlines** is enhanced on December 29. Two additional weekly roundtrips are added from Seoul to Yantai and new twice-daily nonstop roundtrips are inaugurated between Seoul and Shanghai.

Enplanements for the year total 8.37 million and 631 million FTKs are operated. Revenues fall 5.3% to \$942 million.

Early in January 1999, **Air China International Corporation**, which has lost upwards of \$25 million the previous year, receives a new chairman/CEO, succeeding the retiring Yin Wenlong. CEA Executive Chairman/CEO Wang Lian, once vice minister of the CAAC, receives the prestigious post.

Discussions concerning the formation of a strategic alliance with **Qantas Airways (Pty.), Ltd.** are announced on February 10. Under its terms, the two would begin code-sharing flights at the end of March. The Australian line will operate thrice-weekly B-767-338ER return flights from Sydney to Shanghai, while CEA will fly the same number of flights using an A340-313X between Beijing, Shanghai, and Sydney. The CEA Beijing-Shanghai segment will replace the same segment now dropped by Qantas.

After a month's delay, the dual-designator service with **All Nippon Airways Company, Ltd. (ANA)** duly begins on March 15. CEA codes are placed upon ANA flights between Shanghai and Osaka (KIX) and between Osaka (KIX) and Beijing via Qingdao. ANA's flight codes are added to CEA's similar flights. ANA has more than 50 weekly flights to China and CEA has more than 30 to Japan. The code-sharing automatically doubles the two airlines' flights between China and Japan.

General Manager Li Zhong-ming informs Reuters, Ltd. on March 19 that, instead of the loss projected, CEA will, in fact, show a profit for 1998. Due to increased travel over the Chinese Lunar New Year holiday, the company was profitable in February and, to raise cash and repay debt, the carrier will dispose of 13 MD-82s over the next 3 years, including 8 this year. The retirements are part of a program announced by **CAAC (The General Administration of Civil Aviation of China)** to trim the size of the overall domestic airline fleet and thereby help cut costs. CEA will receive 3 A320s and 2 MD-90-30s before December, which, after the MD-82 sales, will leave it with a net fleet reduction.

The company announces on April 13 that it has sold the 13 MD-82s to GE Capital Aviation Services, but leased back 3. Six of the others will be leased to **Spanair, S.A.** and 4 sold to **Spirit Airlines**.

The commercial arrangement with **Qantas Airways (Pty.), Ltd.** is formally signed on May 6.

On May 28, twice-weekly return service is inaugurated from Jinan to Chejudo, in the Republic of Korea.

Twice-weekly A300B4-605R return service is launched on June 17 from Shanghai to Fukushima, Japan, NE of Tokyo.

Flight MU-583, an MD-11 with 17 crew and 172 passengers en route to Los Angeles from Beijing, bounces hard three times and raises a cloud of smoke while landing at its intermediate Shanghai stop on August 8, skidding off the side of the runway and coming to a halt. All aboard are evacuated down emergency chutes and no injuries are reported.

By midyear, the carrier has sold 5 MD-82s, replaced 2 Fokker 100s with 2 leased A320-214s, acquired 2 additional MD-90-30s, and incorporated 3 B-737-3B1s. Part of these changes had been earlier indicated. In September, an agreement is signed with GE Capital Aviation Services for the 10-year lease of 10 more A320-214s.

During the third and fourth quarters, the company's route network is optimized, with over 20 routes, mostly domestic, closed down; the principal foreign casualty is the unprofitable San Francisco service.

Joining with IMB and the Shanghai Branch of the Industrial and Commercial Bank of China, CEA, in October, turns on the Online Ticket Booking and Payment System; the event marks inauguration of the first complete e-commerce system in China's aviation industry.

Chairman Li Zhongming's carrier enjoys a good traffic year, with passenger boardings jumping 6.4% to 8.6 million and 668.94 million FTKs operated. The previous year's net loss is turned into a net gain of \$18.19 million. This success is largely attributed to a rebound from the Asian economic crisis and the government's curb on ticket discounting.

The process of integrating **China General Aviation Corporation**, begun on schedule in November, continues apace as CEA purchases and leases CGAC's aircraft and absorbs its technicians.

A **Cathay Pacific Airways (Pty.), Ltd.** proposal to purchase a minority stake in China Eastern is rebuffed by the management of the mainland carrier on April 1, 2000. Plans to charter 8 A340s from ILFC are cancelled on June 25.

In response to a fatal June 22, **Xian Airlines Y-7-100C** crash, CAAC delivers a major reorganization plan to the China State Council in late July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into 3 groups built around **China Eastern, Air China International Corporation**, and **China Southern Airlines Company, Ltd.**

As the summer begins, the **China Airlines Company, Ltd. (CAL)** launches negotiations with China Eastern and China Ocean Shipping

(Group) Company, Ltd. concerning a possible minority buy into Shanghai-based **China Cargo Airlines Company, Ltd.**

During the last week of August, China Eastern takes a controlling 55% stake in **Air Great Wall**. Plans are announced to initially operate the company as a subsidiary, supplying it with funds to purchase 3 Next Generation B-737s.

At the beginning of September, CEA is granted permission to sell **China Airlines Company, Ltd. (CAL)** a 25% stake in China Cargo.

In mid-month, the first air service is launched from Ningbo, in Zhejiang Province, a Friday-only A320-214 return frequency to Bangkok; simultaneously, weekly roundtrips are started from Shijiazhuang, capital of Hebei Province, to Chogiu, South Korea.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including China Eastern, increase fares on November 5.

CHINA FLYING DRAGON AVIATION COMPANY: 15 Youxie St., Pingfang, Harbin, 150066, China; Phone 86 (45) 802541; Fax 86 (45) 802541; Code CFA; Year Founded 1981. CFDA is established at Harbin as a joint venture between the Harbin Aircraft Manufacturing Co. and the Chinese Ministry of Geological Mineral Resources in 1981 to offer short-haul passenger and cargo charters under the name Feilong Airlines. One of the earliest free-enterprise operators in the People's Republic of China, President Han Jinsheng's nonscheduled carrier grows throughout the remainder of the decade. Additional responsibilities added during these years include forest fire protection, maritime surveillance, and aerial photography.

In 1993, airline employment stands at 507 and the fleet includes 8 Harbin Y-12s, 14 Y-11s, 4 de Havilland Canada DHC-6-300s, and 8 Eurocopter AS-350B2 Ecureuil helicopters.

Operations continue apace during 1994-1995.

While on final approach to Changai on a June 21, 1996 service from Dalian, a Harbin Y-12II, with three crew and nine passengers, collides with a hill (two dead). The company receives its present name late in the year.

Despite the corporate makeover, in 1997 the fleet of the new president, Wu Cabao, remains the same as it was at the beginning of the 1990s. The workforce in 1998-1999 stands at 610.

The exact status of operations at the beginning of the new millennium is unknown.

CHINA GENERAL AVIATION CORPORATION: China (1952-1999). China's only large general aviation operator, 40-year old China General is established at Taiyuan in 1952; scheduled passenger services are inaugurated with Yakovlev Yak-42s in 1989. Over the next 5 years, some 58 routes are established linking the company's base with 18 local and regional destinations, including Beijing, Shanghai, and Guangzhou.

Tourist flights over the Great Wall of China are provided with Mil Mi-8 helicopters and the current color scheme is introduced in 1991. The service, operated by Beijing United Aviation Tourism, is a joint venture with the Handan Helicopter Company.

Just after takeoff from Nanjing Airport en route for Xiamen on July 31, 1992, Flight 7552, a Yakovlev Yak-42D with 10 crew and 116 passengers, fails in its ascent, crashes into a pond 1,970 feet beyond the runway, and burns (106 dead).

Shortly after takeoff for a routine sight-seeing trip on August 11, an Mi-8, with 24 passengers, including the crew and Japanese tourists, crashes 35 nm. NW of Beijing in a rural area; there are no survivors.

In 1993, President Zhang Chang-jing oversees a workforce of 3,791 and his fleet includes 6 de Havilland Canada DHC-6-300 Twin Otters, 5 Yak-42s, 5 Harbin Y-12Hs, 3 Antonov An-30s, and 2 each An-12Bs, Xian Y-7-100s, and Beech Super King Air 200s.

Flights continue in 1994 and enplanements reach 721,480 in 1995.

Airline employment stands at 4,100 in 1996 and the company's 46 aircraft transport a total of 680,000 passengers, a 6.1% decline over the previous year. Cargo traffic grows by 4.6% to 7.04 million FTKs.

During 1997, CAAC announces an airline rationalization plan designed to eliminate some of the nation's 27 regional carriers.

China General is the first targeted and, in September, **Air China International Corporation, China Eastern Airlines Company, Ltd., China Hainan Airlines Company, Ltd., and Shandong Airlines Company, Ltd.** all submit bids for the financially ailing concern.

The largest domestic carrier among the four is chosen by **CAAC (The General Administration of Civil Aviation of China)** to acquire the company. During the fall, China General begins an 18-month assimilation into **China Eastern Airlines Company, Ltd.**

CHINA GREAT WALL CORPORATION: No. 30, Haidan Nanlu, Hai, Dian Dishoe, Beijing, 100080, China; Phone 10-687-48800; Fax 10-687-48865; Code G8; Year Founded 1992. Established at Jiangbei Airport at Chongqing in Sichuan Province on July 21, 1992, President Huang Ming-shun's new carrier, which is initially known as the Civil Aviation Flying Institute of China, employs 150 workers and offers domestic passenger and cargo services with 2 Tupolev Tu-154s and 3 Xian Y-7-100s.

Flights continue in 1993-1999, during which time the fleet grows through the addition of 3 Boeing 737-2T4As, transferred over from **CAAC (The General Administration of Civil Aviation of China)**.

The exact status of operations at the beginning of the new millennium is unknown.

CHINA HAINAN AIRLINES COMPANY, LTD.: 29 Haixiu Road, Haikou, Hainan, 570206, China; Phone 86 (898) 671-1524; Fax 86 (898) 679-8976; http://www.hainanair.com ; Code H4; Year Founded 1989. This new Chinese entrant is formed on October 18, 1989 by **CAAC (The General Administration of Civil Aviation of China)** and the Hainan provincial government to provide scheduled services to destinations in southern China. The company will go through a long gestation period before that goal is realized.

The company becomes a public airline in 1992 when stakes, collectively valued at Rmb 250 million, are purchased by 10 major concerns, chief among which are China Guangda International Trust & Investment Corporation, American Aviation LDC, Sanya Company, and Halkou Station. On the basis of the shareholding, a Rmb 6,660-million loan is acquired. Orders are placed with Ansett Worldwide Aviation Services for the lease of a fleet of Boeing 737s.

At their base at Haiku in Hainan Province, the carrier's chairman, Yuan Feng Po, and President Chen Feng recruit a workforce of 472, including two Australian pilots hired in October from **Ansett Australia (Pty), Ltd.**

Equipped with 2 of 4 ordered Boeing 737-33As, services are inaugurated on May 1, 1993, linking Haiku with Beijing, Chengdu, Guangzhou, Shanghai, and Xian.

During the remaining seven months of the year, China Hainan boards a total of 164,623 passengers and hauls 2.36 million FTKs. Revenues are \$13.5 million and, with no airline taxes in the province, the company realizes a \$7.9-million net profit.

The employee population is dramatically increased in 1994, up 51.6% to 829 and the last 2 B-737-33As are delivered. Orders are placed during the spring for 2 Fairchild Metro 23s and a cadre of pilots for them are sent to the manufacturer's San Antonio plant in July for training.

The route network is increased to 20 destinations and, employing 2 new Fairchild Metro 23s upon their delivery in the fall, CHA initiates a shuttle service between Haikou and Sanya. A new office building is occupied at the company base and two joint venture companies are created, Hainan Air Catering and Phoenix Information Systems.

Passenger boardings skyrocket an almost unbelievable 268.9% to 606,442 while freight increases 346.2% to 5.04 million FTKs. Revenues jump a remarkable 231.6% to \$46.05 million while expenses climb even

more, up 303.1% to \$36.16 million. The operating profit is increased to \$9.89 million and net gain reaches \$10.33 million.

Operations continue apace in 1995. On March 10, farmer Jin Xiaoping unsuccessfully attempts to take over a B-737, en route from Yiu to Guangzhou, and force it to Taiwan. He is overtaken by the jetliner's passengers and crew.

The subsidiary **China Hainan VIP Flight Service** is established under its own chairman, Zhizheng Tu, to provide on-demand passenger charters.

In October, a memorandum of agreement is signed with Fairchild Aircraft for the purchase of a number of Metro 23s. During the last week of November, **CAAC (The General Administration of Civil Aviation of China)** and the PRC Ministry of Foreign Trade and Economic Cooperation grant the company the right to have foreign investors. American Aviation Investment, partially controlled by the financier George Soros, becomes the first to take a stake in a PRC airline when it acquires 25% shareholding in November for \$25 million.

The first 2 Metro 23s are delivered in December. Enplanements this year reach 953,560 and revenues climb to \$58.8 million. A net \$9.8-million profit is recorded.

Airline employment stands at 1,500 in 1996 and the owned fleet now includes 2 each B-737-33As and Fairchild Metro 23s plus 1 Learjet 55. Also flown, under charter, are 2 B-737-3Q8s, 1 B-737-4Q8, and 1 Learjet. Orders are outstanding for 1 B-737-3Q8, 2 B-737-4Q8s, and 2 Metro 23s.

On January 16, the company signs an agreement with Ningbo City to establish a hub at the Zhejiang Province port city. It is the first time a local Chinese airline establishes a hub in another area. As soon as they are delivered, the 2 new B-737-4Q8s are assigned to the new base.

En route from the eastern Chinese city of Yiwu to Guangzhou on March 10, a B-737-33A is hijacked toward Taiwan; after the pilot lands at Zhuhai Airport, 30 miles west of Hong Kong, which the knife-wielding attacker believes to be Taipei, security police subdue the pirate without further incident.

In April, a letter of intent is signed with Fairchild Aircraft for the purchase of 10 more Metro 23s.

Plans are announced on June 1 for the company to be listed on the Shanghai stock exchange late in the year or early in the next. The offering would represent upwards of 30% of the company's 400 million shares.

Two additional B-737-4Q8s arrive under charter in August. The first 5 Metro 23s are delivered on October 16.

The company has an exhibit in the CAAC pavilion at "Airshow China '96," the PRC's first international airshow, which is held at Zhuhai Airport on November 5-10. For the year, an on-time performance rate of 95.5% is registered. President Cheng Feng receives a trophy as China's "national top entrepreneur" for 1996.

Passenger boardings soar 23.1% to 1,240,000 for the full year, while freight is up a remarkable 361.2% to 1.43 million freight FTKs. Through September, operating income is \$75.7 million and a net gain of \$11.9 million (later corrected to \$10.8 million) is announced.

In mid-February 1997, orders are placed for 10 more Metro 23s.

The carrier receives permission from CAAC, on March 19, to extend its services into the area of domestic air cargo transportation. Seven Metro 23s are introduced into service on March 24.

On May 13, it is announced that the carrier will sell space on its planes' sides for ads in a program reminiscent of the "logo jet" program of **Western Pacific Airlines**.

A total of 71 million Class B shares of common stock are traded on the Shanghai Stock Exchange on June 16; they yield \$33.4 million to the airline and allows it to increase its capitalization from Rmb 400.2 million to Rmb 471.2 million.

At the CAAC conference on July 24, Hainan receives a trophy for having provided the best in-flight service in China.

The last 2 Metro 23s from the original order arrive on August 1. Five more from the supplemental request are to be delivered by year's

end and the remainder in 1998. Also during the month, the company sells 71 million shares of its Class B stock on the Shanghai stock exchange; the placement raises \$31.4 million, which is applied to the leases of 3 B-737s.

In September, China Hainan is one of six carriers to form the New Star Alliance. This is in line with the Chinese government's policy designed to reduce the number of regional airlines in order to increase the efficiency of competition. When activated the following January 1, the informal compact will, hopefully, begin to boost the quality of its members' services via integrated passenger and marketing services and code-sharing on selected routes.

Three Metro 23s are delivered in October and one each in November and December. Meanwhile, Chairman/President Feng is a delegate to the APEC Summit conference held in Vancouver on November 21 to 24.

Enplanements total 1.49 million and the company doubles its net gain to \$20.1 million.

Flights continue in 1998. Passenger boardings shoot up 26% to 2.02 million, while cargo traffic jumps 22.1% to 28.65 million FTKs. China Hainan is one of the few mainland Chinese carriers to generate a profit during the year. On turnover of 1.3 billion yuan, a net 100 million yuan gain is realized.

On January 5, 1999, China Hainan is able to sign for a 6.5 billion yuan (US\$785 million) line of credit with the Bank of China. The funds will be employed as financing guarantees for the airline's plans to expand its fleet later in the year through the addition of 1 B-767 and 2 B-737s.

Twice-weekly scheduled MD-11 charters are initiated on March 18 between Taipei and Guam.

On August 30, CHAC becomes the first PRC airline to order a regional jetliner, placing a \$226-million order with Fairchild Aerospace Corporation for 19 328JETs, with 20 options.

Deliveries of the new 328JET commence on November 3; China Hainan, as part of the arrangement, returns 9 Metro 23s to Fairchild. Also in the fall, another new Next Generation B-737-84P is received. Like the other "Baby Boeings" in the fleet, this one also wears a colorful livery reflecting the island's wildlife.

As the year ends, hopes are high that the carrier might also be able to obtain 3 B-767-300ERs. Both the aircraft and approval for international service had been approved in 1997, but were shelved due to the Asian economic crisis. The second 328JET arrives in December.

Enplanements for the year total 1.82 million and 4 million FTKs are operated. A net profit of \$15.9 million is reported.

Air Transport World reveals in its April 2000 issue that the carrier has borrowed \$132.8 million from the Agricultural Bank of China to finance the purchase of 10 more 328JETs. The company's first international route is inaugurated on June 30 with a daily B-737-84P roundtrip from Sanya to Macau.

With approval from both CAAC and officials of the provincial government at Haikou, Hainan raises its stake in Haikou Melan Airport from 25% to 60% on July 1. The company takes over the airport on July 11, becoming the first airline in China to administer an airport.

The sixth B-737-84P arrives on August 4. Also during the month, Hainan becomes the first mainland Chinese carrier to hire Caucasian crew members to serve on its flightdecks.

On September 1, an arrangement is signed between the provincial government and China Hainan under which that carrier will acquire **Changan Airlines**, the identity of which will, for now, be retained.

As a subsidiary, Changan will continue to operate as before with its fleet of 5 Yun Y-7-100s and 2 Y-7-200s, but the 3 new Bombardier Aerospace DHC-8-Q400s it had ordered during the spring will be delivered to China Hainan instead.

The mainline carrier's 10th 328JET arrives from Fairchild Aerospace on September 17.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including China Hainan, increase fares on November 5.

CHINA HAINAN VIP FLIGHT SERVICE: Jingchao Building, No. 5 Nungzhanguan, Naniu, Chaoyang District, Beijing, 100026, China; Phone 86 (10) 6506 8280; Fax 86 (10) 6949 7853; Year Founded 1995. A subsidiary of **China Hainan Airlines Company, Ltd.**, this company is established at Beijing Capital Airport in late 1995 to provide on-demand passenger charters. Zhizheng Tu is appointed chairman.

The first new business jet sold in China's private sector is a Learjet 60, which arrives in September 1996, followed by a Learjet 55. The two planes begin and continue revenue flights.

CHINA NATIONAL AVIATION COMPANY. See CAAC (THE GENERAL ADMINISTRATION OF CIVIL AVIATION OF CHINA)

CHINA NATIONAL AVIATION CORPORATION (CNAC-1): China (1930-1952). Following the creation of a semi-stable Nationalist Chinese government by Chiang Kai-shek in early 1928, the U.S.-based Curtiss-Wright Corporation (CWC) dispatches R. O. Hayward, president of its Aviation Exploration, Inc. subsidiary, to China in December. He is to discuss creation of an American-backed airline with Minister of Railways Sun Fo, son of Chinese political hero Sun Yat-sen.

By January 1929, negotiations have proven favorable and CWC dispatches former airline executive William B. Robertson to Shanghai, where he arrives in mid-February. A number of proving and demonstration flights are made in March and April. A proposal is put to the Chinese government under the China Trade Act for the creation of an airline that can link Shanghai with Hankow, Peking, and Canton.

President Chiang officially signs off on the April 12 creation of China National Aviation Corporation (CNAC-1), with shareholding divided between U.S. (60%) and Chinese (40%) interests. Sun Fo is named president and he, in turn, signs a 10-year contract with Aviation Exploration for the operation of at least one daily roundtrip over three routes, with payment made on a sliding scale based on aircraft capacity.

Not all factions within the Nationalist cabinet are pleased with this new arrangement. The War Minister and Minister of Communications Wang Po-chun jointly express their opposition, with the former prohibiting use of the nation's land airfields, which he declares to be military bases. Wang Po-chun goes even further, contracting with the Stinson Company in May for four aircraft with which to start a competing carrier, the **Shanghai-Chengtu Air Mail Line**. Faced with this opposition, Sun Fo convinces CWC to fund the purchase of 5 Leoning Air Yachts that can operate as amphibians. Curtiss CEO Clement Keys goes even further, sending Harry G. Smith out to manage CNAC-1. Smith also agrees with the decision to acquire amphibians.

The **Shanghai-Chengtu Air Mail Line** launches Stinson SM-1F De-troiter services to Nanking on July 8, becoming the first operator in Chinese civil air history to offer sustained passenger and mail services. On July 27, the crated Leonings, together with a support team, depart Seattle for Shanghai by ship.

China Airways Federal (CAF) is established at Shanghai on August 22 as a wholly owned subsidiary of the CWC subsidiary Intercontinental Aviation and is incorporated under provisions of the China Trade Act of 1922. Ernest R. Price is appointed president and plans are made to initiate service under a contract with CNAC-1. Employing the first re-assembled Leoning Air Yacht amphibian, the company undertakes Yangtze River proving flights from a base on the Whangpoo River at Shanghai on October 12-13.

CAF inaugurates scheduled service on October 21 over an inaugural route from Shanghai up the Yangtze River to Hankow via Nanking, Anking, and Kiuking. As the other 4 Leonings come on line, daily flights are undertaken.

On November 15, President Price approaches CNAC-1 for an initial payment on the company's contract. CNAC drags its feet to a point where Sun Fo feels obligated to resign. He is succeeded by Minister Wang Po-chun, who had originally supported military opposition to CNAC-1

creation. Still unpaid, CAF halts services on December 15. Price now seeks the assistance of Chinese Finance Minister T. V. Soong, who authorizes contract payment. CAF is able to resume its Yangtze River services on December 17; however, a fatal split occurs between Price and Wang Po-chun, who stop communicating. It is reported at year's end that, since start-up, a total of 354 passengers have flown over 8,650 miles.

As the result of CNAC financial difficulties and the feud between Price and the Communications Minister/CNAC President Wang, the CAF contract with CNAC is cancelled on January 31, 1930. Price publicly protests the government action and the State Council overrules the cancellation order on February 7. The rift between Price and Wang is now too deep to repair and the former is dismissed on March 31.

Max S. Polin arrives in Shanghai in April to negotiate a new contract; he succeeds Price as CAF president, but, in the typical Chinese fashion of the day, the talks are protracted. On July 8, Polin and the Chinese government complete their discussions and enter into a new contract.

Under its terms, a new China National Aviation Corporation (CNAC-1) is created, with shareholding divided between the Ministry of Communications (55%) and **China Airways Federal** (45%). Capitalization is increased to 10 million yen (\$3.3 million) and plans are made to amalgamate CAF and the **Shanghai-Chengtu Air Mail Line**. K. C. Huang is named chairman, with Polin becoming president and Gen. Neih Kai-I taking the post of vice president operations. The fleet acquired from the two submerged operators includes 5 Leoning amphibians and 5 SM-F1 Stinson Detroiters. The mail routes from Shanghai to Canton, Peking, and Chongqing are confirmed and a new 10-year contract is executed.

During the next several weeks, agreements are reached with authorities in those areas not controlled by the Nationalist government, including Shantung Province, Szechwan, Peiping, and Hopei. The Chinese State Council confirms the entire arrangement on July 26, the day CAF ceases operations under its own name and assumes its role as the American holding partner. Its previous routes and those of the **Shanghai-Chengtu Air Mail Line** are maintained as preparations are made to expand services.

On September 12–16, Gen. Neih, flying one of the Detroiters, makes a pioneering four-day roundtrip survey flight to Chongqing.

In boardroom battles in the U.S., CEO Clement M. Keys now loses control of CWC/North American Aviation to Thomas A. Morgan. CNAC's fleet, meanwhile, is improved through the addition of up to 5 Air Yachts.

During the fall, mail and passenger traffic between Shanghai and Hankow is significantly increased and by December 1, a total of 3,000 passengers have been safely carried over 40,000 miles in the year since **China Airways Federal, Ltd.**'s start-up. On December 9, an Air Yacht with six aboard crashes in the Whang Poo River, near Shanghai, while taking off (four dead); the event is the first fatal airline crash in Chinese history.

Although his aide had previously reserved an Air Yacht for a charter to Nanking for his entire party, Chiang Kai-shek arrives at the Hankow base on December 24 only to learn that the American field manager has dispatched the Leoning on its normal scheduled service. Considering himself to have been slighted, an angry Chiang orders the manager jailed, even though the plane is called back for him. When the plane arrives back at Hankow, the Chiang has its pilot jailed, refuses to employ CNAC, and proceeds to Nanking on a gunboat.

Meanwhile, the entire operation, capitalized at \$7 million, is not financially viable, losing money at an annual rate of \$260,000 per year. Former naval aviator and CWC official George C. Westervelt arrives at Shanghai on Christmas Day to improve the company's fortunes and win a subsidy from the Chinese government. Westervelt immediately recommends the appointment of a new CNAC-1 management team. William Langhorn Bond is named CEO, with the title of operations manager, and ordered to Asia.

Gen. Neih, on March 4, 1931, completes a three-day roundtrip Stinson Detroit proving flight from Shanghai to Peking. Eleven days later, two SM-1Fs complete a nonstop flight to the nation's northern capital in just seven hours. New CEO Bond arrives in China on March 17.

Leoning service is inaugurated on April 1 to Ichang via Wuhu and Shasi. On April 15, employing Detroiters, CNAC inaugurates airmail flights from Shanghai and Nanking to Peking via Suchow, Tsinan, and Tientsin. The Stinsons are taken out of service on June 8 for engine modifications and the Shanghai to Peking route is closed until these are completed on September 12.

Service is extended along the Yangtze River on October 31 to Chongqing via Wahsien. Poor weather in November–December causes three Detroiters to crash, one onto Taishan Mountain in Shantung and the other two near Peiping (four dead).

Enplanements for the year total 2,296, with 75,742 pounds of mail and freight flown.

In January 12, 1932, the Japanese bomb Shanghai and further attacks the city on January 28. On February 28, Japanese forces complete the occupation of Manchuria and break it off from China to form the puppet state of Manchuko.

Meanwhile, CNAC-1, despite a protest to the American consul by the Japanese, continues to maintain service to Nanjing. Bond keeps the airline in operation in the face of dwindling CWC support and difficulties with the Chinese board chairman K. C. Huang. Several more aircraft are lost in crashes and Morgan seeks a buyer.

On the year, the airline flies a total of 3,153 passengers and hauls 111,872 pounds of mail, a 25% increase over the previous 12 months.

CNAC-1 starts 1933 with a fleet of 5 Stinson Detroiters and 5 Leoning Air Yachts; 7 pilots (1 German, 5 U.S.) are employed. The irregular airmail route to Peking from Shanghai is made permanent by Capt. E. M. Allison on January 12; the twice-weekly SM-1F service is flown via Haichow, Tsingtao, and Tientsin. The first passenger is flown over this route on February 1.

Pan American Airways (PAA) emissary Harold M. Bixby conducts survey flights in China preparatory to a tender offer. On March 31, **China Airways Federal's** 45% interest and responsibilities are purchased from Intercontinent Aviation by Juan Trippe for \$282,238.69, including \$181,385 in Pan Am stock.

The Yangtze River route is extended from Chongqing to Chengtu on June 4, but is discontinued within days. Under terms of the original contract, Shanghai–Canton airmail service must commence by July 8, but efforts have been blocked by Chinese officials seeking bribes.

Two Sikorsky S-38s arrive at Shanghai on June 26; one flies on to Canton, completing the stipulated terms with a mail flight (made possible by a European postmaster) back to Shanghai on the appointed day.

On October 8, agreement for operations to the coast is arranged with the government. Although the arrangement is actually formed between the Chinese and the PAA subsidiary Pacific American Airways, the deal is concealed so as not to raise the interest of the expansionist Japanese. Regularly scheduled S-38 mail-only service is started on October 24 from Shanghai to Canton via Wenchow, Foochow, Amoy, and Swatow. The Chongqing to Chengtu route is reopened thrice weekly on November 23.

The next day, November 24, an S-38 departs its Whang Poo River base to launch passenger flights to Canton. Encountering thick fog, it turns back, only to crash into Hangchow Bay while attempting an emergency landing. During Christmas week, the schedule on the Chongqing–Chengtu Detroit route is increased to four flights weekly.

Boardings for the year decline slightly to 3,132 while freight and mail slips to 110,403 pounds.

On April 10, 1934, the second S-38 disappears en route to Canton from Shanghai; it too is found to have crashed near Hangchow killing all aboard. Although a replacement S-38 will later be delivered, the coastal Canton–Shanghai route is temporarily closed down.

Bixby, Bond, and associates take this opportunity to reorganize the carrier; the board of directors now has five Chinese and five American members. It is also decided that the company will upgrade flight equipment, bringing in new aircraft to join the available fleet—in short, they start over.

Two of the 4 Douglas Dolphin commercial amphibians built are delivered to Shanghai in August. The company's first modern airliner, a Douglas DC-2, is ordered for Chinese service on September 8; 3 more will also be purchased. An agreement is reached with **Pan American Airways (PAA)** for the U.S. carrier to operate a Shanghai-Hong Kong route and a coastal route to Canton. The agreement is initiated on November 2 when the two Dolphins restore airmail service from the company base on the Whangpoo River at Shanghai to Canton.

Bookings accelerate to 5,223 for the year and mail and express jumps to 139,115 pounds flown.

Pan American Airways (PAA) dispatches the first of 3 Ford Tri-Motors, the 5-AT-115, by ship from San Pedro to Shanghai on February 3, 1935; it is followed by the first of 4 DC-2s in March. After a survey flight is completed to Kunming on March 25, Tri-Motor flights commence to Kweiyang in April while Shanghai to Peking DC-2 service is inaugurated in May.

The company extends the Shanghai-Kweiyang service to Kunming with Fords in July and, on August 12, the Ford 5-AT-116, the final Ford Tri-Motor built, is disassembled on the dock at San Pedro, California, and is shipped to Shanghai aboard the S.S. *Nora Maersk*. It will be followed by the 5-AT-101, shipped on October 23. The last S-38 crashes near Hankow on August 13. The fleet now comprises 11 aircraft.

The CNAC-PAA agreement of the previous September now becomes reciprocal as the Martin flying boats begin to arrive. During December, the fleet is increased by the addition of one each Tri-Motor and DC-2.

A total of 11,004 passengers are flown on the year over a record 2.9 million kilometers. Even more spectacular for the company's participants is the carrier's first profit.

A Ford 5-AT-115 Tri-Motor with six aboard en route from Chongqing to Kweiyang crashes near Tzukung, 30 mi. E of the latter point, on March 5, 1936. Although no one is injured, Capt. Byron G. O'Hara must walk 30 mi. to Pengyi to send a telegram reporting the accident site.

Later in the month, Capt. Charles L. Sharp is able to land his flaming 5-AT at Nanking; no one aboard is hurt but the plane is lost in the subsequent fire. A crated DC-2 is delivered by ship on June 26; assembled, it joins the CNAC fleet. During the summer, Capt. Moon Chin surveys a route to India.

In September, service to Yunnan is suspended due to insufficient aircraft availability. After several years of negotiations between PAA and the British government, Hong Kong becomes a stop on the Shanghai to Canton route on November 1. On November 15, thrice-weekly Shanghai-Hong Kong service is started.

Pan American Airways (PAA) delivers a Sikorsky S-43 on December 18; piloted by Capt. Julius Barr, the amphibian becomes the personal aircraft of Madame Chiang Kai-shek. The first DC-2, delivered back in 1934, crashes at Nanking on December 25. During the month, Chinese Nationalist and Communist forces agree to form a united front against the Japanese.

Passenger boardings climb to 18,588, with 190,225 pounds of mail and 57,011 pounds of freight flown; the year's profit is \$150,000.

Bixby and the Chinese sign a transpacific airmail contract on January 19, 1937. On April 16, the Dolphins shift their schedules so as to connect with PAA Sikorsky S-42s. These now begin to provide a link between the Whangpoo River CNAC-1 base at Shanghai and Manila, where the Martin 130s arrive from and depart for California.

Two Douglas DC-2s are delivered on May 18 and 30. A third is delivered to Pan Am on May 25 for transfer, but will not arrive due to the Japanese invasion. By summer, when Bond returns to the U.S. for his first vacation in seven years, the CNAC-1 fleet numbers 18 aircraft in operation or on order, including 4 DC-2s, 1 Ford Tri-Motor, and the 2 newly delivered ex-New York, Rio and Buenos Aires Line Consolidated Commodore *Trinidad* and *Argentina*.

The payroll includes 34 pilots and copilots and the company coffers hold \$15,000. The route network includes 20 Chinese destinations, including Hong Kong, Shanghai, Canton, Kweilin, Chongqing, Chengtu, Ichang, Kunming, Lungchow, Hankow, and Changsha.

Fabricated by Tokyo in an effort to prevent a united China, an incident between Japanese and Chinese troops at the Marco Polo Bridge near Peking on July 7 leads to the Sino-Japanese War and invasion of the nation by Japanese forces. Another flare-up occurs on July 9 at Shanghai, which is bombed on July 14. The Japanese attack results in the destruction of both Dolphins, anchored on the Whangpoo River. Peking is occupied by the Japanese on July 28 and Tientsin the next day. Although 10,000 Imperial marines are landed at Shanghai, the city cannot be quickly taken; a siege begins.

Company aircraft are now often commandeered by the Nationalists for various missions. In one such incident on August 14, a DC-2, piloted by Capt. Sharp, is taken over by Nationalist forces while refueling at an intermediate point en route to Shanghai, which had been bombed that day. Loaded with bomb racks and machine guns, the Douglas is forced to fly on to Hangchow.

All services are suspended on August 22 and Bixby directs the evacuation of American pilots and managers to Manila. Whatever equipment is not destroyed in Japanese bombing raids is seized by the Chinese Air Force in September. The Chinese appoint Colonel Lem Wei-Shing as managing director; he fires the departing American pilots and replaces them with Chinese. The airline's headquarters are relocated to Hankow. In a publicity move, Madame Chiang is placed in charge of civil aviation.

Returning from the U.S. in late fall, William Bond attempts to reclaim the civil airline from the Chinese military. Shanghai falls to the Japanese on November 8. In early December, Bond reaches an agreement with Chiang Kai-shek to resume American participation in CNAC, the main base of which is now transferred to Chongqing on December 13 following the capture of Nanking that day.

From its poorly situated island airfield, CNAC-1 inaugurates DC-2 service from Chongqing to Hong Kong's Kai Tak Airport on December 16 while maintaining schedules to the new, hopefully temporary, Chinese capital at Hankow. Late in the year, the company's contract with Pacific American Airways is renewed, guaranteeing continued **Pan American Airways (PAA)** support.

The onset of war sees the year's traffic figures decline. Customer bookings drop to 14,896 and mail is down to 188,034 pounds; conversely, freight doubles to 111,665 pounds.

CEO Bond "resigns" from **Pan American Airways (PAA)** in January 1938 and, with Madame Chiang's blessing, assumes control of CNAC; "volunteer" American pilots and managers, many fired by Colonel Lem, are signed on as well. Full service is resumed by May, with new routes started to Luchow, Suifu, and Kiating.

Following the spring floods, repairs are made on Chongqing's runway and tarmac; unable to find concrete, a local builder uses flat tombstones to complete his contract.

On August 1, new frequencies are initiated from Chongqing to Kweiyang, Kunming, Kweilin, and Hong Kong. En route to Chongqing from Hong Kong on August 24, the DC-2 *Kweilin*, piloted by Hugh Woods, is attacked by five JNAF fighters that force the plane to crash land on the banks of the Pearl River near Wangmoon, 360 km. W of Macao. All but three (Capt. Woods, his radioman, and a passenger) of the 17 passengers are killed by strafing. The *Kweilin* is the first commercial airliner in aviation history to be lost to hostile aerial assault. The plane will be salvaged and all but three of the bodies recovered.

Flights to and from Hong Kong are now made secretly at night or in bad weather. Canton falls to the Japanese on October 21 and Hankow is besieged. Between October 22-25, a pair of DC-2s rescue Chinese officials from Hankow. With the airfields lit with oil lamps, 238 people are flown out in 15 nighttime flights, including Chiang Kai-shek, aboard the Douglas piloted by Capt. Sharp. Before the temporary capital falls on October 25, both Consolidated Commodore flying boats are also pressed into the rescue effort, saving 58 additional passengers. One of the former Caribbean boats, piloted by Capt. Moon Chin, makes the last flight to the doomed city, landing at Shasi, on the Yangtze River west of town.

The Hong Kong-Chongqing route becomes the nation's major commercial air link to the outside world. During the year, the company flies

a total of 14,505 passengers and 477,819 pounds of freight and mail over 810,910 miles.

On January 25, **1939**, a bilateral air agreement is signed between Great Britain and China that will permit the inauguration of services to Burma. On March 15, Chongqing to Hanoi service is started via Kunming—CNAC-1's first foreign route.

Operating from Hong Kong this year and next, mail and passenger service is maintained from that British outpost to Chongqing. DC-2s and several newly received DC-3s flown by U.S. pilots haul cargos of tin and tungsten out of China, returning with medical supplies. Chinese pilots fly Commodores and Dolphins into the Chinese interior. As in 1938, all schedules are indefinite and carried out only at night or in bad weather.

On October 30, Chongqing to Rangoon flights commence. Passenger bookings for 1939 advance to 16,546.

On January 20, **1940**, a Ford 5-AT Tri-Motor crashes into a mountain near Kian. On October 29, the repaired *Kweilin*, piloted by Capt. Walter Kent and carrying 13 passengers, is again forced down by Japanese aircraft and again the survivors are strafed (9 dead).

The Indochina service is withdrawn following Japanese occupation of the French colony in November. The same month, Capt. Moon Chin makes a proving flight from China to India over the Himalayan Mountains. Boardings this year are level at 16,546.

During treacherous winter operations in early February **1941**, a DC-2 is lost in when it crashes into a peak in southern Hunan. Beginning on March 25 and continuing for the next four months, a Hong Kong to Nanshiung freight service is operated with 5 old Curtiss T-2 Condors purchased from the aircraft dealer Babb Corporation for \$25,000 each.

During early May, a DC-3 makes a hard landing at Suifu, to the west of Chongqing, losing its starboard wing. There is no replacement wing available and so an extra DC-2 wing is flown in from Hong Kong, strapped to the fuselage side of another DC-2. Even though it is 10 feet shorter than a DC-3 wing, the spare is welded into place, allowing this "DC 2-and-half" to return to base, flying into airline lore in the process.

On May 22, CEO Bond has the results of pilot Moon's Himalayan Mountains survey flight in hand. He recommends to U.S. President Franklin D. Roosevelt, through his aide Lauchlin Currie, the transfer to CNAC-1 of a group of C-47s (military DC-3s) to CNAC, which will be employed to establish an aerial supply route between China and India. The White House quickly authorizes delivery of the requested aircraft as part of a larger lend-lease package for Chiang Kai-shek, but they will not reach China before Pearl Harbor. Originally delivered in January 1935, a DC-2 is sold to **Panair do Brazil, S.A.** on May 29.

En route from Chongqing to Kunming on October 29, a DC-2 with nine passengers is attacked by Japanese aircraft, forcing it to crash-land 120 km. NE of its destination. The Rising Sun warplanes strafe the wreckage, but two crew members and three passengers survive.

On November 23, CEO Bond, with seven other Americans and two Chinese officials in a DC-3 piloted by Capt. Sharp, surveys a route from India to China over the Himalayan Mountains called "The Hump." War in the Pacific begins for the U.S. and U.K. on December 7—December 8 in the Philippines and China—at Pearl Harbor in Hawaii and all along the southwestern Pacific rim.

When the Japanese attack Hong Kong's Kai Tak Airport on December 8, 2 CNAC DC-2s and 3 Condors are destroyed by strafing; 2 DC-3s, 1 DC-2, and 2 Condors are hidden in nearby fields and remain serviceable. On December 8–9 and 9–10, the survivors make 16 flights evacuating nearly 400 people from Hong Kong to Namyung, 200 miles inland. Among the evacuees are 275 airline employees, Madame Chiang Kai-shek, industrialist H. H. Kung, and Madame Sun Yat-sen, widow of the founder of the Chinese republic.

One of the DC-3s surviving the Hong Kong onslaught is Capt. Sharp's aircraft, the same unit he had employed to fly CEO Bond over "The Hump" in November. After arriving at Namyung on the last overnight evacuation flight, the plane is immediately drained of its flammable liquids. At dawn on December 11, Japanese fighter aircraft strafe

the airfield, pumping an estimated 3,000 machine gun bullets into Sharp's aircraft.

Employing spare engines and fabric patches, mechanics are able to make sufficient repairs on the Douglas to allow Capt. Sharp to take off with it for Lashio the next day. During the flight, most of the patches on the fuselage sides fall off and the bullet holes, reacting to the airstream, begin to make almost-musical sounds. Still airworthy, Capt. Sharp lands safely at his Burmese destination, where his "Whistling Willie" takes on passengers and cargo before flying on to Calcutta.

Despite the spreading Pacific conflict, the company's operations for the year are the most successful to date. Semi-regular Chongqing to Calcutta flights commence on December 18 over the route started by "Whistling Willie."

A total of 21,292 passengers and 1.27 million pounds of mail and freight are flown over 1,005,000 miles.

The supposedly mighty British fortress of Singapore falls to the Japanese on February 15, **1942**, followed by Rangoon on March 8. Following closure of the Burma Road, the carrier's few remaining planes attempt to assist with logistics for the Allied military. The day of Rangoon's loss, company aircraft begin a daily logistics shuttle between Myitkyina in north Burma and the RAF base at Dinjan in Assam. The carrier's last two DC-2s crash-land at Kunming on March 14 (20 dead). Within days, **Pan American Airways (PAA)** orders a DC-3 transferred to CNAC-1 from its Pacific Alaska Airways subsidiary.

On April 8, the company completes a month of urgent flights between India and Burma. Some 16 tons of supplies are flown in daily for Gen. Joseph Stillwell's retreating forces, while a total of 2,400 personnel and 50 tons of cargo are flown out.

On May 5, a DC-3 piloted by Moon Chin and transporting six passengers including Col. Jimmy Doolittle returning from his raid on Tokyo, lands at Myitkyina from Chongqing to refuel. Sixty-six refugees clamor aboard and the plane, now piloted by Capt. Paul Kessler, flies on to Calcutta, where it deplanes its incredible all-time-record 72-person manifest. This is the famous scene often shown in films and videos commemorating the DC-3.

Ten of the C-47s approved for CEO Bond by President Roosevelt late the previous spring arrive at Kunming during May and June. These, together with the 3 remaining in CNAC inventory (including the new PAA unit) are able to open regular "Hump Ferry" service to Calcutta via Dinjan on July 1. A connection is also undertaken from Kunming to the Nationalist Chinese capital at Chongqing. In August, flights commence to Lanchow and Kweilin.

During the remainder of the year and into **1943**, company aircraft bear the brunt of the Himalayan service until U.S. 10th Air Force reinforcements begin to arrive in April of 1943. The main base of operations is transferred from Kunming to Calcutta and night flights are introduced. In October 1943, the company base at Chongqing is shifted to Suifu. Flights per month rise from 225 in January 1943 to 1,068 in November 1944.

On March 20, **1944**, **Pan American Airways (PAA)** advertises for pilots for a Burma Road supply service, which CNAC-1 resumes on May 27. The road itself, having moved out of danger, becomes the subject of a massive six-month rebuilding program, an effort partially sustained by these special CNAC supply flights. This year and next, lend-lease DC-3s and C-54s replace lost owned aircraft and expand the fleet.

The rebuilt Burma Road, now known as the Ledo Road after its Assam destination, reopens in early **1945**. It is reported on January 21 that, since the previous October 22, CNAC-1 alone has made 523 support flights to Paoshan and Myitkyina and 224 C-47 airdrop missions to workers along the highway. Service from Lanchow to Hami is inaugurated on March 28 and a connection is made with the Sino-Soviet airline **Hamiaita**. With the supply line from the U.S. fully open by late spring, CNAC receives 45 new aircraft, primarily Curtiss C-46 Commandos, in May alone. Six C-47s and 3 C-54s (military DC-4s) are acquired in June.

Following the atomic bombing of Hiroshima and Nagasaki in early August, Japan surrenders on September 2 and World War II is finally concluded. In the 80,000 flights made between April 1942 and September 1945, CNAC loses 46 planes and 25 crews on "The Hump" route.

Scheduled services from Shanghai resume in September. A new five-year agreement is signed in December between the Chinese government and **Pan American Airways (PAA)**; under its terms, the company's shareholding is redivided. The Ministry of Communications assumes an 80% stake while PAA sells all of its previously held shares for \$5.1 million and then buys back 20% of them for \$1.55 million. At this point, CNAC's principal base is returned to Shanghai from Calcutta.

Six C-54s are purchased from war surplus stocks in early 1946 and revenue flights are resumed over the prewar Chinese route network. The airline is taken over by the Chinese Air Force on June 18, 1946. Many aircraft are lost during the Chinese Civil War; some scheduled services are, however, maintained and permissions are even obtained for international routes.

A Curtiss C-46 with 3 crew and 25 passengers crashes while climbing away from Sichang, China, on September 20; there are no survivors.

In late fall, 8 war-surplus C-54s are converted to civil DC-4 standard in the U.S. for CNAC. With Nationalist and Communists forces in conflict, the national economy is faced with disaster; still, services are initiated or improved to Hong Kong, Calcutta, Bangkok, and Manila.

A DC-3 with five passengers is lost in an accident at Lung Wa Airfield, Shanghai, on December 16; there are no survivors.

On Christmas Day, three transports are lost in crashes near Shanghai in bad weather (71 dead).

The CNAC fleet at the beginning of 1947 stands at 6 DC-4s, 17 DC-3s, and 18 C-46s. More losses are suffered in January than in any other month of the year.

A DC-4 with 5 crew and 33 passengers is lost during initial approach near Tsingtao on January 5; there are no survivors.

A DC-3 with 3 crew and 16 passengers is lost 120 mi. S of Chungqing, China, on January 25; there are no survivors.

A C-46 with 2 crew and 24 passengers is lost near Hankow on January 28 (25 dead).

With 156 dead since December, the loss rate during the past month has been higher than at any comparable point of "The Hump" airlift during the war.

A C-46 freighter fails its initial climb and crashes at Lung Wa on April 25; both crew and three people on the ground are killed.

Operations continue apace during the remainder of the year, and even improve with the introduction of long-haul international service. Shanghai to San Francisco roundtrips commence on June 10 via Guam, Wake Island, and Honolulu.

A DC-3 freighter with three crew is lost near Yulin, China, on October 27 (two dead).

In November, **British Overseas Airways Corporation (BOAC)** forms a subsidiary, **Hong Kong Airways, Ltd.**, to compete with CNAC while protecting certain transport aspects of British commerce in China. HKA launches its first scheduled service, to Shanghai, on December 2.

Enplanements for the year total 202,510, with 8,826 tons of freight transported.

Hong Kong Airways, Ltd. initiates twice-daily flights to Canton on January 10, 1948, doubling the service on March 22. A C-46 with 11 aboard is lost at Mukden on January 20; there are no survivors.

Between April 21 and July 23, CNAC's Douglas and Curtiss transports fly 3,418 tons of supplies to the city of Mukden, which is besieged by Communist forces. The airline is taken over by the Chinese Air Force for three weeks on June 18 in order to avoid a strike by its unpaid personnel.

In early December, the company's base of operations is transferred from Shanghai to Hong Kong. A C-54 crashes on Basalt Island, near Hong Kong, on December 21, killing all 35 aboard, including President Theodore Roosevelt's son Quentin, who is now CNAC's vice president.

En route from Shanghai to Tsingtao on January 30, 1949, a DC-3 is diverted by 6 of the 20 passengers to fly to Tainan, Taiwan. The 6 are granted political asylum and the others are held for a month and released. The plane is confiscated by the Chinese Nationalist government.

Also in January, Harold Bixby is sent to China to see if CNAC can be saved in the face of Mao's advance; the pioneer's response is negative. William L. Bond is also sent out to conduct a survey and stiffen employee resolve.

Flights to the U.S. end on August 16; regularly scheduled operations cease the next day and the airline starts sending its aircraft to safety in Hong Kong. Mao Tse-tung announces the formal creation of the People's Republic of China on October 1.

C. Y. Liu, the carrier's Chinese managing director, defects to the Communists on November 9 with 10 of the company's 56-plane fleet plus the **Central Air Transport Corporation (CATC)** Convair CV-240, the only one in China. Other Communist-oriented employees seize the remaining ships, bringing about their grounding when Nationalist officials revoke their airworthiness certificates. A group of pilots specifically pledge their loyalty to representatives of the U.S. partial-owners on November 13 and two days later, Nationalist Gen. Shen is asked to take over the company.

Those elements at Hong Kong are now grounded, but a British court in the crown colony acts on December 3 to prevent the Nationalists from taking control of the aircraft. Over the next several weeks, hundreds of out-of-work CNAC-1 technicians and air crew flee to Peking, secretly smuggling out maintenance manuals and spare parts for the 10 planes acquired on November 9.

Realizing the subsidiary cannot be saved, Bond returns to New York and begins negotiations with Chinese Nationalist representative T. V. Soong seeking \$2 million (the appraised value of **Pan American Airways's** 20% interest) for the carrier. Following completion of a \$1.25 million sale on December 16, Bond and the subsidiary's Chinese directors meet at Hong Kong on December 31 to dissolve Pan Am's interest and pass the remainder of the airline to the Nationalist government for **Civil Air Transport (CAT)**. In 16 years, CNAC has earned a net \$3.87 million net profit for its American owner and its sale is seen as the conclusion of a successful investment.

Following the collapse of the Nationalist cause and the evacuation to Formosa, **Civil Air Transport (CAT)** bids to purchase the carrier's entire fleet of C-46s/C-47s. At the same time, CEO Bond, having lost all interest in the airline business, retires. Following a three-year legal battle, CAT emerges successful in 1952 and CNAC-1 is no more.

An aviator active with CNAC-1 and CAT, Capt. Felix Smith, writes of his experiences in *China Pilot: Flying for Chiang and Chennault* (London, Eng.: Brassey's, 1995).

CHINA NATIONAL AVIATION CORPORATION (CNAC-2). See **CAAC (THE GENERAL ADMINISTRATION OF CIVIL AVIATION OF CHINA)**

CHINA NATIONAL RELIEF AND REHABILITATION AIR TRANSPORT. See **CIVIL AIR TRANSPORT**

CHINA NORTHEAST AIRLINES. See **CHINA NORTHERN AIRLINES COMPANY, LTD.**

CHINA NORTHERN AIRLINES COMPANY, LTD.: 3-1 Xiao He Yan Road, Dadong District, Shenyang City, Liaoning Province, 110043, China; Phone 86 (24) 829-4435; Fax 86 (24) 829-4433; Code CJ; Year Founded 1988. CNA is one of several regional carriers officially established in July 1988 under the auspices of **CAAC (General Administration of Civil Aviation of China)**. Originally formed during the previous December as China Northeast Airlines, it is quickly renamed China Northern. Based at Shenyang, in Liaoning Province near North Korea, the carrier operates the world's only scheduled international route with a de Havilland (HS) DH 121 Trident, a 2E, from Beijing to the North Korean capital of P'yongyang.

In July 1989, CNA receives the first of 10 McDonnell Douglas MD-82s coproduced in China and earmarked for it a year earlier. The MD-82 begins charter services throughout Manchuria on August 4. The last of its 10 twin-engine aircraft arrives by December. In May 1990, the carrier receives its own two-letter designator code, CJ.

When scheduled services begin in the province and internationally to Siberia and Japan during 1991, the fleet includes 1 Antonov An-24V, 16 MD-82s, 11 Harbin Y-7-100s (Chinese-built Antonov An-26s), and 15 Harbin Y-5s (Chinese-built An-2 biplanes). After the Trident 2E P'yongyang service is suspended at the end of March and its aircraft retired, there are no more scheduled Trident flights in the world. Revenues for the year total \$102 million.

Four leased An-24Vs arrive in 1992, along with 5 MD-82s, one of which is permanently placed on the North Korean service.

In 1993, President Wang Kai-yuan oversees a workforce of 4,720 and a fleet that includes 2 leased Airbus Industrie A300-600Rs, 4 An-24V, 2 chartered and 21 owned MD-82s, and 11 Y-7-100s. The route network now includes 120 services to domestic locations as well as stops in North Korea, Japan, and Southeast Asia.

While en route from Changchun to Fuzhou on November 12, an MD-82, with 82 passengers is hijacked to Taiwan by state economic agency employee Li Xiangyu and Dr. Han Shuxue; the aircraft is allowed to return to the PRC and both pirates are held for trial. Li will receive a 13-year prison term and Han 11 years.

While landing at Urumqi following a November 13 service from Beijing, the autopilot of Flight 6901, an MD-82 with 10 crew and 92 passengers reengages and causes the plane to undershoot the runway, hit power lines, and crash into a field 3 km. short of the runway (12 dead).

An MD-82 with 137 aboard en route from Qingdao to Fuzhou is hijacked to Taiwan on December 17 by clothing salesman Gao Jun. Again, the aircraft is allowed to return to China and the pirate is tried and jailed, this time for 10 years.

The next day, a Chinese couple, accompanied by their 11-year-old son, divert another flight from Ganzhou to Taipei.

An MD-82 with 139 aboard is hijacked to Taipei on June 7, 1994.

Operations continue apace in 1995. China Northern in July is one of seven PRC carriers agreeing to make service with Taiwan easier for passengers from both Chinas; beginning in August, it will offer double boarding passes to customers traveling via Hong Kong on a **China Airlines, Ltd. (CAL)** connection.

In late November, it is announced that McDonnell Douglas will assist the airline in setting up and operating a 30,000-sq.-ft. training facility at Dalian.

Four-times-a-week roundtrips commence on December 8 between Shenyang and the new airport at Macau.

Enplanements for the year reach 4,837,450.

Airline employment stands at 7,100 in 1996 and the owned fleet now includes 4 A300B4-622Rs, 4 An-24Bs, 23 MD-82s, and 9 Xian Y-7-100s. Also operated, under charter, are 2 A300-600Rs and 3 MD-82s. Orders are outstanding for 2 A300B4-622Rs and 9 MD-90-30s. A new route to Macao is inaugurated during the spring and the first MD-90-30 is turned over to the company at Long Beach in ceremonies on June 27.

The company has an exhibit in the CAAC pavilion at "Airshow China '96," the first PRC international airshow, which is held at Zhuhai Airport on November 5-10.

Passenger boardings accelerate 3.6% to 5,018,101 and cargo jumps 20.5% to 79.16 million FTKs.

There is no change in the size of the employee population during 1997. Destinations visited include Beijing, Changchun, Changsha, Chengdu, Chongqing, Dalian, Dandong, Fuzhou, Guangzhou, Haikou, Hangzhou, Hefei, Jilin, Jinan, Macau, Nanjing, Manning, Pyongyang, Shanghai, Shantou, Shenyang, Shenzhen, Tianjin, Urumqi, Wenzhou, Ziamen, Xian, Yantai, and Zhengzhou.

When the auto-throttle of an MD-82 with 10 crew and 126 passengers fails during takeoff from Dalian on July 20, the aircraft runs 130 m. off

the runway and its landing gear collapses. Although the jetliner is badly damaged, there are no fatalities.

An arrangement is reached during August by **DHL Worldwide Express** with both China Northern and **Air Koryo** to provide all-cargo shipments between Beijing and P'yongyang, employing belly space aboard the airliners of those two companies.

Enplanements drop 6.2% to 4,708,488, but cargo rises 17.2% to 92.78 million FTKs.

Flights continue apace in 1998. On June 18, weekly roundtrips are inaugurated from Dalian to Toyama, Japan.

Passenger boardings fall again, down to 4.48 million, but freight traffic climbs again, up to 153.46 million FTKs.

In May 1999, orders are placed with Britten Norman at Bembridge, Isle of Wight, for 3 BN-2A Trislanders. The aircraft, which will be assembled from kits made in Romania, will be delivered beginning in January and will supplement the carrier's aging Y-5s on regional services.

Enplanements for the year dip 1.6% to 4,417,000, but cargo is up a healthy 15.8% to 177.64 million FTKs. An 80-million yuan profit is reported.

Airline employment at the beginning of 2000 stands at 8,000, a huge 69.5% boost. The company now has 13 billion yuan (US\$2.73 billion) in assets.

Fleet expansion continues into the new millennium as, on March 7, the carrier signs a contract with Airbus Industrie for the delivery of 10 A321s, beginning at year's end.

Two Chinese-manufactured McDonnell Douglas MD-90-30s are received on September 19.

Weekly MD-82 return service is inaugurated on October 6 from Harbin to Vladivostok via Mudangijang.

It is reported on October 8 that a new marketing and code-share agreement has been signed with **Angel Airlines, Ltd.** Under its terms, CNA provides a pair of A300B4-622Rs in November with which to operate Angel's domestic and international routes from Bangkok.

A week later, the western press reports that the company is in merger discussions with **China Southern Airlines Company, Ltd.** and that a possible amalgamation (with CSA the surviving partner) may occur before year's end.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including China Northern, increase fares on November 5.

CHINA NORTHWEST AIRLINES COMPANY, LTD.: Laodong Naniu, Xian, Shaanxi, Shaanxi Province, 710082, China; Phone 86 (29) 426-3029; Fax 86 (24) 426-2022; <http://www.virtual-airline.co.uk/China-Northwest.html>; Code WH; Year Founded 1989.

CNWA is one of several regional carriers established in May 1989 under the auspices of **CAAC: General Administration of Civil Aviation of China**. Based at Xi Guan Airport, at Xian City in Shaanxi Province, the new entrant, formerly a directorate of the monolithic state carrier, offers regional domestic and charter services in Shaanxi and Gansu provinces for the next two years.

In May 1990, the carrier receives its own two letter designator code, WH. Drawing on an old northwestern China legend that whenever a Feitian (flying Apsaras) appears there is good luck and happiness, the company now adopts an Feitian in flight around a globe as its symbol.

Scheduled operations commence in early 1991, at which time the fleet includes 3 Antonov An-24s, 3 British Aerospace BAe 146-100s, 10 Tupolev Tu-154Ms, 2 Xian Y-7s (Chinese-built An-26s), and 5 Y-7-100s. Revenues for the year total \$81 million.

Flight equipment is significantly increased in 1992. Initially added are 2 leased Airbus Industrie A300B4-605Rs and 2 A310-222s. Orders are placed at the end of June for 12 BAe 146-300s.

Upon its arrival from Toulouse in July, the premier A310-222 becomes the airline's first wide-body aircraft. A network of 70 routes links

the Xian base with nearly every city in the People's Republic. The first 4 BAe 146-300s are delivered in the fourth quarter.

In 1993, President Gao Jun Uue oversees a workforce of 4,000 and a fleet comprising 5 leased A300B4-605Rs, 3 A310-222s, 1 An-24V, 2 An-24RVs, 3 chartered BAe 146-100s, 4 BAe 146-300s, 10 Tu-154Ms, 2 Y-7s, and 5 Y-7-100s. Three more BAe 146-300s are delivered in the spring and the first international routes are initiated from Xian City to Hong Kong, Singapore, and Nagoya.

Flight 2119, a new BAe 146-300 with 5 crew and 108 passengers, fails its takeoff from Yinchuan on July 23 for a service to Beijing. The aircraft impacts earthen banks and lands in shallow water, exploding and splitting into 3 sections (55 dead).

Flights begin to Bangkok in 1994. Its passenger service standards noticeably bad, the airline becomes the object of a lawsuit by 81 disgruntled passengers in April; the suit is heard by the Chaoyang District Court at Beijing.

While en route from Guangzhou on June 6, auto-pilot induced oscillations cause Flight 2303, a Tu-154M with 14 crew and 146 passengers, to shake so violently that it crashes near Xian, its point of origin; there are no survivors in the country's worst aviation disaster to date.

In July, the company joins with the Nanjing local government to form the regional carrier **Nanjing Airlines Company, Ltd.**

China Northwest in July 1995 is one of seven PRC carriers agreeing to make service with Taiwan easier for passengers from both Chinas. Beginning in August, it will offer double boarding passes to customers traveling via Hong Kong on a **China Airlines, Ltd. (CAL)** connection.

Twice-weekly roundtrips commence on December 8 from Shenyang to Macau via Tianjin and from Dalian to Macau via Yantai.

Enplanements reach 2,545,511.

Airline employment stands at 4,700 in 1996 and the owned fleet now includes 2 A300B4-605Rs, 7 BAe 100-300s, 9 Tupolev Tu-154Ms, 2 Xian Y-7s, and 3 Y-7-100s. Also operated, under charter, are 2 A300-600Rs, 3 A310-222s, and 3 BAe 146-100s. Orders are outstanding for 4 A300-600Rs.

The company has an exhibit in the CAAC pavilion at "Airshow China '96," the PRC's first international airshow, which is held at Zhuhai Airport on November 5-10.

Passenger boardings surge 17.3% to 3,078,005 and cargo climbs 36.3% to 56.23 million FTKs.

There is no change in the size of the workforce in 1997. In addition to 70 domestic markets, the company also flies to Hong Kong, Nagoya, Singapore, and Tashkent.

On February 10, security guards are aboard an A300B4 en route from the central city of Wuhan to Zhuhai at the border with the Portuguese enclave of Macau. With the help of some of the 173 passengers on board, the guards are able to overpower a hijacker in his attempt to force the flight to divert to Taiwan. The plane puts down at Guangzhou where the pirate is arrested.

Customer bookings advance by 1.5% to 3,125,000, while freight increases by 69% to 94.98 million FTKs.

During the first quarter of 1998, the regulatory body **CAAC (The General Administration of Civil Aviation of China)** significantly increases pressure for the amalgamation of the country's regional airlines into three large groups centered on major carriers. It is hoped that, by 2001, **Changan Airlines Company, Ltd.** will become part of China Northwest.

Passenger boardings fall to 2.85 million, while cargo traffic jumps to 109.87 million FTKs.

Flights continue in 1999. During mid-May, a pair of Airbus Industrie A320-200s are chartered from ILFC.

Recovering from the Asian economic crisis, the company is able to report passenger bookings up 4.5% to 2,982,000 and a 30.1% freight surge to 142.97 million FTKs.

The workforce totals 4,900 at the start of 2000, an 18.8% rise. The carrier now operates 116 domestic air routes, 5 regional routes, and approximately 10 international charter flights, connecting over 50 large and medium cities at home and abroad.

Flights from Xian to Seoul begin on April 1. The company's fifth China-Japan air route is inaugurated on August 11 from Xian to Okinawa; the roundtrip A320-200 service is offered twice weekly.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including China Northwest, increase fares on November 5.

CHINA OCEAN HELICOPTER CORPORATION: 19-20 Floors Agricultural Bank Tower, 188 Jielang Road West, Shenzhen, Guangdong, 418001, China; Phone 86 (755) 559-0779; Fax 86 (755) 559-0757; Year Founded 1982. China Ocean Helicopter Corporation is established at Nantou-Xili in 1982 to provide logistical support for the nation's new offshore oil industry. Ownership is divided between the state-owned China International Trust & Investment Corporation (CITIC), China National Helicopter Corporation, and four other smaller concerns. Over the next decade, President/General Manager Ma Xian Shi is able to open facilities in Beijing and Shenzhen and total investment reaches \$275 million.

The initial fleet comprises 3 Aerospatiale AS-332L1 Super Pumas, which will be joined later in the decade by 3 AS-365N1 Dauphins, license-built in China and known as Z-9s. One of the European-made helicopters is leased from **Bristow Helicopters, Ltd.** of the U.K., which also supplies personnel and management expertise.

As the 1980s close and the 1990s begin, COHC finds itself with additional responsibilities in the areas of search and rescue (SAR) and the emergency evacuation of oil platforms in the South China Sea prior to typhoons.

The most spectacular event in the company's history occurs in August 1991 when its Super Pumas resume 18 survivors from a capsized DB29 oil drilling barge in the South China Sea during the advent of a typhoon. The crew of one of the AS-332L1s is awarded the "Crew of the Year" citation by the Helicopter Association International.

The following year, 1992, the company begins to offer charter services to the growing number of foreign tourists flocking to the People's Republic of China. President Ma oversees a workforce of 400 that operates with 6 Eurocopter Super Puma and Dauphin helicopters.

Flights continue apace in 1993-1998. One AS-332L is withdrawn during the latter year as airline employment reaches 340.

It is understood that service is maintained without change during the remainder of the decade; exact information, is, however, unavailable.

CHINA SOUTHERN AIRLINES COMPANY, LTD.: Baiyun Airport, Guangzhou, Guangdong, 510406, China; Phone 86 (20) 667-8901; Fax 86 (20), 666-7637; http://www.cs-air.com; Code CZ; Year Founded 1987. CSA is one of several regional carriers established under the auspices of **CAAC (General Administration of Civil Aviation of China)**; Capt. Yu Yanen is named chairman/president. Created in the fall of 1987 and based at Guangzhou in Guangdong Province near Hong Kong, the former CAAC directorate receives 3 B-757-221Bs in November.

When the pro-democracy movement is suppressed at Beijing and other cities on June 4, 1989, the U.S. State Department places a temporary ban on the delivery of B-757 navigation systems (and hence further delivery of the aircraft) to the airline. The hold is lifted in July, despite opposition from members of the U.S. Congress.

The airline receives its own two-letter designator code in May 1990, CZ. In July it negotiates an arrangement with GPA Group for the lease of 10 B-737s beginning in December. Also in July, the carrier is officially named China Southern. Hardly have flights begun when tragedy occurs.

En route from Canton to Xiamen on October 2, Flight 8301, a **Xiamen Airlines Company, Ltd.** B-737-247A with 104 passengers, is hijacked by "active criminal" Jiang Xiaofeng, who claims to have 15 pounds of explosives strapped to his body. The pirate demands to be flown to Taiwan and refuses an offer to be flown to Hong Kong, instead.

With fuel nearly exhausted, the government orders Capt. Cen Longyu, the same pilot hijacked to Taiwan in May 1988, to try a ruse in an effort to convince Xiaofeng that his demand has been met and that he is landing. When this gambit fails, a fight breaks out in the cockpit as the little Boeing completes its final approach to Canton's Baiyun Airport.

The aircraft hits hard, veers off the runway, sideswipes a **China Southwest Airlines Company, Ltd.** B-707-336C Stratoliner and then slams into a China Southern B-757-21B, with 118 passengers, preparing to depart on a domestic service to Shanghai. In the explosion and fire that follows and that will burn out both the B-737 and B-757, 84 are killed aboard Flight 8301, 47 aboard the B-757, plus the driver of an airport service vehicle. Fifty other passengers are wounded, including the pilot of the Stratoliner. The fireball creates China's worst air disaster ever.

Operated by the Guangzhou Civil Aviation Bureau, CSA in 1991 flies 1 leased B-737-247A, 5 chartered B-737-3YOs, 6 chartered B-737-2T4As, and 12 B-757-221Bs, as well as 3 Shorts 360s and 5 Xian Y-7s (Chinese-built Antonov An-26s). The first of 10 ordered B-737-5YOs arrives under lease in February. Destinations visited include Beijing, Changsha, Guangzhou, Hefei, Kunming, Nanning, Shantou, Xiamen, Yichang, and Zhanjiang.

Nonstop flights begin from Beijing to Hong Kong in May; these frequencies are followed by flights from Beijing to Kuala Lumpur that begin in August. In December, flights commence from Guangzhou to Surabaya, via Jakarta, in a reciprocal arrangement with **Garuda Indonesia**. Also in December, orders are placed for four SAAB 340Bs.

Enplanements for the year total 3,235,650 and revenues are \$312 million.

Airline employment stands at 3,801 in 1992 and the first of 4 SAAB 340Bs arrive in April as replacements for the Shorts and Y-7s. Based in Shenzhen, it is the first new technology turboprop aircraft to enter commercial service in the People's Republic of China.

Also added are 4 leased B-737-247A, 10 chartered B-737-5YOs, 1 chartered B-757-21B, 1 leased B-767-35HER, and 2 chartered B-767-375ERs. International services are inaugurated to Bangkok, Jakarta, Kuala Lumpur, Manila, Penang, and Surabaya. A former CAAC route linking Beijing with Hanoi via Nanning is resumed.

On November 24, Flight 3943, a B-737-3Y0 with 10 crew and 131 passengers en route from Guangzhou, crashes into a 7,000-ft.-high mountain 20 mi. outside of Guilin Airport while on approach; there are no survivors.

Passenger boardings increase 44.5% to 5.83 million. Revenues total \$537 million and expenses are low enough to allow a \$102-million operating profit.

President Capt. Yu Yanen oversees a workforce of 7,820 in 1993. His fleet comprises 4 owned and 15 leased B-757-21Bs, 10 chartered B-737-5YOs, 6 B-737-2T4As, 5 each B-737-3YOs and Xian Y-7s, 4 each Antonov An-24Vs, B-737-31Bs, SAAB 340Bs, and Sikorsky S-76As, 3 each B-767-375ERs and Shorts 360s, 2 B-737-3Q8s, and 1 each An-24RV and B-767-35HER, the latter leased. Orders are outstanding for 5 B-737-31Bs and 6 B-777-21Bs.

Along with **Air China International Corporation** and **China Eastern Airlines Company, Ltd.**, China Southern is one of three former CAAC divisions now elevated in stature by CAAC, now acting as a regulatory body, to that of an independent "aviation group." It is given the authority to acquire its own fleet and responsibility for its own finances, including permission to trade shares on the newly allowed Chinese stock exchanges.

En route from Beijing to Shenzhen on April 6, a B-757-21B with 204 passengers is taken over by steel firm buyer Huang Shu-gang and businessman Liu Baocai, who order the aircraft diverted to Taiwan. At Taipei, the two will receive their requested political asylum in the form of seven-year prison sentences.

In June, the government's requirement that Chinese domestic passengers produce a letter of reference in order to make a booking is changed to presentation of an identity card. By the third quarter, the company is operating along 90 domestic and 10 intra-Asia routes, plus Hong Kong.

After several years of talks, flights finally begin to Hong Kong in 1994. Early in the year, company representatives begin talking with their counterparts at **United Airlines** concerning the possibilities of schedule coordination, code-sharing, and joint marketing.

While en route from Fuzhou to Guangzhou on June 6, a B-737-31B with 139 passengers and a crew of 5, is hijacked to Taiwan by food company purchaser Zou Weiqiang. The aircraft and its passengers are allowed to return to the PRC; Zou will be tried and sentenced to 13 years in prison.

Upon its formation, Shenzhen-based **Shenzhen Airlines Company, Ltd.** becomes an operational subsidiary of China Southern. The company will come to own 60% stakes in four more regional carriers: **Xiamen Airlines Company, Ltd.**, **Shantou Airlines Company, Ltd.**, **Guangxi Airlines Company, Ltd.**, and **Zhuhai Airlines Company, Ltd.**

China Southern in July 1995 is one of seven PRC carriers agreeing to make service with Taiwan easier for passengers from both Chinas; beginning in August, it will offer double boarding passes to customers traveling via Hong Kong on a **China Airlines, Ltd. (CAL)** connection.

During the summer, a B-777 flight simulator is installed at the company's Zhuhai training center; it trains pilots for the first B-777-21B, which is delivered at the end of December. On December 24, a new bilateral air agreement is signed between China and the U.S. that will allow the new Boeing to fly a transpacific service.

Enplanements for the year reach 11,711,804.

Airline employment stands at 14,100 in 1996 and the fleet of China's largest airline comprises 82 aircraft, including the first B-777-212B, which enters service during the first quarter over the "golden triangle" between Guangzhou, Beijing, and Shanghai. Two more B-777-21Bs will be delivered by year's end.

In the spring, officials from **CAAC (The General Administration of Civil Aviation of China)** inform the Orient Airline Association that it will not support the applications for membership of its three largest airlines: China Southern, **China Eastern Airlines Company, Ltd.**, and **Air China International Corporation**. Rather, they insist that China National Aviation Co. (CNAC-2) will be the first admitted.

As the result of a block-space code-sharing agreement signed in April, a **Martinair Holland, N.V.** B-747-21AC inaugurates twice-weekly roundtrips on October 1 between Guangzhou and Amsterdam via Beijing. Under the agreement, China Southern will transport incoming Martinair freight to other Chinese destinations.

The company has an exhibit in the CAAC pavilion at "Airshow China '96," the PRC's first international airshow, which is held at Zhuhai Airport on November 5-10.

Passenger boardings rise 4% to 12,199,795 and 220.95 million FTKs are operated, a 19.2% increase over the previous year. The passenger total statistically represents one of every four passengers enplaned in the PRC. Revenues hit \$1.1 billion. Even so, with its heavily discounted domestic tickets, the company's local yield is 20% lower than that for rival **China Eastern Airlines Company, Ltd.**

Employment remains the same throughout 1997 as it had the previous year.

Flights to the Persian Gulf market of Sharjah commence in February; it is the company's 14th international destination. China Southern also operates 270 domestic routes serving 68 locations.

The first B-777-21B increased gross weight (IGW) is delivered on March 3. Two more of the twin-engine wide-bodies are delivered during the month, neither being IGWs. It is announced during the month that the carrier's debt is now \$2.3 billion.

In April, **Delta Air Lines** joins with the carrier to offer a block-seat, code-sharing service on CSA aircraft operating on the four-times-a-week Guangzhou to Los Angeles route. The Chinese company agrees to purchase seats on Delta's flights Los Angeles on to 13 U.S. destinations. The second B-777-21B IGW arrives during the month.

China Southern takes delivery of its first Airbus A320-232 at Baiyun International Airport in Guangzhou on June 24. The premier aircraft will fly two routes from Guangzhou to Chengdu, the capital of southwest

China's Sichuan Province, and to Xi'an, the capital of northwest China's Shaanxi Province.

Following **Air China International Corporation** and the **China Eastern Airlines Company, Ltd.**, China Southern Airlines on July 20 becomes the third Chinese airline to fly between China and the U.S. It also becomes the first to operate a B-777 in transpacific service when one of its Dash-21BAs launches thrice-weekly Guangzhou to Los Angeles return service on July 21. The 7,800-mile route to CSA's 27th international destination requires a flight of 12–14 hrs.

The Boeing is met with a welcoming ceremony, during which speeches are given by John Driscoll, executive director of Los Angeles World Airports, and China's deputy consul general in Los Angeles, Wu Zhong-hua. About 100 representatives from local communities are present to greet the flight crew and 60-member Chinese delegation, which is led by Zhang Hanqin, vice chairman of the Standing Committee of the Guangdong Provincial People's Congress.

To further celebrate the opening of China's first twin-engine, transpacific route, the airline offers introductory fares of just HK\$500 for tickets purchased in the former British colony.

Also in July, the company is listed on the New York and Hong Kong stock exchanges and plans are announced for a domestic offering the following year.

CAAC's ownership in the carrier is reduced to 68.1% on July 30–31 when Goldman Sachs (Asia), acting as global coordinator, sponsor, and lead manager, places H shares of the airline on the Hong Kong Stock Exchange and American Depository Shares on the New York Stock Exchange. The transactions are the largest stock offering ever by a Chinese firm overseas.

The \$632 million raised will be employed to purchase new aircraft, pay debts, and expand facilities.

China Southern begins a 7,200-kilometer, twice-weekly B-777-21B air route from Beijing to the city of Brisbane via Guangzhou, capital of southern China's Guangdong Province, on September 21. This is the 30th international air route on the carrier's charts. The Australian city is followed onto the network by Kuala Lumpur.

With a 27.1% share of the domestic market and 273 routes throughout the country, CSA at year's end is the nation's dominant domestic airline with the largest route network. It is also the 17th largest airline in the world in terms of operating profit and 20th in passenger boardings and net profit.

Customer bookings total 15.24 million, while operating revenues jump 12.6% to \$1.55 billion. With costs of \$1.26 billion, the operating profit moves to \$284.35 million and there is a \$137.94-million net profit. There will, however, be no dividend for the year as the company will turn the profits into business expansion.

During the first quarter of 1998, the regulatory body **CAAC (The General Administration of Civil Aviation of China)** significantly increases pressure for the amalgamation of the country's regional airlines into three large groups centered around major carriers. It is hoped that, by 2001, **Guizhou Airlines Company, Ltd.** will be taken over by China Southern.

The acquisition actually comes more quickly than envisioned. In April, China Southern takes a 60% stake in Guizhou.

The Asian financial crisis, competition from foreign airlines, retrenchment of state enterprises, and falling business traffic caused by improved road infrastructure all contribute to a decline in demand for air transport. The situation is exacerbated by an increase in domestic airline capacity.

The airlines, with little success, introduce a variety of fare reductions. **CAAC (The General Administration of Civil Aviation of China)** now steps in and requests that the companies delay new aircraft deliveries. Some will lease out or park their latest additions. CSA parks its 3 B-777-21Bs at its Guangzhou hub in early August. On August 27, it announces plans to cut two aircraft leases ahead of schedule and not renew two others.

Major product changes occur on the nonstop B-777-21B service from Guangzhou to Los Angeles on September 22. Eighteen formerly first-

class seats are relabeled Premium Business Class seating, while the former business-class seats become Premium Economy Class seating. In both classes, the seats are larger.

On November 2, CSA announces that it will launch its own frequent flyer program, Sky Pearl Club.

The company is a participant in "Airshow China '98" at Zhuhai Airport between November 16–23. On opening day of the event, CSA officials inform Reuters, Ltd. that they are in discussions with numerous other carriers concerning the possibility of an early launch of all-cargo services to the U.S. and Europe. Among the airlines seen as partners in these endeavors are **Delta Air Lines**, **Federal Express**, **Martinair Holland, A.S.**, and **Asiana Airlines, Ltd.**

A comprehensive strategic marketing alliance is entered into with **Delta Air Lines** on December 10. In the new year under its terms, the two will link their frequent flyer programs. In addition, CSA will purchase blocks of seats for sale under its code on Delta flights from Los Angeles to Atlanta, Boston, Dallas (DFW), Chicago (ORD), Honolulu, Las Vegas, Miami, Minneapolis (MSP), New York (JFK), Philadelphia, Portland, San Francisco, and Washington, D.C. (DCA). Delta, meanwhile, will place its code on CSA's thrice-weekly Los Angeles to Guangzhou B-777-21B roundtrips.

Passenger boardings increase 27% to 15.05 million, while 479.01 million FTKs are also operated, a 6.7% boost. As the result of fierce price competition and a slowdown in air travel, the mainland's largest airline suffers a 7.6% downturn in revenues to 11.8 billion yuan (\$1.43 billion). Operating costs reach \$1.36 billion, leaving an operating gain of \$65.1 million. On the down side, there is a 543-million yuan (\$65.7-million) loss.

At the beginning of 1999, CSA is the largest PRC airline in terms of passenger volume, number of scheduled flights per week, number of hours flown, number of routes, and size of aircraft fleet. A total of 300 domestic, 21 Hong Kong regional, and 40 international routes are flown and an average of 2,698 scheduled flights per week are operated to 90 destinations. The fleet contains 102 aircraft, including 81 Boeing and 15 Airbus units, with a combined age of 5.38 years.

The carrier's first advertising campaign in the U.S. begins on February 16, when outdoor billboards go up in the Los Angeles area and an ad appears in the business pages of *The Los Angeles Times* and the western edition of *The Wall Street Journal*. In addition, ads also appear in the Asia/China sections of the February issues of *Travel Weekly* and *Travel Age* magazines, which come out the next day.

Chairman Yan En Yu announces on February 25 that CSA will commit US\$250 million over the next 20 years to upgrade facilities and pilot training center, Western Australia Flying College, at the airport facilities in Merriden and Jandakot, 250 km. E of Perth, Australia. The airline expects to educate 3,000 flyers.

On March 12, CSA gives a guarantee that its computer systems will be Y2K compliant by July.

Following the christening ceremony for the CSA B-777-21B *The Pearl of the South* and a media presentation by senior executives, a pre-service code-sharing flight with **Delta Air Lines** is undertaken, also on March 12, from Los Angeles to Guangzhou.

Thrice-weekly, nonstop B-777-21B block-seat, dual-designator service with Delta begins on March 28 from Los Angeles to Guangzhou. In addition to the seats the American major has purchased on the Chinese line's transpacific flights, CSA is able to book space on Delta flights from Los Angeles to Atlanta, Las Vegas, Honolulu, Dallas (DFW), New York (JFK), Portland (Oregon), and San Francisco.

The company, on April 14, announces the official opening and commercial use of its first A320 flight simulator as part of its more than 100,000-sq.-ft. expansion at Zhuhai; CSA now operates the largest pilot training facility in Asia.

Twice-weekly A320-232 roundtrips commence on May 19 between Jinjiang and Manila.

At the annual general meeting held at Hong Kong on June 15, Director Yang Yuan resigns and the nonexecutive director, Jin De Qin, is removed; they are succeeded by Han Ma Zhang and Simon To, respectively.

Several Hong Kong morning newspapers report on July 9 that PRC officials may force the merger of CSA with **Air China International Corporation**. The report had first been carried in the British industry magazine *Flight International*. The confusion causes the Hong Kong stock exchange to temporarily suspend trading in CSA shares. Later in the day, the restructuring office of **CAAC (The General Administration of Civil Aviation of China)** issues a statement denying plans to forcibly amalgamate the two companies.

Following up on the *Flight International* and local newspaper reports, executives at China Southern confirm on July 13 that preliminary discussions have been held with **Air China International Corporation** concerning a possible merger or partnership sometime in the future. Analysts suggest a merger might be a difficult feat to accomplish.

Twice-weekly A320-232 nonstop roundtrips are inaugurated on August 9 between Guangzhou and Phnom Penh. In a grand ceremony at Toulouse on August 20, CSA accepts the last of 20 A320-232s first ordered in 1997.

During the fall, CAAC executive, aviation media types, and various airline employees join in a wide-ranging, but ultimately empty discussion concerning the possible merger of CSA with **Air China International Corporation**. *Flight International* reports on October 13 that the discussions have broken down due to CSA concern over the financial shape of Air China.

Two A320-232s are subleased to **Swissair, A.G.** Weekly frequencies between Guangzhou and Los Angeles are increased from three to four on December 6.

Assisted by recovery from the Asian economic crisis and the government's curb of domestic fare discounting, passenger bookings inch up 0.4% to 15,112,000 while 616 million FTKs are operated, a 10.4% improvement. Operating revenues jump 12.2% to \$1.6 billion while expenses rise 1.2% to \$1.38 billion. The operating profit rises to \$223.4 million and the previous year's net loss becomes a \$9.95-million net profit.

By the start of **2000**, annual figures for airline employment have increased 103.4% to 15,902. Among the world's top 25 airlines at the beginning of the new millennium, CSA is 24th in terms of passengers and 19th in operating profit.

Saturday-only A320-232 roundtrips between Guilin and Seoul commence on January 7.

On February 1, two B-777-2B1s are wet-leased for two months to **Biman Bangladesh Airlines, Ltd.** The wide-bodies will operate 128 flights between Dacca and Jeddah transporting Muslim Hadj pilgrims.

During the first quarter, the company sells and leases back 4 B-757-2B1s and begins to emphasize e-marketing over the Internet via a new website.

Twice-weekly B-757-2B1 roundtrips commence on March 28 between Shanghai and the Tibetan capital of Lhasa.

Employing a B-747-200F chartered from **Atlas Air**, CSA, on March 29, inaugurates its first international freighter service over a three-weekly roundtrip route from Shenzhen to Chicago (ORD). Previously a charter, the Wuhan-Hong Kong B-737-300 route is converted into a daily scheduled roundtrip on May 1. A marketing and code-share agreement is signed with **Japan Air System, Ltd.** on June 19.

In response to a fatal June 22 **Xian Airlines** Y-7-100C crash, CAAC delivers a major reorganization plan to the China State Council in late July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into three groups built around China Southern, **China Eastern Airlines Company, Ltd.**, and **Air China International Corporation**.

A code-sharing agreement is signed with **Vietnam Airlines** on July 26 providing for dual-designator service from Guangzhou to Ho Chi Minh City.

CSA is the first to take operational and managerial control of another airline under the CAAC mandate. Although it will be allowed to retain its name, **Zhongyuan Airlines**, based at Zhengzhou in Henan Province,

almost immediately becomes part of the Southern Airlines Group on August 1. It is anticipated that **China Southwest Airlines Company, Ltd.** and **Yunnan Airlines Company, Ltd.** will be acquired later in the year.

Also in August, the company unveils a new and ambitious cargo plan; to further its freight effort, CSA will acquire 3 B-747-400Fs and build a 25,000-sq.-ft. cargo center at Shenzhen by 2002.

E-ticketing for domestic services is expanded in September and is now available from the company base at Guangzhou to over 60 Chinese cities. A B-747-47UF ACMI contract begins with **Atlas Air** on September 15 over a route from Shenzhen and Shanghai to Chicago (ORD).

A code-sharing agreement is signed with **JAS (Japan Air System, Ltd.)** on September 22 covering service over a route from Guangzhou and Osaka (KIX).

Merger discussions with **Air China International Corporation**, broken off earlier, have been resumed and quietly concluded during the year. However, it is reported on October 2 that a merger proposal submitted by the two to the CAAC has been rejected on the grounds that the resultant carrier would be too large.

Two weeks later, the Western press reports that the company is in merger discussions with **China Northern Airlines Company, Ltd.** and that a possible amalgamation, with CSA the surviving partner, may occur before year's end.

Thrice-daily B-757-2B1 roundtrips are inaugurated on October 29 from Guangzhou to Singapore via Hong Kong and to Kuala Lumpur via Bangkok.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including China Southern, increase fares on November 5.

New Australian B-777-2B1 return service from Guangzhou is launched on December 6, twice weekly to Sydney via Melbourne and once per week directly to Sydney.

CHINA SOUTHWEST AIRLINES COMPANY, LTD.: Shuangliu Airport, Chengdu, Sichuan, 610202, China; Phone 86 (28) 581-4466; Fax 86 (28) 558-2630; <http://www.cswa.com>; Code SZ; Year Founded 1987. CSWA is one of several regional carriers established in October 1987 under the auspices of CAAC (**General Administration of Civil Aviation of China**). Based at Shuangliu Airport at Chengdu in Sichuan Province and based on its parent's former Chengdu regional directorate, it inaugurates service in early 1988 with 9 B-737-200s. In 1989, the fleet is altered to include 4 B-737-3Z0s, 5 B-707-336B/Cs, and 2 Tupolev Tu-154Ms.

By 1990, the company is visiting some 30 large and small destinations over 50 routes in Sichuan province, as well as Lhasa, Tibet's airport at an altitude of 11,600 feet. In May, it receives its own two-letter airline designator code, SZ.

En route from Canton to Xiamen on October 2, Flight 8301, a **Xiamen Airlines Company, Ltd.** B-737-247A with 104 passengers, is hijacked by "active criminal" Jiang Xiaofeng, who claims to have 15 pounds of explosives strapped to his body. The pirate demands to be flown to Taiwan and refuses an offer to be flown to Hong Kong instead. With fuel nearly exhausted, the government orders Capt. Cen Longyu, the same pilot hijacked to Taiwan in May 1988, to try a ruse in an effort to convince Xiaofeng that his demand has been met and that he is landing. When this gambit fails, a fight breaks out in the cockpit as the little Boeing completes its final approach to Canton's Baiyun Airport.

The aircraft hits hard, veers off the runway, side-swipes a **China Southwest Airlines Company, Ltd.** B-707-3J6B Stratoliner and then slams into a **China Southern Airlines Company, Ltd.** B-757-21B with 12 crew and 110 passengers preparing to depart on a domestic service to Shanghai. In the explosion and fire that follows and that will burn out both the B-737 and B-757, 84 are killed aboard Flight 8301, 47 aboard the B-757, plus the driver of an airport service vehicle. Fifty other passengers are wounded, including the pilot of the Stratoliner. The fireball creates China's worst air disaster ever.

The fleet in **1991** includes 1 B-707-3J6B, 3 B-707-3J6Cs, 5 B-737-3Z0s, 5 Tu-154Ms, and 5 Xian Y-7-100s, which are Chinese-built Antonov An-26s. Revenues total \$118 million.

The amount of flight equipment available is significantly increased in **1992**. Added are 3 B-737-3Z0s, 2 B-757-2Y0s, 4 B-757-2Z0s, and 4 Harbin Yu-12 IIs. One Tupolev is withdrawn.

In **1993-1994**, President Zhou Zhengquan oversees a workforce of 3,400 and a fleet comprising 6 owned and 5 leased B-737-3Z0s, 4 Tu-154Ms, 4 each Yu-12 IIs, B-737-3Y0s, and B-737-3Q8s, 3 each Y-7-100s, B-707-3J6Cs, B-757-2Y0s, and B-757-2Z0s, and 1 B-707-3J6B.

The number of domestic routes is increased to 70 and a new service is offered linking Lhasa to Katmandu. On February 18 of the latter year, a B-737-3Y0 with 5 crew and 130 passengers is hijacked to Taiwan while en route from Chengdu to Fuzhou. Businessman-pirate Lin Wen-qiang has also brought along his wife, foster mother, and two sons. The aircraft and its passengers, minus the Lin family, are allowed to return to the PRC; Lin, himself, will be tried and sentenced to nine years in jail.

Enplanements reach 5,481,433 in **1995**. The company leases aircraft to China National Aviation Corporation (CNAC-2), a subsidiary of CAAC, which employs them to launch charter flights to Kai Tak Airport at Hong Kong.

A five-year experimental airlift program ordered performed by the airline by CAAC (**The Civil Aviation Administration of China**) on behalf of the Chinese Air Force is completed during the spring. CSA will continue to offer flights for the military between Chengdu and the capital of the Tibet Autonomous Region. The experimental project has proven to be such a success that CAAC now orders a Chinese Air Force liaison office set up in each of the country's major regional airlines.

China Southwest in July is one of seven PRC carriers agreeing to make service with Taiwan easier for passengers from both Chinas; beginning in August, it will offer double boarding passes to customers traveling via Hong Kong on a **China Airlines, Ltd. (CAL)** connection.

Airline employment stands at 7,000 in **1996** and the fleet includes 39 aircraft.

The company has an exhibit in the CAAC pavilion at "Airshow China '96," the PRC's first international airshow, which is held at Zhuhai Airport on November 5-10.

Passenger boardings rise 3% to 5,650,961 and 98.37 million FTKs are operated, a 16.4% increase over the previous year.

The workforce in **1997** remains the same as the previous year. Among the markets served by the company are Bangkok, Beijing, Dalian, Guangzhou, Hong Kong, Kunming, Lhasa, Shanghai, Singapore, Urumqi, Wuhan, Xiamen, and Zhengzhou.

The company on June 13, announces the launch of a new route on June 26 linking Chengdu and Wuhan, capitals of Sichuan and Hubei provinces and the famous scenic spot of the Huangshan Mountain (Yellow Mountain) in eastern China's Anhui province. The move is made to promote the '97 China Tourism program. The company's Boeing 737s take off at 9:05 a.m. every Thursday and Sunday from Chengdu and return the same day.

Customer bookings drop 4.3% to 5,407,675, while cargo is up 1.9% to 100.2 million FTKs.

During the first quarter of **1998**, the regulatory body CAAC (**The General Administration of Civil Aviation of China**) significantly increases pressure for the amalgamation of the country's regional airlines into three large groups centered around major carriers. It is hoped that, by 2001, China Southwest will be acquired by **China Eastern Airlines Company, Ltd.**

Weekly return service begins on November 20 between Chengdu and Lhasa, the capital of the Tibetan Autonomous Region. The first of 3 A340-313s on order is received at month's end.

Passenger boardings fall to 4.74 million, while freight traffic climbs to 166.7 million FTKs.

While en route from Chengdu, capital of Sichuan province, to the port city of Wenzhou on February 24, **1999**, a Tu-154M with 10 crew and 51 passengers slams into a hilly rural area some 18 mi. from its destina-

tion; there are no survivors. At least one passenger, businessman Lei Ming, has missed the flight for which he was booked. "The flue saved my life," he informs the *Shanghai Express*.

The carrier's 4 remaining Tu-154Ms are withdrawn from service for inspection on February 26 and will not fly again until the cause of the February 24 disaster is determined. Meanwhile, 1 each leased A340, B-737, and B-757 are brought in to ensure regular services.

A one-year aircraft, crew, management, and insurance (ACMI) wet-lease contract is signed with **Royal Nepal Airlines Corporation** on March 8. Under its terms, China Southwest will fly a B-757-2Z0 on behalf of the Nepalese on routes from Kathmandu to Singapore, Hong Kong, New Delhi, and London.

On April 16, weekly roundtrips commence between Lhasa and Xining in Qinghai Province. The 1,500-km. route passes over the Kunlun, Tanggula, and Nyainquetanglha mountain ranges where the weather is often risky.

The first of 3 new B-737-8Z0s joins the company on November 1; China Southwest is the third Chinese carrier to take delivery of this Next Generation jetliner. The new plane is placed into service between Chongqing and Shenzhen, Haikou, Kunming, and Urumqi.

The year's enplanements rise 3.9% to 4,925,000, but cargo traffic dips 0.1% to 155.16 million FTKs.

Airline employment by the start of **2000** has risen an impressive 115.1% over the previous 12 months to 8,603.

Two passengers unsuccessfully attempt to hijack to Taiwan a company flight en route Chengdu to Nanchung on February 29; after they are subdued, the plane diverts to Fuzhou.

Employing the leased B-757-2Z0, twice-weekly roundtrips are inaugurated on March 28 from Lhasa to Shanghai via Xian. The next day, the company places an order for three new aircraft of that type for delivery beginning in May 2001. Delivery of an earlier order for B-737-700s will be turned over to another Chinese carrier.

Twice-weekly B-737-8Z0 return service is inaugurated on July 1 between Chongqing and Seoul. The flights are the first to be directly operated by a Chinese airline from southwestern China to South Korea.

In response to a fatal June 22 **Xian Airlines** Y-7-100C crash, CAAC delivers a major reorganization plan to the China State Council in late July. Among the proposals is a release of all airlines from the requirement that they purchase aircraft through CAAC. More important, however, is a recommendation that the 13 largest of China's 34 carriers be consolidated into three groups built around **Air China International Corporation**, **China Eastern Airlines Company, Ltd.**, and **China Southern Airlines Company, Ltd.** China Southwest is scheduled for takeover by the latter.

Also in June, China Southwest becomes the first airline to recruit air hostesses from Tibet, with over 400 applications soon received. In a September 5 Lhasa lottery and ceremony, 15 Tibetan girls are chosen to take the carrier's three-month flight attendant training course.

Reacting to rising fuel costs, the CAAC, on November 1, grants the nation's 34 airlines permission to raise ticket prices by 15% to balance passenger traffic and avgas costs; 23 companies, including China Southwest, increase fares on November 5.

CHINA TOURISM AIRLINE COMPANY. See AIR CHINA

CHINA UNITED AIRLINES: No. 14, Xisanhuan Nanfu, Beijing, 100073, China; Phone 86 (1) 801-6879; Fax 86 (1) 326-7285; Code HR; Year Founded 1984. A transport unit of the Chinese Air Force, United China Airlines is established in **1984** to provide regularly scheduled services outside of the control of CAAC (**General Administration of Civil Aviation of China**). Operations continue apace as a total of 11 regional routes, primarily to military airfields, are operated from a base at Beijing. The enterprise is brought under civil control in December **1986** and, beginning in January **1987**, the company is known as China United Airlines.

President Zhang Rui Ai's airline, equipped with a reliveried fleet of 11 former CAAC BAe Tridents, 3 Ilyushin Il-18s, 5 Tupolev Tu-154Ms,

and 4 Xian Y-7-100s books 100,000 customers by year's end. Enplanements climb to 275,000 in **1988**.

No information is released for **1989–1990**. The fleet in **1991** includes 3 British Aerospace (HS) Trident 1Es, 4 Trident 2Es, and 2 Trident 3Bs, plus 3 Il-18s, 5 Tu-154Ms, and 4 Y-7-100s. Little is known of the operational activities of the world's only Trident operator.

Two leased Boeing 737-33As join the fleet in **1992**, along with an Ilyushin Il-76TD, 3 Tu-154Ms, and all of the remaining Il-18s retired by **CAAC (General Administration of Civil Aviation of China)**. In **1993–1994**, China United operates 44 domestic routes making 150 flights per week.

The last of the Tridents, a 2E, is withdrawn during the summer of **1995** and placed on exhibit at Labour Park at Dalian. Enplanements this year reach 390,010.

The company operates 47 aircraft in **1996**. It has an exhibit in the CAAC pavilion at "Airshow China '96," the PRC's first international airshow, which is held at Zhuhai Airport on November 5–10. A total of 430,000 passengers are flown during the year, a 9.3% increase.

During the first quarter of **1997**, **CAAC (General Administration of Civil Aviation of China)** orders 5 Canadair Corporate JetLiners, the corporate version of the company's Regional Jet. Three are delivered for operation by the airline during the remainder of the year, with two more to follow in **1998**.

Service is maintained without fanfare in **1998**. Enplanements for the year are 359,000.

It is understood that flights continue without change in **1999–2000**; exact information is, however, unavailable.

CHINA XINJIANG AIRLINES. *See* **XINJIANG AIRLINES**

CHINOOK AIR: United States (1984–1985). Chinook Air is set up at Everett, Washington, in **1964** to provide scheduled passenger and cargo commuter flights to Seattle and Mount Washington. Employing Piper lightplanes, the company provides services for only a few months, going out of business during the summer of **1985**.

CHIPOLA AVIATION: Marianna Municipal Airport, Marianna, Florida 32446, United States; Phone (850) 482-8480; Fax (850) 482-7991; Year Founded 1970. Chipola is established by Harrell Foran as the FBO at Marianna in **1970**. Over the next quarter century, Foran also undertakes executive and small group passenger charters and air ambulance flights. A Learjet 25A is employed in **1998–2000**.

CHIPPEWA AIR COMMUTER: United States (1977–1978). CAC is set up at Manistee, Michigan, during the early summer of **1977** to provide scheduled daily roundtrip passenger service to Mt. Pleasant and Detroit. Employing a Britten-Norman BN-2 Islander, the company inaugurates frequencies in August, but these can only be maintained into January **1978**.

CHISUM FLYING SERVICE OF ALASKA: United States (1985). CFS is established at Cordova, Alaska, in early **1985** to provide scheduled passenger and cargo flights to local communities and bush destinations. Revenues services commence with a de Havilland Canada DHC-2 Beaver and a Cessna 185, but are only maintained for a few months.

CHITAAVIA AIRLINES COMPANY: Chita Airport, Chita, Irkutsk Region 672018, Russia; Phone 7 (30222) 41045; Fax 7 (30222) 66396; <http://www.chitaavia.ru>; Code X7; Year Founded 1993. Chitaavia, formerly the Chita division of **Aeroflot Soviet Airlines**, is formed at the Russian city and airport of Chita, in the Irkutsk region, during **1993** to continue the provision of trunk and regional services following the breakup of the parent airline.

Nikolai Semenov is appointed general director and he undertakes to offer scheduled revenue flights to Harbin and Beijing, and throughout

the Chita Region. The fleet includes 4 each Tupolev Tu-154Bs, Tu-154Ms, 9 Antonov An-24s, 3 An-26s, 7 An-2s, 44 An-2s, and a rotary-wing department that includes 10 Mil-2s and 3 Mil-8s.

Operations continue apace in **1994** as enplanements total 405,790. Passenger boardings decline 6.2% in **1995** to 382,100 while freight carriage falls 26.5% to 9.63 million FTKs. Flights continue in **1996** as enplanements decline to 229,140.

The traffic situation continues to deteriorate in **1997**. Customer bookings fall another 5% to 228,000.

In April **1998**, it is announced that in accordance with details worked out in a three-year economic and social pact between the Chita and Irkutsk regions, the company would be merged with **Baikal Airlines**. Before this can occur, however, Baikal goes bankrupt in September.

Chitaavia continues to fly solo in **1999–2000**.

CHITREANA (COMPANIA DE AVIACION, S.A.): Panama (1964–1994). Chitreana is formed by the Valderrama family at Chitre in **1964** and begins scheduled services from Panama City's Paitilia Airport to Chitre in Herrera Province. Initial operations are conducted with a Stinson V-77, which has been employed unofficially for charters since 1952. Within a couple of years, two Douglas DC-3s are placed in service.

During the **1970s** and early **1980s**, flights are also undertaken to destinations in the provinces of Los Santos and Veraguas. In **1989**, General Manager Antonio Valderrama's fleet comprises 1 Piper PA-23 and 1 Britten-Norman BN-2A Trislander.

Early in the **1990s**, a Piper PA-31-310 Navajo is also acquired. Operations continue, however, by **1993** only one Trislander is flown. Flights cease in **1994**.

CHOSONMINGHANG KOREAN AIRWAYS. *See* **AIR KORYO**

CHRISTENSEN AIR SERVICE. *See* **CORDOVA AIRLINES**

CHRISTMAN AIR SYSTEM: United States (1977–1992). In the final year before deregulation becomes the law of the U.S. airline industry, the Christman Trucking Corporation of Washington, Pennsylvania, establishes two air transport subdivisions: the passenger group, CAS, and Christman Air Freight. The former is outfitted with 2 Piper PA-31-350 Navajo Chieftains, which are employed to launch scheduled passenger flights on September 6, **1977** from Pittsburgh to Parkersburg, West Virginia, via Wheeling.

In **1978**, President/CEO Walter L. Christman's passenger fleet is expanded by the addition of a Beech 99 and 3 more Navajo Chieftains. Enplanements total 7,122.

The workforce is increased by 50% in **1979** to 18. The route network is also enlarged as new deregulation-inspired markets are opened in Charleston, Columbus, Akron, and Canton. Passenger boardings leap 109.8% to 8,000. Revenues skyrocket 143.3% to \$523,000.

Enplanements explode in **1980**, climbing by 112.6% to 17,709.

The fleet in **1981** includes 4 Navajo Chieftains and 3 Beech 99s. They are employed to fly 16,165 passengers, an 8.7% drop. Customer bookings at the 45-employee airline are up 29.8% to 20,982 in **1982**.

Two Chieftains are withdrawn in **1983** as the number of boardings at the 11 served destinations rise 17.1% to 24,573. Freight, however, plunges 59.3% to 1 ton.

The payroll is boosted 12.7% in **1984** to 71 and 2 more Beech 99s are delivered. Service is inaugurated to Baltimore, Beckley, Bluefield, Harrisburg, and Washington, D.C. (DCA).

Customer bookings climb 37.7% to 33,834 and cargo skyrockets 242.9% to 7,000 pounds.

The year **1985** is also good for the small regional as an Embraer EMB-110P Bandeirante is acquired and passenger boardings ascend 3.2% to 34,924; freight rises 6.2% to 7,250 pounds.

With seemingly all of its fellow regionals entering into code-sharing agreements, Christman remains independent in **1986** and pays dearly for the decision. In an effort to remain fiscally viable, the

company in April sells all eight of its slots at Washington, D.C. (DCA) to **Suburban Airlines**.

Still, the carrier's 4 Beech 99s, 1 Chieftain, and Bandeirante are unable to stem a significant downturn in enplanements to 30,412, a 12.9% decline.

Traffic figures are again disappointing for the 70-employee small regional in **1987**. Passenger boardings drop 22.8% to 23,471 and freight falls by 85.1% to 4,000 pounds.

The workforce is reduced by 50% in **1988** to 35 and the fleet now includes 3 Beech 99s, 1 Bandeirante, and 1 Chieftain. Customer bookings decline another 25.8% to 17,422 and cargo plunges 64.6% to 1,000 pounds.

Christman suffers yet another bad year in **1989** as passenger bookings plunge 50.5% to 8,628 and freight falls 25.1% to just 945 pounds.

The 35-employee small regional reduces its fleet to 1 Beech 99 and the Bandeirante in **1990**, but cannot seem to improve its traffic figures. Customer bookings are off again, by 25.3%, to 6,444.

The workforce is cut by 28.6% in **1991** to 25. This and other cost-cutting measures and promotions cannot improve the traffic picture. Passenger boardings fall 39.4% to 3,902 and freight is off 31.4% to 285,000 pounds.

Reduced to but 1 Beech 99, President Walter's carrier ceases operations in **1992**.

CHRISTOWITZ AIR SERVICES (NYASALAND), LTD.: Nyasaland (1931-1933). Convinced by an aerial trip the previous October of the need for air transport in Nyasaland, cartage contractor C. J. Christowitz forms this company at Blantyre in July **1931**. Revenue services commence on August 5, when Capt. Henry Hollingdrake flies two passengers over a scheduled roundtrip route from Blantyre to Beira in the de Havilland DH 80A Puss Moth *Nyasa I*.

Following the temporary grounding of the Puss Moths for safety reasons, the fleet is increased in early **1932** by the addition of 2 DH 60G Gypsy Moths.

Capt. Robert Bourlay begins Salisbury to Blantyre Puss Moth service on August 3, **1933**. On October 12, the carrier is combined with competing **Rhodesian Aviation Company, Ltd.** to form **Rhodesia and Nyasaland Airways, Ltd.**

CHRYSLER PENTASTAR AVIATION: 7310 Highland Road, Waterford, Michigan 48327, United States; Phone (248) 666-3630; Fax (248) 666-8580; Year Founded 1974. CPA is set up as the FBO at Oakland-Pontiac Airport in **1974**. A decade later, a charter division is established to fly executives of the automobile industry and others to destinations throughout North America and later, the world.

In **2000**, the company flies 2 Grumman G-1159 Gulfstream IIs, 1 G-1159A Gulfstream II, 2 G-1159C Gulfstream IVs, 1 British Aerospace (BAe) (HS) 125-800 Hawker, and 1 IAI-1124 Westwind from its Michigan hub and Gulfstream IV from Dallas (DAL).

CHS (CILENROC HELICOPTER SERVICES, S.A.): Avenue d'Hougoumont 2, Brussels, 1180, Belgium; Phone (2) 375-6030; Fax (2) 375-4409; Year Founded 1993. Heli Europe, S.A. is established at Brussels National Airport in the summer of **1990** to provide charter passenger, cargo, and other miscellaneous services. Employing 1 Agusta A109, 1 Bell 206B JetRanger, and 1 McDonnell Douglas MD-500, in September Heli Europe inaugurates VIP transport, sight-seeing flights, organ transport, cargo express, and aerial photography work.

Operations continue apace in **1991-1993**. During the latter year, the company identity is changed to **CHS (Cilenroc Helicopter Service, S.A.)** with Roger and Michael Cornelis as directors.

Despite the corporate makeover, there is little change in service over the next seven years, although several Robinson R-22s join the earlier fleet.

CIDNA. See COMPAGNIE INTERNATIONALE DE NAVIGATION AERIENNE, S.A.

CIELOS DEL PERU, S.A.: Ofc. 17, Ave. Elmer Faucett 4800, Callao 1, Peru; Phone (00511) 484-0596; Fax (00511) 484-0405; http://www.staf-airlines.com/br/peru; Code EXD; Year Founded 1997. Cielos del Peru is established at Lima on November 30, **1997** as the latest in a long line of Chilean all-cargo carriers. Shareholding is divided between Chairman Alfonso Conrado Rey, Carlos Benjamin Lopez Costa, Manual Eduardo Francesqui Navarro; Herman Granda is named president.

The small concern Export Air, S.A. is purchased on January 31, **1998** and amalgamated. At this point, revenue flights linking the company's base with Miami commence with a single Boeing 707-320C named *Petete*.

Service is extended to Guayaquil and Santa Cruz de la Sierra and, during the next two years, two more Stratoliner freighters and a B-727F are acquired. The company comes to operate three million FTKs to Miami annually.

On October 27, **2000**, a Douglas DC-10-30CF is leased from CIT Aerospace for five years.

CILENROC HELICOPTER SERVICES, S.A. See CHS (CILENROC HELICOPTER SERVICES, S.A.)

CIMARRON AIR. See COLORADO AIRLINES

CIMBER AIR, A.S.: Lufthavnsvej 2, Sonderborg Airport, Sonderborg, DK-6400, Denmark; Phone 45 74 42 22 77; Fax 45 74 42 65 11; http://www.cimber.dk; Code QI; Year Founded 1950. Organized in **1950** by Capt. Ingolf L. Nielsen and named for a Viking tribe that had conquered Northern Europe, Cimber Air, A.S. initially provides air taxi, cargo, and charter flights from its base at Sonderborg Airport on the border between Denmark and Germany.

The company, employing lightplanes, begins a regular passenger and mail feeder service in **1963** linking its base with Copenhagen and surrounding communities.

Three years later, in **1966**, Nielsen obtains a scheduled service license to fly roundtrips from Sonderborg to Copenhagen. The fleet now includes 7 de Havilland DH 114 Herons. The first of 8 Nord 262s are acquired in **1967** and are employed to begin flying a commuter network in Germany on behalf of **Deutsche Lufthansa, A.G.**

In April **1971**, Cimber joins with SAS (Scandinavian Airlines System) and Maersk Air, A.S. to form a consortium carrier, **Danair, A.S.** Cimber's shareholding is 15% and for its part, it supplies the aircraft and crews necessary to link its base with Skrydstrup, Thisted, Stauning, Odense, and Copenhagen.

Two years later, in **1973**, the contract with **Deutsche Lufthansa, A.G.** ends and the Nord fleet is mostly sold-off to **Ransome Airlines** of Philadelphia. Traffic continues to grow and enplanements in **1975** total 56,000.

Three years later, in **1978**, Managing Director Nielsen's fleet comprises 3 Fokker-VFW 614s, 1 Nord 262, 1 Dassault Falcon 20, 1 Piper PA-31-350 Navajo Chieftain, and 1 Beech Super King Air 200. Two Fokker F28-1000s are acquired in **1979** and the decade is closed out with a passenger boardings figure of 100,000.

Despite the introduction of a new airport at Sonderborg, the company is badly hurt by the oil crisis of **1980**. Fuel prices cause significant financial losses. The F28s are wet-leased to **Saudia (Saudi Arabian Airlines)** for six years and an F27 is dry-leased from Fokker to operate the Sonderborg-Copenhagen service. With capacity reduced, traffic figures drop dramatically.

Three Nord 262s are repurchased from **Ransome Airlines** in **1981** and these turboprops prove the company's savior. The F27 is returned and traffic and financial figures improve in **1982** and, by **1983**, the fleet has been upgraded; gone are the VFW 614s, the Falcon 20, and the Chieftain, replaced by the 2 Fokker F28s and 3 Nord 262s. Daily Nord 262 flights are offered nonstop between Sonderborg and Copenhagen.

Orders are placed in **1984** for 3 Avions de Transport Regional ATR42-200s. The 35th anniversary is celebrated in August **1985** and, in November, delivery is taken of the first of 3 ordered ATR42s.

The second ATR42 arrives in January **1986** and the third in August. Late in the year, Hans Nielsen succeeds his father as company president, although the founder remains chairman. All top posts continue to be occupied by Nielsen family members.

Dagali joins the route network in **1987** as the F.28s return from the Middle East. Passenger and cargo service begins to Esbjerg and Humberston in **1988**.

Airline employment is increased by 16.7% in **1989** to 105 and, to handle an increased traffic load, a fourth ATR42-200 is placed in service. Enplanements reach 126,817, a 44.3% boost while freight climbs 6.9% to 61,640 pounds.

The fleet in **1990** includes 2 F.28s, 4 ATR42-200s, and 2 Nord 262s. As the world airline recession hits, this company, like many others, begins to suffer traffic and fiscal downturns and stops reporting its figures.

During **1991**, 3 more ATR42s, Dash-320s, join the fleet. The **Danair, A.S.** Sonderborg-Copenhagen service continues in **1992**, as does a route from the base city to Montpellier.

A large number of replacement services are also flown for the **Deutsche Lufthansa, S.A.** subsidiary **Lufthansa CityLine, mbH.** These are launched from Kiel to Frankfurt, Paris, Berlin, Munster, Cologne, Osnabruck, and Lyon and from Berlin to Bremen employing 6 ATR42-320s leased from Cimber.

In **1993**, airline employment at Chairman Nielsen's carrier stands at 226 and the fleet comprises 2 Nord 262s, 8 ATR42-320s, including the 6 out with **Lufthansa Cityline, mbH.**, 1 Beech Super King Air 200, and 1 Dassault Falcon 20.

One of the ATR42-320s is leased to the new Swedish regional **Holmstrom Air, A.S.** in **1994**. The Falcon is replaced with a Cessna 501 Citation I, while the Nords and King Air are retired. Operations continue apace in **1995** as the company orders 5 ATR42-520s. Four ATR42-320s are chartered to **Lufthansa Cityline, mbH.** Enplanements, reported for the first time this decade, total 100,533.

Airline employment stands at 230 in **1996** and the fleet includes 7 ATR42-320s, including the 4 still with **Lufthansa Cityline, mbH.** and the Cessna 501 Citation I. The first 2 ATR42-520s are delivered, 1 each in February and April. Passenger boardings skyrocket 81.1% to 531,917.

Having proven unprofitable, the year-old return route from Copenhagen to Newcastle operated by **SAS Commuter, A.B.** is turned over to Cimber Air on April 1, **1997**.

Also during the spring, a German subsidiary, **Cimber Air, GmbH.**, is established at Kiel. Destinations now visited also include Aalborg, Aarhus, Copenhagen, Karup, and Sonderborg.

Enplanements for the year climb to 717,000.

Cimber Air Holdings, A.S., the airline's parent, sells a 26% equity stake to **SAS (Scandinavian Airlines System)** in June **1998** to strengthen its domestic code-share partnership with the major.

The third ATR42-520 is delivered in early **1999**. It is placed into service on the route from Copenhagen to Karup. On March 29, the five-times-a-day nonstop MD-81 return service from Copenhagen to Karup, Denmark, provided by **SAS (Scandinavian Airlines System)** is discontinued and replaced by ATR-520s of Cimber Air, which operate an equal number of turboprop flights.

Through September, the company receives 3 ATR72-520s, several in "Team Lufthansa" colors. In October, one of the ATR42s is employed to launch five-times-a-day roundtrips between Copenhagen and Esbjerg Airport. The following month, a firm order is placed for 2 Canadair CRJ200ERs, along with 4 options.

Wearing "Team Lufthansa" livery, the first CRJ200ER is received on August 10, **2000**.

CIMBER AIR, GmbH.: Flugplatz Kiel Holtenau, Kiel 17, D-2300, Germany; Phone 49 (431) 323 656; Fax 49 (431) 321 420; Code QI; Year Founded 1997. Cimber Air, GmbH. is established at Kiel Airport in the spring of **1997** as a subsidiary of the Danish airline. Bernd Luettkie is named managing director and he begins domestic services with a single Aero International (Regional) ATR42-320.

Destinations visited in **2000** include Berlin, Bonn, Bremen, Cologne, Dortmund, Kiel, and Nuremberg.

CINCINNATI AIRLINES: United States (1969–1970). Established at Lunken Airport and named in honor of its base city, Cincinnati Airlines initiates daily Cessna 402 passenger roundtrips to Cleveland's Lakefront Airport in **1969**. The trans-Ohio shuttle is only maintained into **1970**.

CINTA (COMPANIA NACIONAL DE TURISMO AEREO, S.A.): Chile (1953–1957). Following a decision by the Chilean government in early **1953** to allow the start-up of private airlines, CINTA is formed by the air carrier specialist, Jorge Carnicero, at Santiago in November as a division of the Compania Sud Americana de Vapores steamship line. After acquiring a fleet of 3 Lockheed Model 18 Lodestars and 2 ex-**LanChile Airlines (Linea Aerea Nacional Chile, S.A.)** Lockheed Model 10A Electras, the carrier begins domestic passenger and freight service in **1954**.

After a year of successful operations in **1955**, weekly Miami to Santiago flights are initiated on October 26, **1956**. Late in the year, Carnicero persuades the company's directors that tourist dollars could be made if charter flights were undertaken to and from the U.S.

As a result, 2 Douglas DC-3s and the first of 4 DC-4s are purchased from **United Air Lines** and in October **1957** are employed to initiate low-cost, roundtrip Inter-Americano services to Miami via Antofagasta, Arica, Talara, and Panama City. Somewhat overextended in a slender market, CINTA, in December, merges with another new Chilean entrant, **ALA (Sociedad de Transportes Aereos, S.A.)**.

CIRCLE RAINBOW AIR: United States (1983–1995). Honolulu-based CRA begins interisland air tours, flight-seeing, and passenger charters in **1983** with a fleet of 3 Beech 18s.

A decade later in **1994**, President M. Otsuka's company employs two pilots and owns a fleet of 5 Pilatus-Britten-Norman PBN-2 Islanders. Operations cease in **1995**.

CIRRUS AIR: 8605 Lemmon Avenue, Dallas, Texas 75209, United States; Phone (214) 358-3174; Fax (214) 358-0430; http://www.aerosearch.com/companies/cirrus; Code BS; Year Founded 1976. Reggie Parson establishes Cirrus as an independent FAR Part 135 charter operator at Dallas (DAL) in **1976** to offer charter and contract service all-cargo flights. Operations commence with a fleet of 13 Beech 58 Barons, 5 Beech 36 Bonanzas, 2 Cessna 402s, 2 Cessna 401s, and 1 Cessna 210.

Operations continue over the next two decades, during which time the company also establishes hubs at New Orleans, Albuquerque, Midland, San Antonio, and Amarillo. In **2000**, John R. K. Tinkle is chairman/president and the company flies from Dallas a mixed fleet of 4 Barons, 2 Bonanzas, 1 Cessna 402, and 1 Mitsubishi Mu-2.

CIRRUS LUFTFAHRTGESELLSCHAFT, mbH.: Flughafen Saarbrücken, Saarbrücken, D-66131, Germany; Phone 49 6893-986037; Fax 49 6893-83318; http://www.cirrus-airlines.de; Code C9; Year Founded 1990. The German Cirrus is established in **1990** to provide fleet management, executive, and small group passenger charters. The company employs six pilots by **1998** and at Stuttgart Airport bases 1 each Cessna 551 Citation II, Piper PA-34 Seneca, and Beech Super King Air 200. Additional small aircraft are housed at Saarbrücken.

In March, the company receives government authority to operate scheduled services. Two de Havilland Canada DHC-8-100s are leased and employed to initiate roundtrips from Karlsruhe and Baden to Berlin and from Saarbrücken to Leipzig, Dresden, and over the border to Salzburg.

Enplanements during the 12 months total 21,000.

During **1999**, Cirrus becomes a "Team Lufthansa" partner and, in the fall, places a firm order and two options with Embraer for a regional jet.

During the first quarter of 2000, Dash-8 "Team Lufthansa" flights commence from Saarbrücken to Dresden and Mannheim.

The company takes delivery of an ERJ-145 at the beginning of April. After workup, it is placed on the "Team Lufthansa" route between Düsseldorf and Birmingham on April 24.

DHC-8-100 roundtrips from Berlin to Karlsruhe and Baden-Baden are launched on May 15. New "Team Lufthansa" Dash-8 service is started on June 2 from Saarbrücken to Leipzig via Dresden.

CISKEI INTERNATIONAL AIRWAYS (PTY.), LTD.: South Africa (1988–1989). M. L. Potter establishes CIA at Bisho, the capital of the black African homeland of Ciskei, situated within the borders of the Republic of South Africa, in 1988. One each Convair CV-880 and CV-990A Coronado are acquired.

Revenue flights linking the company's base with Johannesburg are started by the Coronado late in the year; however, the airline is not viable and it is shut down in 1989 and the two aircraft are put up for sale.

CITI AIR (PTY.), LTD.: South Africa (1985–1990). Margate Air (Pty.), Ltd. is reformed in August 1985 and moved to Durban, where it begins operations under the name **Citi Air (Pty.), Ltd.** D. White is chairman, with S. Ord as managing director.

Employing 1 Piper PA-31-350 Navajo Chieftain, Cessna 402B, and 2 Piper PA-28 Cherokees, scheduled feeder services are continued by the 10-worker company to Ladysmith, Margate, Nelspruit, Newcastle, and Vryheid.

Over the remainder of the decade, the fleet is enhanced by the addition of 1 Cessna 402B, 1 Cessna 310, and 2 Cessna PA-32 Cherokee Sixes while Pietermaritzburg and the Transkeian capital of Umtata join the route network. Early in 1990, the company is combined with East London-based **Border Air (Pty.), Ltd.** and **Magnum Airlines (Pty.), Ltd.** of Johannesburg to form **Link Airways (Pty.), Ltd.**

CITY AIR SCANDINAVIA, A.B.: Sweden (1992–1993). City Air Scandinavia, A.B. is established by former **SAS (Scandinavian Airlines System)** executives Bosco Janzon and Peter Hilgsoe at Malmö in early 1992 to provide scheduled passenger services to destinations in Sweden, Norway, and Denmark. Janzon, the founder and shareholder, becomes chairman and Hilgsoe becomes managing director. On February 11, they purchase the assets of **Malmö Aviation, A.B.** from Salenia A.B., recruit a workforce of 220. They assemble a fleet of 5 leased British Aerospace BAe 146-200s, as well as a BAe 146-200QT and a Dash-300QT that are operated under contract to **TNT Express Worldwide**. There is also a leased Fairchild Hiller FH-227E.

While the new City Air title is litigated with another carrier in court, passenger flights begin in March under the **Malmö Aviation, A.B.** moniker linking the company base with Stockholm, Oslo, Copenhagen, and other Nordic destinations.

Twice-daily flights are inaugurated on June 28 between Stockholm and London (LCY). CAS is the second company to begin flying BAe 146s into the new downtown British facility. **TNT Express Worldwide** cargo runs are made between Cologne and eight Scandinavian destinations. In December, orders are placed for 5 British Aerospace RJ85s; they will be delivered in 1994–1995.

A new route is initiated early in 1993 from Bromma Airport to Malmö. Financial problems take central stage as increased fees at domestic airports, depreciation of the Swedish krona, and fare dumping by other airlines conspire to push the company toward bankruptcy. In the early spring, Chairman Janzon and Executive Director Hilgsoe propose the elimination of the service between Stockholm and London (LCY).

On April 15, the carrier goes under; the next day it is purchased by Viklund Crafoord, owner of Viklund Inter Trade, A.B., and is provided with a new corporate identity, livery, logo, uniforms, etc. under the name **Malmö Aviation Schedule, A.B.**

CITY AIRLINK, LTD.: Japan (1987–1991). Japan Air Lines Company, Ltd. (2) and Asahi Air Lines, Ltd. jointly establish this

rotary-wing affiliate in late spring 1987 to provide shuttle service between Tokyo's Narita and Haneda Airports. Choji Tomita is appointed president and capitalization of \$666,000 is subscribed equally by the partners (35% each), with the remainder financed by Mitsui & Co. Employing 2 Bell/Fuji 412SPs and headquartered in JAL's Tokyo head office, the new company begins revenue services in June.

Operations continue apace in 1988–1990. Enplanements during the latter year reach 13,211. As has become the U.S. pattern, the helicopter carrier—the only scheduled one in Japan—builds up a heavy financial burden that forces it to cease operations in November 1991.

CITY BIRD, S.A.: Rue de Livoume No. 13, 1000 60, Brussels, Belgium; Phone 32 (2) 752-5252; Fax 32 (2) 752-5210; <http://www.citybird.com>; Code H2; Year Founded 1996. With Eurobelgian Airlines, S.A. founder Victor Hasson as chairman/managing director, City Bird Holdings and its airline subsidiary City Bird, S.A., also marketed as "The Flying Dream," are established at Brussels on August 7, 1996 with the express purpose of offering international low-cost scheduled passenger service to the U.S. The majority of the capitalization (62.5%) is provided by City Hotels, S.A., which Hasson also heads.

After the necessary certificates and permissions are received, 2 McDonnell Douglas MD-11s are ordered. The first leased jetliner, in dark green and gray livery with CityBird and "The Flying Dream" titles, is delivered on December 4 and is christened *Albatross*. The new entrant now advertises both economy and business classes at reasonable fares, without restrictions such as minimum stay requirements. Charters to the French Antilles and La Reunion commence in December.

At the beginning of 1997, twice-weekly nonscheduled charters are also undertaken to the Dominican Republic, two Mexican locations, and Cuba.

Scheduled flights to and from Brussels for selected cities are introduced: Mexico City, Mexico, with service every Thursday, on March 27; Orlando with service every Sunday and Miami with biweekly service Sunday and Wednesday, on March 30; Los Angeles, with biweekly service Saturday and Tuesday, on June 2. Finally, Oakland, serving San Francisco with weekly service every Saturday and Newark, serving New York with 4-times-per-week service on Mondays, Wednesdays, Fridays and Saturdays, on June 6.

Meanwhile, the second MD-11, wet-leased from **World Airways**, arrives toward the end of May. After a month of \$148 introductory fares, tariffs on the new routes climb to \$184 on July 1.

Flights continue throughout the fall and plans are made to introduce additional nonstop North American gateways. It is reported in the aviation press that possible merger discussions are being held with **Sabena Belgian World Airlines, S.A.**

On October 30, City Bird undertakes its initial public offering (IPO) of stock. The IPO of a 24% stake is made on the Easdaq stock exchange and brings in \$33.8 million. Ownership is now divided between City Hotels' Chairman Victor Hasson (52%), Flight Invest (24%), and private investors (24%).

In November, Sabena's President/CEO Paul Reutlinger and Chairman Hasson hold a joint news conference. Sabena will, indeed, take a 15% equity stake in City Bird Holdings. In return, City Bird will operate routes on the major's behalf from Brussels to Montreal, São Paulo, and Newark.

The two also announce that they will share two jetliners, each with its own cabin crews, in-flight catering, and cabin decor. On the outside, both will wear Sabena livery.

By year's end, City Bird has lost \$22 million since start-up.

On January 12, 1998, **Sabena Belgian World Airlines, S.A.** exercises an option to acquire 16% in City Bird parent City Bird Holdings for BFr 68 million (US\$1.9 million); it also has an option for a further 8.4% by November 1999.

A second MD-11 ordered by City Bird is delivered to Sabena at the end of March and is dispatched to the **Swissair, A.G.** modification center at Zurich for cabin modifications. Due to enter service in just three days, the City Bird, S.A. MD-11 being modified at Zurich is damaged

by a scissors lift on April 12. Repairs are quickly made as both companies await the delivery of a third MD-11 by the end of the month.

On April 15, the two airlines begin to code-share with **Delta Air Lines** on City Bird's daily roundtrip route from Newark to Brussels, where passengers are able to connect with Sabena flights elsewhere. The airlines employ 1 each City Bird MD-11 and B-767-33AER, painted in **Sabena Belgian World Airlines, S.A.** colors, which have been reconfigured to include business and economy cabins for Sabena passengers and a separate City Bird cabin. The duo is placed onto a new twice-weekly route between Brussels and Montreal on May 6.

Announcing that it will start freight operations in the following July, a pair of Airbus A300-600Fs are ordered in midyear.

Flights continue during the remainder of the year.

A major expansion of the company's cargo interest in the year 2000 is emphasized by the March 3, 1999 order for 2 B-747-400Fs.

During the month, a five-year code-sharing agreement is signed with **Lignes Aeriennes Congolaises, S.A.** Under its terms, the new Belgian entrant will fly passengers and cargo between Europe and Kinshasa on a weekly basis, using LAC flight codes. The arrangement will allow LAC to resume international air links abandoned in 1992, with passenger services starting in May and A300-600F freighter flights beginning in summer.

The B-767-33AER is wet-leased to **Luxair (Luxembourg Airlines, S.A.)** on March 30; with two City Bird pilots, six City Bird flight attendants and two Luxair flight attendants, the aircraft inaugurates roundtrip service from Luxembourg to Newark, four times a week.

A public row between City Bird and **Sabena Belgian World Airlines, S.A.** erupts in Brussels on April 27 over the former's dual-designator pact with LAC. Claiming that the new arrangement is a surprise action that will damage the pioneer line, which operates between Brussels and Kinshasa four-times-a-week, Sabena demands \$9.22 million in damages. It also indicates that it is seeking an arbitration ruling that City Bird's actions constitute a unilateral termination on its part of the commercial arrangement with Sabena.

City Bird President/CEO Hasson calls a news conference to rebut the Sabena action. He complains that Sabena had not wanted the LAC link in the first place and should have known about it since its 11.2% stake in City Bird gives it a seat on the City Bird board. Both companies, which do not suspend their existing pact, indicate that there are no plans to terminate their cooperative agreement and acknowledge that arbitration may take six months to a year.

The wet-lease pact with LAC begins on May 17. Weekly B-767-33AER roundtrips, conducted in the manner of those launched by City Bird with Luxair at the end of March, are undertaken between Brussels and Kinshasa. At month's end, a B-767-33AER is wet-leased to **Condor Flugdienst, GmbH** for two months. To avoid a repainting, the phrase "On behalf of Condor" is added behind the City Bird titles.

The two A300C4-605Rs arrive, one each in June and July, at which point City Bird launches intra-European all-cargo services.

As the concentration on wet-lease activities intensifies, flights to California and Mexico are withdrawn.

A newly received Airbus A300C4-605R, the *Toucan*, is wet-leased to **Cargolux Airlines International, S.A.** in September; the wide-body is employed to operate twice-weekly cargo roundtrips to Ghana and the Ivory Coast. The aircraft, one of two chartered for ACMI service, work as part of a new City Bird Cargo division located in Luxembourg.

With the beginning of the winter schedule, the carrier launches charters to Mediterranean holiday points employing a pair of leased B-737-46Qs.

A total of 83,000 passengers are flown on the year. Operating revenues surge 44% to \$153.1 million, allowing the first net profit (\$3.8 million) in company history. City Bird Cargo, in its only full quarter of operation, generates \$8.7 million, 95% of that from the Airbus ACMI's.

The workforce stands at 450 as the new millennium begins. On February 15, an agreement is reached with **Virgin Express Airlines, S.A.** under which City Bird will take over all Virgin charters as of October 1.

In March, **Swissair, A.G.** terminates its exclusive block-space contract with City Bird, which is unable to fill the bellies of its passenger planes flying to Miami and various charter points.

The offices of City Bird Cargo are shut down at the end of the month and the executives hired to run it are discharged; the operation is returned to Brussels where, in April, the Cargolux contract is replaced with another from **Air France**. The second Airbus is leased to the Israeli freighter **CAL Cargo Airlines, Ltd.**

Two chartered Next Generation B-737-86Qs arrive in June, while the first Dash-300, the B-737-3L9 previously operated by **Air Holland Charter, N.V.**, is delivered on July 31. These fly from Paris (CDG), the latter beginning in September after it has undergone technical changes.

Flights to Miami and Orlando end on September 9, although in-transit flights through the former are operated for a short period thereafter.

Employing one of the company's MD-11s under an ACMI contract, **ALM (Antillean Airlines, N.V.)** launches thrice-weekly roundtrips on December 3 between Curaçao and Amsterdam.

CITY CONNEXION AIRLINES, S.A.: 20 Boulevard de la Nation, Bujumbura, BP 6, Burundi; Phone 257 212426; Fax 257 213398; http://www.cca-airlines.com; Code G3; Year Founded 1998. Originally known as Congo Commercial Airlines, S.P.R.L., City Connexion is established at Kinshasa by Tony Goetz en Zonen, one of the largest European independent gold refiners and traders, in early 1998. Chairman Tony, who remains based in Antwerp, appoints his son Alain president. Neil Robertson is appointed chief operating officer, with Claude Piquard as general manager. Employing 3 leased Let 410UVs, regional services are initiated on August 31.

In April 1999, South African-based **Transoceanic Airways (Pty.), Ltd.**, which operates as Africargo Airlines (Pty.), Ltd., is taken over; initially, it is allowed to retain its previous identity. Congo Commercial, to escape continuing hostilities in the Congo, is now relocated to Bujumbura and renamed. Operations continue, much as before, employing the 2 Africargo Canadair CL-44Ds, 3 Lets, and 1 Piper Aztec. Medical and evacuation flights become a specialty.

During the remainder of the year, a strategic plan is put into place designed to make City Connexion into what President Goetz terms "a real airline." Agreements are finalized for joint ventures on routes to Kenya, Tanzania, the United Arab Emirates, and destinations in Europe. At the same time, an \$8.5-million order is placed for 2 Ayres 7000 turboprops.

City Connexion launches regularly scheduled weekly L-410 UVP flights from Bujumbura to Johannesburg during the first quarter of 2000. It also operates ad hoc jet charters throughout Africa south of the Sahara. Destinations are visited in Uganda, Rwanda, Tanzania, and the Democratic Republic of the Congo.

CITY EXPRESS, LTD.: Canada (1984-1991). Ailing **Air Atonabee, Ltd.** is purchased in March 1984 for C\$2 million by former the **Nordair, Ltd./Quebecair, Ltd.** vice president, Victor Pappalardo. Among the AAL assets are 5 Canadian-built Saunders ST-27s, which are stretched de Havilland DH 104 Doves with Pratt & Whitney of Canada PT-6 turboprop engines. Passenger boardings rise to 3,000 per month by June. A de Havilland Canada DHC-7 is acquired from **Arkia Israeli Airlines**, allowing retirement of 3 ST-27s.

The original services are continued from a base at Toronto Island Airport over two routes—to Ottawa via Peterborough and to Montreal (YUL). The DHC-7 and 2 ST-27s launch City Express service on September 13, the same day the carrier's name is officially reregistered under that title. Employing buses to transport passengers between airports and downtown locales, the carrier's boardings grow to 8,715 within a month.

A second DHC-7, acquired from **Henson Aviation** in the U.S., is placed in service in March 1985. The former **Nordair, Ltd.** route from Hamilton to Pittsburgh is now assumed with ST-27s. Hamilton is added as a stop on the Toronto-Ottawa run in August. Pappalardo's commuter, spurred on by deregulation, becomes the first airline to receive loan insurance guarantees from the Canadian government.

The AAA credit rating that the guarantees represent allows the borrowing of C\$15 million for the acquisition of 2 DHC-8s. The new turboprops are received in early September, allowing two more firsts: the first DHC-8s purchased by a privately owned Canadian airline and the first Canadian airline ever to take delivery of two Canadian-built aircraft on the same day. The newcomers are employed on September 13 to inaugurate daily service to Montreal in celebration of the carrier's first official anniversary under its City Express name. Ottawa-Hamilton service, begun in August, is stepped up in September.

In fall, daily Montreal-Ottawa service begins and with a Grumman Gulfstream I chartered from **Air Inuit, Ltd.**, weekend flights begin to Peterborough. Orders are placed for 2 more DHC-8s (with 4 options) as service Hamilton-Pittsburgh, Pennsylvania, begins on October 21. Enplanements for the year total 120,000.

Hamilton-Pittsburgh service is suspended in January 1986. A DHC-8-100 is leased from DHC between January and February and a new purchased machine replaces it in March. Flights from Toronto to St. Catharines begin seven times daily on July 28 with single-engine Cessnas and Pipers. Charter flights to Atlantic City are launched from Toronto, Montreal, and Hamilton in April under the title Atlantic City Express.

Direct Toronto-Quebec City service is inaugurated in October, in conjunction with offerings from the holiday package tour operator Pronto Tours. Nine daily ST-27 return flights begin Toronto Island to London, Ontario, in September. Passenger boardings increase to 295,450. City Express is now the largest remaining independent regional carrier in the nation.

Airline employment grows by 8.7% in 1987 to 350. The fourth and fifth DHC-8-100s are delivered in January and a sixth is leased for two months in February, the same month twice-weekly ski charters are undertaken from Toronto Island to Quebec City for transport overland to Mount St. Anne de Beaupre. Service to Peterborough is dropped in March and to Hamilton in May.

Late in May, another DHC-7 is acquired, this one from **Air Niugini (Pty.), Ltd.**, and joins the others in offering new routes to Newark and Detroit. **Southern Jersey Airways, Ltd.** provides another Dash-7 in August. It is employed to operate hunting charters to Schefferville during the fall. In December, the Montreal route is stretched on to Quebec City, Sept Iles, and Wabush.

Customer bookings for the nation's last remaining independent swell 18.8% to 353,000.

All 6 remaining ST-27s are retired on August 15, 1988, the same day scheduled services from Toronto Island to London and Rochester, New York, are dropped. The year's enplanements are kept confidential. Service from Montreal to Quebec, Wabush, and Sept Iles is cancelled in February 1989; however, flights continue between Montreal and Ottawa. In October, it is announced that City Express will become the first Canadian member of the **Continental Airlines** "Continental Express" commuter network.

"Continental Express" Dash-7 flights commence five days per week in May 1990, linking Toronto Island Airport and Ottawa with the Continental hub at Newark (EWR). Although traffic and financial statistics have not been available for some time, it is clear by midyear that the pioneer Toronto carrier is in trouble.

In July, the 4 DHC-8s are repossessed by Mutual Life of Canada, Ltd., which reports that no payments have been received for them since March and that almost C\$1 million is owed in principal and interest. The airline is restructured in September and although flights to Montreal end, the "Continental Express" schedule is maintained.

The company is forced into receivership and ceases operations in late February 1991 after creditors reject a tickets-for-debt plan. The carrier is now liquidated in an effort to recover the C\$46 million it owes.

CITY LINK, LTD.: Dubai, United Arab Emirates; Year Founded 1995. City Link is established by businessman Adel Khalifa al-Otaiba at Dubai in the fall of 1995 to offer amphibious third-level service between the Dubai Creek Marina, located at the Golf & Yacht Club and

the Al Ain Palace Hotel on the Abu Dhabi Corniche. A Dubai business association, the Al Qaisar Group, provides capitalization. Henning Norby, an experienced seaplane operator from the Maldives, is named managing director, with British pilot Capt. John Nowell as operations director.

Twenty-two-times-per-day revenue flights commence in December with a pair of float-equipped Cessna 208 Caravan Is. The aircraft are dressed in very bright livery depicting holiday scenes.

Operations continue apace in 1996-1999 as 5 more floatplane Cessnas join the carrier, allowing the initiation of charter flights throughout the U.A.E.

CITY LINK, LTD.: India (1991-1992). City Link, Ltd. is established in New Delhi in the fall of 1991 to offer scheduled passenger services to Calcutta and Bombay. Revenue flights begin in November with a single Rombac (BAC) 1-11-516 wet-leased from the Romanian manufacturer. Operations cease just after the start of the new year.

CITY LINK AIRLINES, LTD.: Port Harcourt International Airport, Port Harcourt, Nigeria; Phone 234 (90) 500 843; Fax 234 (90) 230 238; Code CRG; Year Founded 1988. Established as an FBO/charter operation at Port Harcourt in 1988, Managing Director Capt. Theo Onu's concern adds a scheduled airline division in March 1993. Employing an Embraer EMB-110 Bandeirante, flights begin to Abuja and Enugu.

By 2000, the fleet of the 26-employee company has grown to include 2 Embraer EMB-110 Bandeirantes and 1 EMB-120 Brasilia. These allow frequencies between the three communities to be increased.

CITYFLYER EXPRESS, LTD.: Iain Stewart Centre, Beehive Ring Road, Gatwick Airport, West Sussex, England, RH6 0PB, United Kingdom; Phone 44 (1293) 567 837; Fax 44 (1293) 567 829; <http://www.british-airways.com/inside/wrldwide/partners/franchise/docs/cityfly.shtml>; Code FD; Year Founded 1992. Euroworld, Ltd. is reorganized in January 1992 and is given this new title. Robert Wright remains as chairman with Brad Burgess as managing director. The company is 40% owned by its directors with financial support from the 3i Corporation. Airline employment is increased by 66.7% to 150. The fleet comprises 2 Shorts 360-300s, which are quickly repainted. The first of 2 Avions de Transport Regional ATR42-320s, the first to be operated in scheduled service by a U.K. airline, is delivered in April.

Scheduled passenger services are launched under the new name in May linking the 135-employee company's base at London (LGW) and Antwerp, Rotterdam, Leeds, Guernsey and Jersey.

The second ATR42-320 arrives in June and a third ATR42-320 is delivered in October. The third new turboprop allows the carrier, in November, to begin a roundtrip frequency over the old **Dan-Air/Dan-Air Services, Ltd.** route between Newcastle and London (LGW).

Enplanements total 236,292 and freight grows by 10.4% to 280,000 FTKs. Revenues total £6 million, but there is a loss of £506,000.

The workforce is increased by 30.7% in 1993 to 196 and the fleet is increased by 1 Shorts 360-300. Scheduled services are launched in January from London (LGW) to Leeds and Dublin. A fourth ATR42-320 is acquired under lease in early spring and is employed to inaugurate flights to Dusseldorf on May 1.

In August, the company becomes a code-sharing partner of **British Airways, Ltd. (2)** and begins to fly under the marketing name of "British Airways Express." The five-year franchise, or licensing, arrangement with the U.K. flag line involves no equity stake by the larger company and is designed to increase feeder traffic for both carriers at London (LGW), Leeds, and Bradford, providing service that appears "seamless."

It does, however, mean that in outward appearance the regional will resemble its patron. Aircraft are painted in modified BA colors, with BA interiors. Cabin crew and airport staff wear BA uniforms, while check-in and ticket counters resemble BA's and meals are served using BA sup-

plies. This pact, pioneered in essence by **Allegheny Airlines** over 25 years earlier, will be the model for later BA arrangements with regionals, as well as the franchise arrangements developed by the other European majors, including **Air France** and **Deutsche Lufthansa, A.G.**

The leased ATR42-320 is replaced in November by an owned unit. Passenger boardings swell 39.1% to 388,000 and revenues jump 36.5% to £16.8 million. Net gain totals £144,000.

Four new employees are hired in **1994** and the new ATR42-320 enters revenue service in January. Business-class service is introduced for European schedules; passengers are eligible to earn credits in BA's Executive Club frequent flyer program.

In April, flights begin from Leeds to Dublin and from London (CTN) to Paris (CDG).

Traffic figures are released through November and show that customer bookings have increased 45.5% to 496,418. Cargo dips 2.6% to 343,000 FTKs. Revenues reach £25.6 million and allow a £632,000 net profit, a 339.5% increase.

In **1995** airline employment is increased by 62.5% to 325 as a sixth ATR42-320 arrives in April under lease from **TAT European Airlines, S.A.**, another new BA affiliate. Additionally, the French line provides CityFlyer with 2 of the 3 new ATR72-202s that enter service beginning in November.

From Gatwick Airport, where the regional is now the second largest operator, flights are operated to Leeds, Newcastle, the Channel Islands, Ireland, Germany, and the Netherlands. The last Shorts 360-300 is retired in November.

During the year, the company complains to the European Union (EU) that the decision of the Flemish government to provide **VLM (Vlaamse Luchttransport, N.V.)** with an interest-free, unsecured BFr 20 million (\$680,000) loan is anticompetitive state aid, which is illegal under EU guidelines.

Enplanements skyrocket 85.8% to 730,000 and revenues reach £33.8 million. A net £956,000-million profit is posted.

The workforce is significantly increased in **1996**, growing another 23.1% to 400. Two more ATR72-202s arrive in January and February and a chartered ATR42-320 is delivered in March.

During the first quarter, the EU agrees with CityFlyer that the Flemish government loan to **VLM (Vlaamse Luchttransport, N.V.)** constitutes state subsidy. It rules that VLM must pay market rate interest to the government, backdated to the date of the loan, but rejects the British call that the loan be secured or repaid.

Thrice-daily frequencies are introduced from London (LGW) to Cologne and Bonn. During late spring, orders are placed for 2 Avro RJ100 jetliners.

Passenger boardings soar 28.4% to 862,284. Revenues surge 43.1% to £48.4 million, while net profit increases 196% to £2.83 million.

Once again in **1997**, the employee population grows dramatically, rising 55% to 620. The Avros enter service in March and April. Frequencies are inaugurated to Bremen and Luxembourg.

On September 20, a malfunctioning air conditioner fills the cockpit of an RJ100, with 47 passengers en route from Bremen to London (LGW) with smoke, necessitating an emergency landing at the destination; no injuries are reported.

In early October, the company purchases a fifth Avro RJ100 for delivery in the second quarter of the following year.

The company's fifth ATR72-202 is received in November, replacing the chartered ATR42-320. The following month, a third RJ100 is requested with a fourth taken as an option.

Customer bookings accelerate 31.5% to 1,134,226. Revenues accelerate 35.8% to £65.7 million and allow the net gain to climb 44.3% to £4.08 million.

On April 6, **1998**, thrice-daily RJ100 roundtrips begin from London (LGW) to Zurich. The flights are timed to link with **British Airways, Ltd. (2)** Gatwick departures to North and South America, the Caribbean, and Africa. In order to get the necessary slots, CityFlyer terminates its services to Leeds and Bradford.

The new RJ100 arrives at the end of May. When it enters service on June 1, it is the third of its type to operate on behalf of the company. By midyear, the carrier is offering 636 weekly departures from London (LGW) to 13 U.K., Irish, or Continental destinations.

In August, service is increased from London (LGW) to Luxembourg to four roundtrips every weekday.

After some months of planning, the decision is taken to become a full member of the BA Group. Consequently, on November 30, subject to government approval, the airline's financial backers reach a conditional agreement with **British Airways, Ltd. (2)** for the regional's purchase. Having acquired full ownership of its first franchise partner for £75 million (\$125 million), BA will allow it to continue operations under its own name, air operators certificate, fleet, board of directors, and the management team headed by Managing Director Burgess. The two airlines will, however, more fully integrate their networks and schedules.

Passenger boardings accelerate 15.4% to 1.31 million, while 4,000 FTKs are also operated.

Newly appointed Secretary for Trade and Industry Stephen Byers reacts to a complaint by **Virgin Atlantic Airways, Ltd.** in early January **1999**. Executives of Richard Branson's carrier claim that although they had been interested, they were not given a chance to bid on CityFlyer before its takeover by BA was arranged. Additionally, Byers indicates that the move raises competition concerns in that BA would gain control of 39% of all the takeoff and landing slots at London (LGW). Consequently, the proposed acquisition is referred to the U.K.'s Monopolies and Mergers Commission on January 20. A report of that body's findings will be made on April 28.

On March 7, **Virgin Atlantic Airways, Ltd.** announces that it will match any BA bid for CityFlyer Express. As the value of the BA bid is at present unknown, Virgin is bidding blind.

At the beginning of April, CityFlyer orders an eighth Avro RJ100 for delivery in the spring of 2000. Repainted in "British Airways Express" colors, an ATR72-212 is simultaneously wet-leased for two-and-a-half years from **British World Airlines, Ltd.**

The company currently flies 5 RJ100s in "British Airways Express" service, with 2 more aircraft scheduled for delivery in July and August. When the sixth RJ100 enters service in July, it is the first from any BA franchise partner to wear the new stylized Union Jack on its tail.

U.K. Trade and Industry Secretary Stephen Byers grants approval on July 26 for **British Airways, Ltd. (2)**'s £163.75 (\$117 million) takeover of CityFlyer. The authority is contingent upon the major's agreement to an hourly cap on its London (LGW) slots under a plan to be worked out with John Bridgeman, the U.K. competition commission and director general of fair trading.

Thrice-daily roundtrips commence on October 31 between London (LGW) and Hanover. Two services are operated with ATR72s and the third with an AVRO RJ100.

A proposal is made during the first quarter of **2000** to transfer the Manchester, Glasgow, Edinburgh, Paris, Aberdeen, Frankfurt, and Geneva routes to CityFlyer from the European unit of **British Airways, Ltd. (2)** at London (LGW). On March 26, **Aer Lingus Irish Airlines, Ltd.** begins to code-share on company frequencies between London (LGW) and Dublin.

The fleet is increased to 10 in April and May with the delivery of 2 additional AVRO RJ100s.

Having found efficiencies and cost savings from its London (LGW) ground staff worth £8 million, BA officials decide after all not to transfer seven routes from the major to its wholly owned subsidiary.

In mid-July, a \$360-million order is placed for up to 12 more AVRO RJ100s and RJXs, with 6 of the RJ100s to be delivered by November. At the end of September, the carrier is given the green light to take over in March the routes from London (LGW) to Toulouse and Bordeaux previously operated by the "British Airways Express" partner **Air Liberte, S.A.**

With the beginning of the winter schedule on October 29, all BA services to Jersey are consolidated at London (LGW); under the

franchise agreement, CityFlyer performs these services six times a day using AVROs.

CITYJET, LTD.: The Mezzanine, Terminal Building, Dublin Airport, Dublin, Ireland; Phone 353 (1) 844-5588; Fax 353 (1) 844-4588; <http://www.greenwich2000.com/lcy/cityjet.htm>; Code WX; Year Founded 1993. Under the leadership of Patrick Byrne, founder and managing director, CityJet is established at Dublin in late December 1993 as a franchise subsidiary of **Virgin Atlantic Airways, Ltd.** Equipped with a pair of former **Crossair, Ltd.**-operated British Aerospace BAe 146-200s in modified Virgin livery, the new regional begins daily roundtrip service on January 10, 1994, over a route linking its base with London (LCY). A BAe 146-100 chartered for a year from the Australian concern **National Jet System (Pty.), Ltd.** joins the fleet in July.

A new dual-designator route is opened with **Virgin Atlantic Airways, Ltd.** on June 16, 1995, between Dublin and Brussels. When the "Air France-Air Inter Express" program is established late in the year, CityJet holds discussions with the Paris-based major concerning its possible transfer into a code-sharing partnership. In exchange for subsidy, CityJet agrees that it would repaint its aircraft and fly medium- and low-density domestic or regional routes for the Air France Groupe.

The franchise agreement with **Virgin Atlantic Airways, Ltd.** is not renewed in 1996. Indeed, the British major on April 23 purchases **Eurobelgian Airlines, S.A.**, which will be reformed into **Virgin Atlantic Express, Ltd.** An "Air France Express" contract is signed instead.

The Irish airline now encounters financial difficulties. In December, CityJet is put into examinership (equivalent to U.S. Chapter XI bankruptcy) with accumulated losses of Ir£13 million and debts of Ir£2.4 million.

The carrier enters into survival discussions with **Malmo Aviation Schedule, A.B.** while also seeking a capital injection from Irish financiers. The Swedish carrier agrees to assist, providing as part of its Ir£1.75-million (\$6.6-million) rescue plan a BAe 146-200 that it has recently purchased from **USAirways**, as well as leasing and maintenance services valued at Ir£650,000.

In February 1997, the Malmo rescue plan is approved by the courts, giving the Swedish airline a 43% stake in Managing Director Byrne's concern. Another new investor is Yeoman International, which takes a 17% stake; Yeoman Chairman/CEO Paul Coulson becomes the airline's nonexecutive chairman. In addition, creditors agree to write off Ir£6 million in debts, including Ir£1.8 million of the Ir£2.4 million owed to London City Airport.

Two BAe 146-200s are now leased from **USAirways**. Although CityJet withdraws from its Dublin to Brussels route, it increases its frequencies from Dublin to London (CTY) to eight daily roundtrips in April.

In May, it also begins flying from Dublin into the new **Air France** facilities at Paris (CDG). In addition, a frequent flyer program, **Simply-City**, is introduced. In October, the company announces a 50% increase in passenger boardings on the Dublin-London (CTY) route in the six months ending September 30.

Given that it does not share the same strategy for the future of the company, **Malmo Aviation Schedule, A.B.** sells its 43% stake in CityJet on December 16. Following the buyout, Yeoman International has become the largest investor, having increased its shareholding from 17% to 20%; Standard Life boosts its stake from 16% to 20%, while four private shareholders, including Brendan McDonald, also increase their shares.

Simultaneously, the company purchases the two leased **USAirways** BAes, plus spare engines, for about Ir£12.8 million (\$18.5 million). The acquisition is partially funded through a \$10-million loan from the Anglo Irish Bank. The Malmo BAe 146-200 is retained on lease.

In October 1998, CityJet enters into discussions with **Air France** concerning the possibilities of deepening its franchise relationship with the French major. Negotiations are also held on the value of starting joint flights between London (LCY), Paris (CDG), and Strasbourg. These dual-designator flights commence, as do services to Malaga.

Late in December, **National Jet System (Pty.), Ltd.** of Australia offers Ir£3.5 million (\$3.7 million) over a seven-week period for a 60% stake in CityJet, Ltd. Plans are made to revamp the financially challenged Irish airline into a holding company in which a 40% interest would be owned by CityJet shareholders.

The NJS proposal also envisions the elimination of several routes from Dublin, including those to London (CTY) and East Midlands, and the reduction of the staff from 350 to 250.

On February 24, 1999, CityJet's board of directors, at the recommendation of senior management, rejects the offer, even though NJS has already paid a part of the purchase price.

In addition to the proposed downsizing, concern exists that the arrangement will be blocked by European Union regulations prohibiting non-EU nations from holding majority shareholding in EU airlines.

As reported in the March 10 issue of *Flight International*, the entire package had been part of a complicated secret enterprise between NJS, CityJet, and **British Airways, Ltd.** (2). The plan was to gain an existing air operators certificate that would allow the launching of a BA franchise airline in Italy with 5 former **UNI Airways Corporation, Ltd.** BAe 146-300s that NJS would lease from **Global Air Australia (Pty.), Ltd.**

Following the conclusion of the failed Australian gambit, CityJet begins to operate another of its 7 BAe 146-200s in "Air France Express" colors. One more of the type is wet-leased in late March from **Titan Airways, Ltd.** The aircraft will not be repainted while in service with the Irish line.

At the beginning of April, Managing Director Byrne negotiates a completely noncontroversial arrangement with London (CTN)-based **Air Foyle, Ltd.** Under its terms, the British carrier would assume controlling interest in exchange for a significant equity investment.

Acting via Air Foyle (Ireland), Ltd., **Air Foyle, Ltd.**, on May 17, completes and formalizes its deal with CityJet. In exchange for a £4-million (£Ir8-million) investment, the British carrier acquires a 50.01% majority stake. Air Foyle Chairman W. R. C. "Chris" Foyle becomes the Irish line's new chairman, while CityJet's founder Byrne retains his post as managing director.

Nonexecutive Chairman Coulson steps down as a director, but his company is approved to continue to organize the airline's aircraft leasing. Other minority shareholders include Standard Life, Murphy Insurance Group, Eugene Murtagh, and Brendan McDonnell. In reporting the story, *Irish Independent* reporter Gerald Flynn speculates that some of these existing shareholders may invest another £2 million, but notes that all now suffer a major dilution of their stakes.

In addition, **Air France** invests £2 million as a convertible loan. The French major's contribution will result in CityJet enhancing its role as an "Air France Express" carrier. As an additional number of its aircraft are repainted, CityJet expands its commuter services from Dublin to Paris, Florence, Nice, Toulouse, Madrid, and Strasbourg to a point where these flights account for half of the company's business. Service under its own name to London (CTN) and East Midlands brings in 25% of income, while wet-lease operations coordinated by Air Foyle (Ireland), Ltd. make up the rest.

The arrangement between CityJet and **Air France**, called a "sweet deal," is fully detailed in the financial pages of the May 21 issue of *The Irish Times*.

During the fall, a British Aerospace ATP is leased from **British World Airlines, Ltd.** and is placed on "Midland Cities Express" service five times a day between Belfast and East Midlands Airport.

Four-times-weekday (reduced on weekends) BAe 146-300 return service from Dublin to London (LCY) is begun by **Aer Lingus Commuter, Ltd.** in direct competition with CityJet on November 1. This competition causes a severe loss of market share for CityJet. With costs mounting and expenses for expansion pending, **Air Foyle, Ltd.** on December 19, elects to sell its 66% stake in the Irish airline.

Although **Air France** maintains that it has no plan to take the tendered shares, the 33% minority owner assumes the stake on February 17, 2000, naming Jacques Bankir CEO. The French promise to keep

their prize Irish-owned and licensed even as seven of its eight aircraft operate "Air France Express" flights from Paris (CDG) to Cologne, Dublin, London (LCY), and Florence.

A strange equipment exchange occurs on April 3 when CityJet dry leases a BAe 146-200 for six months from **Jersey European Airways, Ltd.** while JEA wet-leases a CityJet BAe 146-100 to operate its routes from Dublin to London (LCY).

The wet-lease BAe contract with **British European** (the renamed JEA) ends on October 20. Repainted in "Air France Express" colors, the jetliner begins flying from Paris (CDG) to Nantes on October 29. The same day, the company is selected by **Air France** to park a BAe 146 at Paris for use as a "hot spare," instantly ready for short-haul replacement service.

On November 6, CityJet becomes the first **Air France** franchise partner to have its entire fleet painted in "Air France Express" livery.

CIVAIR CHARTER SERVICES (PTY.), LTD.: P.O. Box 120, Newlands, Cape Town, 7725, South Africa; Phone 27 (21) 934-4488; Fax 27 (21) 934-4462; <http://www.civair.co.za>; Year Founded 1981. CivAir is set up at Cape Town in 1981 as a rotary-wing operation designed to provide domestic passenger air taxi and charter flights. Over the next decade, an extensive program of charter services, particularly to big game parks, is undertaken. In addition, various kinds of aerial work operations are initiated, including tourist flight-seeing, corporate transfer packages, and offshore helicopters up the nation's west coast.

By 1991, Chairman Andrew Cluver and General Manager James Blomenus oversees a 20-person workforce and a fleet made up of 3 Bell 206B JetRangers, 1 Bell 206L LongRanger, 1 Eurocopter BO-105CBS, 1 McDonnell Douglas MD-500E, and 1 each Robinson R-22 and R-44. All are painted in a bright red livery.

Flights continue in 1992-1996. In 1993, the MD-500E, in a distinctive pink and blue livery, is outfitted to provide medical evacuation and to serve as a flying traffic reporter, the Radio Good Hope Traffic Patrol. Medics from the Cape Town Fire Service are aboard every flight, making it possible for the helicopter to land and provide assistance.

The company continues to provide helicopter charters to various bush destinations. In the summer of 1997, for example, the company transports **Virgin Atlantic Airways, Ltd.** Chairman Richard Branson and his family in three helicopters from Bushmans Kloof. Microsoft Chairman Bill Gates and his wife Melinda are taken on a Peninsula tour, while actor Val Kilmer, according to the company newsletter, lives up to his reputation as an "enfant terrible" on a trip to Springbok.

In late summer, CEO Cluver determines that a need exists for a fixed-wing charter service to tie in with the offshore helicopter business. Consequently, the company is reformed during September into a two-division concern.

Leaving Blomenus to handle the day-to-day operations of the helicopter unit, CEO Cluver takes personal charge of the new fixed-wing division, establishing a base at Cape Town where a hangar with offices and workshops is erected. A Beech 58 Baron and a Beech King Air 90 are acquired, given the carrier's familiar red colors, and begin flights to tourist destinations, including Tswalu in the Northern Cape. Like the helicopters, the two fixed-wing aircraft are also leased for corporate charter and film work. A Learjet 45 is available for on-demand subcharters.

Meanwhile, in support of the bid by Cape Town for the 2004 Olympic Games, CivAir repaints a JetRanger in the bid color scheme. The Bell 206B has the impact of a flying billboard as it shuttles IOC officials to, from, and over the city.

The company's BO-105CBS completes a support contract for the exploratory phase of work to develop the deep offshore diamond mining company NAMCO. CivAir receives a contract to support the mining operation once full-scale mining begins.

It is reported that, since 1993, the Radio Good Hope Traffic Patrol aircraft has participated in the rescue of several lost hikers, saved victims of automobile accidents, delivered babies at the side of the road (two from cars and one from a bus), and even participated in the arrest of a fleeing murder suspect.

The offshore NAMCO contract begins in January 1998, with the BO-105CBS committed to the transport of workers and supplies to the mining vessel *Kovambo*.

When, during the spring, the resort at Bushmanskloof opens a new landing strip, it also acquires a Cessna 414, which CivAir agrees to fly under contract. CivAir also purchases a Pilatus PC-12. In addition, a Jet-Ranger is contracted to provide support to the Working for Water Project in the Eastern Cape, while the R-44 undertakes aerial observation service for a large Gauteng-based security firm.

The MD-500E is repainted in a glowing white livery, but continues to provide its traffic and medical assistance service.

The Bell 206B continues to provide flights for IOC members, the most distinguished being Prince Albert of Monaco. Other celebrities provided lifts include boxer Evander Holyfield, actor Wesley Snipes, and model Naomi Campbell, who takes a fast scenic tour and provides her autograph—on her credit card slip.

Flights continue apace during the remainder of the year and into 1999-2000. A homepage is opened on the World Wide Web.

CIVIL AIR TRANSPORT, LTD.: Taiwan (1946-1968). On October 25, 1946, ex-Flying Tigers chief Claire L. Chennault, his associate Whitney Willauer, and Chinese business leader Dr. Wang Wen-san sign a contract with the Chinese National Relief and Rehabilitation Administration creating **CNRRA Air Transport (CAT)** for charter operations. Up to \$2 million is supplied by Fiorello La Guardia's UN Relief and Rehabilitation Administration to purchase the new airline's aircraft, fuel, and supplies. The remainder of the year is occupied in setting up shop at Shanghai and recruiting a group of former U.S. 14th Air Force pilots and mechanics.

The first 3 CNRAA C-47s arrive at Shanghai from the Philippines on January 27, 1947. The initial mission to be flown is a nonscheduled all-cargo operation designed to carry relief to famine-plagued areas of three Chinese provinces cut off from land transport. The first proving operation is conducted on January 31 with a flight between Shanghai and Canton.

An aviator active with CNAC-1 and CAT, Felix Smith, recalls them both in *China Pilot: Flying for Chiang and Chennault* (London, Eng.: Brassey's, 1995).

On February 2, two of the three Douglas transports begin a medical relief contract that will eventually see 9,000 pounds of supplies flown Shanghai-Liuchow. Three days later, the third aircraft is employed to inaugurate scheduled passenger services between Shanghai and Canton. Between March 22 and May 22, C-47's in Operation Boo Peep shuttle 625 sheep Shanghai-Lanchow and Peking.

Throughout the remainder of the year, additional freight routes are opened and airline employment grows to 822. An additional DC-3 is acquired from the U.S. carrier **Northwest Airlines** in September and a significant number of war-surplus Curtiss C-46 Commandos are placed into service during the fourth quarter. CNRAA Air Transport makes its final flight on December 31, the same day it is officially liquidated.

For the year, a total of 27,600 passengers and 6,987,394 revenue ton-miles of cargo are flown, making the short-lived airline the world's largest cargo carrier.

Gen. Chennault and his colleague Willauer sign a new contract with the Chinese government on January 2, 1948, and resume operations the same day as Civil Air Transport, CAT. On January 18, CAT C-46s and C-47s begin flying a roundtrip supply and evacuation contract from Shanghai to Peking and Mukden.

Flights to Tihwa, in Sinkiang, commence on February 20. In April, 3 DC-3s arrive from **Northwest Airlines**. By May 25, 2,210 tons are taken into Mukden and 22,173 passengers taken out. Most of the carrier's aircraft are now employed in support of Nationalist forces during the civil war as various contracts are flown.

A final DC-3 arrives from **Northwest Airlines** in July. A C-46D, with 24 passengers, is lost near Tsingtao, on July 29 (18 dead).

The first international route is inaugurated on September 24 between Canton and Haiphong, in Indochina.

Between October 1 and 31, when Mukden falls, CAT delivers 1,289 tons of food and evacuates 10,000 people from the besieged city in 20 flying days. Between November 23 and December 31, the airline brings in 37,136 soldiers, 135 tons of ammunition, and 1,501 tons of rice to besieged—then lost—Hsuehchow.

A C-54B with 4 crew and 29 passengers is lost on Basalt Island on December 21; there are no survivors.

On the year, CAT registers 223,700 bookings and flies 88,238 tons of cargo.

CAT, **China National Aviation Corporation (CNAC-1)**, and **China Air Transport Corporation (CATC)** in January 1949 commit 14, 12, and 10 aircraft, respectively, to the relief of Taiyuan; they fly and air-drop 1,869 tons of food and 14 tons of cargo losing one C-46 (crew rescued) to AA fire. Although the supplies allow the city to hold out for three months, Taiyuan is lost on April 24 and the airlift ceases. Still, the operation will provide lessons for those undertaking the year's other big aerial supply operation, the Berlin Airlift. In June, an airlift is also inaugurated from Mentze to Haiphong in Indochina; it allows reopening of the tin mines in Yunnan Province.

With the disintegration of the Nationalist cause, to say nothing of runaway Chinese currency inflation, CAT faces economic ruin unless new capitalization can be located. During the summer, Gen. Chennault meets with executives of the U.S. CIA in Washington, D.C. concerning the airline's use as a covert asset.

Regularly scheduled operations by CATC and CNAC cease on August 17 and the airlines start sending their aircraft to safety in Hong Kong.

Mao Tse-tung proclaims establishment of the People's Republic of China on October 1. Early in the month, George Kennan, head of the Policy Planning Staff of the U.S. State Department, provides an analysis of the Chennault plan for the covert use of CAT. Although Kennan has not endorsed the idea, the CIA now enlists CAT in its secret war effort to save Nationalist China on Taiwan. On October 10, CAT and the CIA agree to enter into a formal charter arrangement. With the Nationalist cause on the mainland lost, CAT evacuates to Hong Kong on October 11.

On behalf of CAT, Tommy Corcoran, once an advisor to President Franklin D. Roosevelt, signs the formal charter agreement with Emmet D. Echols of the CIA's Office of Finances on November 1. The pact is good for \$500,000 to CAT, including \$200,000 up front. Alfred T. Cox is sent to Hong Kong by the CIA to represent company interests at the airline's new headquarters site.

C. Y. Liu, CNAC-1's Chinese managing director, defects to the Communists on November 9 with 10 of the company's 56-plane fleet plus the CATC Convair CV-240, the only one in China. Other Communist-oriented employees seize the remaining ships, bringing about their grounding when Nationalist officials revoke their airworthiness certificates. A group of pilots specifically pledge their loyalty to representatives of the U.S. co-owners on November 13 and two days later, Nationalist Gen. Shen is asked to take over CNAC.

At the end of November, plans are made to fly to the assistance of Gen. Ma Pu-fang, a Muslim leader in northwest China who claims to have 50,000 troops ready to combat the Chinese Communists. Before any missions can be laid on, however, Gen. Ma is defeated. The man manages to steal out of China aboard a CAT Douglas with his personal \$1.5-million fortune; he then books a Hadj flight to Mecca, where he retires.

On the year ending in November, the carrier has delivered 81,411 passengers and flown 21,964,565 revenue ton miles.

Those elements of the CNAC/CATC fleet at Hong Kong are now grounded under guard, but a British court in the crown colony acts on December 3 to prevent the Nationalists from taking control of the aircraft. Over the next several weeks, hundreds of out-of-work CNAC technicians and aircrew flee to Peking, secretly smuggling out maintenance manuals and spare parts for the planes acquired on November 9.

A C-46 with 38 passengers is lost near Lanchow on December 9; there are no survivors. Another Commando, with 40 passengers, is lost at Hoikow on December 10 (17 dead).

Civil Air Transport moves from the British crown colony to Taiwan on December 16. Realizing that the CNAC-1 operation on the mainland cannot be saved, its former CEO, William Langhorne Bond, returns to New York and begins negotiations with Chinese Nationalist representative T. V. Soong, seeking \$2 million (the appraised value of **Pan American Airways'** 20% interest) for the carrier. A \$1.25-million sale on behalf of PAA is completed, also on December 16.

Three days later, Gen. Chennault and Whiting Willauer, on the basis of a bill of sale to themselves, register a large fleet of transports in the U.S., including some previously flown by CNAC and CATC. Ex-CEO Bond and CNAC's Chinese directors meet at Hong Kong on December 31 to dissolve Pan Am's interest and pass the remainder of the airline to the Nationalist government for CAT.

On behalf of attorneys for PAA and the new People's Republic of China, the Hong Kong Supreme Court on December 31 grants an injunction against the removal of the former CNAC/CATC fleet to Taiwan.

All operations on mainland China stop in January 1950 after the fall of Mengtze. CAT's owners, represented by former Office of Strategic Services (OSS) chief William J. "Wild Bill" Donovan, now become embroiled in a legal battle for possession of the remaining transports of CNAC and CATC at Hong Kong, some of which they had registered in the U.S. in December.

Financially distressed, CAT's officials sign an option on March 24 to sell the carrier to "undisclosed principles," i.e., the U.S. CIA, which option is exercised by August. CAT is now reorganized as a Delaware-based subsidiary, CAT Incorporated, of a new CIA holding company, the Pacific Corporation. The airline will continue to provide public, commercial services throughout Asia under its previous CAT moniker, but, as CAT Incorporated, it will also provide the men and airplanes for covert operations.

During these corporate and covert dealings, the airline continues to provide commercial services. On April 20, the company launches from Taipei a weekly roundtrip service that visits Hong Kong, Bangkok, Singapore, and Tokyo. Following the North Korean invasion of South Korea on June 25, CAT C-46s and C-47s, in Operation Booklift, begin flying various cargos Japan-South Korea in association with the U.S.

On September 8, an extensive contract is awarded by the Far East Air Material Command, USAF. In December, following the Chinese invasion, CAT participates in the evacuation of wounded and other passengers from Yonpo, losing three C-46s in crashes between December 8-10.

The legal battle in Hong Kong has, meanwhile, gone against Chennault and Willauer, with the civil courts ruling in favor of Communist claims on several occasions, even agreeing, once the Peking-based lawyers had settled certain financial claims with CNAC-1 creditors, to release \$300,000 in CNAC-1 funds to the mainland Chinese.

The U.S. government protests to the U.K., which orders the disputed aircraft held pending a local court ruling, which, as it turns out, again favors Peking. Meanwhile, a U.S. Federal Court in San Francisco also hears evidence and awards the remaining CNAC-1 assets to Chennault and Willauer.

In February 1951, 3 Civil Air Transport C-46s and 1 C-47 are assigned to support Operation Paper, a CIA covert incursion into Yunnan. Employing ex-Nationalist Chinese troops from the Shan states of northern Burma under Gen. Li Mi, CAT aircraft stationed at Bangkok under Agent Cox drop arms acquired from a CIA depot on Okinawa. They also drop agents into northern Burma where they are to assist and train the general's soldiers for operations in Yunnan Province.

With air drops from CAT aircraft, 2,000 of Gen. Li Mi's troops advance into Yunnan in April, but are driven out by Communist troops within a week.

In the spring, the carrier contracts with the U.S. Special Technical and Economic Mission to begin flying medical supplies Tokyo-Hanoi. About the same time, a domestic Taiwanese route network is established, possibly as cover for clandestine operations. Between April and December, C-47s parachute CIA-backed guerrilla and intelligence teams into North Korea.

A second operation into Yunnan Province in July by soldiers of Gen. Li Mi, again supplied by air, is thwarted as quickly as the first attempt. Undaunted, the CIA hires engineers to open a World War II landing field at Mong Hsat for CAT aircraft.

On December 16, international scheduled service is inaugurated to Bangkok and Tokyo. Even as the Korean War rages, the legal battle for possession of the CNAC fleet at Hong Kong continues. This year the Communists, blocked by hostilities from appearing before the Hong Kong Supreme Court, still manage to win that body's approval to take over the planes. The decision is delayed when the U.S. again pressures Great Britain, but the British reaffirm Hong Kong's decision on December 29.

In March 1952, unmarked Boeing B-17s and C-47s from Taiwan begin support of CIA covert operations on the Chinese mainland and Manchuria by flying in and air dropping agents, supplies, and leaflets; the aircraft are piloted by expatriate pilots from Eastern Europe. Operation Paper remains in full bloom as CAT aircraft support Nationalist Chinese troops, which have joined the forces of Gen. Li Mi in northern Burma. When the Soviet Union raises the question of covert U.S. aid at the UN, it is claimed that financing for the general has been acquired through the sale of drugs.

Overt scheduled service is inaugurated from Taipei to Pusan on March 30 and to Manila on June 25.

During July, Gen. Chennault is, by special arrangement, allowed to argue CAT's legal case before the Privy Council in London and also before the Hong Kong Supreme Court. On July 29, the British government awards 40 CNAC aircraft to CAT, which takes possession of them on August 1.

Gen. Li Mi returns to Burma from Taiwan in August and leads 2,100 Nationalist troops, again supported by air, some 60 miles into Yunnan Province. Following another expulsion, the Nationalist leader turns against his unwilling Burmese hosts, becoming a renegade whose actions will poison relations between Rangoon and Washington for a decade.

Two other DC-4s impounded at Hong Kong are leased to the carrier on September 19 and are immediately placed into service on commercial routes, sometimes being employed on night covert flights over the People's Republic of China. The Hong Kong Supreme Court follows suit and agrees to release 31 ex-CATC aircraft on October 9.

A C-47 is lost on November 29 during an Operation Tropic agent pickup flight to Kirin Province. Aboard are two CIA operatives, Richard G. Fecteau and John T. Downey, who are captured by the Communists and imprisoned until 1971 and 1973, respectively. The loss of Fecteau and Downey more or less ends the covert assault on Manchuria.

The huge fleet that is finally won far exceeds CAT's requirements and plans are made to dispose of most of it, although the C-46s will be retained for cargo work on Taiwan and throughout Southeast Asia.

Alfred T. Cox becomes president/general manager on January 19, 1953. Between May 6 and July 11 in Operation Squaw I, CAT pilots, flying C-119s supplied to the French by the USAF, drop supplies to French paratroopers in the Plaine des Jarres, Laos. A total of 21 CAT pilots, familiar with the C-119, are dispatched to Indochina to assist the French and, in fact, outnumber the number of French Air Force in-country pilots tasked to operate the "Flying Boxcar." The Korean War ends with an armistice and partition of the country on July 27.

As the result of a conference held in Bangkok, it is arranged that CAT will remove the troops of Gen. Li Mi from Burma. On November 9 in Operation Repat, 8 C-46s commence flying Li Mi's ex-Nationalist soldiers from Burma and Thailand to Taiwan; 2,250 people are repatriated by December 8.

Between February 14 and March 20, 1954, CAT C-46's fly 3,475 people in Operation Repat flights to Taiwan. When the project is completed, CAT has flown a total of 5,583 soldiers and 1,040 of their dependants to Taiwan, receiving payment of \$125 per head from U.S. foreign aid funds. Also returned are 1,000 rifles, 69 machine guns, and 22 mortars, which represent only a fraction of the arms CAT had dropped earlier.

Meanwhile on March 13, airline pilots in French C-119s, led by chief pilot Paul R. Holden, commence Operation Squaw II relief flights from Haiphong to besieged troops at Dien Bien Phu. Holden is wounded by antiaircraft fire on his fifth flight.

By May 7, when the garrison surrenders, the CAT-manned aircraft have flown 684 airdrop missions. Piloted by James B. "Earthquake McGoon" McGovern and Steve A. Kursak, a C-119 is shot down over Dien Bien Phu just hours before the collapse; McGovern is killed. The CAT pilot with the most Squaw II missions is A. L. Judkins, with 64, followed by Steve A. Kusak with 59.

From May–July, isolated French outposts are also supplied by air. Following the Geneva settlement, CAT is contracted to assist in the exchange of refugees.

Between August 22 and October 4, in Operation Cognac, 19,808 passengers are flown out of North Vietnam while simultaneously—and covertly—arms and agents are smuggled in from the south. Overt scheduled services are launched on September 9 from Taipei to Seoul via Pusan. Also during the year, legislation is enacted requiring Chinese Nationalist citizens to own a majority interest in the airline.

In 1955, the Chinese Nationalist government on Taiwan officially acquires controlling interest in Civil Air Transport. Civil Air Transport Company, Ltd. is established to take over from Civil Air Transport, Inc. Shareholding is divided between the government (51%), CAT, Inc. (41%), and private Chinese interests (9%). No new capital is invested and, in fact, the company's assets are now transferred to Asian Aeronautical Company, Ltd. (later Air Asia Company, Ltd.), which leases aircraft to the carrier and provides its personnel.

During the remainder of the year and also in 1956–1957, additional commercial routes are opened, covert missions flown, and new aircraft ordered. Registers show 23 C-46s in operation. In October of the latter year, an unmarked CAT B-17 flying from Kermittola, Pakistan, initiates Operation Stbarnum, the aerial delivery of U.S.-trained Tibetan agents into Chinese occupied Tibet.

During 1958 the carrier's legitimate and covert aircraft provide logistical and operational support to the insurgents attempting to overthrow the government of Indonesian President Sukarno. CAT pilots, acting in the guise of soldiers of fortune, fly B-26 raids in support of insurgent forces on Sumatra. One of these, Allen Pope, is shot down during the operation on May 18 and held prisoner for four years. Gen. Chennault dies in New Orleans on July 27.

A Douglas DC-6B is placed in service in October 15 and begins to operate an international service from Taipei to Hong Kong known as "The Mandarin Flight." Another DC-6, a military C-118, is secretly acquired from the USAF 322nd Troop Carrier Squadron on Okinawa for use in support of an expanded Operation Stbarnum.

In March 1959, during the Tibetan revolt against Chinese Communist occupation, the C-118 drops agents into Tibet who are able to assist the flight out of the Dalai Lama. CAT aircraft begin to support guerrilla raids into Tibet and to bring the first of 700 potential guerrilla fighters out for transfer to and training in the U.S. When the airlift of the newly trained agents begins during July, it is operated nightly by contract CAT pilots employing unmarked USAF Lockheed C-130 Hercules freighters.

In 1960, CAT Incorporated is split into three separate subsidiaries of the Pacific Corporation. The original company launched by Gen. Chennault, CAT, provides scheduled domestic service for the Chinese Republic, as well as open and covert charter flights. Air America acquires most of CAT's former Indochinese responsibilities and Air Asia becomes a huge Taiwan-based maintenance and service organization.

Operation Stbarnum, for all intents and purposes, ends on May 1 when the Soviets shoot down the U-2 of Francis Gary Powers. Since the previous November, CAT aircraft have not only delivered agents into Tibet, but almost 400 tons of cargo for the resistance as well. Only two or three more missions will be operated after the election of President John F. Kennedy in November.

The first jetliner, a Convair CV-880M, is ordered and on June 5, 1961 it is delivered at San Diego and christened by Madame Chiang Kai-shek

as the *Mandarin Jet*; it will become famous for its elaborate interior motif depicting ancient China. The first M model delivered, the *Mandarin Jet* begins Mandarin services on July 12 from Taipei to Hong Kong, followed by flights to Okinawa on July 14, and Tokyo and Seoul on July 17. The last DC-4 is retired on July 31.

Between **1962–1963**, the CAT fleet grows to include 4 DC-3s, 4 DC-4s, 1 CV-880, 2 PBV-5As, and 17 C-46s. Covert missions continue into Indochina. Plans are made to divest the company of its domestic services.

In **1964**, the CIA elects to divest itself of the noncharter portion of the carrier and begins a three-year process of turning it over to the Nationalist government, which already “officially” controls it, but is not prepared either technically or psychologically to assume full responsibility. Employing C-46s and Beech 18s, another “Company” proprietary airline, Air America, assumes CAT’s services to Okinawa and the Ryukyu Islands.

The first domestic route to be withdrawn, from Taipei to Taitung, is turned over to **Foshing Airlines** on January 18. While on a June 21 Pescadores to Taipei flight, a C-46, with 5 crew and 52 passengers, crashes at Shengkang under mysterious circumstances, killing all aboard, including Malaysian movie mogul Dato Loke Wan Tho, reportedly the richest man in Asia. Flights to the offshore island of Makung end on July 18 and frequencies from Taipei to Hualien are turned over to **China Airlines, Ltd. (CAL)** on December 31.

Operations continue apace in **1965** and, in **1966**, President George A. Doole (who is also a career CIA officer and ex-pilot for **Pan American World Airways-1**) oversees 5,000 employees of the Pacific Corporation, a company that, on paper, has a net value exceeding \$22 million. Services are suspended to Manila on October 5 and Seoul on October 11.

In late **1967**, a B-727-92C jetliner is acquired by lease from another CIA proprietary airline, **Southern Air Transport**, which delivers it in January **1968**, the same month in which the CV-880M is sold to **Cathay Pacific Airlines (Pty.), Ltd.** It will be delivered to the Hong Kong-based flag carrier on October 1.

Coming into Chang Kai Shek Airport at Taipei after a flight from Hong Kong on February 16, Flight 1010, the new B-727-92C *Mandarin Jet* with 11 crew and 52 passengers descends below the glide slope, touches down, and rolls 200 m. before becoming airborne again. The plane then strikes a line of trees and crashes into a farmhouse on a tea plantation at a point 11 km. NW of the runway. Twenty-one people are killed aboard the jetliner and one on the ground.

The *Mandarin Jet*’s U.S. pilots S. E. Dew and H. H. Hicks go on trial for manslaughter on March 25, even though there is no precedent for the trial of commercial pilots on criminal charges in an aircraft accident.

At this point, **China Airlines, Ltd. (CAL)**, having received a large cash payment from the CIA, is authorized to take over the remaining international services in the following spring. The trial of Dew and Hicks ends on May 21 before a verdict is rendered; the novel *A Band of Brothers*, by famed aviation writer Ernest K. Gann, will be based on this incident. On April 2, the company announces that it will suspend international passenger service and limit its flights to cargo runs. CAT domestic operations continue a short while longer, but end, together with the airline, on May 29. In a footnote, the trial of Dew and Hicks is resumed in late fall, but both men are acquitted on January 20, **1969**.

CLAIRWAYS, LTD.: Kenya (1947–1952). With a base at Nairobi West Airport, Clairways is established in **1947** to provide charter and scheduled services to regional destinations. The company’s primary route, from Nairobi to Aden via Kismayu, Mogadishu, Hargeisa, and Berbera, is operated with 3 Avro Anson Vs until **1952**.

CLARKSBURG AIRWAYS: United States (1930). The first indigenous West Virginia airline, C.A. is established north of that city in the fall of **1930** to offer scheduled passenger service via Fairmont and Morgantown to Pittsburgh. A Travel Air 6000 is acquired and revenue services commence in October. The air transport experience is so new to the region and traffic is so light that the carrier folds within a month.

CLARKSVILLE FLYING SERVICE: United States (1972–1975). CFS is established at Clarksville, Tennessee, in **1972** to offer scheduled daily air taxi flights to Nashville and to local airfields on the border between Tennessee and Kentucky. Cessna lightplane frequencies are duly inaugurated and are maintained until **1975**.

CLASSA. See **CONCESSIONARIA LINEAS AEREAS SUBVEN- CIONADES, S.A.**

CLASSIC AIR. See **BUFFALO AIRWAYS**

CLASSIC AIR, A.G.: Ackerstr. 2, Buelach, CH-8180, Switzerland; Phone 860-4424; Fax 860-4707; http://www.classicair.ch; Year Founded 1985. Classic Air is established at Grenchen on November 7, **1985**, 50 years after the inaugural flight of the Douglas DC-3, to undertake nostalgic passenger charters with refurbished examples of “The Plane That Changed the World.” The first Douglas transport is ready to offer exclusive tour and passenger charters to various European destinations from Zurich Airport in **1986** and the initial months of service prove so successful that a second DC-3 is acquired in **1987**.

Flights are operated without incident in **1988–1990**. While over Heidelberg on a December 22, **1991** service from Frankfurt, a DC-3A with 3 crew and 29 passengers encounters turbulence; the Douglas transport makes a standard left turn to escape, but strikes a cloud-shrouded, tree-covered hill (28 dead).

Operations continue apace in **1992–1994**, with a replacement DC-3 placed into service. A total of 9,000 passengers are transported during the latter year.

The workforce is reduced by 17.2% in **1995**, falling to 29 while customer bookings are off 35.5% to just 6,200. The 2 Douglas transports remain in operation during the remainder of the decade.

CLASSIC AIR AVIATION SERVICES: 9, Frishman Street, Tel Aviv, 63578, Israel; Phone 972 (3) 527-4057; Fax 972 (3) 522-1648; Year Founded 1995. CAAS is set up at Tel Aviv in **1995** to provide aircraft leasing, passenger services specializing in refugee movements, and cargo services, primarily the delivery of automobile parts and perishables. In **1996**, a single scheduled cargo route is opened to Liege. By **1998–1999**, General Manager Joseph Ades fleet includes 1 each Antonov An-124-100 Ruslan and an Ilyushin Il-76.

CLASSIC AIRWAYS, LTD.: United Kingdom (1997–1998). Classic Airways is established in May **1997** by **British World Airlines, Ltd.** and the aircraft broker Independent Aviation Group to provide wet-leased, standby aircraft for ad hoc charters or replacement services. David Chubalashvili is chairman and he begins revenue services in October with a single Lockheed L-1011-100 TriStar under British World’s operating certificate.

On May 9, **1998**, Classic charters an L-1011-50 TriStar from Investors Asset Holdings; the wide-body had previously been operated by **Caledonian Airways, Ltd.**

On September 20, **British World Airlines, Ltd.** suspends permission for Classic operations on its certificate. The move forces Classic to ground its 2 TriStars, one of which is the subject of a maintenance dispute with Marshall Aerospace.

Unable to regain an operating certificate, Classic shuts down.

CLASSIC HELICOPTER CORPORATION: 6505 Perimeter Road, South, Boeing Field, Seattle, Washington 98108, United States; Phone (206) 767-0515; Fax (206) 767-4018; Year Founded 1982. While teaching high school English in Texas in the **1970s**, Karen Walling makes the social acquaintance of Torrance, California-based helicopter manufacturer Frank Robinson. She accepts his invitation to become Robinson Helicopters director of marketing and takes the opportunity to train on the firm’s R-22s.

Finding western Washington state to be a rich potential market without a Robinson dealership, Walling resigns and moves to Seattle, where she opens Classic Helicopter at Boeing Field in **1982** with two R-22s.

Focusing on flight training and sales, the new owner/president later moves into charters, adding one new helicopter per year.

Operations continue apace during the remainder of the decade and, by **1990**, Classic is the largest helicopter training firm in its region. During the year, the Plum Creek Timber Company signs a contract to employ Classic helicopters for aerial reconnaissance and tours.

Other corporate clients attracted during the early **1990s** include The Boeing Company, Weyerhaeuser, and several motion picture and documentary filmmakers. Revenues from flight operations, maintenance and service, and sales approach \$6 million per year.

In **1994**, Walling and Chief Pilot Roger McKean oversee the operation of 7 Robinson R-22s, 2 Bell 206B JetRangers, 1 Hughes 500E, and 1 Eurocopter AS-350B. Work is begun on a \$2-million headquarters building, scheduled to open in late **1995**.

In **1996-1999**, President Walling's fleet is increased by the addition of an eighth R-22 and several Bell 206L-3 LongRangers equipped to battle wildfires.

The **2000** fire season is the worst in the U.S. West since 1994, with over 67,000 fires consuming in excess of 5 million acres in Washington, Oregon, California, Idaho, New Mexico, and Montana by mid-summer.

Spectacular fires first grasp the attention of world viewers in May and June when television networks picture the huge fires raging through New Mexico, including the Los Alamos area where a nuclear facility is located. The Cerro Grande fire consumes over 47,650 acres of federal forest and wildlands in the Bandelier National Monument while the stubborn Viveash fire in Santa Fe National Forest burns over 30,000 acres. Classic is one of 10 civil helicopter operators assigning assets to the fires; its Bells will later move on to fight the summer forest fires in Washington and Montana.

CLAY LACY AVIATION: 7435 Valjean Ave., Van Nuys, California 91406, United States; Phone (818) 989-2900; Fax (818) 989-2953; <http://www.claylacy.com>; Year Founded 1968. Former United Air Lines pilot and noted national air racing champion Clay Lacy establishes this jet charter FBO and flight business in **1968**. Two years later, Lacy, who continues to race, captures the Unlimited Air Race Championship.

In association with Bill Lear, developer of the Learjet, Lacy continues to expand his charter operation during the next three decades. During these years, Lacy branches out into aerial photography, developing the camera system known as "Atrovision," and assists in the filming of scores of commercials and feature motion pictures with aviation themes. In January **1988**, Lacy is pilot of the 36 hr. 54 min. record-making world circumnavigation made by the United Airlines Boeing 747SP *Friendship One*.

By **1997**, Lacy maintains facilities at 3 locations around the country and employs 28 full-time pilots. In the east, a Grumman G-1159 Gulfstream III is based at Gwinnett County-Briscoe Field in Lawrenceville, Georgia, from which location it flies passenger, cargo, air ambulance, patient transport, and aerial photography missions.

The same mission is performed by 1 each Cessna 525 Citation, Beech Super King Air 200, and King Air 90 based at Boeing Field, King County International Airport at Seattle.

The bulk of Lacy's charter fleet is based at Van Nuys. Flown from California are 4 Grumman Gulfstreams, 3 Learjet 35As, 2 each Learjet 24s and Learjet 25s, and 1 Learjet 55.

Flights continue in **1998**. Having reported the progressive loss of all electrical systems while en route from San Diego, a Learjet 55B with two crew and five passengers makes a gear-up landing at Los Angeles (LAX) on December 17. Although the aircraft is badly damaged, no injuries are reported.

Service is maintained in **1999-2000**.

CLINTON AERO SERVICE: United States (1972-1984). Clinton Aero is formed as an FBO by Anthony von Elbe and E. James Drollette at Clinton County Airport, Plattsburgh, New York, in **1972**. In addition to ground operations, the company forms the usual adjunct air taxi service.

The decision is taken in **1981** to establish a scheduled airline division, equipping it with a Cessna 172 and a Piper PA-23 Aztec. These are employed to begin daily roundtrips to Burlington, Vermont, on April 1.

In **1982**, the company applies for and obtains a contract to begin Essential Air Service (EAS) flights with a mixed fleet that over the next year comes to comprise 2 Beech 99, 2 Piper PA-31-350 Navajo Chiefs, 1 Cessna 404, 2 Cessna 172s, and 1 Cessna 340A. Provided with a \$1.9-million EAS subsidy from the federal government, Clinton initiates flights from Plattsburgh across Lake Champlain to Burlington, Vermont.

In **1983**, former Air North President John Sullivan joins the carrier as vice president-finance. Sullivan and von Elbe approach Brockway, Inc., which earlier had purchased the "Allegheny Commuter" partner Crown Airways, to ascertain that corporation's interest in investing funds in Clinton for the purchase of Beech 1900s. In fact, negotiations completed on August 1 result in the commuter's sale, effective early the following year. Enplanements for the first EAS year total 46,000.

Early in **1984** the carrier's purchase by the Pennsylvania-based Brockway Corporation is completed and on May 1 it begins flying as Brockway Air. Later in the summer, Brockway acquires Burlington-based Air North as well; the two neighboring companies are amalgamated, with Sullivan as airline division president and Clinton founder von Elbe as vice president/general manager.

On September 1, Brockway Air, comprising two internal divisions, the former Clinton as Brockway Air (N.Y.) and the former Air North as Brockway Air (Vt.), commence integrated operations over the combined route network of the merger partners.

CLINTONDALE AVIATION: West Bridge, Ltd. Business Centre, Leningradsky Pr 37, Building 14, Moscow, 125167, Russia; Phone 7 (095) 967-8660; Fax 7 (095) 155-6536; <http://www.clintondale.com>; Code CD6; Year Founded 1995. This Russo-American joint venture company is set up by Colin J. Hamilton and Yuri Konovalov at Moscow in January **1995** to operate executive and small group passenger charters. CEO Konovalov works out of the operating headquarters in Moscow, while President Hamilton remains at corporate headquarters in Highland, New York. Managing Director Konovalov begins revenue flights with a single Tupolev Tu-134.

A 50% equity stake in the concern is taken on June 5, **1996** by Louisiana-based Petroleum Helicopters, specializing in the provision of rotary-wing air transport. Its chairman, Carroll W. Suggs, becomes Clintondale board chairman, while PHI CFO Michael J. McCann joins the board. The two begin to jointly operate a Bell 212 on an oil-industry support contract in Kazakhstan.

Under the direction of Chairman Carroll Suggs and International Vice President Gary Weber, plans are made to further enlarge, via Clintondale, the PHI presence in the CIS.

Between **1997-1999**, the fleet is enlarged to include 2 each owned Let 410UVPs and Mil Mi-8MTVs, plus 2 Tupolev Tu-134As, 4 Yakovlev Yak-40s, and 4 Mi-8MTVs under charter. Other aviation assets are also available under lease. Clintondale comes to specialize in VIP air tours, aviation project support, and medical evacuation. Indeed, successful medevacs are completed from Kazakhstan and Russia to Helsinki, Budapest, and London. The affiliated subsidiary KazAir West is acquired.

On December 23 of the latter year, Clintondale begins the operation of two each chartered Mi-8MTVs and Mi-26s as part of an international relief effort in East Timor.

The Clintondale participation in East Timor comes to an end in March **2000**; the U.S. Department of Defense sends the carrier a certificate of appreciation for its work.

Longtime operations executive Konstantin Safronov becomes chief operating officer on June 12, while, on June 30, the board of the Central

Asian American Enterprise Fund is flown to its annual meeting at Baku aboard one of the carrier's Yak-40s.

One each VIP-outfitted Cessna Citation X and KazAir West Yak-40 become available for charter throughout Kazakhstan and the CIS on July 27.

CLIPPER AIR INTERNATIONAL: United States (1975–1976). J. S. Jervis establishes CAI at St. Croix in the U.S. Virgin Islands in the fall of 1975 to provide scheduled passenger services to regional Caribbean destinations. Daily Beech 18, Piper PA-23 Apache, and PA-34 Seneca revenue roundtrips commence linking the company's base with St. Juan, St. Martin, and Tortola.

The company is not a success and fails before its first birthday in 1976.

CLIPPER INTERNATIONAL, LTD.: Switzerland (1980–1983). Organized at Basel in late 1980, Clipper International initiates intercontinental jet charter and contract service flights to West Africa with a Boeing 707-320C in early 1981. The carrier is unable to achieve financial viability and after being dormant for a part of 1982, shuts its doors in 1983.

CLS CZECHOSLOVAK AIRLINES (CESKOSLOVENSKA LETECKA SPOLECNOST): Czechoslovakia (1927–1939). The Czech Ministry of Public Works organizes this rival to the established state carrier in the spring of 1927 in order to offer flights to Western Europe. A joint stock company, shareholding is also held by the giant Skoda armaments concern.

Smaller than competing **CSA Czechoslovak Airlines**, CLS is, throughout its 12-year history, equipped with more modern aircraft, beginning with 4 Fokker F-VIIb/3ms and 5 Avia BH-25s. Working in cooperation with **Deutsche Lufthansa, A.G. (DLH)**, subsidized services are started from Prague via Leipzig and Essen to Amsterdam; from Prague via Munich and Zurich to Basel; and from Berlin to Vienna via Prague.

Enplanements total about 3,500 in 1930 and the fleet includes 2 Fokker F-VIIAs and 7 F-VIIb/3ms. In 1931, a fleet of 5 Avia BH-25s is acquired and placed into service on the company's Prague to Berlin and Rotterdam frequencies.

The fleet is enhanced further as the decade develops. Among the newer types received are the 2 former **KLM (Royal Dutch Airlines, N.V.)** Fokker F-XVIII *Rijstvogel* and *Kwartel*, purchased in 1935–1936; they enter service on routes from Prague to Berlin and Vienna.

An unidentified Fokker en route to Amsterdam from Prague crashes at Bruelon, Germany, on April 7 of the former year (seven dead). The first of 3 Douglas DC-2s is delivered on November 5.

In 1937, in cooperation with **KLM (Royal Dutch Airlines, N.V.)**, the carrier launches a weekday Blue Danube Air Express from Rotterdam via Prague and Vienna to Budapest. The fleet is now enlarged by the addition of 2 more Douglas DC-2s (on July 12 and November 29) and 4 of the first DC-3s employed in Europe.

The Rotterdam end of the Vienna route is extended to London (Croydon) in 1938. On August 14, a DC-2 crashes at Kehl, Germany (17 dead). Late in the year, flights are offered from Prague to Marseilles via Munich, Zurich, and Geneva and from Prague to Berlin via Vienna in cooperation with Austroflug, A.G.

Following the German invasion in the spring of 1939, CLS ceases flying and its resources are acquired by **Deutsche Lufthansa, A.G. (DLH)**, beginning with 3 DC-3s on August 24 and the remaining DC-2s and DC-3s in July–August 1940. In March 1941, the DC-2s are transferred to the Finnish line **Aero O/Y** and christened *Voima* and *Sisu*.

CLTM AIRLINES (CARABISCHE LUCH TRANSPORT MAATSCHAPPIJ, N.V.): Netherland Antilles (1962–1986). This privately owned all-cargo airline is formed at Curacao on November 17, 1962. Equipped with a Douglas DC-3, the carrier began service in early 1963, initially operating cargo feeder flights for **KLM (Royal Dutch Airlines, N.V.)** between Curacao and Miami. A DC-4 is acquired in 1964.

Later, in 1969, the company is designated the nation's official freight airline and scheduled services are started. To provide additional lift, 1 DC-6A and 2 Curtiss C-46 Commandos are purchased. The U.S. CAB authorizes a three-year foreign air carrier permit in 1972. When the certification is renewed in 1975, the C-46s are withdrawn and sold.

Flights continue into the 1980s with 3 leased DC-6A freighters, which permit several weekly frequencies between Curacao, Aruba, and Miami. Airline employment in 1985 stands at 12. Operations cease in 1986.

CLUB AIR, LTD.: Ireland (1987–1988). Club Air is established at Dublin in late 1987 to offer inclusive tour and other charter passenger flights to European and Mediterranean holiday destinations, as well as a scheduled service linking its base with London (CTN). Operations commence with a single Boeing 727-046 leased from **Virgin Atlantic Airways, Ltd.**

Early in 1988, Virgin upgrades its lease to a B-727-225. Unable to generate sufficient revenues, the company closes its doors by September.

CLUB BAJA AIRLINES. See **BAJA AIRLINES**

CLUBAIR (PTY.), LTD.: Australia (1976–1982). Grahame Swanson forms Clubair (Pty.), Ltd. at Sydney in the summer of 1976 and equips it with a Cessna 402, which inaugurates scheduled services between Rutherford Airport, Maitland and Sydney in October. The Cessna is replaced by a GAF Nomad N.22B in June 1978, the first to enter commercial service in Australia. A second Nomad joins the fleet in November.

Although the route network out of Sydney is expanded, the company is unable to absorb the higher fuel prices and other difficulties caused by the world economic situation in the early 1980s and ceases operations in 1982.

CMA. See **COMPAGNIE DES MESSAGERIES AERIENNES, S.A.**

CMA (COMPANIA MEXICANA DE AVIACION, S.A. de C.V.): Mexico (1924–1956). U.S. pilot William "Slim" Mallory, on July 11, 1924, receives a Mexican government route award (Concession No. 3) for services from Mexico City to Tampico. Joining with American businessman George L. Rihl, who is backed by Randal G. Piper and Carl V. Schlaet, the two form **Compania Mexicana de Aviacion, S.A. de C.V.** The government contract is shifted to CMA on August 16, amended to include Concession No. 4, Mexico City–Tuxpan and Tampico–Matamoras.

Capitalized at \$25,000, the new airline is officially registered on August 24; Mexican citizen Lic Gustavo Espinosa Mireles is named president. The assets of financially distressed **CMTA (Compania Mexicana de Transportation Aerea, S.A. de C.V.)**, formed as the nation's first air carrier in 1921, are acquired and merged. The initial fleet comprises 3 Lincoln Standards obtained in the merger; it will eventually contain 8 Standard biplanes.

CMA enters into the delivery of payrolls by air business in 1925, dropping money orders and sacks to specified areas in the oil fields near Tampico from Lincoln Standard biplanes. The service is undertaken as a method of avoiding bandits, but at least one sack is lost when dropped off-target into a jungle. The bombardier, who later becomes a **Pan American Airways (PAA)** vice president, is fired. During the year, Sherman Fairchild purchases a 20% interest and agrees to supply all of the airline's equipment needs.

A 10-year Mexican government airmail contract is received on August 16, 1926 for the route from Mexico City to Tampico via Tuxpan. Flying a Lincoln Standard, M. A. Nimenin makes an extended survey flight on December 9, Mexico City to Matamoras via Tampico, in 6 hrs. 5 min.—the first direct flight to the U.S. border for the Mexican carrier.

Capitalization is increased in 1927 to 150,000 pesos and 7 Fairchild FC-2Ws join the fleet; the last three are christened, *Ciudad de Veracruz*, *Ciudad de Mexico*, and *Ciudad de Merida*. Nonscheduled mail services are maintained.

A revised and enlarged mail contract is accepted from the government on February 28, 1928. On April 25, the FC-2W *Ciudad de Mexico* launches the carrier's first scheduled service, thrice-weekly over the Mexico City–Tuxpan–Tampico route. Four Travel Airls join the fleet during the year and 2 employees are killed by aircraft propellers in separate accidents. On October 15, 2 FC-2Ws, *Ciudad de Merida* and *Ciudad de Veracruz*, initiate Mexico City to Merida flights via Minatitlan, Villahermosa, Ciudad de Carmen, and Campeche.

On January 2, 1929, the U.S. Post Office requests bids on Foreign Air Mail Route No. 8 from Brownsville, Texas to Tampico and Mexico City. Through a stock exchange, on January 23 **Pan American Airways (PAA)** purchases all CMA shares for \$150,000; the buyout leads the American government to award Juan Trippe's airline the Brownsville–Tampico–Mexico City roundtrip FAM-8 route on February 16.

Meanwhile, the new Ford Tri-Motor 5-AT-12 *Mexico*, complete with both U.S. and Mexican registration numbers painted on the wings and fuselage, is delivered on February 2, followed by the 5-AT-22 on March 5 and 5-AT-27 on March 7.

Piloting the *Mexico*, Charles A. Lindbergh, on March 10, inaugurates PAA's Mexican service southward from Brownsville; the return flight north is made by Mexican pilots. A fourth Tri-Motor is delivered on March 28 and, during the remainder of the year, CMA will receive from its U.S. parent 2 Fokker F-VIIB/3ms, 4 Fairchild 71s, 6 Stearman C-3Bs, and the 5-AT-11, which is turned over in May, along with the 5-AT-40. New routes are now opened by the Stearmans and Fairchilds—Tejeria to Tapachula on May 15, Tampico to Tejeria on September 1, and Tapachula to Guatemala City on October 9.

Meanwhile, on September 9, the carrier enters into an arrangement with two U.S. railways (Missouri-Kansas City-Texas and the New York Central) and two airlines (**Southern Air Transport** and **Universal Aviation Corporation**) for participation in a 49-hr. Mexico City–New York multistop air-rail service. The Ford Tri-Motor 5-AT-27 is returned to **Pan American Airways (PAA)** on December 2 for use on a route in the Panama Canal Zone.

The American parent takes back another Ford 5-AT-31 on May 19, 1930; Ford Tri-Motors replace Fairchilds on the Guatemala City route on September 16. During the year, the fleet is enlarged by the addition of 3 ex-**Pan American Airways (PAA)** Fokker F-10As plus a Curtiss C-1 Robin. CMA is now the largest airline in Latin America, in terms of total passenger kilometers flown.

In 1931, a Merida interchange with PAA allows CMA to offer a through service to Havana. Following the February 9, 1932 failure of Corporacion de Aeronautica de Transportes, S.A. de C.V., **Pan American Airways (PAA)**, on February 26, forms the CMA subsidiary **Aerovias Centrales, S.A. de C.V.** to operate the late Theodore Hull's former routes with a fleet of 4 F-10As and 2 Fairchild 71s.

The 5-T-22 is returned to **Pan American Airways (PAA)** on July 19 for transfer, a month later, to **Pan American-Grace Airways (Panagra)**. The same day, the 5-AT-27, previously employed on a Panama Canal service, is reacquired. Dismissing the central portion of the newly acquired **Aerovias Centrales, S.A. de C.V.** network, Ford Tri-Motors are placed on the Pacific coast link Torreón–Durango–Mazatlan on September 12.

A Northrop Delta 1B, en route for delivery to Aerovias Centrales in early 1933, is lost in a crash. In March, a five-stop coastal route is opened Mazatlan–Ciudad Obregon; this run is extended via Hermosillo to Nogales in midyear. For this service, the Ford 5-AT-31 is reacquired from **Pan American Airways (PAA)** on July 6.

To meet competition from Walter Varig's **Lineas Aereas Occidentales, S.A. (LAO)**, **Aerovias Centrales, S.A. de C.V.**, in April 1934, employs 5 Lockheed Model 10Cs to open Los Angeles to Mexico City same-day service. Additionally, CMA acquires an ex-**Aerovias Centrales, S.A. de C.V.** Consolidated Model 20 Fleetster and a Lockheed Model 9 Orion; PAA supplies a second Orion. The daylong California to Mexico City service makes CMA the first foreign airline to serve a major U.S. destination on a regular basis.

Following the withdrawal of its Mexican government mail contract, **Lineas Aereas Occidentales, S.A. (LAO)** ceases trading in January 1935. Following three years of **Pan American Airways (PAA)** service, the Ford 5-AT-74 is purchased on March 5. **Aerovias Centrales, S.A. de C.V.** is dissolved on December 18 and what is left of its fleet is passed to CMA.

On January 3, 1936, CMA begins service to Los Angeles, becoming the first foreign airline to service a point in the U.S. (other than a border city) on a regular basis. The Tri-Motor route extends to California from Mexico City via Guadalajara, Mazatlan, Hermosillo, and Mexicali. Chartered by the Hamburg-America Line to fly German tourists from Mexico City to Guatemala, the Ford 5-AT-12 with 14 aboard crashes in a pass between two volcanoes near Amecameca on March 26; there are no survivors.

The Electras, formerly employed by **Aerovias Centrales, S.A. de C.V.**, begin to be superseded by 3 Boeing 247Ds, purchased from **United Air Lines (UAL)**, **Pennsylvania Central Airlines**, and **National Air Transport (NAT)**. Orders are placed for 9 Douglas DC-2s and the Ford 5-AT-40 is sold to **Pan American Airways (PAA)** on November 1, followed by the 5-AT-74 on November 10. Reregistered several times, the Ford 5-AT-27 is also sold to the American parent on November 30 for transfer to **Cubana (Compania Nacional Cubana de Aviacion, S.A.)**.

A Lockheed Model 10C crashes 30 mi. SE of Playa Vicente, Veracruz, on January 11, 1937; there are no survivors. After two-and-a-half years service with the parent, the first of the new DC-2s is transferred and placed in service on May 17 and, on August 27, the often-traded Ford 5-AT-31 is once again passed to **Pan American Airways (PAA)**, which will turn it into a freighter.

In the fall, a request is made for 5 DC-3s, which begin to join the fleet in 1938 as the first of 39 to be employed over the next several decades. A Lockheed Model 10E Electra must be written off following a bad landing at Mexico City on February 9. On July 11, a Lockheed Model 10C crashes into the eastern slope of Tuxtla Volcano at Palo Blanco, Veracruz; there are no survivors. Another Electra, a Model 10E, is destroyed in a December 2 crash landing at Mexico City.

The Mexico City–Brownsville frequency is increased to twice daily on May 1, 1939. In terms of passenger kilometers flown, in 1940 CMA ranks as the largest airline in Latin America. En route to Chetumal in Quintana Roo Territory on March 5, the Ford 5-AT-45 crashes into trees on a mountain between Veracruz and Minatitlan; the plane is a total loss but only the copilot is injured. The Ford 5-AT-74 is reacquired from **Pan American Airways (PAA)** on March 26. The first DC-2 acquired back in 1937 is sold to **Aerovias de Guatemala, S.A.** on November 28.

The last Ford Tri-Motor 5-AT-74, flying the Ciudad del Carman–Campeche segment, is retired in February 1941; it is sold to the Guatemalan airline **Aviateca (Compania Guatemalteca de Aviacion, S.A.)** in May. Direct Mexico City to Monterrey flights commence on September 5, with a Monterrey–Nuevo Laredo extension started on December 5. A Cessna T-50 is acquired for the fleet by transfer from **Pan American Airways (PAA)**.

A second international route, to Havana, is opened on October 25, 1942. Night flights to Los Angeles are inaugurated on February 16–17, 1943, and are made possible by the completion of an illuminated airway. A route is opened during the year to Tapachula, via Oaxaca.

In 1944, the fleet is enlarged by the addition of 3 Avro Anson Vs and 7 Douglas C-39s (military DC-2s). Elton "Tubby" Stillman becomes general manager. On December 30, capitalization is increased to 12.5 million pesos, including 4.5 million from private Mexican investors; Pan Am's share is now 56%.

Between March 6–14, 1945, a pilots' strike halts service to 13 states and 25 cities. Mexico City to Monterrey night service is started and the Vera Cruz route is extended to Monterrey. A DC-3 crashes at San Luis Potosi on August 2 (12 dead). A second is lost 12 days later near Mexico City (16 dead).

Following enactment of prejudicial legislation by the Mexican government, **Pan American Airways (PAA)**, on March 28, 1946, is forced

to reduce its CMA interest to 45% by selling 13,750 shares; the American giant continues lavish equipment support. On June 6, the first of 3 DC-4s (converted to civil DC-4 standard from ex-military C-54s) to be delivered during the year arrives at Mexico City.

While climbing away from Mexico City on June 25, the new DC-4 with 5 crew and 42 passengers stalls and crashes; although the plane must be written off and 42 aboard receive various injuries, there are no fatalities.

The **Pan American Airways (PAA)** interest is cut to 41% on August 5.

Additional DC-4s to a total of 7 are placed into service throughout 1947. On April 29, one of these takes Mexican President Miguel Aleman nonstop Mexico City–Washington, D.C., in 9 hrs. 45 min. A number of older aircraft are discarded, including the Ford 5-AT-11, which passes to Compania Dominicana de Aviacion, S.A. in the Dominican Republic. The first DC-4 overhaul in Mexico is completed at the CMA maintenance facility at Mexico City on May 12, 1948.

A cargo division is formed on July 14, 1949. Orders are placed for a 6 DC-6s. On September 26, a DC-3, en route from Guatemala to Mexico City with 25 aboard, crashes into a volcano in heavy fog; there are no survivors.

During the year, the company receives a U.S. license for the maintenance and repair of aircraft with American registry; so efficient will the carrier's engineers and mechanics continue to be over the years that the certificate will never be lost. Equipped with special high-power Pratt & Whitney engines, the first DC-6 is delivered on November 6, 1950 and enters service on December 6.

During 1951, the fleet is enlarged by the addition of 5 more DC-6s. Orders are placed on April 20 for 3 DC-6Bs. Airmail is forwarded to Madrid and London as the result of a cooperative agreement signed with **Cubana (Empresa Consolidada Cubana de Aviacion, S.A.)** followed by **SAS (Scandinavian Airlines System)**. On September 1, a DC-6 en route from Los Angeles to Mexico City, crash-lands on the lake shore at Mexico City; no injuries are reported.

En route from Mexico City to Oaxaca de Juarez on September 25, 1952, a DC-3 with 20 passengers is rocked by an explosion caused by a bomb hidden in a suitcase in the baggage compartment. Although two passengers are badly hurt, the Douglas manages to land safely. On September 29, police capture 2 suspects who had sought to collect \$208,000 in insurance had their crime destroyed the aircraft.

As might, perhaps, be expected, passenger traffic is reported down for the remainder of the year following this incident. The first of 2 DC-6Bs to be delivered on the year arrives at Mexico City on June 12, 1953.

On January 7, 1954, CMA purchases the carrier **TAJ (Transportes Aereos de Jalisco, S.A. de C.V.)** for its Puerto Vallarta route. During the year, the 3 DC-6Bs, having been found unsuitable, are sold (2 to the American carrier **Northwest Airlines**) as 6 additional DC-6s are ordered and begin delivery.

During 1955–1956, the last DC-6s are placed in service, along with 5 Fairchild C-82A freighters.

Three Douglas transports are lost during the former year. While on a scheduled flight from Puerto Vallarta, a DC-3 with 3 crew and 23 passengers is lost at Mascota on March 8; there are no survivors. The second catches fire and crashes in the mountains of Oaxaca State on July 14 (22 dead). A third DC-3, with 3 crew and 13 passengers is lost at Poza Rica, Mexico, on September 8 (1 dead).

During 1956, the marketing title **Mexicana Airlines, S.A. de C.V.** is introduced.

CMTA (COMPANIA MEXICANA DE TRANSPORTACION AEREA, S.A. de C.V.): Mexico (1921–1924). Three U.S. citizens resident in Mexico, Harry J. Lawson, Lloyd A. A. Winship, and Elmer C. Hammond form Mexico's first airline at Mexico City early in 1921. In the spring, 2 Lincoln Standards are purchased in and flown down from Nebraska. On July 1, the central government awards these Americans Airmail Concession No. 1. Routes are initiated for charter and air taxi flights from the capital city to Tampico and Matamoros and to San Luis

Potosi, Saltillo, Monterrey, and Nuevo Laredo. Humberto Jimenez is the first passenger carried.

It is quickly established that the most profitable business is located at the oil field stops on the Mexico City–Tampico run, which is extended down to Tuxpan. The work is also potentially dangerous, as the principal cargo is payroll for the energy workers.

By July 1922, the carrier has flown 1,956 hours; 1,248 passengers are transported, including 289 on intercity flights. In 1923 charter and air taxi work continues, primarily into the oil field areas and the fleet is increased to a reported 10 Lincoln Standards.

Due to competition from American aviator William Mallory, the operation declines badly in 1924; in September, its assets, including 3 Lincolns, are sold to **CMA (Compania Mexicana de Aviacion, S.A. de C.V.)**.

CNA (COMPANIA NACIONAL DE AVIACION, S.A.): Guatemala (1930–1935). Also known as the Central American Aviation Corporation, Ltd., CNA is established at Guatemala City on June 4, 1930; W. Hodkinson is named president. Employing Kreutzer Tri-Motors, the airline soon inaugurates service to Retalhulen via Quezaltenango; to Puerto Barrios; and to Peten.

These routes are maintained almost without change until 1935, when the carrier is purchased by **TACA (Transportes Aereos Centro Americanos, S.A.)**.

CO-AIR (COORDINATED AIR SERVICES (PTY.), LTD.): Papua New Guinea (1975–1986). Formed as a nonscheduled charter carrier at Lae in June 1975, Co-Air undertakes flights that link the nation with various destinations in Morobe, the Western Provinces, and Siassi Islands. The government grants the 50-man airline a license for scheduled services in March 1983.

Having upgraded the fleet to comprise a total of 3 Cessna 206s, 1 Beech B-55 Baron, 2 Cessna 402Bs, and 3 Britten-Norman BN-2A Trislanders, the company inaugurates commuter flights in the late summer. Destinations visited from Lae include Aseki, Finschhafen, Kabwum, Kiunga, Lablab, Menyamy, Pindiu, Siassi, Tabubil, and 14 on-demand stops.

Unable to maintain viability, the company ceases trading in 1986.

COAST AIR (1): United States (1971–1975). Stan Hewitt, Art Hack, and Terry Wills establish coast Air at Ketchikan, Alaska in 1971 as successor to the nonscheduled operator **Simpson Air**. Employing a variety of Cessna lightplanes and de Havilland Canada DHC-2 Beavers, the owners continue passenger and cargo charters until 1973, when scheduled flights are introduced to a number of previously served points, including Klawock, Craig, Hydaburg, Annette Island, Nanaimo, Vancouver, Metlakatla, and Thorne Bay. A Grumman G-21 Goose is added in 1974 and, in 1975 the carrier is sold to Kirk Thomas, who changes its name to **Tyee Airlines**.

COAST AIR (2): United States (1975–1977). Coast Air is established at Ketchikan, Alaska, in 1975 to provide scheduled passenger and cargo flights to Craig, Klawock, and Hydaburg. Revenue flights commence with a de Havilland Canada DHC-2 Beaver and Grumman G-21 Goose. When it is found impossible to maintain economic viability, the carrier shuts down in 1977.

COAST AIR, A.S.: Haugesund Lufthavn Postboka 163, Avaldsnes, N-4299, Norway; Phone 47 (52) 834 110; Fax 47 (52) 840 374; http://www.coastair.no; Code BX; Year Founded 1990. Coast Air, A.S. is established at Haugesund Airport in 1990 to offer scheduled commuter services to various domestic Norwegian destinations. Ashjorn Utne is appointed managing director and his initial fleet comprises 1 each Beech Super King Air 200, de Havilland Canada DHC-6-300, Cessna 206, and Cessna 208 Caravan I.

Services are maintained in 1991 and, on January 28, 1992 a second Canadian turboprop is added. It will operate an oil company contract.

Operations continue apace in **1993** and, in **1994** 1 Twin Otter is replaced when 3 British Aerospace BAe Jetstream 31s are placed into service. Enplanements total 9,064.

Airline employment stands at 17 in **1995**, a very good year for the company. Passenger boardings skyrocket 67.1% to 27,548 just through September.

Fifteen new workers are hired in **1996**, a 68.2% increase in the employee population. The 3 J-31s transport a total of 41,644 passengers, a 45.5% growth rate.

Destinations visited in **1997** include Aberdeen, Bergen, Gello, Hauge-sund, Kristiansand, Oslo, Skien, and Stavanger. In October, 2 more Jetstream 31s are purchased from the U.K.-based concern DK Aviation, Ltd. Customer bookings jump 29% to 53,708.

Flights continue in **1998**. Service is extended to Farsund, Lista and Kristiansund. Passenger boardings fall 13.1% to 48,000.

By the start of **1999**, airline employment has been boosted 56.3% to 50.

During the year, pilot ranks swell from 45 to 60 in anticipation of the receipt of 2 recently ordered Avions de Transport Aerien ATR42-520s.

Passenger boardings plunge 10.9% to 41,000.

After weeks of negotiation, members of the carrier's pilot association strike on February 16, **2000**, demanding that only senior pilots be assigned to fly the ATRs when they are introduced.

The new ATR42-520s are received by April 10 and is placed into service from Floro to Bergen and Oslo.

COAST AIR, LTD.: Kenya (1979–1982). Originally a coastal branch of Nairobi's **Wilkenair Services, Ltd.**, this division, based at Mombasa, becomes **Air Kenya (Coast)**, with other branches at Malindi and Nanyuki. When the Air Kenya (Coast) operation is sold in November **1979**, the Malindi and Nanyuki components are left out of the arrangement and are, in turn, combined to form **Coast Air, Ltd.**

Chairman R. N. Maina's company, in addition to safari, air taxi, and air ambulance charter flights, undertakes daily scheduled service from Mombasa to Lamu. The initial fleet comprises 2 Piper PA-31-310 Navajos, 1 Cessna 402, 2 Beech B-55 Barons, 4 Piper PA-34 Senecas, and 2 Piper PA-32 Cherokee Sixes.

Unable to achieve economic viability in the face of low traffic yields and high expenses, the company halts operations in **1982**.

COAST AIR CHARTER, LTD.: New Zealand (1991–1994). B. L. Waghorn establishes CAC at Christchurch in **1991** to undertake passenger and cargo charters and contract service flights. Revenue operations commence and continue with a fleet of 1 each Cessna 206, Cessna 177, Cessna 172, and Piper PA-31-310 Navajo. Operations continue for three years.

COAST AIRWAYS: United States (1931–1932). CA is established at Santa Barbara, California, in mid-**1931** to offer multistop, scheduled Stinson passenger flights up the coast to Los Angeles. Flights commence in the fall, but without mail subsidy, the company is gone by July **1932**.

COASTAL AIR: United States (1975–1979). Roy Hagerty establishes Coastal Air at Auburn, Alabama, during the summer of **1975** to provide scheduled passenger services to Atlanta and Tuskegee. Employing a Britten-Norman BN-2 Islander, Hagerty inaugurates daily roundtrips on August 1 and maintains them apace until **1979**, when he reforms the carrier into **Southeastern Commuter Airlines**.

COASTAL AIR TRANSPORT: P.O. Box 3985, Christiansted, St. Croix, Virgin Islands 00822, United States; Phone (809) 773-6862; <http://www.coastalair.com>; Code DQ; Year Founded 1976. CAT is formed by Mike Foster at St. Croix, U.S. Virgin Islands, in the spring of **1976** to provide third-level passenger charter service in the eastern Caribbean. Nonscheduled lightplane flights commence in June.

After six years of charter flights, the company elects to offer regularly scheduled commuter frequencies in the summer of **1982**. Employing a Beech B-58 Baron, daily roundtrip revenue passenger service begins on July 4 between St. Croix and Nevis.

During the fall, markets are opened at St. Barthelemy and Anguilla and the fleet is strengthened by the addition of a Cessna 402 and a Britten-Norman BN-2 Islander. Bookings for the year total 1,200. There are 10 employees at the beginning of **1984**.

Operations continue apace in **1985–1987**. In **1988**, the workforce is increased by 20% to 6 and an order is placed for 1 de Havilland DHC-6-300 Twin Otter. Enplanements rise by 15.6% over the previous year to 1,785.

The new Twin Otter enters service early in **1989**, replacing the Cessna. The carrier is forced to stop flying in the wake of September's Hurricane Hugo.

President Michael Foster's small carrier recovers during **1990** and the first part of **1991**, resuming flights during the second half of the latter year. Employing its original Baron and Islander, services are relaunched to St. Barts, Nevis, and Anguilla. Operations continue apace in **1992–1993**, but, by **1994** the Baron and Islander have been retired in favor of a single Cessna 402C. Enplanements are slightly over 2,500 and an operating gain of \$31,000 is reported.

Five people are employed in **1995** as an order is placed for 1 de Havilland Canada DHC-6 Twin Otter. Passenger boardings inch up 0.8% to 2,875 while 64,000 FTKs are operated. Revenue figures show operating revenues are up 9.1% to \$304,000 while expenses are up just 0.2% to \$253,000. A \$51,000 operating profit is posted.

The fleet in **1996** includes 1 Piper PA-31-310 Navajo and 2 PA-34 Senecas. Customer bookings swell 13.1% to 3,253. A Cessna 402C is acquired in **1997**. Unhappily, passenger boardings fall 19.4% to 2,623.

Service is maintained in **1998**, even though business worsens. Customer bookings fall another 19.7% to just 2,000. Only 7 people are employed by the carrier at the start of **1999**.

Customer bookings remain level at 2,000.

COASTAL AIRWAYS (1): United States (1928–1929). An outgrowth of two-year old **Atlantic Airways**, Coastal Airways (1) is founded at New York by Fitzwilliam W. Dalrymple and Enzo De Angelis in late **1928** through the merger of Atlantic and Mill Basin Aircraft, Inc., a fixed base hydroplane concern based in Brooklyn.

The first aircraft, a Leoning amphibian, is purchased on March 18, **1929** from Eastern Trimotor, a subsidiary of the Boston Airport Corporation. At the same time, an order is placed for 6 pontoon-equipped Fairchild 71 cabin-monoplanes. A pair of Curtiss Seagull flying boats are acquired from New Haven Air Terminal between April 23 and May 7 and are employed to inaugurate charter and flight-seeing services. On-demand destinations visited include points in Long Island, New Jersey, Connecticut, Albany, Lake Champlain, and Lake George.

Following delivery of the first Fairchild 71, scheduled twice-daily roundtrip passenger service is started on May 22 from North Beach (later La Guardia) Airport up the Hudson River 150 miles to the state capital at Albany. Fares for the 1¼-hour flights are \$17.50 one-way and \$33.50 roundtrip. A week later, on May 29, President Dalrymple, flying without a pilot's license, suffers the first of many company accidents when he crashes a Curtiss Seagull into Flushing Bay off North Beach. Although no one is injured, the plane must be written off. Dalrymple is succeeded as president by cofounder De Angelis.

On June 12, pilot Clifford McMillin's brand new Fairchild 71 with four passengers crashes into the Hudson River while making a hard landing. All are seriously hurt, but survive; the plane is lost.

Just nine days later, on June 22, the first Fairchild is lost when its pilot, Guy McLaughlin, taxis it onto a sand bar off Barren Island (later Floyd Bennett Field) on Jamaica Bay. It will be destroyed during salvage operations.

On August 1, President De Angelis announces that Coastal will merge with five-month old competitor **Airvia Transportation Company**. A

week later, Airvia's new president, James A. Stader, announces that the two companies will complete their arrangements on September 25, integrating completely by October 15. Joint plans are announced for a new service to Montreal by the Airvia Coastal Transportation Company, employing a pair of Italian-built Savoia-Marchetti S-55 seaplanes made famous by Airvia's pilots, the transatlantic flyers Roger Q. Williams and Lewis A. Yancey.

A second Curtiss Seagull is lost on August 15 when pilot Raymond Brown, with two charter passengers, is unable to get his plane aloft from Loon Lake, in New York's Adirondack Mountains, and crashes; none of the three are hurt, but the plane must be written off.

The entire Coastal-Airvia deal comes unraveled on August 17 when postal inspectors arrest Austin Montgomery and Harry Taylor for the unauthorized sale of some 35,000 shares of company stock through the federal post. Airvia goes out of business, but Coastal, with a severe cash-flow problem, does survive a little longer.

In late August, a second Leoning amphibian arrives in time to help Coastal maintain its schedules in the wake of the Curtiss accident and Airvia near-disaster, while 3 new \$18,075.92 Fairchild Model 71s are delivered, secured by mortgage liens from New York's Commercial Investment Trust, Inc. These are placed into service on the company's routes to Albany, Saratoga, Lake George, and nonscheduled points.

Out of fuel and attempting to make an emergency landing near Coney Island on September 7, pilot William H. "Bill" Alexander's Fairchild strikes a sign in the water and crashes into swimmers on the beach; two children are killed and nine other vacationers are injured. The next day, pilot Henry Ramsdell's Fairchild, just aloft from Jamaica Bay in fog, strikes the motorboat *Carrie D* with a pontoon, slicing it in half and killing fisherman William Brown. Ramsdell, who will later state his belief that he had hit a log, returns to Mill Basin Terminal to install a new float, where he is arrested by New York City detectives and charged with homicide—the first airplane "hit and run" accident. He, like Bill Alexander, who was charged with murder the day before, will be cleared.

Faced with costs from pending lawsuits from these accidents, aircraft rentals, Fairchild repair bills, and dwindling passenger traffic, Coastal soon fades. Beginning on September 17, the company attempts to gain cash by selling parts of the two salvaged Seagulls crashed earlier. The \$2,000 income is, together with proceeds from the sale of the third Curtiss, insufficient to stave off the inevitable. With the stock market crash in October, Coastal's stock, 170,000 shares of which had been offered in the spring at \$17.50 per share, is worthless and the company declares bankruptcy. Its remaining assets are either sold or repossessed.

COASTAL AIRWAYS (2): United States (1967–1969). Initially formed as **Coastal Aviation (1)**, this small Florida commuter begins scheduled passenger and cargo services from Orlando's Herndon Airport in 1967. Employing 1 Grumman G-21 Goose and 1 Beech 99, CA duly inaugurates daily roundtrips to Tallahassee, Tampa, Nassau, Freeport, and West End.

CA-1 is reformed and renamed in 1968 and operations continue apace until the carrier goes out of business in 1969.

COASTAL AIRWAYS (3): United States (1976–1978). The third Coastal is established at Gulfport, Mississippi, in 1976 to provide scheduled passenger and cargo flights to regional destinations. Daily Cessna 402 roundtrips are duly inaugurated linking the company's base with Patterson, Hattiesburg, and New Orleans; these services are maintained into 1978.

COASTAL AIRWAYS (4): United States (1989–1993). Privately owned Coastal Airways (4) is established at Sequim, Washington, in late spring 1989. Founder Jack Sallee is president and his fleet is made up of 2 Cessna 402s. During the summer, scheduled passenger and cargo flights are inaugurated linking Bremerton with Seattle.

In regulatory difficulty, Coastal is shut down by the FAA in August 1990. Sallee is able to put his house back in order during 1991, acquiring 2 additional Cessna 402s and resuming flights. Even though service

is expanded to several destinations in the San Juan island group, traffic figures for the 40-employee firm continue to be held in confidence.

The company encounters financial difficulties in 1992 and the new owner and president, Jack Eagan, cannot redress them. As a result, the small regional must shut its doors in 1993.

COASTAL AVIATION (1). *See* COASTAL AIRWAYS (2)

COASTAL AVIATION (2): United States (1978–1984). Terry Yeager establishes Coastal Aviation at Bethel, Alaska, in 1978 to provide scheduled passenger and cargo services to local and regional destinations. Revenue flights commence with a fleet of Cessna 207s, 402s, and de Havilland Canada DHC-6 Twin Otters.

A feeder arrangement is signed with **Wien Air Alaska** in 1980 and remains in effect until both carriers fail in 1984.

COASTAL CARGO COMPANY: United States (1951–1959). CCC is set up at West Trenton, New Jersey, in 1951 to operate all-cargo contract flights on behalf of the USAF with a pair of leased Curtiss C-46 Commandos. The CAB grants the company an interim supplemental air carrier certificate in 1959, but when this expires on May 9, 1962, Coastal is taken over by **Zantop International Airlines**.

COASTAL HELICOPTERS: 8995 Yandukin Dr., Juneau, Alaska 99801, United States; Phone (907) 789-5600; Fax (907) 789-7076; <http://www.AlaskaONE.com/coastal>; Year Founded 1990. Coastal is established by Mike and Dot Wilson at Juneau in 1990 to provide nonscheduled rotary-wing services to bush locations, as well as flight-seeing and ice field excursions for tourists. During its first decade of operation, Coastal also flies year-round for companies maintaining Juneau's hydroelectric and telephone systems, provides support for the mining and logging industries, and flies professional photographers and filmmakers.

In 2000, the business, which includes maintenance support services, employs 13 pilots, 4 of them full-time, to fly its 5 Eurocopter AS-350 Astars and 2 Bell 206B JetRanger IIIs.

COASTAL PLAINS COMMUTER: United States (1978–1979). CPC is set up on Hilton Head Island, South Carolina, in 1978 to provide seasonal scheduled passenger and cargo services to Charleston and Savannah. Cessna lightplane daily roundtrips are duly inaugurated and are maintained through 1979.

COBDEN AIRWAYS (PTY.), LTD. *See* COUNTRYWIDE AIRLINES (PTY.), LTD.

COBETA. *See* COMPAGNIE BELGE DE TRANSPORTS AERIENS, S.A.

COBHAM AIR ROUTES, LTD.: United Kingdom (1935). Legendary flyer Sir Alan Cobham establishes Cobham Air Routes, Ltd. at London on May 3, 1935; capitalized at £30,000, the fleet comprises an Airspeed Courier and a Westland Wessex. The two aircraft, each flying half the route, begin twice-daily London (Croydon)–Guernsey via Portsmouth and Bournemouth operations on May 6.

On July 3, the Wessex is lost between Bournemouth and Guernsey (one dead) and the company stops trading. Its assets are later acquired by **Olley Air Services, Ltd.**

COBHAM-BLACKBURN AIR LINES, LTD.: United Kingdom (1928–1930). Robert Blackburn's Blackburn Aircraft subsidiary **North Sea Aerial and General Transport, Ltd.**, which had been conducting proving flights in central Africa, is merged with Sir Alan Cobham's company Alan Cobham Aviation, Ltd., on April 24, 1928, to form Cobham-Blackburn Air Lines, Ltd. The Khartoum–Kisumu flights started the previous year continue.

In November 1929, the company contracts to join in an operational and technical survey of the Cairo–Cape Town route sponsored by the Air

Ministry and **Imperial Airways, Ltd.**; the test is completed by April 11, 1930. In midyear, this small operator is acquired by the state airline, which has taken the decision to extend routes into Africa.

COCHISE AIRWAYS: United States (1971–1982). Named for the famous Native American chief, this third-level carrier is organized at Tucson, Arizona, in summer 1971 to offer scheduled Cessna 402 passenger and cargo commuter services to Phoenix, Kingman, Winslow, Prescott, Flagstaff, Grand Canyon, and Yuma. Revenue flights begin in September, as Cochise becomes one of the first commuter airlines to receive official certification from the CAB.

During the next 5 years, the new entrant acquires a fleet of 4 402s, 2 Convair CV-440s, and 3 Fairchild-Swearingen Metro IIs. Enplanements in 1977 total 20,000, revenues total \$712,000, expenses are \$901,000, and the loss is \$189,000.

In 1978, the year of the Airline Deregulation Act, bookings advance by 25% to 25,000. Revenues advance to \$941,000, but costs remain uncontrolled, climbing by 46% to \$1.31 million. Losses rise to \$377,000.

Passenger boardings reach their highest point 1979, increasing by a staggering 340% to 110,000. Revenues, as a result, rise 404% to \$4.74 million and expenses increase only 208% to \$4.05 million, leaving the company with a \$688,000 profit. Indeed, this is the commuter's best—and last really profitable—year.

The fleet of the Tucson-based carrier in 1980 includes 4 Cessna 402s, 3 Swearingen Metro IIs, and 1 Convair CV-440.

Although traffic and income decline, there is sufficient optimism to plan new services to Bakersfield, Santa Monica, and Palm Springs and to order 3 SAAB-Fairchild 340s.

Passenger boardings dip 2.7% to 107,401 as cargo skyrockets 82.4% to 29,000 pounds. Expenses (led by increased fuel prices) climb to \$5.64 million. But, on revenues of \$5.77 million, the profit falls to \$134,000.

However, if the 1980 decline is not bad enough, the PATCO air traffic controllers' strike in the summer of 1981 proves fatal. Despite the addition of a second CV-440, ATC restrictions in the fall help to ensure that overall enplanements plummet 10.3% to 96,392 and freight drops 5.1% to 27,300 pounds.

The severe financial impact caused by the job action cannot be overcome and Cochise is forced to shut its doors on June 2, 1982.

COGEAIR (COMPAGNIE GENERALE AERIENNE AFRICAINE, S.A.): Belgian Congo/Congo/Democratic Republic of the Congo (1955–1971). Cogear is established at Kinshasa's N'Dolo Airport in 1955 to provide passenger and cargo charters throughout the country with a fleet of Piper and Cessna lightplanes. The carrier also provides feeder services on behalf of **Sabena Belgian World Airlines, S.A.** to communities within several hours of the capital.

Service continues apace during the remainder of the decade. A pair of de Havilland DH 114 Heron IBs are acquired and destinations visited from Kinshasa include Boma, Manimba, Masi, Luluabourg, Port Francqui, Lumbashi, Kingolo, Kalem, Goma, Buni, and Beni.

Service becomes somewhat sporadic in the hectic years following the independence of the Belgian Congo in 1960. By the middle of the decade, the company has resumed steady operations, often in competition with the new **Air Congo, S.A. (2)**.

When the Democratic Republic of the Congo becomes Zaire in 1971, Cogear is taken over by **Agence et Messagers Aeriennes du Zaire, S.A.**

COHATA (COMPAGNIE HAITIENNE DE TRANSPORTS AERIENS, S.A.). See **HAITI AIR TRANSPORT, S.A.**

COLEMAN AIR TRANSPORT CORPORATION: United States (1977–1980). CATC is set up at Rockford, Illinois, in 1977 to operate scheduled passenger and cargo services to regional destinations. Employing a fleet of Beech King Air 100s and Grumman Gulfstream G-1 turboprops, daily flights are inaugurated linking the company's base with Milwaukee via Moline.

Services continue apace in 1978, as Des Moines, Cedar Rapids, Waterloo, Detroit, Indianapolis, and Cincinnati join the route network. On November 12, 1979, taking advantage of the expansion possibilities of the Airline Deregulation Act, the carrier announces that it will inaugurate Douglas DC-9-10 service from Rockford to New York the following spring.

Having encountered regulatory difficulties with the FAA, the company loses its operating certificate on July 20, 1980, before it can start jetliner flights.

COLEMILL ENTERPRISES: Cornelia Fort Airpark, Nashville, Tennessee 37206, United States; Phone (615) 226-4256; Fax (615) 226-4702; <http://www.colemill.com/charter.html>; Year Founded 1944. Colemill Enterprises is an FBO established at Cornelia Fort Airpark in 1944. In addition to the traditional overhaul and gas station activities of such a facility, the company also comes to operate domestic, later regional, passenger and express charter services.

By 2000, Operations Director Bill Colbert Jr. oversees a staff of eight full-time and six part-time pilots. The mixed piston- and turboprop-engine fleet includes 2 each Piper PA-31-310 Navajos and PA-31-350 Navajo Chieftains and 1 each Beech King Air 90, King Air 100, B-55 Baron, and Cessna 172 Skyhawk.

COLGAN AIR: P.O. Box 1650, Manassas, Virginia 20108, United States; Phone (703) 368-8880; Fax (703) 331-3116; <http://www.colganair.com>; Code 9L; Year Founded 1991. Following his experience with **Colgan Airways**, Charles J. Colgan Sr. returns to the commuter airline scene in late spring 1991. With joint Executive Vice Presidents Michael J. Colgan and Mary Colgan Finnigan, he establishes another small family-owned regional, **National Capital Airways**, the name being quickly changed to Colgan Air during the summer. Other Colgan family members directly involved are the director of reservations, Dorothy Colgan Chaplin and the purchasing director, Patrick S. Colgan.

Employing a single Beech 1900, the small carrier pioneer opens scheduled passenger flights in the fall linking Washington, D.C. (IAD) with Binghamton, New York, via White Sulphur Springs and Ekins, West Virginia.

Airline employment stands at 49 in 1992 and the fleet is increased by the addition of 2 Beech 1900s and 1 Beech 99. A new route is opened from Boston to Bar Harbor and Rockland in Maine and from Newark to Hyannis and Nantucket. Enplanements for the first full year of service total 18,267.

The workforce is increased to 80 in 1993 as 2 more Beech 1900s join the fleet. Passenger boardings skyrocket 138.8% to 43,000.

The fleet in 1994 totals 2 Beech 99s and 5 Beech 1900Cs. Customer bookings shoot up another 48% to 63,633.

Airline employment grows 6.7% in 1995 to 125. The fleet now comprises 6 Beech 1900Cs, but orders are placed for 2 1900Ds and 1 SAAB 340B. Enplanements soar 24.6% to 79,269.

Twelve new workers join the company in 1996 and the first Beech 1900D enters service in May. A code-sharing agreement is signed with **Continental Airlines**; under terms of the arrangement, the airline will offer "Continental Connection" flights from various Northeast and Middle Atlantic destinations to the major's hubs at Boston, Charlotte, and New York (LGA).

Passenger boardings accelerate 11.4% to 88,344.

The workforce is slashed 64.2% in 1997 to 49. In April, the "Continental Connection" contract with **Continental Airlines** is expanded and now allows that major's passengers to connect via Colgan flights to destinations in Beckley and Bluefield, West Virginia, Charlottesville, Virginia, Hyannis and Nantucket, Massachusetts, and several points in Maine. Over 60 flights per day are now offered on behalf of Continental.

Enplanements during the 12 months total 90,888.

Service is maintained without fanfare in 1998. Customer bookings accelerate 8.2% to 99,000.

On September 24, Colgan joins the "USAirways Express" network, bringing six new cities into the major's commuter system. Beginning on October 11, "USAirways Express" flights are initiated to Boston from Augusta, Bar Harbor, and Rockland, Maine, as well as Rutland, Vermont, and to Washington, D.C. (IAD) from Beckley and Bluefield, West Virginia.

To help provide needed capacity, the company requests three SAAB 340Bs in November. Documents bringing the carrier into the "USAirways Express" family are officially signed in December.

Customer bookings surge 32.4% to 131,000.

Airline employment at the start of 2000 stands at 224, a 17.9% increase during the previous 12 months.

The Swedish-made turboprops are delivered during the first quarter and are employed in February to launch new "USAirways Express" service from Charlottesville to New York (LGA). SAAB 340B service from New York (LGA) to Hyannis via Nantucket begins on June 15.

COLGAN AIRWAYS: United States (1970–1989). In 1970, Manassas, Virginia-based FBO operator Charles J. Colgan Sr., who has enjoyed success in providing charter flights in support of the local IBM facility, establishes an airline division. Employing a Piper PA-31-350 Navajo Chieftain, he inaugurates scheduled passenger and cargo commuter flights on June 19 from his base to Poughkeepsie, New York, via Washington, D.C. (DCA).

During the next eight years, the carrier is gradually expanded, first with services to Binghamton and then to Raleigh, North Carolina. With 2 Beech 99s now available, Colgan boards 17,997 passengers in 1978 and hauls 35.5 tons of freight.

Passenger boardings drop 8.3% in 1979 to 17,000; however, cargo traffic operated accelerates 13.1% to 80,000 pounds. In 1980, Colgan oversees 9 employees and a fleet comprising 2 Beech 99s and the Navajo Chieftain. Enplanements plunge again, down by 40.2% to 9,861. Freight falls too, by 28.5%, to 57,507 pounds.

On April 1, 1981, two new routes are initiated out of Washington, D.C., one to Atlantic City and the other to Hot Springs, Virginia. Enplanements for the year total 14,847, a boost of 50.6%.

During 1982–1983, services are introduced to Baltimore, Philadelphia, Asbury Park, New Jersey, and to Virginia's Shenandoah Valley. Additional Beech 99s are acquired. Passenger boardings skyrocket 85.7% to 29,139 in the former year and 37.4% to 37,754 in 1983.

Following the demise of Clarksburg, West Virginia-based **Aeromech Airlines** and its successor **Wright Airlines** in late 1984, Colgan is awarded their Essential Air Service (EAS) contract and reorganizes its route network.

All of the services added in 1982–1983 plus flights to Hot Springs are suspended. In their place are new frequencies to Pittsburgh and Allentown and the West Virginia cities of Elkins, Clarksburg, and Morgantown, all flown out of Washington, D.C. (DCA). Customer bookings jump 9.6% to 41,535.

The fleet in early 1985 comprises 7 Beech 99s. On November 15, the carrier becomes a code-sharing partner of Texas Air Corporation (TAC) subsidiary **New York Air**. In December the fleet is expanded by the addition of 2 purchased CASA C-212 Aviocars and 2 leased Shorts 330s as New York Air Connection feeder flights are initiated.

Support from the nonunion national helps passenger boardings to jump 21.5% to 50,482.

The 100-employee small regional is acquired on August 13, 1986 by **Presidential Airways** to provide feed to the new large regional's base at Washington, D.C. (IAD). Customer bookings skyrocket 94.5% to 98,165.

When **Continental Airlines** absorbs **New York Air** in February 1987, new opportunities are opened for both Presidential and Colgan. In March, the former abandons its efforts to become a national carrier and instead agrees to become a "Continental Express" airline dedicated to providing feed to Dulles from midsize regional airports.

Colgan, on the other hand, re-signs as a "Continental Express" partner with the mission of serving the same destination from smaller communities. The fleet now includes 7 British Aerospace BAe Jetstream 31s.

Operations continue in 1988–1989, but when Presidential declares Chapter XI bankruptcy in October of the latter year and ceases on December 4, Colgan must immediately follow suit.

COLLONDALE AIR SERVICE (PTY.), LTD.: South Africa (1959–1968). Kenneth Brown establishes CAS at East London in 1959 to provide passenger and cargo charters to local destinations. Revenue operations begin and continue with a Cessna 175, C-206, and a Piper PA-32 Cherokee Six.

John Roderick & Co. (Pty.), Ltd., which owns **Rodair (Pty.), Ltd.** at Bloemfontein, takes over CAS in 1964, operating it as a subsidiary and allowing it to keep its previous name. A small PA-11 Colt is added to the fleet in 1967. Operations cease about a year later.

COLOGNE COMMERCIAL FLIGHT, GmbH: Germany (1988–1992). This small privately owned carrier is formed at Cologne in 1988 to offer charter and air-taxi flights to regional destinations. A fleet comprised of 2 Piper PA-34 Senecas, 2 Cessna 421s, and 1 Cessna 404 Titan is assembled and revenue flights commence. During 1989, the company undertakes charters to Southend Airport in Great Britain and petitions for permission to inaugurate scheduled service over that route.

A Piper PA-31T Cheyenne is acquired in 1990 and operations continue apace in 1991. Unable to maintain either traffic or financial viability in the recessionary year of 1992, the carrier is forced to shut its doors.

COLONIAL AIR LINES (1): United States (1924–1926). Incorporated at Naugatuck, Connecticut, in 1923 as the **Bee Line**, this small carrier offers charter and sight-seeing flights. These activities give rise to claims that it is America's first airline.

In May 1924, the company name is changed to **Colonial Air Lines (1)**. Nonscheduled and unsubsidized passenger and express flights continue. The operation now becomes more substantial and attracts backers from both Connecticut and Massachusetts, including the former state's governor, John Trumbull.

In September 1925, the U.S. Post Office bids out Contract Air Mail Route No. 1, CAM-1, from Boston to New York. Four companies make offers and Colonial triumphs over a newly formed **Eastern Air Transport (1)**, established largely through the efforts of 26-year old Juan T. Trippe. In October, EAT-1 is renamed **Colonial Air Transport**. In January 1926, the two small airlines merge under the latter name.

COLONIAL AIR LINES (2): United States (1942–1956). Canadian **Colonial Airways** is founded on March 6, 1928 to fly the foreign air mail route (FAM-1) between New York and Montreal; actual operations commence on October 1. In 1929, this "Colonial," like **Colonial Western Airways** and **Colonial Air Transport**, is purchased into the holding company, The Aviation Corporation (AVCO), becoming the Colonial Division of **American Airways**.

From 1929 to 1939, the semiautonomous unit is allowed to retain its original name and to operate its mail and passenger route to Canada. As it falls into something approaching neglect, Sigmund Janas and a group of associate investors purchases Canadian Colonial in October 1939, pour new resources (including four Douglas DC-3s) into it, and, on May 1, 1942, rename it **Colonial Air Lines**.

Two of the 4 DC-3s are now handed over to the Army. Janas is able to keep the operation afloat until they are returned in late 1944. The Canadian route is maintained and a substantial interchange of traffic occurs at New York with passengers able to easily board the airliners of **American Airlines**, **United Air Lines**, and **Eastern Air Lines**.

Following the end of World War II, Colonial, on August 10, 1945, is awarded CAB authority for a Washington, D.C. to Montreal route via New York and Ottawa. Twenty Martin 2-0-2s are purchased on November 28. On December 3, the company adopts a 5-day, 40-hour week for all of its employees, except executives and pilots.

During the year, the company files a number of route extension applications with the CAB, including one that would allow the carrier to

fly down the eastern seaboard to the Bahamas, Bermuda, the Caribbean, and Latin America.

The CAB grant is followed in May 1946 by authority to fly to Bermuda. On June 2, Watertown and Massena are added as stops on the New York to Ottawa service. Year-round service to Plattsburg, Rutland, Lake Placid, Saratoga Lake, and Glen Falls is begun on August 4 and the number of New York to Montreal frequencies is increased on October 27.

After a three-year lapse, the Newark to Montreal schedule is resumed on April 28, 1947. Wilkes-Barre and Scranton become company destinations on May 30. After being christened by Mrs. James A. Farley, the inaugural plane begins Bermuda service from New York and Washington, D.C., on August 1. Despite newly won frequencies, the carrier, equipped with DC-3s, finds rough flying weather financially. Passengers, on the other hand, must still endure a 13-point trip between New York and Washington. Flying from New York City (LGA), stops are made at Poughkeepsie, Albany, Saranac, Lake Placid, Massena, Bennington, Watertown, Syracuse, Binghamton, Allentown, Harrisburg, and Washington.

Operations continue apace in 1948–1949 and, on February 5, 1950, the carrier drops a suit, which has made it all the way to the U.S. Supreme Court, to bar **Trans Canada Airlines, Ltd.** from a New York to Montreal route under the United States–Canada bilateral agreement. Two DC-4s establish speed records for Montreal–New York–Montreal service on February 20.

On January 22, 1951, it is announced that the carrier is equipping its aircraft with Visual Omni-Directional-Range (VOR) equipment. On March 24, as part of an interline pact with **Eastern Air Lines** and **British Overseas Airways Corporation (BOAC)**, the airline is able to begin roundtrip tours to the Bahamas and West Indies. Colonial now becomes the object of a long, confused, and involved corporate battle between **National Airlines** and **Eastern Air Lines**, both of which seek its acquisition.

The first to seek the company is George Baker of National who, in the initial year, reaches a tentative merger agreement calling for the absorption of the smaller airline in exchange for 450,000 shares of **National Airlines** stock. However, certain Eastern shareholders have acquired 21% interest in Colonial and are able to defeat the proposed merger.

Meanwhile, the CAB, which has long disapproved certain of President Janas's devious methods, has successfully pressured Colonial's board for a change. On May 31, A. B. Landa is elected a board member and he succeeds the colorful and dictatorial Janas as president. The U.S. sues Colonial and Janus on June 29 for allegedly falsifying company records and accounts and for diverting funds to Janas for his personal use; simultaneously, the government sues both over their issuance of free rides and cut rates.

Although he denies the government charges on July 3, the former president begins repaying \$75,000. On July 18, Colonial pleads not guilty to cut rates, free rides, or record falsifications. The family plan, meanwhile, is resumed on most flights as of September 30. On November 28, Colonial is fined \$10,000 for violating foreign exchange regulations. On December 12, the company accepts a merger offer from **National Airlines** on a stock trade basis.

President Landa is succeeded in early 1952 by Branch T. Dykes. Despite Colonial's December action, **Eastern Air Lines** President Rickenbacker next proposes the highest proportional cost for any airline attempting to take over another and wins the board recommendation of Colonial President Dykes on March 23. Washington, D.C. to Syracuse coach service is opened on September 15.

Charging "prior control" because **Eastern Air Lines** shareholders have nearly a quarter of Colonial's stock, Baker is unable to prevent the CAB's approval of the merger. However, President Dwight Eisenhower rejects the amalgamation and sends it back to the regulatory body for further hearing in early 1953. Daily Lockheed Constellation flights to Bermuda begin on March 10.

The National and Eastern takeover battle continues throughout 1954 and 1955; however, during these years, Eastern's shareholders quietly

unload their interest and the company increases its bid. While Colonial's 5 DC-4s and 8 DC-3s continue to fly their routes, the airline's management is able to convince its board that Rickenbacker's proposal is far superior to Baker's.

Eastern Air Lines and Colonial reapproach the CAB and on January 11, 1956 the regulatory body again agrees to the merger. This time, on January 25, Eisenhower agrees. The two companies are integrated on June 1 and the 25-year-old Colonial—which is remembered today, if at all, as a passenger carrier that flew its entire life without a single fatality—disappears.

COLONIAL AIR TRANSPORT: United States (1923–1929). Having lost the September 1925 contest for Contract Air Mail Route. No. 1 (CAM-1), the New York–Boston run, to competing **Colonial Air Lines (1)**, **Eastern Air Transport (1)** founder Juan T. Trippe changes the name of his concern on October 5 to Colonial Air Transport.

Trippe and his board of directors, including Lorillard Spencer, L. L. Odell, Sherman Fairchild, Robert Thach, William Rockefeller, John Hambleton, and Cornelius "Sonny" Whitney, now negotiate with CAL's board of directors, led by Connecticut governor John Trumbull and includes Howard Coonley, Harris Whittemore Jr., and Irving Bullard. Two days later, the two companies merge under the CAT banner, effective the following January 1926.

With the 26-year-old Trippe as managing director, the 30-member joint board agrees to form a voting trust of 7 members (Trumbull, Trippe, Rockefeller, Hambleton, Bullard, Coonley, and Whittemore). Initial capitalization is \$500,000. The U.S. Post Office now officially makes its award and Trippe sets about establishing, hiring, or purchasing the routes, landing fields, rosters, and flight equipment necessary for a going concern. A Curtiss Lark and 2 Fokker Model 4 Universals are acquired and prepositioned at Hadley Field at New Brunswick, New Jersey.

At 6:45 a.m. on July 21, pilots Hustis I. Wells and Talbot O. Freeman, flying the Lark and a Universal, depart for East Boston Airport via Hartford where they arrive at 9:35 a.m. They are joined later in the morning by LeRoy Thompson with the second Universal. The three aircraft depart Boston after lunch and fly to Teterboro Field at Hasbrouck Heights, New Jersey, where they are greeted by a crowd of 5,000 upon their 8:57 p.m. landing. The company's first day of operations is an unqualified success. Another 308 flights are scheduled during the remainder of the year, of which 242 are completed.

A total of 110 forced landings are made (42 of which result in flight cancellations); however, Trippe's pilots complete 60,867 scheduled miles without an in-flight accident and deliver 6,632 pounds of airmail. On October 1, retired Brig. Gen. John F. O'Ryan becomes president. Vice President Trippe now begins to lobby for westward expansion to Buffalo's new airport.

During the winter and early spring of 1927, the government makes CAM-1 its first lighted airway. Four emergency landing fields are established and two million candlepower beacons are placed every 10 miles from New York to Boston. By March, the carrier has accomplished its first 100,000 miles, all accident-free. One of the Universals and the Curtiss Lark are lost in a hangar fire at Hadley Field on March 28.

Unable to convince his cost-conscious board to expand, at odds with President O'Ryan over a bid for a new airmail contract, and unable to deliver support from his voting trust, Juan Trippe resigns on April 30. Within months, he will form new alliances, which result in the creation of **Pan American Airways (PAA)**.

Employing a recently acquired Fokker C-2 trimotor, Colonial inaugurates New York to Boston passenger flights on April 4. The event is historic as the first experimental scheduled night passenger service. Due to limited airfield facilities at Teterboro Field, the operation cannot be continued. As a result, the Fokker is reassigned to sight-seeing flights over New York until June 18 when it is damaged in a forced landing.

Air express flights between Boston and New York are launched on September 2 when pilot E. G. "Dan" Cline departs the Massachusetts

metropolis with his Fokker Universal, transporting 41 pounds of mail, 10 express packages, and one passenger. Weather forces him to land at Dudley where his passenger departs. Taking off again, he crashes into a tree near Willington, northeast of Hartford, and is killed. Late in the month, 3 new Fairchild FC-2 cabin monoplanes are acquired and employed on the New York–Boston route, as well as on sight-seeing tours from Hadley Field.

While on one of those \$5 rides on October 3, Leroy H. Thompson's FC-2 goes into a spin and crashes (four dead). In December, the two surviving Fairchild aircraft are turned over to the company's new subsidiary, **Colonial Western Airways**, for the inauguration of its new service from Albany to Cleveland.

On the year, CAT has transported 4,016 passengers, 1,140 pounds of freight, and 10.4 tons of mail over 97,767 miles.

Operations continue apace in 1928. A clogged oil line forces the surviving Fokker Model 4 Universal, en route from Boston to Hasbrouck Heights on March 26, to crash New Canaan, Connecticut. During an August weekend, the company is forced to fly extra sections to transport the 512 passengers who wish passage between Boston and New York. Conversely, only 134 passengers are flown in December.

On January 5–6, 1929, Ned Carrington, en route with mail from Boston to New York in an FC-2, crashes into a mountain near Stafford Springs, Connecticut (1 dead). The new Ford Tri-Motor 5-AT-33 is delivered to the company at New York City on March 30, followed by the 5-AT-36 on April 6 and 5-AT-35 on April 12.

In early spring, the board creates the holding company Colonial Airways Corporation to operate CAT, plus its subsidiaries, **Colonial Western Airways** and **Canadian Colonial Airways**. In May, CAC and its operating airlines, by an exchange of stock, are acquired by a larger holder, The Aviation Corporation (AVCO), parent of the emerging **American Airways**.

COLONIAL AIRLINES: United States (1975). Colonial Airlines is founded by Novara Nichols at Cambridge, Ohio, in the summer of 1975. Employing a Volpar Beech 18, he inaugurates daily scheduled passenger roundtrips on September 10, linking his base with Akron to the north and Columbus and Dayton to the west. When traffic does not materialize, the company is shut down in December.

COLONIAL WESTERN AIRWAYS: United States (1927–1929). CWA is organized in late fall 1927 as a subsidiary of **Colonial Air Transport** to develop a service from Albany to the west. An application is made to the U.S. Post Office, which grants the carrier the 452-mile Contract Air Mail Route No. 20 (CAM-20). Equipped with 3 Fairchild FC-2s, 2 of which are transferred over from its parent, the new entrant inaugurates scheduled passenger, mail, and express flights from Albany to Cleveland via Buffalo and Erie on December 17.

On January 8, 1928, an FC-2 crashes at Rural Grove, New York, in dense fog (three dead). Pitcairn PA-5 Super Mailwings are added in the spring.

On June 1, the Mohawk Valley extension, CAM 20, is initiated, linking Buffalo with Albany via Rochester, Syracuse, Utica, and Schenectady. The Ford Tri-Motor 4-AT-41 is delivered on September 28 and a total of 850 passengers are transported by year's end.

On March 17, 1929, the Tri-Motor is on the last of several sight-seeing tours over Newark for the day with 14 aboard and with Louis Foote as pilot. The plane's left and center engines quit just after takeoff, causing the aircraft to crash into a railroad gravel car and break in half (14 dead). The northeastern newspapers label the tragedy "the worst accident in the history of heavier-than-air aeronautics in this country." Relatives of the survivors bring suit against the airline in a trial that begins on March 25.

While attempting to take off from a wet field at Syracuse on April 10, an FC-2 ends up in a creek at the end of the runway. Despite expert testimony from such aeronautical notables as Clarence Chamberlain and Bernt Balchen, the jury in the Tri-Motor crash trial finds against the air-

line and surviving pilot Foote on April 11, awarding the 6 plaintiffs a total of \$89,000. Two other surviving relatives will receive \$71,000 at year's end from another trial.

Also in April, along with **Canadian Colonial Airways** and Colonial Air Transport, CWA becomes an operating subsidiary of the holding company Colonial Airways Corporation. Through an exchange of stock, CAC is taken over by The Aviation Corporation (AVCO) in May.

COLOR AIR, A.S.: Norway (1998–1999). In January 1998, Air Foyle Charter Airlines, Ltd., the charter and replacement services division of the U.K. heavylift airline **Air Foyle, Ltd.**, signs a contract with Color Air, A.S., a Norwegian deep-discount start-up airline owned by the Scadilion Group. Scadilion also controls Color Line, A.S., the Oslo-based ferry boat operator and Norway's largest shipping company that had once owned **Norway Airlines, A.S.**

Scadilion's chairman and owner, Olav Nils Sunde, appoints former **Norway Airlines, A.S.** executive Morton Anderson as Color Air's president and through him will manage the launch of the new operator. Start-up capital of \$40 million is provided.

A workforce is recruited and 2 Boeing 737-3Q8s, previously operated by **TACA International Airlines, S.A.**, are chartered from ILFC. Shortly before flights commence, the new entrant scores an airline record by becoming the first carrier to take its initial reservation via its Internet website. It also sells tickets through the country's largest grocery chains.

Repainted at the Air Foyle workshops at Castle Donnington in the U.K., one of the little Boeings, the *Trondheim*, is employed by Chief Pilot Capt. Tord Tangvik to inaugurate revenue flights on August 7 from Oslo to Aalesund.

When the second plane becomes available, the two jetliners initially link the company's base with Aalesund and Trondheim. The new entrant will compete with **SAS (Scandinavian Airlines System)** and **Braathens, A.S.** Flights to Bergen commence on August 15.

Winning a bet placed three years earlier, Capt. Tangvik is able to depart with his Flight 361 from the new Gardermoen Airport at Oslo on October 8 ahead of the planned premier departure by SAS Flight 303, which is also headed for Bergen.

Flights to Stavanger commence in November. Direct return service is inaugurated on December 1 between Oslo and London (STN). By the end of the year, the company operates 3 Boeing 737-3Q8s and employs 122 workers, including 15 captains and 11 first officers.

Although service continues in 1999, the airline is not profitable. The carrier is declared bankrupt on September 26; all further flights are cancelled and the fleet is deleted.

COLORADO AIR FREIGHT SERVICES. See COLORADO AIRLINES

COLORADO AIRLINES: United States (1976–1984). Upon the completion of Crested Butte Airport in the summer of 1976, its owners, Ronald D. and Sharon Y. Rouse, establish two airline divisions of their Crested Butte Air Service, Inc. to fly passengers and cargo to Denver and Aspen. Passenger services are operated by Colorado Airlines and freight by **Colorado Air Freight Services**. Flights commence in October with a pair of Cessna 206s.

Operations continue apace for the remainder of the decade, although the fleet is enhanced by the addition of Britten-Norman BN-2 Islanders.

In June 1981, the couple takes over the FBO operation of **Cimarron Air** at Grand Junction. Company headquarters are moved to this new base and C-206 operations continue between Grand Junction, Denver, Crested Butte, and Aspen. Cargo flights are extended to other Colorado towns and cities before the operation is forced, by mounting debts, into bankruptcy in 1984.

COLORADO AIRWAYS: United States (1926–1927). Having obtained Contract Air Mail Route No. 12 (CAM-12), Anthony F. Joseph forms Colorado Airways at Denver in the spring of 1926 to link Col-

orado Springs, Pueblo and the state capital with Cheyenne on the transcontinental mail route. Employing a pair of Standard biplanes, Joseph inaugurates service on May 31. Later in the year, the mail-only flights are improved by the replacement of the Standards with Ryan M-1 Mailplanes.

The company is acquired by **Western Air Express** on December 10, 1927.

COLORADO RIVER AIRWAYS: United States (1966–1968). Colorado River is set up at Long Beach, California, in April 1966 to provide scheduled passenger and cargo services with a fleet of de Havilland DH 104 Doves and DH 114 Herons. Roundtrip revenue flights commence on May 26, linking the company's base with Burbank, Bullhead City, and Havasu City, and continue until the company goes out of business in 1968.

COLUMBIA AIRLINES: United States (1935–1936). Very short-lived, Columbia is formed at Curtiss-Steinberg Field at East St. Louis on August 15, 1935 to offer scheduled passenger and small package express services to Detroit via St. Louis, Louisville, and Cincinnati. Five Stinson Model U Tri-Motors are purchased from **American Airlines** and **Canadian Colonial Airlines** and are employed to commence operations in September. Traffic is so poor (984 passengers and 2.9 tons of express) that the company, without affiliation or subsidy, must shut its doors in mid-February 1936.

COLUMBIA HELICOPTERS: P.O. Box 3500, Portland, Oregon 97208, United States; Phone (503) 678-1222; Fax (503) 678-5841; <http://www.colheli.com>; Year Founded 1957. Edward and Wesley Lamatta form Columbia Helicopters at Troutdale Airport, near Portland, Oregon, in 1957. While the two men supplement their incomes as truck drivers and longshoremen, they employ a single used Hiller 12B on contract service flights. Revenues for the start-up year total \$22,000.

Piloting the Hiller 12B, Wesley gains national attention in 1958 when he rescues 17 seamen from a sinking dredge off Coos Bay. A new Bell 47-G2 is purchased in 1959, followed in 1960 by the acquisition of a new Hiller 12B. Company headquarters are transferred to Swan Island, near Portland's downtown area, in 1962.

Operations continue apace during the 1960s, with Columbia providing lift for transmission-tower construction and the stringing of communication lines. The most unusual feat during the first half of the decade is the towing of two water skiers from Portland to the mouth of the Columbia River in order to set a new world record.

In 1967, President Wesley Lamatta, who had let his dream to start helicopter logging be known three years earlier, is approached by representatives of Sikorsky Aircraft Corporation, which sell him an S-61 and recommend the purchase of the Boeing Vertol 107s currently operated by **New York Airways**. The scheduled rotary-wing operator needs to find a buyer for its older aircraft before it can obtain, under an agreement with **Pan American World Airways (1)**, Sikorsky S-61s.

Lamatta approaches **New York Airways** in 1968 and is able to purchase three machines. The first of these enters service and helps the company execute a contract to set power line towers across the Continental Divide in Colorado. These, along with the Sikorsky S-61, are employed in construction work during 1969–1970.

In 1971, **New York Airways'** last 4 Boeing Vertol 107s are purchased. With the requisite lift now available, Columbia is ready to initiate the first trial use of helicopter logging in the U.S. (helicopters had first carried logs in Scotland in 1956). The initial effort is a cooperative venture between Columbia, the U.S. Forest Service, and Erickson Lumber Company of Marysville, California. One of the 107s on this Lights Creek Timber Sale experiment is piloted by joint venture partner Jack Erickson, who will later form competing **Erickson Air Crane** to log with Sikorsky S-64 Skycranes.

A second heli-logging experiment and the first commercial timber sale occurs in early summer in Plumas National Forest, in northern Cal-

ifornia, during the Drum Timber Sale. The 107s prove Lamatta's concept is sound and, in the first successful commercial heli-logging operation in the west, harvest 3 million board feet of wood in 12 weeks.

A third commercial timber sale and another study involve the Siskiyou National Forest in Oregon and the Boulder Overstory sale. The research is designed to study the feasibility of helicopter yarding of large Douglas fir trees, as well as the fire hazard potential and aesthetics associated with heli-logging. This operation, netting 5 million board feet of wood, is completed between August 8 and October 7.

The company's first big overseas contract is accepted during the year. Two BV-107s are dispatched to Papua New Guinea to provide oil rig movement and support flights on behalf of Texaco and the Australasian Petroleum Company.

During the remainder of the decade, the Boeing Vertol 107 fleet grows to 12 and are employed to undertake both logging and construction contracts. Overseas business is also accepted as oil companies hire Columbia to transport oil rigs, often to such inhospitable locations as Papua New Guinea. Transport work is also carried out in Africa, including sandstorm-ridden Sudan.

Between 1975–1976, two BV-107s support energy development operations in Peru. During the latter year, 4 Kawasaki-Vertol 107s are acquired from the government of Thailand. In 1977b, 2 BV-107s are sent to Saudi Arabia, where they provide fire suppression and search and rescue flights during the Hadj, the annual Muslim pilgrimage to Mecca.

In 1978, **Alaska Helicopters** is taken over and 2 Boeing Vertol 107s are sent north to join the new acquisition's choppers in providing passenger and cargo charters throughout Alaska.

Over 128,000 acres of forest are blown down when Mount St. Helen's explodes on May 18, 1980. Consequently, a massive log salvage operation is announced by the U.S. Forest Service, the Washington State Department of Natural Resources, and Weyerhaeuser Industries. Columbia dispatches several of its Boeing Vertol 107s to Gifford Pinchot National Forest to participate in the clearance and these begin to remove over four million board feet of timber.

Operations continue apace in 1981 and, in 1982, a Boeing Vertol 107 is shipped to Lae, Papua New Guinea, where it provides support flights under contract to Chevron Oil at Moro, in the central, Lake Kutubu area. Also during the year, a BV-107 tows a hover barge through 50 miles of broken ice to an offshore drilling island; loaded with 220 tons of equipment, it is then towed back to shore.

In 1983, pilots from the carrier operate 2 Boeing 234s, which ARCO Alaska has chartered to fly workers from Nome to its Navarin Basin Cost #1 platform, some 400 nm. out in the Bering Sea.

A Boeing 234 Commercial Chinook is purchased from **British Airways Helicopters, Ltd.** in the spring–summer of 1984 and is delivered in September. Assigned to the **Alaska Helicopters** subsidiary, the first owned Commercial Chinook to be operated by a North American carrier is employed to make an inaugural passenger flight from Nome to one of Amoco's Navarin Basin oil platforms 400 miles offshore. A contract is now received to regularly fly Amoco Production Company rig workers from St. Paul Island to the Navarin Basin in the Bering Sea.

Following the ditching of a second **British Airways Helicopters, Ltd.** Boeing in the East Shetland Basin on May 2, 1985, the damaged machine is acquired during the summer. Repaired, it, too, enters service in support of Amoco fields off Alaska. In 6 months of operation from St. Paul to the drilling rigs, the 2 aircraft operate 439 hrs. of primarily IFR support, maintaining 100% mission availability.

The fifteenth year of heli-logging is celebrated and it is reported that, since this type of operation began, Columbia has yarded more than 2.04 billion board feet of timber, enough for the construction of 408,600 houses. On behalf of Marathon Oil Company, a BV-107 now transports an Adeco Heli-rig from its base camp to a well site at an elevation of 7,650-ft. near Cody, Wyoming.

During 100 days ending December 5, the company undertakes a contract in the Darfur region of western Sudan on behalf of the U.S. Agency for International Development (AID). Employing three Boeing Vertol

107s, company pilots fly over 8.8 million pounds of food, fuel, and medical supplies.

The 3 BV-107s fly 2,598 hours on this contract, then a world record for helicopter utilization, with 100% aircraft availability and mission completion. At year's end, a USAF C-5A Galaxy returns the 3 helicopters to Portland, Oregon.

The company's fleet of 11 Boeing Vertol 107s enjoy a productive 1986, particularly in July–August. Beginning in June and continuing through July, a BV-107 moves oil rigs and provides oil-company support in Papua New Guinea; at month's end, the rotary-wing aircraft is flown back to the company base at Aurora, Oregon, aboard a Lockheed L-100 Super Hercules of **Transamerica Airlines**.

During August, several 107s, employing the newly developed CORDS (Columbia on-board retardant dispensing system), join in a two-and-a-half week forest fire fighting campaign in Idaho and Oregon. During the same period, another 107, leased to Whonnock Industries of Vancouver, British Columbia, establishes a logging record during work at Hovel Bay on Bute Inlet. In August, the machine flies 338½ hours (a 30-day record) and lifts out over 52 million pounds of timber. In total, the Boeing Vertols have, thus far, amassed over 160,000 flight hours. Meanwhile, the decline in North Sea oil prices causes a planned lease of a Civil Chinook to **British Airways Helicopters, Ltd.** to be put on hold.

Beginning on August 31, 1987 and continuing throughout the fall in a fire fighting campaign termed "unprecedented" by forestry officials, Columbia's entire Northwest fleet of 7 BV-107s and a Civil Chinook are committed to fire suppression flights in northern California, southern Oregon, Idaho, Washington. The Model 234L is particularly impressive as it battles a blaze in California's Mendocina National Forest. Through October 31, the 107s fly over 800 hours and the Civil Chinook another 73.

During a two-day contract with Cincinnati Gas & Electric Co. in December, a two-man crew, suspended from a company BV-107, replaces aircraft in marking spheres on power lines stretching across the Ohio River. At year's end, one of the 107s acquired from **New York Airways** back in 1971, completes its 30,000th flight hour during a logging operation; the mark is a civil record for the type.

One of the company's Model 234 Civil Chinooks is reconfigured for helicopter logging in 1988. Its first contract is the harvest of timber from the Olympic Peninsula near Hoodport, Washington. A Boeing Vertol 107 is placed on a logging contract at Big Jeff, Oregon, in April; the aircraft will yard about four million board feet of timber from elevations nearing 2,500 feet.

During the summer and fall, three 107s are dispatched to Papua New Guinea. The contract has them transporting oil rigs and supporting exploratory drilling in the nation's southern highlands. The logging Chinook is dispatched to Grant's Pass, Oregon, to begin a year's work cleaning up valuable and salvage timber from the Silver Complex burn. Late in the year, a letter of intent is signed with **British International Airways, Ltd. (BIH)** for the purchase of the U.K. airline's final 3 Commercial Chinooks.

In February 1989, the company completes its purchase of the 3 **British International Airways, Ltd. (BIH)** Model 234s at a cost of between \$20 million and \$25 million, including spare parts. The first of these Civil Chinooks departs the U.K. for Portland, Oregon, on February 17, with the other two following at monthly intervals.

A Civil Chinook is assigned to participate in suppression of the King Gulch Fire at Idaho City, Idaho, between July 29 and 31. Delivering 3,000-gallon bucket loads at a time, the giant helicopter flies nearly 23 hours and drops a total of 426,896 gallons onto the blaze.

After 8,158 hours of service over five-and-a-half years in the Southern Highlands of Papua New Guinea flying support for oil rig operations, the leased Boeing Vertol 107 returns to Aurora, Oregon, in August.

On the U.S. West Coast, the Chinook works in Happy Camp, California, on a contract to log timber from Ten Bear Mountain and then returns to Grant's Pass in Oregon. During December, the company accepts a contract from Fiberboard Corporation to begin the salvage,

with its Civil Chinooks, of 10 million board feet of dead, but valuable, old growth timber from Stanislaus National Forest, just north of Yosemite National Park.

In January 1990, a Civil Chinook is dispatched to South Carolina to heli-log upwards of 20 million board feet of pine and red oak blown down during Hurricane Hugo the previous fall. In February, a second Model 234 begins working on the Stanislaus National Forest contract, taking upwards of 400,000 board feet of timber daily in 13-ton slingloads to 3 designated landing zones.

Also in the first quarter, Columbia Helicopters receives timber salvage contracts to remove valuable dead trees from Sequoia, Plumas, Lassen, and Eldorado National Forests. The Boeing 107s are sent to deal with these tasks, which will remove timber killed by fires in 1987 and a 1988 bark beetle infestation.

During the summer, company helicopters are also involved in West Coast fire fighting operations. While combating a blaze near Wenatchee in northwest Washington on August 4, a BV-107 crashes and burns; although its crew escapes without injury, the aircraft must be written off as a total loss.

Between August 8 and 19, 2 Boeing 234s operate 134 flight hours helping to combat the great "Stormy Fire," near Kernville, California. Dropping 3,000-gallon bucket loads of water at a time, the two helicopters deliver a total volume of 1,346,000 gallons during their effort.

After six months of negotiations, the company purchases the 2 Civil Chinooks flown by **Trump Air**. With 7 such machines, each certified by the FAA to lift underslung loads of up to 14 tons, Columbia now operates the largest Boeing 234 fleet in the world, along with 12 Boeing Vertol 107s. Two of the latter, under contract in Papua New Guinea, operate in excess of 2,500 hours.

Columbia pilots ferry the 2 former **Trump Air** Civil Chinooks from Farmingdale, New Jersey, to Aurora, Oregon, during a four-day period in January 1991. Under contract to Mobil Oil, one of the older Model 234s is transported to Lae, Papua New Guinea, where it arrives on May 5. Within days, the Civil Chinook is transporting drilling equipment over high mountain ridges, some in excess of 8,800 feet.

The huge helicopter joins 4 Boeing Vertol 107s already on station in Papua New Guinea providing, as they have for nine years, support for Chevron, Mobil, Command, and British Petroleum. Flights continue, as they have from the beginning, to be made in association with the local concern Milne Bay Air (Pty.), Ltd.

During the year, the concern, which had begun the practice the previous year, continues its work in support of fish habitat enhancement by placing boulders, logs, and root wads into streams and creeks previously disturbed by logging activities.

Operations continue apace in 1992. During November, the Civil Chinook in Papua New Guinea and a BV-107 relocate more than two million pounds of Chevron drilling rig and support equipment owned by Parker Drilling Company in a record number of flight hours. The BV-107 handles 54% of the mission in just under 52 hours, while the Model 234 flies its 46% share in just 12 hours. In North America, heli-logging, as it has for some time, continues to account for the majority of the carrier's flight hours.

During the spring of 1993, the Papua New Guinea helicopters accept another contact to move Parker Drilling equipment; altogether, 1.8 million pounds are transported in just 12 days.

President Roy M. Simmons's corporation is now a worldwide operator of contract and charter passenger and cargo services. Its large fleet of rotary-wing aircraft exceeds 50 in number of various types. During the fall, one of these, a Boeing Vertol 107, N6674D, breaks the 40,000-hr. mark to become the world's highest-time helicopter. Five more BV-107s are acquired from the Swedish armed forces, bringing the total number of civil CH-46 Sea Knights in its inventory to 16.

Airline employment in 1994 stands at 700. Following a presentation to the Malaysian forestry department, the company inaugurates heli-logging operations during the first quarter for a company based at Sarawak. The logging will be done in both Malaysia and Laos.

At the same time, the first of the 5 BV 107s from Sweden undergo refurbishment and enter services during the summer. Six used Sikorsky CH-54As Skycranes are also purchased and refurbished.

Once again, the line is engaged in its annual April 15–October 15 seasonal fire fighting activities. By mid-August, the 3 Model 234s and 9 BV-107s assigned to the mission have set company flight-hour records in fighting over 30 fires in nine states.

After it stops providing Chinook service to Phillips Petroleum in the North Sea's Ekofisk oil field during April 1995, **Helikopter Air Service, A.S.** puts its last 2 B-234s up for sale. Also in April, a Model 234 begins operating on behalf of Helifor, Ltd. from a floating base near Campbell River, British Columbia. In May, the Civil Chinook flies a record 274.6 hrs. and transports 84 million lbs. of timber from logging sites to fjords, from which shipment is completed to sawmills.

The first CH-54A enters service on September 8; it is assigned to a logging contract at Burney, California. The HAS Chinooks are purchased by Columbia later in September and are delivered at the end of December. Arriving at Baltimore by ship, the B-234s are then flown to Columbia's base at Aurora, Oregon. With 9 units, Columbia becomes owner of all of the world's operating Civil Chinooks.

Heavy-lift work increases 20% during the year to 34,157 hrs. The heli-logging business grows 50% by volume and now represents approximately 90% of Columbia's work.

In January 1996, one of the former HAS Chinooks is shipped to Papua New Guinea, where it joins another unit and a BV-07 in moving oil rigs for multiple customers. In May, the two Chinooks move the 99th rig transferred by the company in Papua New Guinea; the Parker Drilling Company's Rig 140 is set up for Chevron Niugini at the Moran 1X site in the central highlands. Bad weather slows the process and it requires 73 flight hours over 12 days to complete the rig's transfer.

Logging protesters attempt to disrupt heli-logging activities at Enola Hill, Oregon, in early June, by lying down among the trees being hoisted up. One protester grabs onto the hook that hangs down from a hovering helicopter; workers scramble to pry him loose and dissuade him from this dangerous tactic. Shortly thereafter, the BV-107 assigned is called away to help fight forest fires at Mount Jefferson.

During July–August, company helicopters assist in the rebuilding of flood-damaged streams in King County, Washington, by hoisting in root wads and logs to help establish ponds and fish breeding sites.

While undergoing a maintenance test flight near company headquarters at Aurora on October 4, a BV-107 crashes while approaching to land; Chief Pilot James Davy and two others aboard are killed.

During the year, the company's helicopters transport 2.5 million tons, more tonnage than is flown by any other helicopter operator in the world. In logging, it delivers sufficient logs to load 98,700 trucks, which, if lined up end-to-end, would stretch from Seattle to Los Angeles.

By March 1997, Columbia has four Civil Chinooks supporting overseas activities. One is heli-logging around Sarawak, Malaysia; two are engaged in the support of energy development in the southern highlands of Papua, New Guinea, and the fourth now enters a new contract to support Shell Oil's oil explorations in eastern Peru.

In early June, the company completes a selective heli-logging operation near Juneau, Alaska, at Echo Cove. The esthetic beauty of the forest is retained because the loggers and helicopters remove only about one in every eight trees.

A sixth B-234 joins the fleet in July, joining 9 others, 3 of which are inactive. It is designated to support a second unit engaged with Canada's Helifor in Pacific Northwest heli-logging operations.

During the first week of February 1998, a BV-107 passes the 50,000-hr. flight time mark, a record for this aircraft type. A second 107 will pass the same mark in midyear.

Although as noted, Columbia's helicopters have been involved in fighting a variety of fires in western states, Mexico, and elsewhere over the years, the company is largely unknown in the eastern U.S. until the spring. Fortunately, the Interagency Fire Center, at Boise, Idaho, has, on behalf of the Federal Emergency Management Administration, had the

foresight to contract with Columbia and several other companies, including **Erickson Air Crane**, for airborne fire fighting support.

Hundreds of lightning strikes ignite the drought-stricken swamplands and underbrush in northern Florida toward the end of May. As these wildfires sweep across the state in the weeks after Memorial Day, local firefighters are nearly overwhelmed. Even the Daytona 500 car race must be cancelled.

By the fourth week of June, 45 of 67 Florida counties are on fire. Fire fighting aircraft, as well as personnel and equipment, are mobilized from across the U.S. and these volunteers arrive from around the country to assist in combating the inferno engulfing over a third of the state.

Columbia dispatches 3 BV-107s, equipped with 1,000-gallon water buckets, to Florida to assist in the campaign against the wildfires. One of the tandem helicopters is reassigned to Lake City from a heli-logging operation in Texas, while a second is moved from logging operations in Redding, California, to De Land. A third is dispatched into the state from Covelo, California. In addition to flight crews and mechanics, the company also provides its own support crews, with maintenance service vehicles and fuel trucks.

Columbia's helicopters are engaged in water drops for 25 days from June 22.

Flights continue during the remainder of the year and into 1999, during which months a new homepage is opened on the Internet's World Wide Web.

Company helicopters again fight fires and harvest logs. Due to environmental and wildlife regulations, logging in many locales can only be completed during strictly regulated monthly windows of opportunity.

The U.S. suffers its second driest summer on record, leading to a rash of wildfires in California, eastern Oregon, and other Western states during July–September. All of the fires spread rapidly, requiring quick responses. With most of the company's helicopters working on logging operations in the Pacific Northwest, all concerned are proud of the rapid response made to calls from the U.S. Forest Service or state forestry departments. During this period, as many as 10 of the company's 12 heavy helicopters simultaneously become involved in fire fighting.

Several fires in California are so large that they must be fought by 8 Boeing-Vertol 107s and a Skycrane, while one blaze, the Pilot Fire near Sonora, is extinguished by a BV-107 and a Model 234 Civil Chinook, working, as is always the case, with ground firemen. Another 234 joins the fleet at the end of August.

Late in the year, the company achieves a milestone of 500,000 tandem-rotor helicopter flight hours. The achievement is finalized through the addition of 92.6 hrs. logged by a BV-107 and 23.2 hrs. performed by a Civil Chinook.

The 2000 fire season is the worst in the U.S. West since 1994, with over 67,000 fires consuming in excess of five million acres in Washington, Oregon, California, Idaho, New Mexico, and Montana by mid-summer.

Spectacular fires first grasp the attention of world viewers in May and June when television networks picture the huge fires raging through New Mexico, including the Los Alamos area where a nuclear facility is located. The Cerro Grande fire consumes over 47,650 acres of federal forest and wildlands in the Bandelier National Monument while the stubborn Viveash fire in Santa Fe National Forest burns over 30,000 acres. Columbia is one of 10 civil helicopter operators assigning assets to the blazes; through June, company Boeing-Vertol 107s dump 53,000 gallons of water and 27,000 gallons of retardant on the Cree fire near Ruidoso and 146,000 gallons of water on the Cerro Grande fire.

The most severe damage occurs in Montana, where Columbia, under contract, assigns 10 of its 13 U.S.-based heavy helicopter fleet. Working daily through June, the operator's BV-107s, Model 235 Chinooks, and a Sikorsky CH-54 Skycrane drop over 250,000 gallons of water and retardant.

Although the conflagration continues, Columbia is required to cycle aircraft in and out of heli-logging commitments. Still, by the end of August, eight helicopters are engaged at five fire sites.

COLUMBIA PACIFIC AIRWAYS: United States (1973–1978). Originally established at Execuair, Inc. in January 1973, this Richland, Washington-based commuter is quickly renamed. Employing 1 Piper PA-31-350 Navajo Chieftain and 1 Beech 99, CPA inaugurates scheduled passenger and cargo services on February 1, linking its base with Seattle, Bremerton, Walla Walla, Spokane, and Portland.

The Beech 99 is lost in an accident at Richland, Washington, on February 10, 1978. Although operations continue until November, the financially troubled regional is unable to recover from the loss of its flagship airliner and shuts its doors. Its routes are purchased by **Cascade Airways**.

COLVIN AVIATION: 1080 Ben Epps Drive, Athens Ben Epps Airport, Athens, Georgia 30605, United States; Phone (706) 548-0717; Fax (706) 549-2038; <http://www.colvinair.com>; Year Founded 1980. Colvin is established at Athens, home of the University of Georgia, in 1980 to provide executive and small group passenger charters. Over the next 20 years, the company also undertakes air ambulance and express flights and its fleet grows to include 3 Learjet 35As, 2 Learjet 25s, and 1 Learjet 24.

COMAG, S.A.: Mozambique (1977–1980). In 1977, the government of Mozambique moves to establish a single domestic airline operation by combining all of the private local and general aviation companies in the country. Bought out and taken over are CASS (Companhia Aerea do Sul do Save), ETAPA (Empresa de Transportes Aereos de Pemba), EMAC (Empresa Mocambicana de Aviacao Comercio), OTA (Organizacoes de Transportes Aereos), SAB (Servicios Aereos de Beira), SAM (Servicio Aereo do Mocambique), SAN (Servicio Aereo do Norte), TAM (Transportes Aereos de Mocambique), TAC (Transportes Aereos Comerciais), TAN (Transportes Aereos de Niassa), TAT (Transportes Aereos de Tete), and TAZ (Transportes Aereos de Zambezia).

The initial fleet comprises the aircraft of the merger partners, including Pilatus-Britten-Norman Islanders, Britten-Norman Islanders, Piper Aztecs, Aero Commanders, Piper Pawnees, and even a Hawker Siddeley HS 125 executive jet.

Medical evacuation, survey and agricultural flights are made, along with charters. The principal business, however, is scheduled services to 24 cities, towns, villages and airstrips.

In 1980, the carrier is reformed and renamed **TTA (Empresa Nacional de Transporte e Trabalho Aereo, S.A.)**.

COMAIR: P.O. Box 75021, Cincinnati International Airport, Cincinnati, Ohio 45275, United States; Phone (606) 525-2550; Fax (606) 525-3420; <http://www.fly-comair.com>; Code OH; Year Founded 1977. Raymond A. Mueller and his corporate-pilot son David R., with two other investors, purchase **Wings Airways**, a small regional airline based at Cincinnati, on January 31, 1977, largely on the basis of \$60,000 of their own assets, and change its name. When service begins in March, the new entrant is so tiny that its only aircraft, the former **Wings Airways** Piper PA-31-310 Navajo, is piloted by David, the company's executive vice president. A Piper PA-23 Aztec owned by Raymond is the fleet backup. Incidentally, the name Comair is not an abbreviation, but reflects the belief of the organizers in the concept of community service. Intrastate flights are undertaken between Cincinnati and Cleveland via Akron and Canton.

Comair's growth in the era of deregulation is remarkable. Two more Navajos are acquired in 1978 and the company's two other investors are bought out. Service is inaugurated to Detroit. Enplanements total 26,502 for the first full year of service.

To meet the growing 1979 service demand born of deregulation, a new Evansville route is added, ground facilities at Greater Cincinnati Airport are expanded, and 7 Piper PA-31-350 Navajo Chieftains supplement the 3 Navajos.

While taking off from Cincinnati on October 8, a Navajo, with the pilot and seven passengers aboard, stalls out and crashes; there are no survivors.

Despite the adverse publicity of the crash, the year's passenger boardings still skyrocket by 93% to 51,151.

The year 1980 is a good one for the company. Its hub is temporarily transferred to Dayton and Chairman Raymond is able to secure sufficient financial backing to cover the \$5 million in losses occasioned by the previous fall's disaster. The company's aircraft now fly to a total of 11 destinations in Michigan, Ohio, South Carolina, Indiana, and Kentucky. Passenger boardings climb 34% to 68,420.

The employee population skyrockets 82.6% in 1981 to 168. Comair, Inc. is organized in Ohio as a Kentucky company on May 22 and, on May 28, goes public, offering stock that improves the financial base. Two million shares of common stock are traded on the NASDAQ and stockholders, in July, approve a merger of the previous Comair into Comair Holdings, Inc.

Orders are placed for a pair of Brazilian-made Embraer EMB-110 Bandeirantes. Meanwhile, a new hangar and headquarters facility are occupied at Greater Cincinnati Airport. In December, the company joins the Deltamatic computerized reservations system of **Delta Air Lines**.

Despite a national recession, enplanements climb 64.6% to 112,610. Profits are earned: \$322,000 (operating) and \$174,000 (net).

Employment increases in 1982, climbing 98% to 303. The fleet now includes 10 Bandeirantes and 6 Navajo Chieftains. Three Shorts 330s are delivered in March and orders are outstanding for 2 Fairchild-Swearingen Metro IIIs and 4 SAAB-Fairchild SF340s, for the company is the American launch customer. New routes are opened in early spring to Toledo, Lexington, and Charleston, West Virginia.

Passenger boardings for the year nearly double, accelerating 95.7% to reach 220,347. Revenues increase 86.5% to \$10.62 million and expenses, even though up by 90.9%, are kept at \$10.17 million. Consequently, a \$445,000 operating profit is generated while the net gain is \$365,000. As a result of its fiscal achievement, the five-year-old carrier is able to advance into the CAB's category of large regionals and almost in celebration, 3 new Shorts 330s are acquired.

The payroll is increased 59.4% to 483 as the rapid pace of expansion continues in 1983. During the year, the carrier adds 2 more Shorts 330s and 5 Fairchild-Swearingen Metro IIIs to its fleet while announcing its order for SAAB-Fairchild SF340s has been expanded to a total of 12. Talks are held with **Delta Air Lines** concerning the possibility of code-sharing operations and, in October, Servair, the FBO at Greater Cincinnati, is purchased.

Passenger traffic jumps another 38.3% to 303,953 and cargo climbs 61.8% to 235,000 FTKs. Revenues rise to \$19.5 million, up 87.7%, as costs grow only 80% to \$18.3 million. The operating profit is \$1.16 million and net gain ascends to \$1.35 million. Airline employment is now 525.

If earlier years are exciting, 1984 proves a landmark. Employment increases 50.9% to 800 and in late winter, Comair receives the first 2 of its 340s and an additional 3 Metro IIIs. The service from Cleveland to Milwaukee is expanded on June 1, as two nonstop frequencies and a one-stop are offered every working day. The SAABs come on-line in late July, at which time the FAA grants a company request to operate under the provisions of FAR Part 121, rather than Part 135. Agreement is now reached with the company's pilots, newly organized by ALPA.

Cleveland's Fred Nance becomes the company's millionth passenger (cumulative) on July 30 when he boards a flight from Cleveland to Louisville.

A code-sharing agreement is signed with **Delta Air Lines** on September 1 and on the same day, flights commence to Fort Wayne, Indiana. On October 1, service is inaugurated to Roanoke and Richmond, Virginia. On December 1, Comair officially becomes the fourth "Delta Connection" commuter network partner, emphasizing its growing role in the interlining of passengers between its markets and those of its major affiliate. Although Delta's reservations code is acquired, Comair retains its corporate identity and livery.

Passenger bookings accelerate 37.1% to 417,601 and freight jumps 31.2% to 308,700 pounds. Revenues ascend to \$32.2 million and

expenses are held to \$29.51 million. The difference between income and disbursements allows a \$2.7-million operating profit and a net gain of \$2.84 million.

Airline employment grows again in **1985**, up 21.2% to 1,000 and the fleet is increased by the addition of 7 SF340s, 1 Metro III, and 2 Embraer EMB-110 Bandeirantes. New international service is introduced, and frequencies are increased or upgraded to the domestic cities of Akron, Charleston, Chattanooga, Cincinnati, Cleveland, Columbus, Dayton, Detroit, Evansville, Fort Wayne, Huntington, Indianapolis, Knoxville, Lexington, Louisville, Milwaukee, Naples, Nashville, Richmond, Roanoke, and Toledo. During the spring, flights begin to Chicago (ORD).

In July, 1.2 million shares of common stock are sold in a public offering that generates \$13 million toward the line's expansion. In December, all of the SF340s are grounded by an Airworthiness Directive from the FAA.

Customer boardings accelerate a whopping 49.8% to 625,537 and cargo skyrockets 81% to 558,000 pounds. Revenues rise 45.1% to \$46.75 million, costs climb 44.9% to \$42.75 million, and the operating profit doubles to \$4 million. A net \$4-million gain is also generated as the year proves the best in company history to date.

The payroll is reduced 2% in **1986** to 980 as 3 more SF340s arrive. The SF340 fleet returns to service in January. On March 10, a tornado strikes Greater Cincinnati Airport at Covington, Kentucky, causing several million dollars worth of damage. Two SF340s and two Metroliners are damaged, along with two company hangars and almost all of the administrative offices.

Delta, for its part, acquires a \$16.8-million, 20% interest (1.85 million shares) in its partner during July and, in October, the regional withdraws from Chicago (ORD) selling its 26 slots to **Simmons Airlines** for \$7 million. In November, the company receives its 401 Certificate from the DOT.

Also during the final quarter of the year, the large regional incurs significant costs as it expands its Cincinnati base of operations in preparation for the enhancement of that hub by interline partner **Delta Air Lines** on December 15. Among these are construction difficulties, bad weather, and a protracted bond issue approval process. On the hub's start-up day, daily departures increase from 48 to 104.

Meanwhile, passenger bookings ascend a slight 1.5% to 634,665. Cargo, on the other hand, actually plunges 13.1% to 485,000 pounds. Revenues decline 1.7% to \$59.81 million, expenses fall 12.2% to \$62.59 million, and the operating loss is \$2.78 million. There is a \$1.31-million net loss.

The new "Delta Connection" partner fully initiates service from its major's Cincinnati hub in **1987**. Having discharged its passengers on March 9, an SF340, after losing hydraulic power, crashes into a fuel truck and a **Delta Air Lines** B-767-232. Both aircraft are substantially damaged; however, there is no explosion.

Beginning in April, some 300 Midwestern travel agents are brought to Cincinnati to view the Comair operation. Daily roundtrip service is inaugurated on July 1 between Cincinnati and the Tri-Cities Regional Airport at Bristol, Tennessee, Kalamazoo, Michigan, and the Greenbrier resort at White Sulphur Springs, West Virginia.

On November 1, the regional opens a new Florida division to provide feed to and from Ft. Lauderdale and Orlando. While the company's 15 SAAB 340s and 21 Fairchild Metro IIIs are retained in Ohio, the 12 Bandeirantes repositioned in Florida add 23 new flights per day and, for the first time in company history, none are connected to the Cincinnati hub.

Overall customer bookings for the year increase 30.5% to 828,734. Revenues turn around and climb by 38.7% to \$63.09 million while costs rise 16.4% to \$56.76 million. The operating profit is \$5.41 million while the net profit is \$4.01 million.

The large regional's workforce is increased by 16.1% in **1988** to 1,380. The fleet grows to include 16 SAAB 340As, 12 Bandeirantes, and 23 Metro IIs. Orders are outstanding for 20 Embraer EMB-120 Brasilias and 3 additional SAABs.

The "Delta Connection's" board on November 1 authorizes establishment of Comair Holdings, incorporated in Kentucky, with Comair, Inc. and CVG Aviation (the former Servair) as its major subsidiaries. Also in November, EMB-110 daily nonstop service is initiated from Ft. Lauderdale to Treasure Cay, Bahamas. The first Brasilia enters service in December.

Passenger boardings top the million-mark in annual boardings for the first time, climbing 43% to 1,184,823. Cargo also does well, jumping 26.1% to 717,000 pounds. Revenues continue to zoom upward, rising by 38.1% to \$110.48 million, expenses jump 37.8% to \$101.74 million, and operating income reaches \$8.73 million. The net gain is \$5.83 million.

The employee population swells a further 17.4% in **1989** to 1,620 and the fleet now includes 10 Bandeirantes, 22 Metro IIIs, 19 SAAB 340As, and 12 Brasilias. Orders are outstanding for 28 additional EMB-120s.

In August, four-times-per-weekday flights start between Chicago and Louisville. The Airline Aviation Academy is acquired on October 20 and renamed Comair Aviation Academy. Also in October, daily roundtrip service begins from Jacksonville to Nassau along with thrice-daily roundtrips from West Palm Beach.

West Palm Beach is visited thrice-daily roundtrip from Jacksonville, beginning in November, while, in December, twice-daily roundtrips begin from Cleveland to London, Ontario, and daily roundtrips commence from Dayton to Tri-Cities Regional Airport, Asheville, and Knoxville.

Customer bookings increase 26.2% to 1,495,899 and revenues move ahead by 30.5% to \$144.2 million. Expenses rise only 24.8% to \$126.94 million and allow operating income to almost double to \$14.14 million. Net profit jumps to \$9.29 million.

The payroll is increased by 23.5% in **1990** to an even 2,000 as the fleet is increased by the addition of 1 EMB-110P and 6 Brasilias. Two Metroliners are withdrawn. Daily roundtrip nonstops begin in January from Cincinnati to Birmingham, while twice-daily nonstop roundtrips begin to Birmingham from Orlando. Twice-daily roundtrips are launched in February from Cincinnati to Greensboro, South Carolina.

Major improvements are now unveiled at Orlando. In March, a new maintenance facility is occupied, followed by the opening of a new terminal in June. Also, on June 5, Raymond A. Mueller retires from the board of directors, turning the entire company over to David R.

Passenger boardings jump 25% to 1,869,644 and revenues swell 32.1% to \$147.87 million. Costs climb 34.9% to \$131.9 million and permit operating income to swell to \$20.15 million. Net profit is up to \$13.01 million.

The Cincinnati-based "Delta Connection" partner enjoys a good **1991**. In January, the carrier is named "Regional Airline of the Year" by *Air Transport World* magazine.

Two more EMB-120s join the fleet in September and an additional Brasilia flight is now initiated from Memphis to Cincinnati and twice-daily Brasilia roundtrips are added from Memphis to New Orleans, along with a fourth daily, direct EMB-120 service from Washington, D.C. to Cincinnati.

In October, daily service is reintroduced from Cincinnati to Huntsville and a fifth daily Brasilia service is added from Orlando to Key West. Brasilia nonstops begin from Orlando to Greenville and Spartanburg in November, along with thrice-daily nonstops from Orlando to Savannah.

While on a November 21 descent to Toronto, the right propeller separates from a SAAB 340A and falls into Lake Erie; the aircraft lands safely and no injuries are reported.

On December 15, the company inaugurates twice-daily Brasilia roundtrips from Cincinnati to Charlotte and increases EMB-120 service from Cincinnati to Greenville and Spartanburg to six times per week.

Customer bookings jump 8.2% to 2,022,032 and cargo climbs by 15% to 866,632 pounds. Revenues ascend 27.9% to \$201.71 million, expenses grow by 30.9% to \$179.98 million, and operating income is \$13.63 million. Net gain is \$7.95 million.

Company employment grows 6% in **1992** to 2,023 and the fleet grows to include 19 SAAB 340s, 40 Brasilias, and 9 Metroliners. Passenger

boardings climb 14.4% to 2,312,391 and revenues swell 12.6% to \$179.9 million. Expenses are up only 10% to \$160.57 million and thus operating income moves ahead to \$19.13 million. Net profit zooms to \$11.45 million.

Airline employment in **1993** stands at 2,200 and the fleet includes 83 aircraft.

On January 4, thrice-daily EMB-120 roundtrip service is inaugurated between Ft. Lauderdale and Tallahassee. Complementing the weekend nonstops already offered, the carrier inaugurates a weekday roundtrip flight on February 1 between Savannah, Georgia, and Orlando.

On April 4, daily service is launched between Raleigh/Durham and Cincinnati while, on April 12, Chairman Mueller announces a 3-for-2 common stock split for shareholders of record, payable 10 days later.

Other destinations now regularly visited include Toronto, Buffalo, Pittsburgh, Baltimore, Washington, D.C. (IAD), Charlottesville, Roanoke, Greensboro, Raleigh/Durham, Charlotte, Chenille, Greenville/Spartanburg, Columbia, Charleston, Cleveland, Akron/Canton, Columbus, Dayton, Toledo, Huntington, Ashland, Louisville, Tri-Cities, Knoxville, Chattanooga, Memphis, Nashville, Grand Rapids, Detroit, Lansing, Kalamazoo, South Bend, Indianapolis, Evansville, St. Louis, Appleton, Madison, Milwaukee, Chicago (MDW), Springfield, Savannah, New Orleans, Birmingham, Pensacola, Panama City, Gainesville, Jacksonville, Daytona Beach, Melbourne, Tampa, West Palm Beach, Naples, Ft. Lauderdale, Miami, Key West, and Freeport/Nassau.

On May 28, the carrier is awarded \$21.6 million for willful patent infringement against it by the Japanese conglomerate Matsushita. Acquisition of the first 2 of 20 Canadair CRJ100 Regional Jets in May allows their introduction of nonstop roundtrip service flights on June 1 from Cincinnati to Toronto and Chicago (MDW) and from Columbus to Akron/Canton. The same day, new nonstops are initiated between Orlando and Sarasota, Florida. Huntsville to Cincinnati daily roundtrips begin on June 7.

Three more CRJ100s enter service on July 1 and are placed on new, twice-daily roundtrip routes from Cincinnati to Lexington, Kentucky, and thrice daily from Cincinnati to Des Moines. On July 15, the new jetliners begin thrice-daily nonstops from Cincinnati to Providence, Rhode Island.

The new jetliners attain near 98% reliability in August, their first full month of operation. Later in the month, Salomon Brothers place a hold rating on shares, fearing that the company's poor financial condition and potential for over capacity might affect its future earnings. CRJ100 service is expanded on November 1 from Cincinnati to Providence and Montreal, while new routes are opened to Des Moines and Toronto. At mid-month, the new jetliners expand service from the Queen City to Allentown, Bethlehem, and Easton, Pennsylvania.

Customer bookings for the year ascend 13% to 2,612,939. Revenues climb 22.1% to \$219.38 and expenses rise only 13.4% to \$182.03 million. The \$37.34-million operating profit is the 25th largest gained by any world airline. Net profit doubles to \$22.51 million.

The workforce is increased by 300 in **1994** as the company completes a move into a new terminal at Greater Cincinnati International Airport. Pleased with its new CRJ100s, Comair, during the summer, employs its newest units to open service from Cincinnati to six new American cities, including Kansas City and Portland, Maine.

Passenger boardings accelerate 25.5% to 3,279,703 and revenues jump 22.1% to \$267.9 million. Expenses rise 25.8% to \$229.05 million and, as a result, pretax income inches up to \$38.84 million and net gain reaches \$24.28 million. Both figures are later adjusted upward to \$47.02 million (operating) and \$29.3 million (net).

Airline employment stands at 2,500 in **1995** and orders are outstanding for 3 Canadair CRJ100s and 20 SAAB 2000s. Plans are announced for the acquisition of the Michigan-based charter operator **Spirit Airlines**.

On May 1, **Delta Air Lines** realigns its hub system; among new developments is a large increase in daily jetliner departures from Cincinnati and a corresponding cutback at Orlando. Comair is called upon to

expand into Miami and Orlando and increases the number of its daily departures by 79%, from 79 to 103. At Cincinnati, Comair, in order to accommodate its partner and reposition its fleet, reduces daily departures from 232 to 222.

Enplanements for the year soar 16.9% to 3,834,577. Revenues accelerate 28.4% to \$463.29 million while costs increase only 17.5% to \$368.47 million. Profits exceed even the previous year's adjusted figures; there is a \$94.82-million operating gain and a net \$60-million net profit is posted.

The workforce is increased by 24% in **1996** to 3,100 and the fleet now includes 43 Canadair CRJ100s, 37 Brasilias, and 5 SAAB 340As. The SAAB 2000 order remains outstanding. Wearing a special red, white, and blue livery with a Canadian maple leaf on the tail under the company name, the landmark 100th CRJ100 built is delivered to Comair on January 25. It is the 29th CRJ to enter service with Comair.

On March 1, a second daily Canadair CRJ100 service is inaugurated from Cincinnati to Appleton, Wisconsin, and Charlotte; the same SAAB 340A frequencies are added or increased between Appleton, Lansing, and Pittsburgh. The number of departures from Cincinnati now number 240, including 62 to nonstop destinations.

On April 1, a \$20-million arrangement is completed for the purchase of the Part 121 charter operator **Spirit Airlines**. The buyout requires government approval which, if forthcoming, would make the Detroit-based airline Comair's seventh subsidiary. Thrice-daily CRJ100 nonstop roundtrips commence on May 1 from Greenville and Spartanburg, South Carolina, to New York via Newark.

Four nonstop daily CRJ100 roundtrips are initiated on June 1 between Miami and Tallahassee; the regional jets also inaugurate five-times-per-day roundtrips between Boston and Montreal the same day. Simultaneously, one of the three daily roundtrips from Cedar Rapids to Cincinnati is upgraded into jet service.

While on final approach to Orlando on a June 23 service from Nassau, Flight 3599, an EMB-120RT with 3 crew and 29 passengers, is unable to lower its landing gear due to a total loss of hydraulic pressure. A wheels-up belly landing is made and there are no serious injuries reported from it. The aircraft is badly damaged.

A second flight from Cedar Rapids to Cincinnati is upgraded to jet service on July 1.

Through the expedient of a service upgrade, Comair is able to introduce daily roundtrip jet service on September 9 between Cincinnati and South Bend, Indiana. The last 3 Metro IIIs are retired at the end of December.

Customer bookings accelerate 21.3% to 4,650,796 and operating income advances 21.7% to \$563.81 million. Expenses jump 21.5% to \$447.69 million and the bottom line of the ledger book shows a \$116.17-million operating profit and a net \$75.42-million gain.

The year **1997** marks the carrier's 20th anniversary and celebrations are in order. Unhappily, the year begins badly.

On January 9, while on final approach during a snowstorm to Detroit Airport from Cincinnati, Flight 3272 suddenly goes into an uncontrolled roll at the 4,000-ft. level. The EMB-120RT with 3 crew and 26 passengers and piloted by Capt. Dann Carlsen crashes into an unpopulated area of Raisinville Township, near Monroe, Michigan, some 18 miles short of the runway outside the city of Detroit, and catches fire; there are no survivors. The crash casts a pall over the North American International Auto Show gala because many of the dead are automobile company employees.

The 48th Canadair CRJ is delivered in April painted in a special anniversary livery; on the side of a plain white fuselage forward of the wing is the phrase "20 years in flight." The number of Canadairs in the fleet reaches 50 in late May. Plans are made for the acquisition of Michigan-based **Spirit Airlines**.

Company executives join with their colleagues from **Airtran** on May 1 in signing a letter of intent to enter into a code-sharing agreement that will connect the two carriers' service through Orlando. The arrangement, when completed, will cover Airtran's 23 cities as well as Comair's nine-stop Florida network.

On May 30, a \$330-million order is given to Bombardier Regional Aircraft for the delivery of 18 additional CRJ200ERs, beginning in September; the request also includes a conditional order for 12 more CRJs with options on 45 more. When the first plane arrives, it is painted in the new white with navy and red livery approved for "Delta Connection" carriers. The scheme is designed to coordinate with the new livery of **Delta Air Lines**.

With **Spirit Airlines** showing a significant decline in possibilities following the May 11 crash suffered by fellow discount airline **Valujet Airlines**, Comair withdraws from merger talks with Spirit in June.

A record high in monthly traffic is recorded in October as 494,422 passengers are boarded, an 18.7% increase over the same period a year earlier. As a result, the carrier converts 12 options for CRJ100LRs into firm orders worth \$250 million. Deliveries will begin a year hence; a total of 45 CRJ options remain.

During the month, a new 21,000-sq.-ft. maintenance facility is opened at Denver. It will accommodate the carrier's growing CRJ100 fleet. It also begins offering jet service over every one of its routes out of Cincinnati.

CRJ100 service to Tri-Cities Regional Airport in Tennessee becomes twice daily on November 2. With the intention of possessing an 80-jet fleet by 1999, Comair, during the third week of November, converts conditional orders for 12 CRJ200s into firm requests; these are in addition to the 54 already on hand. The company may still elect to exercise options on 45 more, some of which may be CRJ-700s.

A new single-day boarding record is established on December 1, the Monday after Thanksgiving, when 20,701 passengers are enplaned.

Two daily nonstops are launched on December 17 between Orlando and Ft. Lauderdale, bringing a total of four per day. Having leased a 21,000-sq.-ft. facility from Wright Brothers Aero, the company, at year's end opens a new maintenance base at Dayton.

Passenger boardings climb 13.9% to 5,298,293. Operating revenues advance 15.5% to \$651.16 million, while expenses are up 9.4% to \$489.56 million. Operating gain increases to \$161.59 million while the net profit soars to \$102.21 million.

At the beginning of **1998**, Comair is the 23rd largest airline in the world in terms of operating profit and 25th in net profit. Airline employment stands at 2,500, a 19.4% reduction.

A major service expansion is announced on January 16, on which date the company has a total of 56 Canadair Regional Jets in service.

Also during January, "Comair University," an in-house management training program, is opened at Thomas More College at Crestview Hills, Kentucky. The 12-course, \$1-million program of executive-style sessions will graduate 400 employees by 2005. Space at Thomas More's Institute for Management Education and Services is also rented for the administrative training of pilots and flight attendants.

Beginning on February 1, six of the carrier's eight daily frequencies between Cincinnati and Detroit become jet flights. Canadairs also take over two of four daily flights to Milwaukee as well as all seven to St. Louis. Initial daily roundtrips commence the same day between Cincinnati and Madison, Wisconsin.

All six daily frequencies between Cincinnati and Charlotte become jet flights on March 1, along with all seven roundtrips to Knoxville. Jet service is also expanded that day to Chattanooga, Charlottesville, and Roanoke and introduced four times a day between the Cincinnati, Wilkes-Barre, and Scranton and Cedar Rapids and Iowa City.

On April 5, a major code-sharing agreement, originally announced on February 19, begins with **Sabena Belgian World Airlines, S.A.** Under its terms, the carriers will share codes on Comair flights from the international hub at Cincinnati to Akron, Canton, Dayton, Detroit, Des Moines, Kalamazoo, Lexington, and Louisville. Europe-bound passengers from those points may connect at Cincinnati for Brussels and links to Sabena's European and African networks.

Two morning Canadair flights are added from Boston to Toronto on April 6 and one afternoon jet flight from Boston to Montreal for a total of six daily roundtrips in each market.

Ground is broken in May for a \$25-million expansion of the company's facilities at the Cincinnati-Northern Kentucky International Airport. Completion of the new addition of offices, maintenance, and training facilities is anticipated within a year.

Also during the month, the carrier retains the Chicago-based law firm of Merlo, Kanofsky and Brinkmeier and files suit against the Brazilian aircraft manufacturer Embraer in U.S. District Court in Louisville, Kentucky. The company charges that the manufacturer of the EMB-120 had failed to warn it concerning design problems, especially icing difficulties, such as those believed to have caused the crash of Flight 3272 on January 9, 1997.

Thrice-daily nonstop CRJ service is inaugurated on June 1 from Newburgh, New York, to Cincinnati and Atlanta. These services replace mainline **Delta Air Lines** flights. The same day, direct Saturday and Sunday roundtrip jet service is started from St. Louis to Nassau, Bahamas.

In addition, daily nonstop CRJ roundtrips are started from Dayton to New York (LGA); two more flights are simultaneously added between Dayton and Cincinnati, bringing the total of daily roundtrips between the Ohio cities to 10.

Also on June 1, thrice-daily nonstop CRJ roundtrips commence from Cincinnati to Long Island MacArthur Airport at Islip, New York. The same day, a third CRJ nonstop roundtrip is initiated between Cincinnati and Myrtle Beach, South Carolina, bringing to three the number of daily jet services between the two communities.

The first scheduled nonstop return jet service between Cincinnati and Nassau, Bahamas, is flown by company CRJs on Saturdays and Sundays beginning on June 6.

Thrice-daily RJ-200 roundtrips commence on July 1 between Cincinnati and Houston (IAH). Simultaneously, thrice-daily nonstop CRJ roundtrips begin from Bush International to Cincinnati.

The code-sharing arrangement with **Sabena Belgian World Airlines, S.A.** is expanded on July 15 to include service to Brussels from Toledo, Indianapolis, St. Louis, Charlotte, and Birmingham. The new dual-designator flights allow Comair passengers from the five cities to travel to and from Brussels via Cincinnati under Sabena's SN code.

Daily service between Cincinnati and Fort Wayne is upgraded on August 1 with the addition of a third CRJ roundtrip; two other frequencies continue to be offered with turboprops.

Bringing Cincinnati Bengals and Green Bay Packers fans and travelers together for the first time, Comair, on August 3, initiates thrice-daily nonstop CRJ flights between the two NFL cities in Ohio and Wisconsin.

A fifth nonstop roundtrip frequency is added on August 10 between Cincinnati and Chattanooga. At this point, four of the daily trips between the Ohio hub and the Tennessee community are operated by CRJs. Simultaneously, a third CRJ roundtrip is offered from Cincinnati to Kalamazoo and Battle Creek; two other daily frequencies between the two points are offered by turboprops.

While en route from Covington, Kentucky, to Columbia, South Carolina, on August 13, Flight 431, a CRJ with 4 crew and 45 passengers, receives a smoke cargo warning message. With triple chimes sounding and a smoke aural, an emergency is declared and the aircraft is diverted to Knoxville. A rapid evacuation is effected once the aircraft is on the ground, but no evidence of fire in the cargo bay is found. The airplane is released to continue to its destination.

On September 23, a day after **Gulfstream International Airlines** begins air shuttle flights to assist in the evacuation of Key West in the face of Hurricane Georges, Comair also lays on additional frequencies to Orlando in order to assist in the removal of people from the path of the storm. Flights between Key West and Orlando are suspended from September 24-29.

On October 1, a \$1-billion contract is signed with Bombardier Aerospace for the acquisition of 50 aircraft over the next decade, including 30 CRJ200s and 20 of the manufacturers new 70-seat regional jets, plus 115 options. Simultaneously, a sixth daily roundtrip *Delta Connection* frequency is initiated between Cincinnati and Chattanooga; five of the frequencies from the Ohio hub to the south Tennessee city are operated by CRJs.

Daily nonstop roundtrip *Delta Connection* CRJ frequencies are launched between Cincinnati and Nassau on October 1; it also introduces two daily flights to Colorado Springs and two additional daily frequencies to Washington, D.C. (IAD).

Also at the start of the fourth quarter, a \$1-billion order is signed with Bombardier Aerospace for the acquisition of 50 more regional jetliners, including 20 of the new 70-passenger models. The company will take delivery of its 80th CRJ in August 1999 and in each month thereafter until the order is finished.

The *Delta Connection* carrier, which has three daily Embraer EMB-120 and three Canadair services from Cincinnati to Ft. Wayne, Indiana, upgrades the service on November 1 to all-jet; a seventh daily jet frequency is simultaneously added. The carrier, which operates three jet and four turboprop roundtrips per week from Cincinnati to Toledo upgrades the Embraer flights to Canadair frequencies on the same day.

Daily CRJ *Delta Connection* roundtrips are begun on December 1 between Cincinnati and Boston. The same day, the carrier announces that it will add one daily CRJ roundtrip on January 3 between Cincinnati and Columbia, Des Moines, Greenville/Spartanburg, Houston (IAD), and the Tri-Cities Regional Airport in Tennessee.

A Comair press release is put out on December 2 revealing that the airline will begin thrice-daily CRJ *Delta Connection* roundtrips on March 2 between Cincinnati and Bangor, Maine. The new service will replace mainline jet service previously provided by **Delta Air Lines**.

Passenger boardings at the nation's largest regional surge 16.6% to 6,175,295. Operational revenues total \$651.1 million, while expenses are \$489.6 million. There are profits: \$161.5 million (operating) and \$102.2 million (net).

The carrier, on January 3, 1999, adds one daily *Delta Connection* CRJ roundtrip between Cincinnati and Columbia, SC; Des Moines, IA; Greenville/Spartanburg, SC; Houston (IAD); and Tri-Cities, TN. Also during the month, Comair Holdings is added to the NASDAQ-100 Index. The airline becomes the first regional to install automatic external defibrillators on all of its aircraft.

Beginning on February 1, Comair upgrades two nonstop flights to jet service between Nassau and Orlando, adds a nonstop CRJ jet flight between Orlando and New Orleans, and upgrades one roundtrip flight to jet service between Orlando and Ft. Myers.

The company's spring schedule is announced on February 4. When all of the flights are implemented, 42 of the 66 cities Comair serves nonstop from Cincinnati will be all-jet. More than 80% of all seats out of Cincinnati will be jet; and Cincinnati will be the only hub in North America where passengers can travel exclusively on a jet plane to every city.

This fact is celebrated on the fuselage of the newly received 70th CRJ, which wears a livery highlighting Cincinnati's skyline as seen from Kentucky east of the Licking River. Titles reading "Cincinnati: The Jet Hub" also appear over the forward half of the windowline.

Also during the month, Comair presents a plan to Cincinnati Airport planners for a new \$25-million, 150,000-sq.-ft., 5-story office building to replace the current 38,000-sq.-ft. building, which will become a training center.

On March 1, a second of the six daily *Delta Connection* roundtrips between Cincinnati and Akron-Canton Regional Airport is upgraded to CRJ as is one to Richmond and Williamsburg, Virginia.

Comair begins thrice-daily CRJ *Delta Connection* roundtrips on March 2 between Cincinnati and Bangor, Maine. The new service replaces mainline jet service previously provided by **Delta Air Lines**.

Simultaneously, *Delta Connection* jet service is increased from Cincinnati to Allentown, Bethlehem, Easton, and Harrisburg, Pennsylvania (2 flights to 4), to Toronto (2 to 7), to Wichita (2-4), and to White Plains, New York (3 to 4).

Just weeks after the board of directors approves a 3 to 2 stock split, company shares, on March 8, hit a high of \$40 each.

On April 1, daily *Delta Connection* Canadair roundtrips are increased to St. Louis (1 to 8) and to Washington, D.C. (IAD) (1 to 7). One daily

Delta Connection roundtrip between Tallahassee and Orlando is upgraded to CRJ on April 4.

Electronic ticketing becomes available on all flights beginning on April 26. The next day, lawyers for members of the ALPA chapter of **Delta Air Lines** file suit against management in an effort to block a move by the parent to employ Comair CRJs on Delta Shuttle flights between Boston and Washington, D.C. (DCA) starting on June 1.

The number of daily *Delta Connection* CRJ roundtrips between Cincinnati and Memphis are increased on May 1 (1 to 4), to Newburgh, New York (1 to 4), and to Tulsa (1 to 4).

The airline wins three major awards during the month. Chairman Mueller is named "Airline Executive of the Year" by *Regional Airline World*; President/CEO David A. Siebenburgen wins the "Regional Airline Executive of the Year" award from *Commuter/Regional Airline News*; and Comair itself is named "Best Managed Regional Airline" for 1999 by *Aviation Week & Space Technology*.

With 24,460 customer enplanements on May 28, the carrier sets the best single-day boarding record in its history.

One daily *Delta Connection* CRJ roundtrip is added on June 1 from Cincinnati to Bangor, Maine (3 to 4), to Columbia, South Carolina (5 to 6), to Houston and to Sarasota and Bradenton (through October 31). Thrice-daily *Delta Connection* roundtrips from Cincinnati to Savannah and Hilton Head, South Carolina, are initiated.

One *Delta Connection* daily roundtrip is upgraded to CRJ on June 3 from Cincinnati to Appleton and Fox Cities, Wisconsin (5 to 6), to Grand Rapids (3 to 4), and to Milwaukee (3 to 4).

Two *Delta Connection* roundtrips between Dayton and Cincinnati are upgraded to CRJ on July 1 (7 to 9), while one daily *Delta Connection* roundtrip is simultaneously upgraded from Cincinnati to Indianapolis (5 to 6), Kalamazoo and Battle Creek (4 to 5), and to Tri-Cities, Tennessee (3 to 4). Twice-daily *Delta Connection* roundtrips from Cincinnati to Charleston, South Carolina, are introduced.

Daily Saturday and Sunday CRJ nonstop *Delta Connection* return service is launched on July 17 from Myrtle Beach, South Carolina, to both Chicago (ORD) and New York (LGA).

Twice-daily *Delta Connection* roundtrips begin on August 1 from Cincinnati to Jacksonville, Florida.

As the October 31 date for renewal of the carrier's *Delta Connection* contract nears, negotiations over a new prorate with **Delta Air Lines** intensify during the summer. A new code-sharing agreement with **Air Canada, Ltd.** that begins on October 7 allows connections for the Canadian major's passengers traveling to 18 U.S. cities.

Unable to come to an acceptable agreement, **Delta Air Lines** (which already holds a 22% stake and believes itself to be under compensated), in early October, makes a \$23.50 per share/\$1.8-billion cash offer to purchase outright the remainder of its Cincinnati-based affiliate. Comair's board agrees to the transaction on October 16 and it is announced two days later. The new wholly owned *Delta Connection* subsidiary will join **Atlantic Southeast Airlines** (taken over earlier in the year) as a Delta division, with the entire commuter network falling under the direction of Comair President/CEO David A. Siebenburgen.

On November 1, frequencies between Cincinnati and Columbia, South Carolina, are increased to seven and those to Minneapolis are increased to five.

Also in November, a number of Comair shareholders file two class action lawsuits (one each in Kentucky and New York) against the airline and its board charging that the takeover price is inadequate and seeking to halt the sale.

On December 1, CRJ roundtrips from Cincinnati to Akron are increased to six, Charleston, West Virginia, to five, Evansville to seven, Madison to four, Orlando to Ft. Lauderdale to seven, and Ft. Myers to five.

Following an illegal job slowdown in mid-December, the airline obtains a court order from the U.S. District Court in Kentucky stopping a work slowdown by its pilots.

Overall passenger boardings climb 14% to 7,032,000.

Airline employment at the start of **2000** stands at 4,536, a 17.7% increase over the previous 12 months. Comair owns the 25th largest fleet among the world's top 25 airlines at the beginning of the new millennium.

When President/CEO Siebenburgen launches his revamped *Delta Connection* network on January 18, he is succeeded as Comair Holdings president by Randy D. Rademacher.

Until they can be replaced with Canadairs, all of the company's EMB-120s are based at Orlando during the first quarter. Thrice-daily CRJ roundtrips are started on March 16 between New York (LGA) and Charleston, South Carolina.

Air France begins to code-share on company flights to 31 U.S. domestic destinations on March 26.

The largest regional jet order in airline history is placed on March 29. Siebenburgen, acting on behalf of Comair and **Atlantic Southeast Airlines**, signs a \$10-billion, 4-year order with Bombardier Aerospace for a mix of 94 CRJ100, CRJ200s, and CRJ700s. Comair's share will include 25 CRJ100s and 20 CRJ200s.

On April 2, CRJ100s double to eight the number of roundtrips offered between Cincinnati and Atlanta, thereby replacing all four of **Delta Air Lines's** daily roundtrips in this market. It also replaces the twice-daily return service from Cincinnati to Colorado Springs. New twice-daily return flights simultaneously begin from New York to Savannah.

A month later, daily CRJ100 flights are initiated from the Queen City to Norfolk and twice daily to Oklahoma City.

Also in the spring, a new Comair Jet Express charter service is established at Cincinnati-Northern Kentucky International Airport. To accelerate the growth of CJE, the company, on July 1, opens a new \$8-million FBO at the same location. Also during the month, 400 IAM-represented maintenance workers ratify a new four-year contract.

Four-times-a-day CRJ100ER roundtrips commence on July 1 from New York (LGA) to Buffalo and Manchester.

A proposal to merge the pilot unions of the *Delta Connection* partners Comair and **Atlantic Southeast Airlines** with that of **Delta Air Lines** is rejected by the ALPA executive council in late August.

Thrice-daily CRJ100 *Delta Connection* roundtrips, code-shared with **Aeromexico (2), S.A. de C.V.**, commence on September 1 between Dallas (DFW) and Mexico City, along with a single roundtrip from Dallas (DFW) to Puebla. The world's largest RJ operator takes delivery of its 100th CRJ100ER on September 29.

On October 1, thrice-daily CRJ100 "Delta Connection" return service is started from Orlando to Greensboro, High Point, and Winston-Salem and from Cincinnati to Sarasota and Brandenton. Twice-daily CRJ flights between New York (LGA) and Birmingham, Alabama, begin on November 1.

Daily CRJ100ER *Delta Connection* roundtrips begin on December 1 from Cincinnati to Augusta, Georgia, along with twice-daily return service to Syracuse.

COMAIR (COMMERCIAL AIRWAYS [PTY.], LTD.): P.O. Box 7015, Bonaero Park, Kempton Park, 1622, South Africa; Phone 27 (11) 921-0111; Fax 27 (11) 973-3913; <http://www.comair.co.za>; Code MN; Year Founded 1967. Comair is formed at Transvaal's Jan Smuts Airport on November 1, **1967** as successor carrier to **Commercial Air Services (Pty.), Ltd.** and as the airline division of the Comair Group. A second subsidiary, Aircraft Distributors of Southern Africa (Pty.), Ltd., concentrates on the airline's previous role as South Africa's Cessna lightplane and Hughes helicopter distributor.

Equity participant Piet van Hoven is named managing director and the fleet comprises 5 Douglas DC-3s, 2 Cessna 404s, and 1 Cessna 401, the 4 surviving Lockheed L-18 Lodestars having been withdrawn. A full schedule of commuter services are undertaken to link Johannesburg with Phalaborwa, Welkom, Durban, and Skukuza.

Flights on behalf of **Lesotho Airways (Pty.), Ltd.** are maintained in **1968**, while Letaba Safaris' stake in a joint service to the national game parks is purchased and the subsidiary is renamed Comair Safaris (Pty.), Ltd.

The government of Lesotho purchases the Comair stake in its national airline in **1969** for R 100,000. Comair Holding's Aircraft Distributors of Southern Africa subsidiary now becomes South Africa's Learjet distributor. The first DC-3, acquired in Canada in 1963, is withdrawn and replaced by a newer model DC-3D, purchased from **Austrian Airlines, A.G.**

In **1970**, South African Marine Corporation (Pty.), Ltd. (Safmarine) purchases a 50% stake in Comair Holdings (Pty.), Ltd. for R 20,000 and 100,000 shares of Safmarine stock. D. Novick becomes chairman during August.

Flights continue apace in **1971-1974**. On behalf of the government, the company inaugurates on-demand charters to Phalaborwa, a mining community just outside of Kruger National Park. Billing itself as "The Safari Airline," Comair carries 39,510 passengers during the latter year.

Airline employment in **1975** is 65. Passenger boardings increase by 6.3% to 42,166. Freight traffic skyrockets by 92% to 398,000 FTKs. The employee population is increased by 28% in **1976** to an even 100 workers. Corporate headquarters are transferred from Ran Airport to Jan Smuts Airport.

Customer bookings accelerate 34% to 53,200 while freight traffic increases 51% to 314,000 FTKs.

Managing Director van Hoven's company changes its fleet somewhat in **1977**, adding a Fokker F.27-200, deleting one 404, and trading the Cessna 401 for a Cessna 206. The Fokker enters service on a Phalaborwa-Skukuza route on January 31 while a new commuter stop is added, under contract to **South African Airways (Pty.), Ltd. (SAA)**, at Richards Bay. Regular aerial safari and tour services are also begun to Skukuza, within Kruger National Park, while charters continue to be flown to various points within the country.

The workforce in **1978** totals 140 and the fleet includes 1 F.27-200, 5 DC-3s, and 1 Cessna 404. Two more Friendships join the fleet in **1979-1980** and service is initiated to Sun City. Enplanements in **1981** reach 96,000.

Two DC-3s are sold to **Ethiopian Airlines, S.C.** in **1982**.

On October 12, a Douglas transport with 3 crew and 27 passengers is involved in an accident at Graskop; no serious injuries are reported.

Customer bookings this year ascend to 105,000.

Margate receives a new service in **1983**. Flights are undertaken to the Margate resort area and, beginning at the end of the year, to Gaborone, Botswana, under contract to SAA. This is the first international route authorized to a South African private airline. These flights help passenger boardings ascend to 110,000.

Airline employment reaches 150 in **1984** and the longtime service to Welkom is contracted to **Magnum Airlines (Pty.), Ltd.** During the year the fleet is increased through the purchase of 2 more F.27-200s and a new fleet livery is unveiled. On December 17, **1985**, a company DC-3 participates in a flyby over the air force base at Swartkop to help celebrate the fiftieth anniversary of the Douglas transport.

Between **1986-1989**, the company removes its Cessnas and a DC-3 and orders a Fokker F.28-4000 that will be placed in service at the beginning of the new decade. Meanwhile, on March 1, 1988, Flight 206, an EMB-110P1 with 2 crew and 15 passengers en route from Phalaborwa to Johannesburg, crashes 13 km. S of its destination. It will later be determined that a nitroglycerine bomb has caused the disaster.

In January **1990**, the company seeks government authority to open scheduled competition with **South African Airways (Pty.), Ltd.** on the Johannesburg-Durban route; the state carrier offers no objection.

Chairman Novik and Managing Director van Hoven oversee a workforce of 200 in **1991**. The Fellowship is replaced by a fourth F.27-200. Enplanements total 131,328, including 13,980 flown on charters. Income exceeds costs and there are profits: \$7.38 million (operating) and \$6.81 million (net).

With the deregulation of South Africa's air transport industry in **1992**, Comair enters a period of rapid expansion. The workforce is increased by 35.4% to 218 and a Boeing 737-244, acquired from **South African Airways (Pty.), Ltd.**, allows the initiation of low-fare flights from

Johannesburg to Cape Town, Gaborone, and Manzini. In August, Comair joins IATA.

Later in the year, the F.28-4000 is reacquired and, by year's end, 12 Boeing and 8 Fokker weekly flights are offered over the new run.

Passenger boardings increase 34.6% to 161,534 while freight skyrocket 131.8% to 9.45 million FTKs. Revenues increase 18.5% to \$39.19 million and expenses climb 30.7% to \$29.65 million. The operating surplus that results is \$9.54 million and net gain reaches \$9.68 million.

Airline employment is increased by 5.8% in 1993 to 290 and the fleet now includes 2 B-737-244s, 4 F.27-200s, and 1 F.28-4000. A new Johannesburg-Durban route is launched in September and pushes customer bookings up a remarkable 92% to 310,730. Cargo traffic, however, declines 11.1% to 24 million FTKs.

In 1994, the workforce is cut by 31% to 200; however, orders are placed for 2 Avions de Transport Regional ATR42-300s. Flights begin linking Johannesburg with Maputo and Harare and, through July, passenger boardings skyrocket 60.9% to 249,000 and 81,000 FTKs of freight are flown.

The first ATR42-300 is delivered in May 1995 and enters service between Johannesburg and the Botswana town of Gaborone via Skukuza in Kruger National Park. The second turboprop arrives in June and begins flying the Richards Bay Line. The fleet is enhanced not only through delivery of the 2 ATRs, but by the addition of 1 more B-737-244, 2 B-737-230As, and 2 B-737-236As.

Two F.27-200s are withdrawn in 1996. On June 12, the carrier signs a nonequity transfer franchise agreement with **British Airways, Ltd. (2)**. Under the arrangement, the South African regional's fleet is repainted in the colors of the U.K.-based major, which will also cooperate in sales and marketing and make its frequent flyer program available to Comair passengers.

The company begins to feed passengers to BA from its domestic South African routes on October 27.

Operations of the BA franchise partner continue in 1997. During the fall, 3 of the company's aircraft are repainted in the new and controversial color scheme of **British Airways, Ltd. (2)** that features a different tail design (representing a BA region served) on each aircraft.

The company during the remainder of the year repositions itself as an all-jet operator on the major trunk routes and makes plans to go one-on-one with **South African Airways (Pty.), Ltd.** Managing Director van Hoven orders the ATRs sold.

Five of Comair's turboprop destinations are passed to **SA Express (Pty.), Ltd.** during late summer; its managing director, Israel Skosana, refuses to disclose the purchase price. Comair will continue to market the routes and retain a share in any profits gained from them.

In October, stated-owned **Sun Air (Pty.), Ltd.** is sold to a consortium that includes Comair (25%), the Black empowerment consortium Rethabile and Coordinated Network Investments (55%), National Empowerment Fund (15%), and company employees (5%).

Given their alliances with rivals **British Airways, Ltd. (2)** and **Virgin Atlantic Airways, Ltd.**, Comair and Sun Air will continue to compete with one another over established trunk routes. There will be no changes in branding or management. The two will, however, seek synergies in the joint purchase of equipment, will coordinate schedules, and will refrain from launching routes in opposition to one another.

In 1998, Comair operates over 250 flights weekly on routes between Johannesburg and Cape Town, Durban, and Port Elizabeth, as well as across borders to Harare, Victoria Falls, and Windhoek. Direct twice-weekly flights are also offered between Cape Town and Windhoek.

On July 23, the company is listed on the Johannesburg Stock Exchange.

SA Express Airways (Pty.), Ltd. sparks a fare war on October 5 when it reduces its domestic ticket prices by up to 15%. Competing Comair indicates that it will immediately match the lower tariffs, but **Sun Air (Pty.), Ltd.** refuses to join the conflict.

Comair joins with **Sun Air (Pty.), Ltd.** and **Nationwide Air Charter (Pty.), Ltd.** during January 1999 in lodging a complaint with the South

African Competition Board. The three allege that **South African Airways (Pty.), Ltd.** has reduced prices and increased capacity on a number of domestic routes to the point where it is engaged in predatory pricing violations. Some SAA fares on the routes between Johannesburg and Durban are less expensive than motor buses. The board indicates that it will undertake an investigation over the next few months. When made aware of the Competition Board complaint, officials from SAA indicate that they will contest the claims.

Leaders of East Africa end their 2½-year embargo of Burundi on January 26; Comair, which has honored the sanctions since their imposition in July 1996, indicates that it will resume flights to Bujumbura in mid-February.

Following a review of its Southern Africa timetables, new schedules, developed by **British Airways, Ltd. (2)** with Comair, come into effect on April 1. These schedules not only offer passengers daily connecting flights between Durban and Johannesburg, but a choice of daily departure times. The new revised schedules replace BA's four-times-per-week Durban services.

During the first week of November, two more daily roundtrips are initiated between Johannesburg and Cape Town and two new weekly return services are started from Johannesburg to Windhoek.

Traffic figures for the year are not released. It is, however, revealed that revenues have increased by 19% to \$283.54 million. With operating expenses of \$268.45 million, there are increased profits: \$15.09 million (operating) and \$14.61 million (net).

During the last week of January 2000, **British Airways, Ltd. (2)** purchases a £17-million (\$27.9-million) 18.3% stake in its South African franchise partner from Gensec and CNI. Comair continues to be listed on the South African stock exchange.

On March 26 **Austrian Airlines, A.G.** begins to code-share on Comair's twice-weekly return flights between Johannesburg and Harare, Zimbabwe. Daily B-737-244 roundtrips simultaneously start from Johannesburg to Lusaka.

Plans are announced during the summer for an increase of frequencies to Harare, Lilongwe, and Victoria, plus expansion of service into Ndola and Nairobi. A new marketing and code-sharing agreement is signed with **Air Namibia (Pty.), Ltd.** on October 9, offering 15 weekly roundtrips between Johannesburg and Windhoek.

COMBS AIRWAYS: United States (1983–1984). **Combs Freightair** is established at Denver in October 1983 to offer scheduled third-level passenger service in Wyoming, Colorado, and Idaho under the name Frontier Commuter. Revenue flights commence with Convair CV-580s leased from **Frontier Airlines (1)**. When the parent files for Chapter XI bankruptcy in April 1984, Combs Airways also fails. Two months later, the CA assets are sold to another new entrant, **ITR Airlines**.

COMBS FREIGHTAIR: United States (1957–1984). Formed in 1957 at Billings, Montana, as **Combs-Pickens Montana Aircraft Company**, the company undertakes nonscheduled cargo charters to various local destinations. A decade later, on September 29, 1967, the operator, renamed Combs Freightair two weeks earlier, begins scheduled Aero Commander 500B flights to Williston, Lewistown, Cody, Spokane, and other regional destinations. An airmail contract is received from the U.S. Post Office. In 1969, Combs joins in an agreement with local service carrier **Frontier Airlines (1)** for a route from Billings to Williston.

During the 1970s, the carrier flies to a total of 40 cities employing a fleet that grows by decade's end to include 10 Convair CV-340s/440s, 14 Aero Commander 680FLs and 7 Aero Commander 500Bs. Retaining its rating as the Post Office's longest continuous contract carrier, Combs sees its freight business increase a huge 132% in 1981.

Operations continue apace in 1982, during which year the amount of cargo carried increases to 34.9 million pounds. The fleet at year's end includes 7 Aero Commander 500Bs, 10 Commander 680FLs, 4 Commander 800FLs, and 10 CV-440s.

An arrangement is reached with **Frontier Airlines (1)** in the summer of **1983** for Combs to begin offering a significant number of scheduled replacement passenger flights for the larger airline as the first Frontier Commuter. Employing a fleet of 8 CV-580s provided by the national under lease, the small regional's Combs Airways division inaugurates hub-and-spoke services on October 17 from Denver to 8 surrounding communities.

Late in the year, to bolster the freight service, the all-cargo division of **Providence Airline Corporation** is purchased and merged, together with its routes and aircraft. The fleet now comprises 8 CV-440s, 4 CV-240s, 11 Aero Commander 680s, and 7 Aero Commander 500Bs.

As a result, the overall freight carried jumps 5.5% to 39.3 million pounds. Enplanements in the fourth quarter total 32,547. Revenues from both freight and passenger services total \$10.7 million and costs are \$11.23 million. Losses total \$535,000 (operating) and \$774,000 (net).

Four additional cities become Frontier Commuter destinations in early **1984**. The company's expansion in recessionary times brings significant financial shortfall and, in April, it files for Chapter XI bankruptcy. While a search is made for new investors, a full schedule is maintained. Two more Frontier Commuter markets are inaugurated in June.

For several months while reorganization is attempted, both freighter and passenger services continue; however, the company shuts down after its last flight on January 14, **1985**.

COMBS-PICKENS MONTANA AIRCRAFT COMPANY. See COMBS FREIGHTAIR

COMED AVIATION, LTD.: Building 28, Blackpool Airport, Blackpool, Lancashire, England, FY4 2QY, United Kingdom; Phone 44 (1253) 349072; Fax 44 (1253) 349073; Code 5W; Year Founded 1994. Comed is established as an air taxi at Blackpool Airport in **1982** and lightplane *ad hoc* charter flights to destinations around the U.K. continue without change for over a decade.

In **1994**, an Embraer EMB-110 Bandeirante is acquired and is employed to launch scheduled services to Belfast, Dublin, and the Isle of Man.

Operations continue without change during the remainder of the decade. Company employment in **2000** stands at 52.

COMITE D'ETUDES POUR LA NAVIGATION AERIENNE DU CONGO, S.A.: Belgium (1919–1920). CENAC is formed on June 26, **1919** to provide survey flights over the Belgian Congo. Aerial photographs are also taken on behalf of mining interests. Early in **1920**, the enterprise is combined with **Syndicate National pour l'Etude des Transport Aeriens, S.A. (SNETA)** to form the **Sabena Belgian World Airlines, S.A.** Congo predecessor **Ligne Aerienne du Roi Albert, S.A. (LARA).**

COMMAND AIR: United States (1966–1968). Command Air is set up at Detroit Lakes, Minnesota, during the spring of **1966** to provide scheduled passenger and cargo flights to Minneapolis. Cessna 441 and Aero Commander 500B services commence on June 22 and are maintained until **1969**, when the company is merged with **Red Baron Airlines.**

COMMAND AIRWAYS: United States (1951–1991). Originally organized by Theodore "Ted" Lafko as the **FBO Mid Hudson Airline** at Wappingers Falls, a suburb of Poughkeepsie, New York, in **1951**, this air taxi and charter operator is purchased for \$40,000 by former **American Airlines** and General Foods Corporation executive Kingsley G. Morse on June 1, **1966**. Reformed, renamed, and employing 2 Beech 18s, 6 Cessna 172s, and 1 Aero Commander 560, Chairman/President Morse begins scheduled operations on July 1 to New York (JFK) from its base at Dutchess County Airport.

An exclusive contract is signed later in the year with IBM for the transport of its personnel and a third Beech 18 is placed into service. For years, the company will be known as "the IBM airline."

During January **1967**, the first of 3 ordered Piper PA-23 Aztecs enter service and for the year—the first full one completed under Morse's direction—a total of 8,684 passengers are boarded. Turboprop operations commence in **1968**; the Aztecs are all replaced by 3 Beech 99s. Another IBM contract is acquired for transport of "Big Blue's" people from Poughkeepsie to Burlington, Vermont.

The company's two routes, together with charter operations, are maintained in **1969** and traffic increases, especially after the introduction of its first de Havilland Canada DHC-6 Twin Otter. Frequencies are also undertaken to Red Bank and Morristown, New Jersey, Islip, New York, and New London, Connecticut.

During **1970**, the fleet is increased by the addition of another Twin Otters. In December **1971**, the Pittsfield to New York route is purchased from Boston-based **Executive Airlines** and, by **1974**, enplanements are up to 80,580.

Airline employment stands at 69 in **1975**. Command is the American launch customer for the Shorts 330 turboprop, ordering 3 from the manufacturer in Belfast, Northern Ireland. Dispatch reliability with the carrier's Beech 99s reaches 97.4% and on-time performance grows to 86%. Joint fares are implemented to 43 communities. Passenger boardings are off by 2% to 79,000.

A Beech 99A with two crew and seven passengers is damaged after aborting takeoff from Dutchess County Airport on March 16, **1976**; no serious injuries are reported.

The 3 Shorts 330s join the fleet of the 80-worker airline beginning in July and orders are placed for 3 more. The new "wide-body" commuter liners are placed into service on the Poughkeepsie to Boston via White Plains route.

Two more Twin Otters are purchased and by **1977** enplanements reach 92,740. They advance to 122,945, up 12.1%, in **1978**.

Passenger boardings climb by 7% to 125,451 in **1979**, and advance by the same percentage to 133,690 in **1980**. Among the destinations now served are Ithaca, White Plains, Boston, Pittsfield, Binghamton, and Lebanon, New Hampshire.

By **1981** passenger boardings have climbed 15% to 153,279. The number of employees rises from 165, up from 140 the year before. The second set of 3 Shorts 330s are placed in service during the year and the Ithaca service is turned over to **USAir**.

The workforce is increased 4.4% in **1982** to 168 and a sixth Shorts 330 joins the fleet. Orders are placed for 3 (later 6) Avions de Transport Regional ATR42-100s at \$6 million per aircraft.

Super-saver fares are introduced and a total of 177,055 travelers are flown—a boost of 15.9%. Revenues jump 25.1% to \$10.5 million.

The fleet in **1983** includes 9 Shorts 330s; the 3 ATR42s remain on order. A public stock offering is made in October and \$6.5 million is garnered within 2 days. To court business travelers, the carrier enters into frequent flyer agreements with **Eastern Air Lines** and **Trans World Airlines (TWA)**. The year's passenger boardings accelerate 18.9% to 210,551.

Enplanements jump 22.8% for the publicly owned large regional in **1984** to 258,585 as service is inaugurated to Albany and Lebanon. Primarily to service a General Electric corporate account to transport executives to GE's turbine division facility at Lynn, Massachusetts, a 12-times-per-day service is undertaken linking Albany with Boston. Command is now listed on the NASDAQ stock exchange.

The ATR order is increased to five in **1985** as the two-millionth passenger (cumulative) is boarded. During the year, GE moves its turbine plant to Schenectady and the previous 12-per-day flights from Albany to Boston are now cut to 4. Still, business travelers account for 76% of total traffic, with largest corporate customers being IBM, the State of New York, GE, NYNEX, General Foods, AT & T, and Dartmouth College.

Customer boardings ascend a weak 1.6% to 262,651, but small profits of \$352,000 (operating) and \$185,000 (net) are still generated on revenues of \$15,762,600.

In January **1986**, Command, the 33rd largest regional airline in the U.S., is named "Regional Airline of the Year" by *Air Transport World*

magazine. The first ATR42-300 is delivered to its North American launch customer on January 27 and enters service in March on such long-haul segments as White Plains to Boston and Boston to Albany. Flights to Providence and Hartford also begin.

Long opposed to code-sharing, the 250-employee Command is forced by the trend to yield its independence. On April 27, the large regional becomes an "American Eagle" partner, agreeing to feed **American Airlines** at Albany, Boston, and New York (LGA and JFK). The 9 Shorts 330s are given Eagle livery, as are the first 3 ATR42-300s, which are all leased.

Customer bookings ascend 22.7% to 322,178 and revenues grow 2.7% to \$16.2 million. Expenses, unfortunately, accelerate 15.6% to \$18 million, leaving an operating loss of \$1.8 million and an equal \$1.8-million net downturn.

Airline employment climbs by 18% in **1987** to 295 and the fourth chartered ATR42-300 is delivered in July, the same month frequencies are initiated to Philadelphia. In November, an agreement is reached with Short Bros., Ltd. for the lease of 3 new Shorts 360-360s; the arrangement includes the sale of Command's 3 older Shorts 330s for \$1.2 million each.

Simultaneously, President Morris reports that published reports of the company's takeover by **Simmons Airlines** are untrue. The first Shorts 360-300 enters service in October.

Passenger boardings jump 30.1% to 419,158 and revenues increase 46.3% to \$23.4 million. With expenses held down, the company becomes profitable, showing gains of \$2.3 million (operating) and \$683,956 (net).

The workforce is increased by 35.6% in **1988** to 400. In January, the fifth ATR42-300 arrives. In March, 20 slots at Washington, D.C. (DCA) are purchased from bankrupt **AVAir** for \$800,000, allowing the start-up of service to the nation's capital in July.

The Poughkeepsie-based regional is one of three "American Eagle" code-sharing partners purchased into the **American Airlines** family. AMR Corporation pays \$24.5 million for the company's independence in July, with the transaction completed on September 30. The year's customer bookings advance by 35% to 565,900 and revenues rise 39% to \$32.5 million. Net profit is a record \$2.1 million.

The Command fleet in **1989** includes 12 chartered Shorts 360-360s and 5 ATR42-300s. The carrier is now reconfigured to provide feed to its parent exclusively at New York (JFK) from 14 northeastern cities. The inaugural flight of an ATR42-300 in "American Eagle" colors occurs in January, between White Plains and Washington, D.C. (National Airport).

Passenger boardings during the 12 months swell 8.8% to 615,667.

Unknown at the time, **1990** is Command's last full year. A sixth ATR42-300 is leased, but, despite the introduction on December 2 of thrice-daily SAAB 340B roundtrip services to Rochester and Washington, D.C. (IAD), Command is the only "American Eagle" subsidiary to suffer a traffic decline. The Poughkeepsie-born large regional sees its customer bookings decline 17% to 510,951.

On June 1, **1991**, the carrier is merged into **Nashville Eagle** to form **Flagship Airlines**.

COMMAND AIRWAYS (PTY.), LTD.: South Africa (1977–1983). This helicopter shuttle is formed at Johannesburg in September **1977** to provide a connection between Jan Smuts Airport and heliports in Pretoria. Return services are initially flown, beginning on November 1, six times daily under the name **Magnum Helicopter Airlines (Pty.), Ltd.** employing 4 Bell 206B JetRangers.

Upon the formation of **Magnum Airlines (Pty.), Ltd.** in **1978**, the rotary-wing operator is renamed **Command Airways (Pty.), Ltd.** As a result of the early **1980s** decline in traffic arriving in South Africa, the carrier is unable to maintain viability and shuts down in **1983**.

COMMERCIAL AIR HIRE, LTD.: United Kingdom (1934–1936). Capitalized at £500 and equipped with a single de Havilland DH 84, the specialized CAH is registered at London on August 7, **1934**. Thereafter early morning newspaper flights are undertaken London (Croydon)–Paris by a Monospar ST.4.

The company's 3 Monospar ST.4s and single de Havilland DH-84 Dragon are employed on April 14, **1935** to start an ad hoc London airport service (Croydon–Heston); designed to eventually link all area airports, the service does not significantly grow. The company is renamed **Air Dispatch, Ltd.** in **1936**.

COMMERCIAL AIR LINES, INC.: Philippines (1946–1948). With backing from Filipino-Chinese millionaire Alfonso SyCip, a group of former USAAF pilots establish this small nonscheduled carrier at Manila during the first quarter of **1946**. A pair of former military Douglas C-47s and are employed to start ad hoc flights around the archipelago, all the way south to Davao.

The company receives a scheduled service permit from the Philippine Civil Aeronautics Commission on July 22, **1947**, and with a newly acquired C-54, launches roundtrip flights to Amoy, Shanghai, and Hong Kong.

The fleet at the beginning of **1948** comprises 12 C-47s, the DC-4, and 9 Noorduynd C-64 Norsemen. On April 15, one of the latter, conducting a flight-seeing service over Mati, close to Davao, crashes; all 12 passengers are killed, including 9 children. The disaster turns public opinion against this irregular company and on September 1 it sells out to **Philippine Air Lines (PAL)**.

COMMERCIAL AIR SERVICES (PTY.), LTD.: South Africa (1943–1967). The brainchild of three South African airmen, A. C. Joubert, Leon Zimmerman, and J. M. S. Martin, while in Egypt in September **1942**, CAS is formed and registered at Johannesburg as a small charter and FBO company during **1943**. World War II prevents the start-up of operations until **1945**, when the Cessna dealership for South Africa is procured.

Joubert, Zimmerman, and Martin locate 10 Cessna UC-78 Bobcat military utility transports (some sources will suggest the planes are Fairchild UC-61 Arguses) at Cairo. Purchased for £1,000 each from the U.S. Foreign Liquidations Commission, they are ferried to Rand Airport, Germiston, near Johannesburg, between March and May **1946**.

The inaugural return charter is flown on July 14 to Durban. The following month, the company receives a pair of Cessna 140s, which it quickly sells. The sale of additional units over the years will enhance corporate profits. At the beginning of the third quarter, L. E. Shagam establishes **Commercial Air Services (Natal) (Pty.), Ltd.** as a subsidiary at Durban and starts nonscheduled services employing a Bobcat leased from Joubert & Co. A Bobcat is also chartered to D. A. Eardley's new **Commercial Air Services (Rhodesia), Ltd.**, which is based at Bulawayo.

Destinations visited by Commercial Air Service during the year and into **1947** include Nairobi, Leopoldville, Stanleyville, Cairo, Luanda, Lagos, and Accra, as well as points throughout South Africa. Additionally, plans are made to operate scheduled services as a feeder for **South African Airways (Pty.), Ltd. (SAA)**.

In need of additional capitalization, the carrier sells a half interest in itself to **Airwork, Ltd.** during the year. Airwork, which for some years has been widely known for its work in Egypt as Misr Airwork, Ltd., is winding down its involvement in that country and is ready for a new challenge. Miles D. M. Wyatt, the chairman of Airwork, becomes chairman of Commercial Air Services, but the three cofounders are left to operate the company on the scene.

Employing 3 Cessna 195s, the company launches scheduled services in July **1948** over a route from Johannesburg to Durban via Kroonstad, Odendaalsrust, Bloemfontein, Bethlehem, and Ladysmith.

The route is not profitable and, in May **1949**, the service becomes a daily return flight between Rand Airport and the gold-mining Orange Free State town of Welkom. This route is not profitable either. When Mr. Martin, now company leader in South Africa, and his associates announce their intention to drop it, the Anglo American Corporation, which operates the Free State Goldfields, steps in with subsidy. The funds thus gained allow Commercial Air Services to purchase a pair of

de Havilland DH 89A Dragon Rapides from **Central African Airways Corporation** in October.

When L. E. Shagham departs for Israel late in the year, his stake in **Commercial Air Services (Natal) (Pty.), Ltd.** is acquired and that company becomes a wholly owned subsidiary.

Operations continue apace in **1950** and late in the year, and in **1951** the fleet is further enhanced by the addition of two de Havilland DH 104 Doves (one purchased and one leased) from **Airwork, Ltd.** These enter service in May, but will prove extremely unreliable and expensive to operate.

Employing Cessna 195s, the company finally begins flying a return service 20 times a week from Durban to Margate in late **1952**. Anxious that it be maintained, the Anglo American Corporation steps forward to offer a £10,000 grant with which to acquire spare parts for the costly Doves. Despite this funding, the company loses money; to no one's surprise, auditors point out that the loss is due to the continuing high cost of flying DH 104s.

CEO Martin signs a £25,000 contract for the purchase of 2 ex-SAA Lockheed Model 18 Lodestars and spare parts from **East African Airways Corporation** in January **1953**. The purchase is made after consultations with **Airwork, Ltd.**, Anglo American Corporation, and undoubtedly with **South African Airways (Pty.), Ltd. (SAA)**, which has flown the Lodestars. The owned Dove is sold to raise funds with which to make the initial payment. Lodestar service begins in April.

The Durban–Margate route is withdrawn in May **1954** and replaced the following month with a brief Welkom–Prieska service via Bloemfontein and Kimberley.

Operations continue apace in **1955–1960**. Cofounder A. C. Joubert departs the company during the former year to seek his fortune in Rhodesian tin mining. During these years, the Durban–Margate service is resumed and a newspaper delivery route is opened between Durban and Port Elizabeth. Three more Lodestars are acquired. During the latter year, **British United Airways, Ltd.** acquires **Airwork, Ltd.**, together with the CAS stake.

By **1959–1961**, Commercial Air Services is providing 11-times-a-week return services between Johannesburg and Welkom, plus Saturday-only flights between Welkom and Durban. Also during the decade's final year, a daily roundtrip is inaugurated from Bulawayo to Umtali via Fort Victoria and Salisbury.

The **British United Airways, Ltd.** interest is purchased by Martin and Zimmerman in **1962**. The following year a Douglas DC-3 is purchased out of Canada and is placed into service on the Johannesburg to Welkom route. A new Cessna 195 service is initiated to Phalaborwa in **1963**, but proves so popular that the lift capacity of the L-18s must be assigned to it.

In **1964**, a Cessna 205, later replaced by Lodestars and a larger C-206 Super Skywagon, launches a new roundtrip route from Johannesburg to Sishen via Vryburg, Kuruman, and Hotazel. Later in the year, a second DC-3 is purchased by **Swissair, A.G.**

By **1965**, the company is operating a fleet of 5 Cessnas, 2 Douglas DC-3s, and 5 L-18 Lodestars; M. McFarland becomes general manager. The Welkom terminus is extended by Cessnas to Norvalspont beginning on February 1.

Having shared the risk with Martin and Zimmerman for three years, Max Geffin is now bought out by the latter. A third DC-3 is purchased from **Alitalia, S.p.A.**; a total of 15,711 passengers are flown on the year.

Airline employment in **1966** stands at 155. DC-3 service is undertaken from Johannesburg to Durban, Phalaborwa, and Skukuza.

Plans are made to completely restructure the company and it public. At the end of the year, a new subsidiary, Aircraft Distributors of Southern Africa (Pty.), Ltd., is formed to handle aircraft sales, which now include Hughes Helicopters, as well as Cessna.

In partnership with Letaba Safaris, CAS undertakes Cessna flight-seeing and tourist services to the national game parks during the spring of **1967**.

More importantly, company airmen begin operating SAA DC-3s on scheduled flights to, from, and between Cape Town, Oudtshoorn,

George, Plettenberg Bay, Port Elizabeth, Grahamstown, Queenstown, and East London. This contract service allows the state carrier to assign its own flyers to its newer Vickers Viscounts and Boeing 727-44s.

Basutair, Ltd. is reformed into **Lesotho Airways (Pty.), Ltd.** during midyear, with the assistance of Commercial Air Services. Basutair's founder and managing director, Richard Southworth, remains in charge. A Douglas DC-3 is wet-leased from CAS and, under contract to the government, it is employed, beginning on October 2, to offer a scheduled weekly roundtrip between Maseru and Johannesburg. A second weekly roundtrip is offered as a pooled frequency in partnership with **South African Airways (Pty.), Ltd.**

The long-anticipated CAS corporate reorganization occurs on November 1 with the formation of Comair Holdings (Pty.), Ltd., which will operate the renamed **Comair (Commercial Airways [Pty.], Ltd.)** and Aircraft Distributors of Southern Africa as subsidiaries. Shareholding is traded on the Johannesburg Stock Exchange.

COMMERCIAL AIR SERVICES (NATAL) (PTY.), LTD.: South Africa (1946–1952). L. E. Shagham establishes CAS (Natal) as a subsidiary of **Commercial Air Services (Pty.), Ltd.** at Durban on **1946**. Revenue flights to Margate commence with a single Cessna UC-78 Bobcat leased from the parent.

When Shagham departs for Israel in **1949**, his stake is purchased by CAS, which continues to operate under the direction of E. T. Watkinson. A Cessna 170 is leased from **Commercial Air Services (Pty.), Ltd.** and flights continue into **1952**.

COMMERCIAL AIR SERVICES (RHODESIA), LTD.: Southern Rhodesia (1946–1960). The brainchild of three South African airmen, A. C. Joubert, Leon Zimmerman, and J. M. S. Martin, while in Egypt in September 1942, **Commercial Air Services (Pty.), Ltd.** had been formed and registered at Johannesburg as a small charter and FBO company during 1943. World War II prevented the start-up of operations until 1945, when the Cessna dealership for South Africa is procured.

Joubert, Zimmerman, and Martin locate 10 Cessna UC-78 Bobcat military utility transports (some sources will suggest the planes are Fairchild UC-61 Arguses) at Cairo. Purchased for £1,000 each from the U.S. Foreign Liquidations Commission, they are ferried to Rand Airport, Germiston, near Johannesburg, between March and May **1946**.

During the ferry flights south, Joubert and Martin stop at Bulawayo, where they enter into a relationship with local entrepreneur D. A. Eardley. In August, with assistance from the South Africans in the form of a leased Bobcat, Eardley forms Commercial Air Services (Rhodesia), Ltd. and launches nonscheduled services.

A hangar is purchased at Kumalo Airport in February **1947** and a Piper J-3 Cub and de Havilland DH 82 Tiger Moth are acquired with which to begin a flight school. It also becomes Rhodesia's Cessna dealer and brings in one each Cessna 120 and C-140. Late in the year, the flight school aircraft are sold as an order is placed for a C-170.

The larger Cessna is delivered in October **1948**. A year later, a C-195 is acquired from **Commercial Air Services (Pty.), Ltd.** In **1950**, the company receives a contract from the Bechuanaland Protectorate to operate a scheduled twice-monthly return service from Bulawayo to Maun via Francistown. It is launched in early **1951** with a second C-195, which was acquired with funds received from the sale of the C-120 and C-140.

A third C-195 arrives in August **1952** as the C-170 is withdrawn and sold. Early in **1953**, an asbestos concern contracts for personnel flights with the company, but specifies that a twin-engine plane be employed. As a result, a Beech 18 is acquired with which to begin the corporate service in August. Flights continue apace in **1954**.

In **1955**, the Central Africa Air Authority grants CAS (Rhodesia) permission to inaugurate a C-195 route from Bulawayo to Livingstone via Wankie. This is the last significant development in the carrier's history prior to its merger, with several other small airlines, to form **Rhodesia United Air Carriers, Ltd.** in December **1960**.

COMMERCIAL AIR TRANSPORT: United States (1928–1930). CAT is organized at Seattle in late fall 1928 to offer international flights to Vancouver, British Columbia. Employing a Ryan B-1 Brougham, the carrier inaugurates scheduled service in December to take advantage of the possibilities of generating Christmas traffic.

The operation is continued until 1930.

COMMERCIAL AIRLINES. See **AMERICAN INTERNATIONAL AIRWAYS (2)**

COMMERCIAL AIRWAYS, LTD.: Canada (1929–1930). Employing the Fokker Model 4 Universal of **Western Canada Airways, Ltd.**, C. H. “Punch” Dickens makes the first airmail flight into the northern part of western Canada on January 23, 1929. The route runs from Fort McMurray to Fort Simpson.

A monthly service is opened from Fort McMurray to Herschel Island via Aklavik and Mackenzie River on November 26. Between December 10 and 30, 2 Bellancas are employed by W. R. “Wop” May and I. Glyn Roberts to carry mail (a remarkable 120,000 letters) the 1,676 miles from Fort McMurray to Aklavik; this is the first official airmail flown in the Canadian Arctic and is a 17-day, multistop undertaking.

A scheduled service is operated in early 1930 between Lethbridge and Edmonton via Calgary. On November 25, the company is one of several merged to form **Canadian Airways, Ltd.**

COMMERCIAL AVIATION COMPANY (PTY.), LTD.: Australia (1927–1934). Late in 1927, Capt. H. C. Miller founds the **Commercial Aviation Company (Pty.), Ltd.** at Adelaide. With financial support from Sir MacPherson Robertson, Miller purchases a de Havilland DH 61 in the spring of 1928; it is christened *Old Gold* and employed to inaugurate thrice-weekly and weekly, respectively, Adelaide–Renmark and Adelaide–Mount Gambier services.

A route is established to Broken Hill in 1929; Adelaide–Port Pirie service is started in 1930 and Whyalla is added to the route network in 1931. A Fokker Model 4 Universal is purchased in 1933.

Robertson subsidizes the start of weekly Fokker service on January 19, 1934 over a route Adelaide–Kimba via Port Pirie and Whyalla. As a result of the investment, the carrier’s name is now changed to the **MacRobertson-Miller Aviation Company (Pty.), Ltd.**

COMMODORE AVIATION (PTY.), LTD.: Australia (1979–1986). Privately owned, this commuter operator is formed at Port Lincoln, South Australia, in January 1979. Employing a Cessna 402 and a Piper PA-23 Aztec, nonscheduled charter services commence in March. Once government permission is received, scheduled flights are able to begin on May 23 over a route from Adelaide and Ceduna. During the next two years, the fleet is upgraded by the addition of 3 Cessna 337s; Minlaton and Streaky Bay are added to the route network.

In 1981–1983, another Cessna 402 and a Piper Navajo are acquired. Following the failure of **Trans-Regional Airlines (Pty.), Ltd.** in 1984 the company enlarges its service area to include Broken Hill, Leigh Creek, Penneshaw, Port Augusta, and Whyalla.

Unable to fiscally handle the expansion, Commodore is forced to shut its doors in 1986.

COMMUNITY EXPRESS, LTD.: United Kingdom (1994–1996). Brian Day establishes Community Express at Bristol’s Lulsgate Airport in July 1994 to offer scheduled domestic commuter services. A significant 49% minority shareholding is taken by the U.S.-based **Mesa Air Group**. Mesa executives Robert Dynan and W. Stephen Jackson are named to CE’s five-member board of directors.

Plans are announced for the inauguration of four-times-a-day round-trips between London (LGW) and Birmingham.

After considerable start-up difficulty is resolved, a single Shorts 360-100 is leased from Mesa during the summer of 1995. It is employed by

the 30-worker company to inaugurate the four daily flights in November from Birmingham and East Midlands to London (LGW).

A second chartered Shorts 360 enters service in the spring 1996, followed by a pair of leased British Aerospace BAe Jetstream 31s, one each in May and June. These initiate new services from London (LGW) to Bristol and Cardiff.

The added capacity and destinations cannot reverse a decline in fortunes. In September, the carrier halts service and is placed into receivership. During the 9 months of the year it has operated, CE transports a total of 24,745 passengers.

COMMUTAIR: 518 Rugar Street, Plattsburgh, New York 12901, United States; Phone (518) 562-2700; Fax (518) 562-8030; <http://www.commutair.com>; Code TH; Year Founded 1989. Following the sale of **Brockway Air** to **Metro Airlines**, unemployed officials of the former, led by Anthony von Elbe, establish Commutair at Clinton County Airport in Plattsburgh, New York in late spring 1989. Von Elbe becomes chairman/CEO, with John A. Sullivan Jr. as president. A contract is negotiated with **USAir** and a fleet of 9 Beech 1900Cs is acquired.

“USAir Express” feeder flights begin on August 1 from communities in northern New York, including Syracuse and Albany, and throughout New England to the major’s hubs at Boston and New York.

By year’s end, a total of 31,724 passengers have been transported.

The fleet is increased in 1990 by the addition of 3 more Beech 1900Cs. Passenger boardings accelerate to 237,801. Thrice-daily “US-Air Express” service is initiated in September 1991 from Boston to Binghamton and Utica, New York. In December, an order is placed for 20 Beech 1900Ds.

The company’s 18 Beech 1900s haul a total of 342,899 passengers, a boost of 44.2%. Revenues are \$29.64 million.

Nine Beech 1900Ds join the fleet in 1992. While on initial approach to Saranac Lake, New York, on a January 3 service from Plattsburgh, a Beech 1900C with two crew and two passengers strikes a 2,280-ft. wooded mountaintop near Gabriels and crashes (two dead).

The first of 20 Beech 1900Ds is delivered in August. Customer bookings rise 12.5% to 385,609 and revenues ascend 27.7% to \$41 million.

In 1993, airline employment stands at 175 employees and the fleet totals 23 Beech 1900s. Passenger boardings climb another 26.5% to 487,983.

Four additional Beech 1900s arrive in 1994 and help customer bookings to advance 12.7% to 550,174. The workforce is 280 in 1995 as one more Beech 1900 enters service. Enplanements jump 11.5% to 613,576. Operating income of \$61,240,348 is generated.

The employee population is increased by 13.8% in 1996 to 370 and the fleet now comprises 19 Beech 1900s. Passenger boardings accelerate 10.5% to 662,568 and revenues jump 23.3% to \$79.84 million.

On February 27, 1997, **USAir** is renamed **USAirways** and “USAir Express” becomes “USAirways Express.” During the remainder of the year, Chairman/CEO von Elbe’s regional will begin to paint its aircraft in a modified version of the major’s new grey and dark blue livery.

Customer bookings inch up 0.2% to 663,954, while operating revenues 2.9% to \$77.8 million.

Flights continue in 1998. The fleet at the beginning of the year includes 30 Beech 1900Ds. Passenger boardings fall 6.1% to 635,729. Revenues slide to \$76.4 million.

Passenger boardings fall 3.4% to 601,000. Operating revenues advance 7.8% to \$82.43 million as expenses climb 9.8% to \$69.93 million. At \$12.41 million, the operating gain is nearly level, but net profit rises to \$11.49 million.

On June 15, the carrier signs a comprehensive marketing agreement with **Continental Airlines** under which it becomes a “Continental Connection” carrier before the end of the year. The carrier serves notice on September 12 that it will end its ‘USAirways Express’ relationship in December.

The company's fleet replacement program continues apace towards the goal of exchanging 26 of 31 aircraft. By late October, 11 Beech 1900Ds have been delivered, including the 400th of its type to be manufactured.

CommutAir formally becomes a "Continental Connection" affiliate on November 12; the same day, service to Plattsburg, Poughkeepsie, and Saranac Lake ends.

The 'USAirways Express' arrangement officially ends on December 4. Two days later, four-times-a-day "Continental Connection" Beech 1900D return service is inaugurated from New York (LGA) to Rochester, along with five-times-a-day roundtrips to Syracuse and Albany.

COMMUTAIR OF MICHIGAN: United States (1975–1976). Commutair of Michigan is set up at Pontiac in 1975 to provide scheduled passenger and cargo services to regional destinations. Employing a single de Havilland Canada DHC-6-100 Twin Otter, the commuter duly inaugurates daily roundtrip frequencies linking its base with Detroit, Toledo, and Lima. Services cannot be maintained a year.

COMMUTAIRE INTERNATIONAL AIRWAYS: United States (1976–1977). CIA is established at Miami in 1976 to provide scheduled roundtrip passenger and cargo services to intrastate destinations. Employing a pair of Britten-Norman BN-2 Islanders, the commuter duly inaugurates daily frequencies linking its base with West Palm Beach, Boca Raton, Ft. Lauderdale, and Key Largo.

Services are maintained into 1977.

COMMUTE AIR: United States (1967–1968). Chester C. Johnson founds Commute Air at Spokane, Washington, in early 1967 to offer scheduled passenger and cargo services to regional destinations. Employing a Cessna 402 and a Grumman G-44 Widgeon, the new entrant inaugurates flights on April 1 linking its base, by year's end, with Kalispell, Moses Lake, Wenatchee, Seattle, Sandpoint, Libby, Kalispell, Poison, and Missoula.

Having expanded rapidly, "The Northwest's Fastest Growing Air Carrier," as it bills itself, cannot achieve economic viability and becomes one of the fastest dying, shutting its doors in 1968 before its first birthday.

COMMUTER AIR PHILIPPINES: Philippines (1990–1996). CAP is formed at Domestic Airport in Pasay City in 1990 to provide scheduled regional passenger and cargo services. Charles Miller Jr. is named managing director and revenue services are inaugurated with a start-up fleet of 4 Beech 18s.

Operations grow during 1991–1995 and a Douglas DC-3 is placed into service, replacing 2 of the Beechcraft. The concern shuts down in late 1996.

COMMUTER AIRLINES (1): United States (1962–1982). With the most generic of names, this third-level carrier is established by Jerry Winston at Binghamton, New York, in the summer of 1962 to offer nonscheduled passenger and cargo services to Washington, D.C. (DCA). Employing a Beech 18 and several Piper PA-23 Aztecs, the company initiates revenue services on October 12. Operations continue apace through 1963 and, beginning on October 12, 1964, the New York–Washington, D.C., route becomes scheduled.

On March 22, 1970, a Beech 18 fails its takeoff and crashes at Binghamton's Broome County Airport (three dead). No more fatalities are reported throughout the 1970s. The fleet is altered, with the Beech 18s replaced by de Havilland DH 104 Doves followed by Piper PA-31-10 Navajos and Fairchild-Swearingen Metroliners. A significant northeastern route network is established as Boston, New York (LGA), Utica, Ithaca, Elmira, and White Plains are all visited.

Convair CV-580s are acquired in 1978. On September 23, White House official Midge Shubow reports the opening of a government investigation into the question of why commuter airlines are exempted from CAB over-booking regulations. The action stems from the com-

pany's attempt to bump consumer adviser Esther Peterson from a flight despite the purchase of a ticket four weeks in advance.

A Midwest division is established in 1979 and operated under the name **Freedom Airlines**. The company's 12 aircraft transport 10,000 passengers and 6,000 pounds of freight during the year.

By 1980, President Winston's eastern company is also serving Elmira, Ithaca, White Plains, New York (JFK and LGA), Newark, Boston, and Wilkes-Barre/Scranton. The fleet comprises 4 Swearingen Metro IIs, 7 Piper PA-31-350 Navajo Chieftains, and 1 PA-31 Navajo. Collectively, these transport 83,000 passengers during the year, a spectacular increase. A 10-day strike by pilots ends on December 5 with a 9.5% wage increase over the next five years.

In November 1982, Commuter Airlines and its **Freedom Airlines** subsidiary combine services under the Freedom name, choosing to emphasize flights into the Midwest.

COMMUTER AIRLINES (2): United States (1965–1970). Paul G. Delman sets up the second Commuter Airlines at Sioux City, Iowa, in the fall of 1965 to provide scheduled passenger and cargo flights to Chicago via Marshalltown and Ames. Daily roundtrip Beech B-80 Queenaire revenue services commence on November 17 and continue apace through 1966.

One of the first regional airlines to adopt the hub-and-spoke pattern of airline operations over a traditional linear route network, Commuter transfers its headquarters to Chicago's Meigs Field in 1967. Employing Beech 99s, the enlarged operator begins flying to Springfield, Elkhart, Detroit, Sheboygan, and Peoria.

The airline is able to remain in business until May 1970.

COMMUTER AIRLINES OF CHICAGO: United States (1966–1970). Chuck Downey establishes Commuter Airlines of Chicago at Meigs Field in 1966. Employing a Beech B-80 Queenaire and a Beech 99, Downey's firm inaugurates scheduled daily roundtrips linking its base with Chicago (ORD), Detroit (DET), Elkhart, and Springfield.

Operations continue apace until the carrier is purchased by and merged into **Hub Airlines** in September 1970.

COMMUTER EXPRESS, LTD.: Canada (1984–1988). Founded in 1979, **Soundair, Ltd.** (formerly **Owen Sound Air Service, Ltd.**) undertakes charter services from its base at Wiarton, Ontario. As a result of the USA/Canada Special Air Services Agreement signed in 1984, the company receives government permission to begin a two-year experiment in providing third-level international commuter flights from a base at Toronto.

At the same time, **Soundair, Ltd.**, having purchased the assets of financially distressed **Aero Trades Western, Ltd.** of Winnipeg, is reconfigured as a holding company for the operation of two airline subsidiaries, **Soundair Express, Ltd.** and **Commuter Express, Ltd.**

Employing a fleet of Fairchild-Swearingen SA-226 Metro IIs and Merlin IVs painted in burgundy and gray livery, Commuter Express, Ltd. inaugurates its first scheduled passenger service in the fall linking Winnipeg with Calgary via Prince Albert. Thrice-daily international roundtrip passenger frequencies to and from Columbus commence on December 17.

Thrice-daily flights begin to Dayton, Ohio, in May 1985, followed by service to Toledo in December. Enplanements for the first full year reach 25,000.

Daily flights begin to Akron and Canton in March 1986. Metro III frequencies are also inaugurated to Lansing, Michigan, and Youngstown, Ohio, in late spring and early summer, with twice-daily service to Fort Wayne, Indiana, beginning in November. The fleet now comprises 10 Fairchild Metro IIIs.

Discussions are begun with **Air Canada, Ltd.** on the possibility of the experimental carrier, which is now deemed a success worthy of expansion, becoming an "Air Canada Connector" code-sharing partner. Meanwhile, bookings for the year climb to 35,000.

The Toledo and Fort Wayne frequencies are suspended in April 1987 for lack of traffic and are replaced by services to the Michigan cities of Saginaw and Grand Rapids. Toronto to Allentown and Harrisburg frequencies commence in August. The operation becomes an **Air Canada, Ltd.** commuter partner in November; the fleet is now repainted in "Air Canada Connector" livery. Passenger boardings increase by 50% to 60,000.

The company image is further reformed in March 1988 when it is re-named **Air Toronto, Ltd.**

COMMUTERS AIR SERVICE: United States (1932). Employing a Travel Air 6000, this short-lived New England feeder is formed at Springfield, Massachusetts, in the late spring of 1932. Once a Stinson Jr. S and a Sikorsky S-39B are acquired, the operator inaugurates scheduled passenger and air express services to Hartford, Connecticut, in August.

Traffic is insufficient to justify the continuance of operations beyond October.

COMPAGNIE AERIENNE DU LANGUEDOC, S.A. (CAL): France (1976–1988). CAL is formed at Aerodrome d'Albi in 1976 to provide scheduled regional passenger flights; Robert De Ros is appointed chairman. With a fleet of 4 Swearingen Metro IIs and 2 Beech 99s, twice-daily flights are inaugurated linking Le Puy and Paris and Clermont-Ferrand with Bordeaux, Toulouse, and Lyon. These services are maintained throughout the remainder of the decade.

In the early 1980s, the fleet is upgraded to include 3 Metro IIs, 2 Nord 262s, and 1 Embraer EMB-110. Additional destinations are added in southern and central France, including Marseilles, Nice, and Bergerac.

In 1986, Managing Director Rene Mauries acquires another Nord 262 and three additional Metroliners. Epinal and Clermont join the route network in 1987. Expenses outrun income in 1988, forcing the carrier to stop flying.

COMPAGNIE AERIENNE FRANCAISE, S.A. (CAF): France (1919–1922). This company is formed at Paris in early 1919 and launches service between Nîmes and Nice on April 17. In cooperation with the British carrier **Aircraft Transport and Travel, Ltd. (AT & T)** and the French railroads, air and rail operations begin in February 1920, allowing passengers the possibility of flying or riding from London to Nice. Following the arrival of an AT & T aircraft at Paris, customers ride the rails to Avignon before boarding a CAF airliner for Nice.

A similar service is opened in 1922, Paris–Cherbourg. However, the carrier ceases operations before year's end.

COMPAGNIE AERIENNE FRANCO-CANADIENNE, LTD.: Canada (1927–1930). The Compagnie Aérienne Franco-Canadienne is established at Gaspé (Quebec) in 1927 to undertake aerial mapping flights over the Gaspé Peninsula on behalf of the provincial government. The noted World War I French squadron commander, Count de Lesseps, is persuaded to become general manager and chief pilot.

A base is established at Gaspé Basin and another at Goose Lake and the operation is outfitted with 5 Schreck FBA-17 amphibians. While photographing the Gaspé shoreline on October 18, de Lesseps is forced down in a storm near Mont Joli. Seven weeks later on December 4, his body is found at Clambank Cove, Port au Port Peninsula, Newfoundland.

Operations continue in 1928 and, during 1929, this Quebec-based pioneer employs a Schreck FBA-17 amphibian to inaugurate passenger flights along the St. Lawrence River. A weekly contract mail route between Oskelaneo and Chibougamau begins on December 20. When the mail subsidy ends in 1930, the carrier stops flying.

COMPAGNIE AERONAUTIQUE EUROPEENNE, S.A. (CAE): Aeroport Marseilles, Provence BP127, Marcella, F-13729, France; Phone 04.42.79.70.40; Fax 04.42.89.96.09; http://www.com2i.fr/cae; Code C9; Year Founded 1991. CAE is established at Liege in May 1991 to offer regional charter services and to undertake a scheduled service to Paris (CDG). Charles Petiteau is appointed chairman and revenue flights commence in September with a pair of Fairchild Metro IIIs.

asis upon cargo services. The carrier begins daily delivery of Italian newspapers into France.

Flights to Maastricht are started in 1993 and to Orly Airport at Paris in 1994. For the latter service, a Beech Super King Air 200 is placed into service. Air ambulance services are also introduced.

Operations continue apace in 1995–2000. During these years, capitalization reaches FFfr 1.9 million and the Super King Air 200 is replaced with another Metro III and orders are placed for 2 British Aerospace (BAe) Jetstream 32s. The workforce reaches 25, including 15 pilots.

The company also comes to specialize in the transport of dangerous goods, flying over 80% of all such services in France during 1996 alone.

Charters are operated further abroad, particularly along the Mediterranean coast and in Northern Europe. In mid-1997, scheduled flights are inaugurated from Paris to Maastricht via Liege.

COMPAGNIE AIR LITTORAL, S.A. See AIR LITTORAL, S.A.

COMPAGNIE AIR PROVENCE INTERNATIONAL, S.A. See AIR PROVENCE INTERNATIONAL, S.A.

COMPAGNIE AIR TRANSPORT, S.A.: France (1946–1953). A subsidiary of **Air France** and **Compagnie Generale Transatlantique, S.A.**, CAT is set up in 1946 to provide scheduled Douglas DC-3 services to North Africa. Revenue flights commence from Paris, Lyon, Marseilles, Toulouse, and Basel to Algiers, Constantine, and Oran. During the summers, charter flights are offered to vacation travelers between London and Deauville and Le Touquet.

Services continue apace, but, as profits decline in the early 1950s, the carrier appears headed for bankruptcy. Instead, on May 23, 1953, the airline is merged with **Compagnie Generale de Transport Aériens, S.A.** to form **Air Algeria (Compagnie Generale de Transport Aériens, S.A.)**.

COMPAGNIE ALGERIENNE DE TRANSPORT AERIENS, S.A. (CATA): France (1947–1950). CATA is set up at Philippeville in 1947 to provide Algerian local services. Employing a fleet of 4 Douglas DC-3s and 4 Nord NC-702 Martinets, the company undertakes scheduled flights from Algiers to Biskra, Constantine, and Setif.

Service continues apace until January 1950, when the airline is taken over by **Societe Aigle Azur, S.A.**

Two Fairchild Merlin IVs join the fleet in 1992, allowing further emphasis. **COMPAGNIE BELGE DE TRANSPORTS AERIENS, S.A. (COBETA): Belgium (1945–1950).** This independent is formed at Brussels in 1945 to provide contract services. Employing Douglas DC-3 aircraft leased from **Scottish Aviation, Ltd.**, twice-weekly flights are undertaken between the Belgian capital and Manchester and Glasgow, beginning on July 12, 1947. Operations continue apace in 1948–1949.

Unable to successfully compete against the state-owned **Sabena Belgian World Airlines, S.A.** the airline ceases trading in 1950.

COMPAGNIE CORSE MEDITERRANEE, S.A. See **CORSE MEDITERRANEE, S.A.**

COMPAGNIE D'AFFRETEMENTS ET DE TRANSPORTS AERIENS, S.A (CATAIR): France (1969–1981). Catair is organized at Paris (CDG) in the spring of 1969 to offer passenger and cargo operations. C. Slama is named president with J. Prabonneau as managing director. A fleet is assembled that initially comprises 4 Lockheed L-1049C Constellations purchased from the flag carrier **Air France**.

An L-1049C with four crew is cleared to land at Douala on August 9—and disappears. Wreckage is found three days later 80 km. NE of the airport and there are no survivors.

A fifth replacement L-1049C arrives from **Air Fret, S.A.** in 1970. Revenue flights are, meanwhile, inaugurated to various destinations in Europe, the Mediterranean, and North Africa.

Operations continue throughout the 1970's and the fleet is changed; gone are the Super Connies, replaced with 1 Sud-Est SE-210 Caravelle XII and 5 Caravelle VIs. As energy expenses rise and traffic falls due to recession, the carrier is unable to maintain viability and shuts its doors in 1981.

COMPAGNIE DE CHARGEURS REUNIS, S.A.: France (1936–1943). Chargeurs Reunis is established at Dakar during the first quarter of 1936 to offer scheduled roundtrip services along the West African coast to Casablanca from harbor buoys employed as seadromes. The first 2 Sikorsky S-43s arrive on June 27 and July 7, respectively, and enter service.

Operations continue apace in 1937 and a third S-43 is delivered on January 21, 1938. Acquired in an unsuccessful effort to establish a new flying boat route, the S-43 owned by **DNL Norwegian Airlines, A.S.** is purchased by the French line on September 14.

Services continue following the establishment of Vichy in 1940; however, the carrier ceases in 1943 and the surviving aircraft escape to join the Free French service being operated from Abidjan.

COMPAGNIE DE TOURISME MONDIAL. See **LEBANESE INTERNATIONAL AIRLINES, S.A.L.**

COMPAGNIE DE TRANSPORT AERIEN, S.A. (CTA GENEVA): Switzerland (1978–1993). This carrier is organized at Geneva on September 28, 1978 to assume the assets and services of the bankrupt charter carrier **Societe Auxiliare de Transport Aerien, S.A. (SATA)**, which ceases trading in October. Upon formation, 57% of the \$18-million shareholding is taken by **Swissair, A.G.**, with the remaining 43% going to the French-speaking Swiss cantons.

With a staff of 116 (mostly ex-SATA employees) and 3 ex-SATA Sud SE-210 Caravelle XRs purchased out of receivership, inclusive-tour flights commence on November 2. En route from Geneva, a Caravelle crashes into the sea near Funchal, Madeira, on December 18 (33 dead).

Destinations are added in North Africa and Europe in 1979, including Greece and the Canary Islands. Enplanements for the first full year of operation total 119,551. In December, a net loss of \$791,871 is reported for the period of operation since start-up.

Airline employment is increased by 12.1% in 1980 to 130. **Swissair** installs a new management team for its subsidiary; **Swissair, A.G.** Vice president Rolf Kraehenbuehl becomes chairman with Rolf Kressig as president; a fourth Caravelle XR joins the fleet.

As the result of increased efficiencies and a boost in passenger boardings of 51.1%, to 244,480, the charter airline begins to turn around. Revenues advance by 58.2% to \$25.3 million, but expenses are up by 52.4% to \$25.6 million. Although an operating loss of \$330,864 is absorbed, a net profit of \$163,965 is earned.

The workforce is increased by 3.3% in 1981 to 124. The 4 Caravelle XRs transport a total of 149,000 passengers, a 21.1% boost. On rev-

enues of \$28.2 million and expenses of \$29.4 million, a \$1.75-million loss is suffered. Boardings in 1982 are 281,700.

Enplanements drop to 273,000 in 1983; however, sufficient revenues are generated to allow payment of an initial 5% dividend to shareholders.

As additional revenues are received in 1984–1985, the profit lines grow; in the latter year, the net income is a record \$600,000 and the dividend is increased to 6%.

Capitalization is increased in 1986 from SFr 10,500,000 to SFr 23,600,000 (\$12 million), with a portion of the new stock offered to the public. At this point, 39% of all traffic is to Greek holiday destinations and all 4 Caravelles are fully amortized. The refinancing allows a \$115.6-million order to be placed for 4 MD-87s.

Enplanements for the year total 135,205 and the profits are \$850,000 (operating) and \$2 million (net).

While anticipating the arrival of its new jetliners, the Swiss operator suffers a difficult 1987. Passenger boardings decline 8% to 125,190 and revenues are off 13.3% to \$37.8 million. Operating income declines to \$550,000, but net gain rises to \$2 million.

The first MD-87 arrives in May 1988 followed by the second shortly thereafter. In June, the first of the McDonnell Douglas aircraft begins replacement flights for **Swissair**, operating five-times-per-week flights to Warsaw, Birmingham, Amsterdam, and Paris (CDG).

Operations continue apace in 1989 as the last 2 of the new MD-87s are placed into service. Profits generated during the year total \$500,000 (operating) and \$3.3 million (net).

Company employment is increased by 10.9% in 1990 as passenger boardings ascend 15.2% to 380,000. Revenues jump 17.1% to \$55.6 million, but expenses force the operating profit down to \$100,000. Net gain drops to \$1.6 million.

The payroll is sliced 4.5% in 1991 to 148 and the fleet now includes 4 MD-87s.

Recession and the Gulf crisis force customer bookings down by 12.1% to 334,600. Revenues inch up 1.8% to \$51.7 million, but expenses climb 3% and force an operating loss of \$500,000. There is, however, a \$1.1-million net profit.

In 1992 the 150-employee **Swissair** subsidiary enjoys a resurgence in traffic as passenger boardings jump 16.2% to 388,800.

In 1993, Chairman Eric Geitlinger and President Kressig employ 140 workers and possess a fleet of 4 McDonnell Douglas MD-87s. The company is now merged with another **Swissair** subsidiary, **Balair Air Charter, A.G.**, to create a larger enterprise, **Balair-CTA**.

COMPAGNIE DE TRANSPORTS AERIENS INTERCONTINENT-AUX, S.A. (TAI): France (1946–1963). Following the French government's decision to allow the creation of certain independent airlines, this carrier is formed by Colonel Genain on June 1, 1946, as successor to the prewar **Air Afrique, S.A. (1)**, of which he had been managing director. As the Bristol 170s ordered are not available, service begins to North Africa on July 1 with French-built Junkers Ju-52/3ms. These wear the new TAI livery, which includes the winged griffin logo of **Air Afrique, S.A. (1)**.

Three Bristol 170s are delivered in 1947, along with 7 DC-4s purchased from **KLM (Royal Dutch Airlines, N.V.)**. Long-haul passenger and cargo routes are opened to many points of the French Empire, including Dakar, Saigon, Tananarive, and Casablanca.

Routes are briefly extended to Martinique and Guadeloupe in 1950–1951, and during the latter year the company test flies the first production model Sud-East SE-2010 Armagnac on freight services from Paris–Casablanca and Dakar, and orders 4.

The first 4 SE-2010s are placed in service on December 8, 1952, flying freight Paris–Casablanca and Las Palmas; uneconomical, they will quickly be returned to their manufacturer within six months.

As the first Indochina War heats up in 1953, TAI becomes a partner in the newly formed **Societe Auxiliare de Gerance et de Transports Aeriens, S.A. (SAGETA)**. Seven SE-2010s are taken out of storage and operated by TAI crews on special resupply flights from Toulouse to

Saigon via Beirut, Karachi, and Calcutta. DC-6Bs begin to replace the DC-4s in 1954 and, in 1955, following French agreement to withdraw from Indochina, the SAGETA effort ends.

On January 1, 1956, France reorganizes its overseas air network. **Air France** retires from Australia and the South Pacific where the routes are turned over to TAI, which, in turn, retires from Africa.

The Paris to Saigon DC-6B route is extended to Darwin and New Caledonia on January 6. On February 20, a DC-6B en route from Saigon via Karachi to Paris with 64 aboard loses 2 engines and crashes in the desert near Cairo (52 dead).

A DC-6B completes the world's longest scheduled flight to date without an aircraft change on February 8, 1957. The new Paris–Auckland route, opened on February 4, is flown in four days as the carrier inaugurates Paris to Australia and New Zealand service.

Connecting with a flying boat service to Tahiti, DC-6B frequencies are extended to Bora Bora in the Society Islands via Noumea on September 28, 1958. A controlling interest is taken in the **Reseau Aerien Interinsulaire, S.A.**, a small carrier providing service between the French Pacific islands.

Just after takeoff from the Ivory Coast on September 24, 1959, a DC-7C with 65 aboard crashes on takeoff from Bordeaux (54 dead).

On May 6, 1960, a partnership is entered into with **Air France**, whereby TAI will fly the South Pacific leg of the state carrier's around-the-world service via New Caledonia and Tahiti. Douglas DC-8-32 service from Paris to Darwin, Australia begins on September 4 via Athens, Teheran, Karachi, Bangkok, Phnom Penh, and Karachi. On September 12, the Douglas jetliner inaugurates a route from Sydney to Los Angeles via Noumea, Nandi, Papeete, and Honolulu.

DC-8 frequencies are inaugurated to South Pacific points on May 6, 1961. On September 14, the carrier agrees, in principle, to a future merger with **Union Aeromaritime de Transport, S.A. (UAT)**. A DC-7C leased to **Madair, S.A.** inaugurates Tananarive–Paris flights on October 20.

TAI and UAT fleets and schedules are integrated in 1962 and the amalgamation of the two carriers is completed on October 1, 1963, resulting in a new airline, **Union de Transports Aériens, S.A. (UTA French Airlines)**.

COMPAGNIE DES GRANDS EXPRESS AERIENS, S.A. (CGEA): France (1919–1923). A Lt. Villier and other officers of the French Service d'Aviation form this carrier at Le Bourget airfield near Paris in May 1919. On March 29, 1920, a pilot named Landry flies a Farman F-50P Goliath on a proving flight to Croydon airfield, 10 miles south of London. Paris–London service is initially irregular, but, with subsidy, is quite competitive after its regular start in July. Meanwhile, Farman F-50Ps and F-60s inaugurate service to Brussels and Amsterdam.

In 1921, **Compagnie Generale Transaériennes, S.A. (CGT)** and its fleet of Nieuports and Salmsons is acquired. On April 7, 1922, the company's most memorable—and unhappy—event occurs when it is party to the first collision between civil airliners.

En route to the U.K. in poor visibility along a road from Le Bourget field, a company Farman F-60 Goliath is piloted by M. Mier. The CGEA aircraft crashes into a **Daimler Airways, Ltd.** de Havilland DH 18 piloted by Robin Duke and inbound over the same course, over Thieuloy-Sainte-Antoine, 18 miles north of Beauvais (seven dead).

Flying a Farman Goliath, pilot Rene Labouchere inaugurates the first civil airline night flights between the Continent and the U.K., Paris (LBG)–London (Croydon), on June 9–10. Beginning on July 23, a frequency is opened by Farman Goliaths from Paris to Geneva; this route is stretched to Aix-les-Bains in October via Lausanne and Evian. Despite subsidy, the carrier and its principal rival are now flying parallel services and thus elect to entertain a merger.

On January 1, 1923 CGEA and **Compagnie des Messageries Aériennes, S.A. (CMA)** are amalgamated into **Air Union**.

COMPAGNIE DES MESSAGERIES AERIENNES, S.A. (CMA): France (1919–1923). Before the Farman brothers break away to form their own **Lignes Aériennes Farman, S.A.**, they join a consortium of the most famous names in French aviation development to plan the inauguration of postwar French commercial air transport. Among the other pioneers providing leadership are Louis Bleriot, Louis Breguet, Rene Caudron, Louis Renault, Robert Morane, and Louis Saulnier. The company they form is CMA, which is registered on April 6, 1919. Employing a Breguet 14A2, the new entrant initiates its first service, for mail and freight only, between Paris and Lille on April 18. This route is extended to Brussels in early August.

On August 26, regularly scheduled services begin between France and Great Britain. Complementing the flights begun by de Havilland DH 4As of **Aircraft Transport and Travel (AT & T)** the previous day, a CMA Farman Goliath initiates a proving flight Le Bourget–London (Hounslow). Regularly scheduled CMA passenger services begin on September 16 when a Breguet 14 flies a Mr. Massot; the first return flight from London occurs three days later. The British and French companies now agree to pool their flights and, at month's end, passenger service is started from Paris to Le Havre.

The London frequencies are maintained with Bleriot Berline SPAD 27s throughout 1920. On May 2, 1921, early morning newspaper service between the two capitals is started; later in the month, the first of 15 new Bleriot Berline SPAD 33s are introduced on the passenger frequencies.

On June 2, a route is opened between Paris and Amsterdam, with stops at Brussels and Rotterdam.

On May 15, 1922, flights are initiated to Marseilles via Lyons while, on August 2, the Paris leg is thrust to London and in September the Lyon destination is pushed to Geneva. Late in the year, the SPAD 33s are converted into SPAD 50s. At this point, competition between the carrier and its principal rival, especially on the London run, is extensive. As a result, CMA and **Compagnie des Grands Express Aériens, S.A. (CGEA)** merge their operations and equipment (including 15 Farman F-60 Goliaths) on January 1, 1923 to form **Air Union**.

COMPAGNIE DES TRANSPORTS AERONAUTIQUES DU SUD-OUEST, S.A.: France (1919–1920). This carrier is formed at Biarritz in July 1919 to offer Bay of Biscay charter flights with Farman F-60 Goliaths. Regularly scheduled Biarritz–Bordeaux service begins in August while in September flights are started from Biarritz to the Spanish town of San Sebastian. Early in 1920, this operator is reorganized and renamed **Societe Franco-Bilbaine des Transport Aériens, S.A.**

COMPAGNIE FRANCO-ROUMAINE DE NAVIGATION AERIENNE, S.A. (CFRNA): France (1920–1925). Designed to expand French air service to southeast Europe, this pioneer is formed at Paris on April 23, 1920. Former French chief of military aeronautics Maurice Duval is chairman, with Pierre de Fleurieu as director general and Albert Duellin as chief pilot. Capitalization of FFr 2.5 million is provided by Aristide Blank, director of the Romanian Banque Marmorosh while the French government, in the person of Assistant Secretary of State for Aeronautics Pierre-Etienne Flandin, promises subsidy. A Poetz 7 piloted by Duellin, with Fleurieu as passenger, completes the first France to Romania survey flight later in the month.

As the result of negotiations with the governments of Czechoslovakia and Poland, the new entrant receives not only landing rights, but additional annual subsidies of five million crowns and FFr 1,000,000-worth of free avgas as well.

Meanwhile, a fleet of Salmson 2A2s and Potez 7s is assembled. These open daily Paris (LBG) to Strasbourg roundtrip service on September 20 and the route is extended on to Prague thrice weekly on October 4 and daily on October 7.

Due to weather conditions, the number of flights are reduced in November and are suspended entirely in December. At year's end, the company has 15 pilots and 31 aircraft on strength. Revenues for the year total FFr 366,000, of which FFr 347,800 come in the form of subsidy.

A number of new subsidies are received during the first quarter of 1921 and, to support the acquisition of new aircraft, shareholders invest FFr 8,500,000, bringing the company's overall capitalization to over FFr 10 million. The first of 20 expensive new Bleriot Berline SPAD 33s, 12 Poetz 9s, and 39 Bleriot Berline SPAD 46s now begin to join the fleet. On April 12, a Poetz 9 inaugurates thrice-weekly Paris–Warsaw roundtrip service via Strasbourg, Prague, and Breslau.

By July with 20 new Bleriot Berline SPAD 33s in service, the fleet totals 47 aircraft and the Warsaw service becomes daily. Also during the summer and fall, maintenance and repair facilities are established at Le Bourget Airport, as well as the airfields at Strasbourg, Prague, and Warsaw. Air service agreements are negotiated with Austria, Hungary, and Romania and plans are made to extend service to Bucharest and Constantinople. A pair of survey and publicity flights are made to Constantinople via Bucharest by a SPAD 46 and Poetz 9; at Bucharest on the return flight, King Ferdinand hosts an official reception. Services are again suspended in December and enplanements for the year total 2,136.

Franco-Roumaine begins 1922 with 21 pilots and 71 aircraft and service resumes in February. Flown by Claude Beaugerard, a SPAD 46 inaugurates a route extension from Prague via Vienna to Budapest on May 1. Service from Budapest to Bucharest via Arad begins on September 21; flying another of the 38 new SPAD 46s, Louis Guidon completes the 3,150-km. transcontinental route on October 3 with a flight from Bucharest to Constantinople.

The achievement is important to the history of commercial aviation, as the service is the first transcontinental air route not only in Europe but the world. The Balkan sector will be flown infrequently due to poor weather and political difficulties and is not profitable; from May to December, only 232 passengers are transported on segments between Prague and Constantinople. Overall passenger boardings decline to 1,174.

Chief Pilot Deullin dies on May 29, 1923, and is succeeded by Maurice Nogues. On July 27–28, a Caudron C-61 trimotor makes the first experimental Paris–Strasbourg passenger-carrying night flight over a route marked by Barbier-Bernard acetylene beacons. Three trimotor Caudron C-61s are employed on night services between Belgrade and Bucharest beginning on September 2–3. These are the world's first regularly scheduled night services.

Jules Bertrand succeeds Director General Fleuriu on September 20 and, the same day, he is a passenger on the first service over a new extension from Budapest to Bucharest via Belgrade. **Trans-Europa Union**, a German company, initiates a competitive Vienna–Budapest route during the year. Customer bookings increase to 12,305.

A total of 22 pilots are on the roster at the beginning of 1924 and the fleet now includes 8 Salmson 2A2s, 5 Poetz 7s, 12 Poetz 9s, 14 SPAD 33s, 38 SPAD 46s, and 3 C-61s. Aero 45s, Poetz 32s, and a giant Caudron C-81 trimotor are placed in service on the Paris–Constantinople route during the year. Daily service is continued to Budapest and Warsaw, with Bucharest added in the summer; flights from Budapest to Constantinople via Bucharest are biweekly.

As the result of worsening financial conditions and a failure of the French Parliament to vote requested subsidies, the company's stockholders on June 26 elect to make major changes. The board of directors, known as an administrative council, is enlarged by four members and shared capital is reduced to FFr 8,250,000. Henceforth, the company will be owned by French (50%), Czech (20%), Romanian (19%), and other (11%) interests and can be viewed as one of the world's first multinational corporations.

Meanwhile, plans are made to inaugurate service to Moscow and Ankara and, in preparation for these routes, night flights from Paris to Strasbourg are terminated. Chief Pilot Nogues, flying the new C-81, makes the first flight from Paris to Moscow via Strasbourg on November 14. Later in the month, the new Ankara extension is started.

In accordance with a vote of the stockholders the previous summer, the carrier is renamed **Compagnie Internationale de Navigation Aérienne, S.A. (CIDNA)** on January 1, 1925. It will eventually be one of the 1933 merger partners forming **Air France**.

COMPAGNIE GENERALE DE TRANSPORT AERIENS, S.A. *See* **AIR ALGERIE; COMPAGNIE GENERALE DE TRANSPORT AERIENS, S.A.**

COMPAGNIE GENERALE TRANSAERIENNES, S.A. (CGT): France (1919–1921). A pioneer air transport firm, this company is created at Billancourt and Paris as a subsidiary of the French Societe Aeronautique Astra (SAA). Both rigid and nonrigid proving flights are launched in 1909. Later in that year, a contract is signed with the **Aero Association Lucerne** to support that Swiss city's local tourist business. With both biplanes and the nonrigid airship *Ville de Lucerne*, CGT operates summer-only flight-seeing services for AAL between 1910 and 1914.

Following the signing of the Versailles peace treaty in the spring of 1919, CGT elects to return to the civil aviation business. Employing biplanes like those from Salmson, Nieuport, or Poetz and working in co-operation with the British carrier **Aircraft Transport & Travel (AT & T)**, CGT flies London–Paris services in November–December and in March–December 1920.

The operation is acquired by rival airline **Compagnie des Grands Express Aériens, S.A.** in mid-1921.

COMPAGNIE GERMAIN, S.A.: France (1934–1938). Henri Germain establishes a small airline at Algiers in 1934 to offer scheduled return services to Oran. Thrice-weekly flights commence employing a Farman 190 and a de Havilland DH 84 Dragon. A year later, service is also initiated between Constantine and Bone.

Flights cease at the time of the Munich crisis in 1938.

COMPAGNIE INTERNATIONALE DE NAVIGATION AERIENNE, S.A. (CIDNA): France (1925–1933). This carrier appears on January 1, 1925, as the reformed and renamed version of **Compagnie Franco-Roumaine de Navigation Aérienne, S.A. (CFRNA)**. A Farman F-4X *Jabiru (Stork)* opens Paris to Zurich service on March 16.

Six Bleriot-Berline SPAD 56-3s, 1 SPAD 46, and 5 SPAD 56-4s are delivered in 1926–1927. These, together with several later modifications of the same machines, Caudron C-81s, and the only C-183, are employed on routes from Paris to Bucharest via Strasbourg, Zurich, Innsbruck, Vienna, Budapest, and Belgrade, from Vienna–Warsaw, and from Bucharest–Constantinople. Caudron C-81, Aero 45, and Poetz 32 service over routes to Warsaw and Constantinople is maintained.

Eight Bernard 190Ts join the fleet in 1929 and are placed on the European routes. In addition, 13 Poetz 29-4s are operated on trans-European services from bases at Paris, Prague, Belgrade, and Constantinople. Two new Aero A-38-2s are placed into service in May 1930 and enplanements reach 10,000 for the year.

Operations continue apace in 1931–1932 and, in early 1933, 2 new Wibault-Penhoet 282s, *Le Diligent* and *Le Frondeur*, are received and placed on the Paris–Warsaw via Prague service. On May 17, CIDNA joins with **Air Orient**, **Air Union**, and SGTA to form the **Societe Centrale pour l'Exploitation de Lignes Aériennes, S.A.** With government backing and the assets of **Aeropostale, S.A. (1)**, the consortium combines in August to form the national carrier **Air France**.

COMPANHIA DE TRANSPORTES AEREOS, S.A. (CTA): Portugal (1945–1947). This tiny airline is formed at Lisbon in early 1945 to provide lightplane service between the capital and Oporto. Flights continue for a little over two years; however, the operation cannot be financially maintained and the carrier is taken over by **Transportes Aereos Portugueses, S.A. (TAP)** on July 15, 1947.

COMPANIA AERONAUTICA DEL SUR, S.A. de C.V.: Mexico (1930–1943). Having obtained the concessions of a small airline network started by J. Hans Mattes in 1930, American Garrett "Peck" Woodside forms his own company at Villahermosa, state capital of Tabasco. Employing Travel Air 4000s and Ryan Broughams, Woodside offers both passenger flights and cargo service for chicle and coffee growers.

Additional concessions are obtained in 1936. The feeder operation of **TACH (Transportes Aereos de Chiapas, S.A. de C.V.)** in neighboring Chiapas state are acquired in 1938. The network is maintained until the summer of 1943, when the carrier is taken over by William T. Churchill Morgan's **CAVSA (Comunicaciones Aereas de Veracruz, S.A. de C.V.)**.

COMPANIA BOLIVIANO DE AVIACION, S.R.L. (BOA): Bolivia (1965–1971). BOA is formed at La Paz in 1965 to operate domestic all-cargo charters with 3 Curtiss C-46 Commandos and 2 former military Boeing B-17s. Flights cease in 1971.

COMPANIA BOLIVIANO DE RUTAS AEREAS, S.A. (COBRA): Bolivia (1964–1967). Another short-lived Bolivian all-cargo charter operator, COBRA also begins flying from La Paz, in 1964. This company also makes use of former military Boeing B-17s; however, in March

1967, it acquires a single Curtiss C-46 Commando. Flights cease by year's end.

COMPANIA DE AVIACION PERUANA, S.A. *See* **CAP (COMPANIA DE AVIACION PERUANA, S.A.)**

COMPANIA DE TRANSPORTES AEREOS GELABERT, S.A.: Panama (1935–1941). Marcos A. Gelabert, a former air force officer, forms the carrier named for him at Panama City in 1935. Service is offered to 14 destinations in the country, including thrice-weekly flights to David and Puerto Armuelles. The company's fleet grows to include 1 Hamilton Metalplane, 1 Stinson Reliant, 1 Lockheed Model 5 Vega, and 1 Sikorsky S-38.

A route is briefly operated to San Jose in Costa Rica during 1938. Persuaded not to close down upon the outbreak of World War II in September 1939, Gelabert receives a \$1,000 per month subsidy beginning in November. Operations are continued until December 8, 1941, when they are suspended permanently.

COMPANIA DE TRANSPORTES AEREOS MEXICO-CUBA, S.A. de C.V.: Mexico (1931–1932). This little-known and short-lived operation is founded at Vera Cruz by Abel R. Perez and Gonzalo Abaunza in January 1931 to offer service across the Caribbean to Havana via Fronterera/Progreso. Three Bellanca cabinplanes and two Savoia Marchetti S.55s are purchased and one of the latter, the *Mexico*, inaugurates service on June 19; while taking off, the engine takes fire, forcing the plane's 17 passengers to abort the first flight.

The business does not prosper and although a timetable is printed in 1932, no regularly scheduled services occur.

COMPANIA ESPANOLA DE TRAFICO AEREO, S.A. (CETA): Spain (1921–1929). CETA is formed at Seville in the summer of 1921. With British assistance and equipped with 2 de Havilland DH 9s delivered on September 19, it opens a mail service between Seville and Larache in Spanish Morocco on October 15.

A Dornier Komet is placed on the route in 1922. Operations continue throughout the decade with subsidies received from the Madrid government, the French and the Germans. The carrier ceases operations on March 13, 1929 when it becomes one of the three small airlines merged to form **Concessionaria Lineas Aereas Subvencionadas, S.A. (CLASA)**.

COMPANIA INTERNACIONAL AEREA, S.A.: Ecuador (1966–1974). CIASA is set up at Quito in late 1966 by a group of former Air Force officers wishing to enter the all-cargo business. Having acquired 3 Curtiss C-46 Commandos, the concern inaugurates non-scheduled freight charters to Panama, Venezuela, and Mexico in October 1967.

The U.S. CAB grants the company a foreign air carrier permit in 1968, allowing the start of weekly flights from Quito to Miami via Panama City. These flights continue until the carrier's operating authority is withdrawn in July 1974.

COMPANIA TABASQUENA DE AVIACION, S.A. de C.V.: Mexico (1945–1970). In 1945, Francisco Somoano purchases the old network started by Garrett “Peck” Woodside at Villahermosa. He forms *Compania Tabasquena de Aviacion* to fly the chicle contracts given up when William T. Churchill Morgan upgraded Woodside’s **CAVSA (Comunicaciones Aereas de Veracruz, S.A. de C.V.)** into **ALASA (Aerovias Latino Americanas, S.A. de C.V.)**.

During the 1950s, roads are built to the areas of the chicle plantations, forcing Somoano to change his carrier from a freight charter operation to a passenger charter airline. Employing Douglas DC-3s and light-planes, the company begins flying tourists from Villahermosa to the Mayan ruins at Palenque. The carrier ceases flying in 1970 and its concessions are transferred to *Aeronaves Alimentadoras*.

COMPASS AIRLINES (PTY.), LTD. (1): Australia (1989–1991). In anticipation of Australian airline deregulation, former **East-West Airlines (Pty.), Ltd.** owner Bryan Grey establishes **Compass Airlines (Pty.), Ltd. (1)** at Melbourne in the fall of 1989 to fly domestic routes throughout the continent. In November, Grey uses his own funds to place deposits with Polaris Aircraft Leasing on 4 Airbus Industrie A300-600Rs and 1 A310-304.

Meanwhile, the holding company Southern Cross Airlines Holdings is established to offer competition with a fourth domestic carrier, **Southern Cross Airlines (Pty.), Ltd.**

Potter & Partners, an underwriting firm, is retained in early 1990 to make a share flotation. The Australian financial community responds with such surprising enthusiasm that the company’s prospectus must be printed three times and by mid-July, all 100 million A\$50 shares are sold. A supplementary 30-million share issue is made and taken up within a week.

Having acquired several Airbus aircraft under lease from the U.K.’s **Monarch Airlines, Ltd.**, CEO Gray’s new entrant begins revenue services in November, the same month the new liberalization law takes effect. Frequencies are offered linking the company’s base with Perth, Adelaide, Sydney, Brisbane, the Gold Coast, and Cairns.

Compass flies a total of 52,817 passengers by year’s end. Although revenues are \$A4.75 million, start-up costs produce an undisclosed, but substantial loss.

The 510-employee company in 1991 now visits Brisbane, Sydney, Melbourne, Adelaide, Cairns, and Townsville. Beginning in March, the Monarch aircraft are returned as Compass’ own planes arrive under charter from France. Sir Leo Hielscher becomes chairman, with former **Southwest Airlines (2)** Vice President Sam Coates as CEO.

Representatives of Polaris appear at company headquarters on December 18 to repossess 2 of the 5 A300-600Rs. With 125,000 advance bookings in hand and a 12% market share, Compass, in light of the adverse publicity the visit engenders, is unable to raise desperately needed funds. As a result, it suspends operations on December 20 when it cannot pay either its overdue airport charters or the aircraft leases. A total of 1,393,612 passengers are flown on the year; however, thousands of holiday travelers are stranded at the end.

COMPASS AIRLINES (PTY.), LTD. (2): Australia (1992–1993). With its own carrier not yet off the ground, Southern Cross Airline Holdings purchases the assets of **Compass Airlines (Pty.), Ltd. (1)** on February 14, 1992 and merges them with its own under the Compass name and logo, while requesting chartered replacements for the Airbuses. A consortium, including **Air Nauru**, threatens legal action to prevent a resumption of operations. Recession and adverse publicity conspire to make the airline’s public offering of A\$50 (\$37 million) difficult; although it is fully underwritten, only 54% shareholding is acquired by the public.

Chairman Sir Leo Hielscher and CEO Sam Coates, holdovers from **Compass Airlines (Pty.), Ltd. (1)**, are able to recruit a workforce of 550 and launch low-fare, high-frequency flights between Brisbane and Melbourne, Sydney, and Adelaide on August 31 with 2 leased McDonnell Douglas MD-83s and 3 MD-82s, the latter chartered from **SAS (Scandinavian Airline System)**.

Cairns and Townsville join the route network during the fall. In December, an MD-82 receives a special Christmas livery, complete with Santa Claus cap; however, reports show that a “grinch” has stolen over A\$10 million since September.

Operations continue apace in early 1993. On March 4, the carrier reports to the Australian Stock and Exchange and Securities Commission (SESC) that, during its first four months, revenues have been A\$27.8 million, but losses are A\$10.9 million (\$7.7 million). When this news reaches investors and the public, ongoing efforts to raise additional capital collapse. The company is put into receivership on April 11 with debts of A\$11.97 million and is liquidated.

The SESC launches an investigation that will lead to the indictment of Douglas Reid, the former director. On December 2, 1997, Reid will be sentenced to 10 years in prison, having been convicted of 22 charges relating to the theft of A\$11 from **Compass Airlines (Pty.), Ltd. (1)** over a 15-month period, while systematically deceiving the officers of the company, auditors, the SESC, and investors.

COMTEL MESSEFLUG, GmbH. & CO.: Computerstrasse 6, Vienna, A-1101, Austria; Phone 43 (1) 7007-5097; Fax 43 (1) 7007-5097; Year Founded 1989. The corporate carrier Comtel is established in 1989 to provide executive passenger charters from Vienna Airport. By 2000, the company, under the direction of fleet chief Edward Meisel, employs four pilots and operates 1 each Cessna 501 Citation I, C-550 Citation II, C-650 Citation III, and Piper PA-31-350 Navajo Chieftain.

CONAIR (PTY.), LTD.: Australia (1970–1981). In 1970, **Connellan Airways (Pty.), Ltd.** is renamed Conair (Pty.), Ltd. Employing light-planes, services continue to various tiny Northern Territories outback destinations from the base at Alice Springs. E. J. Connellan remains chairman and major shareholder, with S. J. Marshall as general manager.

Service continues without incident until October 23, 1975. A Riley Turbo-Skyliner—a de Havilland DH-114 Heron reequipped with Lycoming IGO-540-B1A5 engines—crashes while on approach to Cairns (11 dead).

By 1978, airline employment stands at 130 and the fleet comprises 3 Douglas DC-3s and 5 Riley Turbo-Skyliners.

In 1980, Conair is renamed **Northern Airlines (Pty.), Ltd.**, but soon thereafter ceases operations, being replaced in May 1981 by the Ansett Airlines of Australia subsidiary **Airlines of Northern Australia (Pty.), Ltd.**

The story of Connellan and Conair were written down by chairman Connellan and, after his death, edited by Peter Donovan and published as *Failure of Triumph: The Story of Connellan Airways* (Alice Springs, NT: Paradigm Investments, 1992).

CONAIR AVIATION, LTD.: P.O. Box 220, Abbotsford, British Columbia V2S 4N9, Canada; Phone (604) 855-1190; Fax (604) 855-1189; Year Founded 1969. Destined to become one of the world's largest charter and fire fighting organizations, Conair is established at Abbotsford in 1969 to take over the spraying, charter, and fire fighting divisions of Skyway Air Service, Ltd. Employing lightplanes, Conair provides charter and contract air services, including air cargo, aerial survey work, and agricultural applications.

A single Douglas DC-6B, first operated by **Pan American-Grace Airways (PANAGRA)**, is purchased in 1972. It is joined by two more, one each in 1973 and 1974, the latter having begun service 30 years earlier as the **United Air Lines Mainliner Diamond Head**.

The 1972 Douglas must be withdrawn after a crash landing near Kamloops on February 8 of the latter year that kills its three-man crew. Business continues to expand throughout the remainder of the decade, with four more DC-6s acquired, two each in 1975 and 1976.

In 1980, the company enters the forest fire fighting business; it purchases, modifies, and deploys 3 former Canadian Forces Grumman CS2F Trackers, which it labels Firecats. The DC-6 fleet is significantly increased in 1982 as 1 DC-6 and 2 DC-6As are purchased.

The fire wars continue into the mid-1980s as the company adds additional Firecats and a pair of converted Douglas A-26 bombers.

In 1985, the former **Pacific Western Airlines, Ltd.** base at Edmonton is purchased and turned into a water tanker base. Another DC-6 and a Fokker F.27-600 are purchased in April–May 1986 and the first DC-6B purchased, the ex-PANAGRA machine, is scrapped.

Business continues apace in 1987. The F.27-600, given a drop tank and rechristened a "Firefighter," is sent to Australia to assist during that nation's 1987–1988 fire season.

The A-26s are sold early in 1988 as a DC-6A arrives from **NWT Air, Ltd.** A Firecat is lost in an accident in central British Columbia on August 27. A year later, in September 1989, the Fokker Firefighter is also lost in a crash.

Conair continues operations into the 1990s. Early in the decade, a rotary-wing division, **Frontier Helicopters, Ltd.**, is established to operate executive and small group passenger charters and express services, to participate in high wire survey work, aerial photography, and forest fire fighting. A DC-6B is withdrawn and scrapped in 1994.

By 1998, General Manager Terry Dixon employs 6 DC-6Bs, 2 DC-6ACs, 25 Bell 205s, 10 Bell 206B JetRangers, 2 Bell 212s, and 1 Bell 206L LongRangers. An MBB BK 117 and an Aerospatiale AS-350B Ecureuil previously employed are removed.

Founder Les Kerr is elected to the Canadian Aviation Hall of Fame on January 13, 1999.

The 2000 fire season is the worst in the Western U.S. since 1994, with over 67,000 fires burning over five million acres by the end of July. With American resources stretched to the limit, Conair accepts a U.S. Forest Service contract to provide support. On August 9, the company reports that it has provided 6 DC-6 air tankers to battle the fires.

CONAIR OF SCANDINAVIA, A.S. (CONSOLIDATED AIRCRAFT CORPORATION, LTD.): Denmark (1964–1993). The travel organization Simon Spies Holdings forms this airline in October 1964 to undertake its passenger charter and inclusive-tour flights to holiday destinations in southern Europe, the Mediterranean, and Africa. It will be successor to the failed **Enterprise, A.S.** Revenue flight operations are started on April 1, 1965 with Bristol Britannia equipment.

During 1966–1968, the fleet is upgraded by the addition of 3 Douglas DC-7Cs. Orders are placed for 5 Boeing 720-025s in 1969. Bookings for the year total 127,112.

Enplanements climb to 138,768 in 1970. The 5 B-720-025s are placed into service beginning on June 9, 1971 as the company also occupies new administrative and hangar spaces at Copenhagen Airport South.

Services are maintained during the remainder of the 1970s with little change except in gradual traffic growth and equipment changes as the piston-engine aircraft are retired. By 1978, Chairman/President Simon Spies and his managing director, Verner Moller, employ 250 workers and fly 4 Boeing 720-025s. Enplanements for the year are 237,130.

In 1979 the workforce is reduced by 1.3% to 233 while passenger boardings dip 3.1% to 230,000. Operating income, however, jumps 21.2% to \$35.2 million and a net profit of \$959,657—up 47%—is posted. During the early 1980s the fleet is upgraded; gone are 3 of the 720-025s, replaced by 5 B-720Bs.

In 1985–1986, orders are placed for Airbus Industrie equipment as revenue passenger kilometers (RPKs) flown by the 310-employee company advance an average of 3%. The company continues to withhold its boarding figures in 1987, but does acknowledge 1.04 million RPKs.

In 1988–1989, the Boeings are replaced with 3 A300B4s and orders are placed for 6 A320-231s. Enplanements in the 1988 total 731,200, but during 1989 drop to 408,000.

Company employment is increased by 7.1% in 1990 to 375 and the fleet remains unchanged. Customer bookings double to 858,600.

With the first of the A320-231s available, four-times-per-week Airbus flights are inaugurated in spring 1991 from Stockholm to Ft. Lauderdale. Enplanements for the year, nevertheless, slip to 853,501.

Airline employment in 1992 stands at 560 and the fleet now includes 6 A320-231s and 3 A300B4s, which are all leased to **ZAS Airline of Egypt, Ltd.** Passenger boardings increase to 1,152,600.

Director Moller's workforce in 1993 is 475. In September, the parent Simon Spies Holdings signs an agreement with SAS Leisure, a subsidiary of **SAS (Scandinavian Airlines System)**, to merge the company with **Scanair, A.S.** to form the larger **Premiair, A.S.**

CONCESSIONARIA LINEAS AEREAS SUBVENCIONADES, S.A. (CLASSA): Spain (1929–1932). On April 11, 1927, the Spanish government forms a Superior Aviation Council (CETA) to oversee airline development and subsidy distribution. Having determined that a unified state carrier is required, CETA halts subsidy to three small carriers, **Compania Espanola de Trafico Aereo, S.A. (CETA)**, **Iberia Spanish Airlines (I) (Lineas Areas de Espana, S.A.)**, and **Union Aerea Espanola, S.A. (U.A.E.)**.

On March 29, 1929 these are merged into the new national airline **Concessionaria Lineas Aereas Subvencionadas, S.A. (CLASSA)**. Employing the Rohrbach Rolands, Junkers G-23s, and F-13s of the merger partners, CLASSA, in cooperation with the French carrier **Aeropostale, S.A. (I)**, opens frequencies to Biarritz, across the French border, in July. It is Spain's first international commercial air service.

Madrid's airport is opened near the village of Barajas on April 30, 1930. Following a proving flight on May 27, regularly scheduled flights from Madrid to the Canary Islands begin with new Fokker F-VIIB/3ms.

World financial conditions impact the airline and on October 1, its system is restricted to a single Madrid–Barcelona route. Subsidy for this route is provided by **Deutsche Luft Hansa, A.G. (DLH)**, which needs an affiliate connection at Barcelona. During the year, 6,000 passengers are transported.

The situation worsens in 1931; often the company's 3 G-23s and 4 Fokkers do not fly. Perhaps the greatest event of the final year is the arrival of the Ford Tri-Motor 4-AT-F, the first American transport employed by a European airline. In September, the national concession is lost.

Despite the addition of two new Junkers G-24s in March, CLASSA ceases operations on April 8, 1932. When the Spanish Republic is declared, the new government changes CLASSA's name to **Lineas Aereas Postales Espanolas, S.A.** or LAPE.

CONCIERGE AIR: 2770 Polo Island Dr., B-202, West Palm Beach, Florida 33414, United States; Phone (561) 616-0809; Fax (561) 795-

5425; Year Founded 1995. Neal Rauch sets up Concierge at West Palm Beach in **1995** to offer executive and small group passenger charters throughout the U.S., Mexico, and the Caribbean. Within five years, the concern is flying 1 each Learjet 24, Cessna 421, and Piper PA-23 Aztec.

CONCORD AIRLINES, LTD.: Nigeria (1990–1994). Concord is established at Kaduna in **1990** to provide passenger and cargo services, both scheduled and nonscheduled, to domestic and regional destinations. Bashorun M. K. O. Abiola is named managing director.

Revenue operations to Nigerian domestic destinations begin with 5 Fairchild Hiller FH-227Bs and 1 each Fokker-Fairchild F-27J, British Aerospace BAe 125-403F and 125-700B. Flights are also offered via Calabar to Santa Isabel in Equatorial Guinea.

One FH-227B is withdrawn in **1993** and these largely unheralded services continue apace thereafter for a year.

CONCORS, A.S.: P.O. Box 63, Riga, LV-1029, Latvia; Phone 371 2 207404; Fax 371 7 207479; Code CDS; Year Founded 1991. Although established on November 22, **1991**, the actual start-up of this small regional is long delayed. At the end of **1994**, President Sergey Ratnikov has assembled a fleet that includes 1 each Ilyushin Il-18D and 3 Let 410s. These are employed in January **1995** to inaugurate passenger and cargo charters to destinations within Europe, Russia, and the CIS.

These unscheduled services are continued through the remainder of the decade. In **2000**, airline employment stands at 50.

CONDOR AIR LINES: United States (1936). Condor is formed at San Francisco (Alameda) in the summer of **1936** to offer scheduled passenger flights to Salinas. Although revenue service begins in August, it cannot be maintained beyond November.

CONDOR BERLIN, GmbH.: c/o Condor Flugdienst, GmbH., Marketingforschund, FRA HL 1, Axel Bechmann, Am Grunen Weg 3, Keisterbach, D-65440, Germany; Phone 49 (6107) 939 488; Fax 49 (6107) 939 472; Code CIB; Year Founded 1998. Late in October 1997, plans are announced by **Condor Flugdienst, GmbH.** for the creation of a Berlin-based subsidiary. The new DM 400 (US\$250-million) entity will be based at Schoenefeld Airport and compete in the Berlin market with **Aero Lloyd, GmbH.** and other deep discount airlines which are offering prices that only a smaller low-cost carrier can match. Orders are placed for 4 A320-212s, which will be leased to the start-up by **Germania Fluggesellschaft, GmbH.**

According to schedule, the creation of Condor Berlin, GmbH. occurs on January 1, **1998**, just as **Condor Flugdienst, GmbH.** itself is combined into C&N Condor Neckermann Touristik, A.G.

The first CFM International CFM56-powered A320-212 is delivered in February, and begins operations on March 1 to Erfurt, Hanover, and Stuttgart. Two more leased jetliners are delivered in March and April and, by the middle of April, the company is flying them to 16 points in the Mediterranean and the Canary Islands from Berlin's Tegel and Schoenefeld Airports.

The previous order for A320s is increased from four to six. The leased units are replaced with these owned models in time for the beginning of the fall schedule in October. Services are continued in **1999–2000**.

CONDOR FLUGDIENST GmbH.: Marketingforschund, FRA HL 1, Axel Bechmann, Am Grunen Weg 3, Kelsterbach, D-65440, Germany; Phone 49 (6107) 939 488; Fax 49 (6107) 939 472; http://www.condor.de; Code DE; Year Founded 1961. Deutsche Lufthansa, A.G. determines to establish a large passenger charter and inclusive-tour operation by combining its two small charter associates **Condor Luftrederie, GmbH.** and **Deutsche Flugdienst GmbH.** In the summer of **1961**, the former is merged into **Deutsche Flugdienst GmbH.** The enlarged, amalgamated, and wholly owned subsidiary receives its present name on October 25, given in honor of the prewar subsidiary so closely linked to South American aviation.

Additional Convair CV-440 Metropolitans are transferred to the charter airline from its parent as well as Vickers Viscount 814s and 2 Lockheed L-1649A Super Star Constellations; Condor begins operations in early spring **1962**.

Seasonal Frankfurt–Canary Islands flights begin in May **1963** as Boeing 707-330Bs are acquired from **Deutsche Lufthansa, A.G.** After significant traffic growth in **1964**, the carrier receives, through an April **1965** transfer from its parent, 2 Boeing 727-30 “Europa Jets.”

The first Frankfurt–Moscow jet charter is flown on April 6, **1966** and the company's tenth anniversary—actually, that of its merger partners—is celebrated on April 22. With 15% of the market share, Condor is now the Federal Republic's largest charter airline.

As additional B-727-30s join the fleet in **1967**, the Viscount 814s begin orderly retirement. On January 1, **1968**, all shares of the competing charter group **Sudflug International GmbH.** are acquired.

Three Boeing 747-230Bs are ordered in **1969** and by now the carrier's aircraft are easily identifiable by virtue of their all-white fuselages with canary yellow tails. On July 20, **1970**, a light plane, with 3 aboard, collides with a B-727-30 over northeast Spain. The liner, with 93 aboard, is badly damaged, but lands safely without injuries, while the smaller craft crashes (3 dead).

The first Jumbojet is delivered on April 2, **1971**, with a second arriving later in the year. On May 1, Condor becomes the first charter airline to operate an owned Jumbojet, undertaking its initial flights from West German cities to holiday destinations in the Canary Islands, Majorca, and Spain. In August, a record one-plane load of 490 passengers is flown Frankfurt–Canary Islands.

Enplanements reach the million-mark (1,040,000).

Airline employment stands at 772 in **1972** and the second B-747-230B is delivered on March 31. The two Jumbojets open service to New York, Acapulco, and Los Angeles (the latter via the polar route), as well as to Bangkok and other points in the Far East. On September 6–7, Condor becomes the first West German airline to fly into East Germany, transporting visitors to the Leipzig Trade Fair. Passenger boardings jump 20% to 1.3 million.

In **1973** charter flights are inaugurated to London, Lisbon, and Chicago. A total of 1,589,874 travelers are carried in **1974**. The workforce in **1975** is 937. Two B-727-230s arrive and replace 2 B-727-30s; the fleet now includes 2 B-747-230Bs, 2 B-707-330Bs, and 13 B-727-30/230s. Charter enplanements increase by 14.2% to 1,853,000.

Condor's 981 employees celebrate the twentieth anniversary of flight operations on April 22, **1976**. A B-747-230B, with 483 passengers, is diverted from fog-bound New York (JFK) on July 18 and makes a forced landing at Chicago (ORD) with three flat tires and a damaged landing gear, but no injuries. Enplanements dip 4.6% to 1,768,367.

Operations continue apace in **1977–1978** as Managing Directors Herbert Wendlik and Ernst August Koch plan to reshuffle the airline's fleet by ordering 3 DC-10-30s replace the Jumbojets. A B-747-230C is leased from **Deutsche Lufthansa, A.G.** on January 11, **1979**, replacing a Jumbojet sold out of service in February. The second B-747-230B is withdrawn in June.

The B-747-230C is returned to the West German flag carrier in May **1980** as the 3 DC-10-30s arrive to replace it on the company's long-haul routes to North America and the Far East.

In **1981–1983**, B-737-230s join a reduced number of B-727-230s in flying tourists to the Mediterranean, Canary Islands, East Africa, and Black Sea areas. During these years, the company also becomes the carrier for the West German national soccer team. During the latter year, 2 ex-**Deutsche Lufthansa, A.G.** Airbus Industrie A300B4s are operated.

Enplanements reach (2,439,738) in **1984** and a \$2.5-million net profit is reported, atop an operating gain of \$4 million.

The employee population is increased 8.8% to 1,125 in **1985**. The fleet now includes 3 DC-10-30s, 2 A300B4s, 6 B-727-230s, and 4 B-737-230s. During the summer, 3 A310-200s are acquired. Markets are initiated at Kathmandu, Banjul, Goa, and Dakar. In November, an A310-200 is leased to **Kenya Airways, Ltd.**

Passenger boardings accelerate 6.3% to 2,601,000 and operating income climbs 2.4% to \$265 million. Expenses rise rapidly and cut operating profit to \$2 million and net gain to \$1.2 million.

The payroll grows again in **1986**, up 9.6% to 1,233. A third A300B4 joins the fleet. In June, orders are placed for 5 B-737-330s and 1 A310-304.

Customer bookings rise 2.2% to 2,658,351 and revenues climb by 2.2% to \$489.6 million. With costs down by 1.5% to \$470 million, profits are able to rise tenfold to \$19.2 million (operating) and \$11 million (net).

The requested A310-304 joins the fleet in **1987** along with, in November, the first two B-737-330s. One B-727-230 is converted into a 72-seat luxury liner and is employed on round-the-world trips lasting upwards of three weeks.

Enplanements for the year total 3,024,064 and profits are \$44.5 million (operating) and \$21 million (net).

The workforce is increased by 8.8% in **1988** to 1,427.

While en route from Stuttgart to Izmir on January 2, Flight 3780, a chartered B-737-230 with 5 crew and 11 passengers, crashes near Seferihisar, Turkey; there are no survivors.

The remaining B-737-230s are sold to **TAP-Air Portugal, S.A.** and 5 more B-737-35Bs are delivered, wet-leased from **Germania Fluggesellschaft, GmbH.**

Passenger boardings increase by 3.5% to 3,133,752 and revenues climb 8.2% to \$551.2 million. Expenses also jump and cut the operating profit to \$38 million. Net remains level at \$21.2 million.

The fleet in **1989** includes 3 DC-10-30s, 2 each A310-200s/-300s, and 9 B-737-35Bs, 2 of which are delivered during the year. Customer bookings decline by 6.2% to 2,939,763.

One A310-200 is withdrawn in **1990** along with 2 leased B-737-330s, to be replaced by 9 B-757-230s. Three more B-737-35Bs and 1 more B-757 are ordered. Passenger boardings stabilize and advance 6% to 3,116,626.

Customer bookings move ahead by 3.4% in **1991** to 3,218,522 and cargo climbs 6.8% to 1.13 billion FTKs.

Airline employment in **1992** stands at 1,118 and the fleet now includes 7 B-737-330s, 2 B-737-35Bs leased from **Germania Fluggesellschaft, GmbH.**, 13 B-757-230s, 1 B-757-27B, 5 B-767-330ERs, and 3 DC-10-30s.

Flights begin to the former Soviet republics in the CIS and, in July, it is announced that by the end of the year the carrier will have acquired a 26% interest in the Austrian tour operator ITAS and 26.5% shareholding in **Lauda Air Luftfahrtgesellschaft, A.G.** In November, the carrier joins with **Air Mauritius, Ltd.** to provide shared services between Germany and Mauritius.

Passenger boardings leap upward 33.4% to 4,293,026.

In **1993**, joint Managing Directors Franz Schoiber, Claus Gillman, and Rudolf von Oertzen oversee a workforce of 1,812, down 10.5% from the previous year. Five B-737-35Bs are withdrawn and replaced by a B-747-430C chartered from **Deutsche Lufthansa, A.G.**, along with 3 B-757-230s and 1 B-767-330ER. Flying from Frankfurt, Munich, Stuttgart, Dusseldorf, and other German cities, the company continues to undertake charters to the Mediterranean, Canary Islands, North Africa, Kenya, CIS, Southeast Asia, India, Nepal, the Mideast, the Caribbean, and the U.S., particularly Florida.

In July, the B-767-330ER, operating under a **Deutsche Lufthansa, A.G.** flight number, takes over the scheduled thrice-weekly roundtrips to Detroit, as well as several routes into Spain. At the same time and in a similar mode, the Jumbojet launches twice-weekly roundtrips from Frankfurt to Taipei via Bangkok.

Customer bookings for the year accelerate 16.8% to 5,002,720 and a \$19.7-million net profit is recorded.

The number of airline employees is increased to 1,953 in **1994** and the leased fleet includes 17 B-737-230s, 8 B-767-330ERs, 3 DC-10-30s, 2 each B-737-330s, B-737-35Bs, B-737-330QCs, and Airbus Industrie A310-304s, plus 1 B-757-27B.

St. Lucia and Antigua begin to share weekly roundtrip charters from Germany over routes that were previously flown separately.

Passenger boardings leap upward by 14% to 5.7 million and revenues swell 5.7% to \$1.22 billion, allowing a net gain of \$87.3 million.

The workforce grows by 5.5% in **1995** to 2,117. The company now allies itself with various tour companies and provides lift for their flights. Enplanements rise 6.7% to 6,029,528.

Airline employment is increased to 2,205 in **1996**, as the company becomes launch customer for the Boeing 757 stretch; orders are placed on September 2 for 12 B-757-300s (with 12 options) for delivery beginning in January 1999. Destinations visited include the U.S., Caribbean, Mediterranean, India, Nepal, the Canary Islands, North Africa, Kenya, Taiwan, and the former Soviet Union.

Customer bookings accelerate 7.1% to 6,457,272 and revenues of \$1.2 billion are generated.

The workforce is increased a slight 0.8% in **1997** to 2,223. The owned fleet now includes 6 A320-200s, 7 B-757-230s, and 4 B-767-330ERs. Also operated under contract are 10 B-757-230s, 5 B-767-330ERs, 5 DC-10-30s, 2 each B-737-330s and B-737-35Bs, and 1 each B-737-330QC and B-757-27BER.

In January, orders are placed for 6 A320-200s, powered by CFM56s. The CFMI engine order is valued at \$65 million. The company continues to hub from 18 German cities to over 100 holiday destinations.

On September 18, parent **Deutsche Lufthansa, A.G.** announces that, effective January 1, Condor will join with and provide capacity for Germany's second largest tour operator, Neckermann Reisen, GmbH. (owned by the giant retail group Karstadt, A.G.), in a fifty-fifty joint venture company to be known as C&N Condor Neckermann Touristik, A.G. The new entity will also contain the DLH interest in the Turkish charter line **Sun Express, A.O.** and five German tour operations. The new group is Germany's second largest travel and tour concern after Touristik Union International (TUI) and Condor is its core airline. It is expected that the combined company will have revenues of DM 7 billion (\$3.8 billion) and compete with the travel conglomerate being formed around **Hapag Lloyd, A.G.**

Late in the year, plans for the creation of a **Condor Berlin, GmbH.** subsidiary are announced. The new DM 400 (US\$250 million) entity will be based at Schoenefeld Airport and will compete in the Berlin market with **Aero Lloyd, GmbH.** and other deep discount airlines that are offering prices that only a smaller low-cost carrier can match. Orders are also placed for 4 more A320-200s, which will be leased to the start-up.

Customer bookings accelerate 10.5% to 7,268,000 and a net profit of \$74.71 million is generated.

According to schedule, the C&N Condor Neckermann Touristik, A.G. affiliation occurs on January 1, **1998**, along with the creation of **Condor Berlin, GmbH.** Dr. Dietmar Kirchner becomes managing director.

The owned fleet includes 6 A320-200s, 7 B-757-230s, and 4 B-767-330ERs. Also operated under contract are 10 B-757-230s, 5 B-767-330ERs, 5 DC-10-30s, 2 each B-737-330s and B-737-35Bs, and 1 each B-737-330QC and B-757-27BER. Orders are outstanding for 6 A320-200s and 12 B-757-330s, for which it is a launch customer.

Arrangements are completed in February to sell a pair of DC-10-30s to **Omni Air International**, with deliveries in November of this year and June 1999. The first B-757-330 makes its maiden flight at Renton, Washington, on August 2. Plans remain on schedule for delivery of the aircraft to Condor in late March-early April 1999.

The premier B-757-330, painted in the carrier's new white-and-yellow livery, makes its debut in Europe on December 7, stopping at Frankfurt. The visit marks the first of 17 scheduled flights to 11 destinations on the aircraft's four-day, service-ready demonstration tour for Condor. A public ceremony, presided over by Condor Managing Director Kirchner, shows the new aircraft to the German public. He explains that the new ship will be operated on charters to the Canary Islands and other Mediterranean holiday destinations.

Enplanements for the year dip 1.8% to 7.13 million. Revenues inch up 1.9% to \$1.29 billion and a \$65.44-million net profit is realized.

Although weekly roundtrips from Germany to St. Lucia are maintained, Antigua is dropped from the schedule on March 1, 1999. With all of the testing completed, the carrier accepts delivery of the first 2 B-757-330s at Seattle on March 13. The new aircraft go into service immediately, joining the other units in the Condor fleet in providing charters from 13 German cities. Destinations visited will include Greece, Turkey, Spain, Egypt, Cyprus, Tunisia, Morocco, the Balearic Islands, and the Canary Islands. Seven additional B-757-330s are to be delivered before the end of the year.

Delivery difficulties with the remaining new aircraft for Condor, in late May, to wet-lease a B-767-339ER from **City Bird, S.A.** for two months. To avoid a repainting, the phrase "On behalf of Condor" is added behind the City Bird titles.

An agreement is signed with the government of Grenada on June 19 under which the carrier agrees to begin a regular service to St. George's on November 5. The weekly service will replace flights to Munich dropped by **British West Indies Airways, Ltd. (2) (BWIA)** in 1996.

In an effort to stem the two-year-old dispute within C&N Touristic (Condor and Neckermann) for airline or tour-operator dominance between joint Managing Directors Wolfgang Beeser and Willie Schoiber, Stefan Pichler becomes the single CEO at year's end. Schoiber is retained as chief financial officer.

The company has 13 of its new Dash-300s in service by year's end.

Passenger boardings in the 12 months accelerate 15.6% to 8,249,000 and revenues of \$1,353,887,000 are generated.

On behalf of Boeing, one of the company's new B-757-330s is flown on a 16-city world tour during February 2000, providing exposure for both the airplane and the airline.

On April 12, Boeing and Condor report that the carrier's B-757-330s have had a dispatch reliability percentage of 99.64%, the highest reliability rate in history for any new airliner in its first year of operation.

Weekly B-767-330ER roundtrips are launched on May 7 between Frankfurt and Ft. Myers, with a stop at Tampa on the westbound leg.

Also during the spring, C&N courts First Choice, the fourth largest holiday operator in the U.K. Unhappily, its offer for the parent of **Air 2000, Ltd.** is trumped on May 15 by a £1.8-billion tender from rival Preussag. Speculation thereafter centers on a possible takeover of C&N by the parent of **Airtours International Airlines, Ltd.**

In November, a B-757-330 is leased to **Deutsche Lufthansa, A.G.** for a month of domestic service trials.

CONDOR LUFTREDEREI, GmbH.: Germany (1955–1961). Condor Luftrederei is established in 1955 to offer passenger charter and inclusive-tour services to destinations in Europe, the Mediterranean, and Mideast. After less than four years of competition with the **Deutsche Lufthansa, A.G.** subsidiary **Deutsche Flugdienst, GmbH.**, the company is purchased by the German flag line in 1959.

Allowed to continue as a subsidiary, Condor receives a pair of Con-vaire CV-440s from its new parent. In 1961, it is decided to create a large German charter and tour organization and the two subsidiaries are combined to create **Condor Flugdienst, GmbH.**

CONDOR PERUANA DE AVIACION, S.A. See LINEA DE AVIACION CONDOR TAMPA, S.A.

CONDOR SYNDIKAT, GmbH.: Germany/Brazil (1924–1927). **Deutscher Aero Lloyd A.G.**, one of the forebears of **Deutsche Luft Hansa, A.G. (DLH)**, the Hamburg trading company Schlubach Theimer, and **SCADTA (Sociedad Colombo Alemana de Transportes Aereos, S.A.)** establish the Condor Syndikat in Berlin on May 5, 1924. Given the opportunity, SCADTA Chief Dr. Peter Paul von Bauer subscribes 10% of Condor's initial \$200,000 capitalization. Fritz W. Hammer is appointed director general. The syndicate's goals are the sale of German aircraft overseas, the support of SCADTA's plan to set up an "interamericana" network between Colombia, Central America, and the U.S., and furthering **Deutscher Aero Lloyd, A.G.**'s ambition for

transatlantic service from Europe to South America. To get around certain provisions of the Treaty of Versailles, 2 Dornier Wals, built by CMASA at Pisa, Italy, are purchased. Christened *Atlantico* and *Pacifico*, they are crated up and sent to Colombia by ship.

The two Dorniers, which are actually leased from the Condor Syndikat, arrive at SCADTA's Barranquilla base in early summer 1925. They depart Rio Magdalena at Barranquilla on August 18 on a route proving and goodwill flight to the U.S. via Central America and Cuba. After calls at Cartagena, Cristobal, Puerto Limon, San Jose del Norte, Managua, Amapala, La Libertad, San Jose, Lake Amatitlan, Puerto Barrios, Belize City, and Cozumel, the flying boats arrive at Havana on September 19.

U.S. expedition leader von Bauer spends the first months of 1926 negotiating with Americans interested in financing intra-American service and with the U.S. government over traffic rights. The *Pacifico* is allowed to make a trial flight from Havana to Palm Beach via Miami. The negotiations fail and the *Pacifico* returns to Cuba. The *Atlantico* is crated up and returned to Germany.

Following the establishment of what would become Brazil's **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** at Porto Alegre in midyear, its founder, Otto Ernst Meyer travels to Berlin in November to meet officials of the Condor Syndikat. In exchange for a 21% stake in the German-influenced airline, Meyer is sold the *Atlantico*. Having been shipped by **DLH (Deutsche Luft Hansa, A.G.)** back to Montevideo, the *Atlantico* is now reassembled and flown on to Buenos Aires.

On November 17, what would become the famous "Luther Flight" begins. Former German Reich chancellor Hans Luther, along with Director General Hammer and Herman Teegen, fly the *Atlantico* via Florianopolis, São Francisco, and Santos, to the Ilha das Enxadas, in Rio de Janeiro's Guanabara Bay, arriving on November 27.

The *Atlantico* flies the Brazilian minister of transportation, Dr. Victor Kondor, to Florianopolis on New Year's Day 1927. The flight is officially referred to as "the start of civil aviation in Brazil." On January 26, the Condor Syndikat becomes the first airline company to get a concession in Brazil for passenger and mail operations on the coastal route between Rio de Janeiro and Porto Alegre. On January 29, with Otto Meyer as passenger, the *Atlantico* is prepositioned to Porto Alegre from whence, on February 3, it initiates the "Linha da Lagoa," by flying down the Lagoa dos Patos lagoon to Rio Grande.

Although this is remembered as the inauguration of commercial aviation in the nation, regularly scheduled services do not begin until February 22, after the *Atlantico* has been overhauled. The first mail sacks are carried on the flight of March 28 and the flight of May 17 marks 50 safe missions. Meanwhile, **VARIG Brazilian Airlines (Viacao Aerea Rio-Grandense, S.A.)** is officially registered on May 7; it will receive its official concession on June 10.
